By this time our Boat was come, and we put a freſh Crew into her, and ſent her to fetch our Kedger, which ſhe endeavoured with much Danger of Boat and Men. By this time the Ship was driven ſo near the Shore that ſhe could ſee the Rocks under us, and about us, and we were carried by the Whirlings of the Water cloſe by the Points of Rocks, and then round about back again; and all this notwithſtanding the Sail we had aboard, and we expected continually when ſhe would be beaten to

Pieces. In this Extremity I made them open more Sail, and ſo forced her in among the Rocks and broken Grounds, and where there were many large Pieces of Ice aground. We went over many great Pieces of Rocks that had but twelve or thirteen Feet Water on them, and ſo let fall an Anchor; this Anchor had never been able to wind up the Ship, but that by good Fortune the Ship ran againſt a great Piece of Ice that was aground: This Shock broke the main Knee of her Beakhead, and a Corner of it tore away four of our main Shrouds, and an Anchor that we had at her Bow; and ſo ſtopped her Way that ſhe did wind up to her Anchor.

We ſaw the ſharp Rocks under us, and had but fifteen Feet Water; being alſo in the Tides Way, where the Ice would drive upon us. Our Boat we could not ſee, which made us doubt ſhe had been cruſhed to pieces; in her was the third Part of our Company; but ſoon after we ſaw her come about a Point among the Rocks, ſhe had recovered our Kedger, which made us joyful; with all Speed we laid out Hawſers to the Rocks, and every one worked to the beſt of his Strength to warp her out of this dangerous Place to the Rock's Side, where we had three Fathom Water, and were under the Shelter of a great Piece of Ice that was aground, which kept off the ſtraggling Ice that otherwiſe would have driven upon us. Here we lay very well at the Ebb, but when the Flood came we were aſſualted with Pieces of Ice, that every half Hour put us into deſperate Diſtreſs; we worked continually to keep off the Ice: At full Sea our great Piece of Ice which was our Buckler was afloat, and do what we could got away from us, and left us in imminent Danger from the Ice that drove in upon us; but the Ebb being once made, this great Piece of Ice came again aground, very favourable to us, and ſheltered us all the reſt of the Ebb. All Night we wrought hard to ſhift our Cables, Hawſers, and to make them faſt aloft on the Rocks, that the Ice might the better paſs under them. All Day and Night it ſnowed hard, and blew a Storm at Weſt, which drove in all the Ice out of the Sea upon us. In working againſt the Violence of the Ice, the Hook of our Kedger was broken, two Arms of our Grapnels, and two Hawſers, our Shallop being again very much bruiſed; whereupon we went to work to repair it. This Tide the Harbour was choaked full of Ice, ſo that it ſeemed firm and immoveable, but when the Ebb came it moved; ſome great Pieces came aground, which altered the Courſe of the other Ice, and put us on the Rocks.

Here, notwithſtanding our utmoſt Endeavours, ſhe ſettled upon a ſharp Rock, about a Yard above the main Maſt, and as the Water ebbed away, ſhe hung after her Head, and held to the Offing: We made faſt Cables and Hawſers aloft to her Maſts, and ſo to the Rocks, ſtraining them tough with our Tackles; but as the Water ebbed away ſhe was turned over, that we could not ſtand in her. Having now done to the beſt of our Underſtandings, but to little Purpoſe, we went all upon a Piece of Ice and fell to Prayer, beſeeching God to be merciful unto us. It wanted yet an Hour to low Water, and the Tide wanted a Foot and half to ebb to what it had ebbed the laſt Tide: We were careful Obſervers of low Water, and had Marks by Stones and other Things which we had ſet up, ſo that we could not be deceived. The Ship was ſo turned over that the Portleſs of the Forecaſtle was in the Water, and we looked every Minute when ſhe would overſet; indeed at one Time the Cables gave way, and ſhe ſunk down half a Foot at that Slip; but unexpectedly it began to flow, and ſenſibly we perceived the Water began to riſe apace, and the Ship withal; then was our Sorrow turned to Joy, and we all fell on our Knees, praiſing God for his Mercy in ſo miraculous a Deliverance. As ſoon as ſhe was freed from this Rock, we wrought to get her farther off. All the Flood we were pretty clear from the Ice, but when the Ebb came the Ice came driving again upon us, which drove us to great Extremity: We got as many Pieces between us and the Rocks as we could, but there came a great Piece upon our Quarter, which was above three hundred of my Paces about, but it came aground. Thus came divers great Pieces beſides; which was the Occaſion that this Tide the Harbour was quite choaked up, ſo that a Man might go any Way over it from Side to Side.

When it was three Quarters Ebb, thoſe great Pieces that came aground began to break with a moſt terrible thundering Noiſe, which put us in great Fear that thoſe about us would break us all to Pieces; but God preſerved us. This Morning the Water veered to a lower Ebb than the laſt Tide it had done by two Feet, whereby we ſaw God's Mercy appear to us in our late Extremity. That Flood we had ſome Reſpite from our Labours, but after full Sea our Hopes ebb'd too. The great Piece that was by us ſo ſtopt the Channel that the Sea came all driving upon us, ſo that now undoubtedly we thought to have loſt our Ship.

To work we went with Axes, Bars of Iron, and any thing proper for ſuch a Purpoſe, to break the Corners of the Ice, and to make way for it to go from us. It pleaſed God to give good Succeſs to our Labours, and we got ſo much of the ſofter Sort of the Ice betwixt us and the Rocks, that we thought ourſelves pretty ſecure: But at low Water thoſe Pieces that were aground breaking, kept a moſt thundering Noiſe about us. This Day I went aſhore, and built a great Beacon with Stones upon the higheſt Place of the Iſland, and put a Croſs upon it, and named this Haven, *The Harbour of good Providence.*

4. On the 23d in the Morning with the Flood the Ice drove up among the broken Grounds, and with the Ebb drove all out except one great Piece, which coming aground not far from us, ſettled itſelf in ſuch a Manner that we much feared it: But there came no more, otherwiſe we muſt have expected as great Danger as heretofore. I took the Boat and went aſhore upon the Eaſtern Side, to ſee if I could find any Place free from Danger, and where, among the Rocks, I deſcried a likely Place. From the Top of the Hill where I was I could ſee the Ship. It was now almoſt low Water: At which Inſtant the great Piece of Ice broke with a terrible Noiſe in four Pieces, which made me afraid it had ſpoiled the Ship, it being full half Maſt high. I made what Haſte I could to the Boat, and ſo to the Ship to be ſatisfied, where I found all well, God be thanked. I inſtantly ſent away the Boat to ſound the Way to a Cove which I had found, which was a very dangerous Paſſage for the Boat. At her Return we unmoored the Ship, and with what Speed poſſible warped away from among this terrible Ice. We were not a Mile from them before they broke all to Pieces, and would ſurely have made us bear them Company, but that God was more merciful to us.

We got round the Rocks, and ſo in to this little Cove. Here we made faſt to the Rocks, and thought ourſelves indifferently ſafe; which being done, I went aſhore again to wander up and down, to ſee what I could diſcover: I found it all broken rocky Ground, and not ſo much as a Tree, Herb, or Graſs upon it. Some Ponds of Water there were upon it, which were not yet thawed, and therefore not ready for the Fowl. We did not find in the Snow any Footing of Deer or Bears, but Foxes we ſaw one or two. We found where the Savages had been, but it appeared to have been long ſince: They had made five Hearths, and we found a few Fire-brands about them; and we found ſome Heads and Bones of Foxes about them, with ſome Whale-bones. I could not conceive to what Purpoſe they ſhould have come thither, for we could find none or very little Wood on the Shore-ſide, and no Fiſh at all, though we endeavoured to take ſome. But it may be the Seaſon was not yet come. I called this Cove by the Maſter's Name of my Ship, *Price's Cove:* The Latitude of it is 61 Degrees 24 Minues. The Fire-brands and Chips, which I ſpoke of, had been cut with ſome Hatchet or other Inſtrument of Iron. From the Top of the Hills we could ſee the Iſlands that are on the South Shore, commonly called *Sir Thomas Button's Iſlands.* They bear South and by Eaſt, half a Point Eaſterly, ſome fourteen or fifteen Leagues Diſtance. Upon the Change-Day it flows here at ſeven o'Clock and a half, and the Tide higheſt at moſt three Fathom. The Flood comes from the Eaſtward, and thither it returns. I have been obſervant from the Top of the Hills, and deſcried the great Pieces of Ice two or three Leagues from the Shore, drive to and againſt the Flood and Ebb indifferently; Hence I collected that aſſuredly no Current ſets in here, but that it is a mere Tide. Near the Shore the Eddies whirl in twenty Manners when the Ebb is made, which is becauſe it comes out of the broken Ground amongſt the Ice, that is, aground near the Shore; beſides which Reaſon there are divers Rocks lying under Water, on which you ſhall have thirty, then twelve, and anon but eight, and then twenty Fathoms; and thoſe Uncertainties occaſion ſuch Diſtractions, I would therefore adviſe no one to come near thoſe dangerous Shores, for fear he loſe his Ship.

This Morning, being the 24th, there ſprung up a freſh Gale of Wind at Eaſt; and after Prayer we unfaſtened our Ship, and came to ſail ſteering betwixt great Pieces of Ice that were aground in forty Fathoms, and twice as high as our Top-maſt-head. We ſailed out of this Cove upon the Flood, and had none of theſe Whirlings of the Waters as we had at our going into it. We endeavoured to gain the North Shore, kept ourſelves within a League of the Shore of the Iſland of *Reſolution*, where we had ſome clear Water to ſail through. In the Offing it was all as thick wedged together as poſſible. By twelve o'Clock we were faſt incloſed, and notwithſtanding it blew very hard at Eaſt, yet we could make no Way through it, but the Ice grated us with that Violence that I verily thought it would have wrenched the Planks from the Ship's Sides. Thus we continued in Terror till the 26th Day, driving to and fro in the Ice, not being able to ſee an Acre of Sea from Top maſt-head. The 26th was calm ſunſhiny Weather, and we took the Latitude and Variation, and had Ground, at a hundred and forty Fathom, ſmall white Sand. I cauſed the Men to lay out ſome Fiſhing-Lines, but to no Purpoſe, for I could not perceive the Bait had been ſo much as touched. The Nights are very cold, ſo that our Rigging freezes, and freſh Ponds of Water ſtand upon the Ice about half an Inch thick.

On the 27th there ſprung up a little Gale at South eaſt, and the Ice did ſomething open. Hereupon we let fall our Foreſail, and forced the Ship through the Ice. In the Evening the Wind came contrary, at Weſt-north-weſt, and blew hard, which cauſed us to faſten to a great Piece, to which we remained moored till the 29th. I am ſatisfied here is no Current by many Experiments I have made; ſuch as theſe, by making Marks on the Land, and noting our Drift to and again, with Ebb and Flood, for many Days together, as well in calm Weather as otherwiſe. By all theſe Experiments I found that the Tide was no ſtronger there than that betwixt *England* and *France*. This Morning there ſprung up a fine Gale at Eaſt, and the Ice opened ſomething, ſo that we forced the Ship through it with her Fore ſail. By twelve o'Clock we were got into ſome open Water, with a fine Gale of Wind at Eaſt, and ſo clear Weather that we could ſee the Iſland of *Reſolution*, the Eaſt End bears Eaſt-north-eaſt, ſome twelve Leagues off.

5. From the 29th to the 5th of *July* we ſailed continually through the Ice, with variable Winds and Fogs, and ſometimes calm. The 5th at Noon we had a good Obſervation, and were in Latitude 63 Degrees 15 Minutes, and then we ſaw *Saliſbury Iſland* bearing Weſt-by-north, ſome ſeven Leagues off, with much Ice betwixt it and us, to weather which we were driven to ſtand to the northward. Soon after we ſaw *Prince Charles's Cape*, and *Mill Iſland*; and to North-north-weſt (and indeed round about us) the Sea moſt infinitely peſter'd and cumber'd with Ice. This grieved me very much; for as I had determined to proſecute the Diſcovery to the North-weſtward, I ſaw it was not poſſible this Year. We were driven back again with contrary Winds, ſtill cloſed and peſtered with Ice, and with all the Perils and Dangers incident to ſuch Adventurers, ſo that we thought a thouſand times the Ship had been beaten to Pieces. By the 15th of *July* we were got betwixt *Digg's Iſland* and *Nottingham's Iſland*, not being able to get more Northward. There, for an Hour or two, we had ſome open Water.

But before I proceed further, it will not be amiſs in ſome manner to deſcribe the Streight which begins at the *Iſland of Reſolution*, and ends here at *Digg's Iſland*. If you go down into the Bay, the Streight is about a hundred and twenty Leagues long, and trends Weſt-north-weſt and Eaſt-ſouth-eaſt. Generally in the Entrance it is about fifteen Leagues broad, and then on the ſouthward Side is a great Bay: About the Midſt it is likewiſe about fifteen Leagues broad, and then the Land opens ſomething wider; ſo that betwixt *Digg's Iſland* and *Cape Charles* it is about twenty Leagues broad, betwixt which two ſtand *Saliſbury Iſland* and *Nottingham Iſland*. If it be clear Weather, you may ſee both the South and the North Shores. The Depth in the Middle of the Streight is a hundred and twenty Fathoms, white Sand, a certain Tide runs in it, and no Current. The North Shore is the ſtraiteſt and the cleareſt from Ice. Along this North Shore you have many low ſmall Iſlands, which cannot be ſeen far from Land, and in many Places the Land appears as if it had ſmall Sounds into it: The main Land on both Sides is indifferent high Land.

Being now convinced of the Impoſſibility of doing any thing to the North weſtward, for the Reaſons aforeſaid, I gave Orders to the Maſter of my Ship to ſteer away Weſt-ſouth-weſt, to have a Sight of *Mansfield Iſland*, which the next Day by three o'Clock in the Afternoon we had; having ſo much dangerous foul Weather among the Ice, we ſtruck more fearful Blows againſt it than we had ever yet done. This was the firſt Day that we went to Half allowance of Bread on Fleſh-Days, and I ordered Things as ſparingly as I could. Two of our Men likewiſe complained of Sickneſs, but ſoon recovered. In the Evening we came to an Anchor, and ſent the Boat aſhore to try the Tides: They brought me Word whilſt the Boat was aſhore it flowed about three Feet, as we found by the Ship and by the Ice. The Water at that Time came from the Weſt ſouth-weſt; and the higheſt Tides, ſo far as they could perceive, had not ſwelled above two Fathoms. They found that the Savages had been upon it by certain Fires which they left, and Heaps of Stones, Tracks of other Beaſts, but Foxes they could not find. The Wind was ſo contrary, and the Weather ſo foggy, that we were forced to ſpend ſome Powder to recover our Boat again.

Next Morning being the 17th, the Wind came favourable, and we weighed the Shore, being ſomething clear of Ice, though very thick all to the Offing. We ſtood along it South-and-by-weſt ten Leagues. In the Afternoon the Wind came contrary, and we came again to an Anchor, within a Mile of the Shore, for out to Sea was all thick Ice and impaſſable. I went aſhore myſelf, to be well reſolved of the Tide, and found whilſt I was aſhore that it flowed two Feet, and at that Time the Flood came from Southweſt-and-by-weſt. I doubted it was a Half-Tide, which afterwards I found to be true. I found where the Savages had been upon the Iſland, but could find little or no Drift-wood on Shore, no Beaſts on the Iſland, or Fiſhes in the Sea. It flows on the Change-Day about eleven o'Clock. We ſaw ſome Fowl on it, one of which we killed, and returned on board. This Iſland is a very low Land, little higher than a Sand-bank; it hath Ponds of freſh Water, but no Graſs, and is utterly barren. On the 18th in the Morning the Wind came favourable, we weighed and made ſail, for the Ice was all come about us.

We endeavoured to proceed to the Weſtward, intending to fall in with the Weſtern Land about the Latitude of 63 Degrees; by twelve o'Clock, having been much peſtered, we were come to a firm Range of Ice; but it pleaſed God that the Wind larged, and we ſtood away to Weſt-ſouth-weſt. At Noon in Latitude 62 Degrees, by four in the Evening, having eſcaped dangerous Shocks, we were come as we thought into an open Sea, and joyfully ſteered away Weſt and Weſt-by-North, though the Joy was ſoon quell'd, for by ten o'Clock at Night we heard the Rut of the Ice, and it grew a thick Fog, and very dark with it; nevertheleſs we proceeded, and the nearer we came to it the more hideous Noiſe it made. On the 19th by three in the Morning we were come to it, and as it cleared a little we could ſee the Ice as thick as any we had yet ſeen, theſe being impaſſable, and moreover the Wind at North-weſt. We ſtood along it hoping to weather it to the Southward, but at laſt we became ſo blind with Fog, and ſo encompaſſed with Ice, that we could go no farther.

7. On the 20th in the Morning, notwithſtanding the Fog, we endeavoured to get to the Weſtward, our Ship beating all this while dreadfully. In this Wilfulneſs we continued till the next Day, when, being faſt among the Ice, I obſerved we were in Latitude 60 Degrees 33 Minutes, and then looking what Damage our Ship might have received, we could perceive that below the Plate of Iron which was before her Cut-water ſhe was all bruiſed and broken, the two Knees ſhe had before to ſtrengthen her ſpoiled and torn, and many other Defects which we could not by any Means come to mend. Notwithſtanding all this, and the extraordinary thick Fog, that we could not ſee a Piſtol-ſhot about us, we proceeded with the Hazard of all till the 27th, which was the firſt Time we had clear Weather to look about us. The Wind withal came up at South, and the Ice opened ſomething, ſo that we made ſome Way through it to the Weſtward.

In the Evening we were faſt again, and could go no further, the Wind veering from the South to the Eaſt and blowing a freſh Gale. This occaſioned our Grief the more, that with a good Wind we could not go forward. Putting therefore a Hawſer upon a great Piece of Ice, to keep the Ship cloſe to it, we patiently expected better Fortune. Since we came from *Mansfield Iſland* our Depth was commonly a hundred, and a hundred and ten Fathoms, ouzy Ground. Now the Water began to ſhallow, for driving faſt to and again in the Ice we had but eighty Fathoms. On the 28th and 29th we were ſo faſt incloſed in the Ice, that notwithſtanding we put abroad all the Sail that was at Yards, and it blew a very hard Gale of Wind, the Ship ſtirred no more than if ſhe had been in a dry Dock. Hereupon we went all boldly out upon the Ice to ſport and recreate ourſelves, letting her ſtand ſtill under all her Sails. It was flat extraordinary large Ice, the worſt to deal withal that we had yet found. I meaſured ſome Pieces, which I found to be one thouſand of my Paces long.

This was the firſt Day that our Men began to murmur, thinking it impoſſible to get either forwards or backwards. Some were of Opinion that it was all ſuch Ice betwixt us and the Shore: Others, that the Bay was all covered over, and that it was a Doubt whether we could get any Way, or to any Land to winter in. The Nights were long, and every Night it freezed ſo hard that we could not ſail by Night, nor in the thick foggy Weather. I comforted and encouraged them the beſt I could; and to put away thoſe Thoughts we drank a Health to his Majeſty on the Ice, not one Man in the Ship, and ſhe ſtill under all her Sails. I muſt confeſs that their Murmuring was not without Reaſon; wherefore doubting that we ſhould be frozen up in the Sea, I ordered that Fire ſhould be made but once a Day, and that with but a certain Number of Shides that the Steward ſhould deliver to the Cook by Tale, the better to prolong our Fuel whatſoever ſhould happen.

On the 30th we made ſome Way through the Ice, heaving the Ship with our Shoulders, and with Mauls and Crows of Iron breaking the Corners of the Ice to make Way as we got forwards. The Water ſhoaled apace, ſo that I believed it to be ſome Iſland. At Noon we obſerved through the Fog, with the Quadrant upon a Piece of Ice, and were in Latitude 58 Degrees 54 Minutes, our Depth thirty Fathoms. We put out Hooks to try to catch ſome Fiſh, but to no Purpoſe, for there are none in this Bay. On the 31ſt we laboured as before, and got ſomething forward. At Noon we were in Latitude 58 Degrees 40 Minutes, our Depth twenty-three Fathoms. It was very thick hazy Weather, or elſe I think we ſhould have ſeen the Land.

8. On the 1ſt of *Auguſt* the Wind came up at Weſt, which drove us to the Eaſtward, where our Depth increaſed to 35 Fathom. At Noon, by Obſervation with the Quadrant on the Ice, we were in Latitude 58 Degrees 45 Minutes. At 6 o'Clock this Evening we might perceive the Ice to heave and ſet a little, which was occaſioned by a ſwelling Sea that came from the South-weſt. This did comfort us very much, hoping ſhortly we ſhould get out of the Ice. On the 2d it blew hard at South-weſt, and yet we could not feel the ſwelling Sea, which did again quench the Hopes we had formerly conceived. On the 3d we ſaw a little open Water to the North-weſtward, and felt a Sea from thence, which doth aſſure us that there is an open Sea to the Weſtward. On the 5th we ſaw the Sea clear, but could by no Means work ourſelves to it with our Sails, wherefore about 6 in the Evening we let fall an Anchor in 50 Fathom Water, and ſtood all with Poles and Oars to fend off the Ice and let it paſs to Leeward, and continued this Labour all Night. In the Morning the Wind came up at North-weſt, and we weighed with much Joy, as hoping now to get into an open Sea to the Southward. This by Noon we had done, and were in Latitude 58 Degrees 28 Minutes, very free of Ice. The Wind larged upon us, ſo that we ſtood away North-weſt to get us as high Northward as we could, and ſo come coaſting to the Southward. We went to Prayer and to give God Thanks for our Delivery out of the Ice. On the 9th being in Latitude 59 Degrees 40 Minutes, we came again to the Ice which lay very thick to North, ſince we came out of the Ice our Depth increaſed to 110, and ſince decreaſed again, ſo that I think we approached towards the Shore. The 10th proved very foggy Weather, the Wind contrary, and the Water ſhallowing apace, we came to an Anchor in 22 Fathom. On the 11th in the Morning we weighed and made in for the Shore, and about Noon ſaw the Land, our Depth being 16 Fathom in Latitude 59 Degrees 40 Minutes. The Land to the North of us did trend North by Eaſt, and ſo made a Point to the Southward, and trending away Weſt by South, which we followed, taking it for that Place which was formerly called *Hubbart's Hope*, and ſo it proved indeed, but it is now hopeleſs. The Tide ſet in the Middle of the Bay Eaſt and Weſt, as we have often tried by our Lead aground but near the Shore, as they forced by the Land; I am of Opinion, that in the Ocean or large Bays the Tide naturally ſat Eaſt and Weſt, and that this gives little Hope of a Paſſage. The greateſt Depth we had in the Bay was 110 Fathom, and ſo ſhoaling as you approach the Land, we coaſted round this forementioned little Bay, which is 18 Leagues deep in 8 and 6 Fathom, and in the Bottom of it we were two Fathom and a half Water, and ſaw the firm Land almoſt round about us. Then we proceeded to the Southward 6 and 7 Fathoms Water, within Sight of the Breach of the Shore keeping the Lead continually going, and in the Night we came to an Anchor.

This Night having little Wind we came to an Anchor with our Kedger, but in weighing of him we loſt him, having no more aboard us. The 12th we were in Latitude 58 Degrees 46 Minutes, ſome two Leagues from the Shore, the Variation is about 17 Degrees. On the 13th in the Afternoon it being ſomething hazy, we ſaw ſome Breaches a-head of us, our Depth was 9 and 10 Fathom, and looſing to clear ourſelves of them, we ſuddenly ſtruck upon the Rocks, the Ship being under our two Top-Sails, Fore-Sail and Sprit-Sail, with a freſh Gale of Wind. In this dreadful Accident we ſtruck all our Sails amain, and it pleaſed God to ſend two or three good ſwelling Seas, which heaved us over the Rocks into three Fathom, and preſently into three Fathom and an half, where we chop'd to an Anchor and tried the Pumps, but we found ſhe made no Water, though ſhe had three ſuch terrible Blows that we thought her Maſt would have ſhivered to Pieces, and that ſhe had been aſſuredly bulged. We hoiſted the Boat over-board and double mann'd her to go and found a Way out of this perilous Place; ſhe was no ſooner gone but there aroſe a Fog, ſo that we were obliged to ſpend ſome Powder that ſhe might hear whereabouts we were. The Wind dull'd ſomething, otherwiſe it had been doubtful whether ſhe could ever have recovered us again. After ſhe had been abſent two or three Hours, ſhe brought us Word that it was all Rocks and Breaches round about us, and that withal, ſhe had found a Way where there was no leſs than two Fathom and an half Water, and that afterwards the Water deepened; we preſently weighed and followed the Boat, and paſſed over two Ledges of Rocks on which there were but 14 Feet Water, then it deepened to three or four, and ſo to 14 Fathom, then it ſhoaled again to nine.

It being now dark, we came to an Anchor where we rid all the Night. In the Morning the Wind came contrary, ſo that we could not go that Way we intended to clear ourſelves; and therefore we went to work to fit our Holds, to ſplice our Cables, and made ready two Shot, and ſo placed them in the Hold that they might on all Occaſions run clear, the Ends of them being faſtened to the Main-maſt. We alſo looked to our Anchors and fitted our ſpare ones. We got out our long Boat from betwixt the Decks, which was very much broken and bruiſed. The Carpenter went to fit her, for I intended to tow the Shallop a-ſtern, and to have the Boats ready at an Inſtant, either to lay out Anchors, or to be ſerviceable to what God ſhould be pleaſed to try our Faith and Patience with, for in him was our only Truſt and Hope.

At Noon, in Latitude 57 Degrees 45 Minutes, we could ſee the Land from the North-weſt to the South-eaſt by Eaſt, with Rocks and Breaches, and the Rocks that we came over dry above Water, whereby I knew it flows here above two Fathoms at leaſt. At Noon I ſent the Boat off to ſound to the Eaſtward, becauſe the Water ſhallowed when we came to an Anchor. She brought us Word the ſhalloweſt Water ſhe had been in was ſeven Fathom: We intending thereupon to weigh, the Wind came Eaſt early, ſo that we could not ſtir, but lay here the 14th all Night with a ſtiff Gale of Wind. On the 15th in the Evening our Cable rubbed off, by Reaſon of which perilous and ſudden Accident, in which we had not Time to put a Buoy to it, we loſt our Anchor, and were driven into four Fathom Water before we could ſet our Sails. When we had done we ſtood South-ſouth-eaſt, the Wind being at Eaſt, but the Water ſhallowed to three Fathom Water, then we ſtood North-north-eaſt, and it deepened by Degrees to 10 Fathom, and becauſe it grew dark they came to an Anchor, and rid there all Night.

9. On the 16th in the Morning the Wind came up at North, a freſh Gale, and we weighed and made ſail; by 9 o'Clock it came to a very Storm, and we turned to and again in ten Fathom Water. In the Evening the Wind dulled, and we ſtood South-weſt to have a Sight of Port *Nelſon*, which Courſe we ſtood all Night, by the Stars being in the Latitude 57 Degrees 25 Minutes, the Variation about 17 Degrees. On the 17th in the Morning we ſtood South, and our Depth decreaſed to eight Fathom; at Noon we had good Obſervation, being in Latitude 57 Degrees 15 Minutes, and made Account that we were come ſix or ſeven Leagues of the Southern Side of Port *Nelſon*. Here the Appearance of the Water changed, and was of a ſandy red Colour: We ſtood into ſix Fathoms, and could not ſee the Land from Top-maſt Head; ſo Night coming on, and it beginning to blow hard at Eaſt by South, we ſtood in again to ten and twelve Fathom, where the Water was again of the uſual Colour of the Sea.

On the 18th, as the Wind and Weather favoured us, we ſtood in again South and came into thick Water, into eight, ſeven, and ſix Fathom, and then off again, ſo it grew foggy Weather, keeping our Lead continually going Night and Day. The 19th being clear ſun-ſhiny Weather, we ſtood in again into the thick Water into eight Fathom, where we came to an Anchor to try the Tides, for from the Top-maſt Heads we could not ſee the Land; we were at Noon, by good Obſervation, in Latitude 57 Degrees 20 Minutes, and the Tide ſet North-weſt-and-by-weſt, and South-eaſt by-eaſt. It ran two Knots and a half in two Glaſſes; I perceived that there were nothing but Shoals to the Land. In the Afternoon it began to blow, ſo that we had much ado to get up our Anchor; this done, we ſtood Eaſt-ſouth-eaſt, but the Water ſhallowed apace, and then we ſtood Eaſt and deepened a little. In the Evening the Wind came up at Weſt, and then we ſtood Eaſt-ſouth-eaſt into ten and eight, and afterwards South-eaſt as our Depth guided us by our Lead and the Colour of the Water into ſeven and ſix Fathom.

On the 20th at ſix in the Morning we ſaw the Land; it being very low Land, we ſtood in to five Fathom to make it the better, and ſo ſtood along it. At Noon we were in Latitude 57; we named it the *Principality of South Wales*, and drank a Health, of the beſt Liquor we had, to his Royal Highneſs Prince *Charles*, whom God preſerve; we ſtood along it, and came to a Point where it trends to the Southward, near to which Point there are two ſmall Iſlands. In the Evening it was calm, and we came to an Anchor; the Tide came as before. There we rid all that Night and the next Day. About nine at Night it was very dark and it blew hard.

We perceived by the Lead that the Ship drove, wherefore bringing the Cable to the Capſtang to heave in our Cable, for we thought we had loſt our Anchor, the Anchor hitched again, and upon the Chopping of a Sea threw the Men from the Capſtang; a ſmall Rope, in the Dark, had gotten foul about the Cable and about the Maſter's Leg too; but by the Help of God he cleared himſelf, tho' not without bruiſing. The two Mates were hurt, the one in the Head, the other in the Arm; one of our luſtieſt Men was ſtruck on the Breaſt with the Bar, that he lay ſprawling for Life; another had his Head betwixt the Cable, and hardly eſcaped. The reſt were flung where they were much bruiſed, but our Gunner, an honeſt and diligent Man, had his Leg taken betwixt the Cable and the Capſtang, which wrung off his Foot, and tore the Fleſh all off his Leg, and cruſhed the Bone to Pieces, and bruiſed his whole Body, in which miſerable Manner he remained crying till we had recovered ourſelves, and had Strength to clear him. Whilſt we were putting him and the reſt down to the Chirurgeon, the Ship drove into ſhallow Water, which put us all in Fear, we being ſo ſorely weakened by the Blows which had hurt eight of our Men. It pleaſed God that our Anchor held again, and ſhe rid it out all Night. By Midnight the Chirurgeon had taken off the Gunner's Leg at the gartering Place, and dreſſed the others that were hurt and bruiſed, after which we comforted each other as well as we could.

On the 22d we weighed and ſtood a little off into deeper Water, expecting a better Wind, which in the Afternoon favoured us; we ſtood in again for the Shore, and we proceeded along it; it is very ſhallow about 14 Leagues off and full of Breaches. On the 23d at Noon we were in Latitude 56 Degrees 28 Minutes; in the Evening the Wind came contrary, and we were fain to turn to and again. All this Month the Wind was very variable, and continued not long upon one Point, yet it happened ſo that we could get but little forward.

10. On the 26th there ſprung up a fine Gale at Weſt, but thick Weather nevertheleſs; we ſtood in to ſeven and ſix Fathom, the Water very thick. At Noon it cleared, and we could ſee that we were in a little Bay, the Land being almoſt round about us; we ſtood out of it, and ſo along it in Sight till the 27th in the Morning, when we came to higher Land than we had yet ſeen ſince we came from *Nottingham Iſland*; we ſtood in to it, and came to an Anchor in five Fathom; I ſent off the Boat well manned and armed, with Order in Writing what they were to do, and a Charge to return again before Sun-ſet. The Evening came, and no News of our Boat; we ſhot, and made alſo Fires, but had no Anſwer, which much perplexed us, fearing there had ſome Diſaſter befallen her through Careleſsneſs, and in her we ſhould loſe all, we aboard at preſent not being able to weigh our Anchor nor ſail the Ship.

At laſt we ſaw a Fire upon the Shore, which made us the more doubtful, becauſe they did not anſwer our Shot nor falſe Fires with the like; we thought it had been the Savages that triumphed in their Conqueſt; at length they came all ſafe and well, and excuſed themſelves, that upon their coming on Shore it ebbed ſo ſuddenly, that a Bank of Sand was preſently dried, ſo that they could not come away till that was covered again, and with that they pacified me. They reported that there was great Store of Drift-wood on the Shore, and a good

Quantity growing on the Land. That they ſaw the Tracks of Deer and Bears, and ſtore of Fowl; of which they killed ſome, but no Sign of People. That they paſſed over two little Rivers, and came to a third, which they could not paſs. That it flowed very near three Fathom ſometimes, as appears by the Shore. That it was low Water at four o'Clock; that the Flood came from the North-weſt; and that it flowed half Tide, which both they and we had perceived by the Ship. At low Water we had but three Fathoms where we rid.

On the 29th in the Morning we made Account we had driven back again ſome ſixteen or eighteen Leagues, and in the Morning, as it cleared, we ſaw a Ship to Leeward of us three or four Leagues, ſo we made ſail and bore up with her; ſhe was then at anchor in thirteen Fathom. It was his Majeſty's Ship, commanded by Captain *Fox*; I ſaluted him according to the Manner of the Sea, and received the like of him; ſo I ſtood in to ſee the Land, and thought to tack about, and keep the Weather of him, and to ſend my Boat aboard of him; but the Wind ſhifted, ſo that for that Time I could not. Yet in the Evening I came to weather of him, who preſently weighed, and ſtood off with me till Midnight, and then we ſtood in again. In the Morning Captain *Fox* and his Friends came aboard of me, where I entertained them in the beſt Manner I could, and with ſome freſh Meat I had gotten from the Shore. I told him that I had named the Land the *Principality of South Wales*. I ſhewed him how far I had been to the Eaſtward, where I had landed, and, in brief, I made known to him all the Dangers of this Coaſt, as far as I had been. He told me he had been in *Port Nelſon*, and had made but a curſory Diſcovery hitherto; and that he had not landed, nor had many times ſeen the Land. In the Evening after I had given his Men ſome Neceſſaries, with Tobacco, and other things they wanted, he departed aboard his Ship, and the next Morning ſtood away South-ſouth-weſt, ſince which Time I never ſaw him. The Wind ſometimes favouring me, I ſtood in for the Shore, and ſo proceeded along. The Month of *Auguſt* ended with Snow and Hail; the Weather being as cold as at any Time I have felt in *England*.

11 *September* the 1ſt we coaſted along the Shore in ten Fathom, when it cleared in ſight of Land; at length the Water ſhallowed to ſix and five, and, as it cleared, we ſaw it all Breaches to Leeward, ſo we hulled off North-north-eaſt, but ſtill raiſed Land; by Night we had much ado to get out of this dangerous Bay. At Midnight the Wind came up at South, and ſo we took in our Sails, and let the Ship drive to the Northward, into deeper Water. This Day was the firſt Time the Chirurgeon told me that there were diverſe of the Men tainted with Sickneſs. At Noon we were in Latitude 55 Degrees 12 Minutes.

On the 2d we ſtood in for the Shore; but as we came into ſhallow Water it began to ſhew the Weather threatening a Storm, wherein we were not deceived; for in ſtanding off we had a violent one. By Midnight it broke up, and the 3d in the Morning we ſtood in for the Shore, and by eleven we ſaw it; here we found the Land to trend South-ſouth-eaſt, and South, ſo that we knew that we were at a Cape Land, and named it *Henrietta Maria*, by her Majeſty's Name, who had before named our Ship. At Noon we were in Latitude 55 Degrees 5 Minutes, and that is the Height of the Cape. From Port *Nelſon* to this Cape the Land trends generally Eaſt-ſouth-eaſt, but makes with Points and Bays, which in the Particulars doth alter it, a Point two or three; the Diſtance is about one hundred and thirty Leagues. The Variation at this Cape, taken by Amplitude, is about 16 Degrees, a moſt ſhallow and perilous Coaſt, in which there is not one Harbour to be found. The 3d Day in the Afternoon, we had a Storm at North, which continued till Midnight with extreme Violence. The 4th in the Morning the Storm being broke up, we ſtood in again South-weſt, the Weather being very thick, and we continued ſounding. By Noon it cleared, and we ſaw the Land; here it treaded South-eaſt, and the Tides ſat along it with a quick Motion. In the Evening there came a great rolling Sea out of the North-north-eaſt, and at eight o'Clock it blew very hard at South-eaſt; and by Reaſon of the Encounter of the Wind, and this great Sea, the Sea was all in a Breach; and to make up a perfect Tempeſt, it did ſo lighten, ſnow, rain, and blow all the Night long, that I was never in the like. We ſhipped many Seas, but one more dangerous, which racked us fore and aft; and I verily thought it had ſunk the Ship, it ſtruck her with ſuch Violence. The Ship did labour moſt terribly in this Diſtraction of Wind and Waves; and we had much ado to keep all things faſt in the Hold, and betwixt Decks.

The 5th in the Morning the Wind ſhifted South-weſt, but changed not its Condition; in the Afternoon it changed again to the North-weſt, with that tearing Violence, that not I, nor any that were then with me, ever ſaw the Sea in ſuch a Breach. Our Ship was ſo tormented, and ſo laboured with taking it in on both Sides, and at both Ends, that we were in moſt miſerable Diſtreſs, in this ſo unknown a Place; at eight o'Clock in the Evening the Storm broke up, and we had ſome Quietneſs in the Night following, not one having ſlept a Wink in twenty Hours before. If this Storm had continued Eaſterly, as it was at firſt, without God's Goodneſs we had all periſhed.

On the 6th the Wind was at South-weſt, ſo that we could do no good to the Windward. We ſpent the Time therefore in trimming our Ship; we brought all our Coals, which for the moſt Part was great Coal, aft, as we alſo did ſome other things, and all to lighten her afore. Others picked our Bread, whereof there was much wet; for do what we could we ſhipped abundance of Water between Decks, which ran into the Hold, and into our Bread-Room; for the Sea ſo continually overracked us, that we were like *Jonas* in the Whale's Belly. We overlooked our Tacks and Sheets, with other Riggings of Streſs, becauſe that henceforwapd they were to look for no other but Winter Weather. This Evening our Boatſwain, a careful Man, and one that had laboured extremely theſe two or three Days, was very ſick, ſwooning away three or four Times, inſomuch that we thought he would preſently have died.

The 7th in the Morning the Wind came up to South-weſt, and we ſtood away South weſt, under all the Sail that we could make. In this Courſe we ſaw an Iſland, and came cloſe aboard it, and had twenty Fathom Water, which was ſome Comfort to us; for hitherto we could not come within four or five Leagues to the Shore at that Depth. This Iſland ſtands in 54 Degrees 10 Minutes. The Afternoon we ſtood away South-weſt, and in the Evening had the ſhallowing of the Weſtern Shore, in eight, ten, and ſeven Fathom, but it was ſo thick, that we could not ſee the Land. It is about fourteen Leagues between this Iſland and the Main. The 8th was foggy and calm, which ſo continued till the 9th in the Morning, the Wind then coming up at South-ſouth-weſt. In the Evening the Water ſhallowed to ten and nine Fathoms, wherefore we ſtood off and on all Night. The 10th we made it, finding it an Iſland of about eight or nine Leagues long. It ſtands in Latitude 53 Degrees 5 Minutes, and about fifteen Leagues from the Weſtern Shore. The Part of it that we coaſted, trends Weſt-north-weſt, I named it my Lord *Weſton's Iſland*. We ſtood ſtill away to the Eaſtward, it being foggy Weather. In the Aftenoon we deſcried Land to the Eaſtward of us, which made like three Hills. Towards them we ſailed, keeping our Lead ſtill going and very circumſpect.

At length we alſo ſaw Land to the Southward of us, whereupon we loofed up and made to that by Courſe, as we had ſet it in the thick Fog. We came in among ſuch low broken Grounds, Breaches, and Rocks, that we knew not which Way to turn us; but, God be thanked, it was but little Wind, and ſoon came to an Anchor. Soon after it cleared, at which Time we could ſee nothing but Sands, Rocks, and Breaches, round about us, that Way only excepted which we came in. I ſent preſently the Boat to ſound among the Sholes and Rocks, that if we ſhould be put to Extremity, we might have ſome Knowledge which Way to go. This Night proved calm, and fair Weather, and we rid quietly.

12. On the 11th, in the Morning, I went in the Boat aſhore myſelf, and ſent the Boat about among broken Grounds, to ſound; I found the Land utterly barren, even of that which I thought eaſily to be found; which was Scurvy-graſs, Sorrel, or ſome Herb or other, to have refreſhed our ſick People. I could not perceive that the Tide flowed here ordinarily above two Feet. There was much Drift-Wood on the Shore, and ſome of it drove up very high in the North-ſide of the Iſland, where I judged that the Storms were very great at North, in the Winter. Thus I returned aboard, and ſent many of our ſick Men to another Part of the Iſland, to ſee if themſelves could fortunately find out any Relief for their Grief. At Noon, by good Obſervation, we were in Latitude 52 Degrees 45 Minutes. In the Evening our Men returned comfortleſs, and then we weighed, and ſtood to the Weſtward, coming to an Anchor under another Iſland, in twenty Fathom.

The 12th in the Morning it began to blow hard at South-eaſt, which was partly off the Shore, and the Ship began to drive, it being ſoft oozy Ground We heaved in our Anchor thereupon, and ſailed under two Courſes. Whilſt moſt were buſy in heaving out the Top-Sails, ſome, that ſhould have had eſpecial Care of the Ship, ran her aſhore upon the Rocks, out of mere Careleſſneſs in looking out and about, or heaving of the Lead, after they had ſeen Land all Night long, and might even then have ſeen it, if they had not been blind with Self conceit, and been enviouſly oppoſite in Opinion. The firſt Blow ſtruck me out of a deep Sleep, and I, running out of my Cabin, thought no other, at firſt, but I had been wakened to provide myſelf for another World.

After I had controuled a little Paſſion, and had checked ſome bad Council that was given me to revenge myſelf upon them that had committed this Error, I ordered what ſhould be done to get off theſe Rocks. Firſt we hawled all our Sails back, but that did no good, but made her beat the harder. Whereupon we ſtruck all our Sails amain, and furled them up cloſe, tearing down our Stern to bring the Cable through the Cabin, to Capſtang, and ſo laid out an Anchor to heave her aſtern. I ordered all the Water in the Hold to be ſtaved, and ſet ſome to the Pumps to pump it out, and intended to do the like with our Beer; others I put to throw out all our Coals which was ſoon and readily done. We coiled out our Cables into the Long-boat, all this while the Ship beating ſo furiouſly, that we ſaw ſome of the Sheathing ſwim by us. Then we ſtood, as many as could, to the Capſtang, and heaved with ſuch a good Will, that the Cable broke, and we loſt our Anchor, but with all Speed therefore we put another. We could not now perceive whether ſhe leaked or no, and that by Reaſon we were employed in pumping out the Water, which we had bulged in Hold, though we feared ſhe had received her Death's Wound. Therefore we put into the Boat the Carpenter's Tools, a Barrel of Bread, a Barrel of Powder, ſix Muſkets, with ſome Matches and a Tinder-Box; Fiſh-Hooks and Lines; Pitch and Ockham; and, to be brief, whatever could be thought on in ſuch an Extremity. All this we ſent aſhore to prolong a miſerable Life for a few Days. We were five Hours thus beating, in which Time ſhe ſtruck an hundred Blows, inſomuch that we thought every Stroke had been the laſt that it was poſſible ſhe could have endured. The Water we could not perceive all this while to flow any thing at all.

At length it pleaſed God ſhe beat over all the Rocks, though yet we knew not whether ſhe was ſtaunch; whereupon we went to pumping all Hands, till we made the Pumps ſuck, and then we ſaw how much Water ſhe made in a Glaſs. We found her to be very leaky, but we went to Prayer, and gave God Thanks it was no worſe; and ſo fitted all things again, and got further off and came to an Anchor. In the Evening it began to blow very hard at Weſt-ſouth-weſt, which if it had done whilſt we were on the Rocks, we had loſt our Ship without any Redemption. With much ado we weighed our Anchor, and let her drive to the Eaſtward, among the broken Ground and Rocks, the Boat going before ſounding; at length we came among Breaches, and the Boat made Signs to us that there was no going further among the Rocks, therefore we again came to an Anchor, where we rid all Night, and where our Men, which were tired out with extreme Labour, were indifferent well refreſhed. Here I muſt obſerve, that when the Wind was at South, it flowed very little, or no Water at all, ſo that we could not bring our Ship aground to look to her, for we pumped almoſt continually.

13. The 13th at Noon we weighed, and ſtood to the Weſtward, but in that Courſe it was all broken Ground, Sholes, and ſunken Rocks; ſo that we wondered how we came in among them in a thick Fog. Then we ſhaped our Courſe to the Northward, and after ſome Conſultations with my Aſſociates, I reſolved to get about this Land, and ſo to go down into the Bottom of *Hudſon's Bay*, and ſee if I could diſcover a Way into the River *Canada*; and if I failed in that, then to winter on the main Land, where there is more Comfort to be expected than among the Rocks or Iſlands. We ſtood along the Shore in Sight of many Breaches. When it was Night we ſtood under our Fore-ſail, the Lead ſtill going. At laſt the Water ſhallowed upon us to ten Fathom, and it began to blow hard. We tacked about, and it deepened to twelve or fourteen Fathom, but by and by it ſhallowed again to eight Fathom; then we tacked about again, and ſuddenly it ſhallowed to ſix and five; ſo we ſtruck our Sails amain, and came to an Anchor, reſolving to ride it for Life and Death. We rid all Night, and thought our Ship would have been torn to Pieces. At Break of Day, the 14th, we were joyful Men when we could look about; we deſcried an Iſland ſome two Leagues off at Weſt and by North, and this was the Shole that lay about it. Here ran a diſtracted, but yet a very quick, Tide, of which we taking the Opportunity, got up our Anchor, and ſtood North-weſt, to clear ourſelves of this Shole; in the Afternoon the Wind came up at North-eaſt, and we ſtood along the Weſtern Shore, in Sight of a Multitude of Breaches. In the Evening it began to blow a Storm, and the Sea went very high, and was all in a Breach. Our Shallop, which we now towed at Stern, being moored with two Hawſers, was ſunk, with her Keel up. This made our Ship to hull very broad, ſo that the Sea did continually over-rack us. Yet we endured it, and thought to recover her. All Night the Storm continued with Violence, and with ſome Rain; in the Morning it was very thick Weather.

The Water ſhoaled apace, with ſuch an over-grown Sea withal, that a Sail was not to be endured; and what was worſe, there was no truſting to an Anchor. Now therefore we began to prepare ourſelves, how to make a good End of a miſerable tormented Life. About Noon, as it cleared up, we ſaw two Iſlands under our Lee, whereupon we bore up to them, and ſeeing an Opening betwixt them, we endeavoured to get into it before Night, for that there was no hope of us if we continued out at Sea that Night, therefore come Life, or come Death, we muſt run this Hazard. We found it to be a good Sound, where we rid all Night ſafely, and recovered our Strengths again, which were much impaired with continual Labour; but before we could get into this good Place, our Shallop broke away, being moored with two Hawſers, and we loſt her to our great Grief. Thus now we had but the Ship's Boat, and ſhe was all torn and bruiſed too. This Iſland was the ſame that we had formerly coaſted the Weſtern Side of, and had named Lord *Weſton's Iſland*. Here we remained till the 19th, all which Time it did nothing but ſnow and blow extremely, inſomuch that we durſt not put our Boat overboard.

This Day the Wind ſhifted North-north-eaſt, and we weighed and ſtood to the Southward, but by Noon the Wind came up at South, and ſo we came to an Anchor under another Iſland; on which I went on Shore, and named it *The Earl of Briſtol's Iſland*. The Carpenter wrought hard in repairing our Boat, whilſt I wandered up and down in this deſart Iſland. I could not perceive that there had been any Savages on it, and in brief, we could neither find Fiſh, Fowl, nor any Herb upon it; ſo that I returned comfortleſs again. The Tides high, about ſome ſix Feet, now the Wind is northerly. The Flood comes from the North, and it flows Half Tide; the full Sea this Day was at one o'Clock. Here, ſeeing the Winds continue ſo northerly that we could not get about to go into *Hudſon's Bay*, we conſidered again what was beſt to do, to look out for a wintering Place; ſome adviſed me to go for *Port Nelſon*, becauſe we were certain that there was a Cove where we might bring in our Ship. I liked not that Counſel, for that is a moſt dangerous Place, and it might be ſo long ere we got thither, that we might be debarred by the Ice; moreover, ſeeing it was ſo cold here that every Night our Rigging froze, and ſometimes in the Morning we ſhoveled away the Snow, half a Foot thick, off our Decks; and in that Latitude too I thought it far worſe than the other Place: I reſolved thereupon to ſtand again to the Southward, there to look for ſome little Creek, or Cove, for our Ship.

14. On the 21ſt the Wind came up at North, and we weighed although it was a very thick Fog, and ſtood away South-weſt, to clear ourſelves of the Sholes, that were on the Point of this Iſland. This Iſland is in Latitude 53 Degrees 10 Minutes. When we were clear we ſteered away South. At Noon the Fog turned into Rain, but very thick Weather, and it thundered all the Afternoon, which made us fear a Storm, yet we ventured to proceed. In the Evening the Wind blew hard, therefore we took in all our Sails, and let her drive to the ſouthward, heaving the Land every Glaſs. Our Depth, when we took in our Sails, was thirty Fathom, and it increaſed to forty-five, which was a great Comfort to us in the Dark. At Midnight our Depth began ſuddenly to decreaſe, and as faſt as the Lead could be heaved it ſhoaled to twenty Fathom, wherefore we hop'd to come to an Anchor, and trimmed our Ship aft, to mount to the Sea, and fitted all Things to ride it out. There was no Need to bid our Men watch now. We rid it out all Night although it blew very hard.

The 22d in the Morning, when we could look about us, we ſaw an Iſland under our Lee ſome Leagues off, all Sholes and Breaches between us and it. At Noon, by the Help of the windward Tide, we attempted to heave up our Anchor, although the Sea went Mountains high; joining all our Strength therefore with our beſt Skills, God be thanked, we had it up; but before we could ſet our Sails we were driven into nine Fathoms, endeavouring thereupon to double a Point, to get under the Lee of this Iſland, the Water ſhoaled to five Fathoms; but when we were about it, deepened again; and we came to an Anchor in a very good Place, and it was well for us that we did; for the Wind increaſed to a very Storm; here we rid well all Night, and recovered our Strength again. The laſt Night, and this Morning it ſnowed and hailed, and was very cold; nevertheleſs I took the Boat and went aſhore to look for ſome Creek or Cove to carry in our Ship; for ſhe was very leaky, and the Company became very ſickly and weak with much pumping and extreme Labour. This Iſland, when we came to the Shore, was nothing but Ledges of Rocks and Banks of Sand, and there was a very great Surf on them; nevertheleſs I made them row through it: And on Shore I got with two more, and made them row off without the Breaches, and come to an Anchor and ſtay for me. I made what Speed I could to the Top of a Hill, to diſcover; but could not ſee what we looked for; and becauſe it began to blow hard, I made haſte toward the Boat again. I found that it had ebbed ſo low that the Boat could not, by any Means, come near Shore for me, ſo that we were forced to wade through the Surf and Breaches to her, in which ſome got ſuch a Cold that they complained of it to their dying Day.

But now it began to blow hard, ſo that we could but get little to Windward toward our Ship, for the Wind was ſhifted ſince we went aſhore; and return to the Shore we could not, by Means of the Surf. We rowed for Life: They in the Ship let out a Buoy by a long Warp, and by God's Aſſiſtance we got to it, and ſo hawled up to the Ship, where we all rejoiced together. This was a Premonition to us to be careful how we ſent off the Boat in ſuch Weather. I named this Iſland *Sir Thomas Roe's Iſland*; it is full of ſmall Wood, but in other Benefits not very rich, and ſtands in Latitude 52 Degrees 10 Minutes. At Noon we weighed, ſeeing an Iſland that bore South-ſouth eaſt of us ſome four Leagues off, which was the higheſt Land we had yet ſeen in this Bay; but as we came near, it ſuddenly ſhoaled to ſix, five, and four Fathom; wherefore we ſtruck our Sails amain, and chopped to an Anchor, but it was very foul Ground; and when the Ship was wound up we had but three Fathom Water at her Stern; as it cleared, we could ſee the Breaches all along under our Lee; holding it not ſafe therefore to ſtay long here, we ſettled every thing, in order for the Ship to fall the right Way. We had up our Anchor, got into deeper Water, and ſtood up again for *Sir Thomas Roe's Iſland*, which by Night we brought in the Wind of us, ſome two Leagues off; which did well ſhelter us. The Tides run very quick here, and the Times of running Ebb or Flood, very uncertain; their Currents are likewiſe ſo diſtracted, that in the Night there is no ſailing by the Compaſs, therefore we were forced to ſeek, every Night, ſome new Place of Security, to come to an Anchor.

The 24th in the Morning it loured, and threatened a Storm, which made us, with the windward Tide, weigh, to get near under the Iſland. It was very foggy Weather, and as we ſtood to the North-eaſtward we came to uncertain Depths; at one Caſt twenty Fathom, the next ſeven, then ten, five, eight, and three; and coming to the other Tack, we were worſe than we were before. The Currents defeating our Judgments in the thick Fog, when we could ſee no Land-marks. It pleaſed God that we got clear of them, and endeavoured to get under the Lee of the Iſland; which being not able to do, we were obliged to come to an Anchor in thirty-five Fathom ſome two Leagues off the Shore: All this Afternoon, and indeed all Night too, it ſnowed, hailed, and was very cold. The 25th we weighed, and thought to get to the eaſtward; but as we tacked to and again, the Wind ſhifted ſo in our Teeth, that it put us within a Quarter of a Mile of the very Shore, where we chopped to an Anchor, and rid it out for Life and Death. Such Miſeries as theſe we endured among the Sholes and broken Grounds, or rather more deſperate than I have related, with Snow, Hail, and ſtormy Weather, and colder than ever I felt in *England* in my Life. Our Sheet Anchors were down twice or thrice in a Day; which extreme Pains made a great Part of our Company ſickly. All this laſted with us until the 30th of this Month *September*, which we thought would have put an End to our Miſeries, for now we were driven among Rocks, Sholes, Overfalls, and Breaches round about us, that which Way to turn we knew not, but there rid among them in Extremity of Diſtreſs.

15. The 1ſt of *October* was indifferently fair Weather, and with a windward Tide our Boat went to ſound a Channel, to help us out of this dangerous Place; the Boat within two Hours returned, and told us ſhe had been a Way where there was not leſs than ten Fathom; we thereupon weighed, but found it otherwiſe, and came among many ſtrange Races and Overfalls, upon which there went a very great and breaking Sea; as we proceeded, the Water ſhoaled to ſix Fathoms. Well! there was no Remedy, we muſt go forward, ſeeing there neither was any riding, and as little Hope to turn any Way with a Sail, but that there appeared preſent Death in it: It pleaſed God ſo to direct us that we got through it. The Water ſometimes deepened to twenty Fathom, then upon a ſudden it ſhoaled to ſeven, ſix, and five Fathoms, ſo that we ſtruck all our Sails amain, and chopped to an Anchor, where we rid till Midnight for Life and Death, it blowing a mercileſs Gale of Wind, and the Sea going very lofty, and all in a Breach; the Ground was foul Ground too, inſomuch that we doubted our Cable every Minute.

The 2d in the Morning there was little Wind, whereupon,

upon, taking the Opportunity of the Tide, the Boat went forth to ſound, which returning again in two Hours told us, they had ſounded about that Shole, and had found a Place of ſome Safety to ride in, and had been in no leſs Water than five Fathom. We weighed, and found our Cable galled in two Places; which had ſoon failed us if the Weather had continued. We ſtood the ſame Way that the Boat directed us; but it proved ſo calm that we came to an Anchor in 18 Fathom, hooked the Boat, and went on Shore on an Iſland that was on the ſouthward of us; which I named the *Earl of Danby's Iſland:* From the higheſt Place in it I could ſee all broken Grounds and Sholes to the ſouthward, and rather worſe, than any thing better, than that which I had been in. I found that the Savages had been upon it, and that it was full of Wood. I made haſte to ſound the Bay, for fear of Sholes and ſudden Rocks; but found it indifferent good.

Toward the Evening it began to blow hard, whereſore we made towards the Ship; ſhe put forth her Buoy, and a Warp, and we rowing for Life reached her, wore to Leeward of her; but by getting hold of the Warp, we hauled up to her. The Boat we left half full of Water, ourſelves being as wet as drowned Rats; and it made us the more rejoice that we had eſcaped ſo great Danger; all Night it blowing a moſt violent Gale of Wind, with Snow and Hail. On the 3d, about Noon, the Wind dulled, and we had up her Anchor, ſtanding farther into the Bay in four Fathom and an half Water; here we came again to an Anchor with our ſecond Anchor, for many of our Men are ſick, and the reſt ſo weakened that we can hardly weigh our Sheet-Anchor. I took the Boat and went preſently on Shore to ſee what Comfort I could find: This was the firſt time that I put Foot on this Iſland, which was the ſame that we afterwards wintered upon; I found the Tracks of Deer, and ſaw ſome Fowl; but that which rejoiced me moſt was, that I ſaw an Opening into the Land, as if it had been a River. To it we made with all Speed, but found it to be barred, and not a Foot Water at full Sea, on the Bay, and yet within a moſt excellent fine Harbour, having five Fathom Water. In the Evening I returned aboard, bringing little Comfort for our ſick Men, more than Hopes.

On the 4th it ſnowed very hard, yet I got aſhore and appointed the Boat to go to another Place (which made like a River) and to ſound it; in the mean time I went with four more ſome four or five Miles up into the Country, but could find no Relief for my Sick, but a few Berries only. After we had well wearied ourſelves, I returned to the Place I had appointed them to tarry for me; where at my coming I ſtill found her, ſhe having not been where I ordered her, for it had blown ſuch a ſevere Gale of Wind that ſhe could not row to Windward; thus we returned aboard with no good News. It continued foul Weather with Snow and Hail, and extremely cold till the 6th, when with a favourable Wind I ſtood in nearer to the Shore and moored the Ship. On the 7th it ſnowed all Day, ſo that we were fain to clear it off the Decks with Shovels, and it blew a very hard Storm withal; it continued ſnowing and very cold Weather, and it froze ſo that all the Bows of the Ship with her Beak-head were all Ice; about the Cables alſo was Ice as thick as a Man's Middle; the Bows of the Boat were likewiſe frozen half a Foot thick, ſo that we were fain to beat it off. The Sun ſhined very clear, and we bore the Topſails out of the Tops which were hard frozen in them into a Lump, ſo that there they hung a ſunning all Day in a very Lump, the Sun not having Power to thaw one Drop of them. After the Boat was fitted we rowed towards the Shore, but could not come near the Place where we were uſed to land, for it was all thick Water with the Snow that had fell upon the Sands that are dry at low Water; this made it ſo difficult to row that we could not get through it with four Oars; yet ſomething higher to the Weſtward we got aſhore. Seeing now the Winter to come thus extremely on upon us, and that we had very little Wood, I made them fill the Boat and went aboard, and ſent the Carpenter to cut Wood, others to carry it to the Water-ſide whilſt the Boat brought it on board; for I doubted that we ſhould not be able to go to and again with the Boat. It was miſerable cold already aboard the Ship, every Thing froze in the Hold and by the Fire-ſide; ſeeing therefore we could no longer make uſe of our Sails, it raiſed many Doubts in our Minds that we muſt ſtay and winter.

After we had brought as much Wood on board as we could conveniently ſtow, and enough, as I thought, to have laſted two or three Months, the ſick Men deſired that ſome little Houſe or Hovel, might be built on Shore, whereby they might be the better ſheltered to recover their Healths: I took the Carpenter and others whom I thought fit for ſuch a Purpoſe, and chuſing out a Place, they went immediately to work upon it; in the mean time, I accompanied with ſome others wandered up and down the Woods to ſee if we could diſcover any Signs of Savages, that we might the better provide for our Safeties againſt them; we found no Appearance that there were any upon this Iſland nor near it; the Snow by this Time was half Leg high, and through it we returned comfortleſs to our Companions, who had all this Time wrought upon our Houſe; they on board our Ship took down our Top-ſails the mean while, and made great Fires upon the Hearth in the Hatch-way; ſo that having well thawed them, they folded them up and put them betwixt Decks, that if we had an Occaſion they might bring them again to Yard.

16. The 12th we took our Main-ſail from the Yard which was hard frozen to it, and carried it on Shore to cover our Houſe withal, having been forced to thaw it by a great Fire; by Night they had covered it, and had almoſt hedged it about, and the ſix Builders deſired to lie in it aſhore that Night, which I condeſcended unto, having firſt fitted them with Muſkets and other Furniture, and a Charge to keep good Watch all Night: They had on Shore two Buckhounds, a Dog and a Bitch, which I had brought out of *England*, to kill us ſome Deer, if happily we could find any. By the 13th at Night our Houſe was ready, and our ſix Builders deſired they might travel up into the Country to ſee what they could diſcover. On the 14th by Times in the Morning, being fitted with Ammunition and their Order to keep together, but eſpecially to ſeek out ſome Creek or Cove for the Ship, they departed. We on board took down our two Top-maſts and their Rigging, making Account, if we removed, to make uſe of our Fore-ſail and Miſen.

The 15th in the Evening our Hunters returned very weary, and brought with them a ſmall lean Deer in four Quarters, which rejoiced us all, hoping we ſhould have more of them to refreſh our ſick Men withal; they reported that they had wandered above twenty Miles, and that and had brought this Deer above twelve Miles, and that they had ſeen nine or ten more. The laſt Night they had a very cold Lodging in the Woods, and ſo it appeared, for they looked almoſt ſtarved, nor could they recover themſelves in three or four Days after; they ſaw no Sign of Savages nor of any ravenous wild Beaſts, nor yet any Hope of Harbour.

The 19th my Lieutenant and five more deſired they might try their Fortune in travelling about the Iſland, but they had far worſe Luck than the others, although they endured all Night, and had wandered very far in the Snow, and returned comfortleſs and miſerably diſabled with the Cold. But what was worſe than all this, they had loſt one of their Company, *John Barton*, our Gunner's Mate, who being very weary, merely to ſave the going about, had attempted to go over a Pond that was a Quarter of a Mile over, where when he was in the very Middle the Ice broke and cloſed upon him, and we never ſaw him more. Conſidering theſe Diſaſters, I reſolved to fiſh no more with a golden Hook for fear I ſhould weaken myſelf more with one Hunting than twenty ſuch dear Deers could do me Good. Being now aſſured that there were no Savages upon the Iſland, nor yet about us on the other Iſlands on the Main, as far as we could diſcover, and that the cold Seaſon was now in that Extremity that they could not come to us, if there were any, we comforted and refreſhed ourſelves by ſleeping the more ſecurely.

We changed our Iſland Garriſon every Week, for other refreſhing we were likely to have none till the Spring. From the 19th to the 20th it ſnowed and blowed ſo hard that the Boat could hardly venture on Shore, and but ſeldom land unleſs the Men waded in the thick congealed Water, carrying one another; we ſenſibly perceived withal, how we daily ſunk into more Miſeries. The Land was all deep covered with Snow, the Cold ſtrengthened and the thick Snow Water increaſed, and what would become of us, our moſt merciful God and Preſerver knew only. The 29th I obſerved an Eclipſe of the Moon with what Care poſſible I could, both in the Trial of the Exactneſs of our Inſtruments, as alſo in the Obſervation. This Month of *October* ended with Snow and bitter cold Weather.

17. On the firſt of *November* I caſt up Accounts with the Steward concerning Victuals, the third Part of our Time being this Day out. I found him an honeſt Man, for he gave me an Account every Week what was ſpent and what was ſtill in the Hold remaining under his Hand. I would take no Excuſe for Leakage or other Waſte, unleſs he daily ſhewed it to me. Every Month I made a new Survey, and every ſix Months put what he ſpared by itſelf, which now was at leaſt a Month's Proviſion of Bread, and a Fortnight's Peaſe, Fiſh, *&c.* The 3d Day the Boat endeavoured to get on Shore, but could not go through the congealed Water.

On the 4th they found a Place to get on Shore, and ſo once in two or three Days till the 9th, bringing Beer to our Men on Shore in a Barrel, which would freeze firmly in the Houſe in one Night; other Proviſions they had ſtore. The Ice Beer being thawed in a Kettle was not good, and they broke the Ice of the Ponds to come at Water to drink. This Pond Water had a moſt loathſome Smell with it, ſo that doubting leaſt it might be infectious, I cauſed a Well to be ſunk near the Houſe; there we had very good Water, which taſted, as we flattered ourſelves, like Milk. The 10th, having enough Boards for ſuch a Purpoſe, I ſet the Carpenter to work to make a Boat which we might carry over the Ice, and make uſe of her wherever there was Water. At Noon I took the Latitude of this Iſland by two Quadrants; which I found to be 52 Degrees. I urged the Men to make Traps to catch Foxes, for we daily ſaw many; ſome of them were pied black and white, whereby I gathered that there were ſome black Foxes, whoſe Skins I told them were of great Value, and I promiſed that whoever could take one of them ſhould have the Skin for his Reward; hereupon they made divers Traps, and waded in the Snow, which was very deep, to place them in the Woods.

The 12th our Houſe took Fire, but we ſoon quenched it; we were obliged to keep an extraordinary Fire Night and Day, and this Accident made me order a Watch to look to it continually, ſince if our Houſe and Cloathing ſhould be burnt we ſhould be in a woeful Condition; I lay aſhore till the 17th, all which Time our Miſeries increaſed.

It ſnowed and froze extremely, at which Time we looking from the Shore towards the Ship, ſhe appeared a Piece of Ice in the Faſhion of a Ship, or a Ship reſembling a Piece of Ice; the Snow was all frozen about her, and all her Fore-part firm Ice, and ſo ſhe was on both Sides, alſo our Cables frozen in the Hawſe. I got me aboard, where the long Nights I ſpent with tormenting Cogitations, and in the Day-Time I could not ſee any Hopes of ſaving the Ship. This I was aſſured of, that it was impoſſible to endure thoſe Extremities long; every Day the Men muſt beat the Ice off the Cables, while ſome within, with the Carpenter's long calking Iron, digged the Ice out of the Hawſers: In which Work the Water would freeze on their Cloaths and Hands, and would ſo benumb them that they could hardly get into the Ship without being heaved in with a Rope. The 19th, our Gunner who, as may you remember, had his Leg cut off, languiſhed irrecoverably, and now grew very weak, deſiring that for the little Time he had to live he might drink Sack altogether, which I ordered he ſhould.

The 22d in the Morning he died, an honeſt and a ſtrong-hearted Man. He had a cloſe boarded Cabin in the Gun-room, which was very cloſe indeed, and as many Cloaths on him as was convenient, and a Pan of Coals and a Fire continually in his Cabin, notwithſtanding which Warmth his Plaiſters would freeze at his Wound, and his Bottle of Sack at his Head; we committed him, at a good Diſtance from the Ship, unto the Sea.

18. On the 23d the Ice increaſed extraordinarily, and the Snow lay in Flakes as it fell, much Ice alſo drove by us, yet nothing hard all this while. In the Evening, when the Watch was ſet, a great Piece of Ice came athwart the Hawſer, and four more followed after it, the leaſt of them a Quarter of a Mile broad, which in the Dark very much aſtoniſhed us, thinking it would carry us out of the Harbour upon the Shoal's eaſtern Point, which was full of Rocks. It was newly congealed two Inches thick, and we broke through it, the Cable and Anchor enduring an incredible Streſs, ſome Time ſtopping the whole Ice. We ſhot off three Muſkets, ſignifying to our Men aſhore that we were in Diſtreſs, who anſwered us again, but could not help us. By ten o'Clock it was all paſſed, nevertheleſs we watched carefully, and the Weather was warmer than we had felt it any Time this Month.

In the Morning by break of Day I ſent for our Men aboard, who ſhut up the Houſe and arrived by ten, being forced to wade through the congealed Water, ſo that they received the Boat with Difficulty. There drove by the Ship many Pieces of Ice, tho' not ſo large as the former, but much thicker: One Piece came foul of the Cable and made the Ship drive. As ſoon as we were clear of it we joined our Strength together, and had up our eaſtermoſt Anchor; and now I reſolved to bring the Ship aground, which I had delayed for the following Reaſons. Firſt, It was all ſtony Ground, ſome Stones lying dry three or four Feet above the Water, ſo that it was to be ſuſpected that it was the like all round. Secondly, It ordinarily flowed but two Feet and a half here, and if ſhe ſhould bed deep in the Sands, we could not ever come to dig her out again, for that ſhe would not be dry by four or five Feet. Thirdly, It was a cloſe Sand which might riſe with the Surface, or ſo mount about her, that all our weak Powers could not heave it away the next Spring. Fourthly, We doubted the Tides would not riſe ſo much in the Summer as they did now. Fifthly, We could not bring her out of the Tide's Way, which ran ſomething quick here, and the Ice beſide might drive and mount up upon her, and ſo overſet her, and tear her, and carry away her Planks and Iron Work; and alſo that we ſhould have nothing left to finiſh our Pinnace with. Sixthly, If it blew a Storm at North-weſt or thereabouts, the Water would flow ten Feet and upwards, and that Wind being off the Shore, it would blow away all the Ice, and there would come in an extraordinary great Surf about the Shoal to the eaſtward Point, which was occaſioned by a deep Overfall, beſides ſhe would beat extremely, and if ſhe were put up by the Sea or that Surf, it was very doubtful that we ſhould never heave her off again; for theſe Reaſons we endured all, ſtill hoping for ſome fortunate Accident: But now all our Deſigns we ſaw Fooliſhneſs, and that a great deal of Labour had been ſpent in vain by us. With the Flood we weighed our weſtermoſt Anchor, perceiving God's Aſſiſtance manifeſtly, becauſe it happened to be fine warm Weather, otherwiſe we had not been able to work.

The Wind was now South, which blew in upon the Shore, and made the loweſt Tides. We brought the Ship into twelve Feet Water, and laid out one Anchor in the Offing, and another in Shoal-Water, to draw her on Land at Command: Our Hope alſo was, that ſome Stones that were to the Weſtward of us would fend off ſome of the Ice; we then being about a Mile from the Shore. About ten o'Clock in the dark Night the Ice came driving upon us, and our Anchors came home. She drove ſome two Cables-length, and the Wind blowing on the Shore, by two o'Clock ſhe came aground and ſtopt much Ice, yet ſhe lay well all Night, and we took ſome Reſt.

The 25th the Wind ſhifted Eaſterly, and put abundance of Ice on us. When the Flood came we encouraged one another, and drew home our Anchor by main Force, under great Pieces of Ice, our Endeavour being to put the Ship to the Shore: But to our great Diſcomfort when the Half-Tide was made, the Ship drove among the Ice to the Eaſtward, do what we could, and ſo ſhe would on the Shoal of Rocks. As I have ſaid before, theſe two Days and this Day was very warm Weather, and it rained, which it had not yet but once done ſince we came hither, otherwiſe it had been impoſſible we could have wrought. Withal the Wind ſhifted alſo to the South, and at the very Inſtant blew a hard Puff, which ſo continued half an Hour. I cauſed the two Top-ſails to be had up from betwixt Decks, and we hoiſted them with two Ropes in all Haſte, and we found the Ship aſhore when ſhe had not half a Cable's Length to drive on the rocky Shoals. In the Evening we broke Way through the Ice, and put an Anchor to Shoreward in five Feet Water, to keep her to the Shore if poſſible. Here Sir *Hugh Willoughby* came into my Mind, who without Doubt was driven out of his Harbour in this Manner, and ſo ſtarved at Sea. But God was more merciful to us. About nine at Night the Wind came up at North-weſt, and blew a Storm. This Wind was off the Shore, which blew away all the Ice from about us long before we were afloat. There came in a great rolling Sea withal about the Point, accompanied with a great Surf on the Shore. And now we were left to the Mercy of the Sea on the Ground. By ten ſhe began to roll in her Deck, and ſoon after began to beat againſt the Ground. We ſtood at the Capſtang as many as could, others at the Pumps, for we thought that every fifth or ſixth Blow would have ſtaved her to Pieces. We heaved to the uttermoſt of our Strength to keep her as near the Ground as we could.

By reaſon of this Wind it flowed very much Water, and we drew her up ſo high that it was doubtful if ever we got her off again. She continued thus beating till two o'Clock the next Morning, and then ſhe ſettled again, whereupon we went to ſleep, ſeeing the next Tide we expected again to be tormented.

19. The 26th in the Morning-Tide our Ship did not float. After Prayers I called a Conſultation of the Maſter, my Lieutenant, the Mate's Carpenter and Boatſwain, to whom I propoſed, that now we were put to our laſt Shifts, and therefore they ſhould tell me what they thought of it, *viz.* Whether it was not beſt to carry all our Proviſions on Shore; and, when the Wind ſhould come Northerly, to draw her further off and ſink her? After many Reaſonings they allowed of my Purpoſe, and ſo I communicated it to the Company, who all willingly agreed to it; and ſo we fell to getting up of our Proviſions: Firſt, of our Bread, of which we landed this Day two Dryfats, with a Hogſhead of Beef, having much ado to get the Boats thro' the congealed Water. In the Evening the Wind came up at North-eaſt and Eaſt, and filled the Bay full of Ice.

The 27th the Bay continued full of Ice, which I hoped would ſo continue and freeze, that we ſhould not be forced to ſink our Ship. This Day we could land nothing. The 28th, at Break of Day, three of our Men went over the Ice unknown to me, and the Wind coming up at Weſt drove the Ice from betwixt us and the Shore, and moſt Part of the Day alſo; and yet not ſo but the Boat could go aſhore for any thing. I made the Carpenter fit a Place againſt all ſudden Extremities, for that with the North-weſt or Northerly Wind I meant to effect our laſt Project. In the Run of her on the Starboard Side he cut away the Cieling and the Plank to the Sheathing ſome four or five Inches ſquare, ſome four Feet high from the Keel of her, ſo that it might be bored out at an Inſtant. We brought our Bread which was remaining in the Bread Room up into the great Cabin, and likewiſe all our Powder, ſetting much of our light dry Things betwixt Decks.

The 29th at five in the Morning the Wind came up at Weſt north-weſt, and began to blow very hard. It was ordinary for the Wind to ſhift from the Weſt by the North round about: So firſt I ordered the Cooper to go down into the Hold, and look to all our Caſks; thoſe that were full to mell in the Bungs of them, and thoſe that were empty to get up, or if they could not be gotten up to ſtave them; then to coil all our Cables upon our lower Tire, and to lay on our ſpare Anchors, and any thing that was weighty, to keep it down from riſing. By ſeven o'Clock it blew a Storm at North-weſt. The Ship was already bedded ſome two Feet in the Sand; and whilſt that was a-flowing ſhe muſt beat. This I before had in my Conſideration, for I thought ſhe was ſo far driven up that we ſhould never get her off. Yet we had been ſo ferretted by her laſt Beating, that I reſolved to ſink her right down, rather than run that Hazard. By nine ſhe began to roll in her Deck with a moſt extraordinary great Sea, which I found to be occaſioned by the forementioned Overfall. And this was the fatal Hour that put us to our Wits end: Wherefore I went down into the Hold with the Carpenter, and took his Augre and bored a Hole in the Ship and let in the Water. Thus with all Speed we began to cut out other Places to bore through, but every Place was full of Nails. By ten, notwithſtanding the lower Tire was covered with Water, for all which ſhe began ſo to beat in her Deck more and more, that we could not work nor ſtand to do any thing in her, nor would ſhe ſink ſo faſt as we would have her, but continued beating double Blows, firſt abaſt and then before, that it was wonderful how ſhe could endure a Quarter of an Hour with it.

By Twelve her lower Tire roſe, and that did ſo counterbeat on the Inſide, that it bored the Bulk-Heads of the Bread-Room, Powder-Room, and Fore-piece, all to Pieces. And when it came betwixt Decks, the Cheſts fled about, and the Water did flaſh and fly wonderfully, ſo that now we expected every Minute when the Ship would open and break to Pieces. At One ſhe beat off her Rudder, and that was gone we knew not which Way. Thus ſhe continued beating till Three, and then the Sea came upon the upper Deck, and ſoon after ſhe began to ſettle. In her we were fain to ſink the moſt Part of our Bedding and Cloaths, and the Chirurgeon's Cheſt. Our Men that were on Shore ſtood looking upon us, almoſt dead with Cold and Sorrow to ſee our Miſeries and their own; we looked upon them again, and both upon each other with woeful Hearts. Dark Night drew on, and I ordered the Boat to be hawled up, and commanded my loving Companions to go all into her, who expreſſed their faithful Affection to me, as loth to part from me. I told them that my Meaning was to go aſhore with them, and thus laſtly I forſook the Ship. We were fourteen poor Souls now in the Boat, and we imagined that we were leaped out of the Frying-pan into the Fire. The Ebb was made, and the Water extraordinary thick with Snow, ſo that we thought aſſuredly it would carry us away into the Sea. We thereupon double manned four Oars, appointing four more to ſit ready with Oars; and ſo with the Help of God we got to Shore, hawling up the Boat after.

One Thing was moſt ſtrange in this thick Water, that there went a great ſwelling Sea. Being arrived upon the Land, we ſaluted our Fellows the beſt we could; at which Time they could not know us, nor we them, by our Habits and Voices, ſo frozen we were, Faces, Hair and Apparel. And here I mean to take Breath a-while, after all this long and unpleaſant Relation of our miſerable Endeavours, craving Leave firſt of all to ſpeak a Word or two in general. The Winds ſince we came hither have been very variable and inconſtant, and, till within this Fortnight, the Southerly Wind was the coldeſt. The Reaſon I conceive to be, that it blew from the main Land, which was all covered with Snow; and the North Winds came out of the great Bay, which hitherto was open; ſo that we were under a South Bank, that ſheltered us ſo that we were not ſenſible of it.

20. After we had hawled up the Boat on the 29th of *November*, we went along the Beach-ſide in the Dark towards our Houſe, where we made a good Fire, and with it and Bread and Water we comforted ourſelves, beginning after that to reaſon one with another concerning our Ship. I required that every one ſhould ſpeak his Mind

freely. The Carpenter eſpecially was of Opinion, that ſhe was foundered, and would never be ſerviceable. He alledged, that ſhe had ſo beaten that it was not poſſible but that all her Joints were looſe and Seams open; and that by Reaſon it flowed ſo little Water, and no Creek being near to bring her aground, he could not deviſe how he might come to mend it; moreover, her Rudder was loſt, and he had no Iron-Work to hang on another. Some alledged, that we had heaved her up ſo high on the Sands that they thought we ſhould never get her off again, and that they were aſſured ſhe was already docked three Feet; others, that ſhe lay in the Tide's Way, and that the Tides might tear her to Pieces off the Ground. Beſides which, two of our Anchors we could not now get from under the Ice, which, when the Ice broke, would break them to Pieces, and then we ſhould have no Anchors to bring us home withal, provided we got off the Ship, and that ſhe proved ſound alſo. I comforted them the beſt I could to this Effect.

“ My Maſters and faithful Companions, be not diſmayed for any of theſe Diſaſters, but let us put our whole Truſt in God. It is he that giveth and he that taketh away; he throweth down with one Hand, and raiſeth up with another. His Will be done. If it be our Fortunes to end our Days here, we are as near Heaven as in *England*, and we are much bound to God Almighty for giving us ſo large a Time of Repentance, who, as it were, daily calls upon us to prepare our Souls for a better Life in Heaven. I make no doubt but he will be merciful unto us both here on Earth and in his bleſſed Kingdom. He doth not in the mean time deny that we may uſe all honeſt Means to ſave and prolong our natural Lives; and in my Judgment we are not ſo far paſt Hope of returning into our native Country, but that I ſee a fair Way by which we may effect it. Admit the Ship be foundered, (which God forbid, I hope for the beſt) yet have thoſe of our own Nation and others, when they have been put to thoſe Extremities, even out of the Wreck of their loſt Ship built a Pinnace, and returned to their Friends again. If it be objected that they have happened into better Climates, both for Temperateneſs of the Air, and for pacific and open Seas, and provided withal of abundance of freſh Victuals, yet there is nothing too hard for courageous Minds, which hitherto you have ſhewn, and I doubt not will ſtill do to the uttermoſt of your Power.”

They all proteſted to work to the utmoſt of their Strength, and that they would refuſe nothing that I ſhould order them to do to the utmoſt Hazard of their Lives. I thanked them all, and to the Carpenter for his chearful Undertaking I promiſed to give him ſo much Plate preſently as ſhould be worth 10*l.* and if ſo be I went to *England* in the Pinnace, I would give him her freely, and 50*l.* in Money over and above, and would moreover gratify all them that I ſhould ſee induſtrious. Thus we reſolved to build us a new Pinnace with the Timber we ſhould get upon the Iſland, that ſo in the Spring, if we found the Ship not ſerviceable, we might tear her up, and plank her with the Ship's Planks; and ſo for this Night we ſettled ourſelves cloſe about the Fire, and took ſome Reſt till Day-light.

The 30th, betimes in the Morning, I cauſed the Chirurgeon ſo cut off my Hair ſhort, and to ſhave away all the Hair of my Face, for it was become intolerable, and becauſe it would be frozen ſo great with Iſicles. The like did all the reſt, and we fitted ourſelves to work. The firſt Thing we were to do was to get our Cloaths and Proviſions aſhore, and therefore I divided the Company. The Maſter and a convenient Company with him were to go aboard and get Things out of the Hold. The Cockſwain with his Gang were to go into the Boat, to bring and carry Things aſhore. Myſelf with the reſt to carry them half a Mile through the Snow, unto the Place where we intended to build a Store-houſe. As for the heavier Things, we propoſed to lay them on the Beach. In the Afternoon the Wind was at South-ſouth-weſt, and the Water veered ſo low an Ebb, that we thought we might get ſomething out of the Hold. We launched out our Boat therefore, and with Oars got through the thick congealed Water. It froze extreme hard, and I ſtood on the Shore with a troubled Mind, thinking verily that with the Ebb the Boat would be carried into the Sea, and then we were all loſt Men: But by God's Aſſiſtance they got all ſafe to the Ship, and made a Fire there to ſignify their Arrival on board. They fell preſently to work, and got ſomething out of the Hold upon the Decks, but Night coming on, they durſt not venture to come on Shore, but lay on the Bed in the great Cabin being almoſt ſtarved.

21. The 1ſt of *December* was ſo cold that I went the ſame Way over the Ice to the Ship where the Boat had gone Yeſterday. This Day we carried upon our Backs in Bundles five hundred of our Fiſh, and much of our Bedding and Cloaths, which we were fain to dig out of the Ice. The 2d was mild Weather, and ſome of the Men going over the Ice fell in, and very hardly recovered; ſo that this Day we could land nothing, neither by Boat nor Back. I put them therefore to make us a Storehouſe on Shore. In the Evening the Wind came up at Weſt, and the Ice broke and drove out of the Bay. It was very deep and large Ice, that we were afraid it would have ſpoiled the Ship. The 3d Day there were divers great Pieces of Ice that came athwart the Ship and ſhe ſtopt them, yet not ſo as we could go over them. We found a Way for the Boat, but when ſhe was laden ſhe drew four Feet Water, and could not come within a ſight Shot of the Shore; the Men therefore muſt wade through the congealed Water, and carry Things out of the Boat upon their Backs. Every time they waded in the Ice it was moſt lamentable to behold. In this extreme cold Evening they cut away as much Ice from about the Boat as they could, and picked it with Handſpikes out of her, and endeavoured to hoiſt her into the Ship, there being ſmall Hopes that ſhe could go to and again any more: But uſe what Means they could, ſhe was ſo heavy that they could not hoiſt her in, but were forced to leave her in the Tackles by the Ship-ſide.

The 4th being *Sunday* we reſted and performed the Sabbath Duties of Chriſtians. The 5th and 6th were extreme cold, and we made Bags of our Store-Shirts, and in them we carried our looſe Bread over the Ice on Shore upon our Backs: We alſo digged our Cloaths and new Sails with Handſpikes of Iron out of the Ice, and carried them aſhore, which we dried by a great Fire. The 7th Day was ſo exceeding cold, that our Noſes, Cheeks, and Hands, did freeze as white as Paper. The 8th and 9th it was extremely cold, and it ſnowed much; yet we continued our Labour in carrying and rolling Things on Shore. In the Evening the Water raiſed the Ice very high, and it broke two Thawghts of our Boat, and broke in the Side of her, but for that Time we could not help it.

The 10th our Carpenter found Timber to make a Keel and a Stern for our Pinnace, the reſt wrought about our Proviſions until the 13th Day, and that we ſpent in digging our Boat out of the Ice, which we were fain to do to the very Keel, and dig the Ice out of her, then we got her up; in doing which many of their Noſes, Cheeks and Fingers did freeze. The Cold now increaſed moſt extremely. By the 19th we could get no more Things out of the Hold, but were fain to leave five Barrels of Beef and Pork, all our Beer, and divers other Things, which were all frozen in her. The 21ſt was ſo cold that we could not go out of the Houſe. The 23d we went to get our Boat aſhore, running her with our Oars, but by ten o'Clock there came ſuch a thick Fog that it was as dark as Night. I made them give over, and we made what Haſte we could to the Shore, which we had much ado to find without loſing one another. At laſt we met all at the Houſe, the moſt miſerable and frozen that can be conceived. Upon divers the Cold had raiſed Bliſters as big as Walnuts. This we imagined to come by Reaſon that they came too haſtily to the Fire. Our Well was now frozen up, ſo that dig as deep as we would, we could come at no Water: Melted Snow-Water is very unwholſome, either to drink or to dreſs Victuals: It made us ſo ſhort-breath'd, that we were ſcarce able to ſpeak.

All our Sack, Vinegar, Oil, and every thing elſe that was liquid, was now frozen as hard as a Piece of Wood, and we cut it with a Hatchet. Our Houſe was all frozen on the Inſide; and it froze hard within a Yard of the Fire-ſide. When I landed firſt upon this Iſland, I found a Spring under a Hill's Side, which I then obſerving, I cauſed ſome Trees to be cut, for Marks to know the Place again by. It was about three Fourths of a Mile from our Houſe. I ſent three of our Men which had been with me thither. Upon the 24th theſe wandering through the Snow, at laſt found the Place, and ſhoveling away the Snow they made Way to the very Head of it. They found it ſpring very ſtrongly, and brought me a Can of it, for which I was right joyful. This Spring continued all the Year, and did not freeze, but that we could break the Ice and come to it. We laboured very hard theſe three or four Days to get Wood to the Houſe, which we found to be very troubleſome, through the deep Snow.

22. We then ſettled our Bedding and Proviſions, providing to keep Chriſtmas-Day holy, which we ſolemnized in the joyfulleſt Manner we could. So likewiſe did we *St. John's* Day, upon which we named the Wood we did winter in, in Memory of that honourable Knight, Sir *John Winter*, *Winter's Froſt*, and now, inſtead of a Chriſtmas Tale, I will deſcribe the Houſe that we did live in, with thoſe adjoining. When I firſt reſolved to build a Houſe, I choſe the warmeſt, and convenienteſt Place, and the neareſt the Ship withal. It was among a Tuft of thick Trees, under a South Bank, about a ſlight Shot from the Sea-ſide. True it is, that at that Time we could not dig into the Ground to make us a Hole or Cave in the Earth, which had been the beſt Way, becauſe we found Water digging within two Feet, and therefore that Project failed; it was a white light Sand, ſo that we could by no Means make up a Mud-Wall.

As for Stones there were none near us; beſides we were all now covered with the Snow. We had no Boards for ſuch a Purpoſe, and therefore we muſt do the beſt we could with ſuch Materials as we had about us. The Houſe was ſquare, about twenty Feet every Way, as much namely as our main Courſe could well cover. Firſt we drove long Stakes into the Earth, round about which we wattled with Boughs, as thick as might be, beating them down very cloſe. This, our firſt Work, was ſix Feet high on both Sides, but at the Ends was almoſt up to the very Top. There we left two Holes for the Light to come in at, and the ſame Way the Smoak did vent out alſo. Moreover I cauſed, at both Ends, three Rows of Buſh Trees to be ſtuck up, as cloſe together as poſſible. Then, at a Diſtance from the Houſe, we cut down Trees, proportioning them into Lengths of ſix Feet, with which we made a Pile on both Sides, ſix Feet thick, and ſix Feet high; but at both Ends ten Feet high, and ſix Feet thick. We left a little low Door to creep into, and a Portal before that, made with Piles of Wood, that the Wind might not blow into it. We next faſtened a rough Tree aloft, over all, upon which we laid our Rafters, and our main Courſe, over them again; which lying thwartways over all, reached down to the very Ground on either Side; and this was the Fabric of the Outſide of it.

On the Inſide we made faſt our Bonnet Sails round about, then we drove in Stakes, and made us Bedſtead Frames, about three Sides of the Houſe, which Bedſteads we doubled one under another, the lowermoſt being a Foot from the Ground. Theſe we firſt filled with Boughs, then we laid our ſpare Sails on that, and then our Bedding and Cloaths. We made a Hearth in the Middle of the Houſe, and on it made our Fire; ſome Boards we laid round our Hearth to ſtand upon, that the cold Damp ſhould not ſtrike up into us. With our waſte Cloaths we made us Canopies and Curtains, others did the like with our ſmall Sails. Our ſecond Houſe was not more than twenty Feet Diſtance from this, and made, for the Wattling, much after the ſame Manner, but it was leſs, and covered with our fore Courſe. It had no Piles on the South-ſide, but, in lieu of that, we piled up all our Cheſts on the Inſide; and, indeed, the Reflex of the Heat of the Fire againſt them did make it warmer than the Manſion-Houſe. In this Houſe we dreſſed our Victuals, and the ſubordinate Crew did refreſh themſelves all Day in it. A third Houſe, which was our Store-houſe, was twenty-nine Paces off from this, for fear of firing.

This Houſe was only a rough Tree faſtened aloft, with Rafters laid from it to the Ground, and covered over with our new ſuit of Sails. On the Inſide we had laid ſmall Trees, and covered them over with Boughs, and ſo ſtored up our Bread and Fiſh in it, about two Feet from the Ground, the better to preſerve them; the other things lay more careleſsly. Long before Chriſtmas our Manſion-Houſe was covered thick over with Snow, almoſt to the very Roof of it; and ſo likewiſe was our ſecond Houſe, but our Store-houſe all over, by Reaſon we made no Fire in it.

Thus we ſeemed to live in a Heap and a Wilderneſs of Snow; for out of our Doors we could not go, but upon the Snow, in which we made us Paths Middle deep in ſome Places, and in one ſpecial Place the Length of ten Steps. To do this, we muſt ſhovel away the Snow firſt, and then, by treading, make it ſomething hard under Foot. The Snow, in this Path, was a full Yard thick under us. And this was our beſt Gallery for our ſick Men, and for my own ordinary walking; and both Houſes and Walks we daily accommodated more and more, and made fitter for our Uſes. On the 27th we got our Boat aſhore, and fetched up ſome of our Proviſions from the Beach-ſide, into the Store-houſe, and ſo by Degrees did we with the reſt of our Proviſions, with Extremity of Cold and Labour, making Way with Shovels through the thick Snow, even from the Sea-ſide to our Store-houſe; and thus concluded we the old Year 1631.

23. The firſt of *January*, 1632, and for the moſt Part all the Month, was extreme cold. The 6th I obſerved the Latitude with what Exactneſs I could, it being clear ſunſhiny Weather, which I found to be 51 Degrees 52 Minutes: This Difference is by Reaſon that there is a great Refraction. On the 21ſt I obſerved the Sun to riſe like an Oval along the Horizon; I called three or four to ſee it, the better to confirm my Judgment; and we all agreed that it was twice as long as it was broad. We plainly perceived withal, that by Degrees, as it got up higher, it alſo recovered its roundneſs. The 30th and 31ſt there appeared, in the Beginning of the Night, more Stars in the Firmament than ever I had before ſeen, by two Thirds; I could ſee the Clouds in *Cancer* full of ſmall Stars. About ten o'Clock the Moon roſe, and then a Quarter of them were not to be ſeen. The Wind, for the moſt Part of this Month, hath been Northerly, and very cold. The warmeſt of which Time we employed ourſelves in fetching Wood, working upon our Pinnace, and other things. In the Beginning of this Month the Sea was all firmly frozen over, ſo that we could ſee no Water any where. I hope it will not ſeem tedious to the Readers, if I here deliver my Opinion, how this Abundance of Ice comes to be ingendered.

The Land that incircles this great Bay, which lies in a broken irregular Form, making many little Shole-Bays and Guts, full of Iſlands and dry Sands, is, for the moſt Part, low and flat, and hath Sholes adjoining to it half a Mile or Mile, that are dry at low Water. Now you muſt know that it flows half Tide, that is, from whence the Flood cometh, the Water returneth two Hours before it is high Water, or full Sea. It ſeldom rains after the Middle of *September*, but then falls Snow, and that Snow will not melt on the Land, or Sands. At low Water, when it ſnows, the Sands are all covered over, which the half Tide carries twice in four Hours into the great Bay, which is the common Rendezvous of it. Every low Water the Sands are left clear, to gather more to the Increaſe of it.

Thus it daily gathers together in this Manner, till the latter End of *October*; and by that Time it brings the Sea to that Coldneſs, that as it ſnows, the Snow will lie upon the Water in Flakes, without changing Colour; but with the Wind is wrought together, and as the Winter goes forward, it begins to freeze upon the Surface of it, two or three Inches or more in one Night; which being carried with the half Tide, meets with ſome Obſtacle, and then it crumples, and ſo runs upon itſelf, that in a few Hours it will be five or ſix Feet thick. The half Tide ſtill flowing carries it quite away, that by *December* it is grown to an infinite Multiplication of Ice: And thus, by this ſtoring of it up, the Cold gets the Predominancy in the Sea, which alſo furniſhes the Springs and Water in the low flat Lands, that it cools it like itſelf. This may appear by our Experience; though in all this I freely ſubmit myſelf to the more Learned.

Our Men found it more mortifying cold to wade through the Water in the Beginning of *June*, when the Sea was full of Ice, than in *December*, when it was increaſing; our Well, out of which we had Water in *December*, dried up in *July*; the Ground, at ten Feet deep, was frozen. The Quantity of Ice may very eaſily be made to appear by mathematical Demonſtration; and yet I am not of the Opinion that the Bay freezes all over. For the 21ſt the Wind blowing a Storm at North, we could perceive the Ice to riſe ſomething in the Bay.

24. *February* 1632. The Cold was as extreme this Month as at any Time we had felt it this Year, and many of our Men complained of Infirmities; ſome of ſore Mouths, all the Teeth in their Heads being looſe; their Gums ſwoln with black rotten Fleſh, which every Day was to be cut away; the Pain was ſo great, that they could not eat their ordinary Meat; others complained of Pains in their Heads and their Breaſts; ſome of Weakneſs in their Backs; others of Aches in their Thighs and Knees; and others of Swellings in their Legs. Thus were two thirds of the Company under the Chirurgeon's Hands; and yet, nevertheleſs, they were forced to work daily, and go abroad to fetch Wood and Timber, notwithſtanding moſt of them had no Shoes to put on. Their Shoes, upon their coming to the Fire out of the Snow, were burnt and ſcorched upon their Feet, and our Store-ſhoes were all ſunk in the Ship. In this Neceſſity they made this Shift to bind Clouts about their Feet, and endeavoured, by that poor Help, the beſt they could, to perform their Duties. Our Carpenter, likewiſe, by this Time fell ſick, to our great Diſcomfort.

I practiſed ſome Obſervations by the riſing and ſetting of the Sun; calculating the Time of his riſing and ſetting by very true running Glaſſes. As for our Clock and Watch, notwithſtanding we ſtill kept them by the Fireſide in a Cheſt, wrapped in Cloths, yet were they ſo frozen that they could not go. My Obſervations by theſe Glaſſes I compared with the Stars coming to the Meridian. By this Means we found the Sun to riſe twenty Minutes before it ſhould; and in the Evening to remain twenty Minutes, or thereabouts, longer than it ſhould; all this by Reaſon of the Refraction. Since now I have ſpoken ſo much of the Cold, I hope it will not be taken ill, if I, in a few Words, make it ſome Way appear to our Readers.

We made three Differences of the Cold, all according to the Places. In our Houſe, in the Woods, and in the open Air, in our going to the Ship. For the laſt, it would be ſometimes ſo extreme, that it was almoſt unindurable; no Cloaths were Proof againſt it; no Motion could reſiſt it; it would ſo freeze the Hair on the Eyelids that we could not ſee; and I verily believe that it would have ſtifled a Man in a very few Hours. We daily found, by Experience, that the Cold in the Woods would freeze our Faces, or any Part of our Fleſh that was bare, but it was not ſo mortifying as the other. Our Houſe, on the Outſide, was covered two third Parts with Snow, and, on the Inſide, frozen and hung with Iſicles. The Cloaths on our Beds would be covered with Hoar-Froſt, which in this Habitation was not far from the Fire. The Cook's Tubs, wherein he watered his Meat, ſtanding about a Yard from the Fire, and which he all Day plied with Snow Water; yet in the Night Seaſon, whilſt he ſleeped but on Watch, they would be firm frozen to the very Bottom. And therefore he was forced to water his Meat in a Braſs Kettle, cloſe adjoining to the Fire. And I have many Times both ſeen and felt, by putting my Hand into it, that Side which was next the Fire very warm, and the other Side an Inch frozen.

The Chirurgeon, who had hung his Bottles of Sirrups, and other liquid Things, as conveniently as he could, to preſerve them, had them all frozen. Our Vinegar, Oil, and Sack, which we had in ſmall Caſks in the Houſe, were all firm frozen. It may further, in general, be conceived, that in the Beginning of *June* the Sea was not broken up, and the Ground was yet frozen; and this we found by Experience, in the burying of our Men, in ſetting up the King's Standard, towards the latter End of *June*, and by our Well; in coming away in the Beginning of *July*, at which Time, upon the Land, for ſome other Reaſons, it was very hot Weather.

25. *March* 1632. The firſt of this Month, being *St. David's* Day, we kept Holiday, and ſolemnized it in the Manner of the *Ancient Britons*; praying for the Happineſs of his Royal Highneſs, *Charles*, Prince of *Wales*, afterwards *Charles* II. The 15th one of our Men thought he had ſeen a Deer, whereupon he, with two or three more, deſired that that they might go to ſee if they could take it. I gave them Leave, but they returned in the Evening ſo diſabled with Cold, which roſe up in Bliſters under the Soles of their Feet, and upon their Legs, to the Bigneſs of Walnuts, that they could not recover their former State, which was not very well, in a Fortnight after.

The 26th three others alſo deſired to go out to try their Fortunes, but they returned worſe diſabled, and even almoſt ſtified with the Cold. This Evening the Moon roſe in a very long Oval along the Horizon. By the laſt of this Month the Carpenter had ſet up ſeventeen Ground Timbers, and thirty-four Staddles, and, poor Man, he proceeded the beſt he could, though forced to be led to his Labour. In ſhort, all this Month it was very cold, the Wind about the North-weſt, the Snow as deep as it was all this Winter. But to anſwer an Objection that might be made; you were in a Wood (ſome Men may ſay unto us) and therefore you might make Fire enough to keep you from the Cold, It is true, we were in a Wood, and under a South Bank too, or otherwiſe we had all ſtarved.

But I muſt tell you withal, how difficult it was to have Wood in a Wood. And firſt I will make a Muſter of the Tools we had. The Carpenter, in his Cheſt, had two Axes indeed, but one of them was ſpoiled in cutting down Wood to pile about our Houſe before *Chriſtmas*. When we firſt landed we had but two whole Hatchets; which, in a few Days, broke two Inches below the Sockets. I called for three of the Cooper's Hatchets. The Carpenter's Axe, and the Cooper's beſt Hatchet I cauſed to be locked up; the other two Hatchets to be new helved; and the Blades of the two broken Hatchets to be put into a cleft Piece of Wood, and then to be bound about with Rope Yarn as faſt as might be, which was to be repaired every Day; and theſe were all the cutting Tools we had. Beſides, the 6th of *February* the Carpenter had out his beſt Axe about ſomething, and one of the Company, in his Abſence, by his indiſcreet handling of it, broke that too two Inches below the Socket; we were henceforward forced to uſe theſe Pieces of Tools the beſt we could. Wherefore I gave Orders that the Carpenter ſhould have one of the Cooper's Hatchets; they that looked for Timber in the Woods to have the other; and they that cut down Wood to burn were to have the two Pieces; and this was before *Chriſtmas*.

The three that were appointed to look crooked Timber, ſtalked and waded ſometimes on all fours through the Snow, and where they ſaw a Tree likely to fit the Mould, they heaved away the Snow, and then ſaw if it would fit the Mould, and then they muſt make a Fire to it to thaw it, otherwiſe it could not be cut; then they cut it down and fit it to the Mould, and then with other Help get it home, a Mile through the Snow. Now, for our firing we could not burn green Wood, it would ſmoke ſo intolerably; nay, the Men would rather ſtarve without in the Cold than ſit by it; as for the dry Wood, that alſo was bad enough, for it was full of Turpentine, and would ſend forth ſuch a thick Smoak that would make abundance of Soot, which would make us all look as if we had been free of the Company of Chimney-Sweepers.

Our Cloaths were quite burnt to Pieces about us, and for the moſt part, we were without Shoes. But to our Fuelers again: They muſt firſt, as the former, go up and down in the Snow till they ſaw a Tree ſtanding, for the Snow covered thoſe that were down-fallen; then they muſt hack it down with their Pieces of Hatchets, and then others muſt carry it home through the Snow. The Boys with Cutlaſſes muſt cut Boughs for the Carpenter; for every Piece of Timber that he worked muſt firſt be thawed in the Fire, and he muſt have a Fire by him or he could not work. And this was our continual Labour throughout the forementioned Cold, beſides our tending upon the Sick, and other neceſſary Employments.

26. *April* 1632. The firſt of this Month being *Eaſter-day*, we ſolemnized it as religiouſly as God gave us Grace to do. Both this Day, and the two following Holidays, were extreme cold; and now ſitting all about the Fire, we reaſoned and conſidered together about our Eſtate; we had five Men, whereof the Carpenter was one, not able to do any thing; the Boatſwain and many more were very infirm, and of all the reſt we had but five that could eat of their ordinary Allowance. The Time and Seaſon of the Year came on apace, and the Cold very little abated. Our Pinnace was in an indifferent Forwardneſs, but the Carpenter grew worſe and worſe. The Ship, as we then thought, lay all full of ſolid Ice; which was Weight ſufficient to open the Seams of any new and ſound Veſſel, eſpecially one that had lain ſo long upon the Ground as ſhe had done. In ſhort, after many Diſputes and laying open of our miſerable and helpleſs Eſtates, I reſolved upon this Courſe, that notwithſtanding it was more Labour, and the Men weaker and weaker, yet with the firſt warm Weather we would begin to clear the Ship, that we might have the Time before us to think of ſome other Courſe: This being ordered, we looked to thoſe Tools we had to dig the Ice out of her; we had but two Iron Bars on Shore, the reſt were ſunk in the Ship, and one of them was broken too.

We fell to fitting of thoſe Bars and four broken Shovels that we had, with which we intended, and afterwards we did, to dig the Ice out of her, and to lay the Ice on a Heap upon the larboard Bow, and ſo ſink it down to the Ground, ſo faſt that it ſhould be a Barricado to us when the Ice brake up, which we feared would tear us to Pieces. The 6th was the deepeſt Snow we had had all this Year, which filled up all our Paths and Ways by which we were uſed to go to the Woods; this Snow was ſomething moiſter and greater than any we had had this Year, for formerly it was as dry as Duſt and as ſmall Sand, and would drive like Duſt with the Wind: The Weather continued with this Extremity till the 15th, at which Time the Spring was harder frozen than it had been all the Year before. I had often obſerved the Difference betwixt clear Weather and miſty refracting Weather, in this Manner, from a little Hill which was near adjoining our Houſe; in the clear Weather when the Sun ſhone with all the Purity of Air, that I could not ſee a little Iſland which bore off us South-ſouth-eaſt four Leagues, but if the Weather was miſty as aforeſaid, then we could often ſee it from the loweſt Place.

This little Iſland I had ſeen the laſt Year when I was on *Danby Iſland*. The 13th I took the Height of it by an Inſtrument ſtanding near the Sea-ſide, which Iſland I take to be 34 Minutes, the Sun being 28 Degrees high; this ſhews how great a Refraction here is; yet this may be noted by the Way, that I have ſeen the Land elevated by Reaſon of the reflected Air, and nevertheleſs the Sun hath riſen perfect round. The 16th was the moſt comfortable ſunſhiny Day that came this Year, and I put ſome to clear off the Snow in the under Decks of the Ship, and to clean and dry the great Cabin, by making Fire in it; others I put to dig down through the Ice to come by our Anchor that was in Shoal-water; which the 17th in the Afternoon we got up and carried aboard. The 18th I put them to dig through the Ice near the Place where we thought our Rudder might be; they digged down and came to Water, but no Hopes of finding it.

We had many Doubts that it might be ſanded, or that the Ice might have carried it away already the laſt Year. Or if we could not recover it by digging before the Ice broke up and drove, there were little Hopes of it. The 19th we continued minding our Work aboard the Ship, and returned in the Evening to Supper aſhore. This Day the Maſter and two others deſired they might lie aboard, which I agreed to; for, indeed, they had lain very diſcommodiouſly all the Winter, and with ſick Bedfellows, as I myſelf had done, every one in that kind taking their Fortunes. By lying aboard, they avoided the hearing the miſerable Groanings and Lamentations of the ſick Men, all Night long enduring, poor Souls, miſerable Torments. By the 24th we had laboured ſo hard, that we came to the Sight of a Caſk, and could likewiſe perceive that there was ſome Water in the Hold. This we knew could not be thawed Water, becauſe it froze very hard Night and Day aboard the Ship, and on the Land alſo. By the 23d in the Evening we came to pierce the fore-mentioned Caſk, and found it full of very good Beer, which much rejoiced us all, eſpecially the ſick Men, notwithſtanding it taſted a little of the bulged Water. By this we thought that the Holes we had cut to ſink the Ship were frozen, and that this Water had ſtood in the Ship all the Winter.

The 24th we went betimes in the Morning to work, but we found that the Water was riſen above the Ice where we had left Work above two Feet, for the Wind had blown very hard at North the Night before. In the Morning the Wind came about South and blew hard, and, although we had little Reaſon for it, we yet expected a lower Veer of Water. I thereupon put them to work on the Outſide of the Ship, that we might come to the lower Hole, which we had cut in the Stern-Shoots; with much Labour, by Night, we digged down through the Ice to it, and found it unfrozen, as it had been all the Winter; and, to our great Comforts, we found that on the Inſide the Water was ebbed within the Hole, and that on the Outſide it was ebbed a Foot lower. Whereupon I cauſed a Shot-board to be nailed upon it, and to be made as tight as might be, to try if the Water came in any other Way; to the other two Holes we had digged on the Inſide, and found them frozen. Now I did this betimes, that if we found the Ship foundered, we might reſolve on ſome Courſe to ſave or prolong our Lives, by getting to the Main before the Ice was broken up; as for our Boat it was too little, and bulged beſides that.

Our Carpenter was by this Time paſt Hopes, and therefore little Hope had we of our Pinnace. But which was worſt of all, we had not four Men able to travel through the Snow over the Ice, and in this miſerable State were we at this preſent. The 25th we ſatisfied our Longing, for the Wind now coming about Northerly, the Water roſe by the Ship's Side, where we had digged down a Foot and more above the Hold, and yet did not riſe within Board. This ſo encouraged us, that we fell luſtily to digging, and to heave the Ice out of the Ship. I put the Cook and ſome others to thaw the Pumps, who, by continual pouring of hot Water into them, by the 27th in the Morning had cleared one of them, which we proving, found it delivered Water very ſufficiently. Thus we fell to pumping, and having cleared two Feet Water, we left the other to a ſecond Trial, continuing our Work thus in digging the Ice. By the 28th we had cleared our other Pump, which we alſo found to deliver Water very well. We found likewiſe that the Water did not riſe any thing in the Hold.

The 29th it rained all Day long, a ſure Sign to us that Winter was broken up. The 30th we were betimes aboard at work, which Day, and the 31ſt, were very cold with Snow and Hail, which pinched our ſick Men more than any Time this Year. This Evening being *May* Eve, we returned late from our Work to our Houſe, and made a good Fire, and choſe Ladies, and ceremoniouſly wore their Names in our Caps, endeavouring to revive ourſelves by any Means.

27. At our coming from *England* we were ſtored with all Sorts of Sea-Proviſions, as Beef, Pork, &c. but now, as we had little Hopes of recruiting, our Cook ordered it in this Manner: The Beef which was to ſerve on *Sunday* Night to Supper he boiled on *Saturday* Night in a Kettle full of Water, with a Quart of Oatmeal, about

an Hour; then taking the Beef out, he boiled the reſt to half the Quantity; and this we called *Pottage*, which we eat with Bread as hot as we could, and after this we had our Ordinary of Fiſh. *Sunday*, for Dinner we had Pork and Peaſe, and at Night the former boiled Beef made more Pottage. In this Manner our *Tueſday's* Beef was boiled on the *Monday* Nights, and the *Thurſday's* upon *Wedneſdays*; and thus all the Week, except *Friday* Night, we had ſomething warm in our Bellies every Supper; and ſurely this did us a great deal of Good: But ſoon after *Chriſtmas* many of us fell ſick, and had ſore Mouths, and could neither eat Beef, Pork, Fiſh, nor Pottage. Their Diet was only this; they would pound Bread in a Mortar to Meal, then fry it in a Frying-pan with a little Oil, and ſo eat it. Some would boil Peaſe to a ſoft Paſte, and feed, as well as they could, upon that; for the moſt part of the Winter Water was our Drink. In the whole Winter we took not above dozen Foxes, many of which would be dead in the Traps two or three Days oftentimes; and then, when the Blood was ſettled, they would be unwholſome; but if we took one alive, and he had not been long in the Trap, him we boiled and made Broth for the weakeſt ſick Men; the Fleſh of them being ſoft boiled they eat alſo. Some white Partridges we killed, but not worth mentioning.

We had three Sorts of ſick Men; thoſe that could not move, nor turn themſelves in their Beds, who muſt be tended like Infants; others were, as it were, crippled with Aches; and others that were ſomething better; moſt had ſore Mouths. You may now aſk me, How theſe infirm Men could work? I will tell you: Our Surgeon, who was a diligent and ſweet conditioned Man as ever I ſaw, would be up betimes in the Morning, and whilſt he picked their Teeth, and cut away the Pieces of Fleſh from their Gums, they would bathe their Thighs, Knees, and Legs. The Manner of it was thus; there was no Tree, Bud, or Herb, but we made Trial of it; and this being firſt boiled in a Kettle, and then put in a ſmall Tub and Baſons, they put it under them, and covered them with Cloths upon it. This ſo mollified the grieved Parts, that though, when they roſe out of their Beds, they would be ſo crippled that they could ſcarce ſtand, yet after this was done half an Hour they would be able to go, (and go they muſt) to wade through the Snow to the Ship, and about other Buſineſs; by Night they would be as bad again, and then they muſt be bathed, anointed, and their Mouths dreſſed again before they went to Bed; and in this Diet, and in this Manner we went through our Miſeries.

I was always afraid that we ſhould be weakeſt in the Spring, and therefore I reſerved a Tun of *Alicant* Wine unto this Time: Of this, by putting ſeven Parts of Water to one of Wine, we made ſome weak Beverage, which, by reaſon that the Wine had been froze and loſt its Virtue, was little better than Water. The ſicker Sort had a Pint of *Alicant* a Day by itſelf, and of ſuch poor *Aqua Vitæ* too as we had, they had a Dram allowed them next their Hearts every Morning: And thus we made the beſt Uſe of what we had, according to the Seaſons. *May* 1632, the 1ſt, we went aboard by-times, to heave out the Ice; the 2d, it did ſnow and blow, and was ſo cold that we were forced to keep houſe all Day. This unexpected Cold, at this time of the Year, did ſo vex our ſick Men that they grew worſe and worſe; we could not now take them out of their Beds, but they would ſwoon, and we had much ado to keep Life in them.

On the 3d, thoſe that were able, went on board betimes, to heave up the Ice; the Snow was now melted in many Places upon the Land, and ſtood in Plaſhes; and now there came ſome Cranes and Geeſe to it. The 4th, while the reſt wrought on board, I and the Surgeon went with a Couple of Pieces, to ſee if we could kill any of thoſe Fowls for our ſick Men; but never did I ſee ſuch wild Fowl; they would not endure to ſee any thing move; wherefore we returned in two Hours, not being able to endure any longer ſtalking through the Snow and the wet Plaſhes. I verily thought my Feet and Legs would have fallen off, they ſo tormented me with aching. The 6th, *John Wardon*, the Maſter or my Ship's Chief Mate, died, whom we buried in the Evening, in the moſt Chriſtian-like manner, on the Top of a bare Hill of Land, which we called *Brandon-hill*. The Weather continued very cold, it freezing ſo hard in the Night that it would bear a Man. By the 9th we were come to, and got up, our five Barrels of Beef and Pork, and had found four Butts of Beer and one of Cyder, which God had preſerved for us; it had lain under Water all the Winter, yet we could not perceive it was any worſe. God make us ever thankful for the great and ſeaſonable Comfort it gave us.

The 10th it ſnowed, and blew ſo cold that we could not ſtir out of the Houſe, yet nevertheleſs, by Day, the Snow vaniſhed apace on the Land. The 11th we were on board betimes, to heave out Ice. By the 12th at Night we had cleaned out all the Ice out of the Hold, and found likewiſe our Store Shoes, which had lain ſoaked in the Water all the Winter, but we dried them by the Fire, and fitted ourſelves with them. We ſtruck again our Cables into the Hold; there ſtood a Butt of Wine alſo, which had been all the Winter on the Upper-deck, and continued as yet all frozen. We fitted the Ship alſo, making her ready to ſink again when the Ice broke up. We could find no Defect in her, and therefore we hoped that ſhe was ſtaunch; the Carpenter nevertheleſs argued to the contrary, alledging that now ſhe lay on the Ground, in her Deck the Ice had filled her Defects, and the Ice was the thing that kept out the Water; but when ſhe ſhould come to labour in the Sea, ſhe would certainly open, and indeed we could now ſee quite through her Seams betwixt Wind and Water; but that which troubled us moſt was, the Loſs of her Rudder, and ſhe now lay in the very Strength of the Tide, which whenever the Ice drove might tear her to Pieces; but we ſtill hoped the beſt.

28. The 13th, being the *Sabbath-day*, we ſolemnized it, giving God Thanks for thoſe Hopes and Comforts we daily had. The Weather in the Day-time was pretty warm, but it froze by Night, yet now we could ſee ſome Land. The 14th we began a new ſort of Work: The Boatſwain, and a convenient Number, brought on Shore the reſt of our Rigging, which was much ſpoiled by pecking it out of the Ice, and this they now fell to fitting. I ſet the Cooper to fit our Caſk, although, poor Man, he was very infirm; my Intent being to paſs ſome Cables under the Ship, and ſo to buoy her up with thoſe Caſks, if we could not get her off otherwiſe; ſome others I ordered to go and ſee if they could kill ſome wild Fowl for our ſick Men, who now grew worſe and worſe; but this is to be remembred, that we had no Shot but what we made of the Aprons of our Guns, and ſome old Pewter that we had; for the Carpenter's Sheet-Lead we durſt not uſe.

The 15th I manured a little Patch of Ground that was bare of Snow, and ſowed it with Peaſe, hoping to have ſome ſhortly to eat; for as yet we could ſee no green Thing to comfort us. The 18th our Carpenter *William Cole* died; a Man beloved of us all, as much for his innate Goodneſs, as for the preſent Neceſſity we had of a Man of his Quality: He had endured a long Sickneſs with Patience, and made a very godly End. In the Evening we buried him by Mr. *Wardon*, accompanied with as many as could go, for three more of our principal Men lay then expecting a good Hour. And now were we in the moſt miſerable State that we were in all the Voyage. Before this extreme Weakneſs, he had brought the Pinnace to that paſs, that ſhe was ready to be bolted, *&c.* and to be joined to receive the Planks; ſo that we were not ſo diſcouraged by his Death, but that we hoped, ourſelves, to finiſh her, if the Ship proved unſerviceable. This Pinnace was twenty-ſeven Feet by the Keel; ſhe had ſeventeen Ground-Timbers, thirty-four principal Staddles, and eight ſhort Staddles: He had contrived her with a round Stern, to ſave Labour, and indeed ſhe was a well-proportioned Veſſel; her Burden was twelve or fourteen Tons.

In the Evening the Maſter of our Ship, after the Burial, returned aboard, and, looking about him, diſcovered ſome Part of our Gunner under the Gun-Room Ports. This Man we had committed to the Sea at a good Diſtance from the Ship, and in deep Water, near ſix Months before. The 19th, in the Morning, I ſent Men to dig him out. He was faſt in the Ice, his Head downwards, and his Heel upwards, for he had but one Leg; and the Plaiſter was yet at the Wound. In the Afternoon they had digged him clear out, and he was as free from Noiſomneſs, as when we firſt committed him to the Sea. This Alteration had the Ice, and Water, and Time only wrought on him, that his Fleſh would ſlip up and down, upon his Bones, like a Glove on a Man's Hand. In the Evening we buried him by the others. This Day one *George Ugganes*, who could handle a Tool beſt of us all, had pretty well repaired our Boat, and ſo ended this mournful Week. The Snow was by this time pretty well waſted in the Wood; and we having a high Tree on the higheſt Place of the Iſland, which was called our Watch-Tree, from the Top of it might ſee into the Sea, but found no Appearance of breaking up yet.

The 20th, being *Whitſunday*, we ſadly ſolemnized it, and had ſome Taſte of the wild Fowl, but not worth the writing. The 21ſt was the warmeſt ſunſhiny Day that came this Year. I ſent two a fowling; and myſelf, the Maſter, Chirurgeon, and one more, with our Pieces and Dogs. We went into the Woods to ſee what we could find; we wandered from the Houſe eight Miles, and ſearched with all Diligence, but returned comfortleſs; not an Herb or Leaf eatable could we find. Our Fowlers had as bad Succeſs. In the Woods we found the Snow partly melted away, ſo that it was paſſable. The Snow does not melt away here with the Sun or Rain, and ſo make Land-Floods, as in *England*, but is exhaled by the Sun, and ſucked full of Holes like the Honey-combs; ſo that the Sand whereon it lies will not be wetted. The like Obſervations we alſo made, that let it rain ever ſo much you ſhall ſee no Land-Floods after it. The 22d we went aboard the Ship, and found ſhe had made ſo much Water that it was riſen above the Ballaſt, which made us doubt again of her Soundneſs. We fell to pumping, and pumped her quite dry. And now by Day ſometimes we have ſuch hot Glooms that we cannot endure the Sun, and yet in the Night it freezes very hard. This Unnaturalneſs of the Seaſon tormented our Men that they grew worſe and worſe daily.

The 23d our Boatſwain, a careful Man, having been long ſick, which he had heartily reſiſted, was taken with ſuch a Pain in one of his Thighs, that we thought he would have died preſently. He kept his Bed in great Extremity. And it was a Maxim among us, that if any one kept his Bed he could riſe no more. This made every Man to ſtrive to keep up for Life.

The 24th was very warm Sunſhine, and the Ice conſumed by the Shore-ſide, and cracked all over the Bay with dreadful Noiſe. About three in the Afternoon we could perceive the Ice with the Ebb to drive by the Ship, whereupon I ſent two with all Speed to the Maſter, with Order to beat out the Hole and to ſink the Ship, as likewiſe to look for the Rudder betwixt the Ice. This he preſently performed; and a happy Fellow, one *David Hammon* pecking betwixt the Ice, ſtruck upon it, and it came up with his Launce, who crying that he had found it, the reſt came and got it upon the Ice, and ſo into the Ship. In the mean time the little Drift which the Ice had began to riſe and mount into high Heaps againſt the ſhole Shores and Rocks, and likewiſe againſt the Heap of Ice which we had put for a Barricado to our Ship, but with little Harm to us; yet we were forced to cut away twenty Fathom of Cable which was frozen in the Ice. After an Hour the Ice ſettled again, not having any Vent outwards. This was a joyful Day to us all, and we gave God Thanks for the Hopes we had of it.

The 25th was a fine warm Day, and with the Ebb the Ice drove againſt the Ship and ſtruck her ſoundly. The 26th I took the Chirurgeon with me, and went again to the Wood, and to that Bay where laſt Year we had loſt our Man *John Barton*, but we could find no Sign of him. The 28th it was pretty clear betwixt the Ship and the Shore, and I hoped the Ice would no more oppreſs us; wherefore I cauſed the lower Holes to be firmly ſtopped, the Water then remaining three Feet above the Ballaſt. The 29th being Prince *Charles*'s Birth-day, we kept Holiday, and diſplayed his Majeſty's Colours both on Land and aboard, and named our Habitation *Charles-Town*, by Contraction *Charlton*, and the Iſland *Charlton Iſland*.

The 30th we launched our Boat, and had Intercourſe ſometimes between the Ship and the Shore by Boat, which was new to us. The laſt Day of this Month we found ſome Vetches to appear out of the Ground, which I made our Men pick up and boil for our Sick. This Day we made an end of fitting all our Rigging and Sails, and it being a very hot Day we dried our Fiſh in the Sun, and aired all our other Proviſions. There was not a Man of us at preſent able to eat of our ſalt Proviſions but myſelf and the Maſter. It may be remembered that all this Winter we had not been troubled with any Rheums nor Phlegmatic Diſeaſes. All this Month the Wind was variable, but for the moſt part northerly.

29. *June* 1632. The firſt four Days ſnowed and hailed, and blew very hard, and it was ſo cold that the Ponds of Water froze over, and the Water in our Cans was frozen even in the very Houſe. Our Cloaths alſo that had been waſhed and hung out to dry did not thaw. All Day the 5th it continued blowing very hard on the broad Side of the Ship, which made her ſwag and wallow in her Dock, notwithſtanding ſhe was ſunk, which ſhook her very much. The Ice withal drove againſt her, and gave her many fearful Blows. I reſolved to endeavour to hang the Rudder, and when God ſent us Water, notwithſtanding the abundance of Ice that was yet about us, to heave her further off. In the Afternoon we under-run our ſmall Cable to our Anchor, which lay a-ſtern in deep Water, and ſo with ſome Difficulty got up our Anchor. This Cable had lain ſlack under Foot, and under the Ice all Winter, and we could never have a clear Slatch from Ice to have it up before now. We found it not a Jot the worſe. I put ſome to make Coal-rakes, that they might go into the Water and rake a Hole in the Sand to let down our Rudder. The 6th we went about to hang it; and our young luſtieſt Men took it by Turns to go into the Water and to rake away the Sand, but they were not able to endure the Cold half a Quarter of an Hour, it was ſo mortifying; and uſe what Comforts we could, it would make them ſwoon and die away. We brought it to the Stern-Poſt, but then we were forced to give it over, being able to work at it no longer. Then we plugged the upper Holes aboard, and fell to pumping the Water out of her again.

The 7th we wrought about our Rudder, but were again forced to give over, and ſo put our Cables over board with Meſſengers unto them, the Anchor lying to that Paſs that we might keep her right in the Dock when we had brought her light. By the 8th at Night we had pumped all the Water out of her, ſo that at high Water ſhe would float in her Dock, tho' ſhe were ſtill docked in the Sand almoſt four Feet. This made us conſider what was to be done. I reſolved to heave out all the Ballaſt; for the Bottom of her being ſo ſoaked all the Winter, I hoped was ſo heavy that it would bear her. If we could not get her off that Way, I then thought to cut her down to the lower Deck, and take out her Maſts, and ſo with our Caſks to buoy her off. The 9th betimes in the Morning we fell to work, we hoiſted out our Beer and Cyder, and made a Raft of it, faſtening it to our Shore-Anchor. The Beer and Cyder ſunk preſently to the Ground, which was nothing ſtrange to us, for any Wood or Pipe-ſtaves that had laid under the Ice all the Winter would alſo ſink down as ſoon as ever it was hove over board.

This Day we heaved out ten Ton of Ballaſt; and here I am to remember God's Goodneſs towards us, in ſending thoſe forementioned green Vetches; for now our feeble ſick Men, that could not for their Lives ſtir theſe two or three Months, could endure the Air, and walk about the Houſe. Our other ſick Men gathered Strength alſo: And it was wonderful to ſee how ſoon they were recovered. We uſe them in this manner twice a Day; we went to gather the Herb or Leaf of thoſe Vetches as they firſt appeared out of the Ground, and then we waſhed and boiled them, and ſo with Oil and Vinegar that had been frozen we eat them. It was an excellent Suſtenance and refreſhing; the moſt part of us eat nothing elſe. We likewiſe bruiſed them, and took the Juice of them and mixed it with our Drink: We alſo eat them raw with our Bread.

The 11th was very warm Weather, and we hung our Rudder. The Tides now very much deceived us, for a Northerly Wind would very little raiſe the Water. This made us doubt of getting off our Ship. The 13th I reſolved to know the Latitude of this Place; ſo having examined the Inſtruments and practiſed about it this Fortnight, I found it to be 52 Degrees 3 Minutes. The 14th we had heaved out all the Ballaſt, and carried all our Yards and every thing elſe on Shore, ſo that we now had the Ship as light as poſſible it could be.

The 13th we did little but exerciſe ourſelves. By this Time our Men that were moſt feeble grew ſtrong and run about, the Fleſh of their Gums being ſettled again, and their Teeth faſtened ſo that they eat Beef with their Vetches. This Day I went to our Watch-Tree, but the Sea, for any thing I could perceive, was ſtill firm frozen, and the Bay full of Ice, having no Way to vent it.

The 16th was wondrous hot, with ſome Thunder and Lightning, ſo that our Men went into the Ponds aſhore to ſwim and cool themſelves, yet the Water was very cool ſtill. Here had lately appeared divers ſorts of Flies, as Butter-flies, Butchers-flies, Horſe-flies and ſuch an infinite Number of blood-thirſty Muſketoes, that we were more tormented with them then ever we were with the cold Weather. Thoſe I think lie dead in the old rotten Wood all the Winter, and in Summer they revive again. Here are likewiſe infinite Numbers of Ants and Frogs in the Ponds upon the Land, but we durſt not eat of them: They looked ſpeckled like Toads. By this Time there were neither Bears, Foxes, nor Fowl to be ſeen.

30. The 17th the Wind came Northerly, and we, expecting a high Tide, in the Morning betimes put out our ſmall Cable aſtern out at the Gun-Room Port, but the Morning-Tide we had not Water by a Foot. In the Evening I had laid Marks by Stones, *&c.* and thought that the Water flowed apace: Making Signs therefore for the Boat to come aſhore, I took all that were able to do any thing with me aboard; and at high Water, although ſhe wanted ſomething to riſe clear out of the Dock, yet we heaved with ſuch Good-will, that we heaved her through the Sand into a Foot and an half deeper Water, and further we durſt not bring her; for the Ice was all thick about us. After we had moved her we all went to Prayers, and gave God Thanks that he had given us our Ship again. The 18th were were up betimes, the Cooper and ſome with him to bring freſh Water, myſelf with others to gather Stones at low Water, which we piling up at low Water, the Cockſwain and his Gang fetched them aboard, where the Maſter with the reſt ſtowed them to the Offing, by which means we could the better come and ſtop the two upper Holes firmly: After which we fitted other convenient Places to make others to ſink her, if Occaſion were.

The 19th we were all up betimes to work as afore ſpecified. Theſe two Days our Ship did not float, and it was a very happy Hour which we got her off, for we never had ſuch a high Tide all the Time we were here. In the Evening we went up to our Watch-Tree; and this was the firſt Time I could ſee open Water any Way except that little by the Shore-ſide where we were. This put us in ſome Comfort that the Sea would ſhortly break up, which we knew muſt be ſo to the Northward, ſeeing that Way we were certain there were about two hundred Leagues of Sea. The 20th we laboured as formerly, the Wind at North-north-weſt. The Tide roſe ſo high that our Ship floated, and we drew her off into a Foot and half deeper Water. Thus we did it by little and little, for the Ice was ſtill wonderfully thick round about us.

The 22d there drove much Ice about us and within us, and brought home our Stern-Anchor at high Water. Notwithſtanding all the Ice we heaved our Ship further off, that ſo ſhe might lie afloat at low Water. The next low Water we ſounded all about the Ship, and found it very ſound Ground. We diſcovered Stones three Feet high above the Ground, and two of them within a Ship's-breadth of the Ship, whereby did more manifeſtly appear God's Mercy to us; for if when we found her on Shore ſhe had ſtruck one Blow againſt thoſe Stones, it had bulged her. Many ſuch Dangers were there in this Bay, which we now firſt perceived. In the Evening we towed off the Ship into the Place were ſhe rode the laſt Year, and there moored her, ſteering the Ship Night and Day, Flood and Ebb, among the diſperſed Ice that came athwart us.

The 23d we laboured in fetching the Proviſions on board, which to do we were forced to wade to carry it to the Boat a full Bow-ſhot, and all by reaſon the Wind was Southerly. This Morning I took an Obſervation of the Moon's coming to the South, by a Meridian Line of a hundred and twenty Yards long, which I had rectified many Weeks beforehand,

The 24th I took another Obſervation of the Moon's coming to the Meridian. I had formerly cut down a very high Tree and made a Croſs of it: To it I now faſtened uppermoſt the King and Queen's Pictures drawn to the Life, and doubly wrapped in Lead, and ſo cloſe that no Weather could hurt them. Betwixt both theſe I affixed his Majeſty's Royal Title, *viz. Charles* the firſt, King of *England*, *Scotland*, *France* and *Ireland*, as alſo of *Newfoundland*, and of theſe Territories, and to the Weſtward as far as *Nova Albion*, and to the Northward to the Latitude of 80 Degrees, *&c.* On the Outſide of the Lead I faſtened a Shilling and a Sixpence of his Majeſty's Coin; under that we faſtened the King's Arms fairly cut in Lead, and under that the Arms of the City of *Briſtol:* And this being Midſummer-day, we raiſed it on the Top of the Bar-hill, where we had buried our dead Fellows, by this Ceremony taking Poſſeſſion of theſe Territories for his Majeſty's Uſe. The Wind continuing Southerly, and blowing hard, put the Ice upon us, ſo that the Ship now rode among it in ſuch apparent Danger, that I thought verily we ſhould have loſt her.

We laboured Flood and Ebb with Poles and Oars to heave away and part the Ice, but it was God that protected and preſerved us; for it was paſt any Man's Underſtanding how the Ship could endure it, or we by our Labour ſave her. In the Night the Wind ſhifted to the Weſtward, and blew the Ice from us, which gave us ſome Reſt.

31. The 25th in the Morning the Boatſwain with a convenient Crew began to rig the Ship, the reſt fetching our Proviſion on board. About ten o'Clock when it was ſomething dark, I took a Launce in my Hand, and one with me with a Muſket, and went to our Watch-Tree to make a Fire on the moſt eminent Place of the Iſland, to ſee if it would be anſwered. Such Fires I have formerly made to have Knowledge if there were any Savages on the Main or the Iſlands about us. Had there been any, my Purpoſe was to have gone to them to get Intelligence of Chriſtians, or ſome Ocean Seas thereabouts. When I was come to the Tree I laid down my Launce, and ſo did my Conſort his Muſket, whilſt I climbed up to the Top of the Tree. I ordered him to put Fire to ſome low Tree thereabouts. He unadviſedly put Fire to ſome Trees that were to Windward, ſo that they and all the reſt too, by reaſon it had beeen very hot Weather, being dry, took Fire like Flax and Hemp; and the Wind blowing towards me, I made haſte down the Tree; but before I was half Way down the Fire took on the Bottom of it, and blazed ſo fiercely upward that I was forced to leap off the Tree and down a ſteep Hill, and in ſhort with much ado eſcaped Burning. The Moſs on the Ground was as dry as Flax, and it run moſt ſtrangely, like a Train along the Earth. The Muſket and Launce were both burnt. My Conſort at laſt came to me, and was joyful to ſee me, for he thought verily I had been burnt: And thus we went homeward together, leaving the Fire increaſing and burning moſt furiouſly.

I ſlept but little all Night after, and at break of Day ordered all our Powder and Beef to be carried aboard this Day. I went to the Hills to look to the Fire, where I ſaw it ſtill burn both to Weſtward and Northward, leaving one upon the Hills to watch it. I came home immediately, and made them take down our now Suit of Sails, and carry them to the Sea-ſide, ready to be caſt in if Occaſion were, and to make haſte to take down our Houſes. About Noon the Wind ſhifted Northward, and our Centinel came running home, bringing us Word that the Fire followed him at his Heels, like a Train of Powder. There was no Occaſion to bid us pull down, and carry all to the Sea-ſide. The Fire came towards us with a moſt terrible rattling Noiſe, bearing a full Mile in Breadth; and by that Time we had uncovered our Houſes, and going to carry away our laſt things, the Fire was come to our Town and ſeized it, and, in a Trice, burnt it down to the Ground. We loſt nothing of any Value, for we had brought all into a Place of Security. Our Dogs, in this Condition, would ſit down on their Tails, and howl, and then run into the Sea, and there ſtay. The Wind ſhifted Eaſterly, and the Fire ranged to the Weſtward, ſeeking what it might devour. This Night we lay together aboard the Ship, and gave God Thanks, who had been thus merciful unto us.

The 27th, 28th, and 29th, we wrought hard in fetching our things aboard, as likewiſe our Water, which we towed off with the Ebb, and ſent it to the Ship with the Flood; we were forced to go about the Eaſtern Point for Drift-wood, for the Tools were all ſo ſpent, that we could cut none. Therefore about three Days before I had cauſed our Pinnace to be ſawed to pieces, and with that we ſtowed our Caſk, intending to burn it at Low-water; and ſuch other times as we could not work in carrying things aboard, I employed in fetching Stones; and we built three Tombs over our three dead Companions, filling them in with Sand, in a decent and handſome Manner. The leaſt Tomb had three Tons of Stones about it. The 30th we earneſtly continued our Labour, and brought our Sails to Yard; and by eleven o'Clock at Night had made a pretty Ship, meaning to have finiſhed our Buſineſs with the Week and Month, that we might the better ſolemnize the Sabbath aſhore, and ſo take leave of our wintering Iſland.

The Wind had been variable a great while, and the Bay, ſo clear of Ice, that we could not ſee a Piece of it, for it was all gone to the Northward. Hoping that it may give Content to ſome Readers, I will relate the Manner of the breaking of it up. It is firſt to be noted, that it did not freeze naturally above ſix Feet, the reſt is by Accident; ſuch is that Ice, that you may ſee here ſix Fathom thick; this we had manifeſt Proof of, by digging the Ice out of the Ship, and by digging to our Anchors before the Ice broke up.

32. In *May*, when the Heat increaſeth, it thaws firſt on the Shole by the Shore-ſide, which when it hath done round about, then the Courſes of the Tides, as well by the Ebb and Flood, as by their riſing and falling, do ſo ſhake the main Ice, that it cracks and breaks it. Thus, when it hath got Room for Motion, then runs one Piece of it upon another, and ſo bruiſes and grinds itſelf againſt the Sholes and Rocks, that a Ship may run through it. Beſides this, much of it is thruſt upon the Sholes, where it is conſumed by the Heat of the Sun. The Seaſon of this Climate is moſt unnatural; for in the Day time it will be extreme hot, nay intolerable, by Reaſon it is a ſandy Country. In the Night again it will freeze an Inch thick in the Ponds, and in the Tubs about, and in our Houſes; and all this towards the latter End of *June*. The Muſketoes, upon our coming away, were inſupportable. We tore an old Flag in Pieces, and made us Bags of it to put our Heads in, but it was no Fortification againſt them; they would find ways and means to ſting us, that our Faces were ſwoln out in Pimples, which would ſo itch and ſmart, that we muſt needs rub and ſcar them; and theſe Flies, indeed, were more tormenting to us, than all the Cold we had endured before.

July 1632. The 1ſt of this Month we were up betimes, and I cauſed our Ship to be adorned the beſt we could. Our Flag in the Poop, and the King's Colours in the Main-Top. I had provided a ſhort Account of all the Paſſages of our Voyage to this Day. I likewiſe wrote in what State we were in at preſent, and how I intended to proſecute this Diſcovery, both to the Weſtward and to the Southward, about this Iſland. This brief Diſcourſe I had concluded, with a Requeſt to any noble minded Traveller that ſhould take it down, or come to the Notice of it; that if we ſhould periſh in the Action, then to make our Endeavours known to our Sovereign Lord the King. And thus, with our Arms, Drums, and Colours, Cook and Kettle, we went aſhore, and at firſt we marched up to our eminent Croſs, adjoining to which we had buried our dead Fellows. There we read Morning Prayers, and then walked up and down till Dinner-time. After Dinner we walked up to the higheſt Hills, to ſee which way the Fire had waſted; we deſcried that it had conſumed to the Weſtward ſixteen Miles at leaſt, and the whole Breadth of the Iſland. Near our Croſs and Dead it could not come, by reaſon it was bare Sand. After Evening Prayer I happened to walk along the Beach-ſide, where I found an Herb reſembling Scurvy-Graſs; I had ſome gathered, which we boiled with our Meat to Supper.

It was moſt excellent good, and far better than our Vetches. After Supper we went to ſeek for more of it, which we carried off to the Quantity of two Buſhels, which did afterwards much refreſh us; and now the Sun was ſet, and the Boat came aſhore for us; whereupon we aſſembled ourſelves together, and went up to take the laſt View of our Dead, and to look to their Tombs, and other things. So faſtening my Brief, which was ſecurely wrapped up in Lead to the Croſs, we preſently took Boat and departed, and never put Foot more on that Iſland. This Iſland, and all the reſt, as likewiſe the Main, is a light white Sand, covered over with a white Moſs, and full of Shrubs and low Buſhes, excepting ſome bare Hills and other Patches: In theſe bare Places the Sand will drive with the Wind like Duſt. It is very full of Trees, as Spruce and Juniper, but the biggeſt Tree I ſaw was but a Foot and a half Diameter.

At our firſt coming hither we ſaw ſome Deer, and killed one, but never any ſince; Foxes all the Winter we ſaw many, and killed ſome Dozens of them; but they went all away in *May*; Bears we ſaw a few, but killed none; we ſaw ſome other little Beaſts. In *May* there came ſome Fowl, as Ducks and Geeſe, of which we killed very few; white Patridges we ſaw, but in ſmall Quantities, nor had we any Shot to ſhoot at them. Fiſh we could never ſee any in the Sea, nor no Bones of Fiſh on the Shore-ſide, excepting a few Cockle-Shells, and yet nothing in them neither.

33. *Sunday* being the 2d of *July*, 1632, we were up betimes, about ſtowing and fitting our Ship, and weighing our Anchors; which, when the laſt was a Trip, we went to Prayers, beſeeching God to continue his Mercy to us, and rendering him Thanks for having thus reſtored us. Our Ship we found no Defect in. We had abundance of ſuch Proviſions as we brought out of *England*, and we were in indifferent Health, and gathered Strength daily. This being done, we weighed and came chearfully to ſail. The Wind at North-weſt, bad to get away, wherefore we ſtood over to *Danby Iſland*, to take in more Wood, and there to be ready to take the Opportunity of a fair Wind. I went aſhore with the Boat, for ſome of the Company had told me they had ſeen ſome Stakes the laſt Year driven into the Ground, where we came aſhore, whilſt ſome gathered Wood. I went to the Place, where I found two Stakes drove into the Ground a Foot and a half, and Fire-brands, where a Fire had been made by them. I pulled up the Stakes, which were about the Thickneſs of my Arm, and they had been cut ſharp at the Ends with a Hatchet, or ſome other good Iron Tool, and driven in as it were with the Head of it. They were diſtant above a Stones-throw from the Water-ſide. I could not conceive to what Purpoſe they ſhould be there ſet, unleſs it were for ſome Mark for Boats. This augmented my Deſire to ſpeak with the *Savages*, for, without doubt, they could have given us Notice of ſome Chriſtians with whom they had Commerce.

About four in the Evening I returned with a Boat's

Lading of Wood, and the Wind ſomething favouring, we weighed with our Lead, ſeeking out a Channel amongſt thoſe dangerous Sholes. In the Evening the Wind oppoſing itſelf, we came to Anchor betwixt *Charlton Iſland*, and that Iſland we named the laſt Year, in Memory of that honourable Gentleman Mr. *Thomas Cary*, one of the Bed-chamber to the King, *Cary's Iſland*, where we rid all Night. On the 3d, at break of Day, we weighed, with a bare Wind, and, ſounding up and down for a Channel, we were many times in five and four Fathom Water. The Wind larging upon us we ſtood away Weſt; by Noon we ſaw all the Ice Southward of us, endeavouring therefore to compaſs about the Weſtern Point of *Charlton Iſland*, and ſo to ſeek to the Southward, we found it all Sholes, Rocks, and Breaches. By four in the Afternoon we ſaw the Weſtern Land, but all full of Ice; whereupon, as the Wind favoured us, we ſtood along it in Sight to the Northward.

The fourth was calm, but ſo very thick and foggy withal, that we could not ſee a Piſtol-ſhot about us; we knew not which Way to turn us. Now to avoid telling the ſame thing twenty times, we were continually till the 22d ſo peſtered and tormented with Ice, that it would ſeem incredible to relate it; ſometimes we were ſo blinded with Fog, that we could not ſee about us; and we did ſo ſtrike againſt the Ice, that the Fore-part of the Ship would crack again, and make our Cook and others to run up all amazed, and think the Ship had been beaten all to Pieces. Indeed we did hourly ſtrike ſuch unavoidable Blows, that we left the Hatches open, and twenty times in a Day the Men would run down into the Hold to ſee if ſhe were bulged. Sometimes when we had made her faſt in the Night to a great Piece of Ice, we ſhould have ſuch violent Storms, that our faſtning would break, and then the Storm would beat us from Piece to Piece moſt dreadfully; other times we ſhould be faſt incloſed among great Ice as high as our Poop: This was made, as I have formerly ſaid, by one Piece running upon another, which made it draw eight or ten Fathom Water; beſides which the lowermoſt would riſe from underneath, and ſtrike us under the Bulge with Pieces of five, ſix, nay of eight Tons, that many times we have pumped clear Water for an Hour together, before we could make the Pump ſuck. Among theſe ſeveral and hourly Dangers, I overheard the Men murmur, and ſay, That they were happy that I had buried, and that if they had a thouſand Pounds they would give it, ſo they lay fairly by them; for we, ſay they, are deſtined to ſtarve upon a Piece of Ice. I was forced to ſuffer all this with Patience, and to comfort them again, when I had them in a better Humour.

34. The 22d, having been vexed with a Storm all Night, and this Morning with a thick Fog, we drove in thirteen Fathom Water. About Noon it cleared, and we ſaw the Land, and at that Inſtant had a good Obſervation, whereby we knew it to be the Cape *Henrietta Maria*. I made the Maſter ſtand in with it, and in the mean Time we fitted a Croſs, and faſtened the King's Arms, and the Arms of the City of *Briſtol* to it. We came to an Anchor within a Mile of the Shore, in ſix Fathom Water, ſo we hoiſted out our Boat, and took our Arms and our Dogs, and went aſhore. Upon the moſt eminent Place we erected the Croſs; and then ſeeking about we ſoon ſaw ſome Deer, and by and by more and more. We ſtole to them with the beſt Skill we had, and then put our Dogs on them, but the Deer ran clear away from them at Pleaſure. We tired the Dogs, and wearied ourſelves, but to no purpoſe, neither could we come to ſhoot at them. I ſaw, in all, about a dozen old and young, very goodly Beaſts. We took half a dozen young Geeſe on the Pools, by wading into them; and ſo returned to our Boat, vexed that we had found a Place where there were Refreſhments, and we could get none of them. Whereas we had kept our Dogs with a great deal of Inconveniency aboard the Ship all the Winter, and had pardoned them many Miſdemeanours (for they would ſteal our Meat out of the ſteeping Tubs) in Hopes they might hereafter do us ſome Service; and ſeeing they now did not, and that there were no Hopes they could hereafter, I cauſed them to be left aſhore. They were a Dog and a Bitch, Buck Dogs, of a very good Breed. The Dog had a Collar about his Neck, which, perhaps, hereafter may come to Light.

I ſaw no Sign of any *Savages*, nor could we find any Herbs, or other Refreſhments here. In the Evening, being returned aboard, and the Wind blowing fair at South, I cauſed the Maſter to weigh, and come to Sail, and to loſe no Time, for we hoped for an open Sea to the North-weſt. This Cape has a very ſhole Point that lies off it, which we endeavoured to compaſs. Sailing therefore upon ſhattered Ice, we came to very ſhole Water, four and five Fathom deep, and could not avoid it. At length, ſtanding North, the Water deepened, but we came withal among great Pieces of Ice, which by reaſon of ſome open Water there were a pretty Sea. Theſe hard Pieces of Ice made a moſt dreadful Noiſe. It proved a fair Moonſhine Night, otherwiſe it had gone ill with us. We turned among this Ice, ſtaying the Ship, ſometimes within her Length of great Pieces as bad has Rocks; but by Reaſon we were often forced to bear up, we let fall an Anchor, and ſtood all on the Decks to watch the Ice, ſheering off the Ship to and again to avoid it. Thus having Poles and Oars to fend it, we could not keep ourſelves ſo clear, but many Pieces came foul of us. We broke two of our great Poles with it, which were made to be handled by four Men, beſides ſome other Damage. At break of Day we weighed and ſought all Ways to clear ourſelves of Ice, but it was impoſſible. I conceive it impertinent to relate every particular Day's Paſſage, ſince they were much alike to us. Our Endeavours were ſometimes with our Sails, giving and receiving five hundred dreadful Blows in a Day.

Sometimes we ſtopped at an Anchor, when we could get a little open Water, and ſo ſuffer the Ice to drive to Leeward. Other times we ſhould be encloſed among it, and then it would ſo break and riſe, and leap up under us, that we expected every Hour to be beaten to Pieces. Beſides we had ſuch Storms in the dark Nights, as would break our Moorings we had made faſt to ſome Pieces of Ice, for Security in the Night Seaſon; and then we were beat moſt dangerouſly from Piece to Piece till Day-light, that we could ſee to make her faſt again. I forbear to ſpeak of the Fogs which we had daily, which froze our Rigging Day and Night; beſides all which, we ſhould come into moſt uncertain Depths, ſometimes twenty Fathom, next Caſt ten, next fifteen, then nine, rocky foul Ground; the great deep Ice withal, driving on theſe uncertain Depths, did ſo diſtract the Tides, and deceive us ſo much in our Account, that by the 30th we were driven back ſo far to the Eaſtward, and to the Southward of the Cape, that at five o'Clock in the Evening it bore North-weſt of us ſome three Leagues off, contrary to our Expectations.

With all theſe Miſchiefs, our Ship now became very leaky, that we pumped every half Watch. Here I called a Conſultation, and after conſidering all our Experience, we were of Opinion that it was impoſſible to get to the Northward, or to the Eaſtward, by Reaſon of the Ice; wherefore I reſolved upon this Courſe; when the Wind blew South, it would blow the Ice off the South Shore, then we would ſeek to get to the Weſtward, betwixt it and the Shore. I muſt confeſs that this was a deſperate Reſolution, for all the Coaſt we knew to be ſhole and foul Ground, all Rocks and Stones; ſo that if the Wind ſhould ſhift to the Northward, there would be, without God's Mercies, little Hopes of us. But here we muſt not ſtay, the Nights grew long, the Cold ſo increaſed, that betwixt the Pieces of Ice the Sea would be frozen. I cauſed the Ship to be fitted, and Places again prepared to ſink her a ſecond Time, if ſo be, we were put to Extremities. We preſently put our Project in Execution (the Wind being at South) and got about the Sholes of the Cape, ſtanding then into the Shoreward, to get betwixt it and the Ice. We came into four Fathom Water (very foul rocky Ground) thinking to come to an Anchor all Night, and let the Ice drive to Leeward. But ſtill there was ſo much Ice betwixt us and the Shore, that we were forced to bear up againſt it into deeper Water, and to let the Ship drive among it; the Wind increaſing we endured a moſt dangerous dark Night of it.

In the Morning we fell to work to get the Ship again out of the Ice into ſome clear Water, which we ſaw Weſt by South of us. Some of our Company went out upon the Ice to heave her with their Shoulders, whilſt others ſtood aboard with their Poles; the reſt ſtood to fill and ſpill the Sail. By nine in the Morning we had got into ſome clear Water, and ſtood Weſt and by South into four Fathom Water, foul Ground; but being not able to weather ſome Rands of Ice which drove, we were forced to ſtand off again, and when the Evening grew dark to come to an Anchor. About Midnight there came a great Piece of Ice (which we could not avoid) atwhart of our Cable, and made her drive and drag her Anchor: This drove her into ſhole Water, it being very rocky and foul Ground: We brought the Cable to Capſtang, and heaved with ſuch a Courage that we heaved home our Anchor from under it. Thus we endeavoured the beſt we could to keep ourſelves in eight or ten Fathom Water. It then pleaſed God that the Wind blew along the Shore, otherwiſe it had gone far worſe with us.

35. *Auguſt* 1632. The 1ſt of this Month, at break of Day, when we could ſee all about us, we were forced to ſtruggle again with the Ice, and to get in nearer to the Shore, by Reaſon the Wind was oppoſite, to come to an Anchor; we let the Ice drive to Leeward, hoping there was a clearing Sea to the Weſtward: The Ice drove very thick upon us, and one Piece came foul of us, which touched our Sprit-ſail Yard, and made the Ship drive; but we ſoon cleared ourſelves of it. Then we weighed, and ſtood in nearer to the Shore; but the Water ſhoaled, and there were ſo many thick Rands of Ice betwixt us and the Shore that there was no coming to an Anchor, ſo we turned betwixt the Ice, many Pieces of it being aground in ſhole Water, and few Pieces diſtant one from the other a Cable's Length: This Day we ſaw two Sea Mawes on the Ice. The 2d in the Morning we were glad at break of Day, having moſt dangerouſly turned among the Ice, and endured many a Blow; we ſtood in again to the Shoreward, to ſee if we could get ſome clear Water; for to the Northward it was all impaſſable Ice: We ſtood into five and four Fathom, but ſtill all impaſſable with Ice, ſo we ſtood off again into deeper Water; and in the Evening we were incloſed with extraordinary great Pieces; it was a very thick Fog withal, ſo that we made faſt the Ship to a great flat Piece and went to ſleep, after our extreme Painstaking.

The 3d, 4th, and 5th we were incloſed among very great Ice, and it blew ſuch a Storm of Wind that we, endeavouring to get forward to the Weſtward, ſtruck ſuch heavy Blows that made all the Fore-part of the Ship crack again; then we gave over working, and let her alone among it, but then the Ice would break and riſe under us, and that endangered us as bad as the former. Our Ship made now above a Ton of Water every Watch, which we pumped out before our other Labour. God be merciful unto us among all theſe Dangers.

The 5th at Noon we were in Latitude 55 Degrees, the Cape bearing off us South-eaſt by Eaſt, twelve Leagues off, and this all we have got ſince the 22d of *July*; all Night it blew a violent Gale of Wind at Weſt-north-weſt, and about Midnight our Hawſer (by which we made faſt to a Piece of Ice) broke, and we loſt four Fathom of it. We beat all Night moſt fearfully, being toſſed from Piece to Piece, becauſe in the Dark we duſt not venture our Men to go on the Ice, for fear of loſing them. All the 6th the Storm continued, and drove us again quite with the Ice almoſt to the Cape. The 7th was the moſt comfortable Day we had ſince we came out of our Wintering place. The Wind came up fair at Eaſt, and we got, although with our former Inconveniencies and Dangers, nearer the Shore, and into ſome open Water, making good way to the Weſtward. Add to this that our Leak now ſtopped of its own Accord, ſo that we pumped but little. We ſailed all Night, keeping good Watch on the Forecaſtle, bearing up from one and looſing from another. Thus we did the 8th alſo; but then the Wind ſhifting to the North-weſt, it drove the Ice on the Shore, and we came to an Anchor in eight Fathom Water. The main Ice we had ſome two Miles to windward of us; but the Set of the Tide kept it off from us. At Noon we were in Latitude 55 Degrees 34 Minutes. In the Evening a Range of Ice drove upon us, which made us weigh, and ſtand in nearer the Shore into ſix Fathom, and there come to an Anchor. The Wind increaſing about Midnight, the Ship drove, and was quickly in five Fathom Water, wherefore we let fall our Sheet Anchor, and both held her; but what troubled us was, we expected every Minute that the main Ice would come upon us, then there would be no Hope but to run on Shore.

The 9th in the Morning we weighed our ſecond Anchor, the Ice being within leſs than a Mile of us. About eight in the Morning a Point of it came foul of us, which we prevented by weighing, and came to Anchor in three Fathoms and a half Water. The Wind continued North-north-weſt, which was in on the Shore. This Morning I cauſed all our empty Caſks to be filled with Water, and the Ship to be left unpumped, and the Place looked to that we had prepared to ſink her, for we were at preſent in as apparent Danger as any time this Voyage, and to our great Grief it was all full of foul rocky Ground. The Danger of this was, if we made faſt to a Piece of Ice that drew deep Water, then as ſoon as it came to Ground on the Rocks it would break all to Pieces and betray us to our Deſtruction. About Noon there came foul of us the Point of a Range of Ice which we reſolved to endure the Extremity of with an Anchor, thinking to ride and break through it, we now perceiving ſome open Water beyond it; thruſting therefore, and fending with our Poles, at laſt a great Piece of Ice came athwart our Hawſer, and there was a briſk Sea among it: The Ship now fell upon it ſo violently that I expected every Blow ſhe would beat out her Bows; at length ſhe drove with it ſo that I thought the Cable had been broke; we brought it to Capſtang to heave it in, but found that our Sheet Anchor was broke in the Middle of the Shank. We preſently ſet our Sails thereupon, endeavouring that Way to edge in among the Ice off of this dangerous Shore. It pleaſed God to favour our Labour ſo, that by eight in the Evening we got off into ſeven Fathoms Water, and a dark Night coming on we made faſt to the biggeſt Piece we could find. It blew all Night, but at Midnight the Wind came up at North, which was more on the Shore than before.

By break of Day, on the 10th, we were driven into four Fathom very foul Ground, ſo that the Lead fell off the Rocks three or four Feet, we ſet our Sails and uſed our utmoſt Endeavours to edge off. Some of us went upon the Ice to haul her, others ſtood with Poles to thruſt by Night. At Night we got off to eight Fathoms, and made faſt to the biggeſt Piece we could find. If any Man ſhould aſk, Why we kept ſo near the Shore in this continual Danger? I anſwer, becauſe in the Offing, the Ice was ſo extraordinary thick that we could make no Way through it; beſides, when we were in that great thick Ice, and the Wind came up fair at South, or South-eaſt, or Eaſt, we could not get out of it; therefore we choſe to run this Adventure, and ſo prevent and overcome all Dangers with God's Aſſiſtance, and our extreme Labour.

36. The 11th in the Morning was a thick Fog, yet there ſprung up a Gale of Wind at Eaſt, and we made in for the Shore. From the 11th to the 14th the Wind continued fair, and we made all the Sail we could Night and Day as the Ice would ſuffer us; we had the Shore in ſight by Day on one Side, and the Ice within two Miles on the other; and we ſailed among diſperſed Pieces looſing from one, and bearing up for another, The 14th at Noon we were in Latitude 57 Degrees 55 Minutes. In the Evening we were embayed in Ice, and ſtood South-eaſt to clear ourſelves of it, but could not; but ſeeing from the Topmaſt-head clear Water over it, we put up to it.

But there aroſe a very thick Fog, and Night came on withal, that we were forced to faſten to a Piece of Ice, expecting Day and better Weather.

The 15th in the Morning, although the Fog was very thick, we would endeavour to get out of the Ice, and ſtood away Weſt; but within two Hours the Water ſhoaled from forty to twenty-five Fathoms; whereby we knew that we had the Shoaling of the weſtern Shore. Then we ſhaped our Courſe to the northward; the Fog continued ſo thick, that we could not ſee a Piſtol-ſhot about us. We had not ſtood this Way two Hours, but we heard a Rut of Ice a-head of us, which made the moſt hideous Noiſe of any I had heard this Voyage. We hauled our Tacks aboard, and ſtood to the weſtward in this Day-darkneſs; hearing it ſometimes, and ſeeing it ſometimes, which was very large, deep, and high Ice above the Water; we weathered it all except ſome few Pieces, and got into open Water. About Sun-ſet there came a ſudden Guſt at North-north-weſt, and before we could handle our Sails it was with us, and put us into ſome Trouble; it dallied with us, by Guſts, till nine o'Clock; and then it fell into a moſt violent Storm. We conſidered where we might have the cleareſt Drift, and ſo took in all, and let her drive her Head to the ſhoreward. Before Midnight the Water ſhoaled on us unto fifteen Fathoms.

Then we turned her Head to the eaſtward, and ſet our main Courſe low-ſet, but as much as ſhe could bear. The Water deepened but little, and we knew that we were on thoſe rocky Shoals which we ſtruck on the laſt Year; God be merciful unto us. Here was the firſt great breaking Sea we had this Year. The 16th, in the Morning, we were driven to a great Rand of Ice; to avoid which we ſet our Force and Courſe too, and ſtood to the ſhoreward in fifteen Fathom Water, and then about again. We ſtood in a Mile to the Ice, but there was a great ſwelling Sea in it, that it was not durable; ſo we ſtood out again. About three in the Afternoon the Storm broke up, and blew fair at North-weſt, which produced Good for us, for we had not Drift for four Hours, beſides, it was but five Leagues betwixt the Shoals and the Ice: We ſet all our Sails, and endeavoured to weather the Ice, but in the Evening we were ſtill peſtered with it. By Midnight we knew not which Way to turn, nor what to do; ſo we took in all our Sails, and let her drive among it. The Ice beat us on every Side, for there went among it a very great full Sea. The 17th in the Morning, when we could ſee about us, we were in the Midſt of it; but in the laſt Storm it was all broken to Pieces, as big as a Boat of three or four Ton, which gave us many a heavy Blow in the dark Night. If this Storm had taken us among it, it had broken us all to Pieces without God's miraculous Preſervation. We made ſail, and endeavoured to clear ourſelves of it to the northward, which, by eight in the Morning, we had done; we then went to Prayer, and gave God hearty Thanks, that had delivered us out of it; for we were hourly, for the Space of ſix Weeks, as it were in the Jaws of Death; yea, never had any, that I have heard of, been for ſuch a Space in ſuch long Nights upon a foul Shore, tormented with Ice, as we have been.

At Noon we were in 58 Degrees 20 Minutes. Now, as touching the Diſſolution of the Ice, we found that this Storm had torn and ſhattered this Rand of Ice which was on the Outſide, although it muſt have a long Time to work into the main Body of it. I have in *July*, and in the Beginning of *Auguſt*, taken ſome of the Ice into the Ship, and cut it ſquare two Feet, and put it into the Boat where the Sun ſhone with a very ſtrong Reflexion about it, and notwithſtanding the Warmth of the Ship, for we kept a good Fire, and all our Breathings and Motion, it would not melt in eight or ten Days. It was our Practice, when we ſhould be two Days together faſt to a Piece of Ice, to ſet Marks to it, to ſee how it conſumed, but it yielded us ſmall Hope of diſſolving; we could not, in that Time, perceive any Diminution by the ſinking of it, or otherwiſe; nevertheleſs, I think that it is ruined by Storms, or conſumed by Heat ſome Years, or elſe the Bay would be choaked up; but I confeſs theſe Secrets of Nature are paſt my Comprehenſion. Being out of it (but we yet ſaw it from off the Decks to the Eaſtward) I ordered the Maſter to ſteer away North and by Eaſt, keeping the Shoalings of the weſtern Shore. The 18th at Noon we were in Latitude 58 Degrees 36 Minutes.

37. The 19th we continued our Courſe betwixt the North-north-eaſt, and the North and by Eaſt, and by Noon were in Latitude 61 Degrees 7 Minutes, ſome twelve Leagues off the Shore: I ordered the Maſter to ſhape his Courſe North-eaſt, to look into that Place betwixt *Cary's Swans-neſt* and *Ne plus ultra*. The 20th we were in Latitude 61 Degrees 45 Minutes. This Day we ſaw ſome few Seals about the Ship. The 21ſt the Water ſhoaled, ſo that it was concluded we were near Land; but about Noon the Wind came up at North eaſt, directly oppoſite; we looſed as near as we could, and as it larged we came to ſtand Eaſt, and Eaſt and by North. The 22d we fell in with the Land to the Weſtward of *Cary's Swans-neſt*, where we had forty Fathoms three Leagues off. We ſtood in within a League of the Shore into eighteen Fathoms, and ſeeing the Land to the Southward of us, we compaſſed about it, it being *Cary's Swans-neſt*, which is in the Latitude of 62 Degrees All the 23d we ſailed North-eaſt, and, for the moſt Part, in Sight of Land.

The 24th at Noon, by Judgment, we were in Latitude 69 Degrees 30 Minutes, having ſailed a North-eaſt Courſe: All this Day was a very thick Fog, which about one o'Clock cleared a little, ſo that I expected to ſee the Land; ſome of our Men, better ſighted, ſpied it about two Leagues off. I knew it could be none other than *Nottingham Iſland*, though it was ſomething contrary to the Expectation of our beſt Mariners: We ſtood in to make it, it was the North End of it, and it bore off us due Eaſt; I was ſoon aſſured of it, and I ordered the Maſter to ſhape his Courſe North-weſt and by North. Both he and others were unwilling, but without much-ado ſubmitted themſelves: It was very foul, thick Weather. The Reaſons of my Reſolution were theſe: The Time of the Year was far ſpent, and the Winter came upon us, therefore I would make the ſhorteſt Way betwixt the Lands already diſcovered. If I found an open Sea I had my Deſire, and then I intended to proceed to the utmoſt of our Power.

If I met with Land I ſhould then finiſh the Diſcovery, it being not above fifteen Leagues from Land to Land, and not above ten Leagues from *Nottingham Iſland* to the Main of the North Shore; we made what ſail we could, it blowing a very ſtiff Gale of Wind till eight in the Evening; then it began to blow fiercely, and we took in our Topſails, and ſtood under our two Courſes and Bonnets; at nine it blew a violent Storm at South-ſouth-eaſt, ſo that we took in our Foreſail, and let her drive North-weſt. All Night it continued an extraordinary Storm, that we heaved the Lead every half Watch; but the Ship drove ſo faſt, that ſhe would be paſt the Lead before there were two Fathoms of Line out, all the Night being exceeding cold withal. The 25th the Storm continued, and ſo perplexed us, that there were but few that could ſleep or eat for twenty-four Hours. About ſix in the Afternoon the Storm began to abate, yet there blew a freſh Gale of Wind between the South and South-weſt: We ſtood Weſt-north-weſt and made a North-weſt Way; when ſuddenly the Sea became very ſmooth. We reaſoned thereupon among ourſelves, What might be the Cauſe of it? We all thought it to be a Leeward Tide, nothing doubting what we afterwards encountred; the Ship had a very quick Way in the ſmooth Water.

38. The 26th by two in the Morning we were ſuddenly got among the Ice, and it pleaſed God that the Moon at that Inſtant gave us ſo much Light that we could ſee a little about us. We would have ſtayed the Ship, but it was ſo thick to the Windward, and ſo near us, that we durſt not. We then bore up in this unexpected Accident, and I verily believe did not eſcape ſtriking the Length of a Foot againſt the Ice, as hard as Rocks, two or three Times, as the Ship now having Way after 12 Leagues a Watch. Then we ſtood cloſe by the Wind to the Eaſtward, expecting Day that we might ſee about

us. We could from Top-maſt Head ſee the Ice from the North-north-weſt, the North-weſt, and ſo round about by the South to the Eaſt; and ſome there was to the Leeward of us. It was all flat ſound Ice, and the Sea as ſmooth as a Wall amongſt it. This ſtruck us all into a Damp, whereupon I called a Conſultation of my Aſſociates, namely, *Arthur Price*, Maſter; *William Clements*, Lieutenant; *John Whittered*, Maſter's Mate; *Nathaniel Bilſon*, Chirurgeon; and *John Palmer*, Boatſwain; requiring them to adviſe and counſel me how to proſecute our Buſineſs to Effect. Theſe went all together and reaſoned amongſt themſelves, and then brought me their Opinions in Writing under their own Hands, *viz.* Our Advice is, that you repair Homeward from this preſent 26th, and that for theſe Reaſons:

Firſt, That the Nights are long, and ſo extreme cold withal, that we can hardly handle our Sails and Rigging. Secondly, The Seaſon is now ſubject to ſtormy and guſty Weather, as witneſs the preſent, it having continued a Storm ever ſince the 24th, and yet doth continue no Weather to diſcover in. Thirdly, We doubt whether *Hudſon's Streights* be ſo clear of Ice that it may be paſſable in convenient Time, Winter coming on apace, before we are frozen up, ſeeing the Ice lies here all over the Sea. Fourthly, We muſt have fair Weather to paſs the Streight, for which we may ſtay a long Time, if we neglect the firſt Opportunity. Fifthly, Our Ship is ſo very leaky, that in foul Weather we are forced to pump every Glaſs, which is great Labour. Moreover, we know her to be ſo bruiſed with Rocks and Blows of the Ice, that ſhe is no more to be adventured among it, but in ſaving our Lives homewards. Beſides all this, our Men grow very weak and ſickly with extreme Labour. Sixthly, The Seaſon of the Year is ſo far ſpent, that we can expect no other Weather than we have had, both lately and at preſent; that is to ſay, Snow and Fog freezing our Rigging, and making every Thing ſo ſlippery that a Man can ſcarce ſtand, and all this with the Wind Southerly, which, if it ſhould come to the Northward, then we are to expect far worſe. Seventhly and laſtly, That the Ice lies all in thick Rands and Ranges in the very Way we ſhould go, as you and all Men here may ſee; and therefore we conclude as aforeſaid, that there is no Poſſibility of proceeding further: Wherefore we now counſel you to return Homeward, hoping that God will give us a favourable Paſſage to return to our native Country, if we take Time and not tempt him too far by our Wilfulneſs.

Indeed moſt of theſe Difficulties were in View, and I could not reaſonably oppoſe them, nor any Reaſon could I give for proceeding further; wherefore with a ſorrowful Heart, God knows, I conſented that the Helm ſhould be borne up, and a Courſe ſhaped for *England*, hoping that his Majeſty would graciouſly conſider our Endeavours, and pardon our Return. And although we have not diſcovered populous Kingdoms, and taken ſpecial Notice of their Magnificence, Power, Policy, &c. brought Samples Home of their Riches and Commodities, pried into Myſteries of their Trade and Traffic, nor made any great Fight againſt the Enemies of God and our Nation; yet I hoped that our Willingneſs in thoſe deſart Parts may be acceptable to our Readers.

When we bore up Helm we were in Latitude 65 Degrees 30 Minutes, at Weſt-north-weſt and by North from *Nottingham Iſland*. Some were of Opinion that we were farther to the Northward; but by Reaſon it was my Judgment, I choſe to ſet down the leſſer Diſtance. The 27th the Wind came up at North-weſt, with which we could not have gone on with our Deſign. That Wind made no great ſwelling Sea. By Noon we were athwart of *Cape Charles*, ſo that we went in between that Cape and *Mill Iſlands*. The laſt Night it ſnowed very much, and was very cold, ſo that all our Rigging and Sails were frozen, and all the Land covered with Snow. And here it will not be amiſs to conſider the Reaſons of it: When I was upon *Charles Iſland* (our Wintering-place) and in *June* when the Snow was cleareſt off the Ground, I have in the Nights, and ſome of them following the hotteſt Days, obſerved whether there fell any Dew or no, but I could never perceive any, and from Moſs and Sand little I thought was to be expected. Now of what was exhaled from the ſnowy Ice and cold Sea could there probably be returned, but the like again? Generally we continued on our Courſe blinded with Fog and dirty Weather, and that intermixed with Snow and Froſt among diſperſed Pieces of Ice, many of them higher than our Top-maſt Head. With great Variety of Windfalls we were driven within three Leagues of both Shores; ſo that the laſt of this Month we were in the Narrow of the Streight, which is about fifteen Leagues over; the South Shore was much peſtered with Ice.

September 1632. The 1ſt and 2d we endeavoured to get on our Way. The 3d in the Evening, as the Weather cleared up, we ſaw the South-End of the Iſland *Reſolution*. Theſe three Days and Nights had been extreme cold with Fog and Froſt, inſomuch that our Men in the Evening could hardly take in our Top and Sprit-ſails. We have ſailed through much mountainous Ice, far higher than the Top-maſt Head, but this Day we ſailed by the higheſt I ever yet ſaw, which is incredible indeed to be related. Now as the Wind comes Eaſterly, we feel another Sea out of the Ocean, and the Ship labours with another Motion than ſhe hath done with any that we ever obſerved to come out of the Weſtward. From the 3d to the 8th we had Variety of Winds, and were got clear out of the Streights, but were now come into ſuch a tumbling Sea, the Weather dirty and windy, and by Intervals calm again, that the Ship did ſo labour and roll, that we thought verily ſhe would have rolled her Maſts by the Board. This made her ſo leaky that we were forced to pump every Glaſs; nay, her Seams ſo opened aloft that we lay all wet in her.

39. This was the laſt Day we ſaw any Ice. The Wind now favouring us we made all the Haſte we could homeward, by the Way having endeavoured, obſerved, and experimented ſome Things, in this our unfortunate Voyage. I perfected my Obſervations, which being afterwards commanded to publiſh, I here moſt ſubmiſſively offer unto the judicious Reader. What hath been long ago fabled by ſome *Portugueſe* that ſhould have come this Way out of the South Sea, the mere Shadows of whoſe miſtaken Relation have come to us, I leave to be confuted by their own Vanity; theſe Hopes have ſtirred up from Time to Time the more active Spirits of this our Kingdom to reſearch that merely imagined Paſſage. For my Part I give no Credit to them at all, and as little to the vicious and abuſive Wits of later *Portugueſe* and *Spaniards*, who never ſpeak of any Difficulties, as Shoal-Water, Ice, nor Sight of Land, but as if they had been brought Home in a Dream or Engine; and indeed their Diſcourſes are found abſurd; and the Maps by which ſome of them have practiſed to deceive the World mere Falſities, making Sea where there is known to be main Land, and Land where there is nothing but Sea.

Moſt certain it is, that by the Induſtry of our own Nation thoſe northern Parts of *America* have been diſcovered to the Latitude of 80 Degrees or upwards; and it hath been ſo curiouſly done, the Labours of ſeveral Men being joined together, that the main Land may be ſeen and ſearched; and they have brought this ſuppoſed Paſſage to this Paſs, that it muſt be to the North of 66 Degrees of Latitude, a cold Climate peſtered with Ice and other Inconveniencies, and where the *Spaniards* Diſpoſitions and their weak Ships can hardly endure it: And withal it is known, that the Entrance of *Hudſon's Streights* is but fifteen Leagues broad, and in the Middle not ſo much; and between *Saliſbury Iſland* and the Main it is but eight Leagues. Then proceeding to the Northward toward the forementioned Latitude, it is but fifteen Leagues from Main to Main. This in Length is about a hundred and forty Leagues, as will more plainly appear by the Map, and infinitely peſtered with Ice until *Auguſt*, and ſome Years not paſſable then; and I believe the Streight is never clear of Ice entirely. Now it is moſt probable there is no Paſſage for the following Reaſons: Firſt, There is a conſtant Tide, Flood and Ebb, ſetting in to *Hudſon's Streights*, the Flood ſtill coming from the Eaſtward, which, as it proceeds, correſpondent to the Diſtance, it alters his Time of full Sea. This alſo entering into Bays and broken Ground, it becomes diſturbed, and overſets with Half-

Tides. Secondly, Here are no ſmall Fiſhes, as Cod, *&c.* and very few great ones, which are rarely to be ſeen, nor are there any Bones of Whales, Sea-Horſes, or other great Fiſh to be found on the Shore, nor any Drift-Wood.

Thirdly, We find the Ice in the Latitude 65 Degrees 30 Minutes, to be lying all over the Sea in Rands, and I am moſt certain that the Sholes, and Shole Bays, are the Mother of it. Had there been any Ocean beyond, it would have been broke all to Pieces, for ſo we found it coming through the Streight into the Sea, to the Eaſtward. Fourthly, The Ice ſeeks its Way to the Eaſtward, and ſo drives out at *Hudſon's Streight*; which I have often obſerved upon the Iſland of *Reſolution*, and driving among the Ice in the Streight. Admit there were a Paſſage, yet it is known that it is narrow for one hundred and forty Leagues, and infinitely peſtered with Ice, as every one has found who has gone that Way; comparing therefore ſome Obſervations taken at *Bantam*, *Gilolo*, and *Firando*, in *Japon*; and the Diſtance between *Japon* and the Weſtern Part of *California*; with the Obſervations taken at *Charlton Iſland*, referring all to the Meridian of *London*; and then the Diſtance betwixt the Meridians of *Cape Charles*, and the Weſtern Part of *California*, will be found to be about five hundred Leagues, in Latitude 66 Degrees, where yet the Meridians incline very much together. To this may be added, that near about *Cape Charles* the Variation is 29 Degrees to the Weſt, which is a probable Argument that there is much Land to the Weſtward, and that this Streight muſt be very long, and that you have no Time to paſs it, but in *Auguſt* and *September*; when the Nights are ſo long, and the Weather ſo cold, that it will not be bearable. Add to this, that neither can any great Ships, which are fit for carrying of Merchandize, endure the Ice, and other Inconveniencies, without extraordinary Danger.

Moreover, one thouſand Leagues is ſooner ſailed to the Southward, and about the *Cape de Bona Speranza*, where the Winds are conſtant, and that with Safety, than one hundred in theſe Seas, where you muſt daily run the Hazard of loſing Ship and Lives. Add hereunto that Comfort for the Sick, or Refreſhment for your Men, here is none to be had in theſe Quarters. Towards the latter End of *Auguſt*, and in *September*, the Weather grows tempeſtuous, and the Winds incline to be Weſterly, that there will be but ſmall Hopes of performing your Voyage this Way. But let us, by Way of Imagination, enlarge this Streight in this Latitude, and free it of Ice. Yet what Advantage in ſpeedy Performance will be got by this Paſſage, if the Winds be withal conſidered, to *Japon*, *China*, and the Northern Parts of *Aſia?* It may be the nearer Cut, but in Navigations the fartheſt Way about is well known, in fewer Days, to be performed, yea with leſſer Pains, and more Safety of Ship and Goods. Again to the *Eaſt-Indies*, and other Parts, where we have the greateſt Commerce and Employment of Shipping, the other Way is as near.

What Benefit of Trade might have been obtained in thoſe Northern Parts of *Aſia*, I will not preſume to ſpeak of? Holding that there is a great Difference betwixt thoſe Parts, and the Northern Parts of *America*, whereas I am ſure that there is none in any Place where I have been in all this Voyage.

40. “ Before we proceed to the Account our Author gives us of his return home, it will be requiſite to conſider the Force of his Arguments againſt the Probability of finding any ſuch Paſſage; becauſe if they were as concluſive as he imagined, they muſt abſolutely prove that all future Attempts of this kind, are weak and raſh in themſelves, and will appear abſolutely abſurd and ridiculous in their Conſequences. In this reſpect, however, we differ from him. And though we are very far from pretending, that Captain *James's* Temper might be ſo far ſouered by Diſappointment, as to miſtake things difficult for things impracticable; yet we may have leave to ſay, that the want of Succeſs in his Voyage, had ſome Influence on his Judgment; becauſe it is very evident that he now treated as light and idle Fables, theſe *Portugueſe* Relations, which he had formerly conſidered as carrying a great degree of Evidence; for otherwiſe one can hardly account for his taking up the Opinion of a North-weſt Paſſage, and that ſo ſtrongly, as to offer his own Service for the Diſcovery of that Paſſage. Let us next then conſider the Reaſons by which he refutes the *Porgueſe* Relations.

“ He ſays, Firſt, that they proceed from their Vanity; next, that they are inconſiſtent with Experience; and, Laſtly, that their Maps and Charts are falſe and groundleſs, and therefore not to be truſted. With reſpect to the firſt, if what the *Portugueſe* delivered, had been the pure Effects of a vain-glorious and boaſting Temper, their Government would not have ſuppreſſed ſuch Relations, but rather have taken Pains to diſcover their Falſhood, which had been no difficult Taſk, and would have effectually anſwered their Purpoſe; for at this Time there was no Nation in the World ſo much concerned in Point of Intereſt, to diſcredit the Belief of a North-weſt Paſſage, as the *Porgueſe*. If, therefore, the Pilot before mentioned, publiſhed, as perhaps he did, an Account of his Paſſage through this Streight, out of Vanity; the Court need only have ſhewn that the Fact was falſe, as, if it had been ſo, was in their Power, and it had done their Buſineſs; whereas the calling in, and ſuppreſſing his Book, was a kind of Proof, that what he ſaid was true. As to the Inconſiſtency of ſuch Accounts, becauſe they do not mention any Hardſhips ſuſtained in the Voyage, or Troubles that they met with from Ice and Snow; we ſhould be able to ſpeak of them more clearly, if we had thoſe Accounts, or if we were ſure that Captain *James* himſelf peruſed them at large any more than we.

“ But ſuppoſing the thing as he ſtates it, perhaps we ſhall not find any good Cauſe to conclude that they talked idly, and as if they came in an Engine, becauſe they mentioned no ſuch Difficulties. It is very poſſible, That Voyages between the ſame Places may be performed at very different Times, and under very different Circumſtances: As for Inſtance, the *Spaniards* ſail from *Acapulco* to *Manilla*, in thirteen Weeks; but from *Manilla* to *Acapulco*, is commonly a Voyage of thirty Weeks; in ſailing to *Cape-Breton*, in the Summer Months, able Seamen ſteer one Courſe, but when they go later in the Year, they ſteer another; and by this Management they generally avoid any Difficulties in either Seaſon.

“ We do not know at what Seaſon of the Year the *Portugueſe* Pilot made his Voyage through the North-weſt Streight, but we know that he failed in a pretty high Latitude; and as he tells us, had a fair Wind through the whole Paſſage; if ſo, there is nothing improbable in ſuppoſing that he reached the Streight in the ſame Time, that the *Spaniards* make the ſame Tranſit from the *Weſt* to the *Eaſt Indies*, and then there is nothing ſtrange in his reaching *Newfoundland* in ſixteen Weeks, which will account for his arriving at *Liſbon* a Month ſooner than the Fleet that came home by the *Cape of Good Hope*; and if he came through the North-weſt Streight in the Month of *Auguſt*, which is alſo very probable, he might not be much incommoded by the Ice.

“ Beſides, we know that Captain *Candiſhe* made the Tour of the Globe, in much leſs Time than any other Circum-navigator; and we find ſome Voyages round *Cape Horn*, much more eaſy and fortunate than others; ſo that if this *Portugueſe* Pilot was remarkably lucky, the thing is very poſſible, and there is no Ground at all for denying the Fact, becauſe hitherto no other Man has met with the ſame Succeſs. As to falſe Charts and Maps, we are far from denying the Fact, but we know another Reaſon has been given for this, directly oppoſite to, and yet no leſs probable than, that aſſigned by Captain *James*, *viz.* that by theſe falſe Repreſentations they may conceal this Paſſage from the Knowledge of Strangers, and diſcourage them from looking for it. This laſt Reaſon may be ſupported by Facts, becauſe it is apparently againſt their Intereſt to have ſuch a Paſſage diſcovered, and becauſe we have authentic Proofs that the *Spaniards* have actually taken all the Precautions in their Power, to guard againſt the *Engliſh* coming, by this North-weſt Paſſage, into the South Seas.

“ As to what he ſays of the Coaſts being examined as far as the Latitude of 66 Degrees, and that all the Coaſts of *America* had been ſearched, as far as 80 Degrees, by *Engliſhmen*, is only in Part agreeable to Fact; ſome great Navigators having, indeed, ſailed ſo far, and reported that they had examined the Coaſts, but it has been ſince found that they had not done this, at leaſt, very accurately; and that it was very poſſible, and very probable too, that the Streight lay to the Southward of 66 Degrees; neither is this a Matter yet cleared up, for other Sea Officers who have been ſent upon this Expedition, have fallen into Captain *James*'s Sentiments, and upon their Return have reported the Coaſts thoroughly ſearched, and no Streight to be met with.

“ The thing, indeed, is natural enough; for when a Man has attempted the Diſcovery of this Paſſage, and failed, why ſhould he not endeavour to conſole himſelf, by pretending to have diſcovered that all former Hopes were in vain, and that in reality there is no ſuch Paſſage to be found? By this he ſecures a Reverſion of Fame, and exchanges one kind of Reputation for another; if he cannot be tranſmitted to Poſterity as a fortunate Man, he may, at leaſt, tranſmit the Memory of his Prudence, by which an Error long received was detected. But if we ſhould ever reſolve to be ſatisfied, at all Events, of the Truth of the Fact, notwithſtanding Diſappointments at Sea, it muſt be by fixing Colonies upon *Hudſon's Bay*, and offering a large Reward to any that ſhould have Boldneſs enough to traverſe the Countries behind the great Lakes, and bring us an Account of them, which would effectually clear up all our Doubts and Difficulties; which till this be done, or the Paſſage diſcovered by Sea, muſt remain ſtill, and prove, as fatiguing to Poſterity, as they have been to paſt and preſent Ages.

“ But let us now proceed to the reſt of his Arguments. As to the Regularity of the Tides in *Hudſon's Bay*, ſubſequent Diſcoveries ſhew plainly, that not only no Argument can be drawn from them againſt a Paſſage, but quite the contrary; for *Hudſon's Streight*, at the Entrance, is only thirteen to fourteen Leagues wide, from the South-ſide to *Reſolution Iſle*; and a ſmall Channel, ſome Leagues wide, to the Northward of that Iſland, in which is no great Current; it runs in the Entrance about five or ſix Miles an Hour, and riſes about eighteen Feet at Spring-Tide. At *Cape Charles*, in the Middle of the Streight, it is about fifteen Leagues wide, and has there loſt nigh half its Force. At *Cape Diggs*, the Weſt End of the Streight, it is about twenty Leagues wide, and is ſtill more diminiſhed in its Heighth and Current; and when it enters the Bay at *Cary's Swans-neſt*, it riſes but ſix Feet. Now it is very reaſonable it ſhould be diminiſhed ſo; when it is conſidered what Space it has to fill in its Courſe ſo far, for there is a great Bay or Inlet on the South-weſt Side, within *Button's Iſle*, and ſeveral others betwixt *Cape Charles* and *Cape Diggs*, and great Inlets on the North-ſide; and the Streight being one hundred and forty Leagues in Length before it reaches the Bay, it requires a great Current even to fill the Streight; when to theſe is added the Space it has to fill in the great Bays and Inlets above *Mill Iſles*, by *Cape Comfort*, and *Weſtland's Portland*, it may be eaſily conceived to be almoſt ſpent, before it paſſes *Manſell's Iſle* and *Cary's Swans-neſt*.

“ How then is it poſſible that a Tide or Current, running through ſo narrow a Paſſage, only five or ſix Miles an Hour, which is not above thirty Miles each Tide, ſhould raiſe a high Tide, not only for one hundred and forty Leagues, beſides all the Bays and Inlets on each Side the Streight, and above *Mill Iſles*, but alſo fill a great Inland Sea, above eight hundred Miles long, and five hundred broad; and after it is expanded in the Bay, and the Current loſt, ſhould be able to raiſe a Tide on the Weſt and North-weſt Side of the Bay, from twelve to ſixteen Feet, nay ſometimes to twenty-two Feet? And if *Norton* and *Scroggs* are to be believed, even to five Fathom, and occaſion ſuch rapid Currents, as at *Brook Cobham*, *Marble Iſland*, *Wager River*, &c. ſo as to run there from four to ſix and ſeven Miles an Hour, if only filled from *Hudſon's Streight*; when at the ſame Time the Tide flowing through *Davis's Streights*, which are above forty Leagues wide up into *Baffin's Bay*, in Latitude ſeventy-eight Degrees, does not there exceed five or ſix Feet any where. Since therefore no other inland Sea has any ſenſible Tide, and even the Tide in the South End of *Hudſon's Bay*, does not riſe above four Feet without a ſtrong Wind at North; how can theſe high and rapid Tides beat the North-weſt Side, without a Communication with ſome other Ocean than that which flows through *Hudſon's Streight?* When it is alſo known that a North and North-weſt Wind raiſes a higher Tide on the Weſt-ſide of the Bay at Neap-Tides, than an Eaſterly or South-weſt Wind does at Spring-Tides, which blows from our Ocean; does not that almoſt amount to a Demonſtration, without further corroborating Proofs? And yet of theſe there want not many, as the Reader will ſee as we proceed in anſwering his Reaſons.

“ His ſecond Objection is, that no Fiſh, more eſpecially Whales, are to be met with in theſe Seas, or Driftwood; whence he infers they have no Communication with the Ocean Weſtward. This Objection is very juſt in itſelf, and well founded, neither can it be denied that it proves very ſtrongly, that no ſuch Paſſage was to be expected near *Charlton Iſland*; but when this is admitted and allowed as a negative Argument, it follows that the contrary, *viz.* the ſeeing Fiſh, more eſpecially large ones of the Whale kind, is an Indication of ſuch an Opening, Paſſage or Streight, and a Proof that there is a Communication between the two Oceans in this Bay. But we know from all the later Voyages into this Bay, that on the North-weſt there are abundance of Whales, though it is true there are none in other Parts of the Bay; whence, according to Captain *James*'s Method of Reaſoning, it is plain ſuch a Paſſage there is; and as from about ſixty Degrees to that Inlet, which Captain *Middleton* called lately *Wager River*, thoſe great Fiſh abound moſt, it is very rational, on the Principles laid down by both theſe great Seamen, to conclude that this Paſſage is ſomewhere thereabouts. Thus it plainly appears, that when duly weighed, this Objection extends no farther than to the Seas and Country about *Charlton Iſland*; and as it affords a Proof there is no Paſſage there, it alſo affords a Preſumption that ſuch a Paſſage there is on the North-weſt Side of the Bay; where, for many other Reaſons, it was moſt likely to expect it.

“ His next Motive for concluding no Paſſage, is the Quantity of Ice, and its driving Eaſtward. But, in reſpect to this, granting him all he lays down, it proves nothing. For as to the vaſt Quantities of Ice formed in that Part of the Bay, where he navigated, no doubt, as he obſerves, it proceeded from Shole-water, and there is as little Doubt that this Ice paſſes out at the Streights; but this ſignifies but little, ſince the very ſame thing happens in regard to *Magellan's Streights* into the *South Seas*, where no ſtronger Signs are to be met with than here. I muſt, upon this Occaſion, obſerve, that if *Magellan's Streights* had not been diſcovered at once, there might have been as many, and as ſtrong Reaſons given, why no ſuch Paſſage ſhould have been expected at the *South Pole*, as our Author, or any other Man, could alledge againſt this Paſſage by the North-weſt; which ought certainly to afford us a Caution againſt too haſty Concluſions upon this Subject, let them be grounded on any Reaſons or Authority whatever. For though human Reaſon is ſufficient to give us a juſt Senſe of the Wiſdom of the Creator, in diſpoſing all Parts of the terraqueous Globe, yet we know by Experience, that Reaſon is not always capable of penetrating the Diſpoſition of the different Parts of the Globe, independent of Diſcoveries which frequently owe as much to Accident as to Reaſon: In regard to Authority, *Americus Veſputius*, who had the beſt Genius for Theory of any Man of his Time, and gave his Name to the new diſcovered Continent, not becauſe he firſt found it, but becauſe he firſt laid it down handſomely in a Map, and was miſtaken in reference to the Southern Paſſage; therefore though we may allow Capt. *James* to be as great a Man, in doing which perhaps we pay him no great Compliment; yet this will give no great Sanction to his Authority; for he may as well be miſtaken in the North, as the famous *Florentin* in the South: Beſides, Diſappointment gives a Bias to moſt Mens Opinion, and, Why may we not ſuppoſe ſomething of this in both Caſes? The Paſſage from the *North Seas* into the *South*, by the *Streights* before mentioned, and the Coaſt to the Northward in the ſame Latitudes, reſembling, in all Reſpects, that to the Southward, being low broken Iſlands before a bold rocky Shore, ſuggeſts very naturally, that there is ſome ſuch Paſſage there.

“ But after laying down theſe Reaſons, Capt. *James* very plainly diſcovers how much they have operated upon his own Mind, and to how great a Degree he is ſatisfied no North-weſt Paſſage is to be found; he attacks the very Expediency of finding it, and ſeems to think it an Argument there is no ſuch Paſſage, becauſe he has wrought himſelf into a Notion that it would be of no great Conſequence, if there was ſuch a Paſſage. Why be it ſo: But there was no ſort of Occaſion for making his perilous Voyage into *Hudſon's Bay*, to know this; he might have ſaid all that he has ſaid againſt the Expediency of enquiring any farther after the North weſt Paſſage, without ſtirring from *Briſtol*. It is therefore manifeſt, that his failing in his hoped-for Diſcovery changed his Mind, and induced him to ſee Things in a different Light, than he did before; becauſe otherwiſe, thoſe very Arguments which he urges at laſt againſt making any future Attempts on this Side were as ſtrong, to have diſſuaded his going. If before he went he never thought of, or regarded, theſe Arguments, he did not ſufficiently weigh and examine the Nature of the Expedition in which he riſqued his Life, and on which he ſet his Reputation at Stake. But if he had (which is certainly much more probable) taken Pains to examine all theſe Reaſons; then his very going, his wintering, and the Conſtancy he ſhewed in aiming at the Proſecution of the Diſcovery afterwards, viſibly demonſtrate thoſe Reaſons made no Impreſſion on him then; if they had he would have ſtaid at home, and never have given the King, or the *Briſtol* Adventurers, ſuch Encouragement as was requiſite for the fitting him out for that Voyage; but this we muſt own would be not much to the Purpoſe, if the Reaſons he gives us were abſolutely concluſive; for whether he bethought himſelf of them firſt or laſt, makes nothing for or againſt the Reaſons themſelves; but it ſo falls out that when maturely conſidered, they will be found to have very little or no Weight at all. As to the Narrowneſs, or Inconvenience, of the Streight, if there be one, that is mere Matter of Conjecture, ſo is the Length of it; the Hardſhips of the Voyage are now known to be very inconſiderable; and as to its being no ſhorter Rout to the *Eaſt-Indies* than by the *Cape of Good Hope*, no body ever ſaid that it was. He acknowledges it is much nearer to the *South Seas*, to *Terra Borealis Incognita*, to *Japon* and *China*, which is all that is deſired, and more than ſufficient to recommend it.

“ It is clear enough, from the whole of Capt. *James*'s Account that he had a very indifferent Opinion of his Expedition, and conſidered it in no other Light than as tending to ſatisfy the *Engliſh* Nation; that it was to no ſort of Pupoſe to venture any more Veſſels into thoſe Seas, and upon thoſe Coaſts, upon that or any other Deſign; for it is plain that he thought a more barren, a more inhoſpitable, and more worthleſs, Part of the World was not to be found; yet Experience has ſince ſhewn us, that as wild and waſte as the Countries about *Hudſon's Bay* were and are, yet they have been found to deſerve both Notice and Keeping; and I dare ſay, have produced this Nation full as much, if not more, than the Colony of *Canada*, ſtrictly and diſtinctly conſidered, ever did to the *French*; which is a Proof that no Man's Authority ought to be regarded where it tends to diſcourage a Nation from extending its Navigations or Diſcoveries. It is not intended by this, to leſſen the Reputation of Capt. *James*, or that Eſteem which his Work has very juſtly procured him from the very beſt Judges. There is no doubt, that he did what he could, and much more than moſt other Men could have done; and there is as little Reaſon to doubt, that he ſpoke what he thought, and what he ſpoke was upon good Grounds; but notwithſtanding this, we ſee he was miſtaken, and miſtaken in many Reſpects. He doubtleſs conceived, that a more perilous Navigation could not be, and that it would be a very difficult Thing to ſend Ships into this Bay conſtantly without loſing them; yet this is a Thing now ſo common, that there is nothing of Wonder in it; he apprehended that there muſt be always an infinite Difficulty in ſailing amongſt Miſts and Ice, but we ſee from Capt. *Middleton*'s Letters that there is now very little in this, and that the Seamen and Officers uſed to the *Hudſon's Bay* Trade, have ſo far overcame all Inconveniencies, that taking it with every Circumſtance, there is, perhaps, no Navigation now uſed, ſo ſafe as this; and from the Account he has given us of his Wintering, we may very fairly infer, that he never ſo much as ſuſpected that an *Engliſh* Factory would be ſettled in a higher Latitude than *Charlton Iſland*, and yet the Factory of *Fort Churchill* has ſubſiſted for many Years. There is one Paſſage in his *Voyage* which ſhews his very great Sagacity; for by pulling up ſome Stakes in a deſart Iſland, and perceiving they were cut by a ſharp Inſtrument, he judged that the Savages muſt have had ſome Communication with Chriſtians, in which he judged very right; but it was near half a Century after, before this Riddle could be explained, or any body could gueſs, that theſe Savages had thoſe Hatchets from the *French*.

“ But to return to the North-weſt Paſſage. The Experience we have of theſe Countries has convinced us of many things, that to Captain *James*, without doubt, after his Return from this Expedition, would have appeared abſurd and incredible. As for Inſtance, that the Continent Weſt and North-weſt from *Charlton Iſland*, is inhabited by ſeveral Nations, and that the moſt Northern of theſe Nations are the beſt clad and the moſt civilized. Amongſt theſe there is a Nation, diſtinguiſhed by the Name of the *Moſemleek Indians*, who are not only a very rational People themſelves, but who conſtantly affirm, and there is no Reaſon to ſuſpect that they affirm a Falſhood, there are large Towns and a civilized People, to the North-weſt of them, who trade upon a large ſalt Lake, in Veſſels twenty times as big as their Canoes; and what Nations may live beyond theſe, is, indeed, to us uncertain; but this is very certain, that if there be a North-weſt Paſſage they muſt inhabit the Coaſts of it; and there never yet was a Country found inhabited, but it was found alſo that thoſe Inhabitants might be traded with to Advantage. But this is not all, the oppoſite Coaſt muſt, very probably, be inhabited too, and it is very likely that the Streight that falls into the South Seas, may be under a Climate, milder, in many reſpects, than *Charlton Iſland* in the Summer. Upon the whole, therefore, all the Difficulties and Diſcouragements, which, from too ſtrong a Senſe of his own Diſappointment, Captain *James* has conjured up, ſink to nothing, when duly conſidered and compared with the Circumſtances that later Diſcoveries have brought to light; ſo that there ſeems to be no Reaſon his Conjectures ſhould have any Weight to deter us from proſecuting Attempts on this Side, even though they ſhould ſtill continue to prove, in ſeveral Inſtances, as they have hitherto done, abortive.

“ Theſe Reflections may, to ſome Readers, appear long, but I hope to very few they will appear uſeleſs or unentertaining; for I will freely confeſs, that if I had not intended theſe Reflections, I would not have inſerted this Voyage, though in all reſpects the beſt of its kind that ever was written. But the Excellency of *Ramuſio*'s Collection, is allowed to conſiſt in his Remarks; and without Remarks, this Voyage, as well written as it is, might do a great deal of Miſchief. Nay, I am perſuaded did do a great deal of Miſchief; for from the Time of his Return in 1632, to 1667, there never was any Voyage made into theſe Parts, nor probably ever would have been made, but for the Sagacity of Mr. *Montague*, our Embaſſador in *France*, afterwards Duke of *Montague*, and Father to the preſent Duke, both eminent Friends to the Commerce of this Nation. He it was that furniſhed us with the firſt Lights that revived our Correſpondence to *Hudſon's Bay*, to which Captain *Guillam* was ſent in 1668, and we have been poſſeſſed of the Trade thither ever ſince. A Trade granted to private Perſons, by a Charter in Truſt for the public Benefit, which was to ariſe from their Endeavours to find a North-weſt Paſſage; which public Advantage they have neglected in the very ſame Proportion they have been ſtudious after their own; a thing ſo very common with Companies, that they might certainly be acquitted, if Cuſtom could be eſteemed a juſt Excuſe. Yet from their ſettling a Trade in theſe Parts it has been found extremely advantageous, as drawing to their Factories *Indians* from very diſtant Countries, who bring them very rich Furs, but who declared alſo that a much larger Trade might be carried on, provided their Factories were more in Number, and fixed more conveniently; nay, they have brought down and ſold, at ſome of the Settlements, Copper Oar, ſo very rich, that by barely beating it between two Stones, it has been reduced into Metal. But neither what they ſaw nor what they heard, could tempt them to alter their Manner of proceeding; they judged, and no Queſtion judged right, that as they were circumſtanced, the Method they are in was the moſt beneficial that could be, and that by extending their Commerce they muſt open it, and ſo render it leſs beneficial.

“ All this was natural enough, and I do not repeat it here (for I know that I have touched it often before) out of any Spirit of Malice or Ill-will; for I really wiſh the *Hudſon's Bay* as well as I do any Company; but only as it makes for my Purpoſe; which is to ſhew, that notwithſtanding Capt. *James* was a very honeſt Man, a very experienced Seaman, and one who very probably had no private Views; yet, in his Coclusions from this his perilous Expedition, he was abſolutely wrong, and by his Authority gave Credit to many Falſhoods, of which theſe Inſtances may ſuffice: 1. He thought the Hardſhips in navigating theſe Seas, and wintering on theſe Coaſts, were invincible; but we know the contrary. 2. He judged the Country ſo barren as to furniſh no Subſiſtance, and the Inhabitants ſo poor as to have nothing worth ſeeking; in both which Experience ſhews he was miſtaken. 3. He firmly believed, that if any Streight was diſcovered more to the North than about the Place he wintered, it would be impaſſable, and its Coaſts uninhabited; but we are ſatisfied this is groundleſs, from the many Openings diſcovered along the *Welcome*; and their being all in the Neighbourhood of very friendly and tractable *Indian* Nations. 4. He was clearly ſatisfied, that from what he had ſeen and diſcovered in his Voyage, there no longer remained any Hopes of finding ſuch a North-weſt Paſſage through *Hudſon's Bay*: But here too his Art failed him; for even Capt. *Middleton*, who I think his Equal as a Mariner, thought it highly probable, till very lately. 5. He does not appear, from what he has written, to have had any diſtinct Notion of what Part of the World he was in, or how the Countries lay round about him; but to the preſent Navigators all this is very clear and certain; we know that from *Canada* to *New Mexico*, and probably even to *California*, is all one Continent, the Weſt-ſide of which only remains undiſcovered; and we further know, that all that has been hitherto found, agrees exactly with, and is every way conformable to, the Notions that have been entertained of ſuch a North-weſt Paſſage, and even with all the traditional, and other kind of Accounts, that we have received of it. But having now made this Piece as uſeful as we can, without curtailing or interpolating it, let us return to Captain *James*'s Concluſion; and having attended him through his long and dangerous Voyage, his cold and comfortleſs wintering, his difficult and wonderful Paſſage homewards, let us ſee him ſafe aſhore, and ſo take our leaves.”

41. The 22d of *October* we arrived in the Road of *Briſtol*, having been hindered and croſſed with much contrary and tempeſtuous Winds and Weather. The Ship being brought into Harbour, and haled on dry Ground, to look to her, it was there found, that all her cut Water were torn and beaten away, together with fourteen Feet of her Keel; much of her Sheathing cut away, her Bows broken and bruiſed, and much Timber cracked aboard, and under the Starboard bulged; ſharp Rocks had cut through the Sheathing, the Plank, and an Inch and an half into a Timber that it met withal. Many other Defects there were beſides; ſo that it was miraculous how this Veſſel could bring us home again. Being all arrived we went to Church, and gave God Thanks for his Preſervation of us amidſt ſo many Dangers. I very well know that what I have here haſtily written, will never diſcourage any noble Spirit, that is minded to bring this ſo long-tried Action to abſolute Effect; and it is likely withal, that there be ſome who have a better Underſtanding, and a ſurer Way of proſecuting it than myſelf have, to whoſe Deſigns I wiſh a happy Succeſs.

And if they do but make a Review of what hath been done, and give more celeſtial Obſervations by hydrographical Deſcriptions, or exacter Practice in Navigation, it will be a moſt commendable Labour; for although I have ſpent ſome Years of my ripeſt Age, in procuring Intelligence from foreign Nations, and have travelled with diverſe honourable and learned Perſonages of this Kingdom, for their Inſtructions; have bought up whatever I could find in Print or Manuſcript, and what Maps or Papers ſoever conducive to this Buſineſs, that poſſibly I could procure; and have ſerved voluntary beſides, and ſpent ſome time in rendering a Relation ſince my coming home, and expended withal, of my own Money, in my aforeſaid Endeavours, and in furniſhing extraordinary Neceſſaries, above 200 *l.* in ready Money; yet I repent not, but take a great deal of Comfort and Joy, that I am able to give an Account, in ſome reaſonable Way, of thoſe Parts of the World, which heretofore I was not ſo well ſatisfied in.

Thus ends this Voyage, which, as I have hinted before, has been ſeveral times abridged, and more than once reprinted at large, but never, that I know of, compleat, and as it ſtands in the original Edition of 1633; which is the Reaſon this Book has been ſo much valued. I have ſeen many Copies that concluded with Profeſſor *Gellibrand*'s Obſervations aſtronomical; but I never met with more than one Copy that had the Addreſs to the Univerſity of *Cambridge*; which, though printed in a different Character, and in ſuch a Manner as if it were a Piece by itſelf, yet is thus mentioned in the Title Page of this Book: *An Advice concerning the Philoſophy of theſe late Diſcoveries, by* W. W. though the Diſcourſe itſelf is ſubſcribed *X. Z.* Who was the Author of it I cannot ſay; but whoever he was, it is plain that he had the Correction of Captain *James*'s Work, and was himſelf, for thoſe times, a Perſon of ſurprizing Knowledge and Freedom of Thought; and therefore I judged the preſerving this little Piece, by reprinting it, would be highly agreeable to all true Lovers of Learning; and therefore it is here ſubjoined.

To the venerable ARTISTS, and younger STUDENTS in Divinity, in the famous Univerſity of *Cambridge*.

“ You Nobly-witted, and Ingenuouſly-ſtudied, Aca-

“ demians, whoſe Excellency in all kind of Learning, all foreign Univerſities do admire, and none attain unto. I here preſent you a Voyage to *Cholcos*, though not the *Golden Fleece* with it. The Search I mean, but not the finding, of that ſo much talked of, ſo often ſought for, *North-weſt Paſſage*, and nearer Way into the *South Sea*. That wherein ſo much *Time* and *Treaſure* hath been expended, ſo many brave Spirits employed, and yet none diſcovered. Perchance there is no ſuch *Paſſage* to be found; and that the *Spaniards*, by the Gullery of their falſe *Sea Cards*, and the Fable of an old *Greek Pilot*, have but diverted our *Engliſh* and *Dutch* Seamen from the Golden *Indies*. This Plot of theirs has taken for theſe many Years, and it appears to be but a Plot; for that themſelves never made uſe of this *Paſſage*. For mine own Part, I ſuppoſe that the *Philoſopher's Stone* is in the *North-weſt Paſſage*. My Argument for it is, that there is ſo much *Philoſophy* in the Way to it.

“ So much and ſuch Variety, and that ſo various (I think) from what is received in the *Schools*, that it were well worth the Diſquiſition of an *Univerſity* (and I wiſh you the firſt Honour of it) either to find out how theſe *Obſervations* may be reduced to *Ariſtotle's Philoſophy*, or whether they need any other Enquiry, and ought to be examined by ſome other Rules than *Ariſtotle* hath yet lit upon. This is my Purpoſe of inſcribing it unto you. Of this one thing am I confident, That you are all ſo *rational* and *ingenuous*, as to prefer *Truth* before *Authority*; *Amicus Plato, amicus Ariſtoteles* but *magis amica veritas.* Your *Sciences* then being *liberal*, your *Studies* I know have ſo far paſſed into your Manners, that your Minds are ſo too; and that ſuch as have already profited beyond the Credulity required in a young Learner, and are themſelves prompted to be *Maſters* of the *Arts*, though they ſtill reverence their old *Greek Tutor*, yet they will not ſuffer that of *Pythagoras's School*, ſo to domineer in *Ariſtotle's*, as to let an *ipſe dixit* go away with it; much leſs allow it the Authority of a *Mayor's Hammer*, with one *Knock* to ſilence all Arguments.

“ Upon this Confidence, I, with all due Reſpects, here prefer two *Propoſitions* unto your diſcuſſing. The firſt this, *Whether theſe Rules of* Ariſtotle's *Philoſophy be to be allowed ſo univerſal, that they hold all the World over.* The ſecond this, *Whether they ought to be ſo magiſterial as to preſcribe againſt all other Examinations.* The firſt of theſe I ſhall but problematically propound unto you; but in the ſecond, I hope a Man of my cloathing may be allowed the Freedom of being ſomething more earneſt.

“ But that I may not come with Prejudice to the making of theſe Motions, or be thought upon ſome *Ignorance or Ambition* to ſpeak againſt the *incomparable Ariſtotle*, I ſhall deſire all my *fellow Academians* to allow me ſo much Diſcretion, as to know, That he that ſhall in your Hearings, oppoſe your *Ariſtotle*, does like the Ship here ſpoken of, run againſt a Rock, endanger his own Bulge, and the ſtaving of his Veſſel. No, I ſo far honour the old *Ariſtotle*, that I will allow him to be *Maſter and Moderator of the Schools*; and that there is the ſame Reſpect due to him in the *Schools*, which, by *Reaſon of long Cuſtom*, is due to one of the *King's Ships* in the *narrow Seas*. *That in Acknowledgment of Sovereignty every other Name ought to ſtrike Sail to him.* *Ariſtotle* (it muſt be confeſſed) hath made all Learning beholding to him. No Man hath learned to confute him, but by him, and unleſs he hath plowed with his *Heifer*. He had the moſt incomparable Wit, and was the moſt logical and demonſtrative Deliverer of himſelf, of all the Sons of Nature. One who beſt of all deſerved to be called her *principal Secretary*: One who not only adorns a Library, but makes it *Qui habet Ariſtotelem, habet Bibliothecam*, is truer of him than of the great Comparer. This is my Opinion of him, and I wiſh him more ſtudied.

“ 'Tis not therefore the Name, or the Authority, of the great *Ariſtotle*, that my Propoſitions meddle withal; but whether his Propoſitions, gathered out of this Part of the World alone, could, like a *royal Paſs, or a Commiſſion*, carry a Man all the World over.

“ It muſt be confeſſed, that in reſpect to the *Equinoctial* and the *Latitude* that *Ariſtotle* lived in, he was but a *Northern Man*, and it was his own Rule, that *nihil agit extra Sphæram activitatis ſuæ*, ſo then it would be put to Voices to conſider, whether he that knew but thoſe Northern Parts, and the *Mediterranean Sea*, could poſſibly make ſuch Collections by what was there to be learned, as ſhould be infallible in the *Southern Hemiſphere*, and the two *Indies*. Plainly, thoſe that are converſant in the *Navigations and Books of Voyages* into thoſe Parts, have found ſo many Contrarities to obſerve, that it was rather tedious than difficult to fill up a *Note Book* with them.

“ The Ancients we know (as if they had meaſured the World by the Yard-Wand) reſtrained the Limits of *Temperature* and *Habitation* by the five *Zones*, without Conſideration of any interloping or concurring Cauſes, which Experience hath now found out to have quite altered their Obſervations. I add, that a good Leiſure and Diligence might obſerve how, in a contrary Part of the World, there be found clean contrary *Cauſes and Effects* unto theſe in this Part of the World. The *South Wind* there brings *Cold*, and *Winter*; and the *North* is the *rainy Wind*. How will the *Thunder* and *Wind* be made to agree with *Ariſtotle*'s *Diſtinction* of a *Meteor?* In ſome Places of the Mountains *Andes*, by *Peru*, it thunders ever. The *Eaſt Indies* have their *Monſons*, and their *Steady Winds*, conſtant for ſix Months together, and who ſhall aſſign their Cauſes? Then the *Doctrines* of the *Tides*, nothing ſo uncertain which *ebb* and *flow* in ſome Places *different*, and in others *contrary* to the *Moon* and her *Motions*. This (as I remember) is *Ariſtotle*'s Diſtinction of a *Meteor*; that it is an *imperfect mixed Body generated out of an infirm and inconſtant Concretion of Elements, which therefore cannot be durable.* Now the *Monſons* are both conſtant in their Continuance this Year; and in their Return next Year, moſt conſtantly keeping their Seaſons half Year one Way and half another Way, for all Ages nothing more conſtant and durable, and therefore nothing like *Ariſtotle's Meteor*. And ſo for the *Thunder* upon the *Andes*; it is firſt perpetual; and ſecondly, not cauſed by a dry *Exhalation* (as *Ariſtotle* wills); but hanging over ſuch *Hills* as are covered with Snow, and a perpetual Winter; witneſs the Thunder on the *Alps* alſo; yea, and that in the Middle of the Sea, five hundred Leagues from Shore, or any thing that is dry; nay, it frequently both *ſnows* and *thunders* upon the *Andes* at the ſame Inſtant; and in *dry* Places, that are hard by, ſcarce ever *thundering*.

“ But not to paſs the Line for it: You ſee in this little Book how *Charlton Iſland*, which is no more northerly than your *Cambridge*, yet is ſo inſufferably cold that it is not habitable, and that there encounter ſo many different (at leaſt ſo ſeeming) Occurences of *Nature*, as were well worthy the Diſquiſition of a *Philoſopher*. I could (in my ſmall Reading) inſtance in many other Particulars, which I had rather ſhould be found out by ſome induſtrious Searchers after *Nature* in the *modern Relations* of our *Diſcoverers*, than in this my ſhort Propoſition. 'Tis not to be doubted but that the careful reading of our *Books* of *Voyages* would more illuſtrate the Hiſtory of *Nature*, and more conduce to the Improvement of *Philoſophy* than any Thing that hath been lately thought upon. Theſe *Navigations* have in part fulfilled that of the *Prophet*: *Many ſhall paſs to and fro, and Knowledge ſhall be increaſed.* This I ſuppoſe might be obſerved from this Study, That the great and infinite *Creator* hath ſo diſpoſed and varied every thing, that it is impoſſible for Man's Reaſon and Obſervation to conclude him; and therefore though the *vulgar* and *received Philoſophy* may give a Man a *general Hint* all the World over; yet no univerſal and unfailing Certainty.

“ This brings me to my *ſecond Propoſition*: That ſeeing God will not have his Works, (no more than his King-

“ dom) to come by Obſervation, *Whether then ought any Human Dictates to be ſo magiſterial as to preſcribe againſt all other Imagination?*

“ No Human Study more conduces to the ſetting forth of *God's* Glory, than the Contemplation of his great Works in *Philoſophy*; for though a ſmattering Knowledge in *ſecond Cauſes* works the Mind towards Atheiſm, yet a higher Speculation of them brings it about again to Religion. No Man I believe will think it fit for us to have a Pope in Philoſophy, one that no body ſhall preſume to cenſure; but all be bound to advance his Decretals above the holy Scripture. This is the Scandal that myſelf and divers good Men take at the undue Authority in ſome Heats pinned upon the *Stagerite*.

“ I am ſorry that the *Iſraelites* Dotage upon *Solomon*'s Philoſophy, ſhould have cauſed the zealous *Hezekiah* to call in and ſuppreſs thoſe invaluable Phyſics, for fear, I ſuppoſe, leſt their Credit ſhould have as much derogated from the Authority of the holy Scriptures, as the brazen Serpent (which he deſtroyed about the ſame time) had done from *Religion*; none will believe that *Solomon's Philoſophy* was contrary to the *Scriptures*, ſeeing the *Scriptures* commend *Solomon* for them. It was not *Hezekiah*'s Fear therefore (or not only) leſt there might have been a Competition between them, but a Neglect of one them: He was zealous, leſt the *Scripture* might have any Writing ſet upon *by it*, though not *againſt it*.

“ Can Divines then be blamed for ſpeaking, when they hear *Ariſtotle's Philoſophy* to be ſolely magnified, and the Study of the *Scripture Philoſophy* diſreſpected; or, that when 'tis confeſſed that ſuch a Thing is true in *Divinity*, and yet the moderating the Point determine for *Philoſophy?* Nay, to hear it called abſurd and ridiculous to have *Scripture* urged at all in Point of *Philoſophy?* No doubt there is *but whatſoever is falſe in Divinity is alſo falſe in Nature*, how much Shew of Truth ſoever it paſſes within *Philoſophy*: *Philoſophy* hath taken its Turn in the *Schools*, and the *holy* Texts, by the *Schoolmen*, have even been ſubmitted unto *Ariſtotle*'s; yea, to the great Corruption of *Theology*, as the Complaint is, hath this Man been ſo far advanced, that *Contra eſt Philoſophus, & contra eſt Apoſtolus*, have familiarly paſſed up and down for equal *Oppoſitians*; ſo that it hath been a *meaſuring Caſt* oftentimes, betwixt the *Prophet* and the *Peripatetic*; and by foul Play hath the Meaſure been made to ſtand the harder at the *Peripatetic*, for that the *Prophet* hath been forced to comply with him by a *wreſted Interpretation*.

“ Thus had St. *Paul* need give his Caveat unto *Theology* as well as unto *Theologues*; *Beware leſt any Man ſpoil you through Philoſophy*.

“ All this were to no Purpoſe, unleſs the Text of *God* were excellent in this Kind, and embelliſhed here and there with moſt admirable *Philoſophy*; what incomparable rare Footſteps of it have we in the Books of *Geneſis*, *Job*, and the *Pſalms?* How noble a Study then were it, and how worthy the Leiſure of ſome excellently learned Men to beſtow ſome Time upon it? *Valeſius* the *Phyſician* hath, in his *Sacra Philoſophia*, done ſomething in this Kind, who yet might have done better here and there for the Honour of the *Scriptures*. I am not ſo ſottiſh, to believe that every Particular is to be drawn out of the *Scriptures*; 'tis none of my Dotage that; or that *God*, in *Scripture*, did intend every where the Accurateneſs of *Philoſophy*, or ſtand to be ſo curious in Definitions and Diſcuſſions; nor that nothing ſhould be determined on till a *Text* confirmed it. But this perchance might profitably be thought upon; that where the *Scriptures* have any thing of this Kind, it ſhould more reverently be eſteemed; Collections out of ſcattered Places (as is done out of *Ariſtotle*'s) made; theſe compared, and their Reſultances obſerved. This ſurely would amount to more than is yet thought of; and in *God's* Name let Scholars be ſo bold with *Ariſtotle* as to examine him upon good Aſſurance by what is *Truth's Touchſtone*: Received *Philoſophy* is a moſt neceſſary Handmaid to the *Scriptures*; but let her not be ſet above her Lady; nor no Competition be made betwixt them.

“ Something elſe remains to be thought of. That ſeeing the ſame *God* who gave *Ariſtotle* theſe good Parts, hath, in like Manner, raiſed up many excellent *Spirits* more; whether it were not injurious to what is done, and a Diſcouragement to what might be done, to have the Inventions, or Obſervations, of thoſe excellent Wits, and great Induſtries, ſo abaſhed with *Ariſtotle*'s Authority, that they can have no Credit in the World; for that his Dictates have pre-occupated all good Opinion? Let it not then be thought unequal to examine the *firſt Cogitation of the old Philoſophy*, by the *ſecond Thoughts* of our more modern *Artiſts*; for that the ſame Improvement may by this means accrue unto the *Phyſics*, that hath advanced our *Geography*, our *Mathematics*, and our *Mechanics*; and let it not be thought ſo inſolent to refuſe *Ariſtotle*'s Authority ſingly, where his Reaſon is not ſo concluding. Seeing other Men have taken the Boldneſs to do that before in ſeveral Kinds; ſome have perfected, and others controlled his *Ethics*, by the *Scriptures*, as *Sculletus Wallæus*, and ſome others. *Juſtin Martyr*, ſirnamed the *Philoſopher*, hath purpoſely written *contra Dogmata Ariſtotelis*. *Baſſon* and *Gaſſendus* (two brave Men) have newly written point-blank againſt him. nor have they taken away all Liberty from thoſe that are to follow them.

“ And thus, with renewing my former Proteſtation for mine own Reſpect to *Ariſtotle*, I conclude my two *Propoſitions*; which I deſire may receive a favourable Conſtruction from all ingenuous, incapricious *Scholars*; I mean them out of Good-will to promote Learning; to encourage and countenance future Undertakings; and, in ſuch a Caſe, a little too much ſaying may be thought not to have exceeded an *honeſt Rhetorication*; for I would not be thought too earneſt in it. The Hint, for all this, I took from this Book, which in mine own, and ſome better, Judgments, is (to ſay no more) as well done, and inriched with as ſure and uſeful Obſervations, as any in this kind. I was deſired by the able Author, and ſome other Friends to overlook the written Copy of it, and to amend the *Engliſh* here and there, in which I did not deſpair of doing ſomething: For that in my younger Time, I had a little acquainted myſelf with the *Language of the Sea*, that which put me in the Head to inſcribe it unto your Names (moſt excellent learned *Academians*) was, for that the Place of this *wintering* was within a *Minute* or two of the Height of our *Cambridge*: Which my Prayer to *God* is, that your Studies may make famous.

“ *Yours*,

X. Z.

SECTION IV.

The late ATTEMPTS *made for the* DISCOVERY *of a* PASSAGE *to the* SOUTH SEAS, *from* Hudſon's Bay; *more particularly that of Captain* CHRISTOPHER MIDDLETON, *Commander of his Majeſty's Sloop the* Furnace.

Interſperſed with Original Papers.

1. *The Reaſons why there have not hitherto been any great Diſcoveries made from* Hudſon's Bay, *notwithſtanding our Settlements in, and Trade thereto.* 2. *Captain* Chriſtopher Middleton*'s accurate and curious Account of the ſtrange Effects of Cold; the Nature of Animals, and Manner of living on the Coaſts of* Hudſon's Bay. 3. *Mr.* Middleton *enters into a Correſpondence with* Arthur Dobbs, *Eſq; for the Diſcovery of a North-weſt Paſſage.* 4. *Reaſons aſſigned by him, to ſhew the Probability of finding ſuch a Paſſage, which actually produced this Voyage.* 5. *An Account of the Undertaking, and of the Impediments thrown in the Way, to hinder Captain* Middleton*'s going, or meeting with Succeſs, in Caſe of attempting this Diſcovery.* 6. *Captain* Middleton*'s Journal of his Voyage for Diſcovery, from his Departure to his Return.* 7. *The Point of Fact as to the Streight, by him called* Wager River, *more clearly ſtated, with Copies of original and amended Declarations.* 8. *An Account of Mr.* Dobbs*'s Exceptions taken to the Relation given by Captain* Middleton *of his Diſcoveries, and Opinion grounded on them, that there is no Streight, or that it is not practicable.* 9. *Mr.* Dobbs*'s Reaſons why the River* Wager *ought rather to be conſidered as a Streight; Captain* Middleton*'s Anſwer, and Replies, to them.* 10. *Captain* Middleton*'s poſitive Proofs that this Opening is a freſh Water River, and not a Streight, communicating with any Ocean or Sea, except* Hudſon's Bay; *with Refutations of thoſe Proofs.* 11. *An Account of a late Act of Parliament, for encouraging the Diſcovery of a* North-weſt *Paſſage.*

1. IN the two foregoing Sections, we have given the Reader as full and as fair an Account as it was in our Power, of the Motives which induced the moſt knowing and able Perſons, in the laſt Century, to ſuppoſe that a Paſſage might be found, through *Hudſon's Bay*, into the *South Seas*; and how this Notion, after prevailing long, and being generally entertained, grew into Diſcredit, by the Miſcarriage of Captain *James*, and by the Account he gave of the Nature and Cauſes of his Diſappointment. We have alſo touched upon the Foundation of the *Hudſon's Bay* Company; but having conſidered that Point more largely in another Place, we thought there was no Neceſſity for dwelling upon it here. In this Section we propoſe to ſpeak of the late Expeditions made that Way, and particularly of Captain *Chriſtopher Middleton*'s, which has afforded Occaſion to the Legiſlature to paſs a Law for encouraging Attempts for this Diſcovery, which ſooner or later there is great Reaſon to hope will be attended with Succeſs.

One would have imagined, that after the Company was eſtabliſhed, for carrying on the Trade to *Hudſon's Bay*, with a View to the finding a North-weſt Paſſage, continual Attempts would have been made for that Purpoſe, agreeable to the Petition upon which that Charter was granted, and to the Preamble of the Charter itſelf, which has been ſo often mentioned; but ſo far has this been from the Practice of the Company, that they have taken all Methods poſſible to prevent the Notion of a Paſſage being found that Way from reviving in the World, by preventing their Captains from publiſhing their Journals; and as by their Charter they have an excluſive Trade, if they do nothing in this Matter, it is impoſſible any body elſe ſhould. There was, indeed, one Captain *Barlow* employed for this Purpoſe about twenty Years ago, but he was never heard of more; and whether he made the Paſſage, and never returned, or whether he was loſt as the Company's Servants report, in the Latitude of 63 Degrees, is what we can give no Account of, at leaſt with any Degree of Certainty. The Reader will hereafter find ſome Account of another Attempt, made by Mr. *John Scroggs*, which, though not attended with Succeſs, was far from giving any Diſcouragement to future Endeavours of the ſame Kind. But what gave Occaſion to the laſt Attempts, was the Informations received from Captain *Middleton* before-mentioned.

This Gentleman had been for many Years in the Service of the *Hudſon's Bay* Company, which gave him an Opportunity of making all the Enquiries neceſſary, and acquiring all the Lights poſſible, to direct him in an Affair of this Nature; and of his Capacity and Knowledge in this Reſpect, the Reader will find an ample Teſtimony in the following Extract of a Relation delivered by him to the worthy Sir *Hans Sloane*, then Preſident of the Royal Society; from whom he received the Prize Medal, which, by the Will of the late Sir *Godfrey Copley*, is annually beſtowed by the ſaid Society. A Relation equally curious in itſelf, and extremely ſuited to our Purpoſe; as it very fully ſhews how much better we are now qualified for making Diſcoveries in thoſe frozen Climates, than in the Days of Captain *James*; and how far the Difficulties, which that Gentleman looked upon as inſupportable, are in the preſent Age overcome. But this Paper has ſo much Merit, that it really needs no farther Introduction.

2. It is obſerved that the Hares, Rabbets, Foxes, Partridges, in *September*, and the Beginning of *October*, changed their native Colours to a Snowy-white, and that for ſix Months in the ſevereſt Part of the Winter. I never ſaw any but what were white, except ſome Foxes of a different Sort, which were grizled, and ſome half red half white.

That Lakes and ſtanding Waters, which are not above ten or twelve Feet deep, are frozen to the Ground in Winter, and the Fiſh therein all periſh.

Yet in Rivers near the Sea, and Lakes of a greater Depth than ten or twelve Feet, Fiſh are caught all the Winter, by cutting Holes through the Ice down to the Water, and therein putting Lines and Hooks. But if they are to be taken with Nets, they cut ſeveral Holes in a ſtrait Line, the Length of the Net, and paſs the Net with a Stick faſtened to the Head-line from Hole to Hole, till it reaches the utmoſt Extent; and what Fiſh come to theſe Holes for Air, are thereby entangled in the Net; and theſe Fiſh, as ſoon as brought into the open Air, are inſtantly frozen as ſtiff as a Stock-fiſh. The Seamen likewiſe freſhen their ſalt Proviſions, by cutting a large Hole through the Ice in the Stream, or Tide of the River; which they do at the Beginning of the Winter, and keep it open all that Seaſon. In this Hole they put their Salt-meat, and the Minute it is immerſed under Water it becomes pliable and ſoft, though before its Immerſion it was hard frozen.

Beef, Pork, Mutton, and Veniſon, that are killed at the Beginning of the Winter, are preſerved by the Froſt for ſix or ſeven Months, entirely free from Putrefaction, and prove tolerable good eating; ſo likewiſe Geeſe, Partridges, and other Fowl, that are killed at the ſame Time, and kept with their Feathers on, and Guts in, require no other Preſervation but the Froſt, to make them good wholeſome eating, as long as the Winter continues. All Kind of Fiſh are preſerved in the like Manner.

In large Lakes and Rivers the Ice is ſometimes broken by impriſoned Vapours, and the Rocks, Trees, Joiſts, and Rafters of our Buildings, are burſt, with a Noiſe not leſs terrible than the firing off a great many Guns together. The Rocks which are ſplit by the Froſt are heaved up in great Heaps, leaving large Cavities behind, which I take to be cauſed by impriſoned watery Vapours that require more Room when frozen, than they occupy in their fluid State. Neither do I think it unaccountable, that the Froſt ſhould be able to tear up Rocks and Trees, and ſplit the Beams of our Houſes, when I conſider the great Force and Elaſticity thereof. If Beer or Water is left in Mugs, Cans, Bottles, nay, in Copper Pots, though they were put by our Bed Sides in a ſevere Night, they were ſurely ſplit to Pieces before Morning, not being able to withſtand the expanſive Force of the incloſed Ice.

The Air is filled with innumerable Particles of Ice, very ſharp and angular, and plainly perceptible to the naked Eye. I have ſeveral Times tried this Winter to make Obſervations of ſome celeſtial Bodies, particularly the Emerſions of the Satellites of *Jupiter*, with reflecting and refracting Teleſcopes; but the Metals and Glaſſes, by that Time I could fix them to the Object, were covered a quarter of an Inch thick with Ice, and thereby the Object rendered indiſtinct; ſo that it is not without great Difficulties that any Obſervations can be taken.

Bottles of ſtrong Beer, Brandy, ſtrong Brine, Spirits of Wine, ſet out in the open Air for three or four Hours, freeze to ſolid Ice. I have tried to get the Sun's Refraction here, to every Degree above the Horizon, with *Elton*'s Quadrant, but to no Purpoſe, for the Spirits freeze almoſt as ſoon as brought into open Air.

The Froſt is never out of the Ground, how deep we cannot be certain. We have dug down ten or twelve Feet, and found the Earth hard frozen in the two Summer Months; and what Moiſture we find five or ſix Feet down, is white like Ice. The Waters, or Rivers, near the Sea, where the Current of the Tides flow ſtrong, do not freeze above nine or ten Feet deep.

All the Water we uſe for Cooking, Brewing, &c. is melted Snow and Ice. No Spring is yet found free from freezing, though dug never ſo deep down. All Waters on Land are frozen faſt by the Beginning of *October*, and continue ſo till the Middle of *May*.

The Walls of the Houſe we live in are of Stone, two Feet thick; the Windows very ſmall, with thick wooden Shutters, which are cloſe ſhut eighteen Hours every Day in Winter.

There are Cellars under the Houſe, wherein we put our Wines, Brandy, ſtrong Beer, Butter, Cheeſe, &c. Four large Fires are made in great Stoves built on purpoſe; every Day, as ſoon as the Wood is burnt down to a Coal, the Tops of the Chimnies are cloſe ſtopt with an Iron Cover. This keeps the Heat within the Houſe (though at the ſame Time the Smoak makes our Heads ach, and is very offenſive and unwholſome.) Notwithſtanding which, in four or five Hours after the Fire is out, the Inſide of the Walls of our Houſe and Bed-Places will be two or three Inches thick with Ice, which is every Morning cut away with a Hatchet. Three or four Times a Day we make Iron Shot, of twenty-four Pounds Weight, red hot, and hang them up in the Windows of our Apartments. I have a good Fire in my Room the major Part of the twenty-four Hours; yet all this will not preſerve my Beer, Wine, Ink, &c. from freezing.

For our Winter Dreſs we make uſe of three Pair of Socks, of coarſe Blanketting or Duffel, for the Feet, with a Pair of Deer-Skin Shoes over them; two Pair of thick *Engliſh* Stockings, and a Pair of Cloth Stockings upon them; Breeches lined with Flannel; two or three *Engliſh* Jackets, and a Furr Coat, or rather Gown, over them; a large Beaver Cap, double, to come over the Face and Shoulders, and a Cloth of Blanketting under the Chin; with Yarn Gloves, and a large Pair of Beaver Mittens, hanging down from the Shoulder before, to put our Hands in, which reach up as high as our Elbows. Yet notwithſtanding this warm Cloathing, almoſt every Day, ſome of the Men that ſtir abroad, if any Wind blows from the Northward, are dreadfully frozen. Some have their Arms, Hands, and Face, bliſtered and frozen in a terrible Manner, the Skin coming off ſoon after they enter the warm Houſe; and ſome have loſt their Toes. Now their lying Indoors for the Cure of theſe frozen Parts, brings on the Scurvy in a very lamentable Manner: Many have died of it, and few are free from that Diſtemper. I have procured them all the Help I could, from the Diet this Country affords in Winter; ſuch as freſh Fiſh, Partridges, Broths, &c. and the Doctors have uſed their utmoſt Skill in vain; for I find nothing will prevent that Diſtemper from being mortal, but Exerciſe and ſtirring abroad.

Coronæ and *Parhelia*, commonly called *Halos* and *Mock-Suns*, appear frequently about the Sun and Moon here. They are ſeen once or twice a Week about the Sun, and once or twice a Month about the Moon, for four or five Months in the Winter; ſeveral *Coronæ* of different Diameters appearing at the ſame Time.

I have ſeen five or ſix Parallel *Coronæ* concentric with the Sun, ſeveral Times in the Winter, being for the moſt Part very bright, and always attended with *Parhelia* or *Mock Suns*. The *Parhelia* are always accompanied with *Coronæ*, if the Weather is clear, and continue for ſeveral Days together, from the Sun's riſing to his ſetting. Theſe Rings are of various Colours, and about 40 or 50 Degrees in Diameter.

The frequent Appearance of theſe *Phænomena*, in this frozen Clime, ſeems to confirm *Deſcartes*'s Hypotheſis, who ſuppoſes them to proceed from Ice ſuſpended in the Air.

The *Aurora Borealis* is much oftner ſeen here than in *England*; ſeldom a Night paſſes in the Winter free from its Appearance; they ſhine with a ſurprizing Brightneſs, extinguiſhing all the Stars and Planets, and covering the whole Hemiſphere. Their tremulous Motion from all Parts; their Beauty and Luſtre are much the ſame as in the Northern Parts of *Scotland*, *Denmark*, &c.

The dreadful long Winters here, may almoſt be compared to the Polar Parts, where the Abſence of the Sun continues for ſix Months; the Air being perpetually chilled and frozen by the Northerly Winds in Winter, and the cold Fogs and Miſts obſtructing the Sun's Beams in the ſhort Summer we have here; for notwithſtanding the Snow and Ice is then diſſolved in the Lowlands and Plains, yet the Mountains are perpetually covered with Snow, and incredible large Bodies of Ice, continue in the adjacent Seas. If the Wind blows from the Southern Parts the Air is tolerably warm, but inſufferable cold when it comes from the Northward; and it ſeldom blows any otherwiſe, than between the North-eaſt and the North-weſt, except in the two Summer Months, when we have for the major Part light Gales, between the Eaſt and the North, and Calms. The Northerly Winds being ſo extremely cold, is owing to the Neighbourhood of high Mountains, whoſe Tops are perpetually covered with Snow, which exceedingly chills the Air paſſing over them. The Fogs and Miſts that are brought here from the Polar Parts in Winter, appear viſible to the naked Eye, in Iſicles innumerable, as ſmall as fine Hairs or Threads, and pointed as ſharp as Needles. Theſe Iſicles lodge in our Cloaths, and if our Faces or Hands are uncovered, they preſently raiſe Bliſters as white as a Linnen Cloth, and as hard as Horn: Yet if we immediately turn our Backs to the Weather, and can bear our Hand out of the Mitten, and with it rub the bliſtered Part for a ſmall Time, we ſometimes bring the Skin to its former State, if not, we make the beſt of our Way to a Fire, and get warm Water, wherewith we bathe it, and thereby diſſipate the Humours raiſed by the frozen Air, otherwiſe the Skin would be off in a ſhort Time, with much hot ſerous watery Matter, coming from under it along with the Skin; and this happens to ſome almoſt every Time they go abroad, for five or ſix Months in the Winter; ſo extreme cold is the Air when the Wind blows any thing ſtrong.

Now I have obſerved, that when it has been extreme hard Froſt, by the Thermometer, and little or no Wind that Day, the Cold has not near ſo ſenſibly affected us, as when the Thermometer has ſhewed much leſs freezing, having a briſk Gale of Northerly Wind at the ſame Time. This Difference, perhaps, may be occaſioned by thoſe ſharp-pointed Iſicles before-mentioned, ſtriking more forcibly on a windy Day than in calm Weather, thereby penetrating the naked Skin, or Parts but thinly covered, and cauſe an acute Senſation of Pain or Cold. And the ſame Reaſon, I think, will hold good in other Places; for ſhould the Wind blow Northerly any thing hard for many Days together, in *England*, the Iſicles that would be brought from the Polar Parts, by the Continuance of ſuch a Wind, though imperceptible to the naked Eye, would more ſenſibly affect the naked Skin, or Parts but lightly covered, than when the Thermometer has ſhewn a greater Degree of freezing, and there has been little or no Wind at the ſame Time.

It is not a little ſurprizing to many, that ſuch extreme Cold ſhould be felt in theſe Parts of *America*, more than in Places of the ſame Latitude, on the Coaſt of *Norway*; but the Difference I take to be occaſioned by the Winds blowing conſtantly here, for ſeven Months in the twelve, between the North-eaſt and North-weſt, and paſſing over a large Tract of Land, and exceeding high Mountains, *&c.* as before-mentioned. Whereas at *Drontheim* in *Norway*, as I obſerved ſome Years ago in wintering there, the Wind all the Winter comes from the North and North-north-weſt, and croſſes a great Part of the Ocean, clear of thoſe large Bodies of Ice we find here perpetually. At this Place we have conſtantly, every Year, nine Months Froſt and Snow, and unſufferable Cold, from *October* to the Beginning of *May*. In the long Winter, as Air becomes leſs ponderous towards the Polar Parts, and nearer to an Equilibrium, as it happens about one Day in a Week, we then have Calms and light Airs all round about the Compaſs continuing ſometimes four and twenty Hours, and then back to its own Place again, in the ſame Manner as it happens every Night in the *Weſt Indies*, near ſome of the Iſlands.

The Snow that falls here is as white and ſmall as Duſt, but never any Hail except at the Beginning and End of Winter: Almoſt every Full and Change of the Moon, very hard Gales from the North.

The conſtant Trade-Winds in theſe northern Parts, I think undoubtedly proceed from the ſame Principle which our learned Dr. *Halley* conceives to be the Cauſe of the Trade-Winds near the Equator; and their Variation. “Wind, ſays he, is moſt properly defined to be the Stream or Current of the Air, and where ſuch Current is perpetual and fixed in its Courſe, it is neceſſary that it proceed from a permanent and unintermitting Cauſe, capable of producing a like conſtant Effect, and agreeable to the known Properties of Air and Water, and the Laws of Motion of fluid Bodies. Such an one is, I conceive, the Action of the Sun's Beams upon Air and Water, as he paſſes every Day over the Oceans, conſidered together with the Nature of the Soil, and Situation of the adjoining Continents: I ſay therefore, firſt, that according to the Law of Statics; the Air which is leſs rarefied and leſs ponderous, muſt have a Motion towards thoſe Parts thereof which are more rarefied, and leſs ponderous, to bring it to an Equilibrium, *&c.*”

Now that the cold denſe Air, by reaſon of its greater Gravity, continually paſſes from the ſolar Parts to the Equator, where Air is more rarefied, to preſerve an Equilibrium, or Balance of the Atmoſphere, I think is very evident from the Wind in thoſe frozen Regions blowing from the North and North-weſt, from the Beginning of *October* until *May*; for we find that when the Sun, at the Beginning of *June*, has warmed thoſe Countries to the Northward, then the South-eaſt, Eaſt, and variable Winds continue till *October* again, and I do not doubt but the Trade-Winds and hard Gales may be found in the Southern Polar Parts, to blow towards the Equator when the Sun is in the Northern Signs, from the ſame Principle.

The Limit of theſe Winds from the Polar Parts towards the Equator, is ſeldom known to reach beyond the 30th Degree of Latitude; and the nearer they approach to that Limit the ſhorter is the Continuance of theſe Winds. In *New England* it blows from the North near four Months, in the Winter; at *Canada*, about five Months; at the *Danes* Settlements in *Streight Davis*, in the 63d Degree of Latitude, near ſeven Months; on the Coaſt of *Norway*, in 64 Degrees, not above five Months and a half, by reaſon of blowing over a great Part of the Ocean, as was before mentioned; for theſe northerly Winds continue a longer, or ſhorter Space of Time, according to the Air's being more or leſs rarefied, which may very probably be altered ſeveral Degrees, by the Nature of the Soil, and the Situation of the adjoining Continents.

The vaſt Bodies of Ice we meet with in our Paſſage from *England* to *Hudſon's Bay*, are very ſurpriſing; not only as to the Number, but Magnitude. It is in truth unaccountable how they are formed of ſo great a Bulk, ſome of them being immerſed a hundred Fathoms or more under the Surface of the Ocean, a fifth or ſixth Part above, and three or four Miles in Circumference: Some hundreds of theſe we ſometimes meet in our Voyage here, all in Sight at once if the Weather is clear; ſome of them are frequently ſeen on the Coaſts and Banks of *Newfoundland* and *New England*, though much diminiſhed.

When I have been becalmed in *Hudſon's Streights*, for three or four Tides together, I have taken my Boat and lain cloſe to the Sides of one of them, ſounded, and found a hundred Fathoms Water all round it. The Tide floweth here above four Fathoms, and I have obſerved upon a Body of Ice, the Tide to riſe and fall that Difference; which was a Certainty of its being aground: Likewiſe, in a Harbour in the Iſland of *Reſolution*, where I continued four Days, three of theſe Iſlands of Ice (as we call them) came a-ground; I ſounded along by the Sides of one of them quite round it, and found thirty-two Fathoms Water, and the Height above the Surface but ten Yards, another was twenty-eight Fathoms under, and the perpendicular Height but nine Yards above the Water.

I can in no other manner account for the Aggregation of ſuch large Bodies of Ice; but that along the Coaſts of *Streight Davis*, both Sides of *Baffin's Bay*, *Hudſon's Streights*, *Anticoſti* or *Labradore*, the Land is very high and bold, and a hundred Fathom and more cloſe to the Shore. Theſe Shores have many Inlets or Firths, the Cavities of which are full of Ice and Snow by the almoſt perpetual Winter there, and frozen to the Ground, increaſing for four, five, or ſeven Years, till a kind of Deluge, or Land-flood, which commonly happens in that Space of Time throughout thoſe Parts, breaks them looſe and launches them into the Streights or Ocean, where they are driven about by the variable Winds and Currents, in the Months of *June*, *July*, and *Auguſt*, rather increaſing than diminiſhing in Bulk, being ſurrounded (except in four or five Points of the Compaſs) with ſmaller Ice for many hundred Leagues; and Land covered all the Year with Snow, the Weather being extreme cold for the moſt Part in thoſe Summer Months. The ſmaller Ice that almoſt fills the Streights and Bays, and covers many Leagues out into the Ocean along the Coaſt, is from four to ten Fathoms thick; and chills the Air to that Degree, that there is a conſtant Increaſe to the large Iſles, by the Sea's waſhing againſt them, and the perpetual wet Fogs like ſmall Rain, freezing as they ſettle upon the Ice; and their being ſo deeply immerſed under Water, and ſuch a ſmall Part above, prevents the Wind's having much Power to move them; for though it blows from the North-weſt Quarter near nine Months in twelve, and conſequently thoſe Iſles are driven towards a warmer Climate, yet the progreſſive Motion is ſo ſlow, that it muſt take up many Years before they can get five or ſix hundred Leagues to the Southward: I am of Opinion, ſome hundred Years are required; for they cannot, I think, diſſolve, before they come between the 50th and 40th Degrees of Latitude; where the Heat of the Sun conſuming the Upper-parts, they lighten, and waſte in Time; yet there is a perpetual Supply from the Northern Parts, which will ſo continue as long as it pleaſes the Author of all Beings to keep Things in their preſent State.

Obſervations of the Longitude, Latitude, *and the* Declination of the Magnetic-Needle *at* Prince of Wales's Fort, Churchill *River*.

	Hou.	*Min.*	*Sec.*
Having obſerved the apparent Time of an Emerſion of *Jupiter*'s firſt Satellite at *Fort Churchill*, on *Saturday* the 20th of *March* laſt, 1741-2, at - - - - - -	11	55	50
I find the ſame Emerſion happened at *London*, by Mr. *Pound*'s Tables compared with ſome Emerſions actually obſerved in *England*, near the ſame Time, at - - - -	18	15	10
Whence the horary Difference of Meridians, between *Fort Churchill* and *London*, comes out	06	19	20
Which converted into Degrees of the Equator, gives for the Diſtance of the ſame Meridians - - -	94	50	00

Wherefore, ſince the Time at *London* was later in Denomination than that at *Churchill*, it follows that, according to this Obſervation, *Churchill* is 94 Degrees 50 Minutes in Longitude Weſt of *London*.

I took ſeveral other Obſervations, which agreed one with another to leſs than a Minute; but this I looked upon as the moſt diſtinct and beſt.

The Obſervation was made with a good fifteen Feet refracting Teleſcope and a two Feet Reflector of *Gregory*'s Kind, having a good Watch of Mr. *Graham*'s that I could depend upon; for I have frequent Opportunities of diſcovering how much its Variation amounted to, and conſtantly found its daily Deviation or Error to be fifteen Seconds too ſlow; by which Means it was as uſeful to me, for all Purpoſes, as if it had gone moſt conſtantly true, without any Change. This Watch I kept in my Fob in the Day, and in Bed in the Night, to preſerve it from the Severity of the Weather; for I obſerved that all other Watches were ſpoiled by the extreme Cold.

I have found, from repeated Obſervations, a Method of obtaining the true Time of the Day at Sea, by taking eight or ten Altitudes of the Sun or Stars, when near the prime Verticle, by Mr. *Smith*'s or Mr. *Hadley*'s Quadrant, which I have practiſed theſe three or four Years paſt, and never found, from the Calculations, that they differed one from another above ten or fifteen Seconds of Time. This Certainty of true Time at Sea, is of greater Uſe, in the Practice of Navigation, than may appear at firſt Sight; for you not only thereby get the Variation of the Compaſs, without the Help of Altitudes, but likewiſe the Variation of the Needle from the true Meridian every time the Sun or Star is ſeen to tranſit the ſame. Alſo, having the true Time of Day or Night, you may be ſure of the Meridian Altitude of the Sun or Star, if you get a Sight fifteen or twenty Minutes before or after it paſſes the Meridian; and the Latitude may be obtained to leſs than five Minutes; with ſeveral other Uſes in aſtronomical Obſervations, as the Refraction of the Atmoſphere; and ſo allow for it by getting the Sun's apparent Riſing and Setting, which any-body is capable of doing; and from thence you will have the Refraction.

If we had ſuch a Teleſcope contrived as Mr. *Smith* recommends to be uſed on Shipboard at Sea, now we can have an exact Knowledge of the true Time of the Day or Night, from the above Inſtruments, and a good Watch, we ſhould probably be able to obſerve the Eclipſes of the firſt Satellite of *Jupiter*, or any other Phænomenon of the like Kind, and thereby find the Diſtance of Meridians or Longitude at Sea.

The Variation of the Magnetic-Needle, or Sea Compaſs, obſerved by me at *Churchill* in 1725 (as in N° 393 of the *Philoſophical Tranſactions*, for the Months of *March* and *April*, 1746) was at that Time North 21 Degrees weſterly; and this Winter I have carefully obſerved it, and find it no more than 17 Degrees; ſo that it has differed about one Degree in four Years; for in 1738 I obſerved it here, and found its Declination 18 Degrees weſterly. I have carefully obſerved, and made proper Allowance for the Sun's Declination and Refraction, and find the Latitude here to be 58 Degrees 36 Minutes North; but in moſt Parts of the World where the Latitudes are fixed by Seamen, they are, for the moſt Part, falſely laid down, for want of having regard to the Variation of the Sun's Declination, which computed at a diſtant Meridian, when the Sun is near the Equator, may make a great Error in the Sun's riſing and ſetting, *Azimuths*, &c.

3. We cannot, after the Peruſal of this ingenious Diſcouſe, full of ſo much curious Matter, and containing ſuch pregnant Proofs of the Author's perfect Acquaintance with his Subject, doubt, that ſuch a Perſon ſhould be received with all the Marks of Eſteem and Confidence poſſible; by one who had formed a Deſign of reviving this ſo long neglected Diſcovery, by an Attempt through *Hudſon's Bay*, The Gentleman who had then, and ſtill has, this Matter at Heart, was *Arthur Dobbs*, Eſq; a Man born to revive the old heroic Spirit, of turning all our Endeavours to the Service of the Public. This had led him to obſerve, that the ſureſt and moſt effectual Means of improving our naval Force, and extending our Navigation (things that have hitherto gone, and, indeed, muſt always go together) was to open ſome new Branches of Commerce, to which, as we ſhould thereby have a better Title, ſo by getting the Start of other Nations, we might be able to manage to greater Advantage.

He ſaw, likewiſe, that with whatever Expence this might be attended to the Public, it would not only repay the ſame abundantly, but would alſo be, at the Bottom, much leſs chargeable than in Appearance; for there is in this reſpect, ſuch a Difference between public and private Expence, as deſerves to be thoroughly examined; becauſe the comprehending of it is a thing of much greater Conſequence, than can, at firſt Sight, be eaſily conceived. For if private Men embark in any Undertaking which demands the Diſburſement of large Sums of Money, they can do it only with a View of Profit to themſelves; and conſequently if they are either miſtaken in their Deſign, or miſcarry in the Execution of it, they are real Sufferers in proportion to the Loſs with which ſuch an Attempt is attended; but the Caſe is very far from being the ſame, when Undertakings of the like Kind are managed by the Public; for then the Money diſburſed falls into the Hands of Individuals, and conſequently though the Attempt may be diſappointed, yet the real Loſs is little or nothing; becauſe thoſe who furniſh the public Expences receive the Money that is thus ſpent, and it is no more than a different kind of Circulation, which, in the End, comes to very near the ſame thing, as if the original Undertaking had coſt little or nothing.

On the other Hand, the Views of private Perſons tend to their particular Advantage; and though this turns to the general Good of the Society, yet this is in a very ſmall Proportion in Compariſon of what may be expected, and, indeed, muſt neceſſarily follow from Undertakings of ſuch a public Nature, when attended with Succeſs. An Inſtance will make this plain. The *Hudſon's Bay* Company has now ſubſiſted near fourſcore Years, within which ſpace of Time the Proprietors have been very large Gainers, but the Advantage to the Public has been very far from being great. They have exported our Manufactures, but in very ſmall Quantities; their Profit, upon ſuch Exportations, has been very conſiderable; but the Gain to the Public would have been much greater, if thoſe Exportations had been larger, though the Balance, in favour of the Company, would then have been leſs. They employ but a few Ships, and a ſmall Number of Seamen; their Factories are few and thin, all which may anſwer their Purpoſes very well; but 'tis plain they do not anſwer the national Purpoſe of enlarging our Navigation, and increaſing our Seamen.

Yet this is not all; we ought to conſider the wide Difference between the Advantages accruing to the Public from the Trade of the Company, and the Advantages that would have accrued if a North-weſt Paſſage had been ſearched for and found; for if ever this ſhould be brought about, it is very clear, that for a great Part of this Time the Nation has loſt all that might have been acquired thereby. It may be anſwered that this is founded upon a Suppoſition only, to which I anſwer, that it is founded upon the ſame Suppoſition with their Charter; and therefore it was their Duty to look for it, which they have not done. But let us now ſee what Hopes Captain *Middleton* gave Mr. *Dobbs* of the finding ſuch a Paſſage; and theſe we ſhall give in this Gentleman's own Words, which are as follow.

4. “ In his Letter to me of *October* the 18th, 1739, he ſays I was this Year at *Churchill* Factory, where Mr. *Norton* is Governor; he was along with *Scroggs* in the Year 1722, and remembers very well, that when they came to an Anchor in the *Welcome*, near the Latitude of 65 Degrees, they had twelve Fathom at high Water, and but ſeven Fathom at low Water; and he ſeems confident, from a View that he took from a Promontary aſhore, that there muſt be a clear Paſſage. The Land is very high, and falls off to the Southward of the Weſt. This Year ſome of the Natives, who came down to treat at *Churchill*, and had never been before at any of our *Engliſh* Settlements, informed him that they frequently traded with *Europeans*, on the Weſt Side of *America*, near the Latitude of *Churchill*, by their Account, which ſeems to confirm the two Seas muſt meet. I remain, *&c. Chriſtopher Middleton*.

“ In another of his Letters of the 21ſt of *January*, 1737, he ſays, That the Company think it their Intereſt, rather to prevent than forward new Diſcoveries in that Part of the World; and for that Reaſon they won't ſuffer any of our Journals to be made public. All the Intimation I am able to give is, that the Tides riſe more with a North and a North-weſt Wind, at neap Tides, than ever the Spring-Tides do at *Churchill* or *Albany*, with a Southerly or Eaſterly Wind, and as there is little or no Tide between *Mansfield* and *Cary's Swans Neſt*, nor any in the North, or North-north-weſt of *Mill Iſles*, in that Bay, it muſt come from the *Welcome*, which cannot be far from ſome Weſtern Ocean. Alſo in Mr. *John Scroggs*'s Journal of 1722, he mentions, that in Latitude 64 Degrees 50 Minutes, the Tide ebbed five Fathoms, but gives no Account which Way, or from whence, the Tide came, and they all agree that a great many Whales are ſeen in the *Welcome*. Whereas I don't remember to have ſeen any in other Parts of *Hudſon's Bay*, and I have been in all Parts of it except the *Welcome*; all which are favourable Circumſtances. I ſhall be glad, at all times, to contribute what I can to your Information, and beg you will believe me to be, Sir, *&c. Chriſtopher Middleton*.

“ In another of his Letters of *November* the 5th, 1737, he mentions the Company's having ſent out two Sloops (at my Solicitation) upon the Diſcovery; they proſecuted their Voyage no farther then Latitude 62 Degrees 15 Minutes North, and returned without making any new or uſeful Diſcovery; ſo far as I can learn, they found a great many Iſlands, abundance of black Whales, but no very great Tides, the higheſt about two Fathoms, the Flood coming from the Northward.

“ In his Extract from *Scroggs*'s Journal, of the *Welcome*, he alſo ſays, that he had two Northern *Indians* aboard, who had been entertained in the Factory all the foregoing Winter, upon the Account of his Diſcovery; they gave us Information of a rich Copper Mine that lay near the Surface of the Earth, and ſaid they could direct the Sloop or Ship to lay her Side to it, where ſhe might land very ſoon. We had ſeveral Pieces of Copper brought to *Churchill*, and made it evident there is a Mine ſomewhere in that Country. Theſe *Indians* ſketched out the Lands with Charcoal, upon a Skin of Parchment, before they left the Factory, and as far as they went they found it agree very well.

“ He afterwards ſays, when they returned, which was in a Month's Time, or thereabouts, I examined the Officers and Men; ſeveral had been my Scholars, in the Winter, to learn Navigation. They told me they ſaw nothing at thoſe times they were aſhore to hinder their going farther; for when they were eight or ten Miles from *Whale-bone Point*, which bore Eaſt-north-eaſt from them, they ſaw an open Sea, and the Land ſtretched away to the Southward of the Weſt. This they ſaid to *Scroggs*'s Face, as ſoon as they were got aboard our Ship at *Churchill*; though while they were under his Command they diſſembled it, and ſaid what he pleaſed to have them. From this, and all other Accounts, it appears there muſt be a Paſſage for the Tides, from the Weſtern Ocean.”

We need not at all wonder, that upon having ſuch Lights as theſe, Mr. *Dobbs* reſolved to proceed, and to make uſe of all his Intereſt at the Admiralty Board, to procure ſuch Aſſiſtance, and ſuch Encouragement, to Captain *Middleton*, as ſhould appear requiſite for carrying this Deſign into Execution. It is very evident that there was nothing precipitate, raſh, or haſty, in this whole Proceeding; but Mr. *Dobbs* acted with all the Caution and Diſcretion, that in a Matter of ſo great Importance to the Public, and of ſo great Conſequence to his own Character, it became him to do. He had advanced as far in this Enquiry, as it was poſſible for a Man to do, without going to *Hudſon's Bay* in Perſon; and his Acquaintance with Captain *Middleton* ſeemed ſufficient to ſupply that Defect; for he was allowed to be an excellent Seaman, and therefore a very proper Judge of the Probability, or Improbability of ſuch a Paſſage; he had conſidered that Point of his own Accord, and as we have ſeen before, had collected Reaſons ſufficient to determine him to believe it probable. He had been, not once, but twenty times, at *Hudſon's Bay*, and conſequently appeared one of the fitteſt Men living, to be intruſted with the Direction of this Diſcovery. Mr. *Dobbs*, therefore, acted with Wiſdom and Prudence, as well as Honour and Gratitude, recommending him to the Admiralty, as the moſt proper Perſon to be employed in an Expedition for the diſcovering a North-weſt Paſſage. All theſe Facts I have related as they appear to me, and with the Impartiality becoming an Hiſtorian. I have no perſonal Knowledge of either of theſe Gentlemen, and I never ſought it, that I might not fall under any Prejudices, or Prepoſſeſſions. I report all things as fairly as I can, and if there be any Errors or Miſtakes, they muſt proceed, not from any Fault in my Will, but in my Underſtanding. And with this I thought it neceſſary to acquaint the Reader, as well as that I am not at all a Party in this Diſpute; and that my only Motive to meddle therewith, is for his Service.

5. It was natural for Mr. *Dobbs* to expect this Expedition ſhould meet with ſome Checks and Diſcouragements, from thoſe who were moſt capable of promoting it, I mean the *Hudſon's Bay* Company; but it is certain that he did not expect near ſo much Trouble in this Affair, as he met with. Speaking of it after the Return of Captain *Middleton*, he throws all the Paſſages relating to this Matter together; and having firſt obſerved that this was an Undertaking the Company was by their Charter bound to promote, goes on in the following Manner:

“ This, ſays he, they have not only neglected to do, but have concealed the Knowledge or Preſumptions they had of it as much as poſſible; and have not only chicaned when applied to, but have actually, by Letter from their Governor, refuſed to look for it, when applied to upon that Account; and have alſo diſcouraged the Attempts of others, not only by concealing the Navigation into thoſe Seas, by obliging their Captains, under a Penalty, not to make or publiſh any Charts or Journals of thoſe Seas and Coaſts, or Voyages thither, but alſo by putting all the Difficulties they durſt, upon the King's Ships lately ſent upon the Diſcovery; having claimed, and taken from Captain *Middleton* an *Indian* Boy, whom he had brought to *England*, and having learned the *Engliſh* Tongue, would have proved a good Interpreter; and made his Clerk a Governor of one of their Factories, to induce him to leave him, and alſo ſent away their Ships a Month earlier than uſual, to lie in the *Orkneys*, leſt he ſhould have gotten any of the Sailors, who had been accuſtomed to, and acquainted with, the Navigation;

"but even went farther, to tempt the Captain to quit the King's Service, and not to attempt the Diſcovery; and offered him 5000*l.* either to return to their Service, or look for it in *Davis*'s Streight, or *Baffin's Bay*, and not to look for it in *Hudſon's Bay*, or at the *Welcome*. Alledging it would coſt the Company ſo much to ſupport their Right againſt the Crown; and as he had been their Friend, and knew all their Concerns, it would be better to give him that Sum, than to give it to the Lawyers.

"When they found him Proof againſt their Bribery, they then thought to diſtreſs him another Way, by writing to their Governor at *Churchill*, which was the moſt convenient Harbour for the King's Ships to winter in, and was neareſt to the Paſſage, not to receive him into their Port. And afterwards, when the Company was applied to by the Lords of the Admiralty, to allow him to winter there, if it was neceſſary for him, and to give him what Aſſiſtance they could, in ſupplying his Wants, which they would thankfully repay the Company in *London*; after deliberating ſome Time upon an Anſwer, they wrote to the Lords of the Admiralty, that they had ſent ſuch a Letter as their Lordſhips deſired, to their Governor at *Churchill*, and diſpatched it by Poſt to their Ships at the *Orkneys*. This being no way ſatisfactory to Captain *Middleton*, who had been informed of their Letter to the Governor not to admit him, he applied for a Duplicate, to carry it with him, in caſe the other ſhould miſcarry, there being no ſettled Poſt to the *Orkneys*; upon which they gave him a Duplicate ſealed up, and, upon Application, a Copy of it, to know what it contained, which was in theſe Words:

Hudſon's Bay Houſe, *London*, *May* 15, 1741.

Mr. *James Iſham*, and Council, at *Prince of Wales*'s *Fort*, *Churchill River*.

GENTLEMEN,

"Notwithſtanding our Orders to you, if Captain *Middleton* (who is ſent abroad in the Government's Service, to diſcover a Paſſage North-weſt) ſhould, by inevitable Neceſſity, be brought into real Diſtreſs, and Danger of his Life, and Loſs of his Ship; in ſuch Caſe you are then to give him the beſt Aſſiſtance and Relief you can. We remain,

"*Your loving Friends,*

"*Bibye Lake*, Governor,
"*William Ederton*,
"*J. Winter*,
"*Atwell Lake*,
"*John Anthony Merle*,
"*John Merry*.

"Upon ſo extraordinary a Diſcovery of the Inclinations of the Company, to baffle the Attempt of finding out the Paſſage, and to diſcourage Captain *Middleton* from proſecuting the Diſcovery; the Lords of the Admiralty thought it neceſſary to apply to the Lords of the Regency, that the Secretary of State might, by their Orders, write to the Company, to require that Aſſiſtance which they refuſed to the Admiralty, which was ſent, and upon that the Company gave a Letter to the Captain, in a more humane and friendly Stile; but in Conſequence of their Offer, it is plain that he ſtifled and diſguiſed the Diſcovery of the Paſſage. By this it is evident that the Company believe there is a Paſſage, which they want to conceal; for otherwiſe it had been their Intereſt to have had the Attempt made, and if not found, there would have been an End put to the proſecuting it any farther; and they might probably have enjoyed their Trade to the Bay, without its being coveted or enquired into."

When all Difficulties were overcome, and things ſo diſpoſed that nothing was wanting to Captain *Middleton*'s purſuing his Voyage, but his Inſtructions from the Admiralty, with reſpect to the Meaſures he was to purſue in his intended Diſcovery; theſe were very ſoon procured, and appeared to have been drawn up with great Circumſpection, and the moſt perfect Knowledge of the Subject to which they relate, as the Reader cannot but allow, after the ſerious Peruſal of them.

Theſe Inſtructions ran thus: "Whereas we have, in Obedience to his Majeſty's Commands, ordered the *Furnace* Sloop, whereof you are Commander, to be fitted out, in a proper Manner, to proceed on a Voyage towards *Hudſon's Streight*, in order to attempt a Diſcovery of a Paſſage, that Way, into the Weſtern *American* Ocean; and have appointed the *Diſcovery* Pink, *William Moor*, Maſter (who is hereby required, and directed to follow, your Orders) to attend you on the Service: You are hereby required and directed, ſo ſoon as the ſaid Sloop and Pink are ready for the Sea, to fall down to the *Nore*; and when they have been paid what is due to their Companies, to proceed to *Leith*, and deliver the incloſed Packet to Captain *Holbourn*, Commander of his Majeſty's Ship the *Dolphin*; containing Orders for the ſaid Captain to proceed, in Company with you, as far as the Iſlands of *Orkney*, for your better Security againſt the Privateers of the Enemy, ſaid to be cruizing thereabout.

"You are accordingly to proceed with the ſaid Ship *Dolphin*, as far as the aforeſaid Iſlands, and then to make the beſt of your Way with the Sloop and Pink, under your Command, towards *Hudſon's Streight*; and, after paſſing the ſame, to proceed to *Cary's Swans Neſt*, and then ſteer North-weſterly, ſo as to fall in with the North-weſt Land, at Sir *Thomas Roe's Welcome*, or *ne ultra*, near the Latitude of 65 Degrees North.

"You are there to make the beſt Obſervations you can, of the Height, Direction, and Courſe of the Tides, Bearing of the Lands, Depth and Soundings of the Sea and Sholes, with the Variations of the Needle.

"When you come up with the *Whalebone Point*, in 65 Degrees, you are to try the beſt Paſſage in doubling that Land, whether to Weſtward or Eaſtward, in caſe it be an Iſland; and on which Side ſoever you meet the Tide and Flood, to direct your Courſe, ſo as to meet the Tide, whether North-weſterly or South-weſterly.

"If after, in doubling that Cape, you find either a Streight or an open Sea, you are to keep on your Courſe, till meeting the Tide of Flood; and if it be ſo wide as to loſe Sight of Land, then keep to the Larboard or *American* Shore, ſteering South-weſterly, ſo as to take the Bearings of the Lands and Soundings, and obſerve whether there are any Inlets, Bays, or Rivers, to ſhelter the Ships in, in caſe bad Weather, or contrary Winds, oblige you to take Harbour; and there make the beſt Plans you can of ſuch Harbours, and the Charts of the Coaſt.

"You muſt make no ſtay any where, whilſt Wind and Weather permits (except for making Obſervations for your Safety in your return) until you get to the Southward of 60 Degrees North; and then, if you continue to find an open Sea, make more careful Obſervations of the *American* Coaſt or Iſlands, and of the Head-lands, Bays, and Rivers, until you make the Latitude of 50 Degrees, or any more Southerly Latitude, in caſe you find it convenient to winter on the Weſtern Side of *America*. But if you ſhould find it more convenient to come into the Bay to winter, or can make your Paſſage home in Time, after making a Diſcovery of the Paſſage to the Weſtern *American* Ocean (which is more eligible) in order to proſecute the Diſcovery to Advantage next Seaſon; then you need proceed no farther Southely than 50 or 60 Degrees Latitude, and make all proper Obſervations of the Tides, Bays, Head lands, Sholes, and Rocks, on both Sides, if the Paſſage be narrow, on which ever Side the Wind and Weather permits you; with the Variation, or any other curious Obſervations you can make.

"If you find any Inhabitants upon the Coaſt, or any populous Nation to the Southward, you are to endeayour, by all proper Means, to cultivate a Friendſhip and Alliance with them; preſenting them with ſuch Trifles as they value, and ſhewing them all poſſible Civility and Reſpect; but to take Caution, if they be numerous, not to let yourſelf be ſurpriſed; but to be conſtantly on your Guard againſt any Accidents.

“ If you find it proper to winter on the other Side of the Paſſage, get to a warm Climate, not more northerly than 42 Degrees, in ſome ſafe Harbour that may be of Uſe in a future Settlement, and rather make an Iſland, if there be a good Harbour, which would be ſafer than on the Continent for an Infant Settlement.

“ If your Place of wintering is within a proper Diſtance to be ſupplied by the Natives on the Continent, take proper Seeds of Fruit-Trees, Plants, Grain, and Pulſe, and ſow them in the Spring; or in caſe you find any civilized Nation who want ſuch Kinds, you may preſent ſome to them, and make them ſenſible of their Uſe and Manner of Culture.

“ In Places where you meet with Inhabitants, make Purchaſes with their Conſent, and take Poſſeſſion of convenient Situations in the Country, in the Name of his Majeſty of *Great Britain*.

“ But when there are no Inhabitants, you muſt take Poſſeſſion by ſetting up proper Inſcriptions as firſt Diſcoverers and Poſſeſſors.

“ If in your Paſſage you meet with any Ships trading to the weſtern Countries eaſtward of *Japon*, or any *Japoneſe* Ships, and you apprehend any Danger from them, either from their Force or Number, you are to proceed no farther in the Diſcovery, but are immediately to return that Ships of ſufficient Force may be ſent out the next Seaſon to begin a Trade, or to make a Settlement without any Apprehenſion of Diſturbance from any powerful Nation on that Side, leſt any Accident ſhould prevent your Return, and diſcourage any farther Attempts to be made for the future. If you ſhould arrive at *California* without any Apprehenſion of Danger, and chuſe to winter in 42 Degrees (where *Caxton* is ſaid to have found a civilized Nation and a good Harbour) or more ſoutherly, then endeavour to meet Capt. *Anſon* in the Month of *December*, before the Arrival of the *Manilla* Ship at the *Cape St. Lucas*, the ſouthern Cape of *California*, and leave a Copy of your Journal with him, leſt any Accident ſhould happen to you upon your Return, and ſo the Diſcovery be loſt, and it might prevent Ships being ſent out to your Relief in caſe of Shipwreck.

“ But foraſmuch as in an Undertaking of this Nature, ſeveral Emergencies may ariſe not to be foreſeen, and therefore not ſo particularly to be provided for by Inſtructions before-hand, you are in ſuch Caſe to proceed as upon Advice with your Officers you ſhall judge may be moſt advantageous to the Service on which you are employed.

“ When you return home, you are to proceed into the River *Thames*, and ſend our Secretary an Account of your Arrival, and Proceedings, for our Information. Given under our Hands the 20th of *May*, 1741.

“ *Charles Wager*,
“ *Thomas Frankland*,
“ *Glenorchy*.

“ *To Capt.* Middleton, *Commander of His Majeſty's Sloop the* Furnace, Deptford.

“ By Command of their Lordſhips.
“ *Thomas Corbett*.

“ *By the Commiſſioners for executing the Office of Lord High Admiral of* Great Britain *and* Ireland, *&c.*

“ You are hereby directed, during the Courſe of your intended Voyage, not to give ony Diſturbance or Moleſtation to any of the Ships or Sloops employed in the Service of the *Hudſon's Bay* Company; but to give them all Protection and Aſſiſtance that lies in your Power, whenever any Opportunity offers of your being ſerviceable to them. Given under our Hands the 29th Day of *May*, 1741.

“ *Charles Wager*,
“ *Vere Beauclerk*,
“ *Glenorchy*.

“ By Command of their Lordſhips.
“ *Thomas Corbett*.”

We may plainly ſee from theſe Inſtructions, that nothing was wanting on the Part of the Admiralty to further this important Diſcovery, but that however Captain *Middleton* was left ſufficiently at his Liberty, as indeed it was very reaſonable he ſhould, to proſecute whatever Methods his own Circumſtances and the Situation of Things ſhould ſuggeſt to him for the Furtherance of the Deſign when he came to be engaged in the Execution of it, and which it was impoſſible to forſee and provide for before that time. It is plain alſo, that all due Care was taken of the *Hudſon's Bay* Company, in that they had not the leaſt Reaſon to complain that this Expedition made by the King's Ships, within the Limits of their Charter, could in any Degree turn to their Prejudice. But it is now time to ſee what Effects a Scheme executed with ſo much Judgment and Deliberation produced, and this will be beſt ſeen from an Extract of the Captain's own Journal which we ſhall give the Reader; and ſhall then furniſh him with ſome other Lights, in order to ſhew why the want of Succeſs in this Undertaking did not entirely deſtroy all Thoughts of finding ſuch a Paſſage as Captain *Middleton* ſought for through *Hudſon's Bay*.

An ABSTRACT *of Captain* Chriſtopher Middleton's *Journal*.

6. I ſailed from *Churchill* the 1ſt Day of *July*, and continued ſailing with a fair Wind till the 3d, when we ſaw an Iſland, the two Extremities bearing North by Eaſt, and Eaſt by North, lying in the Latitude of 63 Degrees North, and Longitude from *Churchill* 3 Degrees 40 Minutes Eaſt; which I took to be the ſame which *Fox* named *Brook Cobham*. On the 5th Day I ſaw a Head-land on the North-ſide of the *Welcome*, bearing North-weſt by North, ſeven or eight Leagues diſtant, in the Latitude of 63 Degrees 20 Minutes, and Longitude from *Churchill* 4 Degrees. Here I tried the Tides ſeveral times, and found cloſe in with the Land the Tide to run two Miles an Hour from the North by Eaſt, which I took to be the Flood; and by the Slacks, from ſeveral Trials, I found that a Weſt, or Weſt by North Moon, made high Water, having a Full Moon that Day. On the 8th Day I ſaw the North-ſide of the *Welcome*, with much Ice in Shore: I tried the Tide, and found it ſet Eaſt-north-eaſt, two Fathoms. On the 9th, continuing my Courſe, and ſailing through much Ice, I was obliged at length to grapple to a large Piece, the Tender did the ſame to keep off from Shore, the Wind blowing us right upon it: I tried the Tide frequently, and could diſcover neither Flood nor Ebb by my Current-Log: Here we were faſt jammed up in Ice, being totally ſurrounded for many Miles, and the Wind ſetting it right upon us: It was all Ice for ten Leagues to windward, and we were in great Danger of being forced aſhore; but it happily falling calm after we had lain in this Condition two or three Days, the Pieces of Ice ſeparated, or made ſmall Openings; we being then within two Miles of the Shore, and with no ſmall Difficulty hauled the Ship from one Place to another, till we got amongſt what we call *Sailing Ice*, that is, where there are ſuch Intervals of Water as a Ship, by ſeveral Traverſes, may get forward towards the intended Courſe. In this Manner we continued till we ſaw a fair Cape or Head-land to the northward of the *Whalebone Point*, in the Latitude of 65 Degrees 10 Minutes; Longitude from *Churchill* 8 Degrees 54 Minutes Eaſt; and this I named, after my worthy Friend, *Cape Dobbs*.

I had very good Soundings between the two Shores of the *Welcome*, having forty-ſix, forty-eight, and forty-nine Fathoms Water. At the ſame time that I ſaw *Cape Dobbs*, I ſaw a fair Opening bearing North by Weſt, which, according to my Inſtructions, I ſtood in for, among the ſailing Ice; it was juſt Flood when we entered it, the Tide running ſtrong; which, by Obſervations afterwards I found to run five or ſix Miles an Hour. I run over ſome Rocks on the North-ſide of it very luckily, being juſt high Water, and anchored in about thirty-four Fathoms; but ſo ſoon as the Tide of Ebb was made, it ran ſo ſtrong, and ſuch Quantities and Bodies of Ice came down upon us, that we were obliged to ſteer the Ship all the time, and keep all Hands upon their Guard with Ice-poles, to ſhove off the Ice; notwithſtanding which we brought our Anchor home, and taking hold again, one of the Arms of the Anchor was broke off.

The next Day I ſent my Lieutenant in the Boat, to ſeek out ſome ſcurrer Place for the Ships, it being impoſſible to keep afloat where we were. Some *Uſkimay* Savages came off to us; I uſed them civilly, made them Preſents, and diſmiſſed them. As ſoon as I got the Ships ſecured, I employed all my Officers and Boats, having myſelf no little Share in the Labour, in trying the Tides, and diſcovering the Courſe and Nature of this Opening; and after repeated Trials, for three Weeks ſucceſſively, I found the Flood conſtantly to come from the Eaſtward; and that it was a large River we had got into, but ſo full of Ice there was no ſteering the Veſſel with any Probability of Safety, while the Ice was driving up and down with the ſtrong Tides.

Here I lay not a little impatient to get out, went ſeveral times in my Boat towards the Mouth of the River, and from a Hill that over-looked Part of the *Welcome*, ſaw that Place full of Ice, ſo that I found there was no Time loſt by our being in Security; however, I ſent my Lieutenant and Maſter, in the eight-oared Boat, to look out for a Harbour near the Entrance of the River, but they found none; and it was no ſmall Miracle they got on Board again, for they were ſo jammed up with Ice, which driving the ſtrong Tides, would inevitably have ſtove the Boat to Pieces, and all muſt have periſhed, had it not been for an Opening in a large Piece of Ice, into which they got the Boat, and with it drove out of the River's Mouth; but when the Tides ſlacked, the Ice opened as uſual, and they rowed over to the North Shore, ſo got in with the Flood. I ſeveral Times ſent the *Indians* aſhore to ſee if they knew any thing of the Land, but they were quite ignorant of it. In this vexatious Condition I continued three Weeks, reſolving to get out the firſt Opportunity the River was any thing clear of Ice, and make what Diſcoveries I could by meeting the Flood-tide. This River, of which by frequent Trials of the Lands, Soundings, Tides, *&c.* I was able to take a Draught, I named the River *Wager*, after the Right Honourable Sir *Charles Wager*.

On the 3d of *Auguſt* the River, for the firſt Time, was a little clear of Ice; and accordingly, in Perſuance of our Diſcovery, on the 5th by Noon I got into the Latitude 66 Degrees 14 Minutes; we had then got into a new Streight, much peſtered with Ice, and on the North-ſide of which we ſaw a Cape or Head-land bearing North; we had deep Water, and very ſtrong Tides within four or five Leagues of it; I named this Head-land *Cape Hope*, as it gave us all great Joy, and Hopes of its being the extreme North Part of *America*. Seeing little or no Land to the Northward of it, we turned or worked round it the ſame Night, and got five or ſix Leagues to the North by Weſt, before we could perceive any otherwiſe than a fair Opening; but about Noon the 6th Day, having got into the Latitude of 66 Degrees 40 Minutes, found we were embayed, and, by two in the Afternoon, could not go above three Leagues further; and having tried the Tides all the Forenoon every two Hours 'till two o'Clock in the Afternoon, found neither Ebb nor Flood, yet deep Waters. From this it was concluded, that we had overſhot the Streight on the North-eaſt Shore, from whence the Flood came; and as there was no proceeding above three or four Leagues further, it was agreed upon by all, to turn back and ſearch narrowly for a Streight or Opening, near where we found the ſtrong Tides.

On the 7th, after we were confirmed the Flood came in at the North-eaſt from the Eaſt by South, I went on Shore in the Boat, and found it flowed fifteen Feet three Days after the Full, and a Weſt by South Moon made high Water. I travelled twelve or fifteen Miles, from Hill to Hill, on Land, 'till I came to a very high Mountain, from whence I ſaw a Streight or Opening the Flood came in at, and, the Mountain I ſtood on being pretty near the Middle of this Streight, I could ſee both Ends of it, the whole being about eighteen or twenty Leagues long, and ſix or ſeven broad, and very high Land on both Sides; but it was all frozen faſt from Side to Side, and no Appearance of its clearing this Year, and near the 67th Degree of Latitude, and no anchoring the Ships, being very deep Water cloſe to the Shore, and much large Ice driving with the Ebb and Flood, and but little Room if thick Weather ſhould happen, which we continually expected in thoſe Parts, it was agreed upon in Council to make the beſt of our Way out of this dangerous narrow Streight, and to make Obſervations between the 64th and 62d Degrees of Latitude. The frozen Streight I take to run towards which *Bylot* named *Cape Comfort*, and the Bay where *Fox* had named a Place *Lord Weſton's Portland*; it is in the Latitude of 66 Degrees 40 Minutes, and 12 Degrees 49 Minutes Eaſt from *Churchill*.

Purſuant to this Reſolution we bore away, and tried the Tides on the other Side the *Welcome*, ſounding and obſerving cloſe in Shore, but met with little Encouragement. On the 11th of *Auguſt* I once more ſaw the Iſland of *Brook Cobham*, and continued trying the Tides; and ſtill finding the Flood come from the Eaſtward, and by coaſting along the *Welcome* was certain of its being the main Land, though there are ſeveral ſmall Iſlands and deep Bays, and ſaw ſeveral black Whales of the right Whale-bone Kind, I worked off and on by *Brook Cobham*, ſent the Northern *Indians* on Shore upon the Iſland, who, at their Return, gave me to underſtand, it was not far from their Country, and deſired I would let them go Home, being tired of the Sea. I kept them with Aſſurances that I would act according to my Promiſe, and finding no Probability of a Paſſage, in two or three Days after I gave them a ſmall Boat, well fitted with Sails and Oars, the Uſe of which they had been taught, and loaded it with Fire-arms, Powder, Shot, Hatchets, and every thing deſirable to them; they took their Leave of me, and I ſent another Boat for Water, which accompanied them on Shore, the Southern *Indian* being with them.

The Southern *Indian*, who was Linguiſt for the Northern ones, returned with the Boat; being uſed to the *Engliſh* Cuſtoms at the Factory, and deſirous of ſeeing *England*, being a willing handy Man, I brought him with me; and the ſame Evening, which was the 15th of *Auguſt*, I bore away for *England* thinking to have tried the Tide at *Cary's Swans Neſt*, but could not fetch it. On the 20th I ſaw *Manſells Iſle*, on the 21ſt *Cape Diggs* was in Sight; on the 26th made *Cape Reſolution*, and arrived at *Carriſton*, in *Pomona*, one of the Iſlands of *Orkney*. Moſt of my Men being ſo very much afflicted with the Scurvy, and otherwiſe ſick and diſtempered, that I was obliged to leave Part of them behind me, and only wait to impreſs Hands to carry the Ship ſafe to *London*.

This Account appeared very clear and very ſatisfactory, even to Mr *Dobbs* for ſome Time; but upon re-conſidering the Motives which induced him to believe there was ſuch a Paſſage, the Accounts given him by Captain *Middleton* formerly, and what he delivered upon this Subject in his Journal, he began to ſuſpect that Things were not ſo clear as they ſeemed to be, but that ſomewhere or other there was a Miſtake; yet without charging Captain *Middleton* with any Breach of Duty, or ſo much as ſuſpecting a Deſign in him to conceal any Part of his Diſcovery.

7. By Degrees, however, the Scene began to change. Mr. *Dobbs* came into an Opinion, that the Opening to which Captatn *Middleton* had given the Name of the River *Wager*, was, in Reality, the Streight he was ſent to diſcover. He ſuggeſted this to that Gentleman, who adhered to his former Opinion, that it was a River and no Streight, that it was freſh Water and not ſalt, and that the Whales which were ſeen in it, came through the frozen

Streight from the Eaſtward. But while Mr. *Dobbs* and Captain *Middleton* were diſputing this Matter in Letters, a new Affair broke out, which made a great Noiſe; for ſome of the Officers who had ſerved under Captain *Middleton* declared poſitively, that in their Judgment there was a Paſſage, and that the Captain's Journal was calculated to conceal it. This produced a long Controverſy, attended with may perſonal Reflections on both Sides, into which it is not my Buſineſs, nor have I any Inclination, to enter; but ſhall content myſelf with giving the Reader what I take to be the moſt material Part of Mr. *Dobbs*'s Charge, as it ſhews upon what Grounds he believed the River *Wager* to be a Streight, and the Methods which, in his Opinion, Captain *Middleton* had taken to conceal its being thought ſo; and this I ſhall give in Mr. *Dobbs*'s own Words, that I may not ſeem prepoſſeſſed in Favour of one Side, or prejudiced againſt the other.

8. “In Captain *Middleton*'s going out, ſays Mr. *Dobbs*, he ſaw much Ice from Latitude 63 Degrees 35 Minutes to *Cape Dobbs*, as well as to *Deer Sound* in *Wager River*, and in the Streight and Bay near *Cape Hope* this Year; but none was ſeen in the *Welcome* by *Button*, *Fox*, and *Scroggs*, the ſeveral Years they were there at the ſame Seaſon, though *Button* and *Scroggs* were as high up as *Wholebone Point*, in Latitude 65 Degrees, and *Fox* ſaw as far from Latitude 64 Degrees 10 Minutes, without ſeeing any Ice in the Sea, or Snow upon the Land, but ſaw great Numbers of ſmall Fiſh leaping, as well as many Whales near *Brook Cobham*. Captain *Middleton* had, during his whole Voyage out from *Churchill* and back again to *Brook Cobham*, very fine Weather, without any Storm, or Froſt, or Snow, the Winds for the moſt part blowing from the Eaſtern Quarter, ſo that he had no Pretence, upon his Return, to avoid ſearching the Weſt Side of the *Welcome*. It was theſe Eaſterly Winds that Year which carried ſo much Ice into the *Welcome* from the South-eaſt as well as from the Bay and Streight near *Cape Hope*, all which was forced by the rapid Tide into *Wager River*; and it appears from the Journal, that it was theſe Winds which cauſed ſo great a Quantity of Ice in the River as far as *Deer Sound*, and not from the breaking out of the Ice above in a Freſh-water River as he gave out; and he would have made the flowing in of the Tide ſo far from the South-eaſtward, to have been a Confirmation of it; whereas, by what he has mentioned in his Journal, it is by all Circumſtances a Salt-water Streight or Paſſage; for the Increaſe of its Wideneſs from ſeven Miles at its Entrance to eight Leagues, and of its Depth from fourteen to eighty Fathoms, the Boldneſs, Height, and Craggedneſs of the Coaſt, without Tree or Shrub, and without any Snow or Ice in the Valleys or Hills, are all Symptoms of its being a Salt-water Paſſage; but the Number of Whales and other Fiſh ſeen above in the Streight, at leaſt twenty Leagues up the River, when none were ſeen below, or in the *Welcome* or Streight, and Bay above *Cape Hope*, is a Demonſtration they did not come under the Ice into *Wager River* from the Eaſtward, and there being none ever ſeen in the Bay or Streights of *Hudſon*, but by broken Lands on the North-weſt Coaſt, it is next to a Certainty that they came from the *Weſtern Ocean* to that Place; for it is contrary to Reaſon and Fact, to ſuppoſe that Whales and other Sea-fiſh ſhould go up a Freſh-water River, as he affirms it to be; but it was very natural for the Whales to be there, if they come in from the *Weſtern Ocean*, which was not ſo liable to be frozen as an Inland Bay, for they would puſh their Way through the Streights and broken Lands, until they were prevented by the Ice, which the Eaſterly Winds drove into the Streight from the *Welcome* along with the Flood; and this was jammed in among the Iſlands in the Paſſage, and appeared to be firm Ice, as it alſo appeared from the Hills to be ſo below them to the Mouth of the River.

“This alſo eaſily accounts for the Number of Whales ſeen from *Whalebone Point* to *Brook Cobham*, and even to *Whalecove*, in Latitude 62 Degrees 30 Minutes, where many are caught by the *Eſkimaux Indians*, when none are ſeen in the other Parts of the Bay, or in the Streights; for if there be a Communication between the *Weſtern Ocean* and the Bay in this Place, the Preſumption is, that it is not by one Paſſage, but that it may be all a broken Land, interſperſed with Iſlands, as the Iſlands of *Terra del Fuego* are at the Streights of *Magellan*, which is almoſt a parallel Inſtance; and therefore this Streight of *Wager* may not be the only Inlet into the Bay, but from *Whalecove* unto that River may be all broken Lands, with ſeveral Sounds among the Iſlands which are mentioned by *Scroggs* and *Fox*, and cannot be controverted from this Journal; ſo that the Whales might get to that Part of the Bay ſooner, as there was no Ice there to obſtruct their Paſſage, when there was much Ice in the *Welcome* and Eaſt Entrance of *Wager Streight*, which prevented theſe Whales getting any farther than *Deer Sound*. This, I think, makes it highly probable, that there is a better and eaſier Paſſage Southward of *Cape Dobbs* betwixt that and *Whalecove*, in Latitude 62 Degrees 30 Minutes, where there is no Ice to obſtruct the Paſſage from the Middle of *June* to *October*; and if the Trade was once opened, this might be diſcovered by any Ships who would go there to fiſh for Whales, or would trade with the Natives for Fin or Oil, who might follow them into Inlets, through which they come into the Bay; and this may be done without wintering in the Bay; for they may return any Time in *September* or *October*, ſafe from any Obſtruction from the Ice.”

The only ſeeming Objection to this, and which gave a Hand to Captain *Middleton* to repreſent *Wager Streight* as a Freſh-water River was, the Tide flowing into it from the Eaſtward, when if it had been a Streight, he imagined he might have met a Tide of Flood from the Weſtward, and therefore repreſented it as if the Ice was but breaking up in the River after he had entered it. But ſince this is a Streight, and not an immediate Communication with the *Weſtern Ocean*, he could not expect to meet the Weſtern Tide 'till he had got half Way through the Streight; for each Tide flows up its own End of the Streight, andmeet in the Middle. This is not only founded upon Reaſon, but upon Fact, in the only parallel Inſtance we know, that is, in the *Magellanic Streight*; though, by Appearance, this Streight is a greater and bolder Streight than the other.

The Tide at the North-eaſt Entrance of *Magellan Streight* flows from the Eaſtward, and riſes four Fathoms before it comes to the firſt Narrow, which is but half a League wide, and from thirty to thirty-five Fathoms deep; after a League or two it increaſes to ſix or ſeven Leagues wide, to the ſecond, where it is about a League wide, and thirty Fathom deep. Within the ſecond Narrow it increaſeth again to five or ſix Leagues wide, and the Tide ſtill flows from the Eaſtward, and riſes about ten Feet. In the middleChannel, about thirty Leagues within the Streight, it is two hundred Fathom, and the Channel but three Leagues wide, and from thence to the Middle of the Streight it leſſens to two Leagues wide, and about a hundred Fathom deep, and the Tide ſtill flows from the Eaſtward for above fifty Leagues. As they come near the Middle of the Streight, the Current of the Tide is not above an Hour at each Tide, and the Tide riſes nine Feet. Near *Cape Quad*, beyond the Middle of the Streight, it is but two Leagues wide, and for about thirteen Leagues farther it is rather leſs, ſometimes not four Miles wide, from whence it gradually widens to the Weſt Entrance, where it is five Leagues wide: So that *Wager Streight* is much larger ſo far as they were in it, which was about thirty Leagues; it being by the Account, as mentioned in the Journal, ſix or ſeven Leagues wide, and eighty Fathom deep; which, if there be no other, is a noble Paſſage But there is a great Probability of there being a better and ſafer Paſſage to the Southward of *Whalebone Point*, by which the Whales get into that Part of the Bay.

Thus, ſays Mr. *Dobbs*, from the former Accounts, and what has been divulged by Captain *Middleton* in his Journal, there ſeems to be ſtrong Preſumptions of a Paſſage.

But after ſhewing what he has concealed, and falſified in his Journal, and his whole Conduct from his going to *Churchill*, until his Return to *England*, and even ſince his Return, it will appear plainly that he intended to ſerve the Company at the public Expence, and contrived every Thing ſo as to ſtifle the Diſcovery, and to prevent others from undertaking it for the future, ſo as to ſecure the Favour of the Company, and the Reward he ſaid they promiſed him before he began the Voyage.

As to his Declarations and Conduct during the Voyage, it appears by undeniable Evidence, that he declared, in Preſence of ſome of his Officers, to the Company's Governor at *Churchill*, that he ſhould be able to make that Voyage, and none on board him ſhould know whether there was a Paſſage or not, and he would be a better Friend to the Company than ever.

The Lieutenant finding one of the Men at the Factory, who very well underſtood the Northern *Indian* Language, and would have been of great Uſe upon the Diſcovery, offered to take him with him at his own Riſque, ſaying, he would anſwer it when he came back, it being for the Good of the Service they were upon; but the Captain would not allow of it, for fear of diſobliging the Company. The Captain, in going Northward from *Churchill*, never once went aſhore, nor ſent his Boat to look out for any Inlet, or try the Tide, having only once tried the Current at Sea in Latitude 63 Degrees 20 Minutes, where he found a very rapid Tide, although he found much Ice to the Northward, and had Time enough before he entered the Ice to try all the Coaſt, but ſtood off to the Eaſtward until he paſſed *Cape Dobbs*, and tho' he then found an Opening North-weſtward, he only went in with a View to ſhelter his Ships, but not to look out for a Paſſage; and therefore, when he went in, got to the North-eaſt Side out of the Tide, inſtead of out of the South-weſt Side, where he ought to have gone if he had puſhed for a Paſſage; and though he lay there three Weeks, he never but once went croſs to the Weſtern Shore, and that only one Day or two before he quitted the River, pretending that he could not do it for the Ice; and even this he does not mention in his Journal, although he found there an excellent Cove for ſheltering his Ships He once pretended to croſs the Streight from *Deer Sound*, where he had no Ice to prevent him; but after going two Leagues he returned and ſaid, it was too far, and he had taſted the Water, which was freſh, aſking the Boat-men if it was not ſo, which they contradicted, ſaying only, it was not very ſalt. When the Lieutenant went up to *Deer Sound*, he diſcovered from a Mountain an Opening South-weſtward, upon the other Shore, ten Leagues diſtant betwixt a high and low Headland, and alſo obſerved the Ice there, when it was a Quarter Flood at *Wager River*, move down the River againſt that Tide. Upon his mentioning this to the Captain, he was laughed at, who aſked him, From whence that Tide could come? and no farther Enquiry was made into it.

Afterwards, when from the Numbers of Whales, and Breadth and Depth of the River, it was given out among the Ship's Company, that they believed it was a Streight and no River, he rated ſeveral of them for pretending to ſay ſo againſt his Opinion, ſaying, his Clerk was a double-tongued Raſcal; that he would cane the Lieutenant, broomſtick the Maſter, and laſh any others who ſhould concern themſelves about the Voyage, and threatened that if any kept private Journals, he would break up their Boxes, and take them from them; and though he allowed his Clerk to take the Bearings of the Land, and Proſpects in other Parts of the Voyage, yet, when in the *Wager River* and at the *Welcome*, he forbid him from taking any. This happened when the Lieutenant and Maſter were down the River to look out for a Cove for the Ships, when they ſhould ſail out of the River. When they returned, he, imagining that Rumour would turn out to his Prejudice, in caſe no farther Enquiry was made about its being a Streight or River, ſaid they might go up and try the Tide, and ſee if there was any other Way out into the *Welcome*, which was into the Bay, not into the *Weſtern Ocean*; but by his Warrant limitted them to go to *Deer Sound*, or thereabouts, which was only where he had been himſelf before, and ordered them to come back with the utmoſt Diſpatch the Nature of the Service would allow. This was the 28th of *July*. When they were gone he ſaid, he ſuppoſed the Lieutenant would bring back ſome romantic Account of a Streight or a Paſſage, but for his Part he would not take the Ships a Foot farther; and accordingly before their Return unmoored, and was preparing to warp out of the Cove, which he did the Morning after they returned. The Lieutenant, upon his Return, gave the following Report under his Hand, *viz.* *July* 27, 1742, I was ordered with the Maſter to take the ſix-oared Boat, and go up *Savage Sound* as high as *Deer Sound*, and try the Tides. I found that the Flood there comes from the River *Wager*. It flowed there ten Feet Water.

We then ſailed from *Deer Sound* from the high bluff Land on the Weſt Side of the River *Wager*. The Courſe from the Iſlands off the North Side of *Deer Sound* is North-weſt, and North-weſt by North. By Compaſs Variation allowed Weſt by North. We ſounded all the Way over, and had no Ground with a Line of ſixty-eight Fathom to the high bluff Land. We then ran up a Branch of the main River, and ſounded and found fifty Fathom one third, over that Branch; there were ſeveral Iſlands in it ſounded about a League off an Iſland on the North Side, and found thirty Fathom Water, in running between the Iſlands and the ſuppoſed Main, which was on the Weſt Side of that Branch; the Freſhes ſuddenly turned againſt us, the Boat altering the Land very much before, ſounded, and had no Ground at ſixty-eight Fathom; as we run up it we ſounded near a ſmall Iſland, and had twenty-nine Fathom. We ſteered Weſt North-weſt, between the Iſlands and the Weſt Land, by Compaſs (Weſt by South) there being ſeveral Iſlands in the *Fair Way*, and no Ground in the Middle of the Channel at ſixty-eight Fathom. We went about fifteen Leagues above *Deer Sound*, and ſaw a Freſh or Run of Water coming againſt us; and the Wind being fair, I was afraid of ſtaying any longer, for fear of hindering the Ships from going to Sea; there is a great Probability of an Opening on the Weſt Side, by the coming in of the Whales; but I could not go higher up to try it, for the above-mentioned Reaſons.

We went to the Top of a high mountainous Land, from whence we ſaw a great Run or Fall of Water between the Weſt Land and the Iſlands. It was very narrow, and, ſeemingly, not a Mile broad; and at the ſame Time ſaw a fair Channel or Streight to the Northwards of the Iſlands, with Land on both Sides, as high as the *Cape of Good Hope*, running away to the Weſtward, with many bluff Points and broken Lands; in coming down we ſaw ſeveral very large black Whales, playing about the Boat and aſhore.

John Rankin.

Auguſt 1,
1742.

This being a ſtrong Proof of an open Channel or Streight going to the Southward of a Weſt, the Captain thought it too flagrant, and therefore there being ſome little Variation between his Account and the Maſter's, made them cook up the following Report between them, which both were to ſign; which being not ſo particular, did not appear ſo ſtrong for the Paſſage. It run in theſe Words:

Purſuant to an Order from Captain *Chriſtopher Middleton*, Commander of his Majeſty's Ship the *Furnace*, bearing Date the 27th of *July*, 1742, We whoſe Names are hereunto ſubſcribed, took the *Furnace's* ſix-oared Boat, and went from *Savage Sound*, where his Majeſty's Ships, *Furnace* and *Diſcovery*, then lay; and on the 28th, at one in the Morning, arrived at *Deer Sound*, where we tried the Tide, and found the Flood came into that Place from the River *Wager*, and roſe at that Time ten Feet. At ſix o'Clock the ſame Morning we left *Deer Sound* (where we put the two Northern *Indians* aſhore to kill ſome Deer) and ſailed for a high bluff Land, on the North-weſt Side of the River *Wager*. Our Courſe from the Iſlands on the North Side of *Deer Sound*, to the high bluff Land, was North-weſt by North, by Compaſs. We ſounded frequently, and had no Ground with a Line of ſixty-eight Fathom, all the Way over. When we were a-breaſt of the high bluff Land, we ſteered Weſt-north-weſt keeping the Mid-Channel, and ſtill found no Ground at ſixty-eight Fathom, excepting ſome Iſlands that lay in the fair Way, about one third over the River, and thirty Fathom within a League of one of them. This Courſe we kept until we got about fifteen Leagues from *Deer Sound*; but finding the Tide or Freſh againſt us, and the Wind coming fair, we were afraid of ſtaying any longer, for fear of hindring the Ships from going to Sea. However, we came to a Grapnel with the Boat, and went up a high mountainous Land, where we had a fair View of the River, from whence we ſaw a great Run or Fall of Water, between the ſuppoſed main Land, and the aforeſaid Iſland, very narrow ſeemingly, not a Mile broad, about a League from where the Boat lay. But to the Northward we diſcovered a large Collection of Waters, in which were many Iſlands, and high mountainous Lands on both Sides of it; the Weſt-ſide of it having many bluff Points and broken Lands. In our Return towards the Ships, and not far from *Deer Sound*, we ſaw ſeveral large black Whales, of the Whale-bone kind, ſome of which came very near the Boat; ſo that upon the whole, we think there may be ſome other Paſſage into the Sea, from the River *Wager*, beſides that which his Majeſty's Ships, *Furnace* and *Diſcovery*, came in at; and imagine there is a great Probability of an Opening or Inlet into the Sea, ſomewhere on the Eaſt-ſide thereof, though we cannot fix the Place. Given under our Hands this 1ſt Day of *Auguſt*, 1742.

John Rankin.
Robert Wilſon.

It may be eaſily ſeen with what View the Report was altered, the moſt material Points being changed; for when they got beyond the North-weſt *Bluff*, inſtead of ſaying that the Current or freſh Water ſuddenly turned againſt them; it is here ſaid, being againſt them, the firſt being a Tide, the other a Stream. Again, inſtead of mentioning a fair Channel or Streight over the Iſlands, running between the high Land to the Weſtward, it is here altered to a large Collection of Water to the Northward, in which were ſeveral Iſlands with high Land on each Side of it; the Weſt-ſide having bluff Points and broken Lands, without determining the Courſe of the Streight to the Weſtward. And inſtead of ſaying there was a great Probability of an Opening on the Weſt-ſide, by the coming in of the Whales, it is here altered to, Upon the whole, we think there may be ſome other Paſſage into the Sea, from the River *Wager*, beſides that which his Majeſty's Ships came in at, without determining it to the Weſtward, as in the other; but on the contrary, to make it ſeem otherwiſe, they ſay, and imagine, there is a great Probability of an Opening or Inlet into the Sea, ſomewhere on the Eaſt-ſide thereof, though we cannot fix the Place. This Change ſeems wholly calculated with a View to leave it undetermined, that the Captain might have it in his Power to ſay, that the Opening was to the Northward or Eaſtward, from *Baffin's Bay*, and pretend that the Whales came from thence. But both the Lieutenant and Maſter have ſince confirmed that the Streight beyond the Iſlands, was four or five Leagues wide, free from Ice, and its Courſe ran Weſt South-weſt; and the Maſter having ſeen further than the Lieutenant, from the Top of a Mountain, where he killed two Deer, was for going further; but the Lieutenant, his Proviſions being ſpent, and he having exceeded his Orders by fifteen Leagues at leaſt (for he computed it twenty Leagues, but the Captain would not allow it to be ſo far) and had alſo out-ſtaid his Time, he was afraid he ſhould be put in Arreſt, if he proceeded farther, and durſt not proceed. However, he took a Bottle of Water filled there at the Shore, and two Bottles filled further down the Streight Eaſtward. And the Captain, when he came aboard, owned that the Bottle of Water, taken up at the Weſtern End of the Streight, near the Current or Fall of Water, was the ſalteſt, which the Maſter ſaid was as ſalt as any he had taſted in thoſe Seas, which was alſo confirmed by others who had taſted it aboard. The Lieutenant is now convinced that it was a Tide or Ripling, which came from the Weſt South-weſt, which ſtopped the Way of the Boat, and made them come to a Grapnel, and that it was the Tide of Flood; for it was then flowing Water, and flowed ſix Feet when he was aſhore. But the Captain, under pretence it was brakiſh, would not purſue the Diſcovery of that South-Weſtern Streight or Paſſage, but immediately warped out of the Cove; and on the 4th of *Auguſt*, the beſt Month in the Year to perfect the Diſcovery, he ſailed out of the River to make the Diſcovery North-eaſtward, the quite contrary Courſe he ſhould have taken, according to his Inſtructions. Nor did he call a Council to warrant him for quitting the Diſcovery; though on all Emergencies, or where it was likely to turn out to Advantage in promoting the Diſcovery, he was directed to call one, and act for the beſt of the Service he went upon; but quitted the Paſſage without Advice, by his own Authority and Pleaſure; pretending all the while he was in the Paſſage, to regret that he could not get out of the River for the Ice in it and the *Welcome*, in order to proſecute the Diſcovery. After this, in order to have an Excuſe, and to pretend that he had followed his Inſtructions, which was to proceed, without loſs of Time, to *Whalebone Point*, and there to endeavour to meet the Tide of Flood, on either Side of that Point he found the beſt Paſſage, in caſe it were an Iſland, whether the Flood came from the North-weſt or South-weſt; and if he found, after doubling the Cape, either a Streight or open Sea, to purſue his Courſe, ſtill meeting the Tide of Flood; though this limited him to meet the Tide, if it came from any Part to the Weſtward, yet he finding the Tide did not meet him, but followed him into *Wager River*; and having taken no Pains to know how the Flood was at the Weſt End of the Streight, beyond *Deer Sound*, deſpiſing the Lieutenant's firſt Report, which mentioned a Tide from the Weſt South-weſt meeting them; thought if he could find a Tide, or have a Probability to account for a Tide's coming from the North Eaſtwards into *Wager River*, he might then ſay he followed his Inſtructions in meeting the Tide, although it came from the North-eaſt; and accordingly, without allowing any Boat to go aſhore to try the Tide, until he himſelf landed at *Frigid*, at what he calls the *Frozen Streight*, he, in his Journal from his own Obſervations of the Current, always affirms the Tide of Flood came from the North-eaſt, by *Cape Hope* or *Wager River*; and affirms, that at *Cape Frigid* a Weſt by-ſouth Moon made high Water, and that it flowed from the South Eaſtward, through a frozen Streight, from four to ſeven Leagues wide; and accordingly he has laid it down ſo in his new Chart, ſince his Return, and pointed all the Darts in it; ſhewing the Courſe of the Flood through the *Frozen Streight*, up into *Wager River*, and as far as *Brook Cobham*, along the *Welcome*, where he pretends the South Eaſtern Tide meets it.

9. Now I ſhall plainly make it appear from Reaſon, and from the Obſervations of experienced Men aboard him, his own Officers, and from his Caution in preventing any aboard him from knowing the Time, Current, and Heighth of the Tide, by his making his Obſervations only aboard, and regulating and minuting them down only in his Log-Book and Journal, only as he thought proper; that there was no ſuch Tide from the North-eaſt, and that he muſt have known that there is no ſuch Tide; but endeavoured to conceal the true Tide from his People aboard. I ſhall alſo ſhew that the Tide of Flood came the contrary Way from the South Weſtward, near *Brook Cobham*, and ſo went up Part of *Wager River*. I ſhall alſo ſhew there was no ſuch *Frozen Streight* as he has laid down in his Chart, but the whole is falſely laid down, and the only Streight there was round the Iſland he ſtood upon, which was but three Leagues wide, and full of ſmaller Iſlands, which Streight went round the Iſland from North by the Eaſt, and came out again by the South and Weſt, between the Iſland he was on, and the low Beach of *Cape Hope*;

Hope; ſo that to make out the Point, that he had ſo far followed his Inſtructions in meeting the Tide of Flood, he has manifeſtly and falſely impoſed upon the Public in his Chart, by making a Streight and Tide where there was none.

To ſhew that he has given a falſe Account of this Tide and frozen Streight I muſt obſerve, That when he ſent down the Lieutenant and Maſter to look out for a Cove at the Mouth of *Wager River*, they were incloſed in the Ice, and drew up the Boat upon a large Piece of Ice, which was carried by the Tide of Ebb to the South-eaſtward, cloſe by the Shore, about *Cape Dobbs*; and when the Tide ſlacked they rowed over with the Flood to the North Shore, to get into the Eddy out of the Current, and next Day went up the River. Again, When the Ship ſailed up the River they were becalmed, and were afraid of being forced up again by the Return of the Flood; upon which they towed with their Boats a-head, and plied with the Ship's Oars with all their Force to the North-eaſtward to get out of the Way of the Tide of Flood; but if the Flood had come from the North-eaſt, they wouldhave been juſt in the Way of the Tide of Flood, and to have avoided it they ought to have ſteered their Courſe South-eaſt, to *Cape Dobbs*; ſo that both the Accounts tally, that the Flood came from the South-weſt round *Cape Dobbs*. At half an Hour after two, on the 6th of *Auguſt*, he ordered the Lieutenant aſhore at the low Beach, to try the Tide, being then four Miles from the Shore; at three he made the Signal for him to come on board before he got to the Shore; but he was ſo near as to report, That the Tide had fallen two Feet; ſo that he ſeemed to repent his having ſent him to try the Tide, leſt he ſhould find a contrary Tide to what he gave out. Tho' the Lieutenant, when he got aboard, told him it was ebbing Water, and that the Ebb went to the South-weſtward, yet he minuted it down in his Log-Book, and printed it ſo in his *Defence*, that it was flowing Water, and the Flood came from Eaſtward; but in his *Journal* he ſays, it had ebbed two Feet, and the Flood came from the Eaſtward.

The Captain's Clerk, Gunner, and Carpenter, went aſhore at *Cape Frigid* the 8th of *Auguſt*, about ten in the Morning; and after going fifteen Miles into the Country returned to the Boat about ſeven at Night, when he found it was low Water, and roſe fifteen Feet, which being three Days and a half after the full Moon, a Weſt-ſouth-weſt Moon made low Water, and conſequently a North-north-weſt Moon made high Water; and having aſcertained that a Weſt by North Moon made high Water in *Wager River*, the Tide at *Cape Frigid* being five Points later, could not raiſe that Tide; for the Tide, the further it flows, is always the later in flowing; and therefore the Tide in *Wager River*, being at leaſt three Hours ſooner than at *Cape Frigid*, it could not poſſibly be cauſed by any Tide from thence, nor could the Tide near *Brook Cobham*, where a Weſt Moon made high Water, be cauſed from that Tide for the ſame Reaſon, it being above four Hours ſooner than the Tide at *Cape Frigid*.

It appears alſo, that there was no Tide or Current in the Bay above *Cape Hope*; and the Gunner, who was aſhore with the Captain, went with the Carpenter two or three Miles farther than the Captain and Clerk, even to the very Shore of what he called the *Frozen Streight*, and conſequently knew it better than the Captain. He ſays it was an Iſland they were upon, and the Streight was only an Arm of the Sea that ſurrounded the Iſland, and detached it from the low Beach; that it was not above three Leagues wide on the Eaſt Side, and full of Iſlands; that the Ice was frozen faſt from Side to Side; ſo that it is impoſſible ſo great a Quantity of Water could paſs through that Paſſage if it had a Communication with *Hudſon's Streights* by *Cape Comfort*, as would fill ſo large a Bay as that above *Cape Hope* (the Streight from *Cape Hope* to *Wager River*) all that River for thirty or forty Leagues, which was from four to twelve Leagues wide, and the whole Coaſt of the *Welcome* to *Brook Cobham* above ſixty Leagues, and that from a Streight which was but three Leagues wide, and had many Iſlands in it; ſo that the Streight, excluſive of the Iſlands, was not probably four Miles wide. Beſides, had ſo much Water flowed from that Streight, as he has laid down in his Chart, it muſt have cauſed a very rapid Current in the Bay above *Cape Hope*, it being in the direct Courſe of the Tide. The Captain of the *Diſcovery* alſo, in his Anſwer allows, that the Opening of the Streight he ſaw, which was betwixt *Cape Frigid* and the *Low Beach* was not above three Miles wide, and no ſuch Tide flowed there as in *Wager River*, although it was ſo narrow in that Place.

This alſo accounts for that Arm of the Sea's being frozen which ſurrounded the Iſland, becauſe there was no Tide or Current there to break it up. It alſo appears from the Lieutenant who was left on board to command when the Captain went aſhore, that, at eleven o'Clock, after the Captain left the Ship, a ſtrong Current forced him to northward, which muſt have been the Flood, as it was not high Water till one o'Clock. And it appears alſo the ſame from the Men who were left with the Boat; for upon the Captain's Return to the Boat he aſked them which Way the Flood ſet, and they ſaid to the Northward; which he contradicted, and ſaid, they were miſtaken, for it could not be ſo. So that from all theſe Facts, as well as from Reaſon, it appears, that the Tide of Flood came from the South-weſtward to that Place and the River *Wager*; and that the Tide and Streight which he has laid down in his Chart, and publiſhed in his Journal, is falſe, and an Impoſition upon the Public, and only calculated to ſerve his Purpoſe of concealing the Paſſage, by endeavouring to make out that no Tide came from the Weſtward, but all through *Hudſon's Streight* and *Baffin's Bay*; and that *Wager* was a freſh Water River, and that the Whales ſeen there came all in through that frozen Streight from *Baffin's Bay* or *Cumberland's Inlet*, he having allowed that none came in through *Hudſon's Streight*, or round *Cary's Swans Neſt*.

But as a further Confirmation of this South-weſtern Tide, and that it came from the weſtern Ocean, it appears that, after the Captain had neglected looking into the Bays and Inlets in the Weſt Side of the *Welcome*, from *Cape Dobbs* to *Marble Iſland* (although it had been ordered in Council) in theſe Words, " It was agreed upon to
" make the beſt of our Way out of this cold, dangerous
" and narrow Streight, and to make further Obſervations
" between the Latitude of 64 and 62 Degrees on the
" North Side of the *Welcome*, having ſeen large Openings,
" broken Land, and Iſlands, with ſtrong Tides; but
" had not an Opportunity of trying from whence the
" Flood came, in our Paſſage hither. Given under our
" Hands this 7th of *Auguſt*, 1742.

" *Chr. Middleton.*
" *J. Rankin.*
" *Rob. Wilſon.*
" *Geo. Axx.*
" *J. Hodgton.*
" *W. Moor*, Maſter of the *Diſcovery*."

When he came to *Marble Iſland*, which he called *Brook Cobham*, having called another Iſland ſo upon his going northward, the ſame *Fox* had called ſo before on the 12th, at three in the Morning, he ſent the Lieutenant aſhore to try the Tide, and to look out for a Place of Safety, to water the Ships before they returned to *England*. The Iſland was ſeven Leagues long and three over in the broadeſt Place. It lay Eaſt by South, and Weſt by North, the true bearing Variation allowed, and about three Leagues from what they called the *Weſtern Main*. The Lieutenant on the South-ſide found an excellent Cove ſafe from all Winds, with a ſmall Iſland lying croſs the Entrance: He ſounded without and within the Cove, and found two and a half Fathom in the Entrance at low Water, and deep and ſafe lying within it; whilſt he was ſounding, taking a Draught of the Cove, and upon the Iſland taking a View of an Opening, he obſerved on the Weſt Main the *Indians* killed a Deer and a white Bear; and about eight at Night, as they were taking off the Bear-Skin, a ſtrong Tide of Flood came from the North-weſt by the Compaſs, and had almoſt carried the Bear away; which proves that the Tide of Flood came from the Weſtward. This I ſhall give in his own Words, as he minuted it down at *Marble Iſland* at the ſame Time it happened, annexed to the rough Draught he made of the Cove, *viz.*

This is the Cove upon *Brook Cobham* or *Marble Iſland*; it was almoſt dark; my Men were taking the Skin off the Bear they had killed in the Water.

The Tide came ſuddenly from Weſt-north-weſt, round the North-weſt end of the Iſland, upon us, and flowed ſo faſt that we had almoſt loſt the Bear; we were forced to throw it into the Boat, our Men up to the Middle in Water, by the ſudden Flowing of the Tide; as all the Men can prove.

I am very certain that there is a great Probability of a Paſſage or Streight leading to ſome Weſtern Ocean, from the above Reaſon; for I did obſerve an Opening to the Weſtward of *Marble Iſland*, and deſired I might go there: But he told me it did not ſignify much to go thither; but if I had a Mind to go to *Marble Iſland* for Water, I might. So I did not come near the Opening I perceived to the Weſtward; it was almoſt calm all the Day we lay there.

Auguſt 12, *John Rankin.*
1742.

After the Lieutenant returned aboard, the Maſter was ſent aſhore; upon his Return, he told him, the Tides roſe there very high, and wanted to go aſhore again to obſerve them, which he refuſed, under Pretence he had ſtaid too long aſhore before. It appears from the Journal, that by the Marks on the Shore, it ſometimes roſe there twenty-two Feet.

It is allowed alſo, that a North-weſterly Wind, at *Churchill*, always raiſed the Tides higher at Neap Tides, than a South-eaſterly Wind did at Spring Tides.

The two Northern *Indians*, who were aboard Captain *Middleton*, were very intelligent Men; and the other *Indian* being a very bad Interpreter for them, Mr. *Thompſon* the Surgeon, who could ſpeak ſome of the Southern *Indian* Tongue, was endeavouring to learn their Language, and to teach them *Engliſh*; and was making out a Vocabulary of their Language, which the Captain obſerving, threatened to uſe him ill, or crop him, in caſe he had any Correſpondence with them; ſo that he was obliged to meet them in private; and for that Reaſon could not know ſo much from them, as he otherwiſe would; but from the beſt Account he could get from them, they told him, that the Copper Mine, which they generally went to once in two Years, was not far from the Coaſt where they were, between Latitude 62 Degrees and 64 Degrees; that it was upon an Arm of the Sea, the Water being ſalt; that they were five Days in paſſing it in their Canoes; that it was ſo deep, that if they cut a Deer's Skin into Thongs, it would not reach the Bottom; that the Streight went towards the Sun almoſt at Noon, and that there were many large black Fiſh in it, ſpouting up Water. *Lovegrove*, one of the Factory Men at *Churchill*, who had been often at *Whalecove*, in Latitude 62 Degrees 30 Minutes, in the Company's Sloop, trading for Whale-Fin with the Natives, alſo told them, that the Coaſt there was all a broken Land and Iſlands; and that upon his going upon one of theſe Iſlands, he ſaw an open Sea Weſtward of it. *Wilſon* alſo, who has been Maſter of the Sloop which goes to *Whalecove*, for ſeveral Years, told, at *Churchill*, that he had the Curioſity to paſs in through thoſe Iſlands, near the *Whalecove*, and found the Opening enlarge itſelf South-weſt, and became ſo wide, that he could ſee no Land on either Side. Yet though the Captain might have known this, and much more, which he had from *Norton* and *Scroggs*'s Crew, as well as Accounts from the *Indians* before this Voyage to the ſame Purpoſe, he never once made an Eſſay to land upon the Weſtern Coaſt, or to look out for a Weſtern Tide or Inlet.

What was ſtill as unpardonable as neglecting the Diſcovery, was his putting the two Northern *Indians* aſhore, at *Marble Iſland*, againſt their Inclinations, when they were deſirous to come to *England*, in a very bad Boat he got at *Churchill*, which they did not know how to manage in an Iſland three Leagues from the ſuppoſed Main; the *Eſkimaux Indians*, their Enemies, living upon that Coaſt, and ſome hundred Miles diſtance from their own Country, inſomuch that one of them, who was about forty Years old, when he parted with Mr. *Thompſon* the Surgeon, with Tears, told him, he did not know what would become of them. He told them, he was very much concerned at it, but ſince it was the Captain's Pleaſure, it muſt be complied with.

The Captain gave them ſome Proviſions, Ammunition, Hatchets, and Toys; but leaving them in a deſolate Iſland, with a bad Boat among their Enemies, at ſo great a Diſtance from their own Country, was unpardonable; when by a Day or two ſailing to the Southward, he could have landed them in a Country they knew, where they had no Enemies to be afraid of. The Excuſe he made for not bringing them to *England* was, That upon his Return his Friends might be out of the Admiralty, and as he had no Orders to take them home, they would be left a Charge upon him; and when they learned to ſpeak *Engliſh*, they would be talking of the Copper Mine and Paſſage, and would put the Public to the Expence of ſending out more Ships in queſt of it. And this, no doubt, was the true Reaſon for that Piece of Cruelty; for he thought if they came to *England*, he ſhould not be able to conceal the Paſſage.

It is, however, to be obſerved, that Captain *Middleton*, being an excellent Seaman, has very vigorouſly defended himſelf againſt all theſe Objections and Imputations; and has offered many plauſible Arguments to deſtroy the moſt weighty of thoſe Reaſons alledged by Mr. *Dobbs*, to prove, that what he calls a River, ought to be accounted a Streight. Thus, in anſwer to what Mr. *Dobbs* ſays of its increaſing in Breadth and Depth the farther they advanced, Captain *Middleton* obſerves, that this happens frequently in Rivers, more eſpecially on the *Swediſh* and *Norwegian* Coaſts; where, though they are narrow, and have no great Depth at their Entrance, perhaps, but ten or twelve Fathoms, yet they afterwards grow wider, and diſcover no Ground with Lines of two or three hundred Fathoms.

All this may be, and yet this Inlet may be a Streight and not a River; for though there may be Rivers with theſe Properties, yet Experience ſhews us that they belong alſo to Streights; and though the Argument, urged by Mr. *Dobbs*, muſt be allowed not to be concluſive, if what the Captain ſays be true, yet it ſtill has great Weight, taking it in Conjunction with the other Reaſons offered; becauſe if it is a Streight, we ſhould naturally expect to find things ſo; and therefore their being found ſo, ſtill argues this to be a Streight, till ſome poſitive Reaſon can be ſhewn that it is not ſo. In ſhort, what Mr. *Dobbs* ſays amounts to no more than that probably it may be a Streight; and what the Captain anſwers, allowing it to be true, proves no more than that poſſibly it may be a River; not that it is ſo.

As to the Height of the neighbouring Lands, the Captain ſays, that the Lands about the *Swediſh* and *Norwegian* Rivers, are as high as any he ſaw about the River *Wager*. But allowing this alſo, it is not all concluſive. If the Lands had been low, it would have been very improbable that this ſhould be a Streight; but as it is on all Hands allowed that they are high, it is very probable it may be ſo; the Proof makes one Way as ſtrong as the other, but then it depends entirely on the Strength of the Captain's Memory; and it would have been ſtronger in his Favour, if he had mentioned the particular Rivers, on the Banks of which he had ſeen as high Lands, as he owns to be on this.

As to the want of Trees and Shrubs, Captain *Middleton* ſays, that all who have travelled the Country between the Latitude 58 and 66 Degrees 30 Minutes by Land, agree, that higher than 61 Degrees they ſaw neither Tree nor Shrub, but only Moſs, even among freſh Rivers and Lakes. This again is only a general Aſſertion, and does not at all prove that it is not a Streight; perhaps, however, Trees and Shrubs might be ſhewn to grow on the Banks of Rivers in a more Northerly Latitude, at leaſt ſome Travellers tells us ſo; but the thing is not very material either Way; but if there had been Trees or

Shrubs, they would have been eſteemed Proofs of its being a River; and therefore among the Arguments of its not being ſo, there was no Impropriety in mentioning the Want of Trees and Shrubs on all the Lands near it.

As to the black Whales, Seals, and Sea-Horſes, ſeen at twenty Leagues above the Entrance, the Captain gives a very large Return. He ſays it does not appear, from any Journals, Reports, or Anſwers, that one Whale was ſeen higher than *Deer Sound*, which is but fifteen Leagues up; whereas the Weſtward is above thirty Leagues; or that one Sea-Horſe or Seal was ſeen in any Part of the River; but that ſeveral were ſeen juſt without the Mouth of the River, in the *Welcome*, is atteſted by the Log-Book, and by the Affidavits of *Towns*, *Van Sobric*, and *Grant*; and Captain *Middleton* has traded for Whalebone in all Parts of the Bay and Streights where the *Eſkimaux* frequent, which could not be if the Whales, from whence they get it, were not killed there; becauſe in ten or twelve Days after they are dead, the Bone all drops from their Mouths; all which amounts, together, to almoſt a Demonſtration, that the Whales, both in the Bay, and *Wager River*, come from the North-eaſt; which is alſo ſomewhat comfirmed from the great Number of *Indian* Store-Houſes, of Oil, Fin, and Blubber, not above eight Leagues upon the North-eaſt Coaſt of the River; whereas their proper Habitations are on the Main, on the other Side the River. Moreover, if theſe Whales come out of any Sea from the Weſtward, they would have been ſeen in plenty the higher they had gone up, which was not ſo. However, Concluſions drawn from Whales being ſeen in any Place, are, at the beſt, but very precarious.

In Reply to this, it is neceſſary to take Notice of a Fact which ſeems directly oppoſite to the Account given in Captain *Middleton*'s Anſwer. Mr. *Rankin*, in his Report, has the following Paſſage: “We went above fifteen Leagues above *Deer Sound*, and ſaw a Freſh or Run of Water coming againſt us; and the Wind being fair, I was afraid of ſtaying any longer, for fear of hindering the Ships from going to Sea. *There is a great Probabily of an Opening on the Weſt Side, by the coming in of the Whales*; but I could not go higher up to try it, for the above-mentioned Reaſons.” In the amended Report this Paſſage is entirely left out; for as to what is ſaid therein, I mean in the amended Report, ſigned by *Rankin* and *Wilſon*, of their ſeeing large black Whales in their Return from the Ships, not far from *Deer Sound*; this is alſo contained in the original Report, wherein Mr. *Rankin* ſays, *In coming down we ſaw ſeveral very large black Whales playing about the Boat, and aſhore*; ſo that nothing can be plainer, than that the Meaning of *Rankin*, was to diſtinguiſh between *thoſe Whales*, the Sight of which induced him to believe there was *an Opening to the Weſt*, and the *black Whales* that he ſaw *in returning to the Ships*. And why the former Whales were left out in the amended Report, is a Matter that deſerves Conſideration; but it is very plain, that as it ſtood in the original Report, it is irreconcileable to the Captain's Anſwer; and therefore he was in the right to guard againſt it, by ſaying, *However, Concluſions drawn from Whales being ſeen in any Place, are at the beſt very precarious.* It may be ſo; but it is very evident that Mr. *Rankin* concluded from thence, that there was an Opening to the Weſt; and thoſe who incline to believe him, will conclude ſo ſtill, though, as the Captain ſays, that Concluſion be but precarious. And yet their other Concluſion of their coming in from their *Frozen Streight* muſt be allowed to be altogether as precarious.

As to the laſt Reaſon aſſigned by Mr. *Dobbs*, *viz.* from broken Lands North-weſtwards, and a vaſt Collection of Waters, full of Iſlands on the South-weſt-ſide, this Anſwer is given by Captain *Middleton*, *viz.* It is moſt likely that theſe watery Places, ſeen at a Diſtance, are the ſame Sort of Lakes of melted Snow from the Mountains, as were every where ſeen from the Eminences they aſcended in that Country, to over-ſpread the Vallies; but be that as it will, there was no coming nigh them for the Rapidity of the Water-falls, that hindered the Boat from going higher up then ſhe did, and the immenſe Quantities of Ice along the South-weſt Shore.

This Anſwer is plainly conjectural, and Captain *Middleton* only offers a Suppoſition to refute what others had affirmed to be a Fact; for Mr. *Dobbs* tells us, that when the Lieutenant and another Perſon were examined before the Lords of the Admiralty, they poſitively affirmed that they had ſeen a fair open Channel, with Lands on each Side, as high as the *Cape of Good Hope*. It likewiſe appears, that the Lieutenant was preſſed to go up this Channel; and the Reaſon he gave for not complying with this Requeſt, was, that he had already exceeded his Orders in extent of Time, and of the Diſcovery, which he had proſecuted farther than he was directed to do; and therefore declined what was propoſed from an Apprehenſion of being puniſhed upon his Return, if he had complied with it.

10. But we are now to come to thoſe Arguments, which have been produced by Captain *Middleton* in the Affirmative, and in Proof of his Aſſertion that this is no Streight, but a Freſh-water River. In the firſt Place, he ſays, that he conceives it can have no Communication with the Sea Weſtward, becauſe the Tide of Flood comes in at its Mouth Eaſtward. To this Mr. *Dobbs* replies, that it was to be conſidered as a Streight, like the *Magellan*, and therefore he was not to look for the contrary Tide, till they were in the Middle of the Streight. In Confirmation of this, Mr. *Dobbs* farther obſerves, the Tide at the North-eaſt Entrance of *Magellan Streight* flows from the Eaſtward, and riſes four Fathom before it comes to the firſt Narrow, which is but half a League wide, and from thirty to thirty-five Fathom deep; after a League or two it increaſes to ſix or ſeven Leagues wide, to the ſecond Narrow, where it is about a League wide, and thirty Fathom deep; within the ſecond Narrow it increaſes again to five or ſix Leagues wide, and the Tide ſtill flows from the Eaſtward, and riſes about ten Feet. In the Middle Channel, about thirty Leagues within the Streight, it is two hundred Fathom, and the Channel but three Leagues wide; and from thence to the Middle of the Streight, it is leſſened to two Leagues wide, and about one hundred Fathom deep, and the Tide ſtill flows from the Eaſtwards for above fifty Leagues. As they come near the Middle of the Streight, the Current of the Tide is not above half an Hour at each Tide, and the Tide riſes nine Feet near *Cape Quad*; beyond the Middle of the Streight it is but two Leagues wide, and for about thirteen Leagues farther it is rather leſs; ſometimes not four Miles wide; from whence it gradually widens to the Weſt Entrance, where it is five Leagues wide, ſo that *Wager Streight* is much larger; for ſo far as they were in it, which was about thirty Leagues, it being by the Account as mentioned in the Journal ſix or ſeven Leagues wide, and eighty Fathom deep; which if there be no other, is a noble Paſſage; but there is a great Probability of there being a better and ſafer Paſſage to the Southward of *Whalebone Point*, by which the Whales get into that Part of the Bay.

The ſecond Reaſon offered by Captain *Middleton* is, becauſe of the gradual Declenſion in the riſing of the Tides, which flowed eighteen Feet at the Entrance, but thirteen at *Deer Sound*; and the higheſt the Boat could go for Water-falls, was no more than five or ſix Feet. But whoever conſiders what is before replied to the Argument, drawn from the Tides coming in from the Eaſtward, will very eaſily ſee, that allowing all the Captain ſays to be true, this is very far from being concluſive; ſince it appears to agree well enough with what happens in the Streight of *Magellan*; and, beſides all this, Mr. *Dobbs* ſays, that in the Captain's Journal, the Tide at *Savage Sound* is ſaid to have roſe but twelve Feet ſix Inches, inſtead of fifteen, and at the ſame Time it roſe ten Feet in *Deer Sound*. He likewiſe ſays, that when they were behind the *Weſt Bluff*, they did not ſtay a Tide, and could only conjecture how much it flowed; nor did they obſerve in their Report, whether the Eaſtern or Weſtern Current was Ebb or Flood; though upon Recollection, the Lieutenant was poſitive it was the Tide of Flood from the Weſtward, which brought the Boat to a Grapnel, it having flowed ſix Feet immediately after he anchored the Boat.

The third Reaſon aſſigned ſeems the ſtrongeſt of all; for the Captain therein aſſerts, that the Water was found to be ſo freſh in the Mid-Channel, above *Deer Sound*, that the Men freely drank it, along-ſide the Boat, inſtead of Beer; and the higher they went they found it the freſher. But it has been before obſerved, that the Lieutenant, in his Expedition, filled a Bottle of Water at the Shore, and two Bottles farther down to the Eaſtward; and that the Captain, when he came aboard, owned, that the Water taken up at the Weſt-end, near the Fall of Water, was the ſalteſt; and the Maſter ſaid, that it was as ſalt as any he taſted in thoſe Seas, which was confirmed by all thoſe who taſted it aboard. It is alſo affirmed, that when the Captain cauſed the Water to be taken up, which he ſays was freſh, the Crew did not come entirely into his Opinion, but only ſaid that it was not very ſalt.

The Captain urges next, that no Whales were ſeen there; but at the Entrance of the River, and at *Deer Sound*; this being an Argument that they came not from any Sea to the Weſtward, but entered by ſome Inlet from the North-eaſt. We have already taken notice, that the Lieutenant contradicts this in his original Report, by aſſerting poſitively that the Whales came from the Weſt.

And Mr. *Dobbs*, in anſwer to this very Argument of Capt. *Middleton*'s expreſſes himſelf thus: "The next Falſity he would have impoſed upon was, that the Whales came in certainly at the Eaſt Entrance of *Wager River*, for he ſaw ſeveral in the *Welcome* and *Cape Dobbs*, before they came in and after they went out, which none of them ſaw but himſelf." And the Journal expreſly ſays, when they came up with the Ice, "Hitherto have been ſeen no Whales, except one white Whale as big as a Grampus, and five or ſix Seals: And both Log-Book and Journal are entirely ſilent about any when they came out, until they came near *Brook Cobham*. When I taxed the Captain with this, all he could ſay was, he heard one or two blow; yet in the Log-Book which he has printed, he ſays he heard two or three blow in that Watch, though nothing of it is entered in the original large Log-Book, nor was any ſeen by any other Perſon on board the *Furnace*; nor did Capt. *More*, in the *Diſcovery*, ſee any, though two on board him took upon them to ſwear, they ſaw or heard two or three blow."

Another Reaſon made uſe of by Capt. *Middleton* is, becauſe Travellers which have gone from *Churchill* by Land, as high as the *Arctic Circle*, affirm, that they met with neither ſalt Water, River, nor Sea, in any Part of their Journey. This Argument would alſo be very concluſive, if the Fact was abſolutely certain; but if it was, it is not eaſy to conceive why Capt. *Middleton* by his Letters to Mr. *Dobbs*, written before the undertaking of this laſt Expedition, ſhould give him any Hopes of Succeſs in ſuch an Undertaking; for had he known and conſidered the Force of this Argument at that Time, in its full Extent, he muſt have ſeen that it proved any ſuch Paſſage as he went in Search of, if not impoſſible, at leaſt impracticable, and therefore not worth the ſeeking. When the Reader reflects upon the Obſervations made in the very laſt Article upon the Conduct and Sentiments of Capt. *James*, after his Return from *Charlton Iſland*, he will probably ſee good Grounds to believe, that Diſappointment operates very powerfully upon ſome Mens Underſtandings, and engages them to treat as vulgar Errors what themſelves formerly eſteemed undoubted Truths, either from an Over-weaning Fondneſs for their own Abilities, or from an envious Deſire to put that out of the Thoughts of others, which by Accident was put out of their own Power.

11. It was however natural enough for Mr. *Dobbs*, after examining this Matter attentively, to wiſh that all the Doubts about it might be removed by a ſubſequent Expedition, and one would have thought that this Scheme muſt have been alſo ſatisfactory to Captain *Chriſtopher Middleton* and the *Hudſon's Bay* Company; becauſe being ſo firmly perſuaded as they ſeem to be, that no ſuch Paſſage can ever be found from *Hudſon's Bay* into the *Weſt Ocean*, they ſhould have been willing to have had this Truth, as they eſteem it, ſo fairly and fully made out as to leave no Grounds, or, if poſſible, no Colour, of Suſpicion about it, as this would have intirely juſtified that Gentleman's Conduct, and have ſaved the Company all future Trouble.

But it does not appear that this actually was the Caſe; on the contrary, ſuch Objections were ſtarted, and ſo many Difficulties ſuggeſted, as quite overthrew all Hopes of obtaining ſuch Aſſiſtance from the Admiralty as they had before; but the Spirit of the Nation being awakened, the Opinion of there being ſuch a Paſſage gaining Ground, and the Deſire of finding it increaſing daily, produced an Application to Parliament in 1744, when, after mature Deliberation, a Law paſſed upon that Subject, in Conſequence of which another Expedition has been ſet on foot.

The Preamble of this Act takes Notice, that as the diſcovering another Weſt Paſſage through *Hudſon's Streight* to the Weſtern *American Ocean*, would be of great Benefit and Advantage to this Kingdom, and that it would be of great Encouragement to the Adventurers to attempt the ſame, if a public Reward was given to ſuch Perſons as ſhould make a perfect Diſcovery of the ſaid Paſſage, it is therefore Enacted, That if any Ships or Veſſels belonging to his Majeſty's Subjects ſhall find out, and ſail through any Paſſage by Sea, between *Hudſon's Bay* and the *Weſtern Ocean* of *America*, the Owners of ſuch Ships or Veſſels ſhall be intitled to receive as a Reward for ſuch Diſcovery, the Sum of *Twenty Thouſand Pounds*. The following Perſons are, by the ſaid Act, appointed Commiſſioners for examining the Claims that may be made under it; *viz.* the Lord Chancellor, the Lord Preſident of the Council, the Lord Privy-Seal, the Lord Steward of his Majeſty's Houſhold, the Lord Chamberlain, the firſt Commiſſioner of the Treaſury, the firſt Commiſſioner of the Admiralty, the principal Secretaries of State, the Speaker of the Houſe of Commons, the Chancellor of the Exchequer, the firſt Commiſſioner for Trade and Plantations, the Treaſurer of his Majeſty's Navy, and the Admirals of the Red, White, and Blue Squadrons for the Time being; and theſe Commiſſioners are empowered to examine the Claimants Witneſſes upon Oath; and the Certificate of the Majority of them (of which the firſt Commiſſioner of the Admiralty ſhall be one) under their Hands and Seals given, ſhall intitle the Perſon or Perſons, having ſuch Certificate, to receive of the Lord High Treaſurer, or Commiſſioners of the Treaſury, the ſaid Sum of *Twenty Thouſand Pounds* after the ſaid Diſcovery ſhall be completed, and the Certificate thereof produced as aforeſaid. As a farther Encouragement, and to promote the executing of, and finding out, ſuch Paſſage, It is further Enacted, That all Perſons, Subjects of his Majeſty, reſiding in any Place where the ſaid Adventurers may come, in the Proſecution of this Diſcovery, ſhall give the ſaid Adventurers all Aſſiſtance; and Perſons, Subjects, as aforeſaid, ſhall no Way obſtruct, moleſt, or refuſe the ſaid Adventurers reaſonable Succour in any Diſtreſs they may fall into in the proſecuting this Diſcovery. A Proviſo is added, that nothing in this Act ſhall extend to prejudice the Eſtate, Rights or Privileges of the Governor and Company of Adventurers of *England*, trading into *Hudſon's Bay*.

Such is the Hiſtory of the Deſign for penetrating into the *Weſtern Ocean*, by a Paſſage to the North-weſt; ſuch have been the Steps taken for putting it in Execution; ſuch the Diſappointments with which Expeditions of this Sort have been attended; and ſuch, finally, the Proviſion made by the Legiſlature, that whoever ſhall be at the Expence and Hazard of this Diſcovery for the public Service, ſhall receive a public Reward.

SECTION.

SECTION V.

A ſuccinct Account of the Grounds upon which a NORTH-EAST PASSAGE *into the Sea of* Japon *has been expected and ſought for. The Attempts of the* Engliſh *and* Dutch *on that Side, with the Reaſons why all Thoughts of a Paſſage that Way have been for many Years given up.*

Collected from *Dutch* as well as *Engliſh* Authors.

1. *A View of the Advantages propoſed from the Diſcovery of a North-eaſt Paſſage, and of the principal Reaſons which have induced ſkilful Geographers, and able Seamen, to believe that ſuch a Paſſage might be found.* 2. *The Attempts made by Sir* Hugh Willoughby, *Captain* Stephen Burroughs, *Captain* Arthur Pett, *and Captain* Charles Jackman, *for the Diſcovery of that Paſſage, without Effect.* 3. *An Account of three Voyages made by the famous* Dutch *Pilot,* William Barentz, *for that Purpoſe, and with no better Succeſs; the Reaſons that induced* Barentz *to die in the Perſwaſion that ſuch a Paſſage might ſtill be found; and the Motives upon which the Hopes of diſcovering this Paſſage were revived after all Thoughts of it had, for a long Time, been laid aſide.* 4. *A ſhort Account of Captain* Wood's *Voyage, in Search of that Paſſage, by the Direction of King* Charles II. *and his Miſcarriage.* 5. *The Reaſons publiſhed by him, after his Diſappointment, to prove the finding ſuch a Paſſage impoſſible, or at leaſt impracticable.* 6. *The Diſcoveries made by the* Ruſſians *in their* Aſiatic *Dominions, and more particularly their late important Diſcovery, that there is a very eaſy Paſſage that Way to* North America. 7. *The Concluſion of this Subject, with ſome free Thoughts thereupon, tending to prove, that if we are diſapappointed in all Attempts of finding either a North-weſt or North-eaſt Paſſage, it will amount to a Demonſtration that there is a clear Paſſage by the North, in or near the Pole.*

1. THE Advantages propoſed by the Diſcovery of a Paſſage to the North-eaſt, may be reduced to three. The firſt is, That it would ſave a great deal of Time; for, whereas we are now obliged to go round by the Cape of *Good Hope*, or, which is ſtill a longer Navigation, by the Streights of *Magellan*, we might then paſs by the Coaſt of *Muſcovy*, and *Great Tartary* into the Sea of *Japon*, in little more than three Months. The ſecond turns on the Wholſomeneſs of the Voyage, which, according to the Methods now in Uſe, conſumes abundance of Seamen; but by this means would become as healthy as any Navigation can be, and be performed with very little Hazard. In the third Place, there is good Reaſon to hope that it would change the very Nature of the *Eaſt India* Trade, by bringing the Balance over to the Side of *Europe*; whereas in the Way we now carry it on, it is morally certain, that if the *Weſt Indies* had not been diſcovered, the *Eaſt India* Trade muſt have eat up and deſtroyed us, I mean the People of *Europe* in general; for whatever there may be gained by us, or by the *Dutch*, it is an uncontroverted Point, that immenſe Sums in Silver are annually ſent from *Europe* to balance the Accounts of our Traders with thoſe in the *Eaſt Indies*; but if a Paſſage ſhould be found to this Country by the North-eaſt, we might then hope to gain as much by cloathing the Inhabitants of the Northern Countries as would balance our Commerce with thoſe in other Parts. We are next to examine the Reaſons why ſuch a Paſſage has been expected and ſought for; and this may be likewiſe reduced under three Heads. The Firſt is grounded on the Diſpoſition of the terraqueous Globe, which ſeems to require a perfect Circulation of that great Body of Water which is intermixed with the Earth; and as we find this Conjecture verified towards the South Pole, it makes the Argument ſo much the ſtronger with reſpect to the North. The Second ariſes from Obſervation, which affords Variety of Inſtances, in Confirmation of the ſame Notion. We will mention one or two: All the Wood that is thrown on the Coaſts of *Greenland*, *Nova Zembla*, *Lapland*, and other Northern Countries is Worm-eaten; which is a Proof that this Wood came from a warmer Climate; ſince it is certain that Ships are not Worm-eaten in the Northern Seas. There is likewiſe a Kind of *Molucca* Bean thrown almoſt by every Tide upon the Northern Coaſts, which is with great Probability believed to be the Product of the Eaſtern Climes; and, what ſtill more ſtrongly corroborates this Manner of Reaſoning, ſome *Dutch* Seamen, who were ſhipwrecked at *Gorea*, obſerved a Harpoon in the Head of a Whale caſt upon that Coaſt, which muſt therefore have come thither from the Northern Seas. Laſtly, there are ſome Facts which, if they could be depended upon, would put this Matter out of Diſpute, ſince they relate to Ships which have actually paſſed this Way, or at leaſt have diſcovered an open Sea through which they might have paſſed; but as this cannot be verified by proper Vouchers, they ought to be conſidered only as Reports, and as ſuch I lay no great Streſs upon them.

2. The firſt who attempted the actual Diſcovery of ſuch a Paſſage to the North-eaſt, was Sir *Hugh Willoughby*, in 1553. He advanced as far as 72 Degrees North Latitude; but finding himſelf blocked up by the Ice, he retired, as well as he could, into the Mouth of the River *Arzina*, in *Lapland*; where he and all his Company were frozen to Death, and were the next Year found in that Condition. This did not diſcourage Captain *Stephen Burroughs*, afterwards Comptroller of the Navy, in the Reign of Queen *Elizabeth*, from purſuing this Diſcovery; on which he ſailed in 1556, and having doubled the *North Cape*, entered the Streights of *Weygatz*, between the South of *Nova Zembla*, and the Country of the *Samoieds*, believing the Gulph, on the Eaſt of that Streight, to be a free and open Sea, in which Opinion he returned to *England*. This occaſioned a third Voyage, by the Direction of that glorious Queen, who, in 1580, ſent Captain *Arthur Pett*, and Captain *Charles Jackman*, to perfect this Diſcovery. They entered the Streight, but found themſelves ſo embarraſſed among the Ice, that after long ſtruggling, with much Difficulty, they got out again, and reſolved to return home; but meeting with very bad Weather, they were ſeparated; and Captain *Pett* was never heard of afterwards, which gave a Check to all farther Thoughts of ſearching for a North-eaſt Paſſage, by our Countrymen.

3. But the *Dutch*, who were extremely ſenſible of the Benefits that might reſult from ſuch a Diſcovery, and being withal very emulous of the *Engliſh* Glory, reſolved to try what might be done in this Reſpect; and with this View they ſent the famous *William Barentz* thither, in 1594, who paſſed the Streights of *Weygatz*, and having

examined the Gulph into which they open, abandoned the Deſign, after having obſerved that the Water was freſh, which had not been taken notice of before. He thought, however, that ſomething might ſtill be done, though not that Way, and therefore undertook a ſecond and a third Voyage to *Nova Zembla*, in Hopes of ſucceeding better. In 1596, which was his laſt Voyage, he and his Crew wintered in that Country, in the Latitude of 78 Degrees. After having loſt their Veſſel, they got off the next Spring in their two Shallops, deſigning for *Cola* in *Lapland*, where they ſafely arrived; but *Barentz* died in the Paſſage. He remained to the laſt Moment in the Sentiments he entertained after his firſt Voyage, and declared if he had lived, he would have made another Voyage, from a thorough Perſuaſion, that notwithſtanding all he had ſuffered, there was a free and open Sea between *Nova Zembla* and *Greenland*.

The beſt Accounts we have of this Undertaking, and of the Extremities of *Norway*, *Lapland*, *Nova Zembla*, *Weygatz*, the Mouth of the River *Oby*, the Coaſt of *Tartary* at the Mouth of that River, and of the *White Sea*, are in the Works of the famous *Linſchooten*, who made this Voyage at the ſame time with *Barentz*. Our great Navigator *Henry Hudſon* had ſome Thoughts of diſcovering the Paſſage, and actually made a Voyage for that Purpoſe in 1610; but the Fate of *Barentz*, and the unpromiſing Appearance of the Frozen Coaſts, obliged him to abandon very ſoon ſo troubleſome an Expedition. In 1653 the King of *Denmark* fitted out three Ships for the finding the North-eaſt Paſſage, and directed the making an exact Chart of their Diſcoveries: Theſe Ships paſſed the Streights of *Weygatz*, and in the Bay beyond them found ſome of the Inhabitants of *Nova Zembla* in their Canoes; which were the moſt brutal and intolerable Savages that were ever ſeen: Their Garments were made of the Skins of Penguins, Pelicans, and other large Birds, with their Feathers on: They lived upon raw Fiſh, and had the utmoſt Abhorrence of more civilized Nations; which was not by any Means to be ſoftened by Preſents or kind Uſage. This made the *Danes* ſoon weary of ſo inhoſpitable a Coaſt, and ſo put an End to the Expedition, which brought ſuch a Diſcredit on the North-eaſt Paſſage as prevented any farther Attempts for near twenty Years. At laſt, after the *Royal Society* was founded here, by which Means Subjects of this ſort came to be more known and more freely examined, the Hopes of finding a North-eaſt Paſſage was again renewed, and ſeveral Papers were written, to ſhew both the Utility of ſuch a Paſſage, and that the finding of it was practicable.

The firſt that revived, at leaſt with any Degree of Vigour, the Notion of diſcovering a Paſſage to the North-eaſt, after that Scheme had lain ſo long under Diſcredit, was a Company of Merchants in *Holland*, who fitted out a Ship for the Diſcovery; which, upon its Return, brought an Account, That they had ſailed to the Height of between 70 and 80 Degrees, and had diſcovered a fair open Sea, without any Ice to the Eaſtward of *Nova Zembla*, which ſeemed ſo plain and ſo perfect a Proof of the Probability of a ſafe Navigation on that Side, that the Merchants concerned in that Undertaking applied to the States for a Charter, that might ſecure to them the Advantages that might reſult from this new-found Paſſage. But the *Eaſt India* Company having Notice of this Application, and foreſeeing how far it might affect their Trade, inſtantly petitioned the States on their Side, ſetting forth the great Services they had done the Republic, the Nature of the Charters which had been granted to them, and the Conſequences that muſt attend the beſtowing on this new Company, the Privileges that they demanded. The States had Regard to their Repreſentations, and refuſed the Charter applied for. The Merchants, upon this, applied to the King of *Denmark*, and having obtained his Licence, an Expedition was made for Diſcovery; but by reaſon of a Mutiny on board the Ship, it came to nothing. A large Account of all theſe Tranſactions was printed in the *Memoirs* of our *Royal Society*, in the Year 1675, but without any Date; one, however, I have with much Difficulty recovered, which is the Voyage wherein the *Dutch* Merchants were ſucceſsful, and which I find was in 1670. The ſame Perſon that gave me this Date acquainted me, that at the Time this Application was made to the States, it was aſſerted that there was no Difficulty in ſailing North about *Greenland*; that ſeveral *Dutch* Ships had actually done it, and that the Merchants being required to verify this Fact, they deſired that the Journals of the *Greenland* Squadron in 1655, might be produced; in ſeven of which there was Notice taken of a Ship, which that Year had ſailed as high as the Latitude of 89, within one Degree of the Pole; and three Journals of that Ship being produced, they all agreed as to an Obſervation taken by the Maſter, *Auguſt* the 1ſt, 1655, in 88 Degrees 56 Minutes; and it was farther ſet forth in thoſe Journals, that the Sea was entirely clear of Ice, and was a hollow rolling Sea, like that of the *Bay of Biſcay*.

4. Soon after the publiſhing the Accounts beforementioned in the *Philoſophical Tranſactions*, Capt. *John Wood*, an experienced Seaman, who had accompanied Sir *John Narborough* in his Voyage through the *Streights of Magellan*, offered his Service to attempt the Diſcovery of the North-eaſt Paſſage; which was accepted, and the eight following Perſons, *viz.* *James* Duke of *York*, Lord *Berkeley*, Sir *Joſeph Williamſon*, Sir *John Banks*, Mr. *Samuel Peeps*, Capt. *Herbert*, Mr. *Dupuy*, and Mr. *Hoopgood*, at their own proper Charge, bought a Pink called the *Proſperous*, of the Burden of one hundred and twenty Tons, fitted her to Sea, with Men, Ammunition, Proviſion, and Merchandize, which was ſuch as was reaſonably propoſed to vend on the Coaſt of *Tartaria*, or at *Japon*, if a Paſſage had been found. The Command of this Veſſel was given to Captain *William Flawes*, and a new Ship of the King's called the *Speedwell*, manned and victualled at the King's Expence, was given to Captain *Wood*, who had the Conduct of the Expedition.

They ſailed from the Buoy at the *Nore*, *May* the 28th, 1676, but the Voyage was very unfortunate; for the *Speedwell* was ſhipwrecked on the Coaſt of *Nova Zembla*, and Captain *Wood*, and his People, returned aboard the *Proſperous*, which put an End to all Thoughts of Expeditions of this Nature; for Captain *Wood*, like other diſappointed Commanders, changed his Opinion upon his Return, and undertook to prove that it was impoſſible to find any Paſſage to the North-eaſt. There is nothing very remarkable, either in his Journal or in that of Captain *Flawes*; but his Relation of his Shipwreck, of the Country of *Nova Zembla*, and his Reaſons for changing his Sentiments, are, in themſelves, very curious, and therefore deſerve the Reader's Notice.

5. " After giving both theſe Journals, ſays he, mean-
" ing his own, and that of Captain *Flawes*, I intend to
" ſhew my Conceptions of the ſaid Voyage, and a true
" Relation of our Miſcarriage, with ſome Obſervations
" made in the ſaid Voyage. The firſt was, the following
" the Opinion of *William Barentz*, that was to ſteer
" directly North-eaſt from the *North-Cape*, and ſo fall
" in the Middle-way, between *Greenland* and *Nova*
" *Zembla*; ſo having made the Land to the Weſtward
" of the *North Cape*, the 19th Day of *June*, I ſteered
" away North-eaſt by Compaſs, which was not ſo much
" by the true Courſe, becauſe of the Variation that is
" there Weſterly; and the 22d Day at Noon we ſaw the
" main Body of Ice, being in the Latitude of 76 Degrees,
" and about ſixty Leagues to the Eaſtward of *Greenland*.
" At the firſt ſeeing of Ice, I did imagine it had been the
" Ice that joined to *Greenland*, and that if I went more
" Eaſterly there might be a free Sea; ſo I ran cloſe by
" the Ice, it lying away Eaſt-ſouth-eaſt, and Weſt-north-
" weſt; and every League or leſs that we ran, we met
" with a Cape of Ice; ſo when we were about that we
" could ſee no Ice to the Northward; ſo ſtanding in
" North-eaſt ſometimes two Glaſſes, that is one Hour,
" we could ſee more Ice ahead, and then we were forced
" to go out the ſame Way we came in, and thus I
" continued coaſting the Ice, ſometimes in Hopes of a
" clear Sea, and then again diſheartened by ſeeing more
" Ice, till at laſt I had no Hopes at all; which was
" when I ſaw the Land of *Nova Zembla* and the Ice join
" to it. So here the Opinion of *William Barentz* was
" confuted, and the reſt of the *Dutch* Relations, which

certainly are all forged abuſive Pamphlets, as alſo the Relations of our own Countrymen.

" But certainly if Men did really conſider the many inevitable Dangers and Miſchiefs that come upon the broaching of ſuch Untruths, they would never do it; for I do now verily believe, that if there be no Land to the Northward of the Latitude of 80 Degrees, that the Sea that is there is all frozen, and always continueth ſo; for I, that could get no farther than 76 Degrees, found it ſo frozen without Intermiſſion, and ſome of the Ice that we ſaw, that was on the main Body, if it had been conveyed 10 Degrees more Southward, would have taken ſome Centuries of Years to thaw it; for the looſe Ice that lay about the Edges of the main Body, was not more than a Foot thick, in ſome Pieces, above the Superficies of the Water, and the reſt of the Cake that was ſunk, was more than 18 Feet below; ſo I conclude that thoſe vaſt Mountains that were on the main Body, were all aſhore, as of Neceſſity they muſt if they hold the ſame Proportion; and conſidering the Shallowneſs of the Water, which I found all along the Ice, which in the Mid-way, between the two Lands, I found to be no more than ten Fathom, was doubtleſs a Sign that to the Northward is Land, and that the main Body of Ice, that lieth cluſtered about the Shore, may be twenty Leagues or more; and that *Nova Zembla* and *Greenland* are the ſame Continent; for if there had been any Paſſage, there would have been ſome Current, which I could never, or very hardly, find to be any; and the little there was run Eaſt-ſouth-eaſt along the Ice, which is nothing elſe but a ſmall Tide, which riſes ſome eight Feet. Thus the Ice having been an Obſtacle in our Way, as alſo the Cauſe of my coming ſo far to the Eaſtward, which, before I never intended, I will come to the Misfortune that happened to us in the Loſs of our Ship, which was thus: Being long amongſt the Ice, the 29th Day of *June*, in the Morning, we had like to have been incloſed in it; it proving likewiſe foggy Weather, I ſtood out to the Southward, thinking to lie there till fairer Weather, or to ſpend ſome Time to the Southward, and then come to the Ice again, to ſee if there might be any Alteration in it, as to its Removal, either to the Eaſt, Weſt, North, or South; but all this Day it proved foggy dirty Weather, the Wind being at Weſt, ſo we lay South-ſouth-weſt with the Stern, and by our Judgment and Reckoning, the Weſtermoſt Land of *Nova Zembla* bore from us Eaſt-ſouth-eaſt, that was four Points under our Lee-Bow; but ſuch was our Misfortune, that it proved not ſo; for about ten o'Clock Captain *Flawes*, being upon our Weather Quarter, fired a Gun, and bore to me, and called out that there was Ice ahead; then I looked out ahead, ſaw ſomething white juſt under the Bow, which preſently I perceived to be a Breach and no Ice; now if I had ſtaid with the Ship, Captain *Flawes* being to the Windward, I ſhould have been aboard of him, and then certainly we had been both loſt; ſo I was forced to bear up with Hope that I might get clear of it; but the Ship being a great while wearing ſtruck on the Rock, her Head lying to Seaward, which if it had not, but that the Broad ſide had been to the Sea, we had all periſhed, without God's great Mercy.

" Captain *Flawes*, in the mean Time (being a ſhorter Ship) wore round, and came cloſe under our Stern, and with great Providence eſcaped and ſtood off to Sea; here we lay beating on the Rock in a moſt cruel Manner, for the Space of three or four Hours, uſing all poſſible Means to ſave her, but all in vain; for it blew ſo hard, that it was impoſſible to carry out an Anchor, capable of doing us any Service; though we had an Opportunity to carry out a ſmall Anchor, and Warp to haul another out by, which ſignified but little; the Ship all this while lay, and at the End of four or five Hours we ſaw Land cloſe under our Stern, to the great Amazement of us all, which before we could not ſee for foggy Weather; ſo I commanded the Men to get out our Boat before our Maſt came by the Board; which was done. I ſent the Boatſwain toward the Shore in the Pinnace, to ſee if there was any Poſſibility of landing, which I much feared, becauſe the Sea ran ſo high. In half an Hour he returned with this Anſwer: That it was impoſſible to ſave a Man the Sea ran ſo high; and the Snow being in high Cliffs on Shore it was inacceſſible, which was but bad Tidings; ſo then it was high time to think on the Safety of our Souls, and we all went together to Prayers, to beſeech God to have Mercy on us; for here nothing but inevitable Ruin appeared before our Eyes. After Prayers were done it proved a little clearer Weather, and I, looking over the Stern, ſaw a ſmall Beach directly with the Stern of the Ship, where I thought there might be ſome Poſſibility of landing; ſo I ſent the Pinnace again with ſome Men, to be landed; but they durſt not venture on Shore; ſo I ſent the Long-boat with ſome twenty Men, to land, who attempted it, and got ſafe on Shore; ſo they in the Pinnace ſeeing that followed them and their Men likewiſe, and both returned on board again. Now the Men on the Shore ſent to me to deſire ſome Fire-arms and Ammunition; for there were many Bears on Shore: So I cauſed to be put into the Pinnace two Barrels of Powder that we had ſaved dry, before the Ship was bulged, and ſome ſmall Arms and Proviſions, with my own Papers and Money; but as ſhe put off from the Ship-ſide a Sea over-ſet her, ſo that all was loſt, with the Life of one Man, by Name *John Boſman*, being Cooper's Mate, and ſeveral others, taken up for dead. The Long-boat being then on ſhore to land more Men; and they hearing us call from aboard (when, as then, we could not ſee the Shore) they came on board, and ſaved the Men; but the Pinnace was all broken to Pieces, which was no ſmall Grief to us; ſo the Lug-boat being on board, and the Sea running prodigious high, the Boatſwain, and ſome others, would compel me and the Lieutenant to leave the Ship, ſaying, It was impoſſible for the Boat to live any longer in that Sea; and that they had rather be drowned than I; but deſiring me when I came aſhore (if it was poſſible) to ſend the Boat again for them; ſo I being half Way on Shore, the Ship overſet, ſo I made all the haſte poſſible to land the Men I had in the Boat; and, having landed them, I went off to the Ship again, to ſave thoſe poor Men that had been ſo kind to me; and, with great Hazard, I got with the Boat to the Quarter of the Ship, and they came down the Ladder into the Boat, only one Man who was left for dead, which was one that had been caſt away in the Pinnace, whoſe Name was *Alexander Frazer*, a very pretty Sailor; ſo I returned to the Shore and got ſafe to Land, though very wet and cold; ſo we hauled up the Boat on Shore, and went up the Land about a Flight-Shot, where our Men were making a Fire, and a Tent with Canvas and Oars, which we had ſaved for that Purpoſe; ſo we lay all that Night very cold, wet, and weary.

" The next Morning, the Man that was left on board recovered, and got unto the Mizen-top, for that Maſt was left ſtanding when we came away, the others we had cut all down. The Ship laboured, and beat violently, but it blew ſo hard, and the Sea ran ſo high, that it was impoſſible to ſave him; ſo the Weather continuing blowing, with extreme Fogs, and with Froſt and Snow, and all the ill-compacted Weather that could be imagined together; we built more Tents to preſerve ourſelves, and the Ship breaking in Pieces came all aſhore to the ſame Place where we landed, which ſerved for Shelter and Firing; beſides, there came to us ſome Hogſheads of Flour, good Store, which was no ſmall Comfort in our great Extremity; and we lay betwixt Hope and Deſpair, hoping for fair Weather, that Capt. *Flawes* might find us, which was impoſſible that ever he ſhould, if it continued foggy; ſome deſpairing of his being ſafe; but that he might be loſt as well as me.

" But ſuppoſing we were never to ſee him again, I was reſolved to try the utmoſt to ſave as many as I could in the Long boat; in order thereunto we raiſed her two

Feet higher, and laid a Deck upon her, to keep the Sea out as much as poſſible; and with this Boat and thirty Men (for ſhe would carry no more) I intended to row and ſail to *Ruſſia*; but the Crew, being not ſatiſfied who ſhould be the Men, began to be very unruly in their Minds and Behaviour, every one having as much Reaſon to ſave himſelf as another, ſome holding Conſultation to ſtave the Boat, and all to run the like Fortune; but here Brandy was our beſt Friend, for it kept them always foxed; ſo that in all their Deſigns I could prevent them. Some were of the Mind to go by Land, but that I knew was impoſſible for any Man; neither had we Proviſions or Ammunition to defend ourſelves from the wild Beaſts; and if it had been paſſable, that is, any going on the Ground for Bogs, they would have met with Rivers, that they knew not whither to go; ſo there being no Probability of going by Land, nor for any to attempt going by Boat with forty Men, leaving the reſt to be deſtroyed, I will ſubmit to the Conſideration of any, whether we were not in a very miſerable Condition, without the Intervention of divine Providence. To write my Thoughts I had at that Time, to ſave as many Men as I could, it is not pertinent at all to the Diſcourſe, ſince it cannot but be tragical.

" The Weather continued ſtill very bad, with Fogs, Snow, Rain, and Froſt, till the ninth Day of our being on Shore, which was the 8th Day of *July*, when, in the Morning it cleared up, and to our great Joy one of the Sailors cried out, *A Sail*; which proved Capt. *Flawes*, as reaſonably may be imagined; ſo we ſet Fire to our Town, that he might ſee where we were, which he preſently ſaw, ſo came and ſent his Boat to us; but before I went off I wrote a brief Relation of the Intention of the Voyage, with the Accidents that had befallen us, and put it into a Glaſs Bottle, and left it in the Fortification I had there built. So by twelve o'Clock we all got ſafe on board, but left all on Shore that we had ſaved from the Ship, for we much feared it ſhould prove foggy Weather again. Now I intend to give a brief Deſcription of the Land, and the Obſervations I made there.

" *Nova Zembla* is ſo called by the *Ruſſians*, which ſignifies *New Land*, in their Language. To prove either that it is an Iſland, or whether it joineth to the Continent of *Tartaria*, would be a very hard Taſk, nor is it certainly known to any; for by Circumſtances I think it impoſſible to prove, and by Experience the Search thereof is ſo impoſſible that it will hardly be tried; but let it be either, I think the Matter is not much, ſince it is the moſt miſerable Country that lieth on the Foundation of the Earth; a Country, moſt Part of it covered perpetually with Snow; and that which is bare is not to be walked on, being like Bogs; upon whoſe Superficies grows a Kind of Moſs, which beareth a ſmall blue and yellow Flower; and this is all the Product of the Earth of this Country. Under the Superficies of the Earth, about two Feet deep, after we had dug ſo low, we came to a firm Body of Ice, which, as I think, was never heard of before; ſo thoſe Men that did imagine, if they were forced to winter to the Northward, to dig Caves in the Earth to preſerve themſelves from Cold, would find here but very bad Lodging. The Snow lieth here contrary to what it doth in any other Country; for in all other Climates the Snow melteth ſooneſt away near the Sea Side, but here in ſome Places it riſes as high as either of the Forelands in *Kent*.

" The Sea has waſhed underneath the Snow a prodigious Way, and the Snow from the Weſtern Sea, upon the high Ridge, over-hanging, is moſt fearful to behold, and up from the Water Side, upon the firſt Ridge of Hills, the Snow was melted, till you came to the next Ridge, which are mountainous, and they all the Way up are covered with Snow, which I believe hath lain there ever ſince the Creation; but after we had aſcended this, which in ſome Places was almoſt perpendicular, we came to the Top of all the Mountains, as we ſuppoſed, for we could not ſee far, for we could hardly ſee one or the other, the Fog was ſo thick, and remained ſo all the Time we were in the Country; but on the Top of the Hills we found it bare from Snow, and indifferent good walking. The Beaſts that I found in the Country were only Bears. I continued on the Top of thoſe Hills ſome two Hours, and went as far as was convenient, that we might find the Way back again. Here I found the Track of many large Deer; alſo we found an Horn or Branches of Deer. Beſides Deer, there are abundance of large white Bears, and ſome Foxes, and a little Creature much like a Coney, but not ſo big as a Rat; and ſome few little Birds like Larks; and theſe are all the Beaſts or Fowls we found in the Country. Every quarter of a Mile there runneth down from the Hills, into the Sea, a ſmall Rivulet of very good Water, which is melted from Snow. Upon the Hills we found abundance of Slate Stone, which made it good walking; but at the Sea Side, where the Rivulet came down, we found very good black Marble, with white Veins in it.

" The Point where we loſt our Ship I called *Speedill*; the high Hills I called King *Charles's Snow Hills*; and the next Point to the Southward, which is the Weſtermoſt Point of *Nova Zembla*, I named *James's Foreland*, and the Point to the Northward, *York Point*. *Speedill* lieth in the Latitude of 74 Degrees 30 Minutes North, and in the Longitude, Eaſt from the City of *London*, 63 Degrees; the Variation of the Compaſs is 13 Degrees Weſt, and it is full Sea at the South-weſt Moon. The Tide riſeth eight Feet, and ſetteth directly upon the Shore, which is a certain Sign that there is no Paſſage to the Northward. The Sea Water, about the Ice and Land, is very ſalt, and much ſalter than any I ever taſted, and a great deal heavier, and, I may certainly ſay, the cleareſt in the World; for I could ſee the Ground very plain in eighty Fathom, which is four hundred and eighty Feet, there being few Steeples ſo high as that was deep, and I could ſee the Shells at the Bottom very plain."

Upon this Account, and theſe Reflections, I have only a few of theſe Obſervations to make. In the firſt Place, it is owned by Captain *Wood*, that he did not ſail ſo high as the *Dutch* did by four Degrees; in this he ſays he was hindered by Ice, and no Doubt he might be ſo; but his Concluſions from thence, that it is impoſſible to proceed higher that Way, and that the Accounts we have of thoſe who have proceeded farther, are to be regarded as fictitious, is very wild and extravagant; for that it is poſſible to ſail to the ſouth of *Greenland* is notorious, and that there may be a Channel between this broken Land and *Nova Zembla*, is more than probable; but that this Channel may be very difficult to find, may be free from Ice but for a ſmall Part of the Year, and that in ſome hard Winters it may not be free at all, is very poſſible.

In the next Place, I muſt take notice, that notwithſtanding we ſee it laid down, that ſearching higher than ſixty-four Degrees on the North-weſt Side is to no Purpoſe, becauſe if a Paſſage could be found in a higher Latitude, it would be impracticable on the Score of Ice and Cold, yet we ſee that a Paſſage has been ſought on the North eaſt Side; and as a Company of *Dutch* Merchants affirm, without any Reaſon for affirming it if it was not true, that ſuch a Paſſage has been found into a Sea free from Ice; this ſhews that Opinions ought not to be too haſtily taken up, which limit the Intelligence and Power of Mankind; and that we ſhould not be over-ready to liſten to ſuch Doctrines in Geography or Navigation, as are evidently dictated by Diſappointment.

My laſt Obſervation is, that on the North-eaſt, as well as on the North weſt, there appear to be broken Lands, which, if we conſider the Nature of Things, ſeem to indicate a Paſſage; and that ſuch a Paſſage on either Side is worth ſeeking, by the Inhabitants in the Northern Part of the World, will appear plainly to any Man who conſiders the Nearneſs of that Paſſage, in Compariſon of the Streight of *Magellan*; and therefore we need not at all wonder, that from Time to Time new Attempts are made, notwithſtanding repeated Diſappointments. I muſt confeſs, that with reſpect to us, a North weſt Paſſage deſerves the Preference, becauſe of our Poſſeſſions in *Hudſon's Bay*, which would enable us the better to ſecure it;

an

and therefore I confeſs it appears to me highly reaſonable, that if a Reward of 20000*l.* ſhall be found not to produce the deſired Effect, it ſhould be enlarged to 100000*l.* for this plain Reaſon, that the Benefit of this Paſſage, when found, would reſult to the Public; and the Reward for finding it, however large, as it would be paid to our own Subjects, ought not to be eſteemed either a Burden or a Loſs to the Public.

6. The Situation of the Dominions of *Ruſſia* is ſo favourable for Diſcoveries on this Side, that it may be juſtly wondered we have not long ago had a clear and certain Relation from the Subjects of that Empire, in Reference to their Commerce with the Nations inhabiting the Northern Parts of *Aſia*; but partly from our Want of Correſpondence formerly with the *Ruſſian* Court, partly from the great Ignorance of the People inhabiting the Northern Provinces of that Empire, and partly from the frequent Revolutions to which their Government has been always ſubject; ſo it has fallen out, that till within this laſt Century we have never had any conſiderable Informations from thence; and even now we are very far from having ſuch clear and diſtinct Accounts, as are neceſſary to reſolve this great Queſtion, whether there is, or is not, a Paſſage to the North eaſt?

Thus much, however, is pretty clear, that the Streights of *Weygatz*, as they were called, do not open into the Sea of *Tartary*, or the *Northern Ocean*, but into a Gulph which is bounded on the North-eaſt by a high mountainous Country, by which it is joined to the Continent; neither have we any abſolute or poſitive Account, that the Sea, to the North of *Nova Zembla*, is navigable or free from Ice. But in the Reign of *Peter the Great*, and ſince his Time, vaſt Diſcoveries have been made to the Eaſtward, and through that Sea, into which Ships muſt neceſſarily come, if a North-eaſt Paſſage could be found. The River *Lena* falls into the *Northern Ocean* very near, if not under, the *Polar Circle*; and from thence the Continent extends two hundred Leagues to the Mouth of the River *Kebuma*, all which is ſubject to the *Ruſſians*.

Beyond this River lies the Country of the *Tychaltſki*, a very barbarous and warlike People, who poſſeſs a Country one hundred and twenty Leagues in Extent, from Weſt to Eaſt, and is the utmoſt Bounds of *Aſia* on that Side. This Country, which reaches as far North as 66 Degrees, is alſo the Extremity of that great Peninſula, to which the *Ruſſians* have given the Name of *Kamſchatka*; the Weſt-ſide of which is, in a good Meaſure, under their Power, and ſome Settlements they have on the Eaſt. The Southern Extremity of this Peninſula, is that Country ſo well known to the World, by the Name of the Land of *Jedzo*, directly over againſt *Japon*; ſo that this great Peninſula has the Ocean on the North and on the Eaſt, the Sea of *Japon* on the South, a Gulph of its own Name, which divides it from *Corea*, *Chineſe Tartary*, and the Dominions of *Ruſſia*, to the Weſt; it extends from the Latitude of 39 to 66 Degrees, and contains 15 Degrees of Longitude, or thereabouts.

On the Eaſt-ſide of this Country lies a very large Iſland, called *Puchochotſki*, extending from the Latitude of 59 to 63 Degrees; the Inhabitants of which are tributary to the *Ruſſians*. To the South of this lies another large Iſland, from 51 to 55 Degrees; the Inhabitants of which are a very warlike People, hitherto unſubdued, and with whom the *Ruſſians* trade for Caſtors, and other rich Furs. It is from this Iſland that one Mr. *Stoller*, a famous Botaniſt, failed laſt Year upon Diſcoveries, and is ſaid to have found but a very ſhort Paſſage to the Coaſts of *North America*. The Reader will eaſily apprehend this, if he pleaſeth to conſider what we have heretofore delivered, of the Situation of the Countries on this Side, from the Frontiers of the *Ruſſian* Dominions, to *California*; for, without doubt, in the Accounts we have from *Peterſburgh* of this Matter, they can mean no more by *North America*, than that Mr. *Stoller* had diſcovered Iſlands to the Eaſtward of thoſe with which the *Ruſſians* were hitherto acquainted; but whether theſe belong ſtrictly to *America* or not, is a Queſtion, that till we are better acquainted with the Nature of this Diſcovery, cannot be reſolved. The Reaſon I have mentioned it is, becauſe it affords a clear and certain Proof, that if we could paſs to the North-eaſt of *Nova Zembla*, we ſhould find a ſhort and eaſy Way to *Japon* and *China*; notwithſtanding all that has been before aſſerted by Captain *Wood*, who, from his own Account, appears not to have failed far enough to the North, to be able to contradict, with any tolerable degree of Aſſurance, the Truth of what was aſſerted by the *Dutch* Navigators, upon the Faith of actual Diſcoveries; for he was ſhipwrecked in the Latitude of 74 Degrees, and they paſt to the North of *Nova Zembla*, in the Latitude of 80 Degrees; and if they could have perfected that Diſcovery, there is no doubt but that, by this Time, all the Trade of *China* and *Japon* had been carried on that Way; for it appears clearly, from the *Ruſſian* Accounts, that thoſe *Dutch* Navigators were actually advanced into that Part of the *Northern Ocean*, which waſhes the Coaſt of *Kamſchatka*, and conſequently had no great Impediments to hinder them in their Paſſage to *Japon*, and from thence to *China*.

7. We will conclude this Section, with obſerving, that from the Nature of the Tides in *Hudſon's Bay*, on the Coaſt of *Greenland*, and in other Parts of the North Seas, it is apparent that ſome Way or other they have a Communication with the Ocean, for otherwiſe it is ſimply impoſſible they ſhould riſe ſo high as they do; and therefore if after all our Endeavours no Paſſage ſhould be found to the North-weſt or North-eaſt, we may reſt ſatisfied, that this Communication is from the North; and that by paſſing round *Spitzbergen* or *Greenland*, we might enter what is called the *Tartarian* Sea, or that Part of the Ocean which waſhes the Northern and Eaſtern Extremities of *Aſia*. This might always have been diſcovered by dint of reaſoning, ſince the Figure of the Globe, and the Diſpoſition of the ſeveral Parts of it, have been tolerably known; but in Proportion as the true Figure of the Earth has been found out, by the Skill and Labour of Mathematicians; and as their Accounts of this Matter have been juſtified by Experiments, this has grown clearer and clearer; ſo that at preſent there can remain few or no Doubts about it, in the Minds of thoſe who are competent Judges of the Subject.

It ſeems therefore to be a Point of the greateſt Importance to make the beſt and ſpeedieſt Uſe of the ſeveral Lights we have received that is poſſible, in order to obtain a Share, at leaſt, in the vaſt Advantages that muſt neceſſarily accrue from the being able to extend our Navigation through any of theſe Paſſages. We have certainly, in this Reſpect, as great or greater Opportunities than any of our Neighbours; and there ſeems to be, at preſent, ſuch a Spirit in the trading Part of our People, as would diſpoſe them to be at any Expence that ſhould be neceſſary to carry Attempts of this Nature into Execution. There is, likewiſe, another Motive to excite our Induſtry, in this Reſpect, which is the Incertainty of our being able to ſecure any Advantages we might deſire from a Trade through *Ruſſia*, which we are told, of late, is become more and more precarious. But if we could once perfect this Deſign, of penetrating into the Eaſt by a new Paſſage, we ſhould not only be leſs dependent upon the Courteſy of that Government, but likewiſe have it in our Power to make it more dependent upon us, in caſe we ſhould be able to fix a conſiderable Settlement on any Iſland in thoſe Parts.

There is no doubt but abundance of Objections may be raiſed to a Scheme of this Nature, which at preſent would be very difficult to anſwer, becauſe we muſt proceed on both Sides, merely upon Suppoſition; but if the Diſcovery was once made, the Caſe would be altered, and the Advantages flowing from it would encourage us to take ſuch Meaſures, as by the Help of our great maritime Power, which can never be better employed than in ſupporting the Commerce of the Nation, might ſecure to us the Trade of theſe *New Indies*. If any thing delivered in this Performance, either now or at any Diſtance of Time, ſhall fortunately lead to promote or facilitate ſuch a Diſcovery, it would fully anſwer the Ends of its Author; and if not, he muſt be content with the Satiſfaction of having offered all that occurred to him upon a Subject, which he thought might be improved to the Benefit of his Country.

CHAPTER II.

Comprehending ſuch VOYAGES and TRAVELS, as relate to the Northern Parts of *Europe*, and ſuch of the Countries adjacent, as are ſubject to any of the *European* Powers.

SECTION I.

A VOYAGE *to the* NORTH, *containing an Account of the* SEA COASTS *and* MINES *of* Norway, *the* Daniſh, Swediſh, *and* Muſcovite Laplands; Borandia, Siberia, Samojedia, Zembla, *and* Iceland; *with ſome very curious Remarks on the* Norwegians, Laplanders, Ruſſians, Poles, Circaſſians, Coſſacks, *and other Nations.*

Extracted from the Journal of a Gentleman employed by the North-Sea Company at *Copenhagen*; and from the Memoirs of a *French* Gentleman, who, after ſerving many Years in the Armies of *Ruſſia*, was at laſt baniſhed into *Siberia*.

1. *Introduction to this Section; an Account of the Author; the Occaſion of his Voyage; his Arrival in* Norway; *and Obſervations made by him on the Country; its Produce and Inhabitants.* 2. *His Arrival at* Berghen; *Journey from thence to the Copper and Silver Mines; with other curious and entertaining Particulars.* 3. *He proſecutes his Voyage from* Drontheim; *the Practice of the* Laplanders *in ſelling Winds; and the Nature of that Impoſture detected.* 4. *He is driven by a Storm on the Coaſt of* Daniſh Lapland; *an Account of that Country; its Produce and Inhabitants; their great Poverty, and their Willingneſs to exerciſe Hoſpitality ſo far as is in their Power.* 5. *The Author's Journey, from the* Daniſh *to the* Muſcovite Lapland; *a Deſcription of the Sledges, Rain Deer, and other Singularities of thoſe Parts.* 6. *The Proſecution of this Subject; an Account of the* Kilops, *the moſt brutal and Savage of any of the* Lapland *Nations; and the Author's Arrival at* Kola, *the Capital of the* Muſcovite Lapland. 7. *His Departure from* Kola, *and his Adventures in his Return; with a Deſcription of the Manner in which the* Laplanders *travel in their Snow-Shoes.* 8. *A Deſcription of the Coaſts of* Borandia; *the Manner of his firſt Interview with the People of that Country; the Motives which induced him to think of making a Journey from thence by Land, to* Siberia. 9. *The Manner in which he and his Companions travelled to* Vitzora; *their Reception by a* Ruſſian *Governor; Trade with him for Furs; and obtain his Leave and Aſſiſtance for continuing their intended Journey.* 10. *They proceed from thence to* Petzora, *trade by the Way, and are kindly treated by the Inhabitants.* 11. *The Author enters* Siberia; *Deſcription of that Country; Manner in which thoſe People live, who are exiled; his Conference with a* French *Gentleman baniſhed thither, who made him a Preſent of his Memoirs.* 12. *An Account from thoſe Memoirs, of the Manners, Cuſtoms, and Vices of the* Ruſſians; *their Religion, Contempt for Learning, and Obſtinacy in adhering to their own Sentiments.* 13. *The ſecret Hiſtory of a* Ruſſian *Princeſs, who, by a malicious Contrivance, was hindered from eſpouſing the* Czar Alexis, *Father to the late* Peter I. *and other Particulars.* 14. *Of the Dignity of the Patriarchs of* Ruſſia; *the ſtrange Superſtition of the People; the Manner of their puniſhing Heretics, and other things worthy of Notice.* 15. *Of the* Circaſſians *and* Coſſacs; *of the Laws of* Ruſſia; *of the* Ruſſian *Letters; Manner of writing; and Character of the then reigning Emperor.* 16. *The Riſe and Progreſs of the* Ruſſian *Empire; the Hiſtory of* John Baſilowitz; *and a remarkeable Story of the* Engliſh *Embaſſador, Sir* Jerom Bowes, *with other Events during his Reign.* 17. *The Derivation of the Word* Czar; *the Stile of the* Ruſſian *Emperor; and an Account of his Family and Court.* 18. *Of the* Czar's *Revenues; the Empreſs's Court; and the Manner in which Ladies of Quality travel in that Country.* 19. *Of the Nature of the Puniſhments in* Ruſſia; *Manner of inflicting them; with various other Particulars.* 20. *Some Account of the* Poles; *the ſtrange Diſeaſes to which they are ſubject; and a Compariſon between the* Poliſh *and* Ruſſian *Language.* 21. *The State of the* Ruſſian *Empire at that time; the principal Favourites and Miniſters; with ſome very curious and remarkable Paſſages relating to the Politics of that Court.* 22. *Of the Commodities and Trade of* Ruſſia; *and of the Methods uſed by the* Dutch *to recommend their own Wares, and prejudice thoſe of the* Engliſh. 23. *A large Deſcription of* Siberia; *the Manners of the Inhabitants, and thoſe who live amongſt them; with an Account of the Produce of that Country.* 24. *This Subject continued; and a Deſcription of the Fruits, ſtrange Beaſts, Birds, &c.* 25. *A ſhort Account of* Tartary, *and ſome of its Inhabitants, particularly the* Calmucs, *&c.* 26. *The Hiſtory of the Author's Travels reſumed; his Arrival at* Papinogorod; *and his Journey thence into* Samojeda; *Deſcription of that Country, and its Inhabitants.* 27. *He proſecutes his Travels to* Zembla; *Account of that Country, its Inhabitants, and the Fiſhery upon its Coaſts.* 28. *This Subject further proſecuted;*

cuted; the Fierceneſs of the Bears; ſtrange Birds there, and other Circumſtancies. 29. *Of the Author's Arrival in* Greenland; *an Account of the Herring Fiſhery, and his Voyage thence to* Iceland. 30. *A Deſcription of that Iſland, and its Inhabitants, with various other Particulars.* 31. *The Author's ſafe Return to* Copenhagen; *the Rarities preſented to the King of* Denmark; *and his Majeſty's Satisfaction with the Account given him of this Voyage.* 32. *The Author's Remarks, on the erroneous Accounts formerly publiſhed of the Countries through which he travelled.* 33. *Some farther Obſervations upon the Facts delivered in this Section.*

1. THE following Voyage, though written juſt a Century ago, has, notwithſtanding, a great Variety of Circumſtances, which ought effectually to recommend it: As for Inſtance, it relates to Countries that have been very little viſited ſince; and therefore what is written about them here may be conſidered as new, though penned at ſuch a Diſtance. The Author appears plainly to have been a Man of great Curioſity; one great End of his travelling being to inform himſelf; to which his principal Motive was the Deſire he had of informing others. He was remarkably fortunate in the Opportunities that offered themſelves for this Purpoſe; and he was no leſs diligent and aſſiduous in improving theſe Opportunities to the utmoſt. The Accounts he gives us are equally candid and circumſtantial; he ſhews much Willingneſs to acquaint us with what he ſaw, and with his Notions upon every Subject; he has added to his own Performance, that of another Perſon; who had the ſame Occaſions to make himſelf acquainted with the Interior of the Country, that he had to examine the Sea-Coaſt; he tells us very fairly how he came by theſe Memoirs; ſo that we have all the Reaſon in the World to be ſatisfied with his Conduct, and to think ourſelves obliged for the Care and Circumſpection he has uſed. There is no doubt, that many things will occur in the Peruſal of this Section, which critical Readers may ſee juſt Cauſe to diſlike; but we cannot expect that Men, who, like our Author, are driven all the World over for a Subſiſtence, ſhould have the ſame Qualifications with thoſe who ſpend all their Days at Eaſe, and in the quiet Purſuit of Learning, in a regular Method. We muſt take Mankind as they are, and judge of their Writings according to their Capacities; making ſuch Allowances as are reaſonable, and as we ſhould expect if we were in their Places. Theſe Travels follow very naturally, and may ſerve as a proper Supplement, in many reſpects, to what is laid down in the former Chapter; and having thus ſhewn the Nature of this Performance, and why we give it a Place here, let us proceed next in the Words of our Author:

About the Year 1647, *Frederick* the IIId King of *Denmark*, being deſirous to advance and increaſe the Trade of his Kingdom, eſtabliſhed two Companies of Merchants at *Copenhagen*, his capital City; the one was an *Iceland* Company, and the other was a Company of Traders to the North. The latter, having obſerved that the Trade to *Norway* was very beneficial, obliged all that were concerned in that Company to ſign a Petition to his *Daniſh* Majeſty, in *February* 1653, repreſenting that a great Profit would ariſe to his Subjects, by encouraging that Trade more, and enabling them to enlarge it, by making further Diſcoveries to the North, whence ſeveral rich Merchandizes might be imported. His Majeſty liſtened to their Requeſt, granted it, and allowed them to extend their Commerce as far Northward as they ſhould think fit; upon which they fitted out ſeverale Ships, to make a Voyage to *Norway* and the North. It happened I was at *Copenhagen* when one of the Northern Fleets was outward bound; and underſtanding the King had commanded the Undertakers of this Enterprize to make all poſſible Diſcoveries of the Countries to which they came, and to bring back the moſt rare Curioſities that they could find, I took a Fancy to the Voyage; one of the Company being my Friend, I went to him, deſired him to recommend me to his Partners, as a Perſon qualified to go Surgeon of one of the Ships. It was not difficult for him to ſucceed in procuring that Employment; the Company entertained me, and I entered into their Service.

All our Merchandize, Proviſions, and Neceſſaries, being aboard, we embarked in the Beginning of *April*, 1670, weighed Anchor, and ſet ſail with two Ships in our Company, and fair Wind and Weather, from the Port of *Copenhagen*. We had a freſh Gale at South-eaſt, till we arrived at *Kat-Gat*, a Streight which divides the *German* Ocean from the *Baltic Sea*. It is a very dangerous Paſſage, full of Rocks, and is forty Leagues in Length, from *Elſenore* to *Schagerhort*. When we came over againſt *Mailſtrand*, a little City and Sea-Port about thirty Leagues from *Copenhagen*, the Wind turned Northward, drove us back ten Leagues, and forced us to make ſome Port on the Coaſt. The firſt we came at we put into, and that was *Schalot*, a Creek; where we caſt Anchor, and rode ſafe under the Caſtle, which looked rather like a Heap of Ruins, than a Place that was inhabited: 'Tis famous only for its Promontory; well known to Mariners who uſe the *Baltic*. We ſtaid there near three Days; on the fourth, an Hour before Sun-riſing, the Wind ſhifted again to the Eaſt, ſo we weighed Anchor to proceed on our Voyage. We had not been at Sea above four Hours before the Wind varied to the North-eaſt, and blew ſo ſtiff a Gale, that we were obliged to leave the Coaſt of *Gottenburgh*, on which Shore we were then, and to ſteer directly over to that of *Jutland*. The Sands being frequent and ſhallow in thoſe Parts, we were obliged to be almoſt always caſting our Lead. As we ſailed along this Coaſt, a Guſt of Wind drove us to a Place where there were but three Fathom and a half Water; and we ſhould certainly have run aground, had not our Pilot, who was a very dexterous Seaman, immediately tacked; when, getting the Advantage of the Wind, in half an Hour we ſounded, and had fifteen Fathom Water.

By the Help of a ſide Wind, we held on our Way for near two Leagues from the Sands; here we found ourſelves in an Eddy, where we were as ſteady as if we had been at an Anchor. We preſently furled all our Sails except the Top-Maſt, endeavouring to keep ourſelves out of it; but all our Endeavours would have been in vain, had not the Wind varied a Point or two to the South-eaſt. We then looſed our Sails, got through it, the Wind blowing freſh, and ſailed towards the Coaſt of *Babus*; we continued our Courſe ſeveral Days and Nights; and about eight o'Clock one Morning diſcovered the Promontory of *Chriſtian Sand*, in *Norway*. The Village that gives Name to the Mountain is ſmall, the Port, however, is commodious. We did not ſtay long there, for the next Day we arrived at *Chriſtania*, or *Obſlo*, the capital City of one of the five Governments of that Kingdom. As ſoon as we were got into Port, we went aſhore to deliver our Letters to the Company's Agents; who received us with Joy, for the good News we brought them, of the King's giving Encouragement to the *Norway* Company, to make their Diſcoveries, and enlarge their Trade in the North. One of theſe Agents hearing I was a Stranger, and had been recommended to his Principals, by one of their Society, and not the leaſt conſiderable Merchant among them, was very civil to me, ſhewed me all that was worth ſeeing, and told me all that was worth knowing, relating to the Place at which we arrived. He alſo commanded a Servant of his, who ſpoke *French* tolerably well, to go with me into the Country three or four Leagues, that I might ſee more of it. Early next Morning we took Horſe, and rode to *Wiſby*, a large Village, nine Miles from *Chriſtiana*, which ſtands between two Mountains; the Houſes are very low, and of Wood, without Iron-work or Windows. There is a ſort of Lattice on the Top of the Houſes, to admit the Light, and they are all covered with Turf.

The Reader is deſired to take notice, that this is not

Wiſby, the capital City of *Gothland*, where the Marine Laws were made, which are ſo famous. The *Norwegian* Peaſants are ſimple, and very hoſpitable: They are all Fiſhermen; their only Trade is in Herrings, Cod, Stock-fiſh, and other Fiſh freſh ſalted or dried: They are Slaves to the Nobility. The *Norwegian* Women are very handſome, though they are red-haired; they love Strangers, and are good Houſewives: They ſpin, and make Cloth for their Families; they look after the Cattle, of which their are great Numbers of all Kinds, as in *France*. There is alſo plenty of Game in this Country; as Elks, Stags, Roebucks, Boars, Goats, Rabbets, Hares; all Sorts of wild Fowl, Otters, Linxes, and wild Cats of divers Colours. All *Norway* is a mountainous Country, and conſequently Bread-Corn will not grow there in any Quantity; but the Inhabitants are abundantly ſupplied from other Parts, by their Commerce, and what they want of Corn-Ground, is made up in Paſtures and Woods. As we were returning towards *Chriſtiana*, we met a Gentleman of the Neighbourhood, followed by two Servants and ſome Dogs, going a Hunting: He knew the Man that was with me, and aſked him if he would divert himſelf with an Elk-Chace, bidding him aſk the ſame Queſtion of me. We had Time enough upon our Hands, ſo we readily accepted his Propoſal. After we had rid about a Mile we met his Huntſman, ſome other of his Servants, and ten or twelve Boors, who led us three Miles further, to a Wood full of Buſhes; when we came to the Entrance of it we alighted, and gave our Horſes to one of his Domeſtics.

The Chace had been prepared the Day before by the Gentleman's Vaſſals, or rather Subjects; for the Nobility of *Norway* are Sovereigns under the King, in their own Territories. We were ſcarce forty Yards within the Wood, before we perceived an Elk running towards us; but before we could fire a Piece he dropped. I aſked of my Guide and Interpreter, how the Beaſt came to fall down dead in that manner? He anſwered, It was the Nature of that Animal to be taken thus with a kind of Falling-Sickneſs, which often ſeized him in the Beginning of the Chace. I did not ſtand to reflect whether his Fears might not contribute to his Diſtemper. I ſeemed to doubt the Truth of it, and thought it to be an Accident which did not often happen; my Guide aſſured me to the contrary, adding, that from this Diſeaſe they were called *Elks*, or miſerable Creatures. The Beaſt is as big as a great Horſe, his Body like a Stag's, but larger and longer; his Legs are long, his Feet broad and cloven, his Antlers great, hairy, and broad, like a Fallow-Deer's, but not ſo well furniſhed with Horns as a Stag. Had he not dropped as he did, I believe it would have been hard for us to have brought him down, as I perceived ſoon after when we had rouzed another, which we chaſed above two Hours before we could catch him; and we had never caught him had he not dropped down dead, as the other did. He killed three of the Gentleman's beſt Dogs with his Forefeet; the Gentleman was extremely ſorry for the Loſs of them, and would hunt no more. He ſent to a Farm of his a Mile off for a Cart, to carry the Game we had caught to his Caſtle; we accompanied him thither at his Requeſt: It was built like the reſt in that Country, after an odd manner; ſtood four Miles from *Wiſby*, and he treated us there very ſplendidly.

My Guide telling the Lord of the Caſtle that I was a *Frenchman*, employed by the *Norway* Company at *Copenhagen*, he made me a Preſent of the twohinder Left-legs of the two Elks we had killed, or rather ſeen die of themſelves; giving me to underſtand it was no ſmall Favour, thoſe Legs being an infallible Cure of the Falling-Sickneſs. I replied by my Interpreter, I wondered, ſince the Foot of an Elk had ſo much Virtue in it, why the Animal that carried it always about with him, did not cure himſelf. The Gentleman reflecting on what I had ſaid, laughed out aloud, and told me I was in the right; for that he had given it to ſeveral Perſons afflicted with the ſame Diſeaſe, and it did not cure them; wherefore he had a long time ſuſpected that the pretended Virtue of the Elks Foot was a vulgar Miſtake; of which, he ſaid, he did no more doubt than that the eating of the Fleſh of the Beaſt infected People with their Diſtemper. He gave me many Inſtances of the bad Effects eating Elks Fleſh had on Human Bodies. I anſwered, the Nails of theſe unhappy Perſons would be a more ſovereign Cure in an Epilepſy, than thoſe of an Elk.

The Gentleman obliged us to lodge with him that Night; and early the next Morning, after we had made a good Breakfaſt, we took our Leaves of him and returned to *Chriſtiana*, where we ſtaid four or five Days; and having received further Orders and Directions from the Company's Agents there, embarked, weighed Anchor, and made the beſt of our Way for *Berghen*. We had a freſh Gale at North-eaſt till we arrived at *Strafanger*, where we were on a ſudden becalmed; and having nothing elſe to employ ourſelves about, we fell all to fiſhing; there is abundance of all Sorts of Fiſh on the Coaſts of *Norway*; we got ſuch Store by our Fiſhing that we were forced to keep *Lent* a long while after, being unwilling to throw the Fiſh overboard: The Calm laſted five Days. On the 6th, towards Evening, it blew up a briſk Gale South-eaſt, by which in a few Days we reached the Port whither we were bound to unload the Merchandize we had taken in for that Place.

2. We anchored in the Port of *Berghen*, one of the fineſt in *Europe*; and when our Cargo was unladen, I went to ſee the City, which is as large as *Abbeville*; it is divided into the high and low Town; the one built on Rocks, the other on the Sea-Shore. It is full of Merchants, and was formerly an Archbiſhopric, which was aboliſhed upon the Reformation of Religion in the King of *Denmark*'s Territories. The Epiſcopal Palace was given to the *Hanſe-Towns*, the principal of which are *Hamburgh*, *Lubeck*, and *Bremen*, for the antient Merchants to live; and the greateſt Part of the Houſes were turned into Warehouſes, from whence they are called *Cloiſters*, and the Merchants *Monks*, though they do not wear a Cowl, nor obſerve the Rules of any Order. This Place, in the Popiſh Times, belonged to a Convent adjoining to the Epiſcopal Palace; and when it was granted to the Merchants, trading to and from the *Hanſe-Towns*, the King obliged them to keep up the Form of a religious Houſe ſo far, that no-body ſhould marry who lived in it.

He that will have a Wife muſt leave the Cloiſter, and live elſewhere; however, he may deal and correſpond with his Brethren, whoſe principal Trade is in Herrings, Cod, and Stock-fiſh, Commodities that go off in great Quantities, in *Muſcovy*, *Sweden*, *Poland*, *Denmark*, *Germany*, *Holland*, and other Parts of *Europe*. As ſoon as we had diſcharged the Cargo we had to deliver at *Berghen*, we ſet ſail for *Drontheim* with a South-Weſterly Wind; we were to unlade above half our Lading there; it was conſigned to the Surveyor of the Copper and Silver Mines, for the Uſe of the Workmen and Miners whom he employed in that Service, and conſiſted in a Supply of Bread and Bear. We were ſcarce half Way thither when the Wind blew ſo ſtiff, that in fifteen or ſixteen Hours we found ourſelves over-againſt *Stora*, where it ceaſed on a ſudden, and the Storm was followed by a Calm, the moſt uneaſy Thing in the World to Mariners. We were obliged to return to our former Diverſions, and ſo ſpend the Time, that we could not tell how to paſs away better, in fiſhing. We took ſuch a prodigious Quantity of Klip Fiſh, that we were forced to ſalt and barrel a great Part of them up; and they were very ſerviceable to us in the Courſe of our Voyage. Klip Fiſh are a Sort of Cod, bigger than thoſe of *Newfoundland*; they never leave the Rocks, lying always upon or under them, from whence they are called *Klip Fiſh* in *Germany*, which ſignifies *Rock Fiſh*.

The Calm held ſeveral Days, and then the Wind blew a freſh Gale Weſt-ſouth-weſt, which was fair for us, and in three Days we arrived at *Drontheim*. When we came aſhore we delivered our Letters to the Surveyor-General of the Mines. By theſe Letters the Surveyor was ordered to unlade our Ships as faſt as poſſible, that we might purſue our Voyage. He told us he could not go to work until the Officers who were to receive the Proviſions came back from the Mines, whither they were gone about thoſe Works: We preſſed him to haſten our Diſcharge, and he offered to ſend a Meſſenger on purpoſe to fetch an Officer to unlade us. I deſired Leave of our Maſter to accompany the Meſſenger, which having obtained, the next Day by times in the Morning the Surveyor's Man and I mounted on Horſeback, and departed for the Mines. When we came to *Steckby* we were obliged to put up, the Night coming on, and we had a long Wood to go through, wherein were Boars, Wolves, and Linxes, in great Numbers, very dangerous for Paſſengers to encounter.

The Road was ſo rocky, that we could reach no farther in a whole Day, though that Town was ſcarce eighteen Miles from *Drontheim*. The next Morning, before Sun-riſe, we left *Steckby*, and proceeded towards the Mines, where we arrived juſt as it was Night, and lodged at the Forges; we were entertained by the People who had the Charge of the Mines, according to the Cuſtom of the Country, with Tobacco, Beer, and Brandy.

Our Hoſt believed we would not think ourſelves welcome unleſs we were made drunk, and therefore plied us ſo faſt with Bumpers that there was no avoiding a Debauch. I met with an Officer there who ſpoke *French*, having waited upon a *Norwegian* Gentleman in *France*. I told him that I came out of Curioſity to ſee the Mines, and I begged him to let me enter them; he promiſed I ſhould do it on the Morrow; and after two Hours drinking and talking, he permitted me to go to Bed. The next Day as ſoon as it was light, the Meſſenger that came with me to the Mines poſted for *Drontheim* with one of the Officers who were to receive the Proviſions we brought for the Mines. I was left at the Houſe of a Maſter-Miner, who went to *Drontheim* the next Day, and I was glad of the Opportunity of his Company, by which Means I had a whole Day to ſpare to viſit the Mines and Miners. When I roſe I went to the Officer that ſpoke *French*, and he had provided a Breakfaſt for me and the Maſter Miner, my Landlord, whom he deſired to ſhew me the Way down into the Mines, that I might ſee them work. When we had breakfaſted, and it is obſervable that the *Norwegians* are much given to Drinking and Good-cheer, we went fifty or ſixty Paces from the Forges, which are on a high Mountain; there we came to the Mouth of one of the Mines; over which was erected a Machine like a Crane, turned by two Men in two great Wheels, to draw up Pieces of the Mine, as Maſons draw Free-ſtones out of the Quarries near *Paris*, or Potters their Clay, in many Places in *France*. The Maſter-Miner and I were put into a wooden Tub, and our Hands into Iron Bands faſtened to it: Thus we deſcended into the Mine above fifty Fathom deep.

When we got to the Bottom of it, it looked like *Pluto*'s Kingdom; there was nothing to be ſeen all round but frightful Caverns, flaming Fire, and Creatures more like Devils than Men: They were cloathed with black leathern Jackets, each having a Camail, ſuch as our Prieſts in *France* wear in Winter; a Piece of patched Leather about the Head of each Miner, a little above the Noſe, and hangs down to his Breaſt like a Muffler; they have all Aprons of the ſame. The Miners are conſtantly and differently employed; ſome uſe the Chiſſel, ſome the Hatchet, to knock out the Copper Stones; others look after the Veins of Copper, or ſound, to try if they can diſcover any Water-place, which ſometimes is hid in the Bowels of the Earth, and breaking forth on a ſudden drowns them all that don't take care. The Maſter-Miner who deſcended with me into the Mine, perceiving I was afraid, and that I was taken with a cold Fit, rung a Bell; which was to give Notice to the People above, that they ſhould draw us up again; accordingly we got up with the ſame Eaſe that we went down. I was very glad to breathe the ſerene Air, free from the unwholſome Damps of theſe ſubterranean Dwellings. I had ſeen enough to ſatiſfy my Curioſity, and could I with Safety have ſtaid longer, there was little more to be ſeen.

We went to the Officer's Houſe, who could diſcourſe with me in my own Language, and were entertained very handſomely and generouſly by him; his travelling having rendered him more polite than his Bretheren at the Mines; after Dinner he ordered Horſes to be got ready, to ride to the Silver Mines. The Officer, the Maſter-Miner, and myſelf, went thither; where we waited on the Surveyor of the Works, who made us heartily welcome, preſented each of us with a great Glaſs full of Brandy, drank off one of the ſame Size to ſhew us the Way, and then gave us the ſecond Courſe in the *Norwegian* Collation, Beer and Tobacco. When we had ſmoaked and drank as much as the Surveyor thought fit, he conducted us to the Forges, a Mile off his Houſe; at which, as in the Copper Mines, there are ſeveral Workmen always employed. Some break the Stones, others waſh them, others melt and refine the Ore, and others coin the Money for the King of *Denmark*. Theſe Mines turn both very well to account, and are not the leaſt Part of his *Daniſh* Majeſty's Revenue. From the Forges we went to the Mine that was next to it; 'twas on a high Mountain; the Maſter Miner and I were let down, as at his own Mine, and I ſaw nothing there which I had not ſeen before in that of Copper. Theſe Miners are cloathed like the others; and their Work and Habitations ſeemed much the ſame. They, both the one and the other, leave off working in the Mines in the Winter; Spring, Summer, and Autumn, being the only Time of their Buſineſs. They work in the Spring and Fall three Hours in the Forenoon, and three after Dinner; in the Summer, four Hours in the Morning, and five after Dinner; the reſt of their Time they ſpend in Mirth and Feaſting. They delight much in dancing, and have their Hautboys, Violins, and other Inſtruments, for that Purpoſe.

When I returned to the Copper Forges, I found the People at their Sports, and was not a little pleaſed to ſee the Variety of their Humours and Paſtimes. For three Months, in the dead of the Winter, they don't work at all; nevertheleſs they receive their full Pay, at the rate of a Crown a Day. Having ſeen all that was to be ſeen at the Silver Mines, the Surveyor took us home with him, gave us ſuch another Collation as we had before, and a good Supper after it. When we had all of us ſufficiently refreſhed ourſelves, we went to Bed; and the next Morning the Maſter Miner and I took our Leaves of the Surveyor, who had provided a plentiful Breakfaſt againſt we got up; and rode from his Houſe to the Copper Mines, where I thanked the Officer, that ſpoke *French*, for his Civilities; and the Maſter-Miner, and myſelf, ſet out for *Drontheim*. Night overtook us by the Time we were got eight Miles from the Mines, which put us on a Neceſſity of taking up our Quarters at a Boor's Houſe, in the next Village we came to. The Peaſant knew my Companion, and thought himſelf highly honoured in ſuch a Gueſt: He therefore did his utmoſt to treat us to our liking.

He provided two Pheaſants, and a Hare he had lately killed, for our Supper; that Game being free for the Boors in thoſe Parts, they are ſeldom unfurniſhed with it. Before we ſat down he brought us his Tobacco, Beer, and Brandy, made of Malt Spirits. After Supper we all of us fell to ſmoaking like Dragons, and drank Brandy and Beer almoſt all Night, which was the moſt beaſtly one I ever ſaw in my Life; but 'tis the Cuſtom of the Country; and both the Gentry and People, by Converſation and Merriment, mean only Lewdneſs and Debauchery. The Peaſant perceiving the Maſter Miner was quite drunk, was ſo rejoiced at it, that he ſoon became in as bad a Condition himſelf. We had all now had our Doſe, and ſome clean Straw was brought and ſpread in the Middle of the Chamber, to ſerve us inſtead of Beds. We lay down together and ſlept till Morning. The Sun was up before the Maſter-Miner and the Boor waked. I ordered, as well as I could, our Horſes to be got ready; reſolving, if poſſible, to get to *Drontheim* that Day. I made the Boor's Sons gueſs at my meaning by Signs. Our Horſes were ſaddled, and then I waked my Companion and his Hoſt. They were no ſooner up, than we muſt again fall to eating and drinking; that Work done we mounted on Horſeback, took our Leaves of the Peaſant, and made the beſt of our Way to *Drontheim*; where we arrived before it was dark.

3. Two Days after I thus returned to *Drontheim*, all our Cargo was unladen, and we had taken aboard the Pro-

Proviſions the Surveyor General of the Mines was to furniſh us with; the Wind ſetting fair we embarked, and a few Hours after ſet ſail to continue our Voyage to the North. The Wind held fair ſeveral Days, till we were under the Arctic Polar Circle, where we were becalmed on the Coaſt; ſome of our Crew were ſo ſuperſtitious, as to give Credit to the common Tradition, that the Inhabitants of the Country, under that Circle, as well as thoſe that dwell on the Coaſts of *Finland*, are Wind Merchants, and can raiſe and ſell a Gale when they pleaſe: Certain it is they are almoſt all of them Wizards, and, as Children of the Prince of the Air, pretend to diſpoſe of the Wind as their proper Merchandize. We were impatient of lying on that Coaſt, and that Impatience put us upon trying any Means, however improbable, to ſucceed, rather than ſtay there any longer. The Captain of our Ship was for trading with the Wizards; accordingly he ſent his Long boat aſhore with his Mate, to traffic with theſe Traders, and purchaſe a Wind of them, the Commodity we ſtood moſt in need on at that Time. Though I believed nothing of the Matter, I had the Curioſity to accompany him. We landed at the firſt Village we came to, applied ourſelves to the chief Necromancer, told him what we wanted, and aſked if he could furniſh us with a Wind that would laſt till we arrived at *Mourmanſkincre*. The Mate could ſpeak enough of his Language to underſtand him, and to be underſtood. The Conjurer gravely replied, No; his Power extended no farther than the Promontory of *Rouxella*. We had a great Way thither, and if we reached ſo far, we thought we might eaſily make the North Cape; ſo the Mate deſired him to go aboard with us, and drive a Bargain with our Captain. The Wizard conſented to the Propoſal, took three of his Comrades with him, leapt into a ſmall Fiſher-Boat, and went aboard our Ship.

Our Captain and he ſoon agreed upon the Price; he was to give him ten Kronen, about five or ſix and thirty Shillings in *Engliſh* Money, and a Pound of Tobacco; for which the Wizard was to furniſh a fair Wind as far as *Rouxella*. When the Bargain was made, and the Money paid, the Wizard tied a Woollen Rag to the Corner of our Foremaſt; 'twas about half a Yard long and a Nail broad; it had three Knots; and this was all our Captain had for his ten Kronen. When the Necromancer had done this Feat, he returned in his Boat to the Village with his Companions. The Captain of our Ship, according to the Inſtructions he had received from the Conjurer, untied the firſt Knot in the Rag, and immediately the Wind ſtruck up Weſt-ſouth-weſt a briſk Gale, and drove us, and the other Ship in our Company, thirty Leagues beyond *Maelſtroom*, without giving our Captain any Occaſſion to untie the ſecond Knot; and this Accident confirmed our Crew in their diabolical Superſtition. This *Maelſtroom* is the greateſt Eddy or Whirlpool in the *Norwegian* Sea; in which many Veſſels that approached too near it have periſhed. For this Reaſon, ſuch as are acquainted with thoſe Coaſts, keep out to Sea eight or ten Leagues to avoid it, and the Rocks that lie off *Oſtraford*, oppoſite to *Maelſtroom*. There are ſeveral ſuch Eddies, five, ſix, and ſeven Leagues from the Shore; and this Danger obliges all Pilots to keep far out to Sea.

The Wind beginning to ſhift a little, and inclining to the North, our Captain untied the ſecond Knot, which kept it in its old Corner, till we made the Promontory of *Rouxella*. When we had paſſed it, the Needle of our Compaſs turned back half an Inch, by which ſome fancied that there was Loadſtone in the Mountain; and had not we had a very dextrous Pilot, we ſhould certainly have loſt our Courſe. Knowing that the other Ships in our Company were in the ſame Trouble as ourſelves, our Pilot ſhut up his Compaſs, and hung out a Flag on his Foremaſt Top, as a Signal for the other Ships to follow us; he was very well acquainted with the Coaſts and Courſe, having often piloted the *Dutch* Ships trading that Way; in which he had no other Helps than his Sea Charts. We were two Days and two Nights in this dangerous Condition, having nothing to depend on but the Pilot's Experience. On the third Day, being far diſtant from the Mountains of *Rouxella*, the Needle of our Compaſs pointed again to its Object; from whence we concluded that we drew near the North Cape; where the Wind failing us, our Captain untied the third Knot, at which there aroſe a North-north-eaſt Wind, ſo furious, that we thought the Heavens would fall down upon us; and that God would juſtly puniſh us with Deſtruction, for dealing with infernal Artiſts, and not truſting to his Providence; we could bear no ſail during the Tempeſt; our Ship drove at the Mercy of the Winds and Waves, which toſt us ſo violently, that we expected every Minute to go to the Bottom.

The Reader will, doubtleſs, wonder at theſe ſtrange and extraordinary Paſſages, in regard to the Witchcraft of theſe Northern People; and therefore it is neceſſary to inform him, that their Witchcraft, like moſt other ſorts of Witchcraft, is downright Fraud and Impoſture. They have in theſe Countries many deep Caverns, and ſubterreaneous Grottoes; by their Obſervations in which, they are able to judge of the Variation of Winds for ſeveral Days to come; and they take care to ſtart ſo many Difficulties in making their Bargains, that they are ſure never to come to a Concluſion till the Signs appear, by which they are morally certain that thoſe Winds will blow which they pretend to ſell. In the preſent Caſe it is evident, that the pretended Conjurer made a very prudent Obſervation before he made his Bargain with the Captain; which was, that his Power extended only to a certain Cape; but the Truth of the Matter was, that he very well knew, by Experience, that Cape was the Limit of his Obſervations, and that he ſhould riſque his Credit if he preſumed to exceed his Bounds. The People in *Iceland* are the moſt famous of any for carrying on this Trade of ſelling of Winds; and they ſell them with leſs Limitation, becauſe living in an Iſland, they are more able to judge of the Variation of Winds in all the Seas rounda bout them; and therefore it is from the Accounts given by ſenſible People who have lived in that Iſland, and who have taken Pains to enquire into this Matter, that we are able to give ſo good an Account of it. This Sort of Knowledge is kept in the Hands of a few People, who thereby awe their Neighbours, and cheat Foreigners. All this may be very naturally expected in a barbarous Country, where Learning and Religion are at a very low Ebb; and I believe it will be generally found, that in Proportion as People are little acquainted with the Word and Works of God, they are moſt apt to pretend to converſe with the Devil; and this ſeems to be confirmed by the declining of ſuch Notions, wherever the Lights of Reaſon and the Goſpel prevail.

4. Though we were not above ten or twelve Leagues from the Coaſt of the *Daniſh Lapland*, yet we did not imagine the Storm would throw us upon it; we feared the Winds ſo much, we did not think of Land; and when we thought ourſelves ſecure from the Rocks, we were almoſt driven upon one, by a ſudden Blaſt thirty Leagues above the Cape, and four from Shore; every Man fell upon his Knees, and begged Pardon of God, believing we ſhould, at that very Inſtant, be daſhed to pieces; I confeſs I never was ſo afraid in my Life, and I believe all the Crew was in as great Conſternation as myſelf; when by good Luck, or rather through divine Mercy, the extraordinary Force and Agitation of the Waves prevented our ſtriking, and drove us a Muſket Shot from the Rock. Our Ship having received no Damage, only by a little ſlight Touch on the Skirt of the Rock, ſprung a Leak a little above the Keel, and two or three Planks were ſomewhat bulged in the Bottom of the Ship's Hold; the Water entered, and we were obliged to pump inceſſantly. On the fourth Day the Wind fell; however, we could not heartily rejoice for our Safety, having loſt Sight of our Friends in the other Veſſels, who, we feared, were at the Bottom by this Time. Notwithſtanding we continued our Courſe with a favourable Gale; we had ſeveral Feet Water in our Hold, and had much ado to live. The Wind was pretty fair, wherefore we reſolved to make the firſt Port, to ſtop our Leaks and refit.

But the Coaſts of the Sea, all over the North, are ſo full of Rocks, that the Ports and Creeks are inacceſſible; and we were forced to ſail on two Days longer, before we could find any Place for our Purpoſe; the next Morning we arrived on the Coaſt of *Wardhus*, the chief Town of the Government of *Daniſh Lapland*; where the King of *Denmark* has a Caſtle garriſoned by two Companies of Soldiers. Here is alſo a Collector to receive the Duties impoſed on Foreigners trading to, or from, *Archangel*, on the *White Sea*; this Officer ſuffered us to paſs without examining us, believing, by our Colours and the Guns we gave him to ſalute the Caſtle, that our Ship was a *Dane*. We then ſailed to *Varanger*, and caſt Anchor half a League from the Town. We preſently put our Long-boat by our Ship's Side, to carry ſome of the Crew aſhore; no body aboard had any Knowledge of the Place, which ſeemed to us to be very wild; wherefore our Captain took eight Men well armed with him, and reſolved to ſee whether there was any Conveniencies for us there to refit, or any Trade to be driven with the Inhabitants. In leſs than half an Hour we arrived at *Varanger*, a populous Town, and a convenient Port; but ſo little frequented, that the Inhabitants were amazed to ſee us. Whether their Aſtoniſhment proceeded from the Sight of Men armed, or of Men leſs barbarous than themſelves, I ſhall not pretend to determine.

But our Captain addreſſed himſelf to thoſe who ſeemed to have moſt Authority among them; demanding if they would permit us to enter their Port, and aſſiſt us to refit our Ship, and were diſpoſed to trade with us. They gave him little Encouragement for Traffic; but underſtanding we were Merchants, who were going to catch *Walrus*, they offered us their Aſſiſtance to refit our Ship, which we thankfully received. Having obſerved the Commodiouſneſs of the Harbour, we returned to our Ship, weighed Anchor, and entered the Port; where we diſcharged our Ballaſt, which was only Sand, to ſerve for Counterpoiſe to ſome Bundles of Tobacco, and Bales of Cloth, which were the Cargo we were to trade with. When the Ship was unladen, we ſecured the Goods in a Houſe near the Shore, that was locked up; and the Captain and Supercargo ordered a Watch to be ſet over it. To gain the Good-will of the Inhabitants of the Country, who, as I have ſaid, were *Laplanders*, ſubject to the King of *Denmark*, we gave them ſome Rolls of Tobacco, a more grateful Preſent to them than Gold. To retaliate our Kindneſs, they treated us with the beſt they had, ſome dry Fiſh, that ſerves inſtead of Bread; ſome Veniſon, not very extraordinary, being the Fleſh of Rain-Deer, an Animal that is often to be met with in *Lapland*, *Borandia*, *Samojedia* and *Siberia*. They brought us Bears Fleſh, and the Fleſh of other wild Beaſts which we had no Knowledge of; alſo freſh Fiſh, boiled without Salt; the Sauce to this Diſh, is either the Oil of other Fiſh, or a ſour Drink; which is one of the beſt of Liquors in their Opinion. We could none of us bear them Company at this Repaſt; their Ragouts were not to our liking, ſo we ſent for Proviſions from aboard, and endeavoured to be as merry as we could in ſuch a Place, and among ſuch Barbarians. Salt Beef and Biſket was our choiceſt Diſh; we offered ſome of it to the *Laplanders*, but when they had taſted it, our Food ſeemed as unſavoury to them, as theirs did to us.

Our Beer was more acceptable; they drank of it freely, and were pleaſed with the Brandy we gave them; yet their own ſour Drink they had more Goût to, than either our Brandy or Beer. It conſiſts of an Infuſion of Juniper Berries, and of a Grain like Lentils, the Name of which I have forgot: It grows there in abundance, as Juniper Trees do. I never ſaw any thing ſo like that Grain as Lentils; and our Botaniſts have made no mention of it in any of our Diſcoveries; they make Brandy with the ſame Grain; it has the like Effect as ours that is drawn off of Grapes; and their common Drink is as ſtrong as our common Wine, and ſerves for the ſame Uſes.

Theſe *Laplanders* are *Lutherans*, and have Prieſts to inſtruct them; they are ſaid, however, to deal ſtill with the Devil; almoſt all of them are Wizards, and ſo ſuperſtitious, that if they meet a Beaſt in the Way, whoſe Appearance is reckoned ominous, they return home, and do not ſtir out all that Day; and when they go a fiſhing, if they have but one Fiſh in the firſt Draught, they take it for an ill Augury, pack up their Nets, and leave Work for that Time. Both Men and Women are low of Stature, yet ſtrong and active: Their Faces broad and flat; they are flat-noſed; their Complexions ſwarthy, like the reſt of the People in the North; their Eyes are like a Hog's, and their Eyelids are almoſt all like thoſe that are bleareyed. They are ſtupid, brutal, and laſcivious, eſpecially the Women, who proſtitute themſelves to all Comers, if they can do it unknown to their Huſbands. The Womens Cloaths are made either of coarſe Cloth or Rain-Deer Skins, with the Hair outward; their Stockings are of the ſame; their Shoes of Fiſh-Skins, the Scales hanging on them; they have no Straps, and reſemble ſomewhat the wooden Shoes worn by the Poor in *France*. Their Coifs are like the *Norwegian* Womens; their Hair is twiſted up in two Rolls, one hangs down on one Shoulder, and the other on t'other. They wear a Cornet Coif on their Heads, made of coarſe Canvas; all their Linnen is of the ſame Fineneſs; ſome of them wear a Sort of Ruff eight Fingers broad, which they tie behind as the Gypſies do in other Countries.

As for the Men they are cloathed in Rain-Deer Skins, the Hair outwards; their Coats are ſhort and come down but half Way to their Thighs, like a Waiſtcoat; their Breeches and Stockings are of the ſame, the Hair always outwards. On theſe they wear a Sort of Boots, made of Fiſh-Skin, which though rough and coarſe, are ſtitched ſo neatly, that the Seams are not to be ſeen. Some of them wear no Boots at all, but Stockings, like the Women, their Bonnets are round like a Seaman's Cap; they are always made of Rain-Deer Skins, the Hair ſtill outwards, and edged with a Band of a Fox's Skin, ſome white, ſome grey. Theſe *Laplanders* Lodgings are like thoſe of the Boors about *Chriſtiana*.

They have no Light but what enters by a Hole at the Top of the Hut. They don't make uſe of Beds to lie on, any more than the other *Laplanders*, the *Borandians*, *Samojedians*, *Siberians*, *Zemblians*, *Iſlanders*, or the reſt of the Northern Nations. The whole Family of a *Daniſh Laplander*, Maſter, Miſtreſs, Children, Men and Maids, lie down altogether very familiarly, on Bear-Skins ſpread in the Middle of the Room; and when they riſe in the Morning the Bear-Skins are taken up, and laid by till they are wanted again at Night. In each Houſe there is a great black Cat, which is highly valued by them; the *Laplanders* talk to it as if it was a reaſonable Creature; every Night they go out of their Huts with it, to conſult it alone; and it will follow like a Dog, either in Fiſhing or Hunting. Though this Animal looks like a Cat in Appearance, yet if I had a little more Superſtition, I ſhould have believed it to have been a familiar Spirit.

5. We unloaded our Ship the next Day after our Arrival at *Varanger*; the Inhabitants helped us to haul her aſhore, that we might refit her; the Captain found her much more damaged than he expected, and deſired the *Laplanders* to provide him Timber proper for the Carpenter's uſe; they readily anſwered his Requeſt, and went to a neighbouring Mountain to fell ſome for him. Our Supercargo, as he found the Ship would be ſome time refitting, thought it would not be improper to take a Journey into the Country, to try there whether any Trade could be had; to this Purpoſe he picked out myſelf and two more of the Ship's Company, to accompany him. Early the next Morning, being the 12th of *May*, we ſet out for our Journey, taking with us ſome Tobacco and Cloth to trade with; and Biſket, and ſalt Beef, and Pork, to eat. We deſired three of the Inhabitants of *Varanger* to go along with us, as well to ſhew us the Way, as to help to carry our Goods and Proviſions to the next Village. The *Laplanders* were willing enough to ſerve us; ſo we followed them through the Woods, and Mountains, and Valleys, without meeting any living Creature, till towards four o'Clock in the Afternoon, when we perceived two white Bears of an exceſſive Bigneſs, coming, as we Strangers thought, to devour us.

Our Guides perceiving the Terror we were in, bid us not be afraid, for we need only have our Arms ready to defend ourſelves, in caſe they approached too near us; which we did, cocking and priming our Pieces, and hacking our Flints. Whether or no the Bears were frightened at the Fire we ſtruck out of the Flints, or with the Smell of the Powder, I ſhall not undertake to decide; but they preſently fled away from us ſo faſt, that in a Moment they were out of Sight. An Hour before Night, as we deſcended a Mountain, we eſpied a dozen Houſes at the Foot of it; they were at a great Diſtance one from another. Somewhat farther off we ſaw a Herd of Beaſts like Stags, which our Guides told us were Rain-Deer. When we came to the Village, the *Laplanders* that travelled with us conducted us to a Hut, where being very weary, we were glad to reſt ourſelves, for we had a long Journey in a very bad Way, with Luggage on our Backs, that incumbered and tired us. We gave a Piece of a Roll of Tobacco to our Hoſt, who received it with Joy, aſſuring us he had not had ſo valuable a Preſent in nine Months before; to make us Amends he brought out his Brandy Bottle, ſome Rain-Deers Fleſh dreſſed without ſalting, and ſome dried Fiſh; which we gave to our Guides, and ſupped ourſelves with the Victuals we had brought with us; when we had made an End of our Supper we went to our Repoſe, and lay down on Bears-Skins, after the Country Faſhion. When we roſe in the Morning, we aſked our Hoſt if he had nothing to barter with us for Cloth and Tobacco; he replied he had ſome Wolf, Fox, and white Squirrel Skins, and his Neighbours had ſome of the ſame Commodities, and would gladly truck with us. We bid him, by our Interpreters, bring out his Skins; and if he had any Cloaths made of Rain-Deer Skins, we would deal with him for four Suits, which we wanted to keep us warm; accordingly, he brought forth his Merchandize, and we bought it of him, paying him Part in Tobacco, and Part in Cloth. We trucked alſo with his Neighbours, as long as they had any thing to offer us worthy our buying; and when we had drained that Market, we prayed the Hoſt to lend us ſome Rain-Deers, to carry us farther up the Country; and he was very willing to help us to the utmoſt of his Power.

The Tobacco we gave him having gained his Friendſhip intirely, he took down a Horn that hung up in his Cottage, went out and blew it to call the Rain-Deer to him. Immediately fourteen or fifteen of thoſe Animals came running towards the Hut: He put ſix of them to ſix Sledges, each Sledge made ſomewhat like a Gondola; it was placed on four Poſts joined together by other croſs Poſts nailed to them, and this was faſtened to two Poſts two Feet longer than the Sledge that run on the Ground. We put our Merchandize in one Sledge, each of us had one for himſelf, and the other we aſſigned to one of our Guides, who underſtood the Language of the *Muſcovite Laplander*, and that of the *Kilops*; him we took with us; the other two Inhabitants of *Varanger* we diſmiſſed, having paid them in Tobacco for their Trouble. We put on our *Lapland* Cloaths, and lay down each of us in his Sledge covered with a Bear-Skin; at the Back of the Sledge there were two Girts made of Rain-Deer Skin Leather, in which we thruſt our Arms up to the Shoulders, to keep ourſelves ſteady; and we had each a Stick with a ſtrong Ferrel to it, to ſupport the Sledge if it ſhould be likely to overturn by Stumps of Trees, or Stones lying in the Way. When we were ready to ſet out, our Hoſt muttered ſome Words in the Ear of the Rain Deer; I enquired afterwards of our Guide, what he meant by it. He ſaid, it was to tell them whither they ſhould carry us; ſo ſilly are theſe barbarous Wretches.

Cuſtom had made that muttering ſo familiar to the Beaſts that drew us, that when our Hoſt had gone to all ſix, they ran away with us ſo ſwiftly, that we thought we were drawn by ſo many Devils; they continued their Pace over Hills and Dales, without keeping the beaten Road all Day long, till ſeven o'Clock in the Evening, when they brought us to a large Village ſituate between two Mountains, near a great Lake; here they ſtopped ſhort at the fourth Houſe in the Place, which though large was very ordinary and clowniſh. They beat the Ground with their Feet; and the Man hearing a Noiſe, came forth with his Servants, to take us out of the Sledges, and unharneſs our Cattle, and one of them brought out a little Juniper Can, full of Brandy, of which he gave each of us a Brimmer, out of a Bowl made alſo of Juniper Wood. This was to put us in heart; for our Guide had informed him that we were afraid of our Lives, being drawn away ſo ſwiftly by theſe Animals in Sledges, which was a Way of Travelling we were not uſed to. The Horns of theſe Beaſts, both Male and Female, are ſomewhat higher than the Stag's, but more crooked, hairy, and not ſo well furniſhed with Sprouts as a Stag's are; they are of the ſame Colour as Stags, and not much bigger; their Feet are cloven like theirs, but as big as Hoofs of Oxen: They live upon Moſs, which grows every where in thoſe Parts: The Females yield Milk like Cows; the *Laplanders* make Butter and Cheeſe of it, and both are very good. Their Harneſs is a Collar of Rain-Deer Leather, by which they are faſtened to the two Shafts of the Sledge, not much unlike our Horſes to a Coach; thus they draw it with incredible Speed directly to the Place whither you are to go, without being guided by him who rides in it.

6. When we got out of our Sledges, we were conducted by our Hoſt into his Hut, which, like the reſt of the Cottages in the Place, was very little, low, and covered with the Bark of Trees, the Light entering in at a Hole at the Top of it, as we have elſewhere obſerved. Theſe *Laplanders* were cloathed in a manner little differing from thoſe of *Varanger*; their Apparel was of the ſame Make and Materials, but longer; their Coats were of Rain-Deer Skins, the Hair turned outwards. The Women were dreſſed in Garments of the ſame Skin, their Hair twiſted as the Women of *Varanger*; on their Heads they wore a high Bonnet inſtead of a Coif, which was made of the ſame Skins with their Cloaths, and the Hair ſtill outwards.

We gave our Hoſt an End of Tobacco about two Inches long, with which he was mightily pleaſed, and thanked us heartily for it: We gave an End not quite ſo long to each of the Inhabitants of the Place, to make them our Friends, and to ſecure us the better againſt any Attempts of theſe *Barbarians*, who were more brutal than thoſe we laſt dealt with. We ſupped on the Proviſions we brought with us, and our Guides eat ſome of our Hoſt's ſalt Fiſh, and freſh Rain-Deer Veniſon. We aſked him how many Leagues we had come that Day? he anſwered, about thirty, and that we were in the Territories of *Mourmanſkeimore*. The Inhabitants talked a Language quite different from thoſe at *Varanger*; but our Guide had been often in the Country, and underſtood them, and was underſtood by them. After Supper we lay down on Bear Skins to take our Reſt, as we had done the Night before, having firſt bartered away our *Lapland* Habits with our Hoſt for others that were longer, and a Parcel of Tobacco for a hundred grey Squirrels, a Fur very much eſteemed in *Denmark*, and other Parts of *Europe*. The next Day, being the 14th of *May*, we told our Hoſt, by our Interpreter, that we deſired him to provide Sledges to go farther into the Country; this he did accordingly. The other Inhabitants of the Village came to help us forward in our Journey, bringing Brandy with them to drink to us at parting. They put ſix Rain-Deer to ſix Sledges, in one of them we ſtowed our Merchandize and Proviſions; and our Hoſt having performed the Ceremony of muttering in the Ears of the Beaſts, we were drawn along with the ſame Swiftneſs as before. We came to no Place that was inhabited till about three o'Clock in the Afternoon, and then we arrived at a Village, wherein were eight Cottages, built on a high Mountain by a Wood-ſide, where our Cattle ſtopped; by which we gueſſed that there were ſome Inhabitants; but ſeeing nobody come to us, we baited our Rain-Deer with Moſs, which grew there plentifully, and refreſhed ourſelves with ſalt Beef and Biſket; our Interpreter regaled himſelf upon ſome Rain-Deer Veniſon, and dried Fiſh: All of us making merry with the Brandy we had given us in the laſt Village. We ſtaid in this Place near an Hour, and then our Guide, who underſtood the Way of making Rain-Deers go as well as the other *Laplanders* did, endeavoured to get them forward; but he had much-ado to effect it.

This Place being their uſual Stage, he was forced to perform ſeveral myſterious and ridiculous Ceremonies; he went alone into the Wood, and coming out again, muttered ſome Words in the Ears of theſe Animals, which whether they underſtood or not, had little Effect upon them, for they did not ſtir. He did ſo four or five times, and then he began to proceed, though not ſo ſwiftly as before. We aſked him the Reaſon why we ſaw no body in the Village? He replied, 'twas a very common thing in that Country; theſe Dwellings belong to the *Kilops*, a Nation of *Laplanders* more wild than the others; who often change their Habitations; fly from Strangers, and ſubſiſt only by what they get by hunting. Continuing our Journey, we deſcended the Mountain; about nine o'Clock we ſpied four *Kilops* not far off, returning from hunting, in Sledges drawn by Rain-Deer; to avoid us they turned aſide out of our Way, and took another. In leſs than half an Hour we entered a long Wood, in which we heard terrible howlings and cryings, but ſaw nothing; when we got through the Wood, we had another Mountain to deſcend, at the Bottom of which we perceived there was a Village; our Cattle carried us to it, and ſtopped and beat the Ground at what Cottage they pleaſed. Our uſual Preſent of Tobacco, purchaſed us our uſual Welcome of the Maſter of the Houſe; we made a good Supper on our Proviſions, as our Guide did on his, and down we lay, according to Cuſtom, to take our Reſt on Bear-Skins; which, though homely, was a welcome Repoſe to our wearied Limbs, ſufficiently jogged in the Sledges.

In the Morning we roſe as early as the Hoſt, and demanded of our Interpreter how many Leagues we had travelled the Day before? He replied, at leaſt forty. But he muſt be out, either in his reckoning, or the Leagues muſt not be ſo long as they are generally calculated to be; for forty of their Leagues make one hundred and ſixty of thoſe between *Paris* and *Lyons*; each *Lapland* League being as long as a *German*: Let a Man be ever ſo well mounted, he cannot ride on Horſe-back above five a Day. Our Guide alſo informed us that we were in the *Muſcovite Lapland*; we bid him aſk the Inhabitants of the Village, whom we had preſented with Tobacco, and been treated by them with Brandy, whether they had any Commodities to truck with us for Tobacco and Cloth? We had ſome Rolls of the former left, and moſt of our Bales of the latter. Tobacco being by much the better Commodity, the *Laplanders* replied, they had ſome Furs; we aſked to ſee them, and they brought them out to ſhew us: They were white Fox-Skins, black and grey Fox-Skins, grey Squirrels, and Sables though not of ſo fine a Colour as thoſe of *Borandia*, *Samojedia*, and *Siberia*. Theſe Merchandizes were what we wanted, ſo we ſoon ſtruck a Bargain, and paid the Inhabitants in Cloth and Tobacco. When our Market was over, we fell to drinking with them; they were not quite ſo brutal as the other *Laplanders* we had dealt with, but they were very rude and indecent in Converſation, doing things before us that Decency will not permit me to name. It growing late, and we deſigning to proceed yet further, to diſpoſe of the few Rolls of Tobacco we had left; we prayed our Hoſt, by our Interpreter, to furniſh us with Sledges and freſh Rain-Deer.

He harneſſed and prepared as many as we had Occaſion for; we mounted our Sledges and departed at one o'Clock; we ran with our former Speed, through different and unbeaten Paths, till ſix, without meeting with one Habitation; half an Hour after we were deſcending a Hill, we ſpied two Huts under a Rock, a little out of the Way; our Guide told us that two *Kilops* lived there, who, as ſoon as they ſaw us, fled with their Wives and Families. We travelled two Hours longer, and came to no Houſe, or any thing like a Dwelling Place; till at laſt we diſcovered a great Village on the Side of a Hill, and on the Banks of a River; here we arrived at eleven o'Clock at Night, and went to the Cottage for a Lodging, whither our Cattle were pleaſed to conduct us. It happened to be in the Middle of the Village; the Maſter of the Houſe received us very kindly, made a Fire in the Middle of his Hut, gave us Brandy, dried Fiſh, and Rain-Deer Veniſon ſalted, at which we were a little ſurpriſed, having not met with any in our Travels hitherto, who made uſe of Salt as theſe did; he alſo gave us Milk and ſalt Butter, very good, and it would have been better, had we had any Bread to eat with it; but we had conſumed our Store, and ſhould have been very much put to it, had we not met with ſo good Entertainment here. Our Guide would not taſte a Bit of ſalt Meat, ſo he was obliged to live on the freſh Veniſon he brought with him. Having ſupped plentifully, we lay down on Bear-Skins, and ſlept till Morning; we roſe early the next Day, took our Leave of our Hoſt, and there being no trading in that Village, paſſed the River to proceed to *Kola*, on the other Side of that Stream, which is as big as the *Seine*.

We came to another Village, and went to the moſt likely Houſe to hire Sledges and Rain-Deer, to carry us to *Kola*, for we could get none in the Place where we lodged; here we furniſhed ourſelves, and about Noon arrived at *Kola*, a little City, or rather a great Town; built among Mountains, on the Side of a River, near ten Leagues from the North Sea. To the Eaſt of it are large Foreſts and Deſarts; *Mourmanſkeimore* to the Weſt, and prodigious high Mountains to the South. The Houſes are very low, built of Wood, and handſomely covered with Fiſh-bones: On the Top of them the Light enters in at a Hole, as in other Places in *Lapland*. There is but one Street in it, and that no fine one. The Inhabitants, like the other *Muſcovites*, are ſevere, ſuſpicious, and ſo jealous, that they lock up their Wives, that Strangers may not ſee them. Our Hoſt took all our Cloth off our Hands, for which he gave us, in Exchange, two Lynx-Skins, ſpotted like a Leopard's, three Dozen of white Fox-Skins, half a Dozen of *Wyetfras*, an Animal which ſomewhat reſembles a Badger, but its Hair is longer and rougher; his Colour is a blackiſh red, and his Tail like a Fox's; we had alſo ſome Ermines of him. There were ſome Ells of Cloth above what we were to give him, for which he obliged himſelf to ſupply us with Proviſions for our Journey back to *Varanger*, and to help us to Sledges, as far as the River we lately paſſed; he treated us as well as he could, and we ſupped, and ſlept as we had done elſewhere.

7. The next Morning, as we were preparing to depart, our Hoſt, having provided Biſket, Ginger, Bread, and Rain-Deer Veniſon ſalted and dried, as alſo a Barrel of Brandy, to ſerve us in our Return; before we had quite packed up our Furs in Bales, his Neighbours underſtanding we had ſtill a few Rolls of Tobacco left, came to aſk if we would truck them for more Skins? We replied, with all our Hearts; ſo they fetched them, being a Dozen of Ermines, two white Foxes-Skins, and four Lynxes, not ſo good as thoſe we had of our Hoſt. The Bargain made, we took their Furs, and gave them the Reſidue of our Cargo of Tobacco, except ſeven or eight Rolls, which we reſerved for our own Uſe, and to pay for the Hire of our Rain-Deer and Sledges in our Way back. Tobacco is more neceſſary than Money, to thoſe who travel in that wild and unfrequented Country; the *Laplanders* valuing an End of Tobacco as long as ones Finger, more than a Crown Piece. The Kings of *Denmark* and *Sweden*, and the Czar of *Muſcovy*, have laid ſeveral Taxes upon it; and there are Officers ſettled in their frontier Towns, to collect their Impoſts upon it. When we had done our Buſineſs, according to the Cuſtom of the Place, we muſt drink with our Chapman; our Entertainment every where was Brandy, and it held till two o'Clock in the Afternoon. We then intreated our Hoſt to get the Sledges, we had hired of him, ready; which he did in one Minute. We ſtored our Merchandize in one of them, got into the other ourſelves, drank a full Glaſs at parting with our Dealers, bid them adieu, and ſet out for the Village on the other Side of the River we

paſſed the Day before. Our Rain-Deer, to our Apprehenſion, ran faſter than any we had hired in our Journey to *Kola*.

We arrived at the firſt Village by ſeven o'Clock; we paſſed the River and came to the ſecond; where we put up at our old Landlord's, who received us with Joy, hoping that we had ſtill an End of Tobacco left, to give him for the Hire of ſome Rain-Deer and Sledges. He preſently gave each of us a Cup of Brandy, for they toſs it off there as we do Beer in the South; and aſked us if we would have the Rain-Deer put to the Sledges? We replied, we had rather reſt ourſelves till Morning, for there was no Village beſides in ſome ſcores of Miles from this. He filled out another Cup, which when we had drank, he offered to take us with him to the Funeral of one of his Neighbours, who had been dead about four Hours. We were very glad of the Opportunity of ſeeing their Ceremonies on this Occaſion, hearing much talk of them. We accompanied him to the Houſe of the Deceaſed; we ſaw his Corpſe taken from the Bear-Skins, on which it lay, and removed by ſix of his moſt intimate Friends, into a wooden Coffin, being firſt wrapped in Linnen, his Face and Hands only bare. In one Hand they put a Purſe with Money in it, to pay the Fee of the Porter at Paradiſe Gate, and in the other a Paſs, ſigned by a Prieſt, to be given to *St. Peter*, as a Certificate that he was a good Chriſtian, and ought to be admitted into Heaven. They alſo put into his Coffin a Barrel of Brandy, ſome dried Fiſh, and Rain-Deer Veniſon, to ſerve him to eat and drink on the Road, having a long Journey to take. They then lighted ſome Fir-Tree Roots, piled up to a convenient Diſtance from the Coffin, wept and howled plentiſully, making ſtrange Geſtures, and turning themſelves in a thouſand different Poſtures, to ſhew the Extravagance of their real and affected Sorrow. When this Noiſe and Geſticulation was over, they marched round the Corpſe ſeveral times in Proceſſion, aſking the dead Man why he died? if he was angry with his Wife? if he wanted any thing? if he was hungry or a dry? if he had loſt his Game at hunting? or had bad Luck at fiſhing? or had not Cloaths to his Mind? Then they fell a howling again, and ſtamping like ſo many Madmen. One of their Prieſts, who aſſiſted at the Solemnity, every now and then ſprinkled ſome Holy-water on the Corpſe; the ſame did the Mourners. I forgot to inform the Reader, that having an extraordinary Veneration for *St. Nicholas*, they, as well as the *Muſcovites*, are *Nicholatians* by Religion, and always place the Image of that Saint near the Bodies of their Dead, inſtead of a Crucifix. This Saint is not the ſame for whom we celebrate a Feſtival in *France*; but *Nicholas*, one of the ſeven Deacons, mentioned in the *Acts of the Apoſtles*. His Image is dreſſed up by them in a Pilgrim's Habit, in a long Robe, with a Camail hanging down over his Shoulders, a broad Girdle about his Middle, and a Staff in his Hand.

The Noiſe they made having almoſt deafened us, and being weary with looking on their barbarous Rites, we left the Cottage of the Defunct, to go to our Hoſt's, where we found only our Hoſtreſs at Home. She had made a Sally out of the Place to which her Huſband had confined her, on our Arrival; as ſoon as ſhe ſaw us, ſuppoſing he was with us, ſhe would have retired to her Corner; but our Guide and Interpreter, giving her to underſtand the good Man was at the Funeral, and would not come home preſently, ſhe ſtayed and viewed us all round, one after another, looked very kindly on us, drew her Seat near us, and ſhewed us a Bonnet of her own embroidering, done very curiouſly with Tinſel Threads. The Work of all the *Muſcovite Laplanders*, is to make Cloaths for themſelves, their Huſbands, and their Children. The Edges of them are all embroidered with Tinſel Thread. They draw them between their Teeth, as fine as the Wire-drawers do their Gold and Silver Threads with their drawing Iron. They work with a good Grace. They are handſome, well ſhaped, and good humoured, and, if they did not very well know how jealous their Huſbands are of them, and fear their Reſentments, they would willingly Proſtitute themſelves to Strangers; for which Reaſon they are ſhut up when any come among them. While our Hoſt was buſied about the Funeral, we pulled out ſome of our Proviſions, and gave our Landlady ſome of every Sort to taſte. She liked all, but eſpecially the Gingerbread; ſhe drank two or three Glaſſes of Brandy, and then withdrew to the Place of Confinement, fearing her Huſband might ſurprize her with us, which would have raiſed his Jealouſy to ſuch a Degree, that he certainly would have uſed her very indifferently. When our Landlord came home, he obliged us to take a Cup or two more with him, to ſmoak a Pipe, and ſup together; for us he brought forth the Victuals he had in the Houſe, which he thought would be moſt grateful to our Taſte, as Salt-butter, which we eat with Bread; our Guide would not touch it, and for him the Man of the Houſe got ſome Bear's Fleſh, which he broiled on the Coals, and ſome dried Fiſh.

All the Cottages in this Village were like the others we had obſerved elſewhere, built of Wood, and covered with Turf; but they were handſomer and better ſet off than any we had ſeen in the Country; being both within and without adorned with Works of Fiſh-bones, curiouſly inlaid. We made as good a Supper as we could, and, according to Cuſtom, lay down with the Family on Bears-Skins; our Landlady only was miſſing, and ſhe was to do Penance by herſelf in a Corner, till we were gone. In the Morning early, on the 18th of *May*, our Hoſt provided our Rain-Deer and Sledges. We ſtowed our Bales, ſeated ourſelves, and away went our Rain-Deer, running as faſt as thoſe we hired at *Kola*. In two Hours they carried us ſix Leagues, where, paſſing between two Hills, we eſpied a *Laplander* going a Hunting; he came up towards us, ſliding on the Snow, which, in that Country, does not melt till Midſummer, as faſt as we rid in our Sledges; his Skates were made of the Bark of a certain Tree; they were ſeven Feet and a half long, only four Fingers broad, and flat at Bottom; he was dreſſed like the other *Laplanders*, in a Garment made of Rain-Deer-Skin, with the Hair outwards; his Cap, his Gloves, his Coat, his Breeches, and Boots, were embroidered with Tinſel; he had a Girt of Rain-Deer-Skin about his Waiſt, a Dart in one Hand, and a Bow in the other, a large Quiver hanging at his Back, and a black Cat followed him. He kept Company with us about half a League; we parted at the Foot of the next Mountain; we deſcended it, and he ſtruck off another Way. We continued our Rout three Days, ſtopping at the ſame Places where we lay in our Journey outwards; and meeting with no new Adventures, our Entertainment, our way of Travelling, and every thing was the ſame as before.

About nine o'Clock at Night, on the 21ſt of *May*, we arrived ſafe at *Varanger*, having received many Services, and no Wrong, throughout the whole Country of *Daniſh Lapland*; for though the Inhabitants are poor and ignorant, they are, however, faithful, and given to no Manner of Theft or Fraud. Their Honeſty is their greateſt, if not their only, Virtue. They are ſo dextrous in throwing a Dart, that they will put a Crown Piece, thirty Paces off, and ſtrike through it; as for the Bow, they are ſo ſkilful, that they will ſhoot their Game in what Part they pleaſe. They don't much care to go to the Wars; and whenever the Kings of *Sweden* and *Denmark*, or the *Czar* of *Muſcovy*, have occaſion for Soldiers, for fear of being forced to ſerve, they leave their Dwellings, and fly to the Woods. They have plenty of Fowl, as Geeſe, Ducks, Pullets, and other Sorts. They feed them not with Juniper Berries, but with another Grain of which they make their Drink; and when that is ſcarce, or for Variety, they give them Fiſh to eat. The greateſt Part of the wild Beaſts in *Lapland* are white, as Bears, Wolves, Foxes, and Hares; and even their Crows are ſo white, that they may be compared to the Swan, having nothing black about them, but their Bills and Feet.

The Fiſh they dry to eat inſtead of Bread is very broad, and two or three Ells long, without Bones, and, excepting the Fat, has a very good Taſte; it is firm and ſubſtantial, and they call it Raff. As for other Fiſh they eat boiled, they have all Sorts among them. Their Utenſils, within Doors, are made of Copper or Wood; and though they eat no Salt, and in general hate it, yet they boil all their Meat in Sea-Water, if they are near enough to get it conveniently. They have a kind of Dogs a Foot long, and four Inches high; their Hair is an Inch long, of a yellowiſh white Colour, rough, and ſtanding up like a Hog's Briſtles. They have curled Tails, ſtrait Ears like a Wolf; Head and Snout like a Rat; are very fit to catch Mice, which they watch like out Cats; and when they have caught them, eat them; for this Reaſon the *Laplanders* value them at an high Rate, though they are very ugly. There is alſo a Sort of wild Bird in *Lapland* of a grey pearl Colour, as big as a Sheep; his Head is like a Cat's, his Eyes red and ſparkling, his Claws and Beak like an Eagle's, with which he will take up Hares, and other ſmall Game.

8. Our Captain began to caulk the Ship the ſame Day we returned to the Port. In two or three Days after, it was in a Condition to put to Sea, and we loaded our Ballaſt. In the mean Time we treated the Inhabitants with Tobacco and Brandy, to keep them in good Humour; for our Crew fancied, that if we did not bribe them to be out Friends, they might, in revenge, raiſe contrary Winds by their Conjurations. They were very good to us in the Opinion of our Mariners; for five Days after, being the 26th of *May* there ſprung up a Wind the moſt favourable for us in the Compaſs, to carry us out of the little Sea of *Varanger*; wherefore we weighed Anchor, and ſailed at ſeven o'Clock in the Morning. The Wind ſhifting afterwards from one Quarter to another, we were obliged to caſt Anchor under the Shore, overagainſt the Iſland of *Wardhus.* The Captain of the Caſtle ſpying us, and knowing who we were, came to us in a Shallop; when he was aboard we entertained him as well as we could, and he returned to the Caſtle very well ſatisfied with his Reception. The next Day the Wind ſettling to a Point, we kept out to Sea, and held our Courſe North-north-eaſt, with all our Sails looſe. In three Days Sail we were got into a Climate where was no Night; we never loſt Sight of the Sun there, it always ſetting on one Side or the other of us, before us, or behind us.

On the laſt Day of *May* we ſpied the Mountains called *Spitzbergen*; at which Time a North Wind blew ſo violently, that we could not keep to Sea, and were forced to leave them to the North-north-weſt, and ſteer our Courſe Eaſt-ſouth-eaſt, endeavouring to make the Shore, that we might lie under it, and be ſheltered from the Weather. We continued our Courſe three Days longer, very much incommoded by the Ice; which being broken, and toſſed by the Tempeſt, beat againſt our Ship's Stern and Sides, ſo furiouſly, that we expected every Minute to founder. On the 4th of *June* we ſpied ſome high Mountains to the Eaſt; we ſteered that Way to make them, and ſhelter ourſelves under a Promontory; but the Wind blowing freſher and freſher, and ſtill North, we were obliged to tack about towards the Coaſts of *Borandia.* We arrived at a Bay, and entered it in a few Hours. The Haven was very commodious; we lay there ſafe from all Weather, in twelve or thirteen Fathom Water. We had ſcarce caſt Anchor before we ſpied two Ships in the Bay, about a Muſket Shot of us. We perceived they were two of our Company, from whom we were ſeparated, in the Storm that drove us into *Varanger.* We were extremely glad to meet with them, fired three Guns, and hung out our Flag in the Stern, as a Signal of our Arrival. They rejoiced as much to ſee us ſafe; for we reciprocally believed, that they and we were gone to the Bottom. They anſwered our Guns by twice as many, hung out all their Flags and Pendants. We did the like, wiſhing for an Opportunity to throw out our Long-boat and go aboard; but the Wind blew ſo ſtiff we durſt not attempt it till four and twenty Hours after. They were as impatient as we, to know how we eſcaped in the Storm, in which we were ſeparated from them; and as ſoon as the Wind ſlackened, a Boat came off from each of them to board us. We embraced one another with extraordinary Affection and Joy, as People that had found Friends whom they thought had been buried in the Deep.

They told us how the Storm drove them on the Coaſt of *Juborſkt*, near an Iſland, where they could not anchor becauſe of the Rocks, which they diſcovered by ſounding. They had ſcarce three Fathom Water, and were forced to tack about immediately, for fear of running upon them. By the Favour of a Point of Wind North-north-eaſt, they continued their Courſe, keeping to Sea as well as they could, though with much Difficulty. In three Days time they reached the Bay, where we met them, and anchored under the Promontories of *Borandia*, eight or nine Leagues from the Iſland called *Kildomovia.* We told them in our Turn, what Perils we had run, and that we were forced to enter the Sea of *Varanger*, and to anchor there to refit our Ship, or we ſhould not have been able to have performed our Voyage. We informed them alſo of our Supercargo's and my Journey into, and through, all *Lapland*, both *Daniſh*, *Swediſh*, and *Muſcovite*; and of our Traffic and Adventures. The Account we gave them of our Trade, encouraged them to go aſhore, and try if they could find any body there to trade with them. We held a Council, and reſolved, that a Captain, a Supercargo, two Accountants, who underſtood both the Language of the *North* and the *Ruſſians*; twenty Seamen out of all our Crews, and myſelf, well armed, ſhould land, taking with us ſeveral Days Proviſions.

Purſuant to this Reſolution two Long-boats were got ready, we went into them, and ſailed to ſhore; where we landed and aſcended a Hill, to ſee if we could diſcover any Habitations; but ſeeing none, we marched to a neighbouring Mountain, half a League from thence; where we ſpied five or ſix Perſons, at two or three Leagues Diſtance, among Buſhes of Thorns and Briars; they came towards us till they perceived us advancing, then they turned their Backs, and fled away ſo faſt, that we loſt Sight of them in an Inſtant. However, we followed their Tracks ſo diligently, imagining it would lead us to ſome Village, that in two Hours March, as we deſcended a Mountain, we ſaw ſome Huts in the Vale below, and advanced towards them, and ſaw thirty or forty Men, armed with Darts and Arrows, prepared to receive and give us Battle; for the Inhabitants ſeeing us come in ſo ſtrong a Body, took us for Enemies. We halted a while, and conſulted what we had beſt to do, whether we ſhould retreat to our Ships, or attack them. They were wild and bold, and nothing was to be got by defeating them, which inclined us to retire; but one of our Accountants offered to go up to them by himſelf, and let them know that we were Friends and Merchants who came to trade with them, if they had any Commodity to truck with us for ours. All the Company approved of this Propoſal.

He approached nearer to them, carrying two Rolls of Tobacco, and a little Barrel of Brandy; when he was ſo near that he might hear what they ſaid, one of them, who ſeemed to be their Captain, aſked him, in the *Muſcovite* Language, who we were, and what we would have? The Man replied, we were Merchants and Friends, and deſired nothing but their Friendſhip, and to trade with them, if they had any thing to ſell us that was for our Purpoſe. They immediately abated of their Fury, ſeemed very well diſpoſed to deal with us, and made Signs to the Man to come up to them. He returned the Signal to us, and we joined Companies, to our mutual Satisfaction. When we came near them, I was amazed to ſee them much ſhorter than the *Laplanders*; their Eyes were little, the white of them inclined to a reddiſh Yellow; their Faces flat and broad; their Heads great; their Noſes flat; their Legs thick, and their Complexion ſwarthy; their Cloaths were a Jerkin that reached down to their Knees, a ſtrait Pair of Breeches, a Cap and Stockings, all of white Bear-Skin, the Hair turned outwards; their Shoes were made of the Bark of Trees. Their Huts were all built and covered with Fiſh-Bones, very low and oval; their Light entering only at the Door, which was made like the Mouth of an Oven.

They ſubſiſt by hunting and fiſhing, eat all their Meat roaſted, without Salt, and uſe undried Fiſh inſtead of Bread; they drink Water after they have infuſed ſome Juniper Berries in it, without boiling or any other Preparation; they put the Berries and the Water into a Tub together, and let it ſtand till the Berries rot there, which gives the Water an agreeable Taſte, at leaſt in a Country where there is nothing better to be got. The *Borandian* Women are as ugly as the Men; they are dreſſed alike, and go as well as them a fiſhing and hunting. They have no Notion of Religion, and live like Beaſts. We bartered away all the Tobacco and Brandy we brought with us, for Fox-Skins, Wolf-Skins, and a few Ermines; they had a great many more Skins of all Sorts, and would fain have trucked with us for Brandy and Tobacco. We told them we had enough of both Commodities on board; if they would go with us we would be ſure to give them all poſſible Satisfaction. They agreed to it, took up their Skins, and carried them to the Shore, where they ſtood admiring our Ships. We made a Signal to them to ſend us off Boats to fetch our Chapmen; each Ship ſent us two. I went in one of them, with the Supercargo, the Accountant that treated with the *Borandians*, the *Borandians* with whom he firſt treated, and another of them, who underſtood the *Muſcovite* Language, having been in *Muſcovy*; the other *Borandians* ſtood on the Sea-ſhore. When we came on board, our Captain underſtanding what ſort of Perſons they were, how wild and brutal; to tame them a little, and render them ſerviceable to us, gave each of them an End of Tobacco about an Inch long, which they took with Joy; he alſo filled out a Brimmer of Brandy to each; and I never ſaw ſo many of the *Borandians* ſo much tranſported as they were at this Entertainment.

They brought ſome Furs with them, which we bought for Tobacco and Brandy. We demanded of them if there was any Conveniency of travelling in their Country to trade with the Inhabitants. They told us there was; but that we muſt expect nothing but Furs. We replied that was the Commodity we wanted. They anſwered, we might have what we would of that Kind, for Tobacco, Brandy, and Money; and, if we pleaſed, might trade as far as *Siberia*, whither they would conduct us. We hired them to be our Guides forwards and backwards, and to furniſh us with what Conveniencies the Country afforded in our Journey, for two Rolls of Tobacco and two Quarts of Brandy, promiſing them further Rewards in caſe the Trade tured to Account, and they aſſiſted us in it. They ſaid that we muſt pay for our Rain-Deer and Sledges, and as for other Things, they would take care to provide what we ſhould think neceſſary. Our Captain made the Bargain with them, gave them another Brimmer of Brandy and ſent them aſhore, to prepare what was proper for our Journey. They got Things ready in an Inſtant, and made ſuch a Report of our Kindneſs to them aboard, and our Generoſity, that their Countrymen were very much our Friends; two Boats Crew went aſhore, and our Supercargo with them, to truck with the other *Borandians*, Brandy and Tobacco for Furs. They were unwilling at firſt to come on board our Ships; but afterwards, when we were better acquainted, they came freely, if they had any Opportunity. We bought their Furs of them, treated them with Brandy; and in return they invited us by ſeveral Signs to their Habitations.

9. In ſeven or eight Hours we had provided ourſelves for our Journey, and our two *Borandians* had brought down ſix Sledges, drawn by ſix Rain-Deer, to the Water-ſide. We aſked them why they did not bring more? They anſwered, there were no more to be had in thoſe Parts. Obſerving that theſe Rain-Deer were larger than the Rain-Deer of *Lapland*, we demanded if they were alſo ſtronger? They replied, Yes; and that one of their Rain-Deer would draw two Men, whereas thoſe of *Lapland* could draw but one. There was Convenience in the *Borandian* Sledges for two Men to ſit. Upon this our Captain called a Council of all the Officers, and it was agreed, That our Supercargo, the two Accountants that could ſpeak the *Ruſſian* Lanuage, myſelf, and a Seaman out of each Ship, ſhould go with the two *Borandians* to trade. One of the Sledges we loaded with Tobacco, Brandy, Gold, Silver, and Copper, to the Value of three or four thouſand Pounds. Our Supercargo and myſelf rode together in one of theſe Sledges; one Accountant and a *Borandian* in another; the other Accountant and the other *Borandian* in a third; two Seamen in the fourth, the other Seaman in the fifth; and he riding by himſelf we ſtowed ſome Barrels of Brandy and Tobacco in his Sledge; the ſixth carried our Proviſions and other Merchandize. We ſat one at one End of the Sledge and the other at the other, facing each other. The Rain-Deer ran away with us as faſt as thoſe of *Lapland*. In eight Hours time they drew us twenty Leagues over Hills and Dales, through Woods and Valleys; and we met no-body in our Way. At the Village we baited our Rain-Deer with Moſs, and ourſelves with Biſket and Beef; our *Borandians* eat dried Fiſh dipped in Fiſh-oil, for they would not touch our ſalt Meat, and did not love our Biſket. They drank at a neighbouring Fountain, and then cheared themſelves with a Glaſs of Brandy; we did the like: And being refreſhed mounted our Sledges, ſet our Rain-Deer a going, and travelled three Hours longer; when we perceived a large Village at the Foot of a Mountain. The Huts were better built, and cloſer together, and thither we haſted to take up our Lodging that Night: We were obliged to divide our Company, for one Cottage would not hold us all. We met with the ſame Reception from our Hoſts as we had in *Lapland*; we gratified them with an End of Tobacco and a Cup of Brandy. Our Guides took Care of our Rain-Deer, and we lay down to reſt on Bears-Skins: I diſtinguiſh one Part of the Day from the other by Day and Night, though really there was no Night at all; but I do it to make myſelf the better underſtood by the Reader. We ſlept ſix or ſeven Hours, then roſe to ſee if we could trade with the Inhabitants of the Village: Our Guides informed them what our Buſineſs was there, and that we would barter our Commodities for theirs. They preſently produced ſome Wolf-Skins, white Fox-Skins, two dozen of Ermines, three hundred grey Squirrels, and ſeven Pair of Sables. They did not care to deal for Tobacco ſo much as the *Laplanders* did, nor as the *Borandians* dwelling on the Coaſts; they were not ſuch good Fellows. Hunting was their only Diverſion and Employment. In the Summer they eat their Meat freſh boiled, or broiled on the Coals; in Winter they eat it dried, providing enough in Summer to laſt them the whole Seaſon; their Manner of drying it is thus: They cut it out in Pieces, ſpread it on the Tops of their Houſes, and leave it in the Sun. Their Huts are flat at Top, covered with Branches of Trees and Turf; they are very low, having no Place but the Door for the Light to enter at; the Doors of their Huts are like the Mouth of an Oven. Theſe *Borandians*, as our Guides told us, change their Dwellings from time to time, like *Kilops*; they, like Beaſts, live without any Knowledge of Religion; they are ſtupid and ugly; their Shoes are made of the Bark of a Tree; their Stockings, Breeches, Caps, Coats, which come down below the Calf of their Legs, and are tied round their Waiſt with a Girdle four Inches broad, are all of white Bear-Skin, the Hair outward.

One cannot diſtinguiſh the Women from the Men but by their Hair which is twiſted and hangs down on their Shoulders; they are as dextrous at hunting as the Men, and only carry a Stick, ſharp at one End, in their Hands; it is of a tough Wood, and ſerves them for a defenſive Weapon; the Strings of their Bows are made only of the Paring of a Tree; they hang a Quiver at their Backs, and a Stone that will cut like a Razor at their Girdles. We bought the Furs the Inhabitants had to ſell for Money and Copper, and ordered our Rain-Deer to be put to the Sledges, mounted them, and having drank each a good Glaſs of Brandy, which may be called *Liquor of Life*, in the North, we proceeded on our Journey. We ran eight or nine Hours before we came to any Habitation: At laſt our Guides ſpied three or four Huts, and turned our Rain-Deer up to them. We found no body in them; however, thither we went and refreſhed ourſelves on our own Proviſions, while our Cattle baited on the Moſs, which grew there in abundance. We reſted three Hours, and then mounted again, to proceed on our Journey: We went fifteen Hours before we came to any Dwelling, or ſaw any human Creature; when we had been ſo long on our Way we eſpied three Hunters riding before us: We overtook them under a Hill. One of them was dreſſed in a long Robe, after the *Muſcovite* Faſhion, tied round his Waiſt with a Girdle four Inches broad. It was all Bear Skin, Hair outwards, and as white as Snow, the Edges black as a Coal. His Cap was like a Seaman's, made of black Fox-Skin. His Breeches and Stockings were of Rain-Deer-Skin. His Shoes of Fiſh-Skin, ſomewhat like thoſe we ſaw at *Varanger*. The two others were dreſſed as we were; their Robes were of white Bear-Skin, the Hair outwards. They had each a dozen of Furs at their Backs, Bear-Skins, Wolf-Skins, and white Fox-Skins, ſome Ermines, and very fine Sables; the Bears Tails hanging ſtill to the Skin. The firſt of them carried only a dozen of white Crows and ſeven Sables hanging at his Girdle. When we came up near enough, one of our Guides ſtopt to talk with him. He lighted out of his Sledge, and the other went into it. While our Accountant rode with him, we admired to ſee our *Borandian* leave us, and this Man ſupply his room. Our Supercargo could not tell what to make of it. The Hunter travelled with us for above an Hour, and we had as bad Luck as before in this uninhabited Country. We met with neither Houſe nor Man. At laſt we drew near the Brow of a high Mountain. We perceived the Sea at a Diſtance, and at the Foot of the Mountain ſeveral Houſes built cloſe together, which looked like a little Town. Thither our Rain-Deer carried us. We alighted to repoſe our wearied Limbs at that Man's Door, who had taken our Guide's Place in one of our Sledges. We found he was a Man of Authority in the Place by Office, and deſired of the Inhabitants to ſerve us as his Friends.

The Name of the Village was *Vitzora*; the People that belonged to it, as ſoon as they ſaw that Perſon in our Company, ran to help us out of the Sledges, and to unharneſs our Rain-Deer. He bartered all his Skins with us for Tobacco and Brandy, except his Bear-Skins, which we did not care to buy, and his Sables, which he would not ſell; indeed, he durſt not. The Great Duke of *Muſcovy*, in whoſe Territories we were, and whom his Subjects call *Czar*, reſerves that Commodity for himſelf. Thoſe who ſell it without Licence from him, in any Part of his Dominions, are ſeverely puniſhed. He appoints certain Officers to take thoſe Furs of ſuch as have them. Thoſe Officers have Warehouſes in ſeveral Places of his Empire, and only they trade in that Merchandize. If any one elſe ſells a Sable-Skin, it is by Stealth and in ſecret, and thoſe that buy it muſt be careful how it is ſeen; for if the Officers we have mentioned, or the Governors of Places that Strangers go through, find any Sable-Skin, or Skins among their Goods which were not bought of the proper Officer, all their Merchandize will be ſeized, and condemned. Having dealt with the *Borandian* Gentleman, if any of that Country deſerve the Name, for all the Furs he had by him that were to be ſold, he ſent two of his Servants about the Village to tell the Inhabitants, That if they would bring us their Skins to his Houſe, they might have Brandy and Tobacco for them, as their Maſter had already had for his. The *Borandians* of *Vitzora* were glad to hear of ſo good a Market; they brought us all their Furs immediately, and we gave them Tobacco and Brandy in Exchange for them. We bought in this Place fifteen hundred Skins of all ſorts; and our Cargo being too great for a Sledge, we deſired our Landlord to do us the Favour to lend us a Bark, which he had, and ſome of his Servants to go in it with one of our Seamen who was a good Sailor, and one we could truſt to carry our Goods a-ſhip-board. Our Ship, it is true, lay above an hundred Leagues off; but the Sailor and the *Borandian*'s Servants, who were uſed to the Coaſts, could eaſily manage that ſmall Veſſel, and convey our Merchandize to our Companions on the Coaſt of *Borandia*. The Gentleman agreed to lend us the Bark at ſuch a Price, and his Servants to help our Sailor. We paid him in Tobacco and Brandy, as current as ready Caſh at *Vitzora*.

The Bark was built in the Form of a Gondola, broad in the Middle, and ſharp at each End. It was all of Wood. There was in it no Iron or Nails. It had a Fir-Tree Maſt in the Middle, and a ſquare Piece of coarſe Cloth, the Thread of it wove of the Rind of a Tree, tied to the Maſt to ſerve for a Sail. The Cordage was of the ſame Make as the Sail. The two Anchors were of Wood, and very heavy. The Cables that held them were made alſo of Ropes of the ſame kind as the other Cordage. He lent us two of his Servants to aſſiſt our Sailor: And when they were about to put to Sea, he ſhewed them privately thirty Pair of Sable-Skins, which we bought with ready Money, clapped them aboard, and ſent them away. We were glad we had got them ſo; for otherwiſe he would not have ſold them to us; the Bark being ready to ſail was a fair Temptation; and ſeeing there was no Likelihood of the Officers ſearching, he let us have them. The Veſſel was now put off immediately, and there was no Officer near to examine it. It was a dangerous Riſk, had there been any Searchers at hand, for himſelf would have been corporally puniſhed, and he and all his Family ſent Slaves into *Siberia*. Our Seaman and the two *Borandians* ſet ſail with our Merchandize; and our Supercargo and Accountants fell to drinking with the *Borandian* Gentleman. While they were making a Debauch, I went about the Town with our other two Seamen. I was pleaſed with its Situation between two Mountains, each of them almoſt a League high. All the Houſes were built and covered with Fiſh Bones very artificially; the Crannies were every where ſtopped up with Moſs as faſt as a Ship new caulked; and above all, Turf was laid handſomely in ſome Places that were moſt expoſed to the Wind, which had no Paſſage into the Houſes, except at the Doors, which were like Ovens Mouths, as in other Places in *Borandia*. At the Top of the Houſes where were Lattices or Windows for the Light to enter, I ſaw abundance of Women and Children at work, ſome making Fiſhing-Nets of the Rind of Trees; others were making of Sails, which looked like fine Mats; others uſing their Hatchets; others Knives. Their Needles were of Fiſh Bones. All of them are ugly, dwarfiſh, flat-noſed and ſwarthy.

10. When we returned to our Lodgings, we conſulted with our Supercargo and Accountants, what we had beſt to do; our Commodities were not half diſpoſed of, and we were in a Country that was full of Furs; the farther we went, the Plenty was the greater, and conſequently the Markets the more encouraging. We had a great deal of Caſh, and our Commiſſions being as large as our Captains, who were to go whither they thought fit, for the Service of the Company; we reſolved to proceed as long as we found the Trade to be good. We ſent our Guides back with the Rain-Deer, and Letters to our Captains, to acquaint them with our Intentions, and give them an Account of our Succeſs. We then hired a Bark to carry us to *Petzora*, the Capital City of a Principality of the ſame Name, on the North Coaſt of the *Muſcovite* Sea. Our Landlord got us a ſmall Veſſel and two Men. We embarked on board it with our Cargo, and by the help of an Eaſterly Wind, coaſted along Shore till we arrived at *Petzora*. We got there in fifteen Hours.

The City is not very big, it is ſituated on the Coaſt, and gives Name to the Sea as well as the Province about it. We went to wait on the Governor ot the Caſtle. He aſſumes that Title, tho' in reality he is no more than a Collector of Cuſtoms. Indeed all the Czar's Governors are ſuch ſort of Perſons, for there are few Noblemen or Gentlemen in *Muſcovy*. They are all uncivil and jealous; Qualities that are incompatible with Nobility. This Governor was a *Muſcovite*; he was dreſs'd after the Faſhion of his Country, in a Robe of Violet-coloured Cloth, with a Mixture of Red. He gave us ſome excellent Metheglin, which went down very pleaſantly, and was as racy as Sack; after that we had Brandy and Gingerbread, the common Collation in *Muſcovy*. Knowing he had the Charge of the Czar's Sables, we aſked him if he would ſell us ſome? He anſwered, he would, enquiring how many we wanted? We anſwered, all he had, if he would let us have them a Pennyworth. He then carried us to the Warehouſe, where there were five Zimmers, each Zimmer fifty Pair; among which there were two Zimmers of the fineſt I ever ſaw, as black as Jet; for which we paid him five hundred Ducats; and we had the other three Zimmers for eight hundred Crowns, or four hundred Ducats. We bought all the Skins he had; they were ſealed with the Czar's Arms. After we had paid him his Money, he would treat us again at the Caſtle.

He ordered two Boats preſently to get ſome freſh Fiſh for us; he killed a young Rain-Deer, and roaſted ſome Wild-fowl that his Servants had brought in. We had a noble Entertainment of Fiſh, and Fowl, and young Rain-Deer Veniſon, which is good Meat; we drank Brandy and Metheglin eight Hours together; and the Fumes had got up into my Head ſooner, had I not every now and then eat a *Muſcovite* Biſket, the beſt Bread in the World. The Governor and his Gueſts at laſt began to be top-heavy; and we all lay down to Reſt on white Bear-Skins, for he had no Beds to lodge us in. We ſlept ſix or ſeven Hours, and then roſe. Our Hoſt preſented each at our Upriſing with a Brimmer of Brandy.

We then went about the Town to try if there was any Trade to be driven with the Inhabitants. The Governor ordered one of his Under-Officers to accompany us; and we bought of ſeveral People two thouſand grey Squirrels, four dozen of Ermines, five hundred Fox-Skins, the greateſt Part of them as white as Snow, ſix ſcore of white Wolf-Skins, two hundred Martens of a greyiſh Colour. All of them coſt four hundred Ducats. We obliged them to take half in Copper, becauſe it incumbered us, and half in Caſh. We went back to the Caſtle, whither we ſent our Merchandize, and where we packed it up in Bales. The packing Cloth was made of the ſame Sort of Stuff as the Sails of the Bark ſent to the Ships. Our Goods being thus taken care of, we reſolved that one of our Accountants ſhould return with them to our Ships. To that end we entreated our Hoſt the Governor to furniſh us with a Bark, which he did; and we hired three *Borandians* to aſſiſt the Accountant in his Voyage; the Governor paſſing his Word for them that they ſhould be truſty and do us no Wrong. For the Hire of the Bark and the *Borandians* Wages, we paid him ten Ducats more, and preſented the *Borandians* with ſome Ends of Tobacco. The Governor engaged to ſatisfy them farther for their Trouble when they came back.

Our Accountant embarking, ſet ſail, the Wind Eaſt-ſouth-eaſt, and we fell to drinking again with our Hoſt the Governor. The Gentleman who had entertained us at *Vitzora*, accompanied us to *Petzora*, and drank ſo hard, that I could not imagine where he found Stowage for ſo much Brandy and Metheglin as he ſwallowed. We continued tippling four Hours together, and then lay down, according to Cuſtom, on Bear-Skins, to repoſe ourſelves. As ſoon as we awoke, our Supercargo deſired the Governor of *Petzora* to hire us ſome Rain-Deer, to carry us into *Siberia*, a Province which ſome Geographers place in *Europe*, and others in *Aſia*. He furniſhed us with ſeven Rain-Deer and ſeven Sledges; one for our Supercargo, one for our other Accountant, one for myſelf, two for our two Seamen, one for our Guide, and the other to load our Tobacco and Brandy. The Proviſions he ſupplied us with, were to laſt till we arrived at *Papinowgorod*, another City in the Province of *Petzora*, on the Borders of *Siberia*. Our Factor took what Money he had left with him; and the ſeven Rain-Deer being put to the ſeven Sledges, the Governor ordered another to be got ready for one of his Domeſtics, whom he commanded to wait upon us ſeven Leagues of our Way to a Village, where we were to change our Rain-Deer, and give them to the Governor's Servant to carry back. For all which he was to have four Ducats. He would not let us go till we had drank five or ſix Glaſſes of Brandy at parting.

We gave both him and our Hoſt of *Vitzora* hearty Thanks for their kind Entertainment, and then got into our Sledges. The Ways were very difficult to paſs. We had no beaten Road, and were four Hours before we could ſee any living Creature; at laſt we met four white Bears, of an exceſſive Bigneſs; they croſſed our Way, and ſeeing us, fled into a Wood. Two Hours after we came to a Village, conſiſting of ſeven or eight Cottages; there was no body in them, the Inhabitants being all gone a Hunting. We alighted out of our Sledges to bait a little on the Proviſions we brought with us. While we were eating, five or ſix Men, with their Wives and Children, returned from hunting, which it ſeems had been very lucky to them, for they brought in with them ſix Bear-Skins, four Wolf-Skins, a couple of Ermines, and eight Sables. The People of the Place were ſurprized to ſee us there, and would have fled from us, had not the Governor of *Petzora*'s Servant aſſured them we were Friends and Merchants, bound for *Papinowgorod.* When they underſtood we were Traders, they came up to us, and viewed us narrowly. They wondered to ſee ſo many Strangers in a Place ſo unfrequented. They were aſtoniſhed at our Way of Dreſs, our Looks and Shape, as alſo at our Language, ſo different from theirs, and ſo unintelligible to them; however, we dealt with them, by the Aſſiſtance of our Interpreter; we bought all the Skins that they dared to ſell us; and they lent us Rain-Deer and Sledges, to carry us as far as the Mouth of the River *Papinowgorod*.

11. When we parted from them, we left the Courſe of the River *Petzora*, and proceeded to that of *Papinowgorod*; the Ways were almoſt unpaſſable, yet with much Difficulty and Fatigue, our Rain-Deer drew us over Mountains and Valleys, through Woods and Foreſts, for three Hours before we met with Man, Woman, or Habitation. When we had travelled ſo long, and approached near a thick Wood, we eſpied five Men in white Bear-Skin Robes, after the *Muſcovite* Faſhion; each of them had a Fuzee on his Shoulder, a Pouch on one Side, and a Knife and Sheath on the other, like the *Borandian* Huntſmen. They ſeemed to make up towards us, for which Reaſon our Guide, who underſtood the Management of Rain-Deer, immediately ſtopped them; and by that Time the five Men were advanced ſo near us, that we could hear them; one of them perceiving that we were Strangers, bid us Good-morrow in the *German* Language, wiſhing they were as free as we were. Our Supercargo, who was a Native of the *Lower Saxony*, hearing him talk his own Tongue, aſked him what Countryman he was? The Man anſwered him to his Satisfaction; and, entering into a longer Converſation, they recollected Things in their Minds, by which they underſtood that they had formerly been intimately acquainted. Our Supercargo alighted out of his Sledge, embraced him, and demanded how he came there? The Man replied, he was one of thoſe whom the Grand King, or Czar, had lately baniſhed for hunting Sables.

This is a Crime that is puniſhed with Baniſhment, and that in *Muſcovy* is equivalent to the Galleys in *France*. Some are baniſhed for ten Years, ſome for ſix, ſome for three, ſome for more, and ſome for leſs; after which they have their Liberty to go where they pleaſe. The more I looked on one of the five Men, the more I thought I had ſeen him before, and alighted out of my Sledge to ſatisfy my Curioſity. As ſoon as I was on the Ground, the Man, who remembered me better than I did him, ran to me and embraced me; ſighing, aſked me, in the *French* Tongue, whence I came, and whither I went? I was ſomewhat ſurprized at it, becauſe I could not yet call to mind who he was; his Habit had ſtrangely altered him; his Beard was long, and his Head bald; beſides, he was ſo fallen away, he was nothing but Skin and Bones. Seeing I could not recollect where I had known him, he told me his Name, and that he had drank very often with me at *Stockholm*. I then remembered that, indeed, he was the Man to whom I had been very much obliged, for the many Civilities I had received from him in *Sweden*: He was a Gentleman by Birth, a *Lorrainer*, and was Lieutenant-Colonel of a Regiment of *Muſcovite* Horſe. He would fain have perſuaded me to go with him to *Moſcow*, promiſing to procure me an honourable and profitable Place, in the Service of the Czar, but I did not think fit to accept of his Propoſal.

The fine Appearance he made at that Time, the Reſpect that every one paid him, as well on Account of his Eſtate, for he was rich, as for the Place he enjoyed, and the Character he bore, of a Man of Courage and Honour, and the miſerable Condition I now ſaw him in, made me ſigh; when I embraced him again with extraordinary Affection and Tenderneſs, aſking him what was the Occaſion of his Diſgrace? He anſwered, the Czar ſuſpected he had not been ſo zealous in his Service as he might have been, and for that Reaſon only baniſhed him to *Siberia* for three Years; that he was to endure Miſeries which were not to be expreſſed, beſides the Dangers to which all baniſhed Perſons are expoſed in hunting wild Beaſts for their Subſiſtence; as likewiſe Hunger, and the Rigour of the Seaſon, which they were forced to ſuffer, and none durſt relieve them. He ſaid they were almoſt every Day attacked by wild Beaſts, which they met in Herds, ſeeking for Paſture; and that they had often much ado to defend themſelves: And further, if they did not each of them catch ſuch a Number of Sables, as they were condemned to furniſh the Czar's Officers with, they were each of them laſhed with a Whip made of Leathern Thongs, thick and hard, on their naked Backs, and ſometimes all over their whole Bodies, till they were all in a gore Blood.

Our Supercargo's Acquaintance told him the ſame Story, ſo did the other three, who ſpoke the *German* and *French* Tongues tolerably well. One of them had been Receiver General of the Czar's Revenues, in one of his Provinces; the ſecond had been a Major General, and the third a Man of Note. They all deplored their Miſfortune, aſſuring us, that when the Time of their Baniſhment was out, they would get far enough from the Czar's Power. We were extremely touched with the Relation of their miſerable Condition. We ſat down on the Moſs, took out the beſt Proviſion we had, and deſired them to take Part of it. We offered them our Help to make their Eſcapes, but they told us it was impracticable; for that they were known to all the Governors of the Forts and Places through which they and we muſt neceſſarily paſs: And in caſe they ſhould be taken, all our, and their, Lives muſt pay for their Attempt to get off. That Death would certainly be our Puniſhment, and theirs; and the moſt cruel Death, which boundleſs Power, and Northern Barbarity, could inflict. This increaſed our Concern for thoſe poor unfortunate Gentlemen; we all weeped heartily at the ſad Sight of what they ſuffered, and the Idea of what they were ſtill to ſuffer.

We could not think of parting preſently with Perſons in their diſconſolate State. We had ſeen them when Fortune ſmiled on them, at leaſt ſome of them; we had been their Friends, and we thought it had been cruel to leave them, without endeavouring to render a Day or two of the diſmal Time they were to paſs, pleaſant to them; the Society of ſuch as they had formerly had a Friendſhip for, would contribute towards eaſing them a little of the Load of Grief that hung at their Hearts. We told them what we wiſhed, and that we were loth to part ſo ſoon; our Trade was not in ſo much Haſte, conſidering the two large Parcels of Goods we had already ſent to our Veſſels, as to hinder us ſpending a Day or two with Men in their Circumſtances, whom we equally loved and eſteemed. The meeting them in ſuch a Place, and in ſo ſad a Condition, had ſomething romantic in it; and as much as we were Merchants, we had more of Heroes than to fly from our Friends in Adverſity, without taking a few Days to condole with them, and endeavour to alleviate their Sorrows.

Beſides theſe Conſiderations, I had another. My Deſign, in the Beginning of my Voyage, was more to make Obſervations on the North Parts of the World, than to reap any Benefit by it. I had formerly made more beneficial Voyages to the *Indies* and *Africa*, than any thing I could propoſe to myſelf by travelling into the North. But having ſeen theſe two Parts of the World, I had a Curioſity to viſit that in which I was now trading, and to inform myſelf of the Manners and Cuſtoms of a People leſs known to us than the *Indians* in the Eaſt and Weſt, though they are at a greater Diſtance from us. I knew the Gentleman of *Lorrain* to be a ſenſible Man, who had lived a long Time in *Muſcovy*, underſtood the State of the Empire, and the Court of the Czar, as well as any Man; and intending to communicate my own Obſervations to the World, I thought I could not better ſecure the Reader's Satisfaction, than by giving him his, which would make my Account of the North complete; wherefore I reſolved to ſtay a Day or two with him, and his poor Brethren in Adverſity, and learn of him what he could inform me of, as to the more noted and more populous Part of *Muſcovy*; the City of *Moſcow*, and the Czar's Court. Our Buſineſs obliged us to keep as near the Coaſt as poſſible; and the Countries that lay near the Sea came within my own Knowledge; but the Inland Provinces were out of our Way, and we had no Pretence to viſit them; my Companions travelling for Profit and not for Pleaſure. Our unhappy Friends rejoiced mightily at our offering to ſpend ſome Hours with them.

To encourage us, they told us they had built themſelves five little Huts in the Wood, which they came out of, where each of them retired when he choſe to be alone; that there was Room enough to entertain us all; and if we would be ſo kind as to go thither with them, they would be infinitely obliged to us. They knew our Buſineſs, and we ſhould not loſe our Time; all the Skins they had were at our Service, except the Sables, which they were forced to reſerve for the Czar; but they were little to be valued, in reſpect to the Joy they ſhould have in our Company. They ſaid, the very Remembrance of the happy Hours they ſpent with us, in their profound Solitude, would make many future Months glide on the more ſweetly. Our Supercargo and I conſented to ſtay with them, out of Reſpect, as the reſt of our Company did out of Hopes of Profit, hearing them offer to give us their Furs. The baniſhed Men told us we muſt travel ſome ſcores of Leagues before we could meet with a Market for our Commodities. We readily agreed to the Propoſals they made us. When we had refreſhed ourſelves on our own Proviſions, we ordered our Guide to unharneſs the Rain-Deer, and convey our Goods into the Huts the Gentlemen had built to defend them from the Weather. Their Neceſſity made them ingenious, and nothing could be better contrived, either for Pleaſure or Convenience, in ſo wretched a Place.

They were built of Fir, higher than any we had ſeen in our Travels; there were two or three Rooms in each of them, and Lattices to let in the Light at the Side. They were each ſhaded by a Tuft of Trees, and paved with broad Fiſh-Bones, ſo artificially, that they looked as if the Floors were inlaid with Ivory. They had digged a Trench round them, and palliſaded the Circumference of the Ground, on which they were built, with ſtrong Poſts, which were joined together with croſs Sticks of ſtrong Wood, and on the Top were Spikes of Fiſh-Bones. By this means, when the Gate, that was the Entrance into it, was ſhut, they were ſafe againſt the Inſults of wild Beaſts, and as ſecure as in a fortified Place. They had all Sorts of hunting and fiſhing Tackle, Store of Metheglin, Biſket, and ſalted Rain-Deer Veniſon. The *Lorrainer* was a temperate Man, but the others loved drinking; ſo they and my Companions fell to it. I always abhorred the Debauches we were forced to make in the North, and was very glad I had an Excuſe to avoid tippling now.

My Friend and I withdrew to converſe together, and the Company perceiving we were old Acquaintance, permitted us to do ſo. We retired into his Hut, and left the reſt with the *Saxon* in his; where they drank away Sorrow at that Time; and after ſix or ſeven Hours ſpent over Brandy and Tobacco, they lay all down on Bear-Skins to take their Reſt. The *Lorrainer* and I, in the mean Time, entered into a Diſcourſe on his own Adventures. He told me how he intended to return home, after his Time of Exile was expired, and how I might hear of him *in France.* Our Converſation was tender and pleaſant; it ran partly on our former Acquaintance, and partly on the Wildneſs of the Country, and the Barbarity of the Inhabitants; upon which I took Occaſion to deſire him to communicate to me the Obſervations he had made of the Court, Country, and Cuſtoms of *Muſcovy*; telling him I intended to publiſh my Voyage to the North, and wanted only ſome Account of the Inland Provinces, to render it, in ſome Meaſure, perfect.

He replied, he was loth to ſpend any of the little Time we had to be together on ſo general a Subject: But if I thought his Reflections and Remarks would be of any Uſe to me, he would give me the Memoirs he had collected when he came firſt into *Muſcovy*, for his private Satisfaction. He could not recommend them to me as Things that did not require to be carefully digeſted and methodized: But he aſſured me the Obſervations were as juſt and entertaining as any he had been able to make ſince, in fifteen or ſixteen Reſidence in that Country.

He then went to a Cheſt he had in a Corner of an inner Room, and took out about twenty Sheets of Paper, containing the Subſtance of what I inſert in the following Pages, relating to the Manners and Policy of the *Ruſſians*; as alſo the Account I give of *Siberia*, which I took entirely from his Memoirs. I would fain have excuſed myſelf, and not accepted his Preſent, believing he could finiſh his Work, and make it uſeful to the Public, with more Succeſs than I could: But he obliged me to take the Memoirs, ſaying, The Things in it were now ſo common to him, that he needed no Remembrances; and his Sufferings had given him ſuch a Diſguſt to the Country, that he ſhould never more have any Curioſity concerning it, or deſire to let the World know any thing of it. And as to theſe Memoirs, though probably they might be of Service to me, they could not be ſo to him: In a Word, he obliged me to take them with me, and I reſolved to add them to my own, when I returned to *France*, and ſhould put the Journal of my Voyage into Order for the Preſs. I have not publiſhed above half the Obſervations the *Lorrain* Gentleman gave me: However, they are the moſt uſeful and diverting of them, and what I doubt not the Reader will be pleaſed with. The Perſon that made them being a Perſon of good Senſe, and very curious in his Reflections on Places and Perſons, he mingled ſeveral Paſſages of the *Muſcovite* Hiſtory with his Memoirs, which he took from their own Books; for he underſtood their Language as well as the Natives; ſpoke it and wrote it as well as their beſt Scholars; who, indeed, are not the moſt learned or elegant Perſons in *Europe*: For Learning is held in Contempt by almoſt all the *Ruſſians*; their Clergy being as brutal and illiterate as their Laity. When my Friend and I had tired ourſelves with talking, we lay down as uſual on Bear-Skins, and ſlept ſound till the next Morning.

We roſe early, and at the Deſire of the five baniſhed Gentlemen, took each of us, our Guide excepted, a Fuzee in our Hands, which they lent us; and we went with them into the Woods, to their Walks, to ſee if their Game were caught in the Snares we had laid for them. We killed among us ten or twelve white Foxes, and half a dozen grey Martens; we met with none of the larger Game; and both the Gentlemen and we were loth to ſpend any more Time about it, for we intended to proceed on our Journey when we had dined; ſo we returned to their Huts, brought forth our Proviſions, the ſame did our Hoſts, and refreſhed ourſelves, as well as could be expected in ſo wretched a Place. After we had drank plentifully, the Gentlemen forced us to take ſeven Bear-Skins, ten white Fox-Skins, two Pair of Ermines, and eight Wolf-Skins; they would not have any Money for them, and it was with Difficulty that we could perſuade them to accept of ſome Brandy, Tobacco, and Cloth, to the Value of their Furs. We were ſo grateful to them for their Civilities to us, that we took care our Commodities ſhould be rather worth more than leſs than theirs. Having eat and drank ſufficiently, we took our Leaves of them, embracing them heartily, and wiſhed them Patience to endure their Sufferings, and a happy Deliverance out of them, and ſaluting them all round, wept reciprocally at parting. Our Rain-Deer and Sledges being got ready we mounted, and bid them all adieu; the like did the Gentlemen to us. Our Rain Deer, at our Guide's Signal, ran away with us; and the unfortunate Exiles went to their Huts.

12. The Territories of the Czar or Emperor of *Ruſſia* are ſo little known, that we have few Deſcriptions of them worth reading, which proceeds from the little Commerce there is between his Dominions and other Parts of *Europe*, and indeed between ſome of his Provinces with the reſt; his Country is the largeſt in *Europe*, beſides what he poſſeſſes in *Aſia*, but moſt of it is thinly peopled; and being uninhabited in many Places, it is conſequently unfrequented. By this Means Travellers never give themſelves the Trouble of going far beyond the Coaſt, or the Province of *Moſcow*; and the Czar's Subjects are ſo illiterate, they can give no Account of Things; for they are ſo ignorant, that they know as little of their own Country as thoſe that were never in it. I found very few Obſervations on the geographical Part of *Muſcovy* among my Friend's Papers; but ſeveral Remarks on the Cuſtoms and Religion of the *Muſcovites*, with which I believe the Reader will be diverted; for they were made by one who had more Opportunities of informing himſelf, than ever any other Man had before him.

Every body that travels into *Muſcovy*, with a Deſign to ſatisfy their Curioſity, about the Manners and Polity, Eccleſiaſtical and Civil, of the *Muſcovites*, will meet with many Difficulties that they will hardly have Patience to ſurmount: The People of *Ruſſia* are naturally jealous, and miſtruſtful; they have no Knowledge of the World, and but very little in any kind of Affairs either Spiritual or Temporal; wherefore they ſuſpect all that make any Enquiries into the State of their Government or Religion, and yet know not why or for what. Printing was brought into *Muſcovy* in the Year 1560, and the Czar then reigning erected a College for teaching Grammar, and the *Latin* Tongue; but it came to nothing in a few Years. The Prieſts, the moſt ignorant, illiterate Creatures that ever aſſumed that Office, ruined it, for fear it might in Time ruin them: Theſe Prieſts are only Laics of good Lives and Converſation, who are for that Reaſon choſen into the Prieſthood. The Occaſion of the *Muſcovites* embracing the Chriſtian Religion, was from the Prayers of a Prieſt of *Chioff*, who praying to Almighty God for the Duke, who was dangerouſly ill, his Prayers were heard, and that Prince miraculouſly recovered to his Health. Their Liturgy is taken from that of the *Greeks* in the *Sclavonian* Language, the Knowledge of which is as rare among them, as that of the *Latin* among the *Roman* Catholics. They imitate the *Greeks* in the Manner of building their Churches.

They have Pictures in them, and formerly had Images richly adorned with Jewels, and other coſtly Ornaments; but this is not ſuffered now, all Sorts of Sculptures being forbidden; and they looked upon the Worſhip rendered them by the Papiſts to be Idolatry. They don't kneel at their Prayers, but proſtrate themſelves on the Ground. On the Eve of certain Feaſts celebrated among them, they ſpend the whole Night at Church in their Devotions. They often throw themſelves on the Floor, ſign themſelves with the Sign of the Croſs, and beat their Heads againſt the Ground. Amidſt the ſeveral Parts of their Services, there are Intervals in which they diſcourſe of their temporal Affairs. The Emperor ſeldom miſſes aſſiſting at the public Worſhip; he is generally attended by the whole Court: He diſpatches Buſineſs at Church, and if any of the Courtiers are not preſent he ſeverely reprimands them.

On *Whitſunday* their Churches are filled with Maple Boughs, which the *Ruſſians* miſtake for Sycamore. Whenever they proſtrate themſelves, they verily believe the Holy Ghoſt deſcends on thoſe Boughs, as Manna fell on the Leaves of Oak in the Deſart. Muſical Inſtruments are not uſed in Churches; the laſt Patriarch aboliſhed that Cuſtom. Their Prayers, which are performed three

Hours after Sun-riſing, are called *Obedni*; thoſe that are made after Sun-ſetting are called *Vackerny*; and thoſe an Hour after Midnight, *Zaoutrinys*.

Their *Obedni*, or Morning Prayer is: *Have Mercy upon me, O Lord, according to thy loving Kindneſs, and blot out my Tranſgreſſion, according to thy Greatneſs, and Multitude of thy Bounties.*

Their *Vackerny*, or Evening Prayer is: *O Lord! hear my Prayer when I call upon thee, and let my Cry come unto thee.*

Their *Zaoutrinys*, or Prayer an Hour after Midnight is: *We put our Truſt in Chriſt, our Saviour; and all our Hope is in him.*

They repeat the *Miſerere*, which they call *Hoſpody Pomelee*, a hundred times over, and the Prieſt who can repeat it ofteneſt in a Breath is reckoned the beſt Man; five or ſix of them will all read aloud together; one a Chapter, the other a Pſalm, the third a Prayer, and the reſt ſo many other different Things, with Noiſe and Confuſion inexpreſſible. Every Prieſt is called *Pope*, or Father; as Pope *John*, or Pope *Peter*; every Biſhop is ſtiled a *Metropolitan*, and the Chief Prieſt, *Proto-Pope*: The Pariſh-Prieſts are commonly cloathed in red Veſtments, ſome wear green, and others blue, according to their ſeveral Fancies; the Form of their Garments is diſtinguiſhed from that of Laymen, by two little Pieces of Stuff ſewed on each Breaſt.

They wear a red Leather Cap on their bald Pates, and that is all the Difference between their Dreſs and the Laity; the Hair of their Heads and Beards is never ſhaved, only the Crown of their Heads, which is always ſhorn; they muſt have Wives, but, according to the Apoſtle St. *Paul*'s Rule, no Prieſt is allowed to have any more than one during his whole Life: Thus their Prieſthood depends on their Wives, and when they die it ceaſes; for which Reaſon they marry young, that they may have a Benefice early, and uſe their Wives better than other Men. Their Wives Garments are diſtinguiſhed like the Huſbands, by two little Pieces of Stuff ſewed on each Breaſt. Their Manner of Baptiſm is much like that of the *Roman* Catholics, except that they always dip the Children they baptize quite under the Water. The Cuſtom of buying Foreigners, on Purpoſe to oblige them to turn Chriſtians, which was very much practiſed by them formerly, is now out of Uſe. When any Man, either Proteſtant or Papiſt, renounces his own Religion to embrace the *Ruſſian*, he muſt renounce his firſt Baptiſm, his Father and Mother, and ſpit three Times over his Shoulder. Some antient Inhabitants of the Country have obſerved, that of two hundred *Engliſh*, *Scotch*, and *Dutch*, who have made Profeſſion of the *Ruſſian* Religion, hardly one died a natural Death.

The greateſt Part of the Marriages in *Muſcovy* are brought about by third Perſons, and without much Solemnity. Five or ſix of the young Woman's Friends who is to be married, examine her ſtark naked before ſhe is further engaged, to ſee if ſhe has any bodily Infirmity; and if they find any, they do what they can to cure it: As for the young Man, he never ſees her, perhaps till he meets her in the Chamber where the Marriage is to be conſummated. The Nuptial Ceremonies are not very great; a few Perſons of both Sexes wait on the Bride about three o'Clock in the Afternoon to Church. When the Prieſt has done his Office, the Panama, or Sexton, throws Hops on her, and wiſhes that ſhe may be as fruitful as that Plant; another Officer of the Church, cloathed in Goat-Skin, the Wool outwards, accompanies her Home, praying all the Way, that ſhe may have as many Children as there are Hairs on his Habit. Young Men lead the Bridegroom Home, and old Women the Bride, who is veiled ſo that nothing of her Perſon is to be ſeen. The Pariſh Prieſt carries the Croſs before her to her Huſband's Houſe.

The new married Couple ſit down at the Table together; ſometimes they have Bread and Salt laid before them, but they don't eat a Bit. In the mean time a Chorus of Boys and Girls ſing an *Epithalamium*, or Wedding Song, ſo lewd and impudent, that it is a Shame to repeat it. When this Ceremony is over, an old Woman and a Prieſt conducts the Bride and Bridegroom to their Chamber, where the old Woman adviſes the Bride to be loving and obedient to her Huſband, and the Bridegroom to be kind to his Wife; the Bridegroom in one of his Buſkins has a Whip, and in the other a Jewel, or Purſe of Money; he commands the Bride to pull them off, and if it happens ſhe lights upon that Buſkin firſt where the Jewel or Purſe of Money is, he gives it to her, which is looked on as a happy Omen for the Wife; but it is reckoned unlucky for her to pull off that Buſkin firſt in which the Whip is; and the Bridegroom gives her a Laſh with it to puniſh her for it, as a Token of the Treatment ſhe is like to meet with. When this is done, they are ſhut up in a Chamber for two Hours; then the old Woman goes in and examines if the Signs of Virginity are apparent, and in ſuch Caſe ſhe ties up her Hair in Treſſes that before hung looſe about her Shoulders, and goes to her Parents to demand the *Albricia*, or Marriage-Portion.

13. To keep the Chambers warm in *Ruſſia*, they are covered with Earth two Feet deep; but when a Couple is newly married the Earth is taken away from the Place where the Marriage is conſummated; for Earth being an Image of Mortality, the *Muſcovites* think it is not proper for the Man or Woman to have it in their Thoughts at that Time. The Children of the *Ruſſians*, young Men or Maids, dare not refuſe Huſbands or Wives propoſed to them by their Parents; nor thoſe that depend on any great Man, thoſe deſigned for them by their Superiors. *Boaris Juanowitz Moriſo*, the ſecond Perſon in the Empire, having reſolved to marry one of his Friends to a rich Widow, a *Dutch* Woman born, who had embraced the *Ruſſian* Religion, the Widow went to *Boaris*'s Wife, Siſter to the Empreſs, threw herſelf at her Feet, and prayed her to prevail with her Huſband not to put ſuch a Conſtraint upon her Inclination, nor oblige her to break a Vow ſhe had made never to marry again. All her Prayers and Tears were ineffectual. *Boaris*'s Wife replied, What would you *Beſcheat*; as much as to ſay, diſhonour my Huſband ſo far as to refuſe one that he offers you, and make him worſe than his Word to his Friend.

The Manner of the *Ruſſians* uſing their Wives is very ſevere and inhuman, though it is much leſs ſo now than formerly: Four or five Years after my Friend came to *Muſcovy*, a Tradeſman in *Moſcow*, after having beaten his Wife unmercifully, forced her to put on a Smock dipped in Brandy, to which he ſet fire and burnt her to Death. What is more ſtrange even than his Barbarity is, that no body proſecuted him for his Wife's Murder. It ſeems there is no Law in *Ruſſia* to puniſh a Man for killing his Wife if it was in Correction. Some of theſe *Barbarians* tie up their Wives by the Hair of the Head, ſtrip them ſtark naked, and whip them till they are almoſt dead: It is true, they never chaſtiſe them ſo ſeverely unleſs it be for Adultery or Drunkenneſs, and indeed it is very ſeldom now that they deal ſo by them at all. The Fathers of young Women who are married, now take the neceſſary Precautions to prevent their Daughters being ſo ill uſed; they oblige their Huſbands to Marriage Articles to treat them according to their Quality, to maintain them with good Victuals and good Drink; not to whip them, nor ſcratch, nor kick them.

That Woman who kills her Huſband is buried alive all but her Head, and ſo left to expire in that miſerable Condition. There is ſeldom any Marriage celebrated in *Muſcovy*, eſpecially among Perſons of Rank, without ſome conjuring or uſing Charms: The Friars and Nuns are accuſed as the moſt guilty of this wicked Practice, which, it is ſaid, they ſtudy in their Solitude. My Friend writes, that he has ſeen a Man come out of the Wedding-chamber like a mad Man, tearing his Hair and crying, he was undone and bewitched. The Cure in theſe Caſes is to apply to ſome, commonly called, *white Magicians*, who for a ſmall Matter of Money diſſolves the Charm, and unties the Knot that others had tied. This Man was ſo ſerved, ſo diſtempered, and ſo cured, as my Papers report; but Credulity perhaps infects even Strangers in *Ruſſia*. The *Muſcovite* Canon forbids any

Man to have conjugal Commerce with his Wife, three Days in the Week, as *Monday*, *Wedneſday*, and *Friday*. Thoſe who break this Law, muſt bathe themſelves before they enter the Church-Door. No Man is admitted into the Church that has had two Wives; every ſuch Perſon muſt ſtay in the Porch; and he who marries a third Time, is excommunicated.

If a Woman is barren, a Man may do what he can to perſuade her to retire into a Convent willingly, and if ſhe will not, he may beat her till ſhe gives her Conſent to it. It is reported that the laſt Empreſs would have been ſhut up in a Monaſtery, had ſhe not at laſt brought forth the *Czarowitz*, or Prince Royal, who was born nine Years ago, on the 2d of *June 1661*. The Empreſs had ſeveral Daughters, but that would not have excuſed her, unleſs ſhe had had a Son and Heir. When the Czar of *Muſcovy* is willing to marry, there are ſeveral young and beautiful Ladies preſented to him, out of which he generally chuſes one to be his Wife.

The laſt Czar on this Occaſion made Choice of a young Lady who was not at all liked by *Boaris Juanowitz*, the reigning Favourite and Miniſter. This Lord would fain have had his Maſter accept of a Wife of his chuſing, and endeavoured to ſet him againſt the Lady he had himſelf choſen. He propoſed to him the Daughter of *Eliah Danelowitz*, a Man of obſcure Birth, who had got into ſome Credit, by Means of a good Eſtate left him by his Uncle, one *Gramatin*, Secretary of the Embaſſador's Office. The young Gentlewoman's Name was *Mary*, ſhe was not extraordinary handſome, but witty and cunning, modeſt and devout, at leaſt in Appearance. *Boaris* thought if ſhe was advanced to the Emperor's Bed, by his Procurement, ſhe would be governed by him; and his Favour with the Czar made his Hopes the more probable. He intended to marry the younger Siſter himſelf, to ſtrengthen his Intereſt by that Alliance. The Propoſal he made to the Emperor, was not, at firſt, approved of. He was very much troubled at it, but thought it would be his ſafeſt Way to diſſemble his Diſcontent; and knowing the Emperor's Inclination for the young Lady he had choſen was too powerful for him to reſiſt openly, and that it might, perhaps, irritate him, if he diſcovered his Averſion for the Match; he reſolved to break it off by Treachery, to prevent any Suſpicion of his Deſigns. He bribed the Women that were, according to Cuſtom, to preſent her with the Crown, and they tied the young Lady's Hair ſo hard, that ſhe fell down into a Swoon; the Women gave out that ſhe had the falling Sickneſs; her Father, who brought her, was ſeized, accuſed of Treaſon, whipt, and baniſhed into *Siberia*.

The Gentlewoman, when ſhe came to herſelf, found ſhe was a vaſt Diſtance from the Throne, to which a few Minutes before ſhe was ſo near: However, ſhe valued herſelf ſo much on the Emperor's Choice of her, that ſhe would never afterwards marry, though ſeveral beneficial Matches were offered her. She was not troubled with the falling Sickneſs any more. The Ring and a Pocket Handkerchief which the Czar gave her, ſhe always kept as Tokens of her Preference in his Favour, though of ſo ſhort Duration. When the Emperor underſtood it was only an Accident occaſioned by the tying her Hair too ſtrait, he was very much troubled at it, and aſſigned her a conſiderable Penſion to make Amends for the Loſs of a Crown, and the ill Uſage her Father had ſuffered on her Account. *Boaris* prevailed with him to marry *Danelowitz*'s Daughter, to which he was the rather induced, becauſe he was afraid of being bewitched if he refuſed; and the Favourite married *Anne* the *Czarina*'s Siſter, as he intended to do, if the Czar conſented to marry *Mary* the eldeſt Siſter.

Though he got ſeveral Advantages by this Marriage, he loſt one that was more valuable than all the reſt, which was his Quiet. He was old and jealous. His Wife handſome and young. They quarrelled in a ſhort Time; and he cauſed Mr. *William Barnſley*, an *Engliſhman* of *Worceſterſhire*, to be baniſhed to *Siberia*, becauſe he ſuſpected that he was too familiar with her. *Barnſley* lived twenty Years in Exile, and afterwards was recalled; he turned from the Proteſtant Religion to the *Ruſſian*, married a great Fortune, and lived at *Moſcow* in Splendour. *Eliah* the Emperor's Father-in-law durſt not ſay that the Empreſs was his Daughter, nor any of the Family, that they were related to her, even not her Uncle, *John Paolowitz Martiſcha*, who was preferred to ſeveral Poſts, one after another. When the *Czarowitz*, or Prince Royal, is fifteen Years old, he is carried to the Market Place, and ſhewn on Mens Shoulders, that he may be known; thereby to prevent any Impoſture, there having been many Cheats impoſed on the *Muſcovites* for real Princes. Till he arrives at that Age nobody ſees him, but thoſe who are intruſted with his Education, and ſome of the Chief of his Domeſtics.

Even the ordinary Sort of People, in *Muſcovy*, hide their Children from every body, but their intimate Friends, and neareſt Relations; they having a Supe--ſtition among them, that Strangers have certain Looks that are unlucky. Their Children are ſtrong and robuſt; they never ſuck above a Month, or two Months at the moſt; after which they give them a Horn, or a Sort of Silver Cup, made like a Horn, with a dry Dug of a Cow tied to the End of it, for them to ſuck.

At two Years old they make them obſerve Faſts, which are very ſtrict. They have four general ones in a Year. In Lent they faſt three Days in a Week; *Wedneſdays*, *Fridays*, and *Saturdays*. On which Days they don't ſo much as eat Fiſh, living on Cabbage, Cucumbers, and Rye-bread. They then drink nothing but *Quaſſi*, a Sort of Beverage, weaker than Small-beer. They won't drink after a Man who has eat Fleſh; and when they are ſick, they will take no Phyſic in the Compound, of which there is either *Cor Cervi*, or *Pil. Lepor*; ſo ſcrupulous are they in the Obſervation of their Faſts.

Their uſual Penances are, to bend their Bodies crooked; to ſtrike their Heads againſt an Image; ſometimes to eat nothing but Bread, Salt, and Cucumbers, and to drink only fair Water. They never eat any thing that they call *Pagano*, i. e. impure; as Horſe-fleſh, Hares, Rabbets, Elks, or Mares-milk, Aſſes-milk, *&c.* in which they obſerve the *Moſaical* Law in ſome Meaſure. The Emperor's Magazines being burnt lately, no leſs than ſix thouſand Flitches of Bacon were burnt with them. By which we may ſee there is ſome Difference between their Religion, and that of the *Tartars*, who abhor all Manner of Swine's Fleſh. Veal is reckoned impure, yet Lamb is not. Venice Treacle is alſo not allowed by them, becauſe there is Viper's Fleſh in the Compoſition of it; nor will they eat any thing, if there is the leaſt Muſk, Civet, or Caſtor Fleſh in it; though the Barbarians feed on it in the North very frequently. Sugar and Sugarcandy, are Scarmunas, *i. e.* forbidden on Faſt Days; and a Knife that has cut Fleſh, muſt not be uſed for twenty-four Hours after.

The Regularity that the *Muſcovites* obſerve in their Faſts is of great Advantage to them; they would not, without it, have Meat enough to ſerve their Occaſions; becauſe they are forced all the Winter long to ſhut up their Cattle in Houſes, for five or ſix Months together; and the Peaſants, who are perfect Slaves, don't much care to trouble themſelves about increaſing their Stock of Cattle, for fear their Lord ſhould come and take them away from them, which is very common for them to do.

14. The Patriarch is Chief of all the Eccleſiaſtics. The Perſon who executes that Office at preſent left the Court two or three Years ago, on ſome Diſguſt he took at the Miniſters. It was ſaid he began to make Innovations, and that he did not love Pictures; to which the *Muſcovites* have a great deal of Reſpect. The patriarchal See has been ever ſince vacant. But the Metropolitan, or Biſhop, or rather Coadjutor, performs all the Duties of this Office. And the Czar dares not fill the patriarchal Chair, ſo long as the abdicated Prelate lives; ſo highly is his Perſon reverenced in *Ruſſia*. Of all the *Muſcovite* Ceremonies, that of *Palm Sunday* is the moſt extraordinary. A hundred Men are ordered to clean the Streets, for the magnificent Proceſſion.

The Emperor marches afoot, richly dreſſed in Cloth of Gold; the Train of his Robe borne up by Princes, and

Hours after Sun-riſing, are called *Obedni*; thoſe that are made after Sun-ſetting are called *Vackerny*; and thoſe an Hour after Midnight, *Zaoutrinys*.

Their *Obedni*, or Morning Prayer is: *Have Mercy upon me, O Lord, according to thy loving Kindneſs, and blot out my Tranſgreſſion, according to thy Greatneſs, and Multitude of thy Bounties.*

Their *Vackerny*, or Evening Prayer is: *O Lord! hear my Prayer when I call upon thee, and let my Cry come unto thee.*

Their *Zaoutrinys*, or Prayer an Hour after Midnight is: *We put our Truſt in Chriſt, our Saviour; and all our Hope is in him.*

They repeat the *Miſerere*, which they call *Hoſpody Pomelee*, a hundred times over, and the Prieſt who can repeat it ofteneſt in a Breath is reckoned the beſt Man; five or ſix of them will all read aloud together; one a Chapter, the other a Pſalm, the third a Prayer, and the reſt ſo many other different Things, with Noiſe and Confuſion inexpreſſible. Every Prieſt is called *Pope*, or Father; as Pope *John*, or Pope *Peter*; every Biſhop is ſtiled a *Metropolitan*, and the Chief Prieſt, *Proto-Pope*: The Pariſh-Prieſts are commonly cloathed in red Veſtments, ſome wear green, and others blue, according to their ſeveral Fancies; the Form of their Garments is diſtinguiſhed from that of Laymen, by two little Pieces of Stuff ſewed on each Breaſt.

They wear a red Leather Cap on their bald Pates, and that is all the Difference between their Dreſs and the Laity; the Hair of their Heads and Beards is never ſhaved, only the Crown of their Heads, which is always ſhorn; they muſt have Wives, but, according to the Apoſtle St. *Paul*'s Rule, no Prieſt is allowed to have any more than one during his whole Life: Thus their Prieſthood depends on their Wives, and when they die it ceaſes; for which Reaſon they marry young, that they may have a Benefice early, and uſe their Wives better than other Men. Their Wives Garments are diſtinguiſhed like the Huſbands, by two little Pieces of Stuff ſewed on each Breaſt. Their Manner of Baptiſm is much like that of the *Roman* Catholics, except that they always dip the Children they baptize quite under the Water. The Cuſtom of buying Foreigners, on Purpoſe to oblige them to turn Chriſtians, which was very much practiſed by them formerly, is now out of Uſe. When any Man, either Proteſtant or Papiſt, renounces his own Religion to embrace the *Ruſſian*, he muſt renounce his firſt Baptiſm, his Father and Mother, and ſpit three Times over his Shoulder. Some antient Inhabitants of the Country have obſerved, that of two hundred *Engliſh*, *Scotch*, and *Dutch*, who have made Profeſſion of the *Ruſſian* Religion, hardly one died a natural Death.

The greateſt Part of the Marriages in *Muſcovy* are brought about by third Perſons, and without much Solemnity. Five or ſix of the young Woman's Friends who is to be married, examine her ſtark naked before ſhe is further engaged, to ſee if ſhe has any bodily Infirmity; and if they find any, they do what they can to cure it: As for the young Man, he never ſees her, perhaps till he meets her in the Chamber where the Marriage is to be conſummated. The Nuptial Ceremonies are not very great; a few Perſons of both Sexes wait on the Bride about three o'Clock in the Afternoon to Church. When the Prieſt has done his Office, the Panama, or Sexton, throws Hops on her, and wiſhes that ſhe may be as fruitful as that Plant; another Officer of the Church, cloathed in Goat-Skin, the Wool outwards, accompanies her Home, praying all the Way, that ſhe may have as many Children as there are Hairs on his Habit. Young Men lead the Bridegroom Home, and old Women the Bride, who is veiled ſo that nothing of her Perſon is to be ſeen. The Pariſh Prieſt carries the Croſs before her to her Huſband's Houſe.

The new married Couple ſit down at the Table together; ſometimes they have Bread and Salt laid before them, but they don't eat a Bit. In the mean time a Chorus of Boys and Girls ſing an *Epithalamium*, or Wedding Song, ſo lewd and impudent, that it is a Shame to repeat it. When this Ceremony is over, an old Woman and a Prieſt conducts the Bride and Bridegroom to their Chamber, where the old Woman adviſes the Bride to be loving and obedient to her Huſband, and the Bridegroom to be kind to his Wife; the Bridegroom in one of his Buſkins has a Whip, and in the other a Jewel, or Purſe of Money; he commands the Bride to pull them off, and if it happens ſhe lights upon that Buſkin firſt where the Jewel or Purſe of Money is, he gives it to her, which is looked on as a happy Omen for the Wife; but it is reckoned unlucky for her to pull off that Buſkin firſt in which the Whip is; and the Bridegroom gives her a Laſh with it to puniſh her for it, as a Token of the Treatment ſhe is like to meet with. When this is done, they are ſhut up in a Chamber for two Hours; then the old Woman goes in and examines if the Signs of Virginity are apparent, and in ſuch Caſe ſhe ties up her Hair in Treſſes that before hung looſe about her Shoulders, and goes to her Parents to demand the *Albricia*, or Marriage-Portion.

13. To keep the Chambers warm in *Ruſſia*, they are covered with Earth two Feet deep; but when a Couple is newly married the Earth is taken away from the Place where the Marriage is conſummated; for Earth being an Image of Mortality, the *Muſcovites* think it is not proper for the Man or Woman to have it in their Thoughts at that Time. The Children of the *Ruſſians*, young Men or Maids, dare not refuſe Huſbands or Wives propoſed to them by their Parents; nor thoſe that depend on any great Man, thoſe deſigned for them by their Superiors. *Boaris Juanowitz Moriſo*, the ſecond Perſon in the Empire, having reſolved to marry one of his Friends to a rich Widow, a *Dutch* Woman born, who had embraced the *Ruſſian* Religion, the Widow went to *Boaris*'s Wife, Siſter to the Empreſs, threw herſelf at her Feet, and prayed her to prevail with her Huſband not to put ſuch a Conſtraint upon her Inclination, nor oblige her to break a Vow ſhe had made never to marry again. All her Prayers and Tears were ineffectual. *Boaris*'s Wife replied, What would you *Beſcheat*; as much as to ſay, diſhonour my Huſband ſo far as to refuſe one that he offers you, and make him worſe than his Word to his Friend

The Manner of the *Ruſſians* uſing their Wives is very ſevere and inhuman, though it is much leſs ſo now than formerly: Four or five Years after my Friend came to *Muſcovy*, a Tradeſman in *Moſcow*, after having beaten his Wife unmercifully, forced her to put on a Smock dipped in Brandy, to which he ſet fire and burnt her to Death. What is more ſtrange even than his Barbarity is, that no body proſecuted him for his Wife's Murder. It ſeems there is no Law in *Ruſſia* to puniſh a Man for killing his Wife if it was in Correction. Some of theſe *Barbarians* tie up their Wives by the Hair of the Head, ſtrip them ſtark naked, and whip them till they are almoſt dead: It is true, they never chaſtiſe them ſo ſeverely unleſs it be for Adultery or Drunkenneſs, and indeed it is very ſeldom now that they deal ſo by them at all. The Fathers of young Women who are married, now take the neceſſary Precautions to prevent their Daughters being ſo ill uſed; they oblige their Huſbands to Marriage Articles to treat them according to their Quality, to maintain them with good Victuals and good Drink; not to whip them, nor ſcratch, nor kick them.

That Woman who kills her Huſband is buried alive all but her Head, and ſo left to expire in that miſerable Condition. There is ſeldom any Marriage celebrated in *Muſcovy*, eſpecially among Perſons of Rank, without ſome conjuring or uſing Charms: The Friars and Nuns are accuſed as the moſt guilty of this wicked Practice, which, it is ſaid, they ſtudy in their Solitude. My Friend writes, that he has ſeen a Man come out of the Wedding-chamber like a mad Man, tearing his Hair and crying, he was undone and bewitched. The Cure in theſe Caſes is to apply to ſome, commonly called, *white Magicians*, who for a ſmall Matter of Money diſſolves the Charm, and unties the Knot that others had tied. This Man was ſo ſerved, ſo diſtempered, and ſo cured, as my Papers report; but Credulity perhaps infects even Strangers in *Ruſſia*. The *Muſcovite* Canon forbids any

Man to have conjugal Commerce with his Wife, three Days in the Week, as *Monday*, *Wedneſday*, and *Friday*. Thoſe who break this Law, muſt bathe themſelves before they enter the Church-Door. No Man is admitted into the Church that has had two Wives; every ſuch Perſon muſt ſtay in the Porch; and he who marries a third Time, is excommunicated.

If a Woman is barren, a Man may do what he can to perſuade her to retire into a Convent willingly, and if ſhe will not, he may beat her till ſhe gives her Conſent to it. It is reported that the laſt Empreſs would have been ſhut up in a Monaſtery, had ſhe not at laſt brought forth the *Czarowitz*, or Prince Royal, who was born nine Years ago, on the 2d of *June* 1661. The Empreſs had ſeveral Daughters, but that would not have excuſed her, unleſs ſhe had had a Son and Heir. When the Czar of *Muſcovy* is willing to marry, there are ſeveral young and beautiful Ladies preſented to him, out of which he generally chuſes one to be his Wife.

The laſt Czar on this Occaſion made Choice of a young Lady who was not at all liked by *Boaris Juanowitz*, the reigning Favourite and Miniſter. This Lord would fain have had his Maſter accept of a Wife of his chuſing, and endeavoured to ſet him againſt the Lady he had himſelf choſen. He propoſed to him the Daughter of *Eliah Danelowitz*, a Man of obſcure Birth, who had got into ſome Credit, by Means of a good Eſtate left him by his Uncle, one *Gramatin*, Secretary of the Embaſſador's Office. The young Gentlewoman's Name was *Mary*, ſhe was not extraordinary handſome, but witty and cunning, modeſt and devout, at leaſt in Appearance. *Boaris* thought if ſhe was advanced to the Emperor's Bed, by his Procurement, ſhe would be governed by him; and his Favour with the Czar made his Hopes the more probable. He intended to marry the younger Siſter himſelf, to ſtrengthen his Intereſt by that Alliance. The Propoſal he made to the Emperor, was not, at firſt, approved of. He was very much troubled at it, but thought it would be his ſafeſt Way to diſſemble his Diſcontent; and knowing the Emperor's Inclination for the young Lady he had choſen was too powerful for him to reſiſt openly, and that it might, perhaps, irritate him, if he diſcovered his Averſion for the Match; he reſolved to break it off by Treachery, to prevent any Suſpicion of his Deſigns. He bribed the Women that were, according to Cuſtom, to preſent her with the Crown, and they tied the young Lady's Hair ſo hard, that ſhe fell down into a Swoon; the Women gave out that ſhe had the falling Sickneſs; her Father, who brought her, was ſeized, accuſed of Treaſon, whipt, and baniſhed into *Siberia*.

The Gentlewoman, when ſhe came to herſelf, found ſhe was a vaſt Diſtance from the Throne, to which a few Minutes before ſhe was ſo near: However, ſhe valued herſelf ſo much on the Emperor's Choice of her, that ſhe would never afterwards marry, though ſeveral beneficial Matches were offered her. She was not troubled with the falling Sickneſs any more. The Ring and a Pocket Handkerchief which the Czar gave her, ſhe always kept as Tokens of her Preference in his Favour, though of ſo ſhort Duration. When the Emperor underſtood it was only an Accident occaſioned by the tying her Hair too ſtrait, he was very much troubled at it, and aſſigned her a conſiderable Penſion to make Amends for the Loſs of a Crown, and the ill Uſage her Father had ſuffered on her Account. *Boaris* prevailed with him to marry *Danelowitz*'s Daughter, to which he was the rather induced, becauſe he was afraid of being bewitched if he refuſed; and the Favourite married *Anne* the *Czarina*'s Siſter, as he intended to do, if the Czar conſented to marry *Mary* the eldeſt Siſter.

Though he got ſeveral Advantages by this Marriage, he loſt one that was more valuable than all the reſt, which was his Quiet. He was old and jealous. His Wife handſome and young. They quarrelled in a ſhort Time; and he cauſed Mr. *William Barnſley*, an *Engliſhman* of *Worceſterſhire*, to be baniſhed to *Siberia*, becauſe he ſuſpected that he was too familiar with her. *Barnſley* lived twenty Years in Exile, and afterwards was recalled; he turned from the Proteſtant Religion to the *Ruſſian*, married a great Fortune, and lived at *Moſcow* in Splendour. *Eliah* the Emperor's Father-in-law durſt not ſay that the Empreſs was his Daughter, nor any of the Family, that they were related to her, even not her Uncle, *John Paolowitz Martiſcha*, who was preferred to ſeveral Poſts, one after another. When the *Czarowitz*, or Prince Royal, is fifteen Years old, he is carried to the Market Place, and ſhewn on Mens Shoulders, that he may be known; thereby to prevent any Impoſture, there having been many Cheats impoſed on the *Muſcovites* for real Princes. Till he arrives at that Age nobody ſees him, but thoſe who are intruſted with his Education, and ſome of the Chief of his Domeſtics.

Even the ordinary Sort of People, in *Muſcovy*, hide their Children from every body, but their intimate Friends, and neareſt Relations; they having a Supeſtition among them, that Strangers have certain Looks that are unlucky. Their Children are ſtrong and robuſt; they never ſuck above a Month, or two Months at the moſt; after which they give them a Horn, or a Sort of Silver Cup, made like a Horn, with a dry Dug of a Cow tied to the End of it, for them to ſuck.

At two Years old they make them obſerve Faſts, which are very ſtrict. They have four general ones in a Year. In Lent they faſt three Days in a Week; *Wedneſdays*, *Fridays*, and *Saturdays*. On which Days they don't ſo much as eat Fiſh, living on Cabbage, Cucumbers, and Rye-bread. They then drink nothing but *Quaſſi*, a Sort of Beverage, weaker than Small-beer. They won't drink after a Man who has eat Fleſh; and when they are ſick, they will take no Phyſic in the Compound, of which there is either *Cor Cervi*, or *Pil. Lepor*; ſo ſcrupulous are they in the Obſervation of their Faſts.

Their uſual Penances are, to bend their Bodies crooked; to ſtrike their Heads againſt an Image; ſometimes to eat nothing but Bread, Salt, and Cucumbers, and to drink only fair Water. They never eat any thing that they call *Pagano*, i. e. impure; as Horſe-fleſh, Hares, Rabbets, Elks, or Mares-milk, Aſſes-milk, *&c.* in which they obſerve the *Moſaical* Law in ſome Meaſure. The Emperor's Magazines being burnt lately, no leſs than ſix thouſand Flitches of Bacon were burnt with them. By which we may ſee there is ſome Difference between their Religion, and that of the *Tartars*, who abhor all Manner of Swine's Fleſh. Veal is reckoned impure, yet Lamb is not. Venice Treacle is alſo not allowed by them, becauſe there is Viper's Fleſh in the Compoſition of it; nor will they eat any thing, if there is the leaſt Muſk, Civet, or Caſtor Fleſh in it; though the Barbarians feed on it in the North very frequently. Sugar and Sugarcandy, are Scarmunas, *i. e.* forbidden on Faſt Days; and a Knife that has cut Fleſh, muſt not be uſed for twenty-four Hours after.

The Regularity that the *Muſcovites* obſerve in their Faſts is of great Advantage to them; they would not, without it, have Meat enough to ſerve their Occaſions; becauſe they are forced all the Winter long to ſhut up their Cattle in Houſes, for five or ſix Months together; and the Peaſants, who are perfect Slaves, don't much care to trouble themſelves about increaſing their Stock of Cattle, for fear their Lord ſhould come and take them away from them, which is very common for them to do.

14. The Patriarch is Chief of all the Eccleſiaſtics. The Perſon who executes that Office at preſent left the Court two or three Years ago, on ſome Diſguſt he took at the Miniſters. It was ſaid he began to make Innovations, and that he did not love Pictures; to which the *Muſcovites* have a great deal of Reſpect. The patriarchal See has been ever ſince vacant. But the Metropolitan, or Biſhop, or rather Coadjutor, performs all the Duties of this Office. And the Czar dares not fill the patriarchal Chair, ſo long as the abdicated Prelate lives; ſo highly is his Perſon reverenced in *Ruſſia*. Of all the *Muſcovite* Ceremonies, that of *Palm Sunday* is the moſt extraordinary. A hundred Men are ordered to clean the Streets, for the magnificent Proceſſion.

The Emperor marches afoot, richly dreſſed in Cloth of Gold; the Train of his Robe borne up by Princes, and all the Court waiting on him. The firſt that goes before him, is the Officer that carries his Handkerchief, lying on another embroidered all over, which hangs on his Arm. The Servants of his Houſhold going before him. In this Order they proceed to the Church, called *Jeruſalem*, but they ſtop by the Way, at a Place built of Free-Stone, in the Manner of a Platform, where he ſays his Prayers, bends his Body almoſt double, turning towards the Eaſt; and then he enters the Church of *Jeruſalem*, which is not far off. He ſtays there an Hour, and then returns back to his Palace; holding on his Arm the Bridle of the Patriarch's Horſe, capariſoned with white Linnen, on which the Prelate rides aſide, carrying a Croſs in his Hand, and giving his Benediction to the People. The Reins of his Bridle are three Ells long, ſupported by three Gentlemen, marching behind the Emperor. Inſtead of a Mitre, the Patriarch wears, at that Time, a flat Cap on his Head, adorned with Diamonds and Gold Loops, edged round with Ermines. A Band of young Men carry ſeveral Pieces of Stuff, of three or four Ells long, before him; ſome red, ſome blue, ſome green, ſome yellow, and ſome of other Colours. The *Metropolites*, the *Protopopes*, and the *Popes*, have all of them Chaſubles, or a Sort of Caps uſed by the Popiſh Prieſts, when they ſay Maſs. The Gentlemen and Lawyers have Boughs of Willow, inſtead of Branches of Palm, in their Hands.

The Czar's Guards, who are pretty numerous, proſtrate themſelves flat on the Ground, and a triumphal Arch is borne along with a Tree on it, from which ſeveral Boys, in the Machine, ſtrive to reach the Apples. When the Ceremony is over, the Patriarch ſends the Emperor a Purſe, with a hundred Rubles in it. The Bells in the Church called *Jeruſalem*, are ſaid to be the biggeſt in the World. There is one of them that weighs thirty Ton; and when it is rung, it almoſt deafens all that ſtand near it. The Czar delights mightily in hearing them. There is a Niche in the Church, where the Patriarch ſtands to give the People his Bleſſing; after which he ſays theſe Words: *Go and eat nothing theſe three Days.* As for him himſelf he lies proſtrate on the Ground all Night, and continues in Prayer till *Eaſter Day*. The Gentleman of *Lorrain*, from whoſe Memoirs this Account is taken, told me a Story of an Accident that happened to an *Engliſh* Merchant's Servant on this Occaſion.

The Servant was a *Ruſſian* by Birth, but born far in the Country; and having never ſeen ſuch a Ceremony before, when he went to Church, he came back ſo very melancholy, that his Maſter took notice of it, and aſked him the Reaſon of it: The *Ruſſian* told him the Orders that were given by the Patriarch, that no body ſhould eat any thing in three Days Time, and was afraid, in the mean Time, that he ſhould die of Hunger. He faſted two or three Days, and was ready to eat himſelf, not being uſed to ſuch Penance: However, he held out, and then ſwore he would never go to Church to hear the Patriarch's Bleſſing again. On *Eaſter Day* the *Muſcovite* Men and Women ſalute one another with a Kiſs, give a red Egg, and cry, *Chriſtos vas Chreſch, God bleſs you.*

In Eaſter Week all the Emperor's Gentlemen and Domeſtics kiſs the Patriarch's Hand, and he preſents them with red Eggs, or thoſe that are gilt. Thoſe of the higheſt Quality have three; thoſe of the middle Rank two; and thoſe of the loweſt one. The Patriarch's Palace joins to that of the Emperor's; but it is built of Stone, and, for its Largeneſs, is very ſtately; but elſe it is a mean Building. The greateſt Sign of Joy in the *Ruſſians*, on their Feſtivals, is their drinking; and their moſt ſolemn Days are thoſe in which they make their moſt Debauches. It is no great Shame among them, for Men, Women, Prieſts, and Lawyers, to be ſeen reeling in the Streets. When the Women of Quality have a merry meeting together, ſhe who makes the Entertainment, ſends to all of them, the next Day, to know how they got home, and how they paſt the Night? The common Anſwer to this Compliment is, I thank your Miſtreſs for our good Cheer, I was ſo merry laſt Night, I can't tell how I found our Houſe out.

The Burials of the *Ruſſians* are very particular. As ſoon as a Man has given up the Ghoſt, all the Windows in the Chamber, in which he died, are ſet open. A Baſon of Holy Water is brought for him to bathe his Soul in; a Piece of Bread is put on the Crown of his Head, that he may not die of Hunger, in the long Journey he has to take. They put a Pair of black Shoes on his Feet; ſome Copeaks, or Pieces of Money in his Mouth; and, in his Hand, a Certificate, ſigned by the Metropolite of the Place, to inform *St. Nicholas* of his Life and Converſation. When that is done his Body is carried to Church, where it is kept a very little while before it is interred. The Wife of the Deceaſed is obliged to ſhew an inconſolable Affliction, and to hire other Women to mourn with her. The moſt pompous Funerals are thoſe at which a great Number of theſe mercenary Mourners aſſiſt.

Theſe Women have ſeveral mournful Queſtions which they aſk of the Deceaſed, in a diſmal Tone, as, *Ah my Dear! why have you left us? did not your Wife do every thing you would have her? did ſhe not take Care of your Houſe? did ſhe not bring you ſeveral pretty Children? did you want any thing?* Or elſe they aſk him, *Why did you die? had you not a handſome Wife, lovely Children, and as much Brandy as you could drink?* For it ſeems Brandy is ſo divine a Liquor with them, they fancy it will make them immortal. When a Man dies without having confeſſed himſelf, or received the extreme Unction, he muſt not have Chriſtian Burial.

Such as have been killed, or are ſtarved to Death with Cold, are removed to a Place, where the *Zemſky precaus* is; there they lie expoſed for three or four Days; thoſe that own them in that Time are permitted to bury them, or elſe they are ſent to *Boſke*, or *Bogzi Dome*, that is, the Houſe of God; where, in a vaulted Cave, may ſometimes be ſeen three or four hundred Carcaſes at a Time, which the Prieſts bury, one after another, in *St. John*'s Church-yard. They read a Pſalm over their Graves every Day for a Month after they are buried; during all that Time the Dirt is not thrown in upon them, but their Graves are covered with a thick Mat, to keep out the Rain. All the *Carnival* Time the *Muſcovites* abandon themſelves to all Manner of Debauchery, and drink ſo exceſſively the laſt Week before Lent, that one would think they ought to drink no more as long as they lived. There is a Sort of Brandy drank among them, ſo ſtrong, and ſo ſubtle, that it will take Fire in their Mouths; from whence I have been told, that ſometimes Flame will iſſue out, and the Country People fancy it would kill them preſently, if they had not Milk ready at Hand to extinguiſh it. Many of them, after a Debauch, in the Time of *Carnival*, going home, fall down on the Snow, and would freeze to Death, if others, ſomewhat more ſober, did not meet with them.

It is a very melancholy Sight, at that Time, to ſee ten or twelve dead Men drawn along on a Sledge, one having a Shoulder eaten off by Dogs, another his Face, and ſome nothing but Bones left. There ſeldom paſſes a *Carnival* without two or three hundred ſuch terrible Accidents. If a *Ruſſian* finds any one of his Acquaintance in Danger of Death, he will not aſſiſt him to get out of it; becauſe if he dies in his Hands, he muſt paſs Examination by the Judge of the *Zemſky precaus*, who always takes Care to make him pay ſeverely before he acquits him.

The *Muſcovite* Images, while they had any, were like the ancient *Greeks*, only they were more ugly and coarſe My Friend aſking them, *Why they repreſented their Gods under ſuch deformed Figures?* they replied, *Their Gods were not proud.* When the Painting of any Images was worn out, it was carried to a Place, called *Gods Market*, where thoſe that bought it had another given them in Exchange, for which they paid ſome Money. If the Man who made the Image was not ſatisfied with it, he gave the Perſons that would exchange the Image a Puſh on the Back, which was a Token that he did not like the Sum, and the Perſons gave him more, till he was content. This Traffic was carried on without any Words, to ſave Decencies, for they would not have it thought they ſold their Gods. It was a great Crime for any one to ſay he bought an Image; he only called it exchanging. Thoſe Images that were done with were thrown into the River, with a Piece of Silver. Thoſe that flung them in, making the Sign of the Croſs, and ſaying, *Proſti*; in *Engliſh*, *Adieu Brother*; or elſe, *Proſti Grandi*, that is, *God be with you my Brother.* When there happens a Fire any where, the firſt Care of the Inhabitants was to ſave their Images; and if by Chance they were burnt, they did not ſay they were burnt, but vaniſhed on high. When a Church is burnt, they do not call it burning, but aſcending; as that, *Such a Church is aſcended.* They give to their *Nicholas*'s, ſo their Images were named, becauſe, generally, they were that of *St. Nicholas*, their moſt precious Treaſures. A Woman who had dreſſed up her *Nicholas* very rich with Pearls and Diamonds, being fallen to Decay, went to Church to beg him to lend her ſomething, repreſenting the Neceſſity ſhe was in.

The *Nicholas* made her never a Word of Anſwer. She took his Silence for Conſent, and preſumed upon it to take away a Ruby or two. The Prieſts watching her narrowly, ſaw her take it off, ſeized her, and carried her before a Magiſtrate, who condemned the poor Woman to have both her Hands cut off; which Sentence was executed accordingly. As for the Images that were in private Houſes, they put Jewels upon them, and took them away as they thought fit; and when they were ſtreightened in their Affairs, they ſometimes ſtript them to their very Shirts. When one is convicted of Hereſy, he is put upon the Top of a low Houſe, whence he is to be thrown down headlong into a Fire, and there conſumed to Aſhes. The Rules of the *Muſcovite* Monks and Nuns are not very ſtrict. The Monks are great dealers in Wheat, Barley, Hops, Horſes, and every thing they can get a Penny by. The Nuns take a great deal of Liberty; they go out of their Nunneries when they pleaſe, viſit their Friends, and commonly live with more Licence than becomes their Sex, as well as their Profeſſion.

The *Ruſſian* Muſick is very bad, notwithſtanding they have ſeveral Schools where their Children are taught to ſing and play upon muſical Inſtruments, with Care and ſevere Diſcipline. They borrowed their Notes either from the *Greeks* or *Sclavonians*; their Gamot is not at all varied; inſtead of *Sol fa la*, they ſing, *Ga ga ge.* Their Cadences are the moſt extravagant of any in the World; and nothing can be more ridiculous, or rather monſtrous, than their awkard Imitation of the *Italian Recitativo.* The laſt Patriarch having forbidden the making muſical Inſtruments, and it being thought by ſome of the *Ruſſian* Miniſters, that the Uſe of them was prejudicial to the good of the State; they have very few Inſtruments, of any Sort, left among them: However, they ſtill reſerve the Bag-pipe, which is in great Reputation there. They have ſome Violins, the Bellies of which are made like a Lute; but they can't play above four or five Notes upon them.

Eliab, the Emperor's Father-in-law, being ſent Embaſſador to the *Hague*, the *Dutch*, who were willing to gain his good Graces, prepared an Entertainment for him; at which their beſt Muſicians, and beſt Voices, performed their utmoſt to divert him. Some Gentlemen, aſking him, *How he liked the Muſic and Singing?* he anſwered, *Very well; for the Beggars in his Country aſked Alms after the ſame Manner*; meaning the Beggars there always ſing when they beg, as they really do in *Muſcovy.* The warlike Muſic of the *Muſcovites*, is the Kettle Drum, whoſe dull Sound agrees with the melancholy Genius of the Nation. They have ſome Trumpets which they ſound very ill, and hunting Horns made of Braſs. I have ſeen ſome Anthems of theirs ſet by the Patriarch of one of their Choirs, for ſo the chief Muſician is called. The *Ruſſians* do not know how to dance; they imagine it does not ſuit well with their Gravity. Their chief Dancers are their *Tartarian* and *Poliſh* Slaves, whom they call in to divert them at their Debauches with rude Dances.

15. The *Circaſſians* inhabit Part of *Tartary*. They are barbarous in their Manners, and ſwarthy in their Complexions. The *Circaſſian* Women are fat, and extremely given to drinking; they ſometimes get drunk at a Feaſt, before they ſet down to Table; grow ſober with eating; get drunk a ſecond Time, as ſoon as their Meal is over; and a ſecond Time grow ſober, either with dancing, or ſome other Exerciſe. They are all, in general, ſo much in Love with dancing, that he who has not a Fiddle in his Houſe, is looked upon as a very pitiful Fellow. Their Government is entirely an Anarchy. The People, in an Inſurrection they made, deſtroyed all the Nobility; and they are now governed by Chiefs or Colonels, choſen among themſelves, with whom the Vulgar are as familiar as they pleaſe. Though their Religion is the ſame, they don't like the *Ruſſians*, forbid all the Strangers to enter their Church-doors; on the contrary, they are open to all Nations, and they receive every body with all poſſible Demonſtrations of Good-nature and Hoſpitality.

Their Soldiers are called *Coſſacs*, in the Language of the Country; from whence ſome Perſons have imagined, that the *Coſſacs* are a Nation of themſelves, whereas they are only the Militia of the *Circaſſians.* The Soil of *Ruſſia* is not ſo fruitful and warm as that of *Circaſſia.* Witchcraft is very common among them, and the Women of the higheſt Rank, ſtudy what they eſteem ſo. The Government of *Muſcovy* is an abſolute Monarchy. There are ſeveral Courts of Juſtice, called *Precauces*; and the Judgments they pronounce are deciſive. The *Ruſſians* have few written Laws; and their Judges, when not biaſſed with Bribes, which have more Power over them than Right and Precedents, govern themſelves in all Cauſes by Cuſtom. Their Clerks write always kneeling, notwithſtanding they have Tables before them. They leave a great Space between each Line, to waſte Paper, of which prodigious Quantities are conſumed amongſt them, and thus pick their Clients Pockets. *Podiack* is a Name given to the Clerks, or Secretaries of their Courts; and their principal is called *Diack.*

All their Buſineſs at Law runs in the Nature of Petitions. They are rolled up in Rolls. The Advocate preſents them to the Judge, over whom there is commonly a *Boyar* ſet, to obſerve his Actions, and to interpoſe his ſuperior Authority, when he thinks fit. If the *Boyar* ſits in Perſon, all Petitions are preſented to him, who gives it to the Secretary, if he does not incline to return an Anſwer preſently; and the Secretary will not put him in Mind of it, unleſs the Advocate bribes him. They have two and forty Characters in their Alphabet, and moſt of them *Greek.*

The Czar now reigning, *Anno* 1670, was born in the Year 1630. He deſcended, by his Mother's Side, from *John Baſilowitz*, and had an elder Brother that died young, who was a Prince of great Hopes, only he ſhewed too much Inclination to Cruelty. He took Delight in plucking out Pidgeon's Eyes, calling them Rebels and Traitors, and ſometimes to pull off their Heads; ſaying, they had betrayed his Father and himſelf, and deſerved to be ſo uſed. The preſent Czar is ſix Feet high; his Mien is lofty and majeſtic; he is fat and of a ſanguine Complexion. His Hair is of a light-brown Colour; he never ſhaves his Beard. When he is angry he is very cruel, but otherwiſe good-natured. Being one Day preſſed very hard by the Officers of his Army to condemn a Deſerter, he anſwered, *It was not reaſonable to do it, for God hath not given Courage alike ta all Men.* He loves his Wife tenderly, and is given to no Manner of Debauchery; he is very kind to his Children and Siſters. He has an excellent Memory; is very devout; and never miſſes to go to Morning and Evening Prayer. If he is not well, he has divine Service performed in his Bed-chamber; but if his Health permits him, he conſtantly goes to Chapel at Prayer Hours, to be preſent at the public Worſhip.

In general Faſts he always aſſiſts at the Midnight Devotions, and ſtands upright two or three Hours together; on ſome Occaſions proſtrates himſelf to the Ground a thouſand times; and on others more ſolemn, fifteen hundred times: He never makes any ſet Meal during the general Faſts, except on *Sundays*, *Tueſdays*, and *Saturdays*; on the other Days he eats only a Bit of brown Bread and Salt, ſome Cucumbers and pickled Muſhrooms, and drinks only a little ſmall Beer; in Lent he never eats Fiſh above twice; he obſerves an exact Faſt for the ſeven Weeks; during which time he lives on Eggs and Milk; beſides the great Faſt, and ſome little ones particular to the *Ruſſians*, every *Monday*, *Wedneſday*, and *Friday*, throughout the Year, he wont touch a Bit of any thing that comes from Fleſh Meat; ſo that of the twelve Months he faſts eight: In public Proceſſions he walks with his Head bare in dry Weather. Though he is thus a great Bigot to his own Religion, nevertheleſs he will not ſuffer his Subjects, when they die, to bequeath large Legacies to his Church; nay, in time of War, and ſometimes under the Pretence of Borrowing, he takes away the Church Plate, and never returns it; if he did not ſo, his Revenues would not anſwer his Expence, the Church being in Poſſeſſion of two Thirds of the Riches of his Empire.

There is an Hoſpital for old Men in his Palace, in which ſome have lived to be one hundred and twenty Years old; he takes a Pleaſure in viſiting them, and talking with them of Events that happened in the Reigns of his Anceſtors. On *Good Friday*, at Night, he viſits all the Priſons, pays ſome of the Priſoners Debts, pardons ſome Criminals according to their ſeveral Deſerts, or the Smallneſs of their Offences, and gives Alms to all that are in Want. All the Eccleſiaſtical Benefices in the Empire are in his Gift; but he was ſo angry with the laſt Patriarch, that he would not nominate another to ſucceed him; wherefore he ordered, that the Pretenders to the Patriarchate ſhould caſt Lots; which Cuſtom is ſince abrogated. In ſhort, the Emperor has a great many good Qualities, and was it not that he has abundance of ill Counſellors about him, who turn him from the good Way he would otherwiſe chuſe to walk in, he might be reckoned amongſt the greateſt and wiſeſt Princes of his Age.

His Father's Inclinations tended to Peace, his own to War; he has had ſeveral Quarrels with the *Tartars*, *Swedes*, and *Poles*; by which his Dominions have been ſo impoveriſhed and depopulated, in ten Years time, that they will not recover their Loſs in forty, nor be in the flouriſhing Condition they were in at his coming to the Crown. The laſt Plague in *Muſcovy* carried off, in ſix Years time, ſeven or eight hundred thouſand Men, Women, and Children: The Cham of *Tartary*, in four or five Years, led above four hundred thouſand into Captivity, who never will return to *Muſcovy* more; and three hundred thouſand at leaſt were killed in the Wars. The beſt Lands in *Ruſſia* are worn out, and the worſt cannot be cultivated for want of Labourers. Thoſe who ſail up the *Volga*, all the Way meet with ſix Women to one Man. The Price of all Commodities are riſen to ſix times the Value before thoſe Troubles; and Copper Money, which formerly uſed to paſs current among them, is now in no Credit, the *Engliſh* and *Dutch* refuſing to take it in all Payments.

16. The *Ruſſians* were freed from the Slavery of the *Tartars* in the Year 1479, by *John* Duke of *Volodomir*, who at firſt had only the Sovereignty of that Duchy; but at laſt he extended his Conqueſts, ſeized the City of *Moſcow*, the Capital of the *Ruſſian* Empire, and expelled the *Tartars* out of his Territories. His Succeſſor, *John Baſilowitz* rendered the *Ruſſian* Name, which had for ſeveral Ages been the Contempt of the North, formidable to their Neighbours. He was cruel, and therefore was called *the Tyrant*; however, that Cruelty was exerciſed moſtly on the Enemies of his Empire, whom he ſubdued, and made way for its future Growth. He was brave, but of a very whimſical Humour: One Day he went to his Diack, or Secretary of State, and preſented him with a Petition drawn up in form in his own Name, and addreſſed to the Diack; wherein he prayed him to furniſh him, by ſuch a Time, with an Army of two hundred thouſand Men; which would extremely oblige him, and engage him to mind him always in his Prayers.

The Diack, who knew his Humour, received the Petition, and ſaid it ſhould be anſwered. He raiſed the Men with extreme Diligence; and it was with this Army he conquered *Caſan* and *Aſtracan*, and made himſelf Maſter of *Siberia*. The *Muſcovites* loved him for his Valour and Familiarity with them. He affected to be as kind to the Populace as he was ſevere to the *Boyars*; he always held a Stick in his Hand, with an Iron-ſpike in it, the Point of which was very ſharp; and often, as he talked with them, he would prick them in the Legs. If they endured the Pain with Conſtancy, he ever after took them into his Favour, and ever after had a great Eſteem for them. Complaint being made to him, that a *Wayvod*, or the Governor of a Province, had received the Preſent of a Gooſe full of Ducats, he ſent for him to Court, making as if he knew nothing of the Bribe: When he came there, he took him to a Place where Criminals were commonly executed, and commanded the Hangman to cut off his Arms and Legs, and at every Blow he aſked him, *how he liked Gooſe-Fleſh?*

Hearing the Inhabitants of *Bologda* cheated their Cuſtomers by ſhort Meaſure, he ſent Orders to his Officers there to get them a certain Yard or Meaſure, to ſee whether it was ſo long as it ſhould be, and finding it fall ſhort of the lawful Length, he fined them ſeverely. Some *Engliſh* and *Scots* Men laughing at ſome of his Freaks, he commanded they ſhould be brought before him ſtripped naked, and in that Condition he forced them to pick up five or ſix Buſhels of Peaſe one by one, which he had thrown about his Chamber on Purpoſe. When they had done he let them go, having firſt made them drink, and admoniſhed them not to laugh at him another time: He ordered a Perſon of the Province of *Caſſan*, whoſe Name was *Plehaſve*, or Baldpate, to be ſent for: His Secretary miſtook him; for inſtead of writing to the *Wayvod* of the Province to ſend up *Plehaſve*, he wrote for one hundred and fifty baldpated Men. The *Wayvod* could find but foreſcore, which he ſent to the Secretary with a Letter of Excuſe, that he could not complete the Number he required of him. The Emperor reading the Letter was amazed at it, and could not imagine what he meant by ſo many Baldpates. At laſt the Secretary's Overſight was found out, and the Czar was ſo far from being angry at it, that he made them drink; and ſo diſſmiſſed them.

He had ſuch an Eſteem and Friendſhip for Q. *Elizabeth*, that he took hold of all Opportunities to ſhew it. It was thought by ſome Perſons of thoſe Times, who pretended to be very good Politicians, that he deſired to marry her, though we ſuppoſe they had very little Grounds for their Conjectures; nor was it likely, that the greateſt and moſt polite Princeſs of *Europe*, would marry a *Barbarian*; however it was ſaid, when his Affairs were in a bad Condition, and he was obliged to fly with his Treaſures to *Wologda*, which City he fortified, that he deſigned to make his Eſcape to *England*, in caſe he had been forced to quit *Muſcovy*, of which he was not without Fear, in a Tumult of the People, and an Incurſion of the *Tartars*; but he triumphed over all his Enemies. It was this Prince who ordered a foreign Embaſſador's Hat to be nailed to his Head for daring to wear it in his Preſence. Notwithſtanding which Sir *Jeremy Bows*, the Queen of *England*'s Embaſſador coming to *Moſcow* ſoon after, not only put on his Hat before him, but cocked it boldly: The Emperor aſked him, *If he had not heard how another Embaſſador had been uſed for the like, or leſs Preſumption?* Sir *Jeremy* replied, *Yes, Sir; but I am the Embaſſador of Queen* Elizabeth *of* England, *who neither takes off her Bonnet, nor ſtands bare-headed to any Prince whatſoever: Her Perſon I repreſent, and ſhe will revenge to the utmoſt whatever Affront is put on her Miniſters.* Upon this the Emperor turned about to his Courtiers, and ſaid: *Here's a brave Man for you, that dares talk and act thus for the Honour and Intereſt of his Miſtreſs: Which of you would do as much for me?*

Sir *Jeremy Bows* was envied by the *Boyars* on this

Account, and thoſe of them who had the Czar's Ear moſt, perſuaded him to give the Knight a wild Horſe to back, hoping he would break his Neck in attempting it. *Bows* undertook the Taſk, and managed the Beaſt with ſuch Addreſs, that he mounted him, rode him, and ſo tired him, that he lay down under him, loſt his Mettle, and did not long ſurvive the Experiment. After which the Czar highly honoured Sir *Jeremy*, and gave him ſeveral particular Marks of his Eſteem.

John Baſilowitz making a Progreſs through ſeveral Provinces of his Empire, divers *Boyars*, and ſome other Perſons, preſented him with ſuch Gifts as they thought would be moſt acceptable to him. Among the reſt, a Shoe-maker conſulted with his Wife what Preſent he ſhould make his Majeſty; a Pair of *Lopkies*, or Shoes, ſhe thought was too little by itſelf, and ſhe adviſed him to root up a great Turnip they had in the Garden, and carry it with the *Lopkies* to the Czar. The Emperor was ſo well pleaſed with the Preſent, that he ordered all his Attendants to buy Shoes of him, and to give him for them twice as much as they were worth: He bought a Pair of them for himſelf. By this Means the Shoemaker got into a Condition to drive a better Trade, and growing rich in a ſhort time left off his Shop. His Children, who inherited his Eſtate, became Gentlemen, and are known to this Day by the Name of the *Lopoſtkies*. There is a Tree near the Place where the Houſe ſtood, which, when any one comes by, he throws off his old Shoes, in Remembrance of the Shoemaker: A Gentleman who underſtood how well it had fared with this honeſt Man, thought if he preſented the Emperor with ſomething conſiderable he might have a proportionable Recompence; ſo he gave him a very fine Horſe; and the Czar, in return, made him a Preſent of the Turnip the Shoemaker had given him.

This Emperor diſguiſing himſelf one Day, rambled into the Country near *Moſcow*; and coming to a Village enquired at it for a Lodging: Every body refuſed to take him in, except a poor Man whoſe Wife was crying-out, and was delivered in the Preſence of the Emperor. He returned to *Moſcow* early the next Morning; promiſing his Landlord to bring him ſome Godfathers and Godmothers the next Day: He was as good as his Word; he went to his Houſe attended by his whole Court, made him ſeveral rich Preſents, and ſet fire to all the Houſes in the Village, except his, only warning the Inhabitants to be more charitable for the future, telling them that the beſt Way to teach them how to treat Strangers hereafter was, for them to experience themſelves how pleaſant it was to be driven to Neceſſity and lie out in the Air in Winter.

He often took delight in aſſociating himſelf with Robbers. He adviſed them once to rob the Emperor's Treaſury, aſſuring them he knew how it was to be done: How? ſays one of the Thieves, giving him a Box on the Ear, You Raſcal, you, would you rob the Emperor, who is ſo good and generous a Prince. Had we not better fall upon one of the rich *Boyars*, who cheat and plunder him every Day? The Czar was ſo well pleaſed with his Anſwer, that he changed Caps with him, and bad him meet him the next Day at *Duretz*, a Place by which he uſed to go frequently; he told the Thief they would be very merry, and drink a Cup of Brandy and Metheglin together. The Robber came at the Time appointed; the Czar ſeeing him, called him to him, and adviſed him to change his Courſe of Life; gave him a Place at Court; and made uſe of him to diſcover and puniſh the other Rogues of his Gang.

17. The Word *Czar* is ſo like that of *Cæſar*, that it is apparently derived from it, and ſignifies *Emperor* in the *Muſcovite* Tongue: The *Ruſſians* ſay it means a Title above a King: They called *David* Czar, and the other Kings of *Europe*, *Kyrlos*, which ſeems to come from *Carolus Quintus*, whoſe Hiſtory they have among them. The Name of the Czar now reigning is *Alexis Michaelowitz Romanow*, i. e. *Alexis* the Son of *Michael* the *Roman*. He has ſeveral Titles; thoſe in the Great-Seal run thus: We *Alexis Michaelowitz*, by the Grace of God, Great Lord, Czar, Duke of *Great*, *Little*, and *White Ruſſia*, Sovereign of *Moſcow*, *Kiovia*, *Uladomir*, and *Novogorod*, &c. Czar of *Caſan*, Czar of *Aſtracan*, Czar of *Siberia*, Lord *Plaſgow*, Great Duke of *Smolenſko*, *Twerſko*, *Ugoſko*, *Perinſko*, *Vealſko*, *Bolgariko*; Lord and Great Duke of *Novogorod*, of the Provinces of *Charnigora*, *Reſan*, *Roſtore*, *Yaraſlave*, *Belouzer*, *Odouria*, *Obderia*, and *Condinea*; Lord of all the Countries lying to the North; Lord of the Land of *Yaveria*, of all the Duchies of *Cartileran*, of *Grenzintan*, and of ſeveral other Countries and Sovereignties Eaſt, Weſt, and North, which we inherit of our Lord and Monarchs our Predeceſſors, our Father and Grandfather.

The Czar's Arms are the ſame with the *German* Emperor's, *viz.* a *Spread Eagle*; but the *Ruſſian* Spread Eagle has a *St. George* on Horſeback on its Breaſt, and a Mitre with a Crown on it between the two Heads. Some Perſons pretend *John Baſilowitz* added the *George* to his Coat, on Account of the Order of the *Garter*, which he received from Queen *Elizabeth* of *England*. The Czar never marries a Woman out of his own Dominions; he chuſes one to his Liking, generally among the Nobility, ſometimes among the Gentry and Commonalty: *Eliab*, the Emperor's Father-in-law, kept a Tavern twenty Years ago, and his Daughter, the Empreſs, ſold Muſhrooms in the Market. As ſoon as the Czar's Wife is dead, all her Family loſe their Credit, and all their Hopes die with her. The Emperor never ſhews himſelf to his People but on certain Days of public rejoicing: When he appears it is always with Pomp; he is very magnificently dreſſed, his Robes glittering with Gold and Jewels; and his Attendants are numerous, all of them handſomely apparelled: It is very ſeldom that he dines in public; when he does, his Nobles dine in his Preſence; his Guards are poſted all round his Palace; they ſtand like ſo many Statues, not daring to ſtir or ſpeak, for fear of making a Noiſe. One would think, by the profound Silence that is always there, that the Place was a Deſart; nobody enters the Inner-court, but his Domeſtics, and ſome Lords, whoſe Offices require their perſonal Attendance in the Imperial Palace.

He is very ſober, drinks little or nothing, and ſometimes puts Oil of Cinnamon or Cinnamon-water into his ſmall Beer, to make it the more pleaſant; for Cinnamon-water is as much uſed by Perſons of Quality, in *Ruſſia*, as Roſe-water is elſewhere. The Smell of Ambergreaſe, or Muſk, is not much valued by them; they have a Drink called *Brague*, which he commonly drinks; it is what in *England* is called *Oat-Ale*. His Bread is all made of Rye, which the *Ruſſians* imagine to be more nouriſhing than Wheat. When he has a Mind to treat his Domeſtics, he commands them to ſit round about him, and plies them with a Sort of ſtrong Water double and treble diſtilled. Thoſe that are not uſed to it are apt to be very ſick with it. He will often put a little Opium in it, and takes Pleaſure in making them drunk. At each Meal he ſends a Diſh from his Table to his Favourites. On *Eaſter-day* all the Courtiers, and the Nobility and Gentry in and about *Moſcow*, wait upon him, kiſs his Hands, and he gives them Eggs. He never paid a Viſit to any one of his Subjects except his Governor, and he being ſick he went once to ſee him.

When he goes out of Town, the eaſtern Gate of the outer Wall is ſhut, and ſo remains till he comes back again; he generally goes out at that Gate unleſs upon an extraordinary Occaſion, as happened a few Years ago, when the Wall fell down on that Side, and ſo he was forced to go another Way: He lies in his Shirt and Drawers, under a rich Quilt made of Marten-Skins; he has but one Sheet under or over him. His greateſt Recreation is in Hunting Fallow-Deer, he does not mind killing of them, provided he can but hunt them down; He loves Fowling, has three hundred Faulconers, and the beſt Ger-Faulcons in the World; they are brought out of *Siberia*. He hunts wild Ducks with them. The Son of the Emperor is called *Czarowitz*, and ſo are all his Children. When the Empreſs is brought to-bed, the People to ſhew their Joy, preſent the Czar with ſomething or other; which he commonly returns. If he likes any

Preſent, and keeps it, he pays a great deal more for it than it is worth.

18. As the Czar's Dominions are very large, ſo likewiſe are his Revenues. In the firſt Place, he is Maſter of the Eſtates and Goods of all his Subjects. No Heir can enter upon his Father's Lands, on his Death, without the Emperor's Conſent; to obtain which, he muſt preſent a Petition to a Court erected for that Purpoſe, to give Poſſeſſion to the Children of ſuch as die, and have made their Wills; and to ſeize the Eſtates of ſuch as die inteſtate, or without Heirs, or are convicted of any Crime, by which their Eſtates become forfeited to the Czar. Secondly, His Cuſtoms on all Goods exported, or imported, are very conſiderable. Thirdly, The Cabucks, or Shops where Brandy is ſold, as alſo thoſe of Strong-beer, belong to him, and he letts them at what Rent he pleaſes. Some pay one thouſand Piſtoles, and others two thouſand a Year, according to their Abilities and Trade. Fourthly, His Baths and Stoves bring him in a good deal; becauſe the *Muſcovites*, both Men, Women, and Children, are obliged to bathe often, out of a Principle of Religion. When the Water of the Bath is too hot, they throw cold Water upon thoſe that are in it. And ſome of them, before they enter the Stove-Chamber, roll themſelves in Snow. Fifthly, The Emperor is the chief Merchant in his Territories. Sixthly, The Trade of *Siberia*, in Marten and Sable-Skins raiſes prodigious Sums; thoſe that are ſent to get them, are either Slaves or Criminals. In ſhort, there is a Tax almoſt upon every thing in *Ruſſia*; that on the *Caviare* of *Aſtracan* only, of which I ſhall ſay more hereafter, is enough to maintain the Expence of his Houſe. All that hold Lands immediately of the Emperor, are obliged to furniſh him with Proviſions. He ingroſſes all the Merchandize that is brought to *Moſcow*, by the *Greeks* and *Perſians*. He ſends vaſt Quantities of Furs to *Archangel*; as alſo Pot-aſhes, Hemp, and Flax, which he barters for Silk, Sables, Velvets, and Cloths of Gold, Sattin, broad Cloth and Damaſk; which Commodities he wants moſt, becauſe he makes all his Preſents of thoſe things. All the Servants of his Houſhold have each a Portion of Meal, Oats, Honey, Fiſh, Nut-Oil, Beer, and Metheglin, delivered out to them.

The *Strelſicks* and *Lanlarics*, who are regular Troops, have nothing but Corn and dried Fiſh, of which the Czar has very large Stores; they have very little Money given them, becauſe they trade and have great Privileges allowed them. The Imperial Palace is very large, and all built of Stone and Brick, except the Czar's Winter-Lodgings, which are three Stories high; theſe are built with Timber, becauſe boarded Floors are reckoned, with them, more wholeſome in cold Weather, than others; filthy Damps being apt to aſcend from the Vaults of thoſe Stoves, where the Walls are Stone. The whole Palace is incompaſſed with a Brick-Wall, in the Circuit of which there are fourſcore Churches and Chapels, the greateſt Part of which have Cupolas and gilt Croſſes upon them. The Princes and prime Miniſters have alſo their Palaces within this Wall; as, *Jacob*, a *Circaſſian* Prince; *Boaris Juanowitz Morolos*, who was the Emperor's Governor, during his Minority; *Knez Alexis*, Maſter of the Fur-Office; *Trebotſky*, General of the Czar's Army; *Eliab Danelowitz*, the Empreſs's Father; *Knez Juan Vaſſilowitz*, a Prince of the Blood, and others of the firſt Rank. There are five Monaſteries, two or three Nunneries, the greateſt Part of the Precauces or Courts of Juſtice, and the Magazine of Arms and Ammunition for War. The Tower called *Velichy*, ſtands by itſelf; it is built of Brick and Free-ſtone; *John Baſilowitz* began it, and his Succeſſor finiſhed it, as it is at this Day; there is a very fine gilt Cupola upon it, and a Ring of Bells in it; it is as high as *St. Mark*'s Tower at *Venice*.

The Czar, as well as other Princes, has his Miniſters of State, but they are not ſo much reſpected as in other Places. The Gentlemen of his Bedchamber never enter it; they wait two or three Rooms off, and further when he is at Dinner. The City of *Moſcow* takes up a great deal of Ground; it is incompaſſed with three Walls, beſides that about the imperial Palace. The firſt, and that which is neareſt the Heart of the Town, is of red Brick; the next to it is of white, and the third of Earth, ſupported by Planks and Boards of Fir; it is fifteen or ſixteen Miles about, and was built in four Days, on Report of the Approach of the Cham of *Crim Tartary*. Since the Czar's Journies that he has lately made to *Poland*, where he ſaw the Manners and Houſes of the *Poliſh* Princes and great Lords, his Court is grown a little more magnificent; his Apartments are hung with Tapeſtries, very rich and beautiful; and he has ſeveral Country-Houſes and Palaces. There is no Prince in the World has more Jewels than he; it is true, moſt of them have Flaws in them, but the *Ruſſians* don't mind that, provided they are large.

All the Difference between the Czar's Cloaths, and thoſe of his Nobles, is, that the Emperor's is a little richer; it is the ſame with the Empreſs, and other Women of Quality; her Head-dreſs is only a little higher than that of other Ladies, and her Shift-Sleeves a little longer. They are about ſix or ſeven Ells in Length; and her Gown, and the Gowns of her Ladies of Honour, are made like our Judges. The Empreſs generally travels in a Chariot, and by Night, attended by moſt of her Ladies of Honour, her Women of the Bedchamber, her Embroiderers, and all her Women Attendants, that are neceſſary to her Perſon. Lately they rid on Horſe-back, very much a Cuſtom, mightily uſed formerly amongſt them, but was a long Time diſuſed upon the bringing in of Chariots into *Ruſſia*. The preſent Empreſs has revived it: She and her Train rid as Men do, aſtride, when they hunt; which is very rarely: They then wear a white Hat on their Head, and a Skain of Silk about their Necks. Men or Women, rich or poor, dreſs after one Manner. There is but one Language, and one Religion, throughout all that vaſt Empire. They differ from all other Nations, even in the leaſt Actions, and are no more like the other Northern Kingdoms, than they are to the Southern or Weſtern.

19. They wear their Shirts above their Drawers, tied round about their Middles, a little above the Navel. They believe a Girdle makes them ſtrong, and that if they did not wear one, they ſhould be unlucky. When they ſpit, one would think they ſneeze. Their Language and their Accent are quite different from other People's. They whiſtle with their Teeth, and not with their Lips. They ſhake their Heads, when they ſhew a Sign of Admiration. It is a great Sin in them, as they fancy, not to waſh their Hands after making Water. Even in their neceſſary Occaſions, they do not do like other Men; they make no uſe of Paper, but have little Spatula's of Tin, well ſmoothed, to ſupply the Place of other Conveniencies uſed elſewhere. As the Hands of our Clocks turn round, in theirs, the Hours turn about the Hand. They imagine it a very ſinful thing for a *Muſcovite* to lie with an *Engliſh* or *Dutch* Woman; but they believe a *Ruſſian* Woman may lie with any Strangers, without committing a Crime worth taking notice of, becauſe the Children ſhe has by them, are born and bred up in the *Ruſſian* Religion.

They love Rye better than Wheat, for the Reaſon I have already mentioned; and ſtale Fiſh better than freſh. They count their thouſand by ſo many four-ſcores and tens, and not by ſo many hundreds. The firſt of *September* is their New-Year's-Day. Their Æra from the Creation amounts to ſeven thouſand and ſixty odd Years. They are very credulous, and any thing will go down with them, let it be never ſo incredible; things that are probable and reaſonable, do not find ſo eaſy Belief among them. When they kiſs a Woman they do it on the right Cheek. Lands that have not been above twenty Years in a Family, fall to the younger Children, proportionably with the eldeſt. When they ſow, they thruſt the Needle in with the Fore-finger. They eat Carrots without ſcraping, and Peaſe without ſhelling. They don't gather them as we do, but tear them up Roots and all, and ſo ſell them in the Market. To ſay that a Man has an inconſtant Wife, they ſay he lies on a Bank of Sand. A Man's bare Word that has got a Beard, is more valued among them, than an Oath of one that has none.

Their fineſt Pieces of Painting are not better than what is commonly done on *Dutch* Chimneys with red Oker and *Spaniſh* white. They are as careful to keep their Teeth black, as we are to whiten ours; they have an Art of painting them, as alſo their Eye-balls. They reckon long Eyes, and little Foreheads, handſome. The *Ruſſian* Women hide Part of theirs in their Coifs. Little Feet, and a ſlender Shape, are Deformity with them. They do their utmoſt to grow fat; for which purpoſe they eat exceſſively, and will lie in Bed whole Days together; that they may increaſe in Bulk, by much eating and much ſleeping. Brandy, which one would imagine ſhould rather waſte than plump them, is thought to be a great Fatner by them. There is ſo much Confuſion in the Ways of Proceedings of the *Ruſſian* Judicature, that it is almoſt impoſſible to give a clear Account of it.

There is a *Precauce*, or Court of it Juſtice, in each Province, in which a *Boyar*, or Lord, preſides, to repreſent the Emperor's Preſon. He has under him a Chancellor, a *Dyack*, or Secretary; ſeveral Sub-ſecretaries and Clerks. If a Plaintiff brings a Suit before the Judge, and he is not corrupted by the Defendant, the former is almoſt ſure to carry the Cauſe; for that it is ſuppoſed the Right commonly lies on his Side. Criminals are ſeldom condemned to Death in *Ruſſia*; they are ſeverely whipt; and, beſides, there is a Sort of Puniſhment worſe than Death. A Murder may be bought off with Money. If one Man kills another, and no body proſecutes him, the Magiſtracy takes no Notice of it. If there be a thouſand Witneſſes againſt a Man accuſed of a capital Crime, he cannot be convicted, unleſs he confeſſes himſelf. It is true, to extort that Confeſſion from him, he is expoſed to the moſt cruel Torture that can be inflicted on the Body of Man. They firſt give him the Strapado. If he confeſſes nothing he is whipt, and the Hangman does it ſo terribly, that he can kill the Criminal with ſix or ſeven Laſhes. Sometimes they pierce his Sides with red hot Irons, or elſe they ſlit his Bones, ſalt them, and put them, hanging to this Body, on the Fire to broil. If he ſays nothing ſtill, they cure him as well as they can; and twenty Days after, if he ſurvives the Torment, they renew it again. Sometimes they will half flea them, and if they endure all with Reſolution, which rarely happens, they pour boiling Lead, Drop by Drop, on the Crown of his Head, cloſe ſhaven, which is the laſt Trial of his Conſtancy.

The Puniſhment of Coiners, is to melt ſome of the Metal of which their falſe Money was made, and force them to ſwallow it. A young Man ſhooting an Owl in the Court of the Imperial Palace, had his left Leg and his right Hand cut off, becauſe ſome of the Shot glanced into the Emperor's Chamber. If a Conſpiracy againſt the Government be detected, the Conſpirators are ſeverely tortured; after which they are ſent to *Sibera*, and are either ſuffered to ſtarve to Death with Cold on the Way, or elſe have their Eyes plucked out, or their Ears cut off; and are left in that diſmal Province fiften hundred Miles from *Moſcow*. It is but lately that the *Ruſſians* have hanged their Criminals; the Reaſon why they would not permit any ſuch Execution before, was out of a fooliſh Fancy, that when the Man was ſtrangled, his Soul departed downwards, and that defiled it. The Criminal ties the Rope about his own Neck, and flings himſelf off from the Ladder, when the Executioner bids him. The Hangman's Place is hereditary, and he is careful to inſtruct his Children in his Trade; which, however, is not ſo reputable as in ſome Parts of *France*, where the Executioner pretends to be a Gentleman by his Office. The common People in *Muſcovy* are very ignorant, and much given to Idolatry. Thoſe that live in the Northern Provinces, about *Archangel*, *Cola*, &c. know no other God but *St. Nicholas*, who, they believe, governs the World. They affirm he failed upon a Mill-Stone, from *Italy* to a Place near *Archangel*, now called *St. Nicholas*'s Port; and if a *Ruſſian* ſeem but to ſuſpect the Truth of this Story, he would be in no ſmall Danger of his Life. They celebrate the Feſtivals of their own Saints with more Devotion than thoſe of the Apoſtles. *St. Nicholas*, they ſay, is *Naſha Bradt*, i. e. *one of their Brethren*, who, being of their own Country, has more Kindneſs for them than either *St. Peter* or *St. Paul*, who never knew them. Thoſe who have made Inroads on other Nations, or plundered Strangers, think they expiate all their Offenes, by building a Church, furniſhing it with a good Ring of Bells, and Store of *St. Nicholas*'s, adorned and ſet off with Jewels. The greateſt Part of the *Ruſſians* are rude and barbarous, except ſome of them, who are civilized by their Commerce with Foreigners, or who have travelled to *Poland* and ſeen that Court.

20. The *Poles* are leſs barbarous than the *Muſcovites*. Some of them improve their Minds by Study; and Arts with the *Ruſſians*, Enemies to the Sciences, are never encouraged. The Gentlemen of *Poland* are at Liberty to travel where-ever they pleaſe. The *Muſcovites* cannot go out of their own Country without Leave of the Emperor, which is not eaſily obtained. However, with all thoſe Advantages, the *Poles* are not ſo refined a People as other Nations. They are proud, inſolent, ſelf-conceited, and have high Opinions of themſelves, and their own Country, which they fancy excels all others. They are whimſical in their Dreſs, vain, prodigal, and very oſtentatious. Their Horſes are fine, and their Furniture magnificent. They affect this, becauſe it is what is moſt ſeen. They are civil to Strangers, and entertain them very handſomely, for two or three Days, till they have ſeen all they have to ſhew them, and have made them drunk four or five times. They drink harder than the *Ruſſians*, and are ſo quarrelſome over their Liquor, that there is ſcarce a Gentleman in the whole Kingdom, but one time or other has been wounded in a Debauch. Their Laws are barbarous to the laſt Degree. Murder is only puniſhed by a pecuniary Mulct.

They pay no more than four or five Crowns for killing a Clown; the Price riſing higher according to the Diſtinction of the Perſon murdered. Their Kings are, in Truth, but Shadows of Monarchs. *Henry* III. was King of *Poland* before he reigned in *France*. He had Reaſon to be weary of their Crown, and would not, by any Perſuaſions they made uſe of, be prevailed upon to keep it. A thing of the higheſt Conſequence, when debated in their general Diet, may be ſtopped by one Senator's Vote, who has Power to proteſt againſt it, without giving his Reaſons for it. The Ceremony is, he ſets his Hand to his Scymitar, and that ſignifies he is ready to oppoſe that Propoſition, in diſpute, to Death; which damns it for that Seſſion; and though, perhaps, the next Day the proteſting Senator changes his Opinion, yet he cannot revoke his Proteſtation. The Pox is very common and dangerous in *Poland*.

The *Muſcovites* got it of the *Poliſh* Women, at the Time they conquered *Vilna*, and ſome other Towns and Provinces on the Frontiers of *Poland*; before which Expedition the *Ruſſians* did not know what that Diſeaſe was. The Scurf, or Plica, is ſtill more common than the Pox. The Cauſe of it is, that moſt of their Springs are poiſoned by Mines of Arſenic, very frequent in thoſe Parts; by which it is almoſt impoſſible to travel thither and not have it. When once it gets into a Family, it goes round it, no body eſcapes the Infection. It is the filthieſt and loathſomeſt Diſtemper in the World. A Man cannot look upon ſome *Polanders*, who have it in Extremity, without turning his Stomach. Beſides that the Symptoms of this Diſtemper are terrible to the Eyes, the Stench of it is abominable; there is no old Wound or Ulcer ſmells ſo intolerably. I have ſeen ſome Monks, whoſe Heads have been all over Scurf, and their Hair clotted together, than which there can be nothing more beaſtly and ſhocking to the Sight; nevertheleſs it is taken no Notice of in *Poland*; the *Poles*, thinking it a Sign of Health; and Gentlemen being moſt troubled with it, it is alſo taken for a Token of their Quality. Thoſe Horſes that have it, whoſe Manes are matted, and whoſe Tails are glewed together with it, are eſteemed the more bold, and the moſt fit for Service; and of if never ſo little this Scurf is cut off, the Beaſts die, or run mad, immediately, or elſe fall lame or blind. It is ſaid the *Poles* were the firſt who brought up the Faſhion of powdering Hair to hide their Plica, which is the more probable, as Starch is the Manufacture of *Poland.* They are more faithful in obſerving their Treaties than the *Ruſſians*, the latter making no Scruple to break the moſt ſolemn Alliances, when it is for their Intereſt: And yet in their private Negociations, the *Muſcovites* are very exact in making good what they ſwear to, and careful how they take a falſe Oath, or indeed how they take any.

The *Poliſh* and *Ruſſian* Languages differ one from the other, as the *Engliſh* does from the *Scots.* The *Poliſh* Tongue, paſſes for the more copious and polite; and yet the Pronunciation is not ſofter, nor the Orthography leſs rude than the *Ruſſian* Language. In ſome of their Words there are ſix Conſonants for one Vowel; they can hardly ſpeak without ſputtering in the Faces of thoſe to whom they ſpeak. They are ſtately in their Salutations, and do not bow ſo low as the *Ruſſians.* The *Tartars* ſalute their Superiors by embracing their Knees. The common People ſalute one another, by putting the Fore-finger on the Mouth of the Perſon ſaluted, and ſhaking the Head a little. The Manner of the *Circaſſians* in this Caſe, is odder ſtill; they aſk the Man whom they would ſalute, if his Servants, his Cows, his Sheep, his Horſes, his Goats, his Hogs, his Cocks, his Hens, and his Turkeys, are all ſafe and well.

21. I ſhall not pretend to write a complete Hiſtory of the Houſe of *Romanzow* now reigning in *Muſcovy*, what is ſaid here hiſtorically, being a ſort of Digreſſion; but believing the Reader will be diverted with a ſhort Account of the preſent Czar's Family I thought fit to give it, and ſome other entertaining Occurrences with I met in the Memoirs ſo often mentioned before. It would be too tedious to give, as the Gentleman who wrote them has done, a long Etymology of the Word *Czar*, and how the firſt *Romanzow* was advanced to the Title, or how *Baſilowitz*, having reduced all the petty Dukes that had Sovereignties in *Muſcovy*, erected a Monarchy on their Ruins. *John Baſilowitz*, his Son, followed his Steps, was ſucceſsful, and ſubdued the Kings of *Caſan*, *Aſtracan*, and *Siberia.* To write all theſe Events, would make a long Hiſtory of itſelf, *Baſilowitz* reigning many Years. And though he was the greateſt Tyrant in the World, he was alſo one of the moſt happy Monarchs, if Victory alone can make a Prince happy.

The Czar *Michael*, Father to the preſent Czar (*Anno* 1670) was a very merciful, religious and good Prince, courteous to Strangers, and one who delighted in maintaining a friendly Correſpondence with all Chriſtian Potentates. Count *Wolmer*, the laſt King of *Denmark*'s natural Son, would have married his Daughter, but the Clergy of *Ruſſia* oppoſed it, ſaying *Wolmer* was a Heretic, and therefore the *Princeſs could not lawfully marry him.* The *Daniſh* Prince reſenting that the *Ruſſian* Prieſts ſhould oppoſe his Match, challenged them to diſpute with his Chaplains, whoſe Religion was the trueſt, his or theirs. The *Ruſſians* refuſed his Challenge. The Czar was highly enraged againſt them for it, demanding, *what Sort of Faith they profeſſed, that they could not defend it by Reaſon and Argument:* Some Days after, as he was going to Bed, he was taken with a Vomiting, and died the next Morning, not without Suſpicion of being poiſoned, the Prieſts apprehending he would make Innovations in their Religion. The Czarina or Empreſs, did not long ſurvive him, and Count *Wolmer* thereupon gave over all Thoughts of the Marriage.

This Emperor often recommended to his Son *Alexis Michaelowitz* to follow the Advice of *Boaris Juanowitz* his Governor. There is an odd Story of the Fate of this *Boaris*'s Father, being a Widower, and the Emperor *Baſilowitz*'s Favourite. He deſired him to beſtow one of his Concubines upon him in Marriage. *Baſilowitz* granted his Requeſt, without naming any of them in particular. The Favourite having a Licence at large, took the handſomeſt of them all. At which *Baſilowitz* fell into a violent Paſſion; and hearing they were retired together to one of his Stove-Chambers or Hummums, to enjoy themſelves with the greater Liberty, as they thought they might lawfully do, having the Emperor and the Prieſt's Conſent; the Czar commaned a Bear to be let looſe upon them; which was done; and the two Lovers were immediately devoured by him. *Boaris* and *Cleab*, the unhappy Favourite's two Sons, were bred up with the Emperor *Michael:* And *Boaris* gained ſuch an Influence over him, by a long Familiarity, that he governed all things as he thought fit, and was more abſolute than his Maſter. He leſſened the Czar's Officers; and thoſe he kept in their Poſts were glad to ſerve for half Pay; even the very Embaſſador's Penſions were retrenched: He impoſed new Taxes, and ſent thoſe Dukes, who having been Sovereigns formerly were moſt dangerous, to diſtant Governments, as to *Pripnin*, to *Bolgorod* and *Corathin*, and to *Caſan:* In ſhort he was ſo ſevere in his Miniſtry, that the Nobility hated him as much as they envied him; and he, deſpiſing their Intrigues to deſpoſe him from his exalted Station of chief Favourite and Miniſter, depreſſed them to raiſe his own Creatures.

The People murmured at the new Impoſitions; there was an Inſurrection upon it; they required Juſtice, and that the Emperor ſhould deliver *Boaris* over to them to be made an Example of for his Mal-Adminiſtration. The Czar was ſuprized at their Demands, not expecting any ſuch Inſolence from his Slaves, for ſo his Favourite had repreſented all his Subjects. He endeavoured to moliſy thoſe of them who were moſt outrageous. And to gain time, and ſave his Favourite's Life, he ſwore he would baniſh him from Court for ever. This Compliance appeaſed them; *Boaris* was ordered to retire, and the Nobility were reſtored to the Czar's Favour, which they managed as little to the People's Satisfaction as *Boaris* had done, who being a cunning Stateſman, obſerved their Diſcontents, and improved them to his Advantage, by encouraging the Clamour againſt the Nobility, who oppreſſed the People ſo much, that thoſe who were lately moſt for baniſhing the Favourite, were now hotteſt for recalling him. They found it no difficult Matter to ſucceed in their Enterprize; the Czar, on their Petition, did readily what they would have him do; ſent for *Boaris* to Court: And he was afterwards very kind to thoſe that had been inſtrumental in his Reſtoration. Ever after, he careſſed the People on all Occaſions, and favoured them to the utmoſt of his Power: He undertook to protect all Foreigners, and was equally beloved by Natives and Strangers. He died about ſixteen Years ſince, *i. e.* in 1650, in a very old Age, beloved by his Prince, and regretted by his People. He had the Character of an able Politician, whoſe Councils were ſucceſsful. He died lamented by every body but the ancient Nobility, whoſe ambitious Deſigns he always thwarted.

It was he that made *Eliab Danalowitz* General of the Czar's Army; who, before he had a Fit of the Apoplexy, was reckoned a Man of great Worth and Capacity. He was bold, daring, and vigilant: His Memory was ſo good, that he knew every one's Buſineſs in all the Employments Civil and Military. He could diſtinctly tell the ſeveral Quarters of an Army of fourſcore thouſand Men: He could tell the Names and Characters of all his Officers; but the Accident that happened as we have already ſaid, weakened him extremely both in Body and Mind: And his Memory is now ſo bad, that he hardly remembers thoſe Perſons with whom he was moſt familiar. He was Treaſurer, and held five or ſix more great Offices, which he managed with equal Skill and Succeſs. 'Tis true, he plundered a great deal, and the Emperor, who feared more than he loved him, winked at it more willingly, becauſe whatever *Eliab* ſcrap'd up, would fall to him in right of his Wife, *Eliab*'s Daughter. Nevertheleſs, after the Death of *Danelowitz*'s Wife, obſerving that he was too kind to ſome *Tartarian* and *Poliſh* Women, he ordered him either to marry or leave the Court. On which Occaſion, I cannot help remarking, that Marriages are in high Eſteem in *Ruſſia*, either out of Policy to encourage what helps to people the Country, or to prevent the *Ruſſians* abandoning themſelves to Boys and Beaſts, to which they are not a little inclined; nor is that Crime puniſhed with Death there, as in other Countries.

I

It is called *Ne Miſheay*, and it got that Name by this Means: A young Raſcal which was ſurprized committing an abominable Action with a Cow, cried out to the Perſon that ſpied him, *Ne Miſheay, Do not diſturb me.* This was done about eight Years ago; and ever ſince, that horrid Sin has been ſo called.

Eliab's Misfortune would have been regretted more, had not *Naſhokin* ſucceeded him in the Adminiſtration of Public Affairs. This Lord is one of the wiſeſt Miniſters in *Europe*; he is a Man of Temper and Integrity; he is indefatigable in the Diſcharge of his Offices committed to his Management, and a hearty Aſſertor of monarchical Government; he is Chancellor of the Office of Embaſſadors, and Governor of *Ruſſia Minor*; and has ſeveral other Employments, which his Predeceſſor *Eliab* held before him. It was *Naſhokin* that concluded the Peace with *Poland*, very honourable to his Maſter. He alſo formed the *Swediſh* Alliance, and erected the Silk Manuſacture throughout all *Ruſſia*; and by his Means *Ruſſia* is made the Mart of the Silk Trade; moſt of that Commodity either from *Perſia* or the *Indies* being brought thither, and ſent from thence into other Parts of *Europe*; but this Commerce did not laſt long.

His next Work was to reform the Emperor's Houſhold, and the Laws of the Empire. He contrived it ſo, that no Suit ſhould be long depending; and every Governor of a Province, aſſiſted by his Council, had a Power given him of Life or Death. Before that Order, Criminals of all Sorts were brought to *Moſcow* to be tried, which was very troubleſome and inconvenient for the Czar. The laſt Summer a *Jew*, who had turned *Turk*, and was Interpreter to the *Perſian* Merchants, accuſed *Naſhokin* on their Behalf, before the Emperor, for doing them ſome Injuſtice in the Precauce, or Court of Embaſſadors, of which he was Chancellor:. The Emperor anſwered, That *Naſhokin* had the Management of all Affairs relating to Trade; that he referred them to him; and if he was unjuſtly accuſed, their Interpreter ſhould pay dear for it. The Czar was as good as his Word, the Accuſation being found to be groundleſs; and the Renegado *Jew* had thirty Laſhes with a Whip, which threw him into a miſerable Condition. *Naſhokin* has often told my Author, That it was the Czar's Intereſt to keep up a friendly Coreſpondence with the King of *England*, more than with any other Prince in *Chriſtendom*; and it will not be improper in this Place to mention ſomething relating to him. Some *Engliſh* Merchants petitioned *Naſhokin*, that they might land ſome Goods which were on board the Ships lately arrived from *England*:

"He told them, he had a Paper printed, giving an Account of the Plague in *London*; that probably this Merchandize might come out of Houſes that were infected, and they knew very well a Spark might ſet a whole City on Fire; that he thought their Way of publiſhing their Infirmities was very ſtrange; adding, that if the Poor and Miſerable expoſe their Miſery and Poverty, it is to excite Compaſſion, and get ſomething by it; but the *Engliſh* ſpread it about every where, that the Plague laid their Country waſte, and gave the World a fair Warning not to have any thing to do with them; as Lanthorns or Light-houſes near the Coaſts warn the Pilots not to come near them for fear of being ſhipwrecked." He ſaid one Day, "He wondered any Princes ſhould ſend Letters of Recommendation in Favour of their Subjects, demanding Juſtice in their Behalf, as if the Czar did not know how to deal juſtly by Strangers as well as by his own Subjects. Sure ſuch muſt be very cheap in *Denmark*, continued he, becauſe I receive more from thence than from any other Kingdom. I do not know what they might coſt in *England*, but I am very well ſatisfied they are all to no Purpoſe. The *Muſcovites* do not govern themſelves like the *Engliſh*, by the Cuſtom of their Countries; and if the *Ruſſian* Dreſs becomes them, theirs will never become the *Ruſſians*." Being once diſcourſing on the Affairs of *England*, and particularly on the Succours ſent by the Kings of *France* and *Denmark* to the *Dutch* againſt the King of *England*, he declared, "He could not penetrate into the Politics of thoſe Monarchs, who in other Things were diſcreet, in doing ſo prepoſterous an Action; that in his Opinion, the beſt Thing for them had been to have joined with the King of *England*, and other Princes of *Europe*, to form an Alliance for the rooting up all Republics, which are good for nothing, but to ſerve for an Aſylum to Rebels and Heretics."

There have lately been a great many *Jews* admitted into the Czar's Court, by means of a *Jewiſh* Surgeon, who pretends to be a *Lutheran*. He was bred up in *Poland*, and advanced himſelf in the Court of *Muſcovy*, by furniſhing *Bogdan Matſeig*, High Steward of the Emperor's Houſhold, with *Poliſh* Girls, of whom he is very fond. This Miniſter was the Companion of the Czar's Youth, and has inſinuated himſelf ſo far into his good Graces, that for ſome Time he has been the reigning Favourite, and managed all the Concerns of the Houſhold as he pleaſed. His Wife obſerving his Intrigues, and underſtanding that he met *Poliſh* Girls, and other handſome young Women, Slaves, as well as thoſe that were free, was ſo jealous of him, that her Ill-humour became inſupportable to him, and he poiſoned her to get rid of it. The People murmured at the Murder, and the Czar commanded *Matſeig*, either to quit his Poſt or marry, and leave his Miſtreſſes. It is ſaid he intended to take one of his Concubines to be his Wife. He cannot agree with *Naſhokin*, and does not love the *Engliſh*, becauſe the *Dutch* have drawn him to their Intereſt by rich Preſents.

22. The Czar has lately built a Work-houſe, about a League from *Moſcow*, where the Poor are employed in Manufactures of Hemp and Flax. The Houſe is beautiful, large, and ſo well contrived, that all the Beggars in his Empire may be employed there; for whoſe Maintenance the Emperor has ſettled Lands upon it, to a conſiderable Value. The *Czaritza*, or *Czarina*, manages the Women's Work, and employs them for her own Benefit. The Czar is every Day buſy in contriving the Increaſe of Manufactures, how to invent new ones, or improve the old. His Workmen coſt little or nothing for their Subſiſtance; he rather gets than loſes by them; ſo that he ſaves his Revenues ariſing by the Cabacks, the Bagnios, and Stove-Chambers, Pitch, Hemp, Flax, Honey, Wax, Caviare, Sturgeons, and the ſalted and dried Fiſh that comes from *Aſtracan*, *Caſan*, the Lake of *Belſire*, and ſeveral other Lakes and Rivers in his Dominions, particularly in *Siberia*, where there are Abundance of them, and yield plentifully.

The Czar goes every Year, about the End of *May*, to a Country Houſe about three Miles from *Moſcow*, called *Obraſanſky*, or the Transfiguration, to which it is dedicated in Obedience to what is ſaid by the Evangeliſt St. *Luke*, Chap. ix. 13. *Maſter, it is good for us to be here, let us make three Tabernacles, one for thee, one for* Moſes, *and one for* Elias, &c. The Emperor ordered ſeveral magnificent Tents to be ſet up; his own was of Cloth of Gold, lined with Sables; that of the *Czarina* of Cloth of Silver, lined with Ermine; and thoſe of the Princes and chief Lords, of other Stuff, and other Linings, according to their ſeveral Ranks. The Czar, and *Czarina*'s Tents, thoſe of their Children, ten in Number, and their five Siſters, were round; in the Middle ſtands one which ſerves for a Church, and, all together, make one of the fineſt Sights in the World. Guards are poſted round about them, at a Muſket-ſhot Diſtance.

There are Palliſadoes placed to keep off the People. None durſt paſs beyond theſe Bounds; for the Czar will not ſuffer his Recreations to be prophaned by vulgar Eyes. When the Emperor goes into the Country for his Pleaſure, no Man is permitted to preſent any Petition unto him. A Captain of *White Ruſſia*, when *Peter Selticoro*, Governor of the Province, refuſed his Pay for above three Years, not knowing how to have Juſtice, thought his beſt Way was to addreſs himſelf immediately to the Emperor. He came up to him where he was in the Country, and approaching too near his Coach to give him his Petition, the Czar miſtruſting he had ſome ill Deſign, perhaps that it was to aſſaſſinate him, thruſt him to the Heart, with a Cane that had an Iron Spike at the End of it. He fell down dead on the Spot, and the Emperor ordering him to be ſearched, to ſee what Arms he had about him, there was nothing to be found but the Petition. The Emperor having read it, ſmote his Breaſt, and appeared mightily concerned that he had murdered an innocent Perſon, ſaying, "His Blood ſhall "lie at *Selticoro*'s Door, who was the real Cauſe of his "Death." He ſent for him, and not being ſatisfied with giving him a ſevere Reprimand, baniſhed him the Court, turned him out of all his Places, which he gave to *Naſhokin*, with an expreſs Command to enquire out *Selticoro*'s Miſdemeanours.

This Accident happened not long ago, and yet is not much talked of. For it is Death to tell what is ſaid or done in the Czar's Court. The Author going once to view the Workhouſe, built for thoſe that were to manufacture Hemp and Flax, juſt as it was finiſhed; and aſking the Workmen what Uſe it was deſigned for, not one of them durſt make any Anſwer, though they knew what was the Deſign well enough. All that he could get out of them was, *That God and the Czar only knew.* The Czar uſed every Night to viſit the Chancellor's Regiſters, to examine what Decrees had paſt, and what Cauſes were depending. Such poor Gentlemen as have nothing to maintain them, but what he gives them, are his Spies, of whom he has many in all Places. In his Armies, at all Wedding Feaſts, in all Embaſſadors Houſes, in all public or private Aſſemblies, they tell him what they hear or ſee, and he governs himſelf accordingly. The Czar's Children are ſerved by other Children, who are bred up with them, and are well educated in all Sorts of Knowledge, ſuitable to their Birth.

Trade is now very low in *Muſcovy*, two fifths of all the Inhabitants having periſhed in the late War; beſides the new Impoſitions laid on all Merchandize, the Cuſtom-Houſe Officers take away Merchants Goods by Force, and compel them to ſell them for Copper Money, which has ſunk the Price of ſeveral Commodities, and raiſed others as much, and put a Stop to the Currency of Commerce in general. Several great Traders were undone by it; ſome of them fell ſo in Deſpair upon it, that they hanged themſelves; and others ſpent what they had, in Cabacks and Brandy-ſhops, to drive away Care; which not being uſed to before, their Debaucheries ſoon put an End to their Lives. *Engliſh* Cloth is not ſo good a Commodity in *Ruſſia*, as that of *Holland*; and though the latter ſhrinks above a ſixteenth Part when it is wet, yet the *Ruſſians* prefer it to the former, becauſe they are of Opinion that it is only new Cloth which ſhrinks. The *Engliſh* are to blame to give way to their Fancy, and to carry on a Trade with them, which the *Hollanders* manage ſo much more to their Intereſt; their ordinary Cloth and Trifles turning to better Account than the beſt Commodity the *Engliſh* can bring them, by the wrong Judgment of the *Ruſſians*. If the Trade for Silks to *Perſia* and the *Indies* ſhould increaſe, the *Engliſh* will find it a hard Matter to recover their former Privileges and Immunities in *Ruſſia*; for the *Ruſſians* are grown ſharper, and corrupted by the *Dutch* correſponding ſo long with them. They are more numerous in *Muſcovy*, and richer than the *Engliſh*. They ſpare for nothing to ruin the Trade of *England* in *Ruſſia*, and ſucceed in it more than ſome imagine. They bribe the Nobility, by Preſents, to defend and protect them, and render the *Engliſh* contemptible and ridiculous, by ſcandalous Libels and abuſive Pictures.

They looked upon the *Engliſh*, a few Years ago, as a loſt and undone People. They are ſuch perfect Slaves, that they have a mean Opinion of all thoſe who are free. The *Dutch* would fare no better, did they not pay dearly for the Friendſhip of the Favourites and Miniſters in *Muſcovy*. They repreſent the *Engliſh* Nation by a Lion without a Tail, with three Crowns on his Head, turned upſide down; or by Maſtiffs, with their Ears and Tails cut off. Theſe fooliſh droll Pieces were done at a Time when they had no Reaſon to ſpeak very well of the *Engliſh*, who had begun a War with them for the leaſt Provocation in the World. The only Way for the *Engliſh* to recover their Reputation and Trade in *Ruſſia*, and to leſſen the Credit and Commerce of the *Dutch*, would be for them to ſuffer no body to deal there, but ſuch as could trade with ready Money, and not upon Truſt, as their Merchants have done for theſe twenty Years; and to ſend an Embaſſy to the Czar, to inform him of the flouriſhing Condition of the *Engliſh* Dominions; of their Strength, Greatneſs, Revenues, and their Colonies in both the *Indies*; to ſhew him Maps of all their Territories over the whole Earth, and Plans of their Forts and Cities. They ought alſo to undeceive *Aſſanaſty Naſhokin*, to whom their Nation has been vilely miſrepreſented by the *Hollanders*, and to preſent *Cogden Matſeig* with ſome Curioſities that he loves. The firſt would make it a Point of Policy to encourage them, when he underſtood the true Nature of the Caſe; and the other would procure them the Emperor's Favour, of which he is always ſure. The Author's Arguments on this Subject are of no Weight now; the Figure the *Engliſh* Nation has made abroad ſince the Revolution, needs no Embaſſy to ſound its Fame. The Ends of the Earth have heard of it with Wonder, and the Czar, as the Queen of *Sheba* did to *Jeruſalem*, came in Perſon to be a Witneſs of its Glory.

23. *Siberia* is a large Province, the greateſt Part of which is *Terra Incognita*, which reaches to the Walls of *Cathay*. Beſides what Account of it I had from the Gentleman of *Lorrain*, I met with ſeveral Perſons in my Travels in theſe Parts, who had been over a great Part of *Siberia*, and on whoſe Relations I can depend. One of them in particular, had travelled ſo far, that he traded with the *Chineſe*; and the other, who was more ignorant, though not leſs faithful, aſſured me that he went ſo far, that he ſaw a Sea with Ships, and Men aboard them, who wore no Hair but on their upper Lips, who were richly dreſſed, and covered all over with Gold and Jewels. Their Garments being quite different from thoſe of the *Ruſſians*, by the Deſcription he gave of them, in all Probability they muſt be *Chineſe* Merchants; for the Sea could be no other than that of the *Kaimochites*, on the North-eaſt Part of *Great Tartary*, or that of the Gulph of *Nankin* in *China*. The latter brought ſome *Chay* and *Bourdian* out of *Siberia* with him. The former is what we call *Tea*, the latter *Aniſum Indicum Stellatum*, a phyſical Drug.

The *Chineſe* Merchants have taught thoſe of *Siberia* to drink the Chay with Sugar as we do; and they take it to be an excellent Remedy for all ſuch as are troubled with any Diſeaſe of the Lungs, with Hypochondriacal Flatus's, and ill Diſpoſition of Stomach. They bring it to them in Papers, containing each a Pound, the Weight and Name being written on each Paper in *Chineſe* Characters. Thoſe that would travel through *Siberia*, are ſix Years on their Journey, occaſioned by the extraordinary Heat and Cold of the Climate, which obliges them to lodge all the Winter in cerrtain Places, and all the Summer in others. *Tumbut*, or as others ſay, *Siber*, is the Capital of this vaſt Province; here the chief Waywod, or Viceroy, reſides. Furs, Marten-Skins eſpecially, which are to be had no where elſe, are the principal Commodities of this Country. They eat dried Fiſh inſtead of Bread, which is not to be ſeen in all the Province, unleſs the Traveller carries it along with him. There is Plenty of all Manner of Fiſh in their Lakes and Rivers, in which they abound. They feed their Dogs with it, and even their Cows in cold Weather, which is exceſſive in *Siberia*, by which Means their Milk, generally ſpeaking, has a fiſhy Taſte.

There is Abundance of Filbert-trees of a prodigious Bigneſs, and the Kernel of the Nut is of a Size anſwerable to that of the Tree that bears it. They go a hunting in Troops, for ſix or ſeven Weeks together, covered over with three or four Skins, and drawn along in a Sledge by thirty or forty huge Dogs. They lie in the open Fields all Night, in the midſt of Winter; but they make good Fires about them to warm themſelves, and broil their Fiſh. Their Dogs are very expert in finding out Martens; and when they have found them, they never miſs taking them. When once the *Siberians* have ſhot them, which they do with a Cuſs, ſo dextrouſly, that they always wound them in the Noſe, that they may not prejudice the Skin. Beſides, if they do not hit them in that Part, it is rare that they catch them,

them; for it is a robuſt Animal, and will eſcape them, ſometimes, though he be ſhot quite through the Body. The River *Ob* runs through this Province; it is very broad, and falls into the *Mare Glaciale*; it is ſtored with Sturgeons and Belugas. The latter is a Fiſh, twelve or fifteen Feet long, reſembles a Sturgeon, but is not ſo pleaſant taſted when it is ſalted, as the former. The Meat is whiter than Veal, and as delicious as Marrow, while it is freſh.

The *Volga* is ſtored with that Fiſh, and with Sturgeon, moſt of all the Rivers in the North. When the Flood comes down the Mountains, by the melting of the Snow, and the Stream grows the more rapid, theſe Fiſh ſwallow great Stones to make them the heavier, that they may ſtem the Torrent the better. They throw them up again when the Waters abate, and the Current is not ſo ſtrong. It is out of the ſoft Roes of theſe Beluga's and Sturgeons, mingled together, that the People of *Aſtracan* make Caviare in this Manner: They put their Roes in a Heap of Salt, and when they have fermented a little, they ſqueeze them, and barrel them up. There are ſome who will not ſqueeze them at all. That Caviare is the moſt delicious, but will not keep ſo long as the other. The *Turks* make it with the Eggs of the Sturgeon, which are black and clammy. This the *Ruſſians* call *Fekra*. There is another Sort, which is nothing but the Roe of a Beluga. The *Armenians*, who I believe firſt made Caviare, do it after another Manner. They begin with cleaning the Roe, and throwing away all that is uſeleſs in them, then ſalt and lay them on crooked Planks, that the fat oily Parts may be drained off; after which they pack them up in Barrels, and beat them down till they are hard. The Beluga has one hundred and fifty Roes, and two hundred weight of Eggs, which the *Armenians* call *Arminſko Fekra*.

The Northern Part of *Siberia* is called *Samojedia*, or *Taſambeida*, which ſignifies Canibals or Men-eaters, becauſe the Inhabitants are ſaid to eat all the Priſoners they take in War. They live in round Tents, covered with Mats and Stags-Skins. They make their Fires in the Middle, and lie about them. There is but one Hole to a Tent, beſides the Door, and that is on the Top, to let out the Smoak. In Summer-time they remove to the Banks of Rivers, for the Conveniency of fiſhing. They live altogether upon Fiſh, which they often eat raw. In Summer they dry it, to keep for their Winter ſtore. Young Dogs are accounted one of their niceſt Diſhes. Their Cuſtoms, Language, and Religion, are entirely barbarous. They worſhip the Sun and Moon. Both Men and Women are dreſſed in Cloaths made of Stags-Skins, the Hair outwards, which they fancy is the warmeſt Way of wearing it. The Men have no Beards. The Women are abominably ugly, and ſo hard favoured, that they can ſcarce be diſtinguiſhed from the Men, the one being often taken for the other by Strangers. Yet as deformed as they are, they do well enough for the Canibals, who like them better than thoſe we think handſome. The Riches of the *Samojedas* conſiſt in Stags. There are ſome of them ſo tame, that they graze in Troops, ſtand ſtill to be harneſſed, and draw Sledges fourſcore Miles a Day, ſo incredible ſwift are thoſe Creatures.

Before the Inhabitants go a hunting of Stags, they conſult a Prieſt, who tells them the Place where they ſhall find their Game; and it is rare that they are out in their Gueſſes. Young Girls are a conſiderable Part of their Father's Wealth; they are never ſeen till they are betrothed in Marriage, and that is frequently done when they are ſix or ſeven Years old; for at that Age, ſomebody or other will buy them for a certain Number of Stags, that they may be ſure to have their Maidenheads. Huſbands are there ſo jealous of their Wives, that they lock them up cloſer than they do in *Italy*; and when they go a hunting, they have a Device to ſecure them from making them Cuckolds in their Abſence. The Emperor does not think theſe People worthy of living under his Government; they are liable to no Impoſts; what they pay is voluntary, and generally is in Stags; which from Time to Time they deliver to the Czar's Officers on the Frontiers. No body underſtands their Language, nor their Laws, which they execute with great Severity. When they ſell a Stag to a Foreigner, they preſerve the Entrails and eat them, even the filthieſt Part of them, after they have ſqueezed out the Excrement. Thoſe who underſtand Magic, are the moſt honourable Perſons among them. They are very dextrous in that fallacious Art, and exerciſe it very commonly towards Strangers; but they dare not play the *Ruſſians* any Tricks for fear of being ſeverely puniſhed. An *Engliſh* Merchant inviting ſome of them to Dinner, one of them got ſo drunk that he could not ſtand, ſpeak, nor ſit; and his Drunkenneſs continued ſo, till an old Woman touched his Forehead, and muttered ſome Words in his Ear; after which, if we may give Credit to Eye-witneſſes, from whom I had it, he grew as ſober as ever he was in his Life.

24. In the South Part of *Siberia* there is a Foreſt, or, as called by them, *a Step* about ſix or ſeven hundred Wreſts long, where there are few Rivers; and yet the Soil is extremely fertile. One may ride there ſeveral Days Journey in vaſt Fields full of Cherry-Trees not above two or three Feet high; not that they won't grow taller, but they were hindered by the Negligence of Travellers, who having made Fires in the Middle of the Fields, go their Ways without thinking of putting them out, and the Graſs of the Foreſt being very long and very dry, catches Fire, and burns up every Thing that lies in its Way. It is no uncommon thing to ſee a Fire burn for thirty or forty Wreſts together, and purſue Travellers ſo nimbly that often they have not Time to ſave themſelves. Theſe Cherry-Trees bear red Cherries, fair to look to, but ſour. The Fruit of ſome of theſe Trees that have been tranſplanted has been very good. I have talked with ſeveral Perſons who have ſeen Tulips, red Roſes, Roſes like Damaſk Roſes, Aſparagus larger and finer than ours, Onions, Marjoram, Thyme, Succory, Sage, Endive or white Succory, and other Flowers, Herbs, and Roots in the Foreſt, which we with a great deal of Care raiſe in our Gardens. The Turnip is very frequently met with there; they have good Carrots and Parſnips in *Samojedia*, and the Merchants of other Nations export a great deal of Nitre and Sal Gemet from thence. Elks are larger there than any where elſe. There is a little Animal called *Zouricks*, and another whoſe Name is *Perivoſkicks*, which are pretty Creatures.

The *Zourick* is ſomething ſhaped like a Badger, but different in the Face; his Skin is of an agreeable Colour; it is black, ſleek, and ſpotted a little, and his Legs ſhort, his Back almoſt a Foot long; they live like Coneys in Burrows under Ground. The *Ruſſians* tell a great many Stories of the Wars of theſe Animals, one with another, of their Dexterity in taking Priſoners, and ſending the Enemy away into Captivity; that they force their Slaves to fetch in Hay and Oats for them to lay up againſt Winter: It is ſaid their Burrows are very clean, neat, and artfully contrived; and if one of them dies the others carry out his Body and bury it elſewhere. Colonel *Crawford*'s Regiment quartering near the Place where they are to be found, theſe Creatures met one Day, to a prodigious Number, and made ſuch a frightful Noiſe as terrified the Soldiers and their Horſes ſo much that they ran away from their Paſture near the Place ten Miles, without ſtopping. The *Perivoſkicks* Skin is brown inclining to yellow, being a Mixture of white and black: The *Ruſſians* make Coats of them, but they are not much valued becauſe the Fur is not long, nor the Skin warm. I have heard, they take a great deal of Pleaſure to carry Squirrels and Ermines from one Side of the River to the other, on their Backs; from whence they derive their Name *Perivoſkicks*, i. e. to carry a Thing from Place to Place. Several Perſons have aſſured me, that the Squirrels in *Siberia*, when they can get nothing to eat on one Side the Water, will paſs over to the other on a little Piece of Wood, and make uſe of their Tails inſtead of a Sail. If the Wind ſets fair, they get over ſometimes; but if it changes they are infallibly drowned. There are many more Reports as extravagant, which have been averred to be true, relating to *Siberia*; but I will not impoſe farther on the Faith of the Reader.

There is a Bird in the Neighbourhood of *Caſan* and *Aſtracan*, about the Bigneſs of a Woodcock, whoſe Beak and Legs are like a Snipe's, and his Neck like a Cock's both for Feathers and Size: They fight like the Game-Cocks in *England*; they ſtand on their Guard when they put their Beaks to the Ground, and when they can do it to Advantage they leap at the Enemy with Vigour, and attack him as violently as the *Engliſh* Cocks of the Game do. They are better to eat than Quails. Sometimes one may catch this Bird near *Archangel*; where is alſo to be found a Bird as big as a Blackbird, reſembling a Hawk; like him he flies after little Birds, takes them, pulls them, cleanſes them, and then eats them. There is another Sort of Fowl as tall as a Swan, which is brought from *Aſtracan*; his Body and Feet reſembles thoſe of a Swan, his Neck is ſhort, thick, and ſo wide, that he will ſwallow a Fiſh ſix Inches broad.

Some Travellers make mention of a Plant in thoſe Parts called the *Lamb*; which deſtroys all the Herbs that grow near it, and then dies; but as this Quality agrees very ill with its Name of a Lamb, ſo the Story is accounted fabulous by Perſons of Judgment. This deſerves to be more particularly conſidered, and therefore we ſhall take the Liberty of adding ſomewhat to the Author's Remarks upon this Subject: This vegetative Animal is called *Borometz*, or *Barannetz*; the latter is the true Name, the Word *Baran* ſignifying, in the *Sclavonian* Tongue, a Sheep, and the Word *netz* being a Diminutive makes it ſignify a little Sheep or Lamb: The Baron *de Heberſtein* deſcribes it thus: He ſays, That it is of the Figure of a Lamb, grows to be very large, with a very ſoft Down, and deſtroys all the Graſs round it. We have Relations of the ſame Kind in other Travels, which are to the full as ſtrong, and ſome of them are pretended to come from Eye-Witneſſes. We ſhall perhaps have Occaſion hereafter to mention ſome of theſe Accounts in ſpeaking of the Countries to which they belong; but at preſent it may be ſufficient to clear up this Wonder, with which ſo many Naturaliſts have been puzzled, and ſome very ingenious and well-meaning Travellers abuſed.

The Truth then of the Matter is this: Some People in theſe Countries, for the Sake of Gain, have had Recourſe to a moſt wicked and barbarous Practice: They have opened their Sheep when at the very Point of Yeaning, and then taking out the Lamb they flea it, cleanſe the Wool; and while the Skin is wet extend it gently, and on all Sides, as faſt as they are able to ſtretch it upon the Graſs; and then, by the Aſſiſtance of Dew and ſour Milk, with which they ſprinkle it as it grows dry, bleach it in the Sun-ſhine till it is as white as Snow itſelf. By theſe Contrivances they obtain a Lamb-ſkin wonderfully thin, ſmooth and ſoft, and extremely fit for lining the under Garments of the Great and Wealthy. But as in all *Mohammedan* Countries, they look upon the Skins of Beaſts as an impure kind of Cloathing, and therefore abſtain from them on the Score of Religion, the People who take all this Pains have been forced to invent this Story of a vegetative Lamb, a Kind of Plant-Animal. And Travellers ſeeing the Skins, and hearing the Tale roundly affirmed, have ſuffered themſelves to be ſo far impoſed upon as to lend their Authorities to impoſe this Cheat upon Mankind, than which, without doubt, there never was a greater or more groundleſs; which is the Reaſon that we have taken the Pains to expoſe it; as we ſhall not fail to do whatever occurs of the like kind in any of the Voyages or Travels that we publiſh; for Credulity and Incredulity are alike dangerous, and without a cautious and judicious Enquiry not eaſy to be diſtinguiſhed. As in the preſent Caſe it would be equally wrong to believe, that no ſuch Skins as Travellers ſpeak of were ever ſeen or met with, as on the other hand it would be to ſwallow the whole Story upon the Credit of ſuch Skins having been ſeen.

25. The City of *Crim*, from whence the Prince of *Tartary* is ſtiled the Grand Cham of *Crim*, the Capital of his Empire, is ſituated on the *Tartarian* Sea, built of Stone and Brick, and encompaſſed with ſtrong Walls. The *Tartars* are tributary to the *Turks*; and it is not long ſince that the Czar of *Muſcovy* paid the Cham of *Tartary* Homage, as being obliged by Oath to feed his Horſe with Oats out of his Cap. The City of *Moſcow* alſo paid the *Tartarian* a Tribute of ten thouſand Coats made of Stags-Skins. The *Muſcovites* have for ten Years paſt refuſed paying it, alledging, that the *Tartars* made void the Treaty by Inroads into *Ruſſia*, and Robberies on their Borders. Indeed they are very troubleſome Neighbours; if they are routed they vaniſh in a Moment, and diſperſe; notwithſtanding which they meet again at Night at the Place of Rendezvous, and the next Day renew their Incurſions with as much Violence as ever: They will march fourſcore Miles a Day, in which time they change Horſes thrice, each of them having three or four Horſes If any one of their Cattle dies, either of Fatigue or Sickneſs, they cut the Fleſh out in Pieces and diſtribute it amongſt their Comrades, who eat it with as much Appetite as we do Beef or Mutton; they often devour it raw, but their common Way of cooking it is to put it between the Saddle and the Back of the Horſe, on which the *Tartar* rides, and that ſoddens the Fleſh enough for them to feaſt upon.

Thoſe Horſes that are in the Fields are very difficult to be caught, becauſe it is almoſt impoſſible to take them from their Company. If a *Tartar* falls ſick, they give him Mares-Milk, and the Blood of a Horſe, whoſe Veins they open on purpoſe. The Reaſon why they eat no Bread nor Salt, is that they believe Bread to be coarſe Feeding, which renders ſuch as eat it heavy and unactive; and that Salt is bad for the Eyes. It is certain their Sight is better than any Peoples in the World; they can ſee forty or fifty Miles when the Proſpect will admit it, and can diſcern a ſingle Man at the ſame Diſtance where the *Ruſſians* could not diſcern a Troop of *Tartars*. They are excellent Horſemen; they ride with a looſe Rein; lift themſelves up in their Stirrups, and ſhoot backwards on their Enemies that purſue them. The *Colmuck Tartars*, among whom *Tamerlane* was born, have a large Extent of Territory: They dwell in Tents, and live in their Paſtures: They are bigger and more ſwarthy than the *Crim Tartars*, and are not at all like them in the Face: Some Part of their Country is ſubject to the Emperor of *Ruſſia*: Their Women are as fit for War, and accuſtomed to it as well as their Men: Lately an Army of them defeated the *Crim Tartars*, who had carried away ſome of their Children into Captivity.

The *Crim Tartars* are flat-noſed; their Eyes are little and ſunk into their Heads; their Foreheads are narrow; their Shoulders low and broad; they are middle-ſized; as to their Shapes and their Make, they are every way ſo ſingular, that it is eaſy to diſcover a *Tartar* at firſt Sight among an hundred other Men. They flat the Noſes of their Children as ſoon as they are born, thinking it to be a Piece of Folly to let their Noſes ſtand in their Light: They are all *Mohammedans*; they laugh at the Worſhip the *Muſcovites* pay their St. *Nicholas*; and maintain that they had better adore the Sun, who is a glorious Body, the Life and Light of the World, than fall down before wooden Images. “ See, ſay they, what your Gods come to. When the Painting is worn out, you throw them into the River with a Coptack or two, and a little Bit of Olibanus; thus they ſail down the *Volga* to the *Caſpian Sea*; there we take them up, dry them, and burn them to roaſt our Horſe-fleſh by the Fire. Are not they very fine Gods that ſerve us inſtead of Faggots, and that cannot reſiſt thoſe that deſtroy them?” Before I have done with my Relation of *Ruſſia*, I will ſay a Word or two of ſeveral ſorts of Muſhrooms that grow there and no where elſe in that Form. There are ſeven which are moſt remarkable in their Figures and Qualities. The ſort called *Rizbiees*, are a little black and red, and ſpring up in a Night in the Marſhes. The *Smitzſkies* or Honey Muſhrooms, which *Gerbard* calls *Fungi farinoſi*, reckoning them among Poiſons, are excellent, and very dear in *Ruſſia*; it is the moſt delicate Diſh that is brought to the Tables of Perſons of the higheſt Quality; they put it in Soups and Pies. They come up before the other ſorts in *April* and *May*.

The *Gribbeys* are of a brown Colour, or rather of a black Yellow; the Tail of one is like a Pilaſter, and ſwells out in the Middle; they come up before the *Somtzſkies.* The *Volnitzies* are brown and black, mixed with red, and grow ſharp at top. The *Grouzbdys* are the biggeſt Sort of all of them, as hollow as a Honey-comb, and whiter than a Tulip when they are dead: Before they are boiled they are full of Juice, ſo tart and bitter, that it will bliſter the Mouth of thoſe that taſte it. I thought I ſhould have died after I had put a little of it within my Lips. The *Maſtamicks* are ſo called from *Maſta*, which ſignifies Butter, Oil, Suet, or any thing that is fat and oily. *Maſta Conova* is Milk or Butter. *Denavanna maſta* is Oil of Olives, or rather the Oil of a Tree; for *Denava* is in *Engliſh* a Tree. There are ſo many ſorts of Muſhrooms beſides, and ſo many of thoſe I have mentioned, that I have been told, a thouſand Waggon Loads a Year are brought to *Moſcow*: The Poor live upon them, and the Rich make them a ſecond Courſe. Almoſt all the *Ruſſian* Muſhrooms are good to eat, and there are very few of thoſe kinds which the Botaniſts call venomous. But to return to our Voyage.

26. We took our Leaves of theſe unhappy Exiles with reciprocal Tears, and mounting our Sledges, travelled on three Hours before we met with any Habitation: We then diſcovered five or ſix Huts together, in which were about a dozen Perſons: We aſked by our Interpreter, if they had any thing to truck for our Money or Brandy? They brought us out what Skins they had, and we dealt with them for them. We followed the Courſe of the River *Petzora*, which gives the Name to the Town; and near the Banks of it came to ſmall Villages pretty often; in ſome of which we found Inhabitants, in ſome others none. Where we met with any body to trade with us, we bought their Furs with Money of ſome, but more with Brandy. They would not part with their Sables for fear of being detected by the Governor of *Papinogorod*, whither we were going, who always ſearches whatever Merchandize is brought thither, to ſee if there are no Sables among it. We croſſed the Mountains which divide *Borandia* from *Siberia*. That was one of the worſt Journeys we had in all our Undertaking; thoſe Mountains being difficult to paſs, and ſo barren, that no Creature, Man or Beaſt, can live upon them: Beſides they are almoſt always covered with Snow; and towards the Aſcent and Deſcent, there are ſuch vaſt Numbers of Bears and white Wolves, that we were afraid of our Lives, expecting every Minute when they would have fallen upon us; though, perhaps, we needed not to have been in ſo much Fear, for thoſe Animals were, probably, as much terrified at us, as we at them.

They fled before us, ſome on one Hand, and ſome on the other, miſtaking us by the glittering of our Arms to be Hunters, and not Merchants. We were twelve Hours in croſſing the Mountains, and our Cattle had much ado to draw us over them. At laſt we reached the Deſcent, and arrived in a Village in *Siberia*, where the Inhabitants were all cloathed in Bears-Skins, with the Hair outwards, having Linnen Shirts on and cloſe Buſkins, by which we perceived we were come among People that were not ſo barbarous as thoſe we had parted from: They, in Effect, received us more civilly, aſked whence we came, and whither we were going. We eat and drank together of the beſt we and they had; ours was Rice-cake and Brandy; theirs, dried Wolfs and Bears Fleſh, Ginger-bread and Spirits. We bought all their Furs, except their Sables, with ready Money.

We reſted in their Houſes, which were built after the manner of the *Laplanders*. We ſlept on Bears-Skins, after having drank each of us a Cup of Brandy. When we awaked, we got upon our Sledges, and travelled without any further Delay for about twenty Hours together, till we came to *Papinogorod*. The Governor of the Place, hearing of our Arrival, ordered us to come to his Caſtle to examine for what, and from whence, we came. We waited upon him as we were commanded, and entered the Caſtle; he ſaluted us in a very friendly manner; and our Accountant, who underſtood the *Muſcovite* Language, gave a ſatisfactory Anſwer to all the Queſtions he demanded of him. When he knew that we were *Danes*, and Dealers, whoſe Buſineſs it was to buy Furs, he entertained us as handſomely as he could; and to ſhew us that he had a great Kindneſs for, and Confidence in, us, he ſent for his Wife to come and ſee us; which ſhe did, bringing in one Hand a Bottle of Brandy, and in the other a Silver Cup, according to the *Muſcovite* Faſhion; as alſo a Plate of Ginger-bread, which a Maid brought after her. We ſaluted her, as is the Cuſtom of the Country, by bowing our Heads. She preſently untied the Knot of her Smock Sleeve, and let it fall to the Ground: Our Supercargo preſently took it up, and kiſſed it, and our Accountant did the like, and ſo did I; then ſhe furled it up again with the left Hand; and taking the Bottle and Cup, which ſhe had ſet down to pay this Ceremony, gave to each of us a Brimmer of Brandy, and a Piece of Ginger-bread, herſelf ſtanding at the End of the Table, by the Side of her Huſband. She then returned to her own Chamber, and the Governor afterwards regaled us with good Cheer.

When we had done Supper, we were conducted to our Lodgings prepared for us in the Caſtle, and, conſidering the Country, lay in very good Beds. We ſlept about ſeven Hours, and then roſe; which the Governor having Notice of by one of his Servants, he got up, and came to ſee us, and brought alſo a Bottle of Brandy with him; one of his Domeſtics held another in his Hand, and filled us out a great Cup for our Morning's Draught. We each of us drank one; after that, we fell to Buſineſs. The Governor demanded if we would buy his Skins? our Supercargo ſaid he would, if he liked them, and could agree on the Price. His Furs were extraordinary well choſen, and though they were the deareſt we met with in all our Travels, yet they were the beſt worth our Money. Having ſeen them bought and paid for them, he ordered one of his Men to call in ſome of the Inhabitants who had Skins to diſpoſe of; but he would not ſuffer them to ſell one ſingle Skin till he had driven his Bargain. While our Supercargo was dealing with the Governor and his Neighbours, I walked up and down the Town.

It is ſituated in a very fine commodious Place, in a little Plain, the Country about it fruitful, ſurrounded with high Mountains, and near it runs a large River, well ſtocked with Fiſh; the Houſes are built very poorly, they are low, and the Walls are of Wood or Mud, caulked between the Beams with Moſs. The Town is paved with Pieces of Timber laid cloſe together. The People of Faſhion in *Papinogorod* are dreſſed in Breeches and Stockings of Cloth, and a long Robe over them of the ſame, which comes down to their Toes. Their Sleeves are made as cloſe as poſſible, ſome of one Colour, ſome another: Their Shoes are like the *Polanders*, they are rather Boots than Shoes, buttoned a-top, and the Leather is dyed, ſome of it blue, ſome red, and ſome yellow: Upon their Heads they wear Cloth Caps, lined and bordered, ſome with black Fox-Skin Fur, ſome with Ermines, and ſome with Sables. As for the Women, they are beautiful, fair and fat; their Hairs are of a light Cheſnut Colour, and their Mien gallant for *Muſcovites*; their Robe or Upper-Garment, like the Mens, comes down to the Toes; it is alſo made of Cloth, either Red, Blue, or Violet Colour; the Shape of it reſembles our long Waiſtcoats; it is lined with white Fox-Skin or Sable; they have long Sleeves pinned to it, for they cannot put their Arms into them, becauſe their Smock-Sleeves are of ſuch a prodigious length; ſome of them are five Ells long; they are made of fine Callico, and plaited up from their Wriſts to their Shoulders; their Head-dreſs is an oval Cap, their Hair hangs a long way down their Backs; their Shoes are made of *Ruſſia* Leather, and they have a Girdle of Pearl, pretty large, round their Waiſts. Thoſe that are Natives of *Siberia*, differ as to their manner or way of Living from the *Samojedas*, *Borandians*, and other Natives of the *North*. All the *Muſcovites* are *Nicholatians* by Religion.

They are grave, robuſt, ſwift, and dextrous at ſhooting with the Croſs-Bow. There are no Pettyfoggers in *Ruſſia*; no Villains who rob the Poor, under Pretence of recovering their Right; who ruin the Fatherleſs by feigned Attempts to ſave their Inheritance, and enrich their own Families with the Spoils of their Neighbours. The *Muſcovite* Law is all Equity, and all Courts of Juſtice are Courts of Chancery; but there is ſuch Care taken to expedite

Cauſes, that there is no Occaſion of Complaint given, as in ſome Countries more polite. Falſe Wittneſſes are ſeverely puniſhed, ſo are Traitors and Robbers; and the Friends of the Deceaſed proſecute Murderers. The *Ruſſians*, eſpecially in *Siberia*, are ignorant, ſelf-intereſted, Drunkards, churliſh, and ſo jealous, that their Wives are almoſt always locked up in their Chambers; nor dare they to ſtir out when they are more at Liberty, unleſs they are commanded by their Huſbands: They are afraid to ſhew the leaſt kind Look or Action to Strangers; and if their Huſbands do not beat them, it is ſo cuſtomary to do it, that they believe they do not love them. When we had bought up all the Furs we liked at *Papinogorod*, conſiſting of white Wolf Skins, white Fox-Skins, black of the ſame, Lynxes, and Sables (for ſome we had of the Governor by Stealth) Ermines and grey Squirrels, we packed up; and with what we bought at *Petzora*, had enough to load one Sledge, and almoſt half another. We had ſtill ſome Tobacco, and about five thouſand Ducats left; wherefore our Supercargo reſolved to go farther to get more Furs, and to return to our Ships through *Samojeda*.

Our Brandy falling ſhort, we bought the beſt the Governor, our Hoſt, had, and bargained with him for Proviſions ſufficient to laſt twelve Days, and for Rain-Deer to carry us to our Journey's End. When we had quite done dealing, and paid our Money, we muſt have a drunken Bout at parting; without which, there is no getting away from a Houſe in *Ruſſia*. We eat and drank for ten Hours together, and then lay down to Reſt eight more, when we got up and harneſſed our Rain-Deer, baled and loaded our Merchandize and Proviſions, we mounted our Sledges, took our Leaves of our Hoſt, and departed. We ran ſeventeen Hours; and all the Way we went bought up what Furs we could light on of the *Siberians*. We then croſſed the *Riphæan* Mountains in ſix Hours more, after which we entered *Samojeda*, a deſolate mountainous Country, full of Juniper Trees, Pine Trees, and Firs. It abounds in Moſs as well as Snow, Wolves, Bears, and Foxes, all white, we met every Moment, to our no ſmall Terror. When we aſcended the Mountain *Stolpboen*, out of which riſes the River of *Borſagatz*, we came to eight or nine Houſes, where we ſtopt, as well to bait our Cattle as to reſt ourſelves. We trucked with the Inhabitants Brandy for white and black Wolf and Fox-Skins, Caſtor and Otter-Skins; they had ſeveral dozen of Ermines, which they would not ſell us upon any Terms, notwithſtanding our *Borandian* Guide aſſured them with a thouſand Proteſtations, that there was no manner of Danger, we being Traders that were going to our Ships, and could not be ſearched before we got to the Coaſts, becauſe we were not to paſs through any Place where there were any Officers to ſearch for prohibited Goods. They would not hearken to us till we had drank them all down; and when the Liquor was gotten up into their Heads, they grew bold, brought out their Sables, and ſold us the beſt and moſt that we picked up in our whole Journey.

We ſtaid to reſt ourſelves in one of the chief Huts of the Village; the Maſter of the Houſe, his Wife, and Children, lay all together, without Diſtinction, and we amongſt them, on Bear-Skins. After we had ſlept four or five Hours, I awoke at a Noiſe our Hoſt made to raiſe his Family. They all roſe and went out; I had the Curioſity to obſerve them; I followed them at a little Diſtance, and perceived they all fell down on their Knees behind the Cottage, lifting up their Hands and Eyes to Heaven to adore the Sun, whom they believe to be God. The *Samojedes* are ſhorter and thicker than either the *Laplanders* or *Borandians*; their Heads are big, their Faces flat, as alſo their Noſes; they have ſcarce any Hair at all, and are as ſwarthy as the Ground itſelf; their Dreſs is a round Cap, furred like a Lamb Skin, a Pair of Breeches, and a white Bear-Skin Coat that comes down no farther than their Knees; they wear about their Middle a Girdle four Inches broad; their Shoes and Stockings are made of the ſame ſort of Skin, with the Hair outwards; under their Shoes they wear a ſort of Skates two Feet long, made like a Gondola, with which they ſlide prodigiouſly faſt on the Snow, that lie almoſt always on the Mountains; inſtead of a Cloak, they hang a Bear's-Skin with black Hair upon it over their Shoulders, the Feet dangling down at the four Corners; it hangs more on the left Side than on the right, to leave their Hands at Liberty for the Managemenr of their Bows. Upon this Skin they tie their Quivers.

The *Samojedian* Women are uglier than the Men; they will endure a great deal of Hardſhip, and take care to breed up their Children well in the handling of their Bows; at which they teach them to be very dextrous; they are dreſſed like Men, only their Upper-Garment is a little longer; their Caps are the ſame with the Mens; and all the Difference in their Head-dreſs is, that the Women have a Lock of Hair twiſted, which hangs down on their Shoulders; at the End there is a Knot of Ribbons made of the Rind of a Tree, and that reaches down to their Heels. This is all their Finery; they hunt as well as the Men, and are armed with Bows and Arrows, as they are; the Huſbands are true to their Wives, and the Wives to their Huſbands. If any one among them is found guilty of Adultery, either Man or Women, the Criminal is immediately ſtoned to Death.

27. Having traverſed *Samojeda*, bartered all our Wares, and loaded ourſelves with Skins, we returned, and met with no Adventurers worth remarking. We made what haſte we could, and reached the Coaſts of *Borandia*. In twelve Days after our Departure from *Papinogorod*, our Ships rendezvouſed at a Place on that Shore, where we had appointed them to meet us. We loaded all our Merchandize aboard them, paid off our *Borandian* Guide, and embarked. We weighed Anchor two Hours after, and ſailed with a fair Wind for *Zembla*, where we arrived the next Day in the Afternoon. We caſt Anchor in a convenient Place, near which we ſpied, upon the Shore, a Company of about thirty Perſons, with Quivers at their Backs, on their Knees, worſhipping the Sun that was then ſetting. Our Maſter and Supercargo conſulted together, what Courſe they ſhould take to come at the Speech of them. They thought them to be more wild than any they had yet ſeen, and that it would be difficult to get them to deal with us. They reſolved to ſend out three Long-boats, with ten Men, well armed, in each, to defend themſelves in caſe they were attacked. I was commanded to make one among them. We rowed to Shore; when we came about a quarter of a Mile off Land, all the Savages, who were ſtill on their Knees, got up, let fly at us; after which they ran away, like ſo many Stags before Hunters. They ſhot at us when we were at too great a Diſtance from them to receive any Hurt by their Arrows.

We landed, and purſued them to the Place whither we thought they were fled, in Hopes that we might be able to catch one or two of them, which, however, was not to be done. We loſt Sight of them, and could not tell which Way they were gone; yet we followed them till we came near ſome Mountains covered with Snow. We advanced farther into the Country, where, on a ſmall Hillock, we perceived a Piece of Wood cut out in the Figure of a Man, but very wretchedly. Before it were two *Zemblians* on their Knees, their Arms lying by them. They were worſhipping this Idol, as the others on the Shore were adoring the Sun. They fled from us, and it growing Night, we did not care to purſue them very far; they ran into a Fir-wood, and we thought it would be in vain to go after them. We therefore concluded our beſt Way was to return to our Ships, and make a Report of what we had ſeen and done. This Idol is called *Fetizo*; one of our Maſters had been there before, and ſeemed to believe that the Devil entered the Idol ſometimes, and from it pronounced his infernal Oracles.

Seven or eight Hours after I was got aboard again, I was taken with a violent Pain in my Head, and a Vomiting, which laſted three Hours; after that I had a ſore Throat, inſomuch that I could ſcarce ſwallow any thing. The Glands were ſwoln to a high Degree. I felt a great Ebullition of Blood, and an Itching over all my Body; my Gums ſwelled, and bled mightily; my Teeth ſhook; and I was ſo faint, that I could ſcarce keep upon my Legs. I loſt my Stomach, and eat nothing;

became extreme weak, and had a Fever almoſt always upon me. My Breath was ſhort and offenſive. I was very dry, and to quench my Thirſt I often drank Water and Vinegar. Perceiving my Diſtemper continued the two following Days, and conſidering that it was cauſed partly by exceſſive Cold, and partly by eating ſalt Meats, which had inflamed my pituitous Glands in ſuch a Manner, that my Phlegm had infected my other Humours, inſtead of Oxycrate, or Water and Vinegar, I reſolved to take ſome Brandy and Syrup of Liquoriſh, of which I drank a Spoonful every Hour. I eat no ſalt Fiſh, all my Food was freſh. I gargled my Mouth ſometimes with Brandy, and ſometimes with Vinegar, to ſtrengthen my Gums, and rubbed my Teeth with *Mel Roſat.* The greateſt Part of our Ship's Crew was taken with the ſame Diſeaſe as well as myſelf. I preſcribed the ſame Remedy; and in fifteen Day's Time I cured them and myſelf too. Our other Ship's Crew were as much troubled with it as our own; their Surgeons did whatever their Art ſuggeſted to them, by way of bleeding and purging to cure them; but thoſe Remedies rather increaſed than helped the Diſeaſe; two of their Sailors died of it, and one of their Accountants was likely to die of it, as alſo ſeveral other Mariners, upon which I was ſent for to a Conſultation. I adviſed them to do as I had done, and to give over purging and bleeding, which are mortal in that Caſe.

It was obſerved, in a very hard Winter, in *France*, that in this Diſtemper, which ſome took for the Plague, and was occaſioned by the Rigour of the Seaſon, that ſeveral Perſons, died immediately upon bleeding, which is of no Uſe in Cacochymical Diſtempers. Bleeding and purging in ſuch Caſes, are good for nothing but to weaken the Sight, to injure the Nerves, to conſume the radical Moiſture, to diminiſh the natural Heat; and, in ſhort, to diſlodge Mens Souls from their Bodies, ſooner than they ought to go; and to fill the Church-yards. However, I would not be underſtood to ſpeak againſt bleeding; in ſome Diſtempers it is good, as in all hot and plethoric Caſes, provided it is not uſed above twice or thrice. Being once at *Algiers*, ſeveral of our Crew were taken with this Diſeaſe, which I call the Scurvy; their Glands were ſo ſwoln, that one would have thought that they had had a Piece of Fleſh in their Throats. They had the ſame Symptoms as I had on the Coaſts of *Zembla*; their Phlegm was ſharp and corroſive, it affected their other Humours, and eſpecially the Maſs of Blood, as the Pox does, which is a Species of it; and I was forced to deal with my Patients as if they had really been poxed, not with Mercury, which by its cold, moiſt, and venomous Quality, exaſperates the Humours of the Body, and infects the Ventricles of the Brain, inſtead of cleanſing them, cauſing a Flux at the Mouth, by which, without Danger, one may cure the Itch, but not the Pox; the latter being cauſed by a cold, moiſt, venomous Humour, oppoſite to the Nature of Mercury; and this the Mercurialiſts cannot deny.

This Scurvy, with which ſea-faring Men are ſo troubled, proceeds from groſs Vapours which come from the bad Water they drink, the bad Bread, and the bad Victuals they eat; the melancholy, cloſe, and foul Air which they breathe: And the Infection of Scorbuticks is only to be remedied by Cordials. I could not forbear making this Reflection, which, as it relates to the Diſtempers incident to ſuch as go the Northern Voyage, I hope it will meet with a favourable Reception.

We ſtaid ſixteen Days on that Part of the Coaſt of *Zembla*, where we at firſt caſt Anchor; where our Crews were all cured, except three or four, who were on the mending hand. Our Maſters ſeeing there was a fair and freſh Gale, reſolved to ſail to *Weygatz*, to fiſh for Walrus, the Fiſh by us called a *Sea Horſe.* We ſailed about ſix Leagues, then cruized up and down for the Conveniency of our fiſhing. We kept near Shore, and put out our Long-boats, and ſent our Harponiers and Fiſhers in them, eight in each, without reckoning the Rowers. We were three Days a fiſhing, without catching any thing; at laſt we ſpied two large Fiſh approaching us; one of them had a Horn in his Forehead, that was of a good Length; our Fiſhers prepared to ſeize him; they came within a Stone's Caſt of him; our Harponiers threw their Harping-Irons at him, ſome on one Side, and ſome on the other, letting looſe the Ropes by which they were faſtened, and then they got off as nimbly as they could, for fear of the Monſter. When our Harponiers and Fiſhers ſaw that the Harping-Irons ſtuck in the Fiſh, they made towards our Ship's Sides, being ſure they had him faſt, becauſe he ſwam above Water, which is a Sign of his Weakneſs; they drew him nearer and nearer, by the Ropes that were faſtened to the Harping-Irons. The Monſter endured all without ſtruggling; he had loſt ſo much Blood, he had no Strength left.

The Fiſhers doing their Office, cut off his Head, which we kept, and flung the Body into the Sea, it being neither good to eat nor for Oil. People fiſh for the Sea-Horſe, purely for the ſake of his Teeth, which are as good as Ivory, and ſomewhat in a Pound dearer, being whiter than Elephants Teeth, and not ſo apt to turn yellow as Ivory is. The Horn of the Sea-Horſe we took, was ten Feet long, very heavy, winding, and as big as a Man's Arm near the Shoulder; very ſmall and ſharp a-top, growing bigger and bigger downwards to the Root. One of our Boats coming too cloſe to the other Fiſh, thinking to make ſure of him, the Monſter, as ſoon as he felt the Iron in his Sides, ſtruck his Tail againſt the Boat with ſuch Violence, in ſtruggling to free himſelf, that he over-ſet the Boat; and the other Boats were ſo far off, that before they could get thither to take up the Men, two of them were drowned; for whoſe Deaths we were troubled, the Prize being by no means a Recompence to us for the Loſs. The Fiſh was taken and his Head cut off, as the other was. I ſaw it had no Horn, but, to make amends, his Teeth were whiter and larger than that of the former.

We cruized up and down four Days before we ſpied any more Fiſh, wherefore it was reſolved to change our Station. As we were preparing to depart, we ſaw four of the ſame Fiſh, which ſeemed to be bigger than thoſe we had caught; ſo we furled our Sails, and made our Harponiers go out in our Long-boats, with the other Fellows that were employed in the Fiſhery. We took three of them; one eſcaped us; that which our Fiſhers brought aboard the Ship I belonged to, had no Horn; neither had the other two any. Twelve Hours after we diſcovered five Fiſh more. Our Harponiers and Fiſhermen got preſently into their Boats, to endeavour to take them, eſpecially one of them, which had a Horn in his Head. But though the Fellows did whatever Men could do to catch them, three of them made their Eſcapes; among which was the horned Fiſh; and the other two were taken, and had their Heads cut off. Two Hours after we ſpied three more; our Fiſhers went out after them; they took one, whoſe Head was brought aboard us, and was ſo big, that each of his great Teeth weighed twenty-nine Pounds.

Two Days after we ſaw ſeven or eight more of theſe Fiſh, and a horned one among them. We put out all our Boats, and our Fiſhers were ſo fortunate as to catch five of them, of which one was the horned Fiſh; it was our Lot to have him; his Horn was like that of the firſt Fiſh we caught, but not ſo heavy or ſo large, it being ſcarce ſeven Feet long. We ſtaid there five Days longer, and ſeeing nothing all that while, took Advantage of a North-north-eaſt Wind, which ſprung up, and ſailed towards *Weygatz*, in Hopes to paſs thoſe Streights. We kept our Courſe pretty well for thirty-ſix Leagues, but then we could go no farther, becauſe of the huge Pieces of Ice that oppoſed our Paſſage, and the Mountains of Ice covered with Snow, called *Pater Noſters*, which lie at the Mouth of the *Mare glaciale* (the frozen Sea) and the great Sea of *Tartary*. If a Ship could paſs through thoſe dreadful Streights, a Paſſage to the *Eaſt Indies* would not be above a Quarter ſo long as it is now, through the *Atlantic Ocean*. For this Reaſon the Streight is called *Weygatz*, as much as to ſay, in *Engliſh*, a Place one cannot paſs through.

28. We came to an Anchor in thoſe Streights, near

the Shore, on the Eaſtern Coaſt of *Zembla*; one of our Seamen landing there, and going about his neceſſary Occaſions, a Bear came behind him, and ſtruck him down with his Paw, and would have certainly deſtroyed him, had we not perceived it. We immediately fired a Fuzee, and by good Fortune ſhot him dead, otherwiſe the poor Sailor would not ſo eaſily have got out of his Clutches; he was not ſoon eaſed of his Fears, and the reſt of his Comrades were ſo terrified by his Example, that they durſt not venture aſhore. A little while after there came three Bears to our Ship Sides, and ſtrove to come aboard. We cut off the Paws of one of them, with our Hatchets, and ſhot the other with a Muſket. While we were diſpatching theſe two, the third mounted the Side of our Ship, and entered it; a Sailor who ſtood near him, cried out as if he were about to be devoured; and well he might, for the Bear was at his Heels. We all took up Oars and Pieces of Timber, with which we knocked him down, others ſhot at him, and two more that were ſwimming towards us, and killed them. We thought this Deſtruction would hinder any more from coming towards us, but we were miſtaken; for four or five Hours afterwards we diſcovered eight or ten more upon the Ice, and taking the Water they ſwam towards us, which obliged us to handle our Arms, and fire at them. We aimed ſo well that not one of them eſcaped us. More and more ſtill approaching from the high Mountains, as if they had declared War with us, we reſolved to retreat before ſuch a terrible Enemy.

We weighed Anchor, and returned to the Place where we firſt anchored, on the Weſtern Shore of *Zembla*. After fifteen Hours ſail, we got out of the Streight, by favour of an Eaſterly Wind. We had much ado to avoid running againſt Rocks of Ice that lay in our Way. At the Mouth of the Streight there is an Iſland which looks very green, covered with Fir and Juniper-Trees. Some of our Crew went aſhore, and ſaw a ſort of Birds there ſo big they could hardly fly. They came and told us what they had ſeen; upon which I deſired Leave to go aſhore, with about forty Men detached from the Crews, to hunt thoſe Birds, and make Diſcoveries. We killed about ſixty of them, ſome we ſhot, and ſome we knocked down with Clubs; their Carcaſſes were carried aboard with us. The Maſter of our Ship, called theſe Birds *Penguins*. They are not much higher than Swans, but a great deal bigger. They are ſharp-beaked, of a brown Colour; their Feet are webbed like thoſe of a Gooſe, and at their Gullet there hangs ſomething like a Bag, about a Foot long; it begins juſt under their Beaks, and comes down to their Breaſts, widening as it lengthens; it is not unlike an Urinal, only it is bigger. In this Bag they put their Victuals, and take it out of it when they have a mind to eat. We were forced to ſkin them before we could eat them; their Skin being very tough, and we had much ado to pull them and dreſs them. The Fleſh was extraordinary good, it taſtes like that of wild Duck, only it is fatter. We eat heartily of it, and had not had ſuch a Feaſt in all our Voyage. We ſtaid at Anchor off of the Iſland, where we caught the Penguins two Days, and then a South-eaſt Wind ſpringing up, we weighed again, and held on our Courſe North-north weſt; in a few Hours we got out of the Streight, then the Wind varied, and we coaſted it along to a high Cape, where we arrived in about thirty Hours. That Cape is not far from the Place where we ſaw the *Zemblians* adoring the Sun.

His *Daniſh* Majeſty having commanded our Captains and Officers to bring off ſome *Zemblians*, if they could poſſibly, that he might learn of them what was the Growth and Riches of their Country, they dropped Anchor, and reſolved to do the utmoſt to obey the King's Command. As ſoon as we were ready, ſome of us went aſhore, in our Long-boats, to ſee what we could diſcover; there were thirty Perſons in all, of whom I made one. We had ſcarce got over the Ship's Side before we diſcovered a *Zemblian* in his Canoe, about half a League off Land; who, ſeeing us make towards him, rowed ſo nimbly, that it was impoſſible for us to get up with him; as ſoon as he ſet foot aſhore, he took up his Canoe and ran away with it on his Shoulder, ſo ſwiftly, that we perceived it would be a difficult Matter for us to overtake him. He held his Dart in his Hand all the while, and yet did not ſeem to be incumbered in his Flight. We landed, and purſued him towards a Hill which we ſaw him mount, but he was nimbler than we, and it was in vain for us to follow him, when we had once loſt Sight of him. We therefore gave over all Thoughts of taking him, and returned to our Ships, very ſorry that we had miſſed our Prize. As we were ſailing back to our Ships we ſaw two *Zemblians* in a Canoe out at Sea, they ſpying us rowed toward the Promontories and Rocks, on the Coaſts, to hide themſelves; but we took to our Oars ſo briſkly, that we came up with them as they were rowing, with all their Might towards a Rock. We ſurrounded them, being in four Boats; and when they found they could not eſcape us, they ſet up a hideous Howling, the moſt horrid Noiſe that ever I heard in my Life. We carried the Men aboard with us, towed the Canoe along, having faſtened it to one of our Boats. It was like a Gondola in Form, fifteen or ſixteen Feet in Length, and two and a half in Breadth. It was made of the Rib-bones of Fiſh, very artificially; the Sides were of Fiſh-Skins ſewed together, it all looked like a huge Purſe, from one End of the Cano to the other; the Bottom was of the ſame Materials with the Sides. The *Zemblians* are ſhut up in it as high as their Waiſts; a Drop of Water cannot get into it; and they expoſe themſelves in the fouleſt Weather, without Fear of foundering. We perceived one of the *Zemblians* we had taken was a Man, and the other a Woman. We made all the friendly Signs we could to them, and careſſed them, to find out where their Habitations were, but we could learn nothing.

Upon this thirty of us landed again, took ſeveral Days Proviſions with us, and went in two Troops, well armed, at about an hundred Yards Diſtance one from another, to try if we could meet with any more of the Inhabitants. We hid ourſelves in Caverns under the Rocks, poſting Sentinels near Trees, in open Places, proper for diſcovering, if any of the *Zemblians* came that Way; where we intended to ſeize them, and force them to ſhew us their Habitations. We were two Days before we could hear of any thing to our Purpoſe; at laſt our Sentinels gave us Notice that they ſpied two coming down a Hill, towards the Sea-ſide. Six of our Company ſtaid in the Cavern; five more, and myſelf, removed to one a little farther off; and a quarter of an Hour after, theſe two *Zemblians* paſſed by our Caverns without perceiving us; one of our Companions ſhot off a Fuzee, to give Notice to thoſe in the other Cavern, that they were hemmed in between us and them; when they came near their Cavern, they ſallied out, and we did the like from ours. The *Savages* being thus trapped, ſaw it was in vain to fly, ſo we eaſily took them. Their Garments were of Penguins-Skins, the Feathers outwards; they had each a Pair of ſtrait Breeches on, which came down no farther than their Knees; a Waiſtcoat of the ſame; the Sleeves no longer than to the Elbows. The reſt of their Arms was naked; their Waſtecoats were picked before and behind; their Caps were in the Form of a Sugar-loaf; their Stockings of the Skin of a Sea-Calf, the Hair outwards. Though their Dreſs was the ſame, yet we ſoon perceived which was the Man, and which the Woman. The Man ſeemed to be about twenty-four Years of Age, his Face like the reſt of thoſe Savages, was very broad, his Complexion ſwarthy, his Noſe flat; he had neither Beard on his Chin, or Hair on his Head. At his Back hung a Quiver full of Arrows, and on his Shoulder he carried an Axe; in his other Hand he held a Bow. The Woman was about twenty Years old, her Hair hung down on each Shoulder, twiſted in two Locks. She had blue Streaks on her Chin, and four or five on her Forehead; her Ears and Noſtrils had Holes bored in them, in which ſome blue Stones, or Rings of Fiſh-bone, were hung. Thoſe in her Ears were as big as a Filberd, and thoſe in her Noſe as a Pea. She held a Dart in her Hand.

We tried all the Ways we could think of to oblige them to ſhew us where they dwelt, but they would not give us the leaſt Token to direct us; they were as ſtubborn as thoſe we had taken in the Canoe, and we were forced to carry them on board without making any further Diſcoveries: When we brought them to their Fellow-Priſoners, we perceived they knew one another, though their Garments were quite different: Thoſe we took in the Canoe being dreſſed in Sea-Calf-Skin Cloaths; and theſe in *Penguins* Skins. The Hair of the Sea-Calf-Skin was put outwards; the Waiſtcoats of theſe *Zemblians* were made of two Skins joined together, the Tails dangling, the one before and the other behind, almoſt as low as their Knees; their Drawers were very ſtrait: The oldeſt was about fifty Years of Age; he had a round Beard of a Cheſnut Colour; he had no Hair on his Head. The Woman that was with him, ſeemed to be about thirty Years old; her Ears and Noſe were bored, as the other Woman's were, and blue Stones hung in them; her Hair was twiſted, and dangled like the Country Woman's: They were both extreme ugly, and the Man and Woman ſhorter and ſquatter, than either the *Laplanders*, *Samojeds*, *Borandians*, or *Siberians*: They had ſqueaking Voices, and ſtinking Breaths, which latter was cauſed by eating of Fleſh without Salt, or Fiſh dipped in Fiſh-Oil. They drank nothing but Water. We could never make them eat any Bread, ſalt Meat, or Fiſh, nor drink any Beer; they taſted Brandy now-and-then, but hated the Smell of Tobacco: Their Needles, the Points of their Darts and Arrows, and all their other Inſtruments were made of Fiſh-bones: The Wood-work of their Bows and Darts was very heavy, of a red-brown Colour; that of their Arrows is much lighter and whiter. When they go, they waddle along like a Duck, and are the moſt deſpicable Creatures I ever ſaw of the Race of Men.

29. The Summer Seaſon being very far advanced, for it was now the latter End of *Auguſt*, and the Days growing ſhorter, we having half an Hour's more Night than we had; the Cold alſo increaſing, and all our Companions longing to ſee their own Country again, we weighed Anchor, the Wind at North north-eaſt, and held our Courſe South-weſt. We ſailed before the Wind ſeveral Hours, and then veered to the South-ſouth-eaſt, which obliged us to make our Way northward, to endeavour to reach ſome Shore. We coaſted along with a South-ſouth-eaſt Gale till we came to *Greenland*, where the Wind ſhifted again to Weſt-ſouth-weſt, and forced us to drop Anchor near a Fleet of *French* and *Dutch* Ships that were come thither a fiſhing; the Whale-fiſhery being the Trade of that Place. The Ships did not lie far off Shore, for the Whale, as well as the Sea-horſe, is caught near Land; they are taken after the ſame Manner as we took the Sea-horſes, and when they are caught they are cut to Pieces and the Greaſe taken out of them; which is put into an huge Kettle, and melted to Oil, near ſome Huts which the Fiſhermen built for their Conveniency along the Sea Shore. It was very well for our *Zemblians*, that we came where there was ſome Whale-oil to be had: They had loſt their Stomachs, and could eat nothing for want of it; they could get nothing down unleſs it was ſoaked in that Oil; and all our Store was out.

I ſaw a Whale dreſſed that had no leſs than three hundred and fifty Pound weight of Bone in her fit for Bodice-makers, beſides the Oil that came out of her Greaſe. We ſtaid but two Days in *Greenland*. The Wind ſpringing up North-eaſterly we weighed Anchor, and proceeded on our Voyage homewards. We had a fair Gale all that Day and the following Night till five o'Clock the next Morning, when we ſaw three Suns in the Heavens one above the other; theſe Meteors were ſo like the Sun in Brightneſs that we could not diſtinguiſh the one from the other; we alſo perceived foul Weather gathering from the ſouthward, and ſoon after we were overtaken by a violent Storm, which obliged us to furl moſt of our Sails, and fire a Gun, for a Signal to our Company of the Danger we were in, thereby warning them to do as we had done. We gave ourſelves over for loſt, and intirely ſubmitted to the Will of Heaven; three Hours after it blew terribly South-ſouth-eaſt; it thundered with louder Claps than ever I heard it before.

The Sea was ſo rough, and our Ship ſo toſſed that we could only carry our Mizen-ſail; the Yard lowered almoſt to the Ship's Deck; two Sailors were forced to tug at the Oar with Ropes, we having much to do to manage the Ship. We ſailed thus all that Day, and the next Night the Wind continuing as ſtiff as at firſt, our Captain commanded one of the Men to get upon the Main-top, to ſee if he could ſpy Land, and diſcover whereabouts we were: The Sailor looking round him, cried out he ſaw a great Fire; our Maſter ſaid it was *Mount Hæcla* in *Iceland*, a Mountain that burns like *Ætna* and *Veſuvius*. The Weather being ſtill foul, we reſolved to make Land as faſt as we could, though we had nothing to do there; we were afraid to keep out to Sea, our Ships having ſuffered much by the Storm. We arrived near the Shore about Night, and as we lay by, heard dreadful Noiſes at Land; they were like the Fire of ſeveral Cannons, after which we ſaw Flames iſſue out of *Mount Hæcla* in abundance. We found ſo many Rocks on the Coaſt of this Iſle, and the Sea was ſo rough, that we did not care to venture nearer the Land than a League; but our Pilot aſſuring us he underſtood the Coaſts well, we made into *Cape Heri*, where by the Skill and Care of the Pilot we anchored in Safety. One of our Company broke her Beakhead againſt a Rock, and had like to have ſplit; the other received no more Damage than we did. We immediately went aſhore; our Maſters, Supercargo, myſelf, and fifteen of our Crew, the Maſter and Merchants of the other Ships accompanying us.

We landed at a Village called *Heri*, and hence we went to *Kirkebar*, a little City or large Town of *Iceland*, where we met eight or nine *Daniſh* Merchants, who were ſurprized to ſee us there. They entertained us very cordially, and told us, that the Day before the whole Iſland ſhook ſo violently that they thought they ſhould be all ſwallowed up. They gave us good Wine, good Bread, and good freſh Meat. There is Plenty of all Sorts of Cattle in this Iſland, which abounds in rich Paſtures; and the Beaſts that feed on them delight ſo much in *Caitophe* Herb, that the Inhabitants are forced to ſtint them to ſuch a Meaſure, or they would eat till they burſt; which they would certainly do if they were ſuffered to eat their Fill, as in other Countries.

30. Our Captain, Supercargo, and the others of our Company, gave the chief Merchant at *Kirkebar* an Intimation, that they would fain ſee what was to be ſeen in the Iſland that was rare. The Merchant preſently ordered Horſes to be got ready for all of us that were willing to go far into the Country: I ſaid I would make one, and we mounted eight in all; the reſt, not having ſo much Curioſity as we, choſe rather to ſtay and drink at this Merchant's. The Merchant ſent one of his Servants and two Iſlanders along with us to be our Guides, and furniſhed us with a Horſe-load of Proviſions. We travelled two Days together in Bye-ways very difficult to paſs, rugged, and unfrequented: At laſt we came near *Mount Hæcla*; five Miles off it we found the Ground ſtrewed with Aſhes and Pummic-ſtones; over which we paſſed, by the Foot of the Mountain. The Weather was very ſerene and calm, and we ſaw neither Fire nor Flames come out of the Mountain: Upon this we reſolved to go up to the Top; but our Guides informed us that, if we went farther, we ſhould be apt to fall into Pits of fiery Fumes, and it was impoſſible to pull us out. Thus all our Company except myſelf declared againſt proceeding. I told them if they would ſtay for me, I would go up myſelf: They promiſed they would; ſo I alighted, and prepared to aſcend the Mountain. One of the *Daniſh* Merchants whom we met at *Kirkebar*, and who accompanied us out of Curioſity, ſaid he would go along with me.

We gave our Horſes to our Guides, who ſtaid behind with the others who came out with us: We footed it over Aſhes and Pummice-ſtones, and ſometimes we were up to the Calves of our Legs in Aſhes, and yet we ſtill went forward, as we reſolved to reach the Top of *Hæcla*. We had not gone far before we eſpied a Flight of Crows and Vultures, that had their Neſts in the Top of the Mountain: We aſcended half a League, and then felt the

Ground ſhake under us; we alſo heard ſuch a terrible Noiſe in the Bowels of the Earth, that it ſeemed as if it would burſt open: At the ſame time there appeared, on all Sides, Chinks; out of which there iſſued bluiſh Flames, which ſmelt like the Stench of burning Brimſtone. This Sight made us turn back, for fear of being conſumed to Aſhes by them. We had ſcarce got down thirty Yards, before a black, ſmoky Cloud aſcended out of the Mountain, ſo that it darkened the Light of the Sun, and covered us ſo that we could not ſee one another; our Fears grew upon us every Step we took; for behind us came Flames of Fire, Showers of Aſhes, and Pummice-ſtones, which fell as think as Hail; and this dreadful Storm was attended with horrible Noiſes, which made us cry out in a frightful Manner, fancying that the infernal Furies were coming out of the Mountain to devour us; beſides, we expected every Moment that the Earth ſhould open, and ſwallow us up, which added Wings to our Flight, and we ran as faſt as we could, to eſcape the Danger, to which our idle and ridiculous Curioſity had expoſed us.

Fear made us ſo nimble, that in a Quarter of an Hour we deſcended ſo much of the Mountain as we were a full Hour in aſcending. When our Companies perceived us come down ſo faſt upon them, they burſt out a laughing at us, and their Laughter grew louder when they ſaw us in ſuch a Pickle, as black as if we had been plunged in Soot; but their Mirth abated as ſoon as we came nearer them and dropped down dead, for ſo they thought us, we being neither able to ſtir nor ſpeak. They rubbed our Temples, Noſtrils, and Hands with Vinegar, and did what they could to bring us to our Senſes again: It was not long before we came to ourſelves; they gave us a good Cup of Canary; and when we recovered Strength, we told them what had happened to us; and they rejoiced that we came off ſo well. We all left the Foot of the Mountain, to go to ſee two Fountains ten or twelve Miles off; the one is always boiling, and the other always ſo cold that it turned every Thing that was put into it to Iron. About a hundred Yards off the Foot of the Moutain we found a Pummice-Stone as big as a Wine-Hogſhead, which had lately been caſt out of *Hæcla.* Our Guides ſeeing that we were aſtoniſhed at the Bigneſs of the Stone, ſaid, they had ſeen ſeveral much bigger than that, which ten Men could not ſtir; and that inſtead of Flames, Aſhes, and Pummice-Stones, there ſometimes iſſued out Floods of Water, as out of Spouts; ſometimes nothing but Flames, ſometimes nothing but Aſhes, and ſometimes nothing but Stones. After three Hours riding we drew near to the Fountains; they are about thirty Yards Diſtance from each other: We came to the cold one firſt, and put in a little Cane I had in my Hand, when I took it out again I was ſurprized to ſee the End of it which had touched the Bottom, metamorphoſed into Iron, and weighing as heavy as that Metal.

From thence we went to the boiling Fountain. At ten Yards Diſtance from it we ſaw a Parcel of Animals as big as Ducks, moſt of them red, which were friſking about and playing together. We ſtood looking on them awhile, pleaſed with the Novelty of the Sight; when we came nearer to the Place we ſaw nothing, and when we were gone they appeared playing and friſking, as before. They do ſo when they ſee no body, but if any body appears they plunge down to the Bottom of the Fountain, which, as our Guides informed us, is ſixty Fathoms deep. From the boiling Fountain we travelled towards the Seaſide, and arriving within half a League of it, we heard Noiſes like the Voices of Perſons complaining. Our ignorant Guides, Natives of the Country, would fain have perſuaded us that theſe Noiſes were the Lamentations of the Damned whom the Devil tormented, and that when he had roaſted them in the Flames of *Hæcla*, he cooled them in the Ice of the Coaſts. Though we did not give much Credit to this *Iceland* Tradition, we reſolved to ſee thoſe Seas of Ice which bound that Part of the Iſland and no other. When we arrived at the Coaſt I found that thoſe imaginary Complaints were occaſioned only by the Agitation of the Wind and Water, the Ice beating againſt it, and the Ice againſt the Rocks. This Ice, ſay our Guides, comes on their Coaſts in *June*, and goes away the fifteenth of *September*.

It was the thirteenth when we were there; and having ſeen all that was worth ſeeing, we returned to *Kirkebar*, where we arrived three Days after; we ſtaid a few Hours in Town, and then went aboard; where we found the Governor of the Iſle accompanied by the Biſhop of *Scelitbolt*, who came to ſee our Ships, and diſcourſe with us, underſtanding we had been at *Zembla*. The Iſlanders for the moſt part dwell in Caverns cut out of Rocks, the reſt live in Huts built after the Manner of thoſe in *Lapland*, ſome with Fiſh-bones, and others with Wood covered with Turf: They and their Cattle lie under the ſame Roof: They are all ugly, both Men and Women; they are ſwarthy, and dreſſed like the *Norwegians*; their Shifts and Smocks are made of Packing-Cloth, or Sarplier; and ſome few wear Coats made of Sea-Calf-Skins, with the Hair outward. They live very plainly, as do all the Nations of the North; they lie on Hay or Straw in their Cloaths with Skins upon them, and make but one Bed for the whole Family. All their Work is fiſhing; they are naſty and brutal; they are almoſt all of them Wizards or Witches. They worſhip the Devil by the Name of *Kobald:* It is ſaid he often appears to them under a human Figure. They have alſo a Sort of Houſhold God or Idol cut out of a Piece of Wood with a Knife, very hideous to look on, which they adore privately, and hide for fear the *Lutheràn* Prieſts, who teach them as they can, the Chriſtian Faith, and endeavour to deliver them from the Bondage of Satan: But theſe *Barbarians* were fonder of their diabolical Idol, and more conſtant to him than ſome Chriſtians to the Profeſſion of their moſt holy Religion. Though the Fields in *Iceland* look fair, and there is Plenty of Paſture, no Wheat grows there, nor any other Grain fit to make Bread with; the Cold is ſo extreme it kills the Seed, or green Corn, by a North-eaſt Wind; which is very violent in thoſe Parts.

31. Three Days after our Return from our Journey to *Mount Hæcla*, and that we were a Ship-board, we took the Opportunity of a North Wind which ſtood fair for us, weighed Anchor and ſet ſail, holding our Courſe South-ſouth-eaſt. We ſailed before the Wind ſeveral Days, and then it blowing a very ſtiff Gale, it drove us on the Coaſt of *Norway*, where we made the Promontory of *Talſo*, a little City built on an Eminence four Leagues from the Sea, there is a fine Caſtle in it; and we rejoiced that we were ſo near Land, hoping that we ſhould ſoon ſee an End of our Voyage. We coaſted along Shore about twelve Hours, and then the Wind changed with the Moon, which obliged us to keep out to Sea, for fear of being driven back; notwithſtanding our Caution, it blew ſo hard that we were forced to drive before the Wind forty Leagues backward.

Then the Weather grew a little more calm; ſoon after that, we had not Wind enough in our Sails to ſtir us. Nothing is ſo tedious to a Sailor as a Calm, eſpecially upon a long Voyage, when he has been out a conſiderable Time, and is impatient to reach home; a Storm would be be more welcome to him: He cannot tell how to employ his Time, all his Thoughts run upon his Country, made dearer to him by many Months Abſence; and his Impatience to ſee it, torments him more under the Delay of a Calm, than the Fear of Shipwreck in a Tempeſt. In about two Hours we had a Water-Cloud to the South-weſt; our Mariners were preſently ſtruck with a dreadful Conſternation, apprehending it would fall upon us. We were obliged to furl all our Sails, and lower our Yards down a Port, fearing it would pour upon us; but it did not come nearer than two Leagues; we ſaw it fall at about that Diſtance. Theſe Clouds are in Form like a black Column or Pillar, which appears in the Heavens over the Sea; and if by Chance they fall on Ships, they ſink them to the Bottom, with the Flood of Water, which pours down from them like Cataracts, eſpecially if it chance to fall perpendicularly. The Wind ſpringing North-north-eaſt, we proceeded on our Voyage, ſo happily, that in ten Days Time we arrived at *Copenhagen*; where having ſaluted the Caſtle, we dropped Anchor, put out our Boat, and went to Shore.

When we entered the City, his Majeſty being informed that we had brought ſome *Zemblians* with us, he commanded us to bring them to Court; which we did, every body gazing at them as if they had been born in another World. The King himſelf admired the Oddneſs of their Dreſs, and the Strangeneſs of their Figures. He ordered the Steward of his Houſhold to give Directions that they might be carefully kept and provided for, and be taught the *Daniſh* Language, hoping he might then get ſomething out of them, relating to their Country, that would be beneficial to his own. He commanded us to give him an Account of the ſeveral Places we had been at; of the Manners of the People, and their Way of living. We gave his Majeſty full Satisfaction in all his Demands, and went then to wait upon our Owners, to inform them what Markets we had met with, and what Returns we had brought them home; which proved mightily to their Advantage and Content. Our Ships were ordered up to *Chriſtian Haven*, to be unladen, which was done in two Days time. One of the chief Merchants of the Company trading to the North, preſented the King in the Name of the reſt, with the two Sea-Horns, which we brought home with us. He received them as Rarities, that were of ineſtimable Price, believing they were really Unicorns Horns, of which abundance of Authors have written, and pretended there is a great Virtue in them. The King commanded they ſhould be depoſited in the Treaſury Chamber, and promiſed to grant the Company, in return, as many Privileges as it was in the Power of his Prerogative to beſtow on them. The Merchant who preſented the Horns, was rewarded with a Chain of Gold, with his Majeſty's Picture hanging to it; and had a Licence to trade, Cuſtom-free, for a certain Term of Years.

32. As I have mentioned the Unicorn, whoſe Horn is ſo much ſpoken of, and valued for the Virtues that are attributed to it, I ſhall take this Occaſion to ſpeak my Thoughts of this Matter, after I have given the Reader an Account of the Sentiments of others. It is very difficult to decide what Creature it is which is properly the Unicorn. There are ſeveral Animals called by the *Greeks*, *Monoceros*, and by the *Latins*, *Unicornu*. Among the four-footed Beaſts, ſeveral wild Aſſes, and wild Bulls, particularly the Bull of *Florida*. Among Serpents, it is the horned Aſp, and the red Salamander. Among Fiſh, the Sea-horſe, and many more, whoſe Names are unknown to *Europeans*. There are ſome Fowl, and even ſome Inſects, that have been thought to be Unicorns; ſuch as the *Flemiſh* and *Engliſh* Beetle, both which are frequently mentioned by Naturaliſts; and beſides theſe, other Animals of different kinds in the *Indies* have been, by ſome, fancied to be the Creature, called by the *Latins*, *Unicornu*. Some Authors will have it to be a Land-Beaſt; others a Water-Animal; and ſome again an amphibious Creature, that lives either on Land or in Water.

Pliny ſays, the Unicorn is like a Bull, ſpeckled with white Spots; her Hoof hard, and cloſed like a Horſe's. *Munſter* writes, that it reſembles a Colt of three Years old, of the Colour of a Weazel; her Head like a Stag's; her Legs and Feet little, and her Horn growing out in the Middle of her Forehead, about two Cubits long. *Marco Paulo*, the *Venetian*, ſays, ſhe reſembles an Elephant, only ſhe is ſomething leſs; that her Colour is the ſame, and alſo her Shape or Form, excepting her Tail, which is like a Bull's; and her Head like a Hog's, but ſo heavy, that ſhe cannot hold it up; this evidently is the Rhinoceros. *Philoſtorgius* writes, that her Head is like a Dragon's; that in the Midſt of her Forehead, her Horn grows out of an indifferent Size, reſembling that of a Snail; that ſhe has a Beard like a Goat; a long Neck; her Feet like thoſe of a Lion, and the reſt of her Body much like that of a Stag, excepting her Skin, which is like a Snake's. *Heliodorus* adds, that ſhe is ſo nimble a Beaſt, the Hunters can never come at her. *Louis Paridis* will have it, that ſometimes ſhe is taken, and that her Food, afterwards, is Peaſe, Lentils, and Beans; that ſhe is not much bigger than a large Greyhound, but is not of ſo ſlender a Make; her Skin, in Colour, like a Caſtor's, only ſleek; her Neck ſmall, but long; and her Feet cloven, like a Stag's; her Tail ſhort; her Muzzle like a Cow's; her Eyes great; her Ears little; and between them grows her Horn, about a Foot long.

Thevet affirms, that the Unicorn is as big as a Bull-Calf ſix Months old, that her Legs and Feet reſemble thoſe of an Aſs; her Ears like a Rain-Deer's, and that her Horn grows up ſtrait on the Top of her Head. *Louis de Bartheme* imagines the Unicorn is like a Bay-Horſe, cloven footed; and that her Horn grows in the Middle of her Forehead. Some ſay, that the Rhinoceros is the Unicorn; *Kircher*, that it is the Sea-Horſe, which he alſo calls Lamia; wherein he is very much miſtaken; for the Lamia is another Sort of Fiſh, called by the *Engliſh* Rahen, of which the Inhabitants of *Martinico*, *Guardaloupe*, *St. Chriſtophers*, and the other *American* Iſlands, ſtand in great fear; for they are in danger of being devoured by them, as often as they bathe in the Sea.

Authors differ widely about the Size and Shape of this Horn. *Albertus* ſays, that at the Bottom, or Root, it is as broad as one's Hand; that from thence it riſes taper to a Point, and that it is ten Feet long. *Munſter* will have it only three Cubits in length, which is only four Feet and a half. *Marco Paulo* ſhortens it to leſs than two Feet. *Paradis* reduces it to a Foot and a half. *Nicolaus Venetus* brings it down to a Foot: And the famous *Jerom Cardan* will have it the length but of three Inches. We find as great or greater Differences as to Colour. *Pliny* is very clear that the Unicorn's Horn is black. *Solinus* ſays it is of a purple Colour. *Paradis* ſays it is red, or of a reddiſh yellow. *Albertus Magnus* thinks it may be like a Stag's Horn: But other Writers are very poſitive that it is much whiter than any Ivory. We are likewiſe aſſured, by ſome, that it is quite ſtrait and ſmooth; others perſuade us, that it is finely wreathed, and ſhines as if it was poliſhed; neither are there Authorities wanting to prove, that ſome are very finely ſpotted with brown and black, but they do not tell us where. When I reflect on the ſeveral Opinions of thoſe who have written of the Unicorn, and how they differ from one another, I ſometimes believe that each of them ſpoke after his own Invention, to raiſe the Admiration of the Reader.

As for the imaginary Virtues of the Unicorn's Horn, they are conſequently fictitious; but ſuppoſing that what has been pretended to be the true Horn was really ſuch, I will venture to affirm, there is no more Virtue in it than in that of a Stag, a Goat, or Elephant's Tooth, which is made uſe of to ſtop the ſpitting of Blood and Bloody-flux, which is done by the aſtringent Quality of theſe Horns, and that cannot ſo properly be called a Virtue as a Malignity. The Unicorn's Horn, or what has been ſaid to be ſo, has neither Smell nor Taſte, and of courſe can have nothing in it of ſuch cordial Virtue as is pretended.

Since my Voyage to the North I have looked over ſeveral Charts drawn by the moſt celebrated Geographers, and I wonder to ſee they placed *Zembla* no farther to the Eaſt-north-eaſt of *Lapland*. It is more to the Northward than they make it. They are alſo in the wrong to divide it from the Continent, and to place it twelve hundred Leagues from *Greenland*, as many of them do; for indeed it is contiguous with it. The Coaſts of *Greenland* join to thoſe of *Zembla*; and were it not for the prodigious Snows that fall there, and the Rigour of the Seaſon, which render the Place uninhabitable, one might eaſily go from *Greenland* to *Zembla* by Land, and from *Zembla* paſſing the *Pater Noſters*, a Ridge of vaſt Mountains, enter *Samojeda*, and thence either into the *Great Tartary* or *Muſcovy*.

I admired alſo, that they did not make the Streights, called *Weygatz*, above ten *French* Leagues long; whereas they are five and thirty *German* Leagues in length. They ſhew by their Charts that Ships may by that Streight enter the great Sea of *Tartary*; which, whatever they pretend to, is not to be done. Some have ſaid, that in the Days of Prince *Maurice* a Ship paſſed the Streights of *Weygatz*, and ſailed into the *Tartarian* Sea, which is a plain Falſity, as I ſhall make appear. This Streight, as I have ſaid, is bounded by the *Pater Noſter* Mountains, the leaſt of which is half a League high; and it is agreed, on all Hands, that they are of Ice which never melts. I am of the ſame Opinion, having been in the Streights near thoſe Mountains in the Dog-Days, the hotteſt Seaſon of the whole Year, and was as cold then as ever I was in *France* in the coldeſt Winter; which Seaſon laſts there all the Year.

33. The many cruious Particulars contained in theſe Voyages and Travels may very well atone for ſome Deficiencies and Miſtakes in them. It appears from hence, that there are no Countries in the World through which Men travel with more Expedition than in thoſe frozen Climates, where one would imagine that Men could ſcarce travel at all; and this induces one to wonder, that they have not been more thoroughly and effectually examined, eſpecially conſidering with how great Eaſe this might be done, if the Court of *Ruſſia* intereſted itſelf in the Matter. Our Author appears to be a Man of great Sincerity, and relates every thing he ſaw diſtinctly; and at the ſame time tells us his Sentiments of the Matter. The Account he has given us of *Ruſſia* is prior in Point of Time to the Reign of *Peter the Great*; who, in ſome meaſure, changed the Nature of his Subjects: But, however, as this has been done very ſlowly, there is good reaſon to believe, that with reſpect to the Bulk of the People in the diſtant Provinces of the *Ruſſian* Empire, they are not much altered from what they were. It is not eaſy to gueſs what part of *Circaſſia* he means, when he ſpeaks of the Inhabitants of it in the manner he does; and for my own Part, I am apt to think he calls the People of the *Ukrain*, *Circaſſians*; and my Reaſon for thinking ſo is, that both in their Language and in that of the *Poles*, the Word *Coſſack* ſignifies a regular Soldier, a Man trained to War, and in conſtant Pay. It is very true, that we now conſider the *Coſſacks* as a Nation, and not as a Militia; and this with Propriety enough, becauſe the *Poles* having given that Country to their Soldiers, they ſtill retain the Name of *Coſſacks*. Though they are no longer regular Troops.

By the way, it may not be amiſs to obſerve, that it was breaking through their military Tenures, and endeavouring to make theſe People pay a rack Rent for their Lands, that induced them to rebel againſt the *Poles*, and to put themſelves under the Protection of the Czar. His Account of *Siberia* is very entertaining and curious, and the *Tinquiſes* he ſpeaks of are the Inhabitants of the very Extremity of *Aſia*, towards the Sea of *Japon*, a very brave, though a very barbarous Nation, with whom the *Muſcovites* have been long at War, but whom hitherto they could never ſubdue. The manner in which the Exiles live in that dreadful Country, is alſo very well and very truly deſcribed. The Mines that have been ſince diſcovered there, have indeed furniſhed another and more laborious kind of Employment. But the ſhooting wild beaſts ahd collecting their Furs, ſtill continues to be the principal Buſineſs of the unhappy Perſons who are baniſhed thither; and theſe are not only Men of as great Rank as any this Gentleman mentions, but ſome alſo of much ſuperior Quality; ſuch as Prince *Menzicoff*, the Duke of *Courland*, the High Chancellor *Oſterman*, whom we remember ſent into thoſe Deſarts as Victims of State rather than Criminals.

The Account he gives us of *Nova Zembla* is very curious and circumſtantial; and what he ſays about the Errors in the Maps publiſhed before his time may be very juſt, but we have had better ſince that. I cannot, by any Means agree, that this Country is contiguous with that of *Spitzbergen* or *Greenland*, though it may be true, that it extends itſelf farther to the North than is generally imagined: Neither do I think that the Seas beyond this Country, are always choaked up with Ice; but if a Paſſage is to be ſought this Way, my Opinion is, that inſtead of ſearching the Coaſts of *Zembla*, the ſhorter and better Method would be to make the South Point of *Greenland*, and then to ſteer North-eaſt, into as high a Latitude as ſhould be judged convenient; Experience having ſhewn that the Weather is not more rigorous, or the Ice more troubleſome, the farther People ſail towards the *Pole*.

What he ſays concerning Unicorns and their Horns, ſeems rather calculated to diſplay his Learning than for any other Purpoſe; ſince it is now univerſally agreed, that the Horns which are ſhewn in *Europe* under this Title are the very Horns he ſpeaks of, and are taken from the Heads of Fiſh called Sea Unicorns; but which, in reality, are a kind of Sword-Fiſh. The Shape of their Body is like a Seal, but the under Fins and the Tail reſemble thoſe of a Whale. They ſwim in Shoals, and generally carry their Horns out of Water, but then they ſwim ſo ſwiftly, that they are very ſeldom taken; there is another kind of Sword-Fiſh, which may be alſo ſtiled a Unicorn, but is generally called a Saw-Fiſh, becauſe the Bone is filled with Teeth or Pegs from the Root to the Top. It was formerly thought that theſe Horns had great Virtue; but Experience has ſhewn that they are of no farther Uſe in Phyſic than as Abſorbents; and in this reſpect Oyſter-ſhells or Crabs-eyes do as well. There is one Obſervation more that may be made on this Section worth Notice, and that is, the Poſſibility of making ſuch Voyages for Diſcovery, they bearing their own Expences, as this plainly did; and a great deal of public Spirit there would be in ſending a Ship or two now and then to trade in this Way, which ſooner or later, would produce us more Advantages than we are able to foreſee: Of this, at leaſt, we are certain, that by Voyages of this kind we eſtabliſhed a Trade to *Archangel*, which was the Foundation of our *Ruſſia* Company; but it is now time to proceed to Countries better known, and into Climates more agreeable than thoſe of which hitherto we have been ſpeaking.

SECTION II.

A ſuccinct and impartial Account of the Kingdom of SWEDEN, *with reſpect to its Climate, Soil, and Produce; as alſo of the Temper, Genius, Cuſtoms, Policy, Form of Government, Force, and Trade of its Inhabitants.*

Collected from the Writings of an *Engliſh* Miniſter reſiding there.

1. *A ſhort but neceſſary Introduction to the ſubſequent Section.* 2. *A clear and comprehenſive View of the Kingdom of* Sweden *and Duchy of* Finland; *the Soil, Climate, Woods, Lakes, Rivers, Produce, Birds, Beaſts and Fiſh found therein.* 3. *An Account of the Mines in* Sweden, *their Value, Methods of working them; as alſo of the Weather and Seaſons of the Year in* Sweden. 4. *A more particular Account of the ſeveral Provinces and Cities of this Kingdom, eſpecially that of* Stockholm. 5. *A diſtinct and copious Detail of the Courts of Juſtice, Laws, and Domeſtic Government, as adminiſtered in the Time of* Charles XI. 6. *The Temper, Genius, Manners, Cuſtoms, and Way of living of the People in that Country.* 7. *A ſuccinct View of the Eccleſiaſtical State of* Sweden; *the Archbiſhoprics, Biſhoprics, Deaneries, Parochial Benefices, Number and Maintenance of the Clergy.* 8. *The Conſtitution, Government, and Revenues of the Kingdom.* 9. *A curious and circumſtantial Relation of the Military Eſtabliſhment and Force of the Kingdom of* Sweden, *the only Country in which a large ſtanding Army is kept up, without any Danger to the Liberties of the People.* 10. *Of their Trade more particularly with* England, *its Advantages and Diſadvantages, and ſome particular Grievances to which Merchants are ſubject in that Country.* 11. *A few additional Obſervations and Remarks upon the foregoing Section, and on the Alterations which have ſince happened in the Government of that Country, and the Condition of its Inhabitants.*

1. THE ſhort Stay that Travellers make in Countries through which they paſs, very ſeldom affords them an Opportunity of looking into the Temper, Genius and Cuſtoms, much leſs into the Religion, Laws, and Government of the People with whom they converſe; which is the Reaſon that in moſt Books of Travels there are a kind of Blanks left for theſe important Paſſages; or if they are filled up, it is done at random, according to the good or bad Impreſſions of the Author, received from the particular Uſage he met with, or from hearſay: So that if either our Traveller has a bad Taſte, or has the ill Luck to keep indifferent Company, we, who are his Readers, are ſure to feel the Effects of it, and to have all Things impoſed upon us, under the fair and ſpecious Pretence of a clear and candid Relation of the naked Truth.

But to prevent the bad Effects of this, and to provide againſt both Evils; that is to ſay, the want of thoſe Informations, which a judicious Peruſer would be moſt deſirous of finding; and to ſecure him from meeting with haſty or falſe Repreſentations in their Stead, we have thought it our Duty in reſpect of the northern Kingdoms; the Conſtitutions of which are beſt worth our Knowledge, and yet are very ſuperficially treated in moſt Books of Travels, to have recourſe to Authors of known Veracity and Experience, who have had Leiſure and Opportunity to conſider the Subjects of which they wrote, and a ſincere Intention to treat them as they ought to be treated. By this means the Defects will be ſupplied which occur in the ſubſequent Travels; and the Reader will be enabled to judge, with critical Exactneſs, of the Truth or Falſity of the Remarks and Obſervations thoſe Writers make; a farther Advantage, becauſe theſe Countries lie at too great a Diſtance to be frequently viſited, and yet near enough for us to be conſiderably affected by whatever Revolutions happen in them, with reſpect either to their Syſtems of Politics or Government. We will begin with *Sweden*, a Country always famous for the Bravery of its Inhabitants, and perhaps by a natural Conſequence, no leſs famous for its Conqueſts Abroad and Changes at Home, than which no Nation of its natural Force has either atchieved or ſuffered greater.

The following Remarks were made by a Miniſter of our own, who reſided there on the Part of King *William* in the Reign of *Charles* XI. a Man in all Reſpects qualified for his Miniſtry in that Country, as having a ſolid Underſtanding, great Uprightneſs of Heart, and a hearty Deſire to ſerve both Nations. In order to this, he thought no Method ſo proper, as that of enquiring ſtrictly, and forming an impartial Notion of the Manners, Laws, and Policy of the People amongſt whom he reſided. It was with this View that he undertook the compoſing that Work, the moſt curious and uſeful Parts of which we have digeſted into this Section; and as the Nation, to whom it relates, are very ſteady in their Tempers, and are not much affected in their Cuſtoms by their Commerce with other Nations; it is like to preſerve its Character for Truth, as long as they preſerve theirs as a People. Thus much by way of Introduction; let us now proceed to this worthy Perſon's Account, for the moſt part in his own Words.

2. The Kingdom of *Sweden* and Dukedom of *Finland* have the *Baltic Sea* on the South, the unpaſſable Mountains of *Norway* on the Weſt, *Lapland* on the North, and *Muſcovy* on the Eaſt; being extended from 56 to 69 Degrees of northern Latitude, and from 32 to 55 Degrees in Longitude, and conſequently are more than twice as big as the Kingdom of *France*; but the Abatements that muſt be made for ſeveral Seas and many great Lakes, ſome whereof are above eighty *Engliſh* Miles long and twenty broad; as alſo for Rocks, Woods, Heaths, and Moraſſes that cover much of theſe Countries, will reduce the habitable Part to a very ſmall Portion comparatively to the Extent of the whole. The Soil, in Places capable of cultivating, is tolerably fruitful; though ſeldom above half a Foot deep, and therefore more eaſily ploughed, as it frequently is by one Maid and an Ox, and is generally beſt where there is leaſt of it, that is, in the little Spaces betwixt the Rocks; and frequently the barren Lands are enriched with Aſhes of Trees growing on the Places, which are burnt, and the Seeds baked amongſt the Aſhes produce a plentiful Crop without further Cultivation.

This Practice is ſo antient, that their Writers derive the Name of *Sweden* from a Word in their Language that expreſſes it; but the Danger of deſtroying the Woods has of late occaſioned ſome Laws to limit that Cuſtom. If the Inhabitants were induſtrious above what Neceſſity forces them to, they might at leaſt have Corn ſufficient of their own; but as Things are managed, they cannot ſubſiſt without great Importations of all ſorts of Grain from the Country of *Leifland*, and other Parts of *Germany* adjacent to the *Baltic Sea*. And notwithſtanding theſe Supplies, the pooreſt Sort, in many Places remote from Traffic, are forced to grind the Bark of Trees to mix with their Corn, and make Bread, of which they have not always Plenty. The Cattle, as in all other northern Countries, are generally of a very ſmall Size; neither can the Breed be bettered by bringing in larger from Abroad, which ſoon degenerate; becauſe in Summer the Graſs is leſs nouriſhing than in the Places from whence they come, and in Winter they are half ſtarved for want of Fodder of all Kinds, which often falls ſo very ſhort that they are forced to unthatch their Houſes, to keep a Part of their Cattle alive. Their Sheep bear a very coarſe Wool, only fit to make cloathing for the Peaſants. The Horſes, eſpecially the fineſt, though ſmall, are hardy, vigorous, ſtrong, ſure-footed, and nimble Trotters; which is of great Uſe to them, becauſe of the Length of their Winters, and their Fitneſs for Sleds, which is the only Carriage in that Seaſon; and the Soldiers pretend, that in War they are not only able to reſiſt, but to break a Body of the beſt *German* Horſe. Of wild Beaſts, which are very plentiful in thoſe Parts, Elks, Deer, and Hares, are hunted for their Fleſh; as alſo together with Wolves, Foxes, wild Cats, *&c.* for their Furs and Hides.

They hunt with leſs Ceremony than elſewhere is uſed, taking all Advantages to ſhoot their Game, at which they are generally dextrous: Parks there are but few, and meanly ſtocked, the Charge of feeding Deer all Winter exceeding the Profit, and abating the Pleaſure of them. There are no Rabbets in theſe Countries but what are brought in for Curioſity, and kept tame. In Winter Foxes and Squirrels ſomewhat change Colour, and become greyiſh; but Hares turn white as Snow. Fowl, both wild and tame, are very plentiful, and good in their Kind, except Sea Fowl, which feed and taſte of Fiſh; the moſt common are the Orras and Keders, the former of the Bigneſs of a Hen, the other of a Turkey: As alſo Partridges, and a Bird ſomewhat reſembling them, called *Yerpers.* There are taken in Winter great Numbers of ſmall Birds, as Thruſhes, Blackbirds and Sydenſewans, the laſt of the Bigneſs of Fieldfares, but better Meat; ſuppoſed to come from *Lapland* or yet farther North, and have their Name from the Beautifulneſs of their Feathers, ſome of which are tipped at the Point with Scarlet: Pigeons there are, thoſe of the Woods very ſcarce, becauſe of the Hawks; and of the Houſe Pigeons none but what are kept tame, becauſe their Food is ſcarce, and the Danger of the Hawks very great if they go abroad. Eagles, Hawks, and other rapacious Fowl, abound moſt in the northern and deſart Parts, whither Nature ſeems to call them, as may be gathered from a Story credibly related of a large Hawk ſhot ſome Years ago in the northern Parts of *Finland*, which had on one Leg a ſmall Piece of Gold with this Inſcription, *Je ſuis au Roy*, on the other, one of Silver, with theſe Words, *Duc de Chevereuſe me garde.*

The chiefeſt Lakes in *Sweden* are, the *Vetter*, the *Wenner*, and *Waſter*; the firſt in *Oſtrogothia*, remarkable for its foretelling of Storms by a continual thundering Noiſe the Day before in that Quarter whence they ariſe; as alſo for ſudden breaking of the Ice on it, which ſometimes ſurpriſes Travellers, and in half an Hour becomes navigable; for its great Depth, in ſome Places above three Hundred Fathom, though no Part of the *Baltic Sea* exceeds fifty; it ſupplies the *Motala*, which runs through *Norcopingh*, where it has a Fall of about 30 Feet; and ſome Winters is ſo choaked up with Ice, that for many Hours no Water paſſes. The ſecond is in *Weſtrogothia*, from which iſſues the River *Elve*, that falling down a Rock near ſixty Feet, paſſes by *Gottenburgh.* The third empties itſelf near *Stockholm*, furniſhing one Side of the Town with freſh Water, as the Sea does the other with Salt. There are abundance of other Lakes, whereof many, like Ponds, have no Vents, and are called *In Seas*; are not ill ſtored with Variety of Fiſh; Salmon, Pike, Tench, Perch, Eels, and many other Sorts unknown elſewhere, of which the moſt plentiful is the Streamling, a Fiſh leſs than a Pilcher, taken in great Quantities, and ſalted in Barrels, and diſtributed over all the Country.

Beſides, the North Bottom or Bay that ſeparates *Sweden* and *Finland*, abounds with Seals, of which a conſiderable Quantity of Train Oil is made and exported; and in the Lakes in *Finland* are vaſt Quantities of Pikes, which being taken are ſalted, dried, and ſold at very cheap Rates. Theſe Lakes are of great Uſe for the Conveyance of Carriages, both in Summer by Boats, and by Sleds in Winter; and among them, and on the Sea-Coaſts, are almoſt innumerable Iſlands of different Sizes; whereof there are, in *Sweden*, above ſix thouſand that are inhabited; the reſt are either bare Rocks, or covered with Wood; *Gotland*, *Oland*, and *Aland*, are Iſles of large Extent, one being ſixty Miles long, and the other two little leſs: Their Woods and vaſt Foreſts, overſpread much of the Country, and are for the moſt part of Pines, Fir, Beech, Birch, Alder, Juniper, and ſome Oak, eſpecially in the Province of *Bleaking*, the Trees growing in moſt Places ſo cloſe together, and lying to rot where they fall, that the Woods are ſcarce paſſable: Theſe afford a plentiful and cheap Firing, and being generally very ſtrait and tall are eaſily convertible into Timber fit for all Uſes. In the Parts near the Mines, the Woods are much deſtroyed; but that Want is ſo well ſupplied from diſtant Places, by the Convenience of Rivers and Winter Carriages, that they have Charcoal above ſix times as cheap as in *England*, though indeed from the manner of making, it is not ſo good.

3. Of Mines in *Sweden*: There is one of Silver, into which Workmen are let down in Baſkets to the firſt Floor, which is one hundred and fifty Fathoms under Ground. The Roof there is as high as a Church, ſupported by vaſt Arches of Ore. The next Deſcent is by Ladders and Baſkets to the loweſt Mine, above forty Fathoms, where they now work. They have no Records ſo antient as the firſt Diſcovery either of this, or the Copper Mines, which muſt needs have been the Work of many Ages. The Ore ſeldom yields above four *per Cent.* and requires great Pains to refine it. They are alſo at the Charge of a Water-mill to drain the Mine, and have the Benefit of another that draws up the Ore. It yearly produces about twenty thouſand Crowns of fine Silver, of which the King has the Preemption, paying only one fourth leſs than the real Value.

The Copper Mine is about eighty Fathom deep, of great Extent, but ſubject to Damage by the falling in of the Roof; yet that is ſometimes recompenſed by the Abundance of Ore that the ruined Pillars yield, though moſt commonly the Loſs in that Caſe is very great: The Occaſion of which Falls is attributed to the throwing the Earth and Stones brought out upon the Ground over the Mine, by which the Pillars become overcharged, and give way; and the Reaſon of this is ſaid to be, that the Profit ariſing to thoſe that are concerned is ſo little that they are not able to carry it off as they ought; and unleſs the King abates a conſiderable Part of the Profit ariſing to the Crown from this Mine, it is believed it will, in a few Years, be at a Stand, eſpecially if the Deſigns of making Copper, that are on foot elſewhere, ſhould take any tolerable Effect.

The Copper yearly made out of this Mine amounts to the Value of about two hundred thouſand Pounds, of which the King has a fourth Part, not by way of Preemption, but in Kind; beſides that, upon the Remainder he has a Cuſtom of twenty-five *per Cent.* when it is exported unwrought. Lately a Gentleman of *Italy* came to *Sweden*, with Propoſals to make Copper a ſhorter and cheaper Way than has hitherto been practiſed, as to make that in four Days which before required three Weeks, and with one fifth Part of the Charge, and with fewer Hands. The Bargain was made, and his Reward agreed to be a hundred thouſand Crowns; and the firſt Proof he made ſucceeded to Admiration: But when he came to work in earneſt, and had got his new invented Ovens made to his Mind, the Miners, as he complained, picked out the very worſt Ore, and were otherwiſe ſo envious and untractable that he failed of Succeſs, and loſt his Reward, and not without Difficulty obtained Leave to buy Ore, and practiſe his Invention at his own Charge, as he now does. Iron Mines and Forges are in great Numbers, eſpecially towards the mountainous Parts, where they have the Convenience of Water-falls to turn their Mills. From theſe, beſides ſupplying the Country, there is yearly exported Iron, to the Value of near three hundred thouſand Pounds; but of late Years the Number of thoſe Forges has been ſo much increaſed, that each endeavouring to underſell others, the Price has been much lowered; and ſince the Prohibition of foreign Manufactures, in exchanging of which Iron was plentifully taken off, it is grown ſo cheap that it is found neceſſary to leſſen the Number of Forges. Neither has that Contrivance had the Effect intended; but, on the contrary, many more are likely to fall of themſelves, becauſe they cannot work but to Loſs, in which Caſe many Thouſands of poor People, whoſe Livelihoods depend upon theſe Forges and Mines, will be reduced to a ſtarving Condition.

The Seaſons of the Year, though regular in themſelves, do not altogether anſwer thoſe of other Climates. As a *French* Embaſſador obſerved, who, in Raillery ſaid, there were in *Sweden* only nine Months Winter, and all the reſt was Summer; for as Winter commonly begins very ſoon, ſo Summer immediately ſucceeds it, and leaves little or no Space to be called Spring. The Productions of the Earth therefore ought to be, as they are, more ſpeedy in their Growth than in other Parts. The Reaſon of which ſeems to be, that the Oil and Sulphur in the Earth (as it appears by the Trees and Minerals it produces) being bound up all the Winter, are then of a ſudden actuated by the Heat of a warm Sun, which almoſt continually ſhines, and thereby makes amends for its ſhort Stay, and brings to Maturity the Fruits proper for the Climate; yet withal, its Heat is ſo intenſe, that it often ſets the Woods on Fire, which ſometimes ſpreads itſelf many Leagues, and can ſcarce be ſtopt, till it comes to ſome Lake or very large Plain. In the Summer Seaſon the Fields are cloathed with Variety of Flowers, and the whole Country overſpread with Strawberries, Raſpberries, Currants, and the like, which grow upon every Rock.

In their Gardens Melons are brought to Perfection in dry Years, but Apricots, Peaches, and other Wall-Fruits, are almoſt as rare as Oranges. They have Cherries of ſeveral Sorts, and ſome tolerably good; which cannot be ſaid of their Apples, Pears and Plumbs, that are neither common nor well taſted. All Kinds of Roots are in Plenty, and contribute much to the Nouriſhment of the poor People. The Sun at higheſt is above the Horizon of *Stockholm*, eighteen Hours and an half, and for ſome Weeks makes a continual Day. In Winter the Days are proportionably ſhorter, the Sun being up but five Hours and an half; which Defect is ſo well ſupplied as to Lights by the Moon, and the Whiteneſs of the Snow, and the Clearneſs of the Sky, that travelling by Night is as uſual as by Day, and Journies begun in the Evening are as frequent as in the Morning. The want of the Sun's Heat is repaired by Stoves within Doors, and warm Furs abroad. Inſtead of which, the meaner Sort uſe Sheep-ſkins, and other the like Defences, and are generally better provided with Cloathing befitting their Condition, and the Climate they live in, than the common People of any Part of *Europe*; though, where any Neglect or Failure happens it uſually proves fatal, and occaſions the Loſs of Noſes, or other Members, and ſometimes the Loſs of Life; unleſs the uſual Remedy to expel the Froſt, when it has ſeized any Part, be early applied, which is to remain in the Cold, and rub the Part afflicted with the Snow till the Blood return to it again.

4. This Country is divided into twenty-five Provinces; each of which is governed by an Officer called *Landſhofding*, whoſe Authority comprehends that of Lord Lieutenant and Sheriff together, except where there is a general Governor, as in *Finland* or upon the Borders of *Denmark* and *Norway*, to whom the Governor of each Province is ſubordinate, and has thereby a more reſtrained Authority. Theſe Officers are placed by the King, and take an Oath to keep the Province for his Majeſty and his Heirs, to govern according to the Laws of *Sweden*, and ſuch Inſtructions as they ſhall receive from his Majeſty, and to quit the Province whenever he ſhall call them thence. To them and their ſubordinate Officers (who are all of the King's chuſing) the Execution of judicial Sentences, the Collection of the King's Revenues, the Care of Foreſts, Parks, and other Crown Lands, *&c.* is committed.

Of Cities, thoſe of *Stockholm*, *Gottenburgh*, *Calmar*, and two or three more may deſerve that Name; the other Corporations, which, in all, make not an hundred, ſcarce exceed ſome Villages in *England*. They are all governed by Burgomaſters and Counſellors, choſen by the King out of their own Body, or at leaſt ſuch as are of the Quality of Burghers; no Gentleman accepting of thoſe Employments. Their Offices and Salaries are for Life, or rather during their good Behaviour. The Privilege of Cities are derived from the King, and for the moſt Part are owing to the Wiſdom of *Guſtavus Adolphus*, the Author of their beſt and moſt regular Conſtitutions at Home, as well as of their Glory Abroad.

The City of *Stockholm* lies in 59 Deg 20 Min. N. Lat. and about 41 Longitude. About three hundred Years ago it was only a bare Iſland with two or three Cottages for Fiſhers; but upon the building of a Caſtle there, to ſtop the Inroads of the *Ruſſians*, and the Tranſlation of the Court thither, it grew, by Degrees, to ſurpaſs the other more ancient Cities, and is at preſent the Metropolis of this Kingdom, and ſuppoſed to be as populous as *Briſtol*. The Caſtle here, which is covered with Copper, is a Place of no Strength or Beauty, but of great Uſe, being a ſpacious Building, that beſides entertaining the Court, furniſhes Room for moſt of the great Offices; the national Court of Juſtice, Colleges of War, Chancery, Treaſury, Reduction, Liquidation, Commerce, Execution; as alſo an Armory, Chapel, Library, Archives, *&c.* It lodges very few of the inferior Officers and Servants of the Court; they, together with the Foot-Guards, being quartered upon the Burghers at their Landlord's Charge, for Lodging, Fire and Candle. In this City there are ſeven large Churches built of Brick and covered with Copper, beſides two more now in building, and three or four wooden Chapels. The Palace of the Nobility, which is the Place of their Aſſembly at the Convention of Eſtates and the Depoſitory of their Privileges, Titles, and ſuch other Records as concern their Body, is a very ſtately Pile; as is alſo the Bank, built at the City's Charge; which, together with ſeveral magnificent Houſes of the Nobility, are covered with Copper, and make a handſome Proſpect. Moſt of the Burgher's Houſes are built of Brick, except in the Suburbs, where they are of Wood, and therefore expoſed to the Danger of Fire; which commonly, when it gets to a Head, deſtroys all before it in the Quarter where it happens: To repair which Misfortune they ſometimes ſend the Dimenſions of the Houſe they intend to *Finland*; where the Walls and ſeveral Separations are built of Pieces of Timber laid one upon another, and joined at the Corners, and afterwards marked, taken down, and ſent by Water to *Stockholm*, there to be ſet up and finiſhed; and when they are kept in good Repair will laſt thirty or forty Years, and are warmer, cleaner, and more healthful than thoſe of either Brick or Stone.

To prevent the Danger of Fire the City is divided into twelve Wards; and in each of theſe is a Maſter and four Aſſiſtants, who upon Notice of any Fire are immediately to repair to it, as alſo all Porters and Labourers, and to range themſelves under the Maſter of their reſpective Wards. There is alſo a Fire-Watch by Night, who walk about only for that Purpoſe; and in each Church-Steeple Watch is kept, and a Bell tolled upon the firſt Appearance of any Fire. The Government of this City is in the Hands of the great Stadtholder, who is alſo a Privy Counſellor. He ſits once a Week in the Town-houſe, and preſides alſo in the College-houſe of *Execution*, aſſiſted by an under Stadtholder and the Bailiff of the Caſtle. Next to him are the four Burgomaſters, one for Juſtice, another for Trade, the third for the Policy of the City, and the fourth has the Inſpection over all public and private Buildings, and determines ſuch Caſes as ariſe on that Account. With them the Counſellors of the City always ſit and give their Votes, the Majority of which concludes. Their Number is uncertain, but uſually about twenty, moſt Merchants and Shopkeepers, or ſuch as have ſerved the King in ſome inferior Employments; and beſides their Salary they have an Immunity from ſuch Impoſitions as are laid on the Inhabitants to ſupport the Government of the City, which pays all its Officers and Servants, and maintains a Guard of 300 Men, and defrays the Charge of all public Buildings and Repairs.

To ſupport this Expence, beſides a Duty belonging to the City upon Goods imported and exported (which is above four *per Cent.* of the Cuſtoms paid the King, and amounts to about four thouſand Pounds *per Ann.*) the Magiſtrates impoſe a yearly Tax on the Burghers, in which they are aſſiſted by a Common Council of forty-eight (which chuſes its own Members every Spring) to proportion the Payments for the enſuing Year. On the richer Traders they uſually impoſe forty, fifty or ſixty Pounds Sterling; and upon others of a meaner Condition, as Shoemakers, Taylors, *&c.* five or ſix Pounds, and no Houſekeeper leſs than fifteen Shillings, beſides quartering the Guards, inferior Officers, and Servants of the Court with other leſs Charges, which all together would be thought a great Burthen, even in richer Countries; neither is it otherwiſe eſteemed by the Inhabitants of this City, who can ſcarce be kept in Heart, by the Privileges they enjoy, as well in Cuſtoms as the Trade of the Place which muſt needs paſs through their Hands. The Natives of other Parts of the Kingdom as well as Foreigners being obliged to deal only with the Burghers, except thoſe of the Gentry that make Iron, who have a Privilege to ſell it immediately to Strangers. This City is in a manner the Staple of *Sweden*, to which moſt of the Goods of their own Growth, *viz.* Iron, Copper, Wire, Pitch, Tar, Maſts, Deals, *&c.* are brought to be exported. The greateſt Part of the Commodities imported from abroad come to this Port, where there is a Haven capable of receiving a thouſand Ships, and has a Bridge or Key near an *Engliſh* Mile long, to which the greater Veſſels may lie with their Broadſides. The only Inconvenience is, that it is ten Miles from the Sea, and the River very crooked, and no Tides.

5. The Laws of *Sweden* were antiently as various as the Provinces were numerous; each of which had Statutes and Cuſtoms peculiar to itſelf, enacted, as Occaſion required, by the Laghman or Governor of the Province; who was choſen by the People, and inveſted with great Authority, eſpecially while the King was elective; his Suffrage concluding the Province he governed. This Variety was neceſſarily attended with great Confuſion; for Remedy whereof, about fourſcore Years ago one Body of Laws was compiled for the Direction of the whole Kingdom: Yet this Collection is but an imperfect Piece, and the Laws ſo few, and conceived in ſuch general Terms, that in moſt Caſes they need the Aſſiſtance of the Civil Law; and after all, the final Determination depends much upon the Inclinations of the Bench; which in a poor Country, where Salaries are ſmall, is often filled with ſuch as are of weak Parts, and ſubject to Corruption on very ſmall Temptations.

The Effects of this would be more viſible, if each ſuperior Court did not keep a Check upon the lower, and the King's Court of Reviſion over-awe them all; to which all Civil Cauſes, exceeding the Sum of ſeventy Pounds, are appealable; and very few end before they have been brought thither. In this Court the Preſident of the Chancery and two or three other Privy Counſellors alſo ſit, ſo does the Chancellor of the Court (an Officer next in Degree to the Privy Counſellor) who is Preſident of the under Reviſion, where he and two Secretaries put Buſineſs into a Method fit to be brought before the King. The Courts of Juſtice inferior to this are of three Degrees; of the loweſt Degree, or firſt Inſtance, there is one in each Corporation (beſides *Stockholm*, in which there are three) as alſo in each Diſtrict or Territory, whereof every Province contains ſeveral, ſome above twenty. In the former (Cities) an Alderman or Counſellor preſides, and has ſome of his Brethren for Aſſiſtants; in the latter the Governor of the Territory with a ſtanding Jury; his Courts being ambulatory are uſually near or upon the Spot where the Fact or Treſpaſs was committed. In theſe Courts Examinations are taken, and Matters not exceeding forty Shillings are determined, the reſt tranſmitted to the next ſuperior Court; of which in every Corporation the Preſident thereof retains the Name of Laghman, without other Authority than that of a Judge. From theſe all Cauſes of Blood muſt be tranſmitted to the reſpective national Courts, where they are determined without farther Appeal; and thither alſo all Civil Actions, not exceeding twenty Pounds, may be appealed.

Of theſe national Courts there are three, one for the Kingdom of *Sweden*, held at *Stockholm*, another for the Kingdom of *Gothia*, kept at *Jencopingh*, and a third for the Dukedom of *Finland*; in each of theſe a Privy Counſellor is Preſident, and above half the Aſſeſſors are to be Gentlemen. All theſe Courts ſit continually, or at moſt have but ſhort Vacations; and not being peſtered with too much Formality, give Cauſes a ſpeedy Diſpatch, unleſs they be retarded by ſome underhand Engagements. Actions relating to the Sea are tried in the ordinary Courts, according to their Sea Laws founded upon thoſe antient ones of *Wiſby* in *Gothland*, which have formerly been as famous in the *Baltic Sea* as the Laws of *Rhodes* and *Oleron* in other Places. The Court of Admiralty has not any peculiar Juriſdiction in the Adminiſtration of theſe Laws, but only in ſuch Matters as directly concern the King's Fleet, and in ſome Places that belong immediately to the Admiralty.

For Cauſes Eccleſiaſtical there is a Conſiſtory in each Dioceſe, of which the reſpective Biſhop is Preſident; where Cauſes of Baſtardy, Contracts of Marriage, and other Cauſes of that Nature are tried, and Church Cenſures of Penance, Divorce, *&c.* inflicted. Theſe Courts have no Power to adminiſter an Oath, nor to inflict any corporal Puniſhment; from them there lies an Appeal to the reſpective national Court; and in ſome Caſes to the King, as is in all other Matters.

For Matters relating to the Mines, beſides inferior Courts and Officers ſettled in the reſpective Parts of the Country, a general Court, called the College of the Mines, ſits at *Stockholm*, of which moſt commonly the Preſident of the Treaſury is Chief, with a Vice-Preſident and other Aſſeſſors. The Laws, in this Regard, are more ſtrict and particular than in other Matters, and for the moſt part Juſtice is very carefully adminiſtered. The Power of executing all judicial Sentences is lodged in the Governors of Provinces, the Stadtholders of *Stockholm*, and other Places, and from them derived to inferior Officers, who are accountable to the national Courts, whither they may be convened and puniſhed upon plain Proof of Default; but the Proof being difficult, and Miniſters of Juſtice apt to favour one another, they take great Liberty to delay Execution, or to arbitrate and put their own Senſe upon Sentences; ſo that their Part of Juſtice is adminiſtered the worſt of all others, and has an Influence not only at Home, but leſſens the Credit of the *Swediſh* Subjects Abroad, againſt whom Juſtice cannot be obtained without great Difficulty.

The ordinary Charges of Law Suits are no where more moderate than in *Sweden*; the greateſt Burthen ariſing from a late Conſtitution, that all Declarations, Acts and Sentences muſt be written upon ſealed Paper, of different Prices, from Two-pence to Seven Shillings a Sheet, according to the Quality of the Cauſe; the Benefit of which accrues to the King, and is computed to bring in 3000*l.* a Year. Other Charges are very few, every Man being permitted (in criminal Actions compelled) to plead his own Cauſe. Accordingly the Practice of the Law is below a Gentleman, and rather the Refuge than the Choice of meaner Perſons, who are very few in Number, and for the moſt part very poor. The Cuſtom of a Jury of twelve Men is ſo antient in *Sweden*, that their Writers pretend it had its Original among them, and was thence derived to other Nations; but at preſent it is diſuſed every where, except only in the lower Courts in the Country, and there the Jurymen are for Life, and have Salaries. They have this peculiar to themſelves; that among them there muſt be an unanimous Concurrence to determine a Cauſe, which in other Courts is done by a Majority of Voices. Titles to Eſtates are rendered more ſecure, and leſs ſubject to Conteſts, by the Regiſters that are kept of all Sales and Alienations, as well as of other Engagements of them, the Purchaſer running the Hazard of having an after-Bargain take Place of his. If he omit the recording of his Tranſaction in the proper Court in criminal Matters where the Fact is not very evident, or where the Judges are not very favourable, the Defendant is admitted to purge himſelf by Oath, to which is oftentimes added the Oath of ſix or twelve Men, who are all Vouchers of his Integrity. Treaſon, Murder, double Adulteries, Burning of Houſes, Witchcraft, and the like heinous Crimes, are puniſhed with Death, which is executed by hanging of Men, and beheading of Women. To which burning alive or dead, quartering and hanging in Chains, is ſometimes added, according to the Nature of the Crime. Criminals of the Nobility and Gentry are generally ſhot to Death.

The Puniſhment of Stealing is of late, inſtead of Death, changed into a perpetual Slavery; the guilty Party being condemned to work all his Life for the King in making Fortifications or other Drudgery, and always has a Collar of Iron about his Neck, with a Bow coming over his Head, to which a Bell is faſtened, that rings as he goes along. Duels between Gentlemen, if the one Party be killed, are puniſhed by the Survivor's Death, and a Note of Infamy upon the Memory of both; if neither be killed, they are both condemned to a Priſon with Bread and Water for two Years; to which is added, a Fine of one thouſand Crowns, or one Year's Impriſonment, and two thouſand Crowns. Reparation of Honour, in Caſe of an Affront, is referred to the reſpective national Courts, where Recantation and public begging of Pardon is uſually inflicted. Eſtates, as well acquired as inherited, deſcend to the Children in equal Portions, of which a Son has two and a Daughter one; nor is it in the Power of the Parents to alter this Proportion, without the Intervention of a Judicial Sentence. In Caſe of their Childrens Diſobedience only, they may bequeath a tenth of their acquired Poſſeſſions to ſuch Child or other as they will favour: Where an Eſtate deſcends incumbered with Debts, the Heir uſually takes two or three Months Time, as the Law allows, to ſearch into the Condition of the Deceaſed's Eſtate, and then either accepts the Inheritance or leaves it to the Law, which in that Caſe adminiſters.

6. The Nature of the Climate, which is very healthful and dry, as well as ſharp, diſpoſes the Natives to a very vigorous Conſtitution; and that confirmed by a hardy Education, coarſe Fare, and hard Lodging, qualifies them to endure whatever uneaſy Circumſtance befalls them, better than thoſe that are born in a milder Climate, and more indulgently bred. But, on the other Side, it ſeems, as if the Severity of the Clime does, in a manner, cramp the Faculties of their Minds, which ſeldom are found endued with any eminent Pregnancy of Wit; yet, by Induſtry, Experience, and Travelling, not a few of them arrive at a mature and ſolid Judgment, being led by their Genius to ſerious Things, in which ſuch as have Patience to go through with the Studies they apply themſelves to become excellent, and merit the Title of great and able Men: But this ſeems not be the Talent of this Nation, for they are more apt to ſit down with ſuperficial Acquiſitions than to purſue their Studies to the utmoſt Extent.

Theſe Diſpoſitions of Body and Mind, qualify them more for a Life of Labour and Fatigue, than of Art and Curioſity; and the Effect of it is viſible in all Orders of Men amongſt them. The Nobility moſtly apply themſelves to a Military Life, in which they are more diſtinguiſhed for Courage, and enduring Hardſhips, than for Stratagems and Intrigues. They that are employed in the Adminiſtration of Civil Affairs, though they are indeed laborious and indefatigable in their Buſineſs, yet they ſeldom raiſe their Speculations above what the Neceſſity of their Employments require, their Abilities proceeding not ſo much from Study as Experience in the Courſe of Buſineſs.

In Point of Learning, they, like their Neighbours the *Germans*, are more given to tranſcribe and make Collections, than to digeſt their own Thoughts; and commonly proportion their Studies to their Occaſions. In Matters of Trade they rather undergo the Drudgery, than dive into the Myſtery either of Commerce or Manufactures, in which they generally ſet up for Maſters before half taught; ſo that in all ſuch Things as require Ingenuity, Neatneſs, or Dexterity, they are forced to be ſerved by Strangers. Their common Soldiers are allowed to endure Cold and Hunger, long Marches, and hard Labour, to Admiration; but they learn their Duty very ſlowly, and are ſerviceable more by Obedience to command, and ſtanding their Ground, than by any great Forwardneſs to attack their Enemy; or Addreſs, in executing their Orders; and ſo their Peaſants are tolerably laborious when Need compels them, but have little Regard to Neatneſs in their Work, and are hardly brought to quit their old ſlow Methods for ſuch new Inventions as are more dextrous and eaſy. The Diſpoſitions peculiar to the ſeveral Degrees of theſe People are: That the Nobility and Gentry are naturally Men of Courage and of a warlike Temper; have a graceful Deportment, incline to value themſelves at a high Rate, and make the beſt Appearance they can, that they may gain the Reſpect of others; and are therefore more exceſſive in the Number of their Attendants, ſumptuous Buildings, and rich Apparel, than in the Plentifulneſs of their Tables, or other leſs obſerved Occaſions. They never deſcend to any Employments in the Church, the Practice of Law, or Phyſic, or the Exerciſe of any Trade; and though to gain Experience in maritime Affairs they ſubmit to the loweſt Offices in other Countries; yet, at home, there is but one Example known of a Gentleman that accepted the Command of a Merchant Ship.

The Clergy are but moderately learned, and little acquainted with Diſputes about Religion, as having no Adverſaries to oppoſe. They affect Gravity and long Beards, are eſteemed for their Hoſpitality, and have great Authority among the common People. The Burghers are not intelligent in Trade, nor able to do their Buſineſs without Credit from abroad; inclined to impoſe upon thoſe they can over-reach, rather than follow their Calling in a fair Way. The Peaſants, when ſober, are more obſequious and reſpectful; but Drink makes them mad, and ungovernable: Moſt of them live in a very poor Condition, are taught by Neceſſity to practiſe ſeveral Arts in a rude Manner, as the making their Shoes, Cloaths, *&c.* and the ſeveral Inſtruments of Huſbandry, and other Neceſſaries, they cannot ſpare Money to buy. And to keep them to this, as alſo to favour the Cities, it is not permitted for more than one Taylor, or other Artiſan, to dwell in the ſame Pariſh, though it be never ſo large, as many of them are above twenty Miles in Compaſs. In general, it may be ſaid of the whole Nation, that they are a People very religious in their Way, and Frequenters of the Church, eminently loyal and affected to Monarchy; grave even to Formality, ſober more out of Neceſſity than Temperance; apt to entertain Suſpicions, and envy each other as well as Strangers; more inclined to pilfering, and ſuch ſecret Frauds, than to open Violence, or robbing on Highways; Crimes as rarely committed in this, as in any Country whatever.

7. The Chriſtian Faith was received in *Sweden* about the Beginning of the ninth Century, and in *Finland* about three hundred Years after; and firſt preached, or at leaſt firſt eſtabliſhed, by *Engliſh* Divines, of whom the chiefeſt was St. *Sigifrid*; who, as their Hiſtories relate, quitted the Archbiſhopric of *York* to become the Apoſtle of the *Goths*. With him three of his Nephews that he brought were martyred by the Heathen *Goths*; ſo alſo was St. *Eſkill* and other *Engliſh* by the *Swedes*: And about the Year 1150, St. *Henry*, an *Engliſh* Biſhop, accompanied St. *Erick*, King of *Sweden*, in his Expedition into *Finland*, which the King conquered, and the Biſhop converted. He alſo was martyred by the Infidels, and lies buried at *Abo*, the Metropolis of that Country. The Reformation there, as in *Denmark* and *Norway*, began ſoon after the neighbouring Parts of *Germany* had embraced *Luther*'s Tenets, and was eſtabliſhed according to his Platform. The Tyranny of King *Chriſtiern* the Second, gave an Opportunity to *Guſtavus*, the Founder of the preſent Royal Family, to alter Religion,

and advanced himſelf to the Regal Dignity, which till that Time was elective, but was made hereditary to his Family, in which it has ſince continued.

As the *Lutheran* Religion has alſo been, never but once, diſturbed from Abroad, and ſince that Diſturbance never diſtracted at Home with Non-conformity; ſo it becomes the Buſineſs of their Preachers rather to perſuade the Practice of Piety than oppoſe the Doctrine of others, or defend their own. The Church is governed by an Archbiſhop, and ten Biſhops, whoſe Studies are confined to their own Employments, being never called to Council, but at the Aſſembly of the States, nor troubled with the Adminiſtration of ſecular Affairs. Their Revenues are very moderate. The Archbiſhopric of *Upſal* is not worth 400 *l.* a Year, and their Biſhops are in Proportion. Under them are ſeven or eight Superintendants, who have all the Power of Biſhops. And over each ten Churches is a Provoſt or rural Dean, with ſome Authority over the inferior Clergy, of whom the Total may be computed by the Number of Churches, which in *Sweden* and *Finland* are about two thouſand; to which the Addition of Chaplains and Curates will increaſe the Clergy to near two thouſand five hundred Perſons; they are all the Sons of Peaſants or Burghers, and can therefore content themſelves with their ſmall Income, which, beſides more inconſiderable Dues, ariſe from Glebe Lands, and one third of the Tithes, of which the other two Thirds are annexed to the Crown, to be employed in pious Uſes: However, the Clergy have generally wherewithal to exerciſe Hoſpitality, and are the conſtant Refuge of poor Travellers, eſpecially Strangers, who go from Prieſt to Prieſt, as elſewhere from Conſtable to Conſtable.

The Clergy of each Dioceſe, upon the Death of their Biſhops, propoſe three Perſons to the King, who chuſes one of them, or ſome other to ſucceed in that Office, which is alſo practiſed in the Choice of Superintendants. In the Choice of an Archbiſhop all the Chapters vote, but the Determination is in the King's Breaſt. His Majeſty hath alſo the Patronage of moſt Churches; ſome few being in the Diſpoſal of the Nobility. Many of their Churches are adorned with Variety of Sculptures, Painting, Gilding, *&c.* all of them are kept clean and in good Repair, furniſhed as well in the Country as City, with rich Altar-cloths, Copes, and other Veſtments. For the regular Government of the Church, it has been found neceſſary to cauſe the antient Eccleſiaſtical Laws and Canons to be reviſed by a Committee of the ſeveral Bodies, and the Eſtates having ſpent ſome Years in that Matter, I at laſt preſented the King with a new Syſtem of Church Laws, wherein his Majeſty having cauſed ſuch Alterations to be made as he thought fit, approved, and publiſhed them. By this means, the Church Affairs of *Sweden* have been ſo well and ſo effectually regulated, that in a long Courſe of Years they have gone on peaceably and quietly, beyond any thing of the ſame Nature in any other Country, if we except *Denmark*; which, as it reſembles *Sweden*, in the Nature of its Church Government, ſo the like Conſequences have followed there.

8. As to the Government and Revenue of *Sweden* they are like thoſe of other Places, ſubject to ſo many and ſo great Changes that one would imagine our Author's Account ſhould, at this Diſtance of Time, be almoſt out of Date; but there is one Advantage attends whatever has the Appearance of a Parliament, which is, that how much ſoever it may ſink and be depreſſed by Fraud, or Force, under certain Conjunctures, it has nevertheleſs Strength to riſe again, in more favourable Seaſons, and even to recover all that it has loſt. In our Author's Time the States of *Sweden* were but Inſtruments of the King's Authority, and only met to ſanctify ſuch Acts of Power as the Crown did not care to take upon itſelf. At this Day things have quite changed their Face; the Kings of *Sweden* have wholly loſt their abſolute Power, which remains where it ought to remain, in the Repreſentatives of the Nobility, Clergy, and People of the Kingdom. The uſual Time of aſſembling the States is once in three Years, or oftner, if Affairs require it. The Letters for calling them together are ſent to the Governors of Provinces, who thereupon write to each Nobleman and Gentleman, and to the Biſhops, who cauſe the ſame to be publiſhed in all Churches.

The Body of the Nobility and Gentry are repreſented by one in each Family, of which there are about a thouſand in *Sweden*, and with them the Colonel, Lieutenant-Colonel, Major, and one Captain of each Regiment ſit and vote. For the Clergy, beſides the Biſhops and Superintendants in each rural Deanery, or ten Pariſhes, one is choſen and maintained at the Charge of his Electors. Theſe make a Body of about five hundred. The Repreſentatives of the Burghers are choſen by the Magiſtrates and Common Council of each Corporation, of which *Stockholm* ſends four, others two, and ſome one; who make about one hundred and fifty. The Peaſants of each Diſtrict chooſe one of their own Quality to appear for them, whoſe Charges they bear; and give him Inſtructions, in ſuch Matters, as they think need Redreſs; they are about two hundred and fifty. The firſt Meeting, when at *Stockholm*, is in a large Room in the Caſtle, called *The Hall of the Kingdom*; where his Majeſty being ſeated on the Throne, and the Privy Counſellors ſitting at ſome Diſtance, the Preſident of the Chancery makes them a Compliment in the King's Name, and then a Secretary reads the King's Propoſals to them; in which they are acquainted with the State of Affairs ſince their Receſs, and the preſent Occaſion of their Advice and Aſſiſtance. To which, firſt the Marſhal of the Nobility, who is choſen by the King, returns an Anſwer, and kiſſes the King's Hand, and after him the Archbiſhop in the Name of the Clergy; the firſt Burgomaſter of *Stockholm* in the Name of the Burghers; and one of the Peaſants for his Brethren. They then ſeparate into four different Houſes, and chuſe a Secret Committee, compoſed of an equal Number of each Body, who receive from the King's Miniſters ſuch further Informations of his Majeſty's Pleaſure, as are not thought fit to be communicated in Public; and thereupon prepare ſuch Matters as are to be propoſed to the ſeveral Bodies. In each Houſe Matters are concluded by Majority of Voices, and if one or more of theſe Bodies differ in Opinion from the reſt, they are either brought over by Perſuaſions, or the Point remains unconcluded.

When the Affairs propoſed by the King are finiſhed, they then inſinuate their Grievances. Each Body ſeverally. To which the King returns ſuch Anſwers as he thinks fit; and to each Member of the three inferior Bodies an authentic Copy is delivered, as well of the general Concluſion made by the whole States, as of the King's Anſwer to the Grievances of his reſpective Body, which he carries Home to his Electors.

The ſtanding Revenues of *Sweden* ariſe from Crown Lands, Cuſtoms, Poll-Money, Tithes, Copper and Silver Mines, Proceedings at Law, and other leſs conſiderable Particulars, which are calculated in all to near a Million a Year; of which the Lands make above one Third, and the Cuſtoms almoſt a Fourth. The Poll-Money is paid only by the Peaſants, each of which above Sixteen and under Sixty pays above twelve Pounds a Year. In the Treaſury-Chamber a Preſident, with four Chancellors, and other Officers, ſit and act as a Court of Juſtice, in ſuch Matters as relate to the King's Revenue, or rather that of the State.

As for the Adminiſtration of the Government, at the Time when the Dyet is not ſitting, it is inveſted in the King, aſſiſted by the Senate, without whoſe Conſent he cannot legally do any thing of great Importance. As to the Number of Senators; we know, by Experience, that the States of the Kingdom think themſelves at Liberty to augment or diminiſh it at Pleaſure; but, at preſent, it is fixed to fourteen. Theſe Senators are not only at Liberty to give their Sentiments upon all Affairs that are brought before them, but are intruſted alſo with the entire Management of public Concerns, in caſe of the Indiſpoſition or Abſence of the Prince. A Senator preſides in each of the great Courts of Juſtice in the Kingdom, and are uſually placed at the Head of all particular Commiſſions, Civil and Military. Their Salaries, as Senators, amount to about three hundred Pounds a Year;

but their being generally poſſeſſed of the moſt beneficial Employments, enables them ſufficiently to ſupport their Dignity with becoming Magnificence.

The King is not at Liberty to fill up the Number upon a Vacancy, but muſt wait till the Dyet aſſembles; when the Secret Committee propoſes to his Majeſty the Names of three Perſons for each Vacancy, one of which he appoints. The Order of Peaſants was formerly excluded from the Secret Committee, which they thought very hard, and made frequent Struggles in order to gain Admittance; in which, till within theſe few Years, they were always unſucceſsful. But the laſt War with *Ruſſia* enabled them to carry their Point, and to gain Entrance for their Deputies; the other Orders, however, attempted to exclude them again in the preſent Dyet, but miſcarried; ſo that in all Probability they will be conſtantly admitted for the future.

9. The Conqueſts made by *Sweden* in the laſt Age, were not ſo much owing to its native Strength, as to the foreign Aſſiſtance of *Germans*, *French*, *Engliſh*, and eſpecially *Scots*, of whom they have uſed great Numbers in all their Wars with *Muſcovy*, *Poland*, *Germany*, and *Denmark*; and by them the Art of War and Military Diſcipline has been by Degrees introduced into this Nation, that in former Times had only the Advantage of Courage and Numbers: For though the original Conſtitution of the Country, and its Diviſion into Hundreds and other large Portions, that ſtill retain Military Names, ſeems to have been the Work of Armies, and the frequent Expeditions of the *Goths*, and other Inhabitants of thoſe Parts, ſhew that in all Ages they were addicted to War and Violence, yet it was in a tumultuous Manner, their Infantry always conſiſting of unexperienced Peaſants raiſed for the Occaſion, and diſbanded as ſoon as it was over.

The Feudal Laws indeed provided for a competent Number of Cavalry; all Eſtates of the Nobility and Gentry being held by Knights-Service: And while the Kingdom was elective, the Kings were bound to maintain ſome Horſe out of the Revenue of the Crown. But this Eſtabliſhment had been in a great Meaſure corrupted, and the Kingdom ſo ſhattered by domeſtic Broils, that it made a very inconſiderable Figure, and was little known in *Europe* till the Crown became hereditary, and the Intereſt of the Royal Family conſiſted in the Strength and Proſperity of the Nation. Since that Time the ſtanding Forces of the Kingdom have been augmented, yet not ſo effectually eſtabliſhed as its Neceſſities required; for it generally happened that the Nobility and Gentry were ſo backward in fitting out their Horſe, and the Levies of Foot not being to be made without the Conſent of the Peaſants in the Aſſembly of the States, it was ſo hardly obtained, that the Regiments were very thin, and Recruits extreme difficult; nor were the Officers Salaries ſo punctually paid as to enable them to be in Readineſs on all Occaſions.

To remedy theſe Inconveniencies, *Charles* the XIth, on whom the States had conferred an abſolute Power to put the Militia into ſuch a Method as he ſhould think fit, made ſuch Regulations in all the Particulars relating to this Matter, as were required to bring it to Perfection. The new Injunctions he made about the Cavalry that the Nobility and Gentry furniſhed, are ſo exact, that it is not in their Power to put either the Men or the Horſe, that are once liſted, to other Employments than what are there ſpecified; but muſt have them in a continual Readineſs whenever they are called upon, with ſuch Arms and Equipage as his Majeſty hath directed; in default of which, ſevere Penalties are inflicted, and the Eſtates they hold by that Service, ſubject to Confiſcation.

For the Infantry the King has taken the like Care; and whereas formerly Levies could not be made but by Conſent of the States, and that but by ſmall Parcels at a Time, and with ſuch Diſturbance, that on theſe Occaſions it was uſual for half the Peaſants to run into the Woods and other hiding Places, to eſcape being Soldiers: This has been remedied by the King's Commiſſioners, who have diſtributed the Infantry of each Province proportionably to the Number of Farms, each of which of the Value of above ſixty or ſeventy Pounds a Year (not being appropriated to the Officers or other peculiar Services) is charged with one Foot Soldier, who receives from the Farmer, Diet, Lodging, ordinary Cloaths, and about twenty Shillings a Year in Money; or elſe a little wooden Houſe is built for him at the Farmer's Charge, who muſt alſo furniſh him with as much Hay as will keep a Cow in Winter, and Paſture in Summer, and plough and ſow for him ſuch a Parcel of Ground as will afford him Bread: They that are married generally accept this latter Condition. The unmarried Soldiers uſually lodge with the Farmer; but are not bound to do him any Service without Wages. When they have once taken the Farmer's Money, and are liſted into the King's Service, they can never quit it ſo long as they are able to ſerve; and if they deſert are puniſhed with Death.

The firſt Inſtitution of this Method was very burdenſome to the Peaſants, who were at great Charge to hire their Men, which coſt fourteen, and ſometimes twenty Pounds a piece; and the ſame whenever their Soldiers died. This in peaceable Times will not be ſo chargeable as it is in Times of War, when Men are unwilling to ſerve, and Recruits more frequently needed. As all the common Soldiers are thus provided for at the Country's Expence, ſo all Officers, both of Horſe and Foot, are maintained by the King, who hath appointed ſo much of the Lands lately reunited, or formerly belonging to the Crown, to that Purpoſe: So that every Officer hath a convenient Houſe and competent Portion of Land to live upon, ſituate in that Part of the Country where the Regiment he belongs to is quartered; as alſo the Rent of ſo many other Farms as make up his Pay eighteen Pounds, though it be ſomewhat leſs than formerly; yet, being punctually paid, either in Money, Corn, or other Commodities, they find it more profitable than when they were to ſolicit for it at the Treaſury: A Colonel of Foot has of theſe Lands the yearly Rent of about three hundred Pounds, and the reſt proportionably; which amounts to about two thouſand five hundred Pounds a Year for all the Officers of one Foot Regiment; and there being in *Sweden*, *Finland*, and *Leiſland*, twenty Regiments of Foot under this Eſtabliſhment, the Maintenance of all the Officers belonging to them coſts the King about fifty thouſand Pounds a Year. What Charge the Cloathing of the common Soldiers once in two or three Years, their Arms and other Neceſſaries, may put the King to, cannot be ſo eaſily computed.

The Officers of Horſe are provided for after the ſame Manner, with ſuch larger Allowance as is requiſite: There are fifteen Regiments of Horſe thus eſtabliſhed, and the Maintenance of their Officers is computed to be about eighty thouſand Pounds a Year; all which ariſes from the Rents of Crown-Lands, as do alſo the Wages of Civil Officers in the Country, who have Farms annexed to their Employments in the ſame Manner as the Militia. The Laws the King has made for maintaining this Conſtitution are very exact, and provide with great Caution, that neither the Peaſants ſhall be oppreſſed, nor the Lands and Houſes ruined; to which End all ſuch Lands are yearly viſited, and the Poſſeſſor compelled to make ſuch Repairs as are found needful: And as every Officer upon his firſt coming to ſuch an Eſtate, ſubſcribes an Inventory of it, ſo upon Advancement he cannot take Poſſeſſion of another Charge till he hath put the Eſtate into as good a Condition as he found it; and in Caſe of Death, his Heirs cannot inherit till that be done.

In Times of Peace, all Treſpaſſes committed by the Soldiery fall ordinarily under the Cognizance of a Civil Magiſtrate, who has the ſame Authority over them, as over the reſt of the King's Subjects, except when they are encamped, or in Garriſon, or in any way under flying Colours; in all which Caſes, as alſo in Matters that relate ſolely to their Profeſſion, their Officers have Juriſdiction over them, without whoſe Leave a private Soldier is not permitted to lodge out of his Quarters, or be out a Day from the Pariſh he belongs to.

The inferior Officers cannot be abſent from their Charge but by the Colonel's Permiſſion; nor Captains, nor thoſe above them, without the King's Leave; and the good Effect of the Officers conſtant Reſidence upon their reſpective Charges, appears in the quiet and peaceable Behaviour of the Soldiers, who have not hitherto broke out into any Enormities, nor given the common People any great Occaſion of Complaint. To keep them in Diſcipline, each Company meets, and is exerciſed once a Month, and every Regiment once or twice a Year; at which time only they wear the King's Cloaths, which, at their Return, are carefully laid up in the Churches. For their Government in Time of War, the King hath lately cauſed the Articles of War to be reviewed and printed, together with a new Eſtabliſhment of Courts Martial, and Inſtructions for the Auditors, Governors, and other Officers concerned in the Miniſtration of Juſtice; and for his Majeſty's Information on all Occaſions, a Book hath been lately made, ſpecifying the Names of every Military Officer in the King's Army, the Time when they firſt came into the Service, and by what Steps they have riſen; by which Means, at one View, his Majeſty knows the Merit and Service of any Officer. The whole Body of the King of *Sweden*'s Forces, according to the beſt and moſt exact Accounts are as follow:

The eſtabliſhed Militia in Sweden, Finland, *and* Liefland *or* Livonia, *are*

	Men
Cavalry, fifteen Regiments, is - - - -	17,000
Infantry, twenty-eight Regiments, is - - -	35,000
Foot-Guards, one Regiment, is - - - -	2,000
Forces in *Pomoren* and *Bremen*, ſix Regim. (now loſt)	6,000
In all fifty Regiments, is - - - - - -	60,000

10. *Sweden* has in all Times furniſhed *Europe* with thoſe Commodities it abounds with, yet either the Warlike Temper, Idleneſs, or Ignorance of the Inhabitants formerly, kept them from being much concerned in Trade, and gave Strangers the Management and Advantage of it; which for a long Time the Hanſe-Towns ſituate on the *Baltic* Sea monopolized, till the ſeven Provinces of the *Netherlands* were erected into a Republic, and became Sharers with them. Before that Time very little Iron was made in *Sweden*; but the Ore being run into Pigs, was carried into *Dantzick*, and other Parts of *Pruſſia*, and there forged into Bars; for which Reaſon the Country Smiths in *England*, call foreign Iron *Dantzick* or *Spruce* Iron. This Nation owes the greateſt Improvements it has made in Trade, to the Art and Induſtry of ſome ingenious Mechanics that the Cruelty of the Duke of *Alva* drove into thoſe Parts. Their Succeſs invited great Numbers of reformed *Walloons* to tranſplant themſelves thither, whoſe Language and Religion remain in the Places they ſettled in; where they erected Forges and other Conveniencies for making of Iron Guns, Wire, and all other Manufactures of Copper, Braſs, and Iron; which for the moſt Part are ſtill carried on by their Poſterity.

The *Swediſh* Navigation was very inconſiderable till Queen *Chriſtiana*, at the Concluſion of the Wars in 1644, obtained from *Denmark* a Freedom from Cuſtoms for all Ships and Goods belonging to *Swediſh* Subjects in their Paſſage through the *Sound*, and eſtabliſhed in her own Dominions that Difference in Cuſtoms that ſtill ſubſiſts between *Swediſh* and foreign Ships, and is in Proportion of four, five, ſix; the firſt called Whole Free; the ſecond, Half; and the laſt, Unfree: So that where a Whole Free *Swediſh* Ship pays four hundred Crowns, Half Free pays five hundred, and a foreign Veſſel ſix hundred. But as great as this Advantage was it had but little Effect, till the *Engliſh* Act of Navigation bridled the *Hollanders*, and opened the Intercourſe between *England* and *Sweden*. Since that Time, their Commerce has been much augmented as well as ours, that Way; and Goods tranſported by both, or either Party, according to the various Junctures of Affairs.

When *Sweden* has been engaged in a War, the *Engliſh* Ships have had the whole Employ; but in Times of Peace, the Advantage is ſo great on the *Swediſh* Side, and Merchants ſo much encouraged by Freedom in Cuſtoms to employ their Ships, that *Engliſh* Bottoms cannot be uſed in that Trade, but while *Sweden* is unprovided with a Number of Ships ſufficient for the Tranſportation of their own Commodities. The chief Commodities of *Sweden* are Copper, Iron, Pitch, Tar, Maſts, Deals, and wooden Ware, to the Value of about ſeven hundred thouſand Pounds a Year. In Return of which they receive from Abroad, Salt, Wines, and Brandy, Cloths, Shifts, Tobacco, Sugar, Spices, Paper, Linnen, and ſeveral other Sorts of Goods; which are ſuppoſed commonly to balance their Exportations, and ſometimes exceed them. Their Trade to *Portugal* for Salt is accounted moſt neceſſary, as without great Quantities of which they cannot ſubſiſt. That with *England* is more beneficial, becauſe it takes off almoſt half their own Commodities, and brings in near two thirds of Money for one of Goods. The worſt is their *French* Trade, as it rather ſupplies their Vanities than their Neceſſities, and gives little or no Vent to the Commodities of the Country.

The general Direction of their Trade belongs to the College of Commerce; which conſiſts of the Preſident of the Treaſury, and four Counſellors, who hear Cauſes of that Nature, and redreſs any Diſorders that happen. The Bank at *Stockholm* is of great Benefit to Trade, as well in regard that the King's Cuſtoms for that City are paid in there; as alſo that the Merchants ordinarily make Payments to each other by Bills drawn upon it, which eaſes them of a great deal of Trouble in tranſporting their Money from Place to Place, that would otherwiſe be very difficult and chargeable. The Management of the Trade of *Sweden* has always been in the Hands of Strangers, moſt the Natives wanting either Capacity or Application, and all of them Stocks to drive it: For without Credit from Abroad, they are not able to keep their Iron Works going; and therefore at the Beginning of Winter they uſually made Contracts with the *Engliſh*, and other Foreigners, who then advance conſiderable Sums, and receive Iron in Summer.

Were it not for this Neceſſity foreign Merchants would have but little Encouragement, or ſcarce Permiſſion, to live and trade amongſt them; and even, as the Caſe ſtands, the Treatment of them is as rigorous as in any Country, occaſioned chiefly by the Burghers; who cannot, with any Patience, ſee a Stranger live among them. This is the leſs ſenſible to the *Dutch* and others, who ſome become Burghers, and the reſt by their near Way of Living are leſs ſubject to Envy; but is more eſpecially the Caſe of the *Engliſh* Merchants, who find it not their Intereſt to become Burghers, and uſually live ſomewhat too high. The Intereſt of *England* in the Trade of *Sweden*, may be computed by the Neceſſaries to us, and the Vent of ours there: Their Copper, Iron, Tar, Pitch, Maſts, *&c.* cannot be had elſewhere, except from *America*, whence it has been ſuppoſed ſuch Supplies were furniſhed; and, if ſo, this Conſideration ought in Reaſon to have an Influence on the *Swediſh* Counſels, and engage them to make the *Engliſh* Trade with them as eaſy as poſſible, that the Merchants be not driven upon new Deſigns. As to our Importations thither, it has already been ſaid that they ſcarce amount to one third of what we export from thence, and conſiſt chiefly of Cloth, Stuffs, and other woollen Manufactures, of which there have been formerly vended yearly there, to the Value of about fifty thouſand Pounds. Beſides thoſe, Tobacco, *Newcaſtle* Coals, Pewter, Lead, Tin, Fruits, and Sugar, with ſeveral other of our Commodities, are ſold at the Market; as alſo good Quantities of Herrings from *Scotland*, with other of their Wares: That in all, we are ſuppoſed to vend Goods to about one hundred thouſand Pounds a Year. If any more than Half be paid for it is looked on as very extraordinary.

But the making of Cloth in *Sweden* to ſupply the Army, *&c.* which has been formerly endeavoured without Succeſs, being now encouraged and aſſiſted by the Public, and undertaken, has of late, and does now, prove a great Hindrance to the Vent of our Cloth there. And to favour this Undertaking, *Engliſh* Cloth now (unleſs it be ſuch finer Cloths as cannot be made there) is clogged with ſuch exceſſive Duties as render the Importation impracticable. Theſe Undertakers have got Workmen from *Germany*, and ſome from *England*; and beſides the *German* Wool they uſe, they receive great Quantities from

Scotland, (ſuppoſed to be purchaſed out of *England*) without which they cannot work; yet, as at preſent, the *Engliſh* Trade in *Sweden* is of the Importance abovementioned, notwithſtanding the Abatements aforeſaid. It is, however, conſiderable, and will be ſo while their Commodities continue to be neceſſary, and thoſe that are concerned in it will deſerve, as they need, Protection and Encouragement.

The laſt Treaty of Commerce between the two Nations, expired ſeveral Years ago, and that of an older, neither ſuits the preſent State of Things, nor has been thought by the *Swedes* to ſubſiſt; tho' now, for their own Intereſt, they inſiſt upon the contrary: Accordingly their Treatment of the *Engliſh* only, in reference to their own Convenience; and as the Subject of former Complaint ſtill remains, ſo new Burdens are frequently impoſed upon them. Sometimes they have demanded of Merchants that were leaving the Country, a ſixth Part of their Eſtates they had got in it, and arreſted their Effects upon that Account. And beſides others that more directly concerns their Trade, the quartering of Soldiers, and paying of Contributions, have been enacted for ſome Years, and ſometimes the *Engliſh* are forced to ſubmit to it. In the Year 1687, they petitioned the King, for redreſs of theſe Impoſitions, which were then very high; upon ſome above fifty Pounds, upon others forty, thirty, *&c.* Beſides that, ſuch of them as kept Houſe had Soldiers quartered upon them, ſome three ſix, or eight. In anſwer to their Petition, a Placart was publiſhed, declaring, that they ſhould be exempt from theſe Payments, but withal, that no foreign Merchants ſhould continue to trade in *Sweden* above two Months in a Year, unleſs he would become a Burgher.

In purſuance of which Reſolution, their Warehouſes were ſhut up for ſome time, and the *Swedes* ſeem reſolved to proceed to Extremity, but have not put that Reſolution generally in Execution, though they ſeem to wait for an Opportunity, and now and then they try it upon particular Perſons, to ſee how foreign Princes will take it. The Law that exacts the third Part of ſuch foreign Merchants Eſtates as die in *Sweden*, has not in effect been ſo beneficial to the *Swedes*, as frightful to the Merchants, who for that and other Reaſons, never think of marrying and ſettling there ſo long as their Affairs are in good Order, and they in a Condition to return home with a competent Eſtate, and Credit too; from which Account *England* ſeems to be leſs concerned to endeavour the Repeal of that Law, it being more uſeful to have *Sweden* a Nurſery for young Merchants, than a Place of Settlement for thoſe that have got Eſtates.

11. Theſe Obſervations and Remarks upon the Kingdom of *Sweden* were written about fifty Years ago, and yet I judged it proper to inſert them here with very few Alterations; and this the rather, becauſe having taken ſome Pains to make myſelf Maſter of the Subject, I have been from thence led to judge, that it is not eaſy to obtain any thing relating thereto more perfect in its kind. The Judgment of its Author ſhines through the whole Piece, and ſhews that he was a very ſenſible, intelligent, and capable Perſon; one who underſtood both Mankind and Government perfectly well, who had many more Opportunities to make, as well as much more Leiſure to digeſt, his Inquiries than ordinary Travellers can be preſumed to have, and therefore his Accounts are more to be depended on, and his Reflections deſerve greater Regard than thoſe that occur in common Books of Travels.

It muſt be allowed that great Alterations have happened in *Sweden* ſince his Time. Upon the Death of the late King *Charles* XII. the *Swediſh* Nation very wiſely laid hold of that Opportunity to recover their ancient Conſtitution, to reſtrain the Power of the Crown within juſt Bounds, to reſtore that of the States, and of the Senate; and they have made the beſt Uſe that could be of this Alteration, by electing a Prince of the Royal Family to be the Succeſſor of the preſent King, and making the Crown hereditary in his Family; but in ſuch a Manner as is conſiſtent with their Freedom. They have likewiſe taken very juſt and prudent Precautions for preſerving, increaſing, and extending the Commerce of their Country, which, though at preſent leſs conſiderable than it formerly was, is, however, in ſuch Circumſtances as ſeem to promiſe the Recovery of its former interior Strength, which muſt be attended ſooner or later, with the Reſtoration of its ancient Grandeur, ſince both Reaſon and Experience teach us, that when due Care is taken for ſecuring the Peace, the Freedom, and Proſperity of any People at home, they certainly become reſpected by their Neighbours, and conſequently as conſiderable abroad, as it is conſiſtent with their own Intereſt and thoſe of their Neighbours that they ſhould be. After thus preſenting the Reader with a fair Idea of the State and Condition of *Sweden*, it is requiſite that we ſhould proceed to that of the next northern Crown, of which we ſhall ſpeak as clearly and as ſuccinctly as may be, without adhering to any particular Author, that we may take in a great Variety of Obſervations, and bring theſe within the narrower Compaſs.

SECTION III.

The preſent State of the Dominions of the Crown of DENMARK, *and of its Subjects, in reſpect to their Manners, Cuſtoms, Laws, Forces, Revenues, Commodities, and Commerce; with occaſional Obſervations and Remarks.*

Collected from the Writings of Mr. *Moleſworth*, and other Authors of Credit.

1. *An Introduction, ſhewing the Nature and Importance of this Section; and the Authorities upon which it is founded.* 2. *The Climate of the ſeveral Parts of the* Daniſh *Dominions, the Seas by which they are bounded, and the Nature of the Toll which the* Danes *exact in the* Sound. 3. *The Soil and Produce of the ſeveral Countries and Iſlands belonging to the Crown of* Denmark. 4. *Of the Commodities and Commerce of this Country.* 5. *Of the Forces of the* Danes *by Sea and Land.* 6. *Of the King's Revenues, and the Manner of Living, and the Amount of them.* 7. *The Temper, Genius, Manners and Cuſtoms of the* Danes. 8. *The Laws in this Country, with reſpect to Civil, Eccleſiaſtical, and Commercial Affairs.* 9. *The preſent State of Religion, and of their Clergy; with other Matters of the like Nature.* 10. *The Nature of the Tenures in* Denmark, *and the Manner in which Eſtates are held there; with other Particulars relative to that Subject.* 11. *Obſervations and Remarks upon the foregoing Section; with ſome Conjectures as to the future State of this Country and its Inhabitants.*

1. THERE is ſcare any Country in *Europe*, or at leaſt in the North, with which we ought to be better acquainted than with *Denmark*, conſidering that the Inhabitants of it were once Maſters of a great Part of this Iſland, that our Princes have frequently intermarried with the Families of the *Daniſh* Kings, and that we have ſtill as great Connection with this Kingdom and Court as with any of the Northen Powers. But notwithſtanding this it ſo happens that we are very far from being generally well informed as to this Nation and its Concerns. It is true that Mr. *Moleſworth*, who reſided at *Copenhagen* in the Reign of the late King *William*, has written a valuable and much eſteemed Treatiſe upon this Subject; in which he very fully explains the Cauſes of, and the Manner in which, that great Revolution happened, whereby the Kings of *Denmark* from being elective and limited became hereditary and abſolute in 1660. And by the Way it may not be amiſs to obſerve, that this is the only legal abſolute Monarchy, perhaps, in the World; the King being declared ſo by the States of the Kingdom, who had that Power by the Conſtitution.

It is indeed true that there was a Force put upon the Nobility; but it was a Force put upon them by the People, who knew that they made a very bad Uſe of the Authority they enjoyed in virtue of their old Conſtitution; and therefore made it their Choice to live under an abſolute King, rather than under a tyrannical Ariſtocracy. We may learn, from hence, ſeveral Things worthy of our Obſervation; and, among them, theſe: That when, in a mixed or limited Government, any Part of it gains ſuch a Superiority over the reſt as is deſtructive of the End of ſuch a Government, which is the Good of the whole, it cannot long ſubſiſt; but muſt infallibly be diſſolved, either by the Uſurpers of ſuch Power being in a Condition to preſerve it, or by the joining of the oppreſſed Parts of the Government; as in this Caſe, to raiſe up another Power capable of controlling ſuch an Uſurpation. That as a Democracy, or popular State, is, of all others, ſooneſt corrupted; ſo an Ariſtocracy, or Government by a few, is, when corrupted, the leaſt to be borne, eſpecially in States which have a viſible Head; and that, in ſuch Revolutions, the Change is ſeldom, if ever, from a tyrannical to a mixed Government; but from one deſpotic Power to another But though the Book before-mentioned ſtates thoſe Points very clearly; and, for the Time in which it was written, is certainly as good a one as can be wiſhed; yet it is now, in ſome Meaſure, out of Date: And, therefore, in order to have a tolerable Idea of the preſent State of this Country, we muſt have recourſe to other and later Obſervations.

The Dominions of the Crown of *Denmark* conſiſt of the great Kingdom of *Norway*, of which ſome Account has been given in the former Section, and therefore we ſhall ſay but little of it here; of the Peninſula of *Jutland*, which, from the Frontiers of *Germany* to its utmoſt northern Bounds, is about two hundred and ſeventy Miles in Length, and of different Breadths; of the Duchy of *Holſtein*, which the King of *Denmark* holds jointly with the Duke of that Title; of the *Daniſh* Iſlands, the Chief of which are *Zealand*, *Funen*, and *Iceland*; and of ſeveral Countries in *Germany*, ſuch as *Oldenbourg*, *Delmenhorſt*, and other Places, partly the hereditary Dominions of the Royal Family, and partly obtained by Conqueſt. We may eaſily diſcern, from hence, that this Crown muſt always have a conſiderable Share in the general Syſtem of Things in *Europe*, as well as in the particular Diſtribution of Power in the North; and conſequently, though its Dominions lie a little out of the way, and we do not very frequently hear of the Effects either of the Power or Policy of the Kings of *Denmark*, yet the Nature of their Dominions, and the Temper of their Subjects, is very well worth the knowing. For ſuch is the Nature of Things in this World, and ſuch the conſtant Fluctuation of Intereſt and Power, that we can never rely, with any Certainty, on the preſent Syſtem; nor can we eaſily foreſee what Turns or Changes may happen, ſo as to judge, with any Degree of Accuracy, which of the Powers, at preſent great, ſhall decline; or which of thoſe, that are now low, ſhall riſe, and become conſiderable, unleſs we look into their reſpective Conditions narrowly, and thereby gain ſome tolerable Notion of the Chances they have of changing their preſent Situations, either for the better or the worſe. After ſhewing, as we have done, the Uſe and Importance of the preſent Section, let us now proceed to the proper Buſineſs of it, with as much Clearneſs and Brevity as poſſible.

2. The Air of *Denmark* is not good, eſpecially near *Copenhagen*, which is ſuppoſed to proceed from its low Situation, and the frequent Fogs there. The Air of *Sleſwick* and *Holſtein* is better than that in the northern Parts, and the Country more deſirable upon many Accounts, as will appear hereafter. The ſame Obſervations are made as to the Seaſons in *Denmark* as in *Sweden*, viz. That the Year is divided into Winter and Summer; that they have no Spring, and very ſeldom any Autumn; but they proceed immediately from an extreme Cold to an Extremity of Heat; and, in the latter End of the Year, from violent hot Weather to an Extremity of Cold. During the Months of *June*, *July*, and *Auguſt*, the Heat is more intenſe than in *England*, and the Nights not near ſo cool as with us, though they are ſo many Degrees to the Northward; nor do they enjoy a clear Sunſhine during thoſe Heats, but thick Vapours all the time between them and the Sun: And indeed it is a general Obſervation, that the Heaven is much brighter and more ſerene far within the Continent, than it is near the Sea-coaſt; nor is the Air leſs clear and pleaſant at Sea, a great Diſtance from Land, than it is in the Middle of the Continent. But this Obſervation holds more true within the Tropics, than it does either in the Northern or the Southern Latitudes. The Air of *Norway* is exceſſive cold; but eſpecially within the Polar Circle, which is inhabited by the *Laplanders*. The more Southerly Part of the Country differs but little from *Sweden*, from which it is ſeparated only by the *Doffrine* Hills.

The Seas bordering on the *Daniſh* Dominions are the *German* Ocean, the *Baltic*, in which is that famous Streight or Paſſage into the *Eaſt-Sea*, called the *Ore Sound*, or generally the *Sound* of the *Baltic*. It hath been obſerved, that there are no Tides in it, and that its Waters are freſher than the Ocean, ſuppoſed to be occaſioned by the Rivers that run into it. The *Sound* is about four Miles over, having the Iſland of *Zealand* on the Weſt, and the Continent of *Schonen* on the Eaſt. In the narroweſt Part of the Streight of *Zealand*, or *Denmark* Side, ſtands the Town of *Elſenore*, and the ſtrong Caſtle of *Cronenbourg*, before which there is a tolerable Road for Shipping. On the Side of *Schonen*, in the Poſſeſſion of the *Swedes*, is the Town of *Helſingbourg*, and a ſmall Battery of Guns, which ſerve only to ſalute the Ships which paſs by it. Between thoſe two Places ſail all the Shipping bound to the *Baltic*. The *Danes*, however, only receive the Toll of all Merchantmen who paſs by it; though the *Swedes* are Maſters of the oppoſite Shore, by virtue of the Treaty concluded when they yielded up *Schonen* to them. But the *Swedes* themſelves were exempted from paying any Duties, till the laſt Peace in the Year 1721, when the Affairs of the *Swedes* were in a very deſperate Condition, and then they condeſcended to pay a Toll to *Denmark*, as other Nations did, on their paſſing the *Sound*.

This Duty is ſuppoſed to have ariſen from the mutual Conſent of the Merchants trading to the Eaſt Country, who at firſt contributed a ſmall Sum towards maintaining of Light-houſes on the Coaſt for their own Security; and thereupon this Paſſage of the *Sound* came to be more uſed than that of either *Belt* to the Weſtward of the Iſle of *Zealand*, which, in other Reſpects, ſeem as commodious as this. From ſome ſuch Beginnings the *Danes* proceeded to demand large Sums, and that as their undoubted Right, being Maſters of both Shores. The Emperor *Charles* V. in behalf of his Subjects of the ſeventeen Provinces of the *Low Countries*, came to an Agreement with the *Danes*, That every Ship of two hundred Tons and under, paſſing the *Sound*, ſhould pay two Roſe Nobles going and coming from the *Baltic*; and every Ship above that Burden, three Nobles; which Agreement remained in force until the United Provinces ſet up for independent States; after which the *Danes* obliged the *Dutch* to pay extravagant Rates.

But the *Hollanders* and *Lubeckers* oppoſing theſe Exactions about the Year 1600, obliged the *Danes* to accept of more moderate Duties. The firſt ſolemn Treaty the *Dutch* made with the *Danes* concerning this Toll was in the Year 1647, wherein they agreed to pay about twenty-five Pounds for every Ship of two hundred Tons paſſing the Streights for forty Years, at the Expiration of which, the firſt Agreement with the Emperor was to be in force. And the *Engliſh*, in their Treaties with *Denmark*, agreed to pay Toll as the *Dutch* and other Nations in Friendſhip with them did. As to the free States of *England* and *Holland*, they aſk no Permiſſion of the *Danes* to paſs the *Sound*; for the Caſtles on the Shores are at too great a Diſtance to prevent it, and, if they had not a Squadron of Men of War ready to compel the Merchant to pay the Toll, he might paſs by unhurt. Beſides, the Paſſage called the *Great Belt*, between the Iſlands of *Zealand* and *Funen* is much wider; and that of the *Leſſer Belt*, between *Funen* and the Continent of *Jutland* is not at all impracticable.

3. The Nature of the Soil, in Dominions ſo far extended, and ſo much disjoined, as thoſe of *Denmark* are, muſt be various. The Iſland of *Zealand*, wherein the capital City of *Copenhagen* ſtands, produces no Corn, but Rye, of which moſt of their Bread is made. Of this they have enough for the Subſiſtence of the Inhabitants, but not to export. There is not much Meadow or Paſture Ground in the Iſland; but what they have is ſhort and ſweet. One fourth Part of the Country is Foreſt, and reſerved for the King's Game, ſuch as Stags, wild Boars, *&c.* which no Subject dares meddle with, though he finds whole Herds of them devouring his Corn, and the Farmers are generally great Sufferers by them. In a wet Seaſon they have the greateſt Plenty of Grain in *Zealand*. Their Cattle are ſmall, and lean in the Winter, kept within Doors for ſeven or eight Months of the Year, and fed with Grains, Roots, Weeds, and ſuch Stuff as their Owners can provide; but in Summer, when there is Graſs to be had, their Beef is pretty good. Near *Copenhagen* the Sea is not ſtored with Fiſh, which is ſuppoſed to proceed from the Water not being ſo ſalt as that in other Seas. The Iſland of *Funen* produces Corn and Wood ſufficient for the Natives, and they have Cattle for their Uſe; but it affords nothing for Exportation, except a few Horſes. *Lapland* is a plentiful Iſland, and produces all Sorts of Corn in Abundance, particularly Wheat, with which it ſupplies *Copenhagen*, and all other Parts of *Denmark*, in ſmall Quantities; for Wheat is a great Rarity among them.

The Iſlands of *Falſtria*, *Langland*, and *Mona*, are reckoned tolerable fruitful; *Arroe* and *Alſen* produce Anniſeeds, which they mix with their Bread, and uſe it in ſeaſoning their Meat. *Jutland* hath Corn enough for the Natives, and abounds in Cattle. The Horſes and Hogs of this Country are reckoned very good, and black Cattle are tranſported lean from hence to *Holland*, where they grow fat in a ſhort time, of which the *Dutch* make a conſiderable Profit. The Country of *Sleſwick* hath a ſufficient Quantity of Corn, Cattle, and Horſes, with which they furniſh their Neighbours. *Holſtein* is a pleaſant, fruitful Country, ſaid to reſemble *England* in its Variety of Hills, Woods, Rivers, Meadows, and Corn Fields. *Stormar* and *Ditmarch* lie down near the *Elb*, being a rich Soil, compared to *Holland* for Fertility and Improvement of its Lands, which are ſometimes overflowed, however, by the neighbouring Ocean. *Oldenbourg* alſo is a flat Country, much expoſed to Inundations; but abounds in Cattle, and hath a Breed of Horſes eſteemed for being of a white or cream Colour; tho' they have generally tender Feet, and laſt but a little while. *Delmenhorſt* is a more hilly Country than *Oldenbourg*, and pretty well wooded. *Norway* and *Lapland* having been largely deſcribed in the firſt Section of this Chapter, there is no Need of dwelling upon them here.

The Iſlands of *Iceland*, *Fero*, and *Schetland* are almoſt as barren as *Norway*; Corn will ſcarce grow in any of them; but they abound in Cattle. The Natives of *Iceland* feed on the Fleſh of Bears, Wolves, and Foxes, and Bread made of dried Fiſh beat to Powder. They barter their dried Fiſh, Tallow, and Sulphur for ſuch other Commodities as they want. There are not, either in he Iſlands of *Iceland* or *Fero*, any Trees, except Juniper-ſhrubs, Birch, and Willows; but they have Roots, and other Garden-ſtuff, which, with their Fiſh, are their greateſt Support. They have good Paſture, and a tolerable Breed of Black Cattle, ſmall-ſized Horſes, and ſome Flocks of Sheep, and almoſt all manner of Roots and Herbs which grow in other Kitchen-gardens; and are pretty well ſtocked with Fiſh and Fowl. But the Cold is very ſevere in all theſe Iſlands, and their Winter is dark, as may eaſily be gathered from their Situation.

4. As to the Manufactures of *Denmark* and *Norway*, there are none, except that of Iron; which is not very conſiderable. *Holſtein* and *Sleſwick* ſeem to be extremely well ſituated for foreign Trade, lying both upon the *Baltic* and the Ocean; but reap little Advantage from their Situation at preſent. *Hamburgh* on one Side, and *Lubec* on the other, which border upon *Holſtein*, are indeed Towns of great Trade, and the *Dane* ſometimes pretends to the Sovereignty of *Hamburgh*; but, by the Countenance of the neighbouring Powers, that City hath hitherto preſerved her Liberties. *Jutland* and *Holſtein* export nothing but Horſes and Cattle. From *Norway*, indeed, there are great Quantities of Fir-timber, for Maſts, Yards, and Planks exported, with Pitch, Tar, Stock-fiſh, Oil, and Iron, for which they receive ready Money chiefly of the *Engliſh*; but of the *French*, Wine, Brandy, Alamodes, and other Trifles.

The *Danes* have ſome inconſiderable Factories in the *Weſt-Indies*, and on the Coaſts of *Guinea*; and in the *Eaſt-Indies*, they are Maſters of the City and Fort of *Tranquebar*, one of the moſt conſiderable Towns on the Eaſt-ſide of the Continent; and from hence are ſent home, ſome Years, two or three Ships. The *Dutch* have, for many Years, been endeavouring to undermine the *Danes* in the *Eaſt-Indies*, and make themſelves Maſters of the Town of *Tranquebar*, inciting the Natives to lay ſiege to it; and the *Danes* were in great Danger of loſing it about five-and-twenty Years ago; but were generouſly ſupported by Mr. *Pitt*, the Governor of *Fort St. George*, as we have ſhewn at large in our former Volume. The *Danes* are reckoned to have more Shipping than the *Swedes*, the Reaſon whereof may be, that *Norway* furniſhes a conſiderable Number of hardy Seamen, who are uſed to thoſe boiſterous Seas; and the *Dutch* alſo maintain great Numbers of *Norwegians* in their Fleets, where they live better than on their own barren Coaſts, which makes theſe People apply themſelves more to the Sea-ſervice than any other Subjects of *Denmark*; and there is always a conſiderable Number of them ready to man the royal Navy: Which brings us to enquire into the Strength and Forces of the *Danes* by Sea and Land.

5. We cannot enter upon this Head without making the ſame Reflections that Mr. *Moleſworth* does. It is certain that the levying Taxes here is not more grievous to the People, than the Reaſon for which they are levied; the Maintenance of a great ſtanding Army. The People are made Contributors to their own Miſery, and their Purſes drained in order to maintain their Slavery. The *French* King has taught the Princes of *Europe* that pernicious Secret of making one Part of the People bridle and ſcourge the other; which, in time, muſt needs end in a general Deſolation. The King of *Denmark* hath even endeavoured to exceed his Original, in raiſing more Men than his Country will maintain; and, at preſent, the Northern and *German* Princes eſtimate their Wealth not by the Fertility or Extent of their Territory, by the Trade or Induſtry of the People, but by the Numbers of Horſe and Foot in their Service; for the Subſiſtence of which, after they have eaten up their own Subjects, they make uſe of an hundred cruel and unjuſt Pretences to ruin and encroach on their Neighbours; and, when they cannot accompliſh ſuch Projects, foment Quarrels among other Princes, that they may have an Opportunity of letting out their Troops for Hire; and have found the Art of receiving Pay, without intereſting themſelves in the Quarrel; which hath been the conſtant Practice of the *Danes*, and ſome neighbouring Princes, for many Years paſt. Thoſe Practices, however, have been very pernicious to *Denmark*.

Nor have the *Danes* ſucceeded in any of their Attempts againſt the City of *Hamburgh*; but, in the laſt War, taking Advantage of the Diſtreſs the *Swedes* were reduced to by a potent Confederacy, the *Dane* made himſelf Maſter of *Bremen* and *Verden*, which he afterwards conveyed to the Sovereign of *Hanover*; and ſeized alſo on the late Duke of *Holſtein*'s Territories, in his Minority, which he ſtill keeps. It is computed that *Denmark*, *Holſtein*, and *Oldenbourg* maintain five thouſand four hundred and fifty Horſe, fifteen hundred Dragoons, and ſeventeen thouſand Foot. *Norway* maintains twelve hundred and thirty-ſix Horſe and Dragoons, and fourteen thouſand three hundred Foot, making in all a Body of near forty thouſand Men. The Foot Soldiers, both Officers and private Men, are generally Foreigners, of all Countries, *Poles*, *Germans*, *Swedes*, *Scots*, &c. There are more Reaſons than one for not employing too many of the Natives; but the principal, leaſt they ſhould ſhew too much Affection to their own Country and not ſo readily obey the arbitrary Commands of their Princes. Officers of Horſe receive no more Pay, in time of Peace, than thoſe of the Foot. The Horſe are uſually Natives, and maintained every one by a Free-holder or Farmer, who is obliged to provide him and his Horſe Meat, and ſix Shillings a Month in Money, half of which the Colonel takes towards his Mounting; and in *Holſtein* they have ſomething better Pay than in *Denmark*. In *Norway* little Money is expended in paying the Forces; the private Soldiers being quartered by the Boors, and, which is an heavy Burthen, ſubſiſted by them.

For the Sea-Service three thouſand Mariners are conſtantly maintained at *Copenhagen*, as well in Peace as War; having a weekly Allowance of Salt, Fleſh, Stock-Fiſh, or Meal, Grout, *&c.* for themſelves and their Families, and about eighty Rix-Dollars a Year in Money. And there are ſeveral Streets of little Houſes, or Barracks, near the Walls where they live, and where their Wives and Children reſide while they are at Sea. Their Buſineſs, in time of Peace, is to work in the King's Yards and Docks, which are over-againſt the Palace in *Copenhagen*, where they take it by Turns to ſerve in all laborious Works relating to the Shipping; and once a Year it is uſual to equip a ſmall Squadron of Men of War, and ſail with them two or three Months for exerciſing the Sailors. All the Officers in the Fleet are in conſtant Pay, as well in Peace as War; and the *Danes* compute, that they can rig out thirty Sail of Men of War and upwards at a very ſhort Warning.

6. The King's Revenues ariſe from the Duties paid by his own Subjects, the Cuſtoms paid by Foreigners, the Crown Lands, Fines, and Confiſcations. The Taxes paid by his Subjects are either fixed or variable; that is, the Prince, in ſome Caſes, chuſes to follow a certain Rule, eſtabliſhed by himſelf; which, he may, however alter, if he ſees fit, and in others he frequently varies. Of the firſt Sort are the Duties of Import and Export, and the Exciſe commmonly called Conſumption laid upon every thing that is eat or drank in the Kingdom. There are alſo Duties paid for Marriage Licences, Duties on Stamp-Paper; on which all Bargains, Contracts, Proceedings at Law, *&c.* are written; ſome of theſe Duties amounting to ſeveral Rix-Dollars *per* Sheet. Duties are alſo laid upon Brewing and Malt, and Corn that is ground on Mills. Theſe Duties are certain, or ſeldom altered. The uncertain Duties are the Taxes on Land, which are not aſſeſſed by the Acre, but according to the annual Value of the Farm. Poll-Money impoſed upon every one according to the perſonal Eſtate he is ſuppoſed to have, which is ſometimes levied twice a Year. Money levied for erecting or repairing the Fortifications.

An occaſional Tax, raiſed only when a Daughter of *Denmark* is to be married, whoſe Portion is uſually an hundred thouſand Crowns. A Tax laid upon every Tradeſman for the Liberty of exerciſing his Calling, and the Gain he is ſuppoſed to make by it, who is obliged alſo to quarter Soldiers. The Ground-Rents, in all Cities and Towns, which the King taxes, according to the Value of the Houſe or the Ability of the Poſſeſſor. In *Holſtein* the Lands are taxed according to the Ploughs, each Plough paying a certain Sum every Month. Not many Years ſince an Eſtimate was made of all the Houſes in the Cities and Towns in the King's Dominions; and all the Lands were meaſured, that the Crown might the better underſtand their Value; and the Ground-Tax, in the Cities and Towns, was aſſeſſed at four *per Cent.* of the whole Value the Ground was rated at, if it was to be purchaſed; and the like Proportion was obſerved towards others, in regard to their Houſes and Profeſſion. The moſt moderate Aſſeſſment of their Poll-Tax is according to the following Proportion, *viz.* A Citizen worth eight or ten thouſand Rix-Dollars pays four Rix-Dollars for himſelf, four for his Wifs, two for every Child, and one for each Servant, and for every Horſe a Rix-Dollar. An Alehouſe-keeper pays one Rix-Dollar for himſelf, another for his Wife, twenty-four Stivers for every Child, and ſixteen for every Servant. The Fortification Tax is uſually high. A Merchant worth ſix or eight thouſand Rix-Dollars, hath ſometimes paid ſixty-eight Dollars, an ordinary Citizen eight or ten, and others in Proportion.

A late Writer hath computed the Revenues of the Crown of *Denmark*, as follows: The Toll of the Sound at 65,000 Rix-Dollars *per Ann.* The reſt of the Toll of *Denmark* farmed at 165,000 Rix-Dollars. The Conſumption or Exciſe of *Copenhagen*, farmed at 140,000 Rix-Dollars. The Conſumption of the reſt of *Denmark* at 140,000 Rix-Dollars. The ſmaller Taxes of *Denmark* at 100,000 Rix-Dollars. Poll-Tax, Fortification-Tax, Ground-Rents and Land-Tax, at 100,000 Rix-Dollars. The whole Revenue of *Norway* at 700,000 Rix-Dollars. The Crown-Lands, Confiſcations, *&c.* at 200,000 Rix-Dollars. The Revenue of *Iceland* farmed at 27,000 Rix-Dollars. *Oldenbourg* and *Delmenhorſt* 8000 Rix-Dollars; and the Toll upon the *Weſer* 5000 Rix-Dollars: So that the whole Revenue of *Denmark* amounts to 2,622,000 Rix-Dollars *per Ann.* But as the Gentleman, who makes this Calculation, obſerves that the Poll-Tax and Fortification-Tax are never raiſed the ſame Year; we muſt, upon that Account, deduct 400,000 Rix-Dollars out of the Sum total, and the whole Revenue will then amount to two Millions two hundred twenty-two thouſand Rix-Dollars, or about five hundred thouſand Pounds of our Money, which in that Part of the World will go near as far as three Times the Sum with us, conſidering the Cheapneſs of Proviſion and Labour in *Denmark* and *Norway*.

7. As to the Perſons of the *Danes* they are generally tall, and ſtrong limbed; their Complexion good; their Hair fair, yellow, or red; and as few of the Men wear Wigs, they take a great deal of Pains in curling their yellow Locks; neither Men nor Women are aſhamed of red Hair, or endeavour to change the Colour. They have bad Shapes, and their Mien is not to be admired. When we ſee the *Daniſh* Women ſitting in a Coach or Chair, ſome of them appear exquiſitely beautiful; but if they riſe and attempt to walk they ſpoil all. Both Ladies and Gentlemen in Summer affect to imitate the *French* Dreſs; but in Winter wrap themſelves up in Furs or Wool, like the reſt of the Northern People. They are neat in their Linnen, changing it often, and affect too much Magnificence. It is obſerved that *Denmark* ſeldom produces a great Genius; they are not good at Invention or Imitation, and are neither deeply learned, nor exquiſite Mechanics. Polite Learning they are perfect Strangers to, and few Books are found amongſt them, except thoſe of controverſial Religion.

Mr. *Moleſworth*, in ſumming up their Character, ſays, he never knew a Country where the Minds of People were more upon a Level. As we find none of extraordinary Parts or Qualifications, or excellent in particular Studies or Arts, ſo we ſee no Enthuſiaſts, Madmen, natural Fools, or whimſical People, but a certain Equality of Underſtanding reigns among them; every one plods on in the ordinary Track of Common ſenſe, without deviating to the right or left. The common People, however, in general, write and read, and their Clergy uſually talk *Latin*, but not in the greateſt Purity. The Vices the Gentry are moſt addicted to, are Gluttony and Drunkenneſs. When they ſit down to eat and drink, they never know when to riſe, but the Debauch ſometimes continues whole Days and Nights. The firſt Thing a Friend is preſented with at his coming into the Houſe is a Dram of Brandy; and they are no ſooner ſet down to Dinner, but every Man and Woman hath alſo a Glaſs ſet by their Plate, and on propoſing a Health take off their Glaſſes together, and by that means make a quick Diſpatch. The Women indeed retire after Dinner, but the Men ſit it out till they have loſt (which is not ſoon done) their little Senſe.

The Liquors drank by People of Condition are *Rheniſh*-Wines, Cherry-Brandy, and all Sorts of *French*-Wines. The Men are fond of them, and the fair Sex do not refuſe them. The poor People indulge in bad Beer and Spirits extracted from Malt or Barley. Nor do the *Norwegians* who can afford it come behind the *Danes*; 'tis the Cuſtom of the Country; and both among the Gentry and common People, Lewdneſs and Intemperance paſs for Wit and ingenious Converſation. As to their Eating, the Tables of People of Condition are covered with a Variety of Diſhes; but the Fleſh, except Beef and Veal, is generally lean and ill taſted; their tame Fowls and wild Ducks are ſcarce eatable. There are no fallow Deer, Woodcocks, Pheaſants or Rabbets; and red Deer are the King's Game, and not to be purchaſed. Their Hares and their Bacon are excellent, as are their freſh-water Fiſh, particularly the Carp, Perch, and Craw-fiſh; but Sea-fiſh is ſcarce and ill taſted; and in general, their Cookery is not agreeable to an *Engliſh* Palate. The common People in Town and Country live upon coarſe Rye Bread, lean ſalt Fiſh, Stock-Fiſh, Roots, and very bad Cheeſe, ſeldom taſting freſh Fiſh, and hardly ever Fleſh. As to the Character of the common People, they are poor, and mean-ſpirited, far from the warlike Temper of their Anceſtors, inclined to cheating, and intolerably jealous and ſuſpicious that others have a Deſign upon them; which may be obſerved to be the Caſe of moſt Men of limited Underſtandings. In our Age, ſays *Puffendorf*, the *Danes* have loſt much of their ancient Glory, becauſe the preſent Nobility and Gentry are rather for enjoying their Revenues in Eaſe and Luxury, than for undergoing the Fatigues of War; and the Commonality have followed their Example.

The *Norwegians* undergo all kinds of Hardſhips with more Courage and Vigour, to which they are inured by the Climate they live in; but the *Danes* ever ſince they have been Maſters of *Norway*, have endeavoured to depreſs and keep that People under, by taking from them all the Opportunities of exerting themſelves; and there are now very few of the ancient Nobility left in *Norway*. The *Danes* travel either in Waggons, on Horſeback, or in Sledges; and there is an Officer who regulates the Prices of Carriage, and puniſhes thoſe who extort more than their Due. If any Gentleman can procure a Warrant from the Court, when he is about to undertake a Journey, the Peaſants or Farmers are obliged to furniſh him with Horſes and Carriage, in every Country through which he paſſes, without being allowed any thing, as they do for the King and Court whenever they travel. The *Danes* have their Playhouſe for their Diverſion; they take their Pleaſure alſo in their Sleds upon the Ice in Winter. But downright Drinking is their favourite Recreation; the moſt ſerious Affairs ſubmit to this, the great Buſineſs of the Day and Night. Nor do the *Danes* indulge more in Eating and Drinking than in their Lodging; for as there is no Place where there is greater Plenty of good Feather-beds, they lay one under, another over them, all the Winter Seaſon. But Lodgings for Strangers are procured with Difficulty in private Houſes, and in Public-Houſes they are obliged to eat and ſleep, in common, no Man being allowed a Room to himſelf, except his Quality be very high indeed.

8. The King of *Denmark* is the great Interpreter of his Laws, and can change them at Pleaſure. He is the ſupreme Judge and Preſident of the High Court of Juſtice, when he pleaſes to ſit there, which is not often: However, whether preſent or abſent, the Advocates always addreſs themſelves to the King. The Princes of the Blood, and the Nobility and Gentry, are commonly tried in this High Court; and the Super-intendants, or Biſhops, have the ſame Privilege, if charged with Hereſy, or any other notorious Crime. Where any Perſon calumniates the Government, or the Adminiſtration, he is declared infamous, and his Goods confiſcated; but if ſuch Diſcourſes tend to a Sedition, they are to be puniſhed with the utmoſt Severity. As to thoſe who endeavour to defame a Magiſtrate, either Civil or Eccleſiaſtical, or injure the Reputation of a Perſon of Honour, by Writing, or otherwiſe, they are to pay eighty Rix-Dollars to the Party grieved, and a Fine of three Marks to the Crown; and in Default of Payment are condemned to the Pillory, and to carry Stones for the Repair of the Fortifications and public Buildings. If any Perſon refuſes to take up Arms, and ſerve the Government, either by Sea or Land, in Caſe of an Invaſion, when he is ſummoned to attend the Royal Standard, he is to be declared infamous, and to forfeit his Eſtate.

A Perſon guilty of Theft is not only ſentenced to be whipped, and to hard Labour in the public Works, but to reſtore double the Value of the Goods ſtolen to the Owner. Coining is puniſhed with the Loſs of Life and Honour, and Confiſcation of the Eſtate of the Offender, and the ſame Puniſhment is inflicted on him who removes an antient Landmark. He who counterfeits the Hand and Seal of another, or forges a Writing, is ſentenced to have his Head cut off; his Goods confiſcated and declared infamous. The Torture is ſeldom uſed in *Denmark*, but in Caſes of High Treaſon; and then only upon Perſons already convicted of the ſame Crime, in order to make them diſcover their Accomplices. Duels, and even the challenging another to fight is puniſhed with the Loſs of Life and Eſtate; and Seconds, who do not endeavour to prevent it, are puniſhed in like manner. He who is killed in a Duel is not ſuffered to be buried in conſecrated Ground; whoever reflects upon another for refuſing a Challenge, is puniſhable, and declared infamous by a *Daniſh* Law. In Caſes of Shipwrecks, the *Daniſh* Subjects are required to give all imaginable Aſſiſtance to thoſe in Diſtreſs, and to preſerve the Goods for the Owner's Uſe.

The Ships which guard the Coaſts are directed to ſave what Effects they can, for which they have a moderate Reward; and the Owners are permitted to ſell them in the Country, or embark them on board other Veſſels. If a Ship or Goods be driven on the Coaſt, and no body appears to claim them, the King's Officers, or the Lord of the Manor takes care to preſerve them; or if they are periſhable Goods they ſell them to the beſt Advantage, and reſtore them to the Owner; but if they are not reclaimed within a Year and a Day, they become the Property of the King, or the Lord of the Place. If the Maſter of any Ship finds Goods floating on the Sea, he is to take Care of, and deliver them to the next Magiſtrate, who muſt keep them a Year and a Day, to ſee if any one can claim them; and if no body owns them they belong to the King; and if any conceal or embezzle ſuch wrecked Goods, he is to be puniſhed as a *Felon*; and the Law is much the ſame where the Perſon finds Goods or Cattle upon the Road; for he is obliged to publiſh them in the Court of the Diſtrict, and can have no Property in the Goods till a Year and a Day be paſt, where no body comes in to reclaim them.

There being but one Univerſity in *Denmark*, a Divinity Reader is appointed to reſide in every Cathedral, to expound the Scriptures to the People; and theſe Divinity Readers, as well as the Maſters of Colleges, are examined by the Profeſſors of the Royal Academy of *Copenhagen* before they are admitted to officiate; private Schools are expreſly prohibited by the Laws of *Denmark*, and none allowed but thoſe eſtabliſhed by public Authority in the Cities and great Towns; and they have two or three Maſters belonging to each School, who have taken their Degree of Maſters of Art at leaſt, as well as the Rector. The firſt Maſter or Rector, is choſen by the Super-intendant, or Biſhop, having paſſed an Examination before him and the Miniſter of the Pariſh. The Under-Maſters are appointed by the Rector, with the Approbation of the Miniſter of the Place. The leſſer Schools, where only Writing and Accompts are taught, are appointed by the

Magiſtrate; the Teacher having been firſt examined by the Prieſt of the Pariſh, who is alſo to take Care that they are inſtructed in the *Lutheran* Doctrine.

No Perſon is at Liberty to ſend a Tutor to travel with his Son, who hath not been firſt examined by the Super-intendant of the Dioceſe, and found to be orthodox in Religion; and the ſame is required where one takes a Tutor into his Houſe, who alſo ought to be a Student of the Univerſity of *Copenhagen.* As no other Method of Teaching is allowed, than that preſcribed by the Government; ſo no other Books may be read, but ſuch as are approved by Authority, which are compoſed by the Profeſſors of their Univerſity. The Importation of Books is alſo prohibited, eſpecially thoſe which treat of any other Sort of Religion, than that eſtabliſhed amongſt them. No other Calendars or Almanacks are allowed to be publiſhed than thoſe made by the Order of the Rector and Senate of the Univerſity, on Pain of Confiſcation of Goods; they are prohibited alſo to inſert in them Predictions relating to War, Plague, or Famine, or any other Calamities.

9. The Clergy of this Kingdom are divided into three Claſſes *viz.* Super-intendants or Biſhops, Intendants, which ſome compare to our Arch-deacons, and Curates or Pariſh Prieſts. The Super-intendant is obliged to viſit his Dioceſe once every Year, and to lie in the Perſon's Houſe, when he comes to any Place; who is to entertain him, Servants and four Horſes, *gratis.* The Super-intendants are conſecrated by the Biſhop, or Super-intendant of *Zealand*, aſſiſted by five or ſix Prieſts; but are all nominated by the King. The Peaſants, who pay Tithes of all their Corn, Cattle, Poultry, and Bees, pay one Third thereof to the Crown, another to the Biſhop and other Uſes of the Church, and the remaining Third to their Pariſh Clerk. But of Graſs and Fruits which grow ſpontaneouſly no Tithes are paid; there are ſome other Dues alſo payable to the Clergy by the Peaſants, for Confeſſion, Burials, Marriages, *&c.*

The Super-intendant holds a kind of Synod twice a Year, conſiſting of the Intendant in his Dioceſe, where the Governor of the Province preſides for the King. The Overſeers are choſen by the Pariſh Prieſts of each County or Diſtrict, in Conjunction with the Super-intendant; and he is obliged to viſit all the Pariſhes under his Inſpection once a Year, at leaſt, and hath a Power of cenſuring the Lives and Converſations of the Prieſts in their reſpective Diviſions. They ſee that the Churches are kept in repair, and that their Revenues are not alienated or miſapplied. No Perſon can be admitted into Prieſts Orders until he hath a Cure provided for him. He muſt have a Certificate alſo from the Divinity-Profeſſor of the Univerſity, concerning the Progreſs he hath made in his Studies, and his Qualifications for the Pulpit; and if he do not come immediately from the Univerſity, he muſt have them from the Overſeer and Pariſh Prieſt, where he reſides; and if the Super-intendant approves of the Clerk, he is inſtituted and inducted as with us. But their Law requires, that none be admitted into Prieſts Orders who are under five and twenty Years of Age; and the giving any Money, or Conſideration, either for Orders or the Preſentment to a Living, is forbidden. And they are obliged to perform Divine Service according to the eſtabliſhed Form or Ritual, obſerved at St. *Mary*'s in *Copenhagen.*

They are obliged to pray for the King and Magiſtracy, and for the Propagation of the Goſpel; and are prohibited to admit any to the Sacrament, who have not firſt been at Confeſſion. But the Penitent, it is ſaid, need not give an Account of every particular Sin. A general Confeſſion, according to the Order the Commands ſtand in, intitles him to Abſolution. The Prieſt is alſo forbid to take any Money, which the *Lutheran* Miniſters frequently do notwithſtanding. The Prieſt may not divulge the Confeſſion of any one, where it is particular; unleſs in Caſes of High Treaſon, or for the Prevention of ſome great Miſchief by ſuch Diſcovery, on Pain of Deprivation; and in this Caſe the Name of the Penitent ought to be concealed as long as poſſible. The *Danes* look upon all who have any Service appointed them in the Church as Eccleſiaſtics; and they are accordingly taken from among the Students, whether they be Clerks, Sextons, or Singingmen, and wholly depend on the Prieſt or Curate of the Pariſh. The Lands of every Perſon convicted of turning Papiſt are forfeited to the next Heir, unleſs he diſpoſes of them before he changes his Religion, and ſuch Apoſtate is baniſhed the *Daniſh* Dominions. Whoever hath received his Education from the Jeſuits is diſabled to have any Employment, Eccleſiaſtical or Civil, and Popiſh Prieſts are prohibited to enter the *Daniſh* Dominions, on Pain of Death; nor is their Law leſs ſevere againſt thoſe they denominate Heretics. *Jews* are forbid to come into the Kingdom without a Royal Licence; and whoſoever diſcovers a *Jew* is intitled to a Reward of fifty Crowns. Their Laws alſo are pretty ſevere againſt Gypſies and Fortune-tellers, who pretend to foretell future Events, and to be acquainted with the Stars; Baniſhment being the Pain of the firſt Offence, and the ſecond Capital. Blaſphemers of GOD and Religion are ſentenced, firſt, to have the Tongues cut out, and afterwards to loſe their Heads; and if their Prieſt or Eccleſiaſtic is guilty of profaning the Name of GOD; or of any other notorious Vice, his Puniſhment is heavier than that of a Layman.

Their Laws concerning Marriage, require that the Conſent of the Relations be had as well as the Woman's. And if ſhe marries without the Conſent of the Guardian, he ſhall receive the Profit of her Fortune during his Life; but if a Guardian neglect to marry his Ward till ſhe is paſt eighteen Years of Age, the Magiſtrate is impowered to relieve her. Their Marriages are diſſolvable, and a Divorce may be obtained in *Denmark* for Adultery; on a voluntary and malicious Elopement; and for Impotence; but in caſe of Adultery the Crime muſt be well proved by Witneſſes, or Circumſtances, the Confeſſion of the offending Party not being ſufficient, ſince many have falſely accuſed themſelves, in order to obtain a Separation: The *Daniſh* Law alſo requires, that the Party who brings the Accuſation be innocent; for otherwiſe no Divorce can be obtained; unleſs it appear, that the ill Uſage of the Huſband hath occaſioned the Wife to offend; and if the Huſband, after he has diſcovered his Wife to be guilty of Adultery, ſhall cohabit with her afterwards, a Separation will not be granted. Where a Woman is divorced for Adultery, ſhe may marry again after three Years are elaſped, with a Royal Licence, provided ſhe has lived chaſtely during that Time; but ſhe may not marry, or reſide within the ſaid Town, or Diſtrict, where her former Huſband lived; and the like where the former Huſband is divorced for Adultery, committed by him; but the innocent Party is at Liberty to marry ſo ſoon as the Sentence of Divorce is pronounced. What they term a malicious Elopement, is where one of the Parties abſents him, or herſelf, from his, or her Spouſe, by the Space of three Years; but if the Party deſerted hath cohabited with another in the mean, time, a Divorce cannot be obtained on this Account.

10. A Man is not to ſell or alienate his Lands before he is five and twenty Years of Age, without the Conſent of his neareſt Relation; and a Woman, whether ſhe be Maid or Widow, can never part with her Lands, but muſt leave them to deſcend as the Law directs. An uninterrupted Poſſeſſion of twenty Years is held to make a good Title, and they are not permitted to run further back in a Trial of the Right. All Obligations alſo, and perſonal Debts, are held to be void if not renewed within twenty Years; for Notes, and Bills of Exchange, are of equal Force with an Obligation; but the Law allows eight Days for all kinds of Payments to be made beyond the Time prefixed, and if that Time be elaſped four and twenty Hours, the Creditor may proteſt it, and have Proceſſes thereon againſt the original Debtor or Acceptor. No Perſon is obliged to pay any Money loſt at Gaming.

The Tenure of Villainage ſtill prevails in many Parts of *Denmark*; and their Vaſſals, or Tenants, who hold by this baſe Tenure, are purchaſed, and deſcend with the Lands they live upon, like Fiſh in the Waters, or Deer in a Park; nor can theſe Peaſants leave the Lands they belong to, and retire elſewhere; if they do, the Lord of the Soil may reclaim them, with their Goods; nor can any Town or Place receive them, unleſs they produce a Licence from their Lord, and a Certificate from the Miniſter of the Pariſh where they laſt inhabited: And if a Peaſant of this Claſs endeavours to conceal himſelf, his Lord may ſeize him, and put him in Priſon, or remove him to any other Tenement or Farm, by way of Puniſhment. And if the Wife of one of theſe Peaſants be brought to-bed on the Lands of another Lord, the Child ſhall, however, belong to the Lord where the Father lives. Although the Lord has a Power to infranchize his Peaſant, or ſell him with the Land, yet he cannot ſell him ſingly or ſeparate from the Manor or Eſtate. The Children of the Eccleſiaſticks of the Peaſants Race are free, and ſo are all Students in the liberal Arts.

A Peaſant cannot have the Freedom of any Town till he is firſt infranchiſed by the Lord; but if he hath reſided ten Years in any City unreclaimed, and becomes a Tradeſman, or Artificer, or applies himſelf to the Sea, he is free. A Peaſant alſo who hath lived twenty Years in a foreign Village out of the Lord's Land, thereby procures his Freedom; or if he goes into the Army and obtains a Commiſſion, this gives him his Freedom. As to Game Laws, every Freeholder may hunt, and fiſh in his own Grounds; and the Nobility and Gentry have the Privilege of hunting in common or waſte Grounds within ten Miles of their Seats, except in the King's Parks; and they may fiſh in Lakes and Ponds which are not the King's; but if any Lord hunt, ſhoot, or fiſh, in any Place belonging to his Majeſty, he forfeits for every Stag one thouſand Rix-Dollars, for a fallow Deer eight hundred, for a Hare four hundred; and for every Swan, Gooſe, Duck, Partridge, or other Fowl two hundred. And whoever is convicted of hunting in another's Lands, forfeits an hundred Ounces of Silver for every Offence.

The People in this Country being pretty much addicted to drinking, all Buſineſs is prohibited to be tranſacted in Taverns, and the ſitting in public Houſes very much diſcouraged; if they will drink, it muſt be at home: And the Reaſon of it is ſuppoſed to be, leſt the People in their Cups ſhould be too free with the Government. It is obſerved alſo, that the Subjects uſually endeavour to imitate the Court: If it happens to be a ſober Reign, the People are leſs given to Exceſs; and where they have luxurious Princes and Miniſters, the lower Part of Mankind do not fail to follow the lewd Example their Superiors ſet them; which is alſo practiſed in other Places. If any Perſon ſends his Effects or Money out of the Kingdom, to be lodged in foreign Banks, the King claims a ſixth Part, and he is obliged to pay a tenth to the Magiſtrates of the Town, or the Lord of the Soil where he reſides; even foreign Merchants have been obliged to ſubmit to theſe Exactions in their returning home, notwithſtanding their reſpective Sovereigns have inſiſted upon an Exemption.

II. The great Alteration that has happened in *Denmark*, from the changing the Monarchy from elective to hereditary, and from being the moſt limited, into the moſt abſolute of any in *Europe*, has had a very ſtrong Effect upon all Ranks and Degrees of People in that Country; and may be ſaid, in ſome Meaſure, to have made a total Change in their Temper, and in the Nation. The Nobility of *Denmark* who were formerly as remarkable for their military Virtues as any in *Europe*, are now very ſeldom mentioned; and thoſe of *Norway* are in a manner extinguiſhed. The *Danes* have a better Army it is true, than they had formerly, but it is an Army entirely in the Diſpoſition of the King, and not, as before, ſufficient to make any great Conqueſts. The naval Force of *Denmark* is more conſiderable; but yet it does not appear capable of ſtriking any great Terror into its Neighbours; whence we may conclude, and that too very juſtly, that the Crown of *Denmark* is far from being ſo formidable as it was in former Times; yet, with reſpect to its own Security, it ſeems to be as well or better provided than ever; for whereas the *Swedes* in the laſt Age, were more than once on the very Point of deſtroying this Kingdom, there is not now the leaſt Danger either of their undertaking or effecting any ſuch Deſign; becauſe the Neighbours of *Denmark*, and the Maritime Powers are bound, both by their Treaties and their Intereſts, to ſupport this Crown if it ſhould be attacked. It is indeed true, that if the Houſe of *Holſtein* ſhould ſucceed to the full and peaceable Poſſeſſion of the *Ruſſian* Dominions, *Denmark* might be in great Danger from thence, as well on Account of the ſuperior Forces of that Empire, as becauſe the Houſe of *Holſtein* have very conſiderable Claims upon *Denmark*, which are hitherto unadjuſted. But on the other Side it is to be conſidered, that as yet that Succeſſion has not taken place, and that in all Probability it will be found more for the Intereſt of the *Ruſſian* Empire to adjuſt thoſe Diſputes amicably, before that Succeſſion takes place, than to run the Hazard of a War about them; which might, and indeed muſt, be attended with many dangerous Conſequences, conſidering how many Powers are intereſted in the Support of *Denmark*, even with Regard to theſe very Claims of the Houſe of *Holſtein* upon her.

According therefore to the beſt Maxims of Policy, we may very fairly conclude, that in Caſe the Kings of *Denmark* act with the ſame Prudence and Caution that they have done for many Years paſt, they will be in a Condition to preſerve what they at preſent enjoy, and be alſo at Liberty to promote and improve the domeſtic Proſperity of their Subjects. By this I mean, their Application to Manufactures and Commerce, which have been greatly encouraged of late Years, and this Encouragement has been likewiſe attended with all the Succeſs they could reaſonably expect. We have ſhewn, in ſpeaking of *Groenland*, that the Subjects of *Denmark* have eſtabliſhed conſiderable Colonies there, and are in Poſſeſſion of a very beneficial Trade upon thoſe Coaſts. We may ſay the ſame thing with reſpect to *Iceland*, the Trade of which is entirely in their Poſſeſſion, and that of *Norway* alſo is much improved and extended: But beſides all this, as we have ſhewn in a former Volume, an *Eaſt-India* Company has been long ſettled at *Copenhagen*, and is now in a flouriſhing Condition. We are alſo to obſerve, that within theſe few Years the *Danes* have opened a Trade to the *Mediterranean*; and as the preſent Monarch ſeems to follow cloſely the Examples of his Predeceſſors, in avoiding as much as poſſible entering in any Degree into the Troubles and Diſputes that for ſeveral Years have kept *Europe* in a Flame, with a View not only to preſerve the Quiet of his Subjects, but to cultivate alſo the Arts of Peace; we have Reaſon therefore to conclude, that in the Space of a few Years, the good Effects of this wiſe Conduct will appear, and the People become much richer than formerly. It is alſo very likely, that when theſe happy Conſequences of a growing and flouriſhing Trade become more conſpicuous, the Government will find it expedient and even neceſſary to relax ſome of thoſe ſevere Laws which are moſt likely to bear hard upon Perſons engaged in Traffic; for without ſuch Indulgences it is impoſſible that the Schemes the *Daniſh* Monarchs ſeem of late to have ſo much at heart, ſhould be ever brought to Perfection.

We may add to all this, that the Benefits immediately reſulting to the Crown from the Increaſe of the Commerce and Navigation of its Subjects, will ſo fully compenſate for ſuch Diminutions of Power, that it is impoſſible any juſt and good Prince, or any wiſe and able Miniſtry ſhould doubt, as to the Propriety of ſuch reaſonable and moderate Changes. By theſe Methods the interior Strength of the Kingdom will be daily augmenting; the Shipping, and conſequently the naval Force, of *Denmark* continually increaſing, and though theſe Advantages may be ſlow in their Nature, yet they are at the ſame time ſo very certain, and of ſuch high Importance, that I make no Scruple of affirming they will, if ſteadily proſecuted, change the whole Face of Affairs in this Country; and before the Cloſe of the preſent Century, reſtore the antient Luſtre of the Crown of *Denmark*, and perhaps raiſe its Sovereigns to a higher Rank, than hitherto they have ever held amongſt the *European* Powers.

SECTION IV.

A comprehenſive Account of the Kingdom of POLAND, *the Situation, Extent, Climate, Soil, Produce, and Commerce of that Country, together with the Laws, Cuſtoms, Manners, Form of Government, and Genius of the Inhabitants; the Privileges of their Nobility, and Power of their Kings.*

Collected chiefly from the Writings of Dr. *Bernard Conner*, who reſided in that Kingdom in Quality of Phyſician to King *John Sobieſki.*

1. *The Situation, Extent, and Limits of the* Poliſh *Dominions, including the grand Duchy of* Lithuania *and that Part of* Pruſſia *which belongs to* Poland. 2. *The Soil, Climate, Produce, Commodities,* &c. *of the Country.* 3. *The Nature of its Domeſtic Trade and Foreign Commerce, and the Reaſon why the latter is ſo inconſiderable.* 4. *An Account of the Dyet of* Poland, *the Perſons who compoſe it, and the Reaſon why* Poland *is called a Republic.* 5. *The legal Powers, Prerogative, and State of the King of* Poland. 6. *A farther Account of the ſame Subject, and of the Revenues of this Monarch; from whence it appears that he is far from being ſo weak, or ſo reſtrained, as is generally imagined.* 7. *The Rights, Immunities, Privileges, extenſive Power and Authority of the Nobility or Gentry of* Poland; *with the Reaſon of their declining Titles; and particular Inſtances of the vaſt Power and large Eſtates of ſome of the Grandees of* Poland. 8. *An Account of the Condition of the Peaſants, and of the Services they owe their Lords; with Remarks on the Patience and Submiſſion of thoſe unhappy People.* 9. *The natural Temper, Diſpoſition, Cuſtoms, Manner of Living,* &c. *of the* Poliſh *Nobility and Commons.* 10. *This Subject continued, particularly with Regard to the Ladies, and ſome Remarks on the Ceremonies at Marriages, Funerals, and other ſuch like Occaſions.* 11. *Of the State of Learning and the Sciences in this Kingdom; and of the Diſeaſes common in* Poland. 12. *A ſuccinct Hiſtory of the Changes that have happened in the Government of* Poland, *and in the Power and Succeſſion of their Kings.* 13. *Obſervations and Remarks upon the foregoing Section.*

1. THE great Kingdom of *Poland* next demands our Conſideration, as being naturally, both with reſpect to the Situation and Produce of the Country, and the Force of the Inhabitants, none of the leaſt conſiderable; though it is very far from being the beſt known in *Europe*. It is thought to extend in Length from Eaſt to Weſt, about ſeven hundred Miles; and in Breadth, from North to South, about ſix hundred. On the North it has *Livonia* and other Provinces of the *Muſcovite* Empire. On the Eaſt it is alſo bounded by the *Ruſſian* Dominions and *Leſſer Tartary*. On the South by *Moldavia*, *Tranſylvania*, and *Hungary*; and on the Weſt by *Pomerania*, *Brandenburgh*, *Sileſia*, and *Moravia*. By this Deſcription, it appears, that the Inhabitants of *Poland* have for their Neighbours, the *Ruſſians*, *Turks*, *Tartars*, *Hungarians*, and other Subjects of the Houſe of *Auſtria*, and thoſe of the King of *Pruſſia*. The Air of this Country is in general temperate and healthful, but exceeding ſerene, and more ſettled both in Winter and Summer, than in thoſe Countries, which border on the Ocean. The only Sea which waſhes any Part of *Poland* is the *Baltic*, which lies to the Northward of it; but it is well watered, however, by Lakes and Rivers.

Their Lakes lie chiefly in the *Greater Poland*, *Cujavia*, and the Territory of *Lublin*; and both Lakes and Rivers abound with Fiſh. Their principal Rivers are the *Weiſel*, or *Viſtula*, which riſes in the *Crapatch* or *Carpathian* Mountains, which divide *Hungary* from *Poland*; its Courſes are partly to the Eaſtward, but generally it runs from South to North, watering many great Cities, particularly *Cracow*, *Lublin*, *Warſaw*, *Thorn*, *Marienburgh*, and *Dantzick*, after which it diſcharges itſelf into the *Baltic Sea*. The *Warta* or *Varta*, which riſes in the *Leſſer Poland*, and running towards the North-weſt, paſſes by *Kaliſch*, *Poſnan*, and ſeveral other great Towns, after which it falls into the *Oder*. The *Nieper* or *Boriſthenes*, which dividing the Dominions of *Muſcovy* from thoſe of *Poland*, in ſeveral Places, falls at length into the *Black Sea* near *Oczakow*. The *Neiſter* or *Tyra*, which riſes in *Red Ruſſia*, and running to the South-eaſt through *Podolia*, paſſes on to *Bender* in *Turkey*, and falls into the *Black Sea*, about ſixty Miles to the Northward of the Mouth of the *Danube*.

The *Dwina*, which divides *Livonia* from *Courland*, and falls into the *Baltic* near *Riga*. The *Bog* which riſes from a Lake in *Podolia*, and bending its Courſe to the South-eaſt, unites its Waters with the *Nieper*, a little before that River falls into the *Black Sea*. Near the Mouth of theſe two united Rivers ſtands the Fortreſs of *Kaſſicarmen*, which the late Czar of *Muſcovy* took from the *Turks*; and by that means, is opened a Communication with the *Black Sea*; but he was obliged to reſtore this Place as well as *Aſoph* to the Grand Seignior, upon the Defeat he met with on the Banks of the *Pruth*. *Niemen* or *Ruſſe* riſes in the Palatinate of *Novogrodeck*, and taking its Courſe to the North-weſt paſſes by *Grodno*, and at length falls into the *Baltic*.

2. The Dominions of *Poland* are uſually divided into eight large Provinces, *viz.* *Proper Poland*, the great Dukedom of *Lithuania*, *Pruſſia*, *Samogitia*, and *Courland*, *Warſovia*, or *Maſſovia*, *Polachia* and *Poleſia*, *Red* or *Little Ruſſia*, *Podolia*, and *Volhinia*, and the *Ukrain*. The Soil for the moſt Part is champain and open; but towards the Borders of *Hungary* mountainous and woody; ſo that the Places furtheſt diſtant from *Hungary* are moſt fruitful. There is only one great Mountain in the Middle of *Leſſer Poland*, called *Mons Calvus*. It has a Monaſtery on the Top, famous, as they pretend, for the real Croſs of CHRIST; what other Hills one meets with here, are rather riſing Grounds than Mountains; the Eaſtern Parts of the Kingdom are full of Woods, Foreſts, Lakes, Marſhes, and Rivers, which afford a delightful Proſpect to that open Country; almoſt all of it, is ſaid to have been overgrown with Wood, but now being cultivated by the Inhabitants is very fertile, and produces every where all kind of Fruit, Corn, and Herbs. A great Part of the Corn made uſe of in *Holland* comes from this Country by way of *Denmark*.

They have a good Breed of Horſes, ſo that their Cavalry is numerous, and well mounted. Their Paſtures are good, and feed a great many Cattle, which they export to foreign Countries; the Foreſts abound with wild Beaſts, and alſo with Bees, that afford vaſt Quantities of Honey and Wax. They have alſo abundance of Flax and Hemp, and Vines in many Places, whoſe Grapes are grateful to the Taſte, eſpecially if the Summer and Harveſt be favourable; but the Wine is generally very ſharp when drawn off. In the Mountains there are Mines of

Lead, Silver, Copper, and Iron, with other kinds of Minerals, as Quickſilver at *Tuſtan* in *Red Ruſſia*, and Vitriol near *Biecz* in the Palatinate of *Cracovia*; but the moſt conſiderable of all are the Salt Mines at *Bochnia* and *Veliſca* in *Leſſer Poland*, which are the chief Riches of the Country. They work in thoſe Mines as we do in our Coal-Pits; the Salt is generally of a bluiſh Colour, but ſome of it white and tranſparent, like Cryſtal; when it is new dug it has a brackiſh Taſte, but when expoſed to the Air becomes brittle, and more ſweet; they have alſo ſome Veins of *Sal Gemmæ*. The Woods are well ſtored with Hares, Coneys, Squirrels, Deer, Foxes, Bears, Wolves, and Boars. The *Maſovian* Foreſts have Plenty of Elks, wild Aſſes, Buffaloes, and Biſonets, which in Shape and Horns reſemble an Ox; have Manes like Horſes, Beards on their lower Jaws, Tongues rough like a File, and very hard, a Bunch on their Backs, and their Hair ſmells like Muſk. They are incredibly ſtrong; the *Poliſh* Nobility hunt them, and eſteem their Fleſh when powdered a great Dainty. The Urus, called by the *Polanders* Thur, is a kind of wild Ox; bigger, ſtronger, and ſwifter than the tame; he has a ſhort black Beard, a Buſh of Hair upon his Forehead, and Horns very wide and large: *Pliny* ſays, the *Romans* made Lanthorns of them. The Elk, called by the *Poles* Loſs, by the *Germans* Elland, which ſignifies miſerable, becauſe of the Falling-Sickneſs, is about the Size of a large Horſe, bodied like a Stag, but broader, its Legs longer, and its Feet cloven and large; their Hoofs are reckoned a Specific againſt the Falling Sickneſs.

In the Deſerts near the *Nieper*, there is a Sort of wild Sheep, called *Solback*, ſhaped like a Goat, but with ſhorter Legs, and Horns growing ſtraiter up. They are exceeding ſwift, and leap very high. They have a Sort of wild Horſes in the *Ukrain*, called by them Dzikiekonil, which their Nobles eat for a great Rarity. In *Lithuania* and *Muſcovy* there is a voracious unſerviceable Beaſt not found elſewhere, called Roſſomoko, with the Body and Tail of a Wolf, and the Face of a Cat; it feeds on dead Carcaſſes, and eats till its Belly is ſwelled to the utmoſt Stretch, then it ſqueezes itſelf betwixt two Trees, forces the Load from its Stomach, and returns to its Prey, devouring and diſgorging ſucceſſively till all is conſumed.

3. The weſtern Parts of this Kingdom produce a great deal of Corn of all Sorts, which is exported from *Dantzick*; as alſo Honey, Wax, Amber, Hides, tanned Leather, *Muſcovite* and *Poliſh* Furs, Oak, Wainſcot, Maſts, Planks, Fir, Deal, Pitch, Tallow, Salt, Hops, Hemp, Flax, Salt-petre, Pot-aſhes, Opium, *Pruſſian* Wool, for coarſe Manufactures; Vitriol, Lapis Lazuli, Vermilion, Braſs, Lead, Iron, Copper, Glaſs, and Earthen-ware, Oxen, Sheep, Hogs, *&c.* to different Parts of *Europe*. They import Stuffs, Silk, and Worſted; *Engliſh* Cloths, Tapeſtry, Jewels, Sables, Salt-Fiſh, Tin, Steel, Martens, *&c.* Iron-ware, *Rheniſh*, *French*, *Spaniſh*, and *Hungarian* Wines, Spirits, Aqua Vitæ, Brandy, Spice, of which they make great Conſumption. They might be much richer, if they were induſtrious and frugal, and applied themſelves to Manufactures; but the *Poles* are little inclined to either; for the Gentry are abſolutely forbid to follow Trade, of any Kind, on Pain of forfeiting their Honour; and the Commonalty commonly want Funds, ſo that all the Trade there is chiefly carried on by foreign Merchants; beſides, ſuch of the *Poles* as have any Fortunes, ſpend too much of their Revenues in coſtly Habits and Luxury, to be able to undertake any conſiderable Traffic. Nor have they any good Ports, except *Dantzick*, which is not enough to improve the Trade of ſo large a Country. It is to this want of Commerce with other Nations, that the *Poles* owe moſt of their Defects in their Government; for if they were once convinced of them, there is not a Nation in *Europe* more capable of correcting them, as we may gather from a very familiar Inſtance: One of their Monarchs being in *Germany*, and not having it in his Power to converſe with Strangers in *Latin*; he was ſo ſenſible of the Defect, that upon his Return to *Poland*, he cauſed a Grammar-School to be erected in every Town throughout the Kingdom; ſo that now there is not a Country in *Europe* where *Latin* is ſo generally underſtood as it is here.

4. From the Time of *Lechus*, the Kings of *Poland* have been elected to the Crown in a regular Deſcent, though not by an hereditary Title. They have really been abſolute, and their Will went for Law; for they made Peace and War when they pleaſed, levied Troops as they thought fit, puniſhed or pardoned at Pleaſure; and all the Adminiſtration, either of public or private Affairs, was ſo wholly lodged in the King's Hands, that the *Poles* themſelves ſay, That *Sigiſmund* II. the laſt King of the *Jagellon* Family, was, to the full, as abſolute as either the King of *France* or *Denmark* is now. Whilſt the Kings of *Poland* thus maintained a ſupreme Power over their Subjects, they exceedingly enlarged their Dominions, were feared Abroad and beloved at Home, commanded numerous Armies, executed Enterprizes ſpeedily, and were always ſure of Succeſs; and this, becauſe they did not then as now, depend upon the lingering and tedious Concluſions of a turbulent Dyet. But the Family of *Jagello* being once extinct by the Death of *Sigiſmund* II. who had reſigned his Kingdom to the Senate and *Poliſh* Gentry, and given them full Power and Authority, to diſpoſe thereof as they thought fit, the Crown of *Poland* was declared once more elective; to the End, that all the Princes of *Chriſtendom*, who had due Merits and Qualifications, might have a Right to aſpire thereunto.

This has given Occaſion to moſt of the Princes of *Europe* ever ſince to court the *Poliſh* Nobility, either to get the Election determined in their own Favour, or elſe to have ſome of their Friends advanced to that great Dignity; but this commonly, with regard to their own private Intereſts, rather than out of any Reſpect to the Perſon they deſired to promote. The Gentry of *Poland* therefore obſerving, that ſeveral Princes always aſpired to their Crown; and conſidering that none of them had more Right than the reſt, and that it lay altogether in their own Power to chooſe whom they pleaſed, reſolved unanimouſly to elect none but ſuch as could condeſcend, nay ſwear, to obſerve the Terms and Conditions they propoſed. By this means, the *Poles* have clipped and limited the antient Power of their Kings, and have reduced them to the Bounds we now find them, that is, barely to a third Part of the Dyet. For the *Poles* knew that no Prince would be ſo imprudent as to ſcruple ſubmitting to any Conditions, to become Maſter of ſo conſiderable a Kingdom, to which he had no Right, either by Birth or any other Claim; and more eſpecially, ſince theſe Conditions are neither rigorous nor diſhonourable, but ſuch as are conſiſtent enough with the regal Character he is to be inveſted with.

Thus the *Poliſh* Gentry, of an abſolute monarchical Government, have in time made a perfect Republic, conſiſting of three Orders. The King, Senate, and Nobility. The *Poliſh* Nation is divided into two Sorts of People. The Nobility, Gentry, or Free-born Subjects, who are hardly a tenth Part of the Kingdom; and their Vaſſals, who are no better than Slaves; for they have no Benefit of the Laws, can buy no Eſtates, nor enjoy any Property; and this, becauſe, ſome Ages ſince, the common People revolting againſt their Lords, and having driven them out of the Nation, the Gentry came with a foreign Power, and reduced them to greater Subjection than before, in which they have been kept ever ſince: So that the Government of *Poland*, at preſent, comprehends only the King and the Nobility. By a Gentleman, or Nobleman of *Poland*, is underſtood a Perſon, who himſelf, or his Family, has Poſſeſſions in Land, for they never intermarry with the common People. All the Gentry, from the King's Sons to thoſe that are Maſters of an Acre, are equally noble, both by their Birth and the Conſtitution of the Kingdom; for no body is born either a Palatine, Senator, or Lord, but their Titles are always annexed to Employments, which the King gives to Perſons advanced in Age, and recommended by their Merit.

The Dyet of *Poland* is compoſed of two Houſes; the Houſe of Senators, anſwerable to our Houſe of Lords; and the Houſe of Nuncios, not unlike our Houſe of Commons; the Senators are the Biſhops, Palatines, *Caſtellans*, and the ten great Officers of the Crown; in all about one hundred and forty-two. In the Upper-houſe the Senators ſit, not by any Writ of Summons, or Letters Patent, as in *England*; but only by Virtue of the great Preferments in the King's Gift, which they enjoy for Life; ſo that the King conſtitutes the whole Upper-houſe, but the Lower, are the Reprentatives of the Gentry, elected by them alone in their reſpective Provinces, without the Concurrence of the common People, who have no Privilege in their Election; inſomuch that nine Parts in ten of the People in *Poland* are excluded from any Share in the Government.

The grand Dyet of *Poland* is nothing elſe but the King, Senators, and Deputies, aſſembled in any Part of the Kingdom his Majeſty commands. Without this great Aſſembly of the States, the King can neither make nor repeal Laws, declare War, conclude a Peace, make Alliance with any foreign Prince, raiſe Troops, impoſe Taxes, or coin Money; in a Word, determine no Matter of any Importance, without the unanimous Concurrence of this Parliament, which they ſtile the free States of *Poland*. Several Motives have inclined the *Poles* to eſtabliſh this Kind of mixt Government; which they take to be a juſt Temperament, of whatever is to be found moſt excellent in the ſeveral Monarchies, Ariſtocracies, and Democracies that have been in the World. It has however appeared from Experience, that their Endeavours in this reſpect have not been very ſucceſsful, ſince there is hardly a Conſtitution in the World, or at leaſt in *Europe*, that anſwers the Ends of Government worſe than theirs; which is very often the Caſe, where People aim at ſuch a Degree of Perfection as is not to be attained in human Affairs.

5. The Republic is divided into two States, the Kingdom of *Poland*, and the great Duchy of *Lithuania*; both which are but as one Body, having the ſame King, the ſame Dyet, the ſame Laws, the ſame Privileges, the ſame Religion, and, as the natural Reſult of all theſe, the ſame Intereſt: Theſe two States are ſo well united, that a King cannot be elected, a Law made, or any thing of Conſequence done, without the mutual Conſent of both. The *Poles* are too proud to agree to deſpotic Power: And therefore thoſe pernicious Maxims of Tyrants, *Si lubet licet, oderint dum metuant*, and the like, would be but ill received among People that have all along ſecured their Liberties by their Valour. As for the Kings of *Poland*, they may reſt in Security in the Boſom of their Country, either without or within their Dominions, ſince they have always their Subjects for their Guards, through indiſpenſable Inclinations; for what contributes chiefly to the Happineſs of theſe Princes, is the loyal Obſervance and voluntary Obedience paid to them even by thoſe that are at Liberty to do the contrary.

Monſieur *de Polignac*, the *French* Embaſſador, uſed to ſay at *Warſaw*, That he thought a King of *Poland* more happy in his Perſon and Condition than a King of *France*; nevertheleſs this Authority of the King of *Poland* is ſo limited by the Laws of the Land, that it does not exact more from the Nobles or Gentry than they think he deſerves; for though their Behaviour be generally obſervant, yet do they tacitly ſeem to call in Queſtion his Power. The *Poliſh* Nobility make no Difference between the King's Right and thoſe of the Senate and Deputies, affirming that ſince three Members compoſe but one Body, they ought equally to ſhare in the ſame. The ſmall Authority therefore of their Kings, and the Impoſſibility of their acting, have expoſed *Poland* to the Inſults of their Neighbours, and the Rage of their own People; as may be ſeen in the Civil Wars of the *Coſſacks*, and the Treachery and Sedition of the Confederates; which could never have arrived at ſo great a Height, if the King had had ſufficient Power to ſuppreſs them. Alſo the great Marſhal of the Crown, *Lumberſkin*, would never have had the Boldneſs to have oppoſed King *Caſimir*'s Deſigns ſo openly, and to have formed ſo many Factions againſt the Court, had he not had Aſſurance of remaining unpuniſhed. We have divers Inſtances of the *Poles* Love for their Kings, and particularly their long enforcing the Right of *Sigiſmund* III. to the Kingdom of *Sweden* in an obſtinate War, which they revived ſeveral Times; as likewiſe the ſupporting afterwards the Pretences of *Uladiſlaus* VII. to *Muſcovy*; to omit divers others of a more ancient Date.

This Reſpect of theirs obliges them to come and ſpend their Eſtates at Court, to augment their Prince's Grandeur by their Prodigality and Magnificence. This appears by a Miſtake made by a King of *Bohemia*, at the Interview between him and *Caſimir the Great*, at *Glogau* (which Place the former had demanded to bound the Limits of *Sileſia*) when he ſaluted a private Gentleman, ſplendidly cloathed, for the King of *Poland*: The Inclination of the *Poles* towards honouring their Prince is ſo ſtrong, that all they are able, even to the Hazard of their Lives and Fortunes, they are willing to laviſh in his Service, without expecting any greater Recompence than the Glory of waiting on his Majeſty's Perſon. A King of *Poland*, when he is juſt, liberal, and religious; one, who obſerves the Laws and Conſtitutions, and, in a Word, who has no other Intereſt but the Good and Safety of his Subjects, is as much reſpected, and as faithfully obeyed in Times of Peace and War, as moſt Princes in *Europe*. As to what relates to War, no Monarch has greater Advantages; for he is neither at the Trouble of raiſing Forces, or Expence in maintaining them; his Buſineſs being only to convene the Dyet, and they do all theſe Things. After War declared, he can continue the ſame either by himſelf or his Generals, can regulate his Troops, and ſee his Army paid out of the Treaſury of the Republic; he has great Reaſon to hope for Succeſs in his Expeditions, becauſe he not having undertaken them on his own Account, thoſe that engaged him will infallibly ſupport him in them, and the rather, by Reaſon that what was done was done with their Conſent. This has proved the Cauſe of almoſt never failing Succeſs to the *Poliſh* Army till of late Days, when the King and his Subjects have not been in ſo good Intelligence with each other as formerly.

6. When the King is in the Army he has the ſupreme Authority, gives Battle when he pleaſes, and beſieges Towns as he thinks fit, and commands abſolutely all the Gentry to follow him into the Field on Horſeback at ever ſo little Warning. At Home he has the Nomination of all eccleſiaſtical Benefices, and of all ſecular Employments, as well Military as Civil, through the whole Extent of his Dominions, with a great Number of royal Demeſnes; which, together with the State Dignities, he confers on thoſe that have deſerved them. He can beſtow as conſiderable Preferments as any Prince in *Europe*, and oblige and raiſe the Fortunes of whom he pleaſes. He has a Right in naming Cardinals, as well as other *Roman* Catholic Kings. He can ſend and receive Embaſſadors privately, in Matters relating to himſelf; but as to what concerns the Republic, the Senate muſt have their Share in it. He can call, prorogue, and diſſolve the Dyet at Pleaſure: In a Word, the *Poles* term him the Protector of their Laws and Privileges, the chief Diſtributor of Honours, the Head of their Republic, and ſupreme General of their Forces.

The *Poles* attend his Perſon uncovered. The chief Senators generally ſerve him at Table; firſt taſting of the Cup before they preſent him with it. His Subjects never ſit before him, nor cover their Heads any where but in the Dyet, and there too the Senators are only allowed that Liberty, for the Deputies ſtand behind with their furred Caps in their Hands. All Sorts of Gold, Silver, or Braſs Coin, are ſtamped with his Image. All Juſtice is adminiſtered in his Name; and at Church they pray for the King and Royal Family. When he is crowned, the Dyet allows him a Penſion of about 140,000*l. per Ann.* which, together with his Patrimonial Eſtate, maintains him a very ſplendid Court. He has his *Poliſh*, *German*, and *Hungarian* Guards, and has the ſame Officers of his Houſhold, as other Kings have. While the Queen-Dowager lives, the Queen Conſort maintains her Court at the King's Charge. But after the Queen Dowager's Death, or Marriage, or the King's Death, ſhe has a Revenue aſſigned for that Purpoſe, over and above the Penſion, which the Dyet ſettles upon the King and Queen; which, in that cheap Country, ſerves to maintain them as high as our Kings live here.

The King of *Poland* has great Incomes of his own; for the *Poles* never care to elect a poor Prince, for fear his Children may come to be a Charge to them after his Death. He gets beſides vaſt Sums of Money for Nominations to Employments; which the late King did not ſcruple to ſell, though directly contrary to the Conſtitutions of the Kingdom; nay, the Eccleſiaſtical Benefices which are very conſiderable, are alſo put under Contribution by ſome cunning Artifice or other; thus the Promotion of the Biſhop of *Cracow*, whoſe Biſhopric is worth eight thouſand Pounds Sterling *per Annum*, which will go further than twenty thouſand Pounds in *England*, was, in the Reign of King *John Sobieſki* procured, by laying a Wager with the Queen of fifty thouſand Crowns, that he did not obtain that Preferment, which as ſoon as the King knew he beſtowed upon him, and ſo the Queen won her Wager. The Crown Revenues ariſe from Cuſtoms and Exciſes, from Part of the Duties of the Port of *Dantzick*, from the heavy Tax laid upon the *Jews*, and from the Salt Mines, which all together bring in rather more than leſs than three hundred thouſand Pounds of our Money annually. But the King's Power in beſtowing Preferments does not extend to Foreigners; neither can he take away any Poſt that he beſtows, or leſſen its Revenues or Privileges. His eldeſt Son has the Title of Prince of *Poland* while his Father lives, but he loſes it upon the Acceſſion of a new King, and is ſtiled Prince by the Name of his Family; and ſuch Precautions are taken, that it is very difficult for a King of *Poland* to make the Crown hereditary in his own Family.

7. We come now to ſpeak of the Nobility of *Poland*, which comprehends all the Gentry in that Country, and even all thoſe whom in *England* we ſtile only Freeholders. Of theſe every Gentleman or Nobleman has his Coat of Arms granted by the Republic; but then he, or ſome of his Family, muſt have an Eſtate in Land. They are capable of the greateſt Offices in the Kingdom, and may buy Lands where they pleaſe, and have a Right to be elected King, if their Credit and Intereſt can procure it. Every Gentleman is a ſovereign Prince in his own Lands, and has Power of Life and Death over his Tenants, who have no Laws nor Privileges to protect them. They dare not leave his Lands to go to others, on Pain of Death, unleſs he ſells them; and if he do his Tenants paſs with his Lands. But if their Lords raviſh their Wives, or Daughters, the Tenants may leave his Service.

If one Lord kills another's Servant he is not puniſhed for it, but only obliged to give him another in his room, or as much Money as will buy one, and to maintain the Family of him that is killed. If he kills one of his own Slaves he only pays a Fine; nay, if one Gentleman kills another, he cannot be apprehended or impriſoned, unleſs convicted by a Court of Juſtice, which gives him Time enough to eſcape, and when condemned he cannot be executed without the King's Conſent. No Soldiers can be quartered upon the Gentry; if any Officer does it, the Dyet either ſentences him to die, or declares him infamous. The Houſes of the Nobility are Sanctuaries, ſo that no Delinquent can be taken there by Force, though he has been arreſted. If a Nobleman will ſwear that his Goods were not bought, but are the Product of his Lands, he may ſend them any where out of the Kingdom, and without Cuſtom; and after he has ſworn, his Certificate ſuffices to exempt the Purchaſer from the Duty. In *Pruſſia* the Nobles are not only free from Cuſtoms, but likewiſe all other Inhabitants by the *Magna Charta* of *Culm*. The *Poliſh* Noblemen have alſo the Privilege of Pre-emption. All the Gentry of *Poland* are equal by Birth, and therefore they don't value Titles of Honour; but think that of a noble *Pole*, or Gentleman of *Poland*, the greateſt they can have. Neither the King nor the Republic beſtow the Title of Prince, which belongs only to the Sons of the Royal Family; for though ſome are made Princes of the Empire, and as ſuch enjoy the Title of Prince, they have no Precedency upon that Account. Nor have they any Dukes, Marquiſſes, Counts, Viſcounts, or Barons, but what have foreign Titles, which the reſt generally deſpiſe; for they do not value any borrowed Character, or external Denomination; but ſay, that it is intrinſic Worth and Service done to their Country, that deſerves Preferment. King *Sigiſmund* III. eſtabliſhed an Order of Knighthood of the Immaculate Conception, created ſeveral Knights, and allowed them Privileges and Superiority above others, but they were ſo much undervalued and deſpiſed by the reſt of the Gentlemen, that the Order (in ſpite of the royal Protection) ſoon came to nothing.

Thoſe great Privileges make the *Poliſh* Gentry powerful; many of them have large Territories, with a deſpotic Power over their Tenants, whom they call their Subjects; ſome of them have Eſtates of five, ſome fifteen, ſome twenty, and ſome thirty Leagues in Extent. But the poor Gentry have their Votes in the Dyet as well as the richeſt. Some of them are hereditary Sovereigns of Cities, with which the King has nothing to do. *Lubomirſki* poſſeſſes above four thouſand Towns and Villages; ſome of them can raiſe five, ſix, eight, and ten thouſand Men, and maintain them at their own Charge. The Gentry of Note have Horſe and Foot Guards, which keep Centry Night and Day at their Gates. They make an extraordinary Figure when they come to the Dyet; ſome of them have five thouſand Guards, ſome had formerly ten thouſand. They eſteem themſelves, eſpecially the Senators, above any Prince in *Germany*, and want nothing of ſovereign Power, but the Liberty of coining Money, which is reſerved to the Republic. Foreign Embaſſadors are obliged to make a great Figure here, otherwiſe the Gentry deſpiſe them. When great Men have Suits at Law, the Dyet, or other Tribunals decide them; yet the Execution of the Sentence muſt be left to the longeſt Sword; for the Juſtice of the Kingdom is commonly too weak for the Grandees. Sometimes they raiſe five or ſix thouſand Men of a Side, plunder and burn one another's Cities, and beſiege Caſtles and Forts; for they think it below them to ſubmit to the Sentence of Judges without a Field Battle; yet formerly, their Noblemen were little better than Slaves. *Cromercus* ſays, that they were obliged to keep the King's Dog. The firſt Riſe is aſcribed to the Privileges granted by *Boleſlaus the Chaſte* to the Clergy; and afterwards when *Poland* was harraſſed by Civil Wars, the Gentry obtained many Privileges from their Kings, which they have ſince taken care to get augmented at every new Election.

The moſt flouriſhing Families in *Poland* are thoſe of *Radzivil*, which has the Title of Prince; the Dukes of *Wiſniowec* and *Zbaraw*, one of which Family was elected King of *Poland* in 1664; the Prince of *Lubomirſky*, whoſe Family are Princes of the Empire; the Princes of *Czartoriſky*; the Princes of *Sapieta*, great Governors of *Lithuania*, the Family of *Lezeinſki*; the Family of *Jablenowſki*; the Family of *Priyemſki*; and that of *Lipſki*. Thoſe that are not noble by Birth, may be created Noblemen. This was formerly at the King's Pleaſure, but of late is at the Diſpoſal of the Senate or Dyet. All the little Dyets of the Republic muſt give their Conſent; and this muſt afterwards be approved by the great Dyet, before they have their Patent. A *Jew* is made a Gentleman by marrying a Chriſtian, and by ſignalizing himſelf in the Wars; but the King muſt propoſe it, and the Dyet approve it. The new made Nobility are liable to ſeveral Impoſitions and Inconveniencies, from which others are exempted; if any one be a Magiſtrate in *Cracow* or *Vilna*, he and his Poſterity are noble. Nobility is forfeited here three Ways; by ſome heinous Crime; for Inſtance, when a Nobleman permits one that is ignoble to uſurp his Coat of Arms; by exerciſing any Trade or Merchandize; ſometimes Poſterity are reſtored, when Parents have quitted their Title through Poverty, and by bearing Office in any City that is not privileged. All the Nobility love to make a Shew, and to be ſplendidly clad.

They formerly delighted in foreign Faſhions; when they had Wars againſt the *Muſcovites* they followed theirs, and when with the *Turks* they took up their Habits. Their preſent Garb is a Veſt, that reaches to the Middle of their Legs, with a long Robe lined with Fur, and tied about their Middle with a Saſh, little Boots, with Iron Heels, Fur Caps, and a Sabre by their Side. When they ride they have a ſhort Cloak, like an *Iriſh* Mantle, furred within and without. The better Sort have rich Furs from *Muſcovy*, but the poorer Gentry content themſelves with the Skins of Tygers, Leopards, Panthers, and a kind of grey Furs. The fineſt of their Fur-ſuits coſt above a thouſand Crowns, are worn only at Dyets, and deſcend from Father to Son. Some of the *Poliſh* Gentry imitate the *French* Faſhion, and wear Linnen, Lace, Perukes, and Swords. The ordinary Sort of Gentry put Chaff into their Boots. Some of their Nobles have fifty Suits of Cloaths, all as rich as poſſible, and they love to have their Servants as well apparelled almoſt as themſelves.

8. As to the Peaſants they are born Slaves, have no Notion of Liberty, but live well ſatisfied without it; in *Courland* they are as ſubject to their Landlords as in *Poland*, and in both Countries almoſt adore them. They love their Landlords, fight for them, and all they have is abſolutely at their Devotion. When they debauch their Wives, or Daughters, thoſe poor Wretches do not think their Women the worſe, or that they themſelves are diſhonoured by it. They have ſcarce any Religion, but, like Brutes, work on *Sundays* for their own Subſiſtence, being obliged to work three or four Days in a Week for their Maſters, without Meat or Wages. Each of them earns his Maſter, at leaſt, ten Pounds *per Annum.* They have no Property, nor can they be made free, except they go into ſome Convent, and are ordained Prieſts, or their Maſters raviſh their Wives, or Daughters. When a Lord lets any Ground to a Peaſant, he orders his other Peaſants, at their Charge, to build him a Houſe, to give him a Cow, Hens, Geeſe, and as much Rye as will keep him a Year. A Slave cannot ſend his Son to the Univerſity without Liberty from his Lord. They reap their Maſter's Corn, and have rigid Taſk-maſters over them, who puniſh them ſeverely, if they do not do as much as is required of them. Their Maſters commonly boaſt of their Clemency, and ſay, that though they have an abſolute Power over them, they ſeldom make uſe of it any more than other Chriſtians do over their Horſes and Dogs.

Doctor *Connor* informs us, he aſked ſome *Poliſh* Noblemen, why they ſo inhumanly treated and undervalued their Boors; who anſwered, that formerly all the Boors revolted from their Landlords, and conſpired to extirpate them, and murdered ſo many, that the reſt were obliged to hide themſelves, or to leave the Kingdom. But, at laſt, the Gentry getting together from all Parts, and being aſſiſted by their Neighbours, quelled the Peaſants, who intended to have ſet up a Commonwealth of their own, and brought them to ſuch Extremities, that ever ſince they have been contented to live like Slaves. In Winter they wear a Sheep-ſkin with the Wool inwards, and in Summer a cloſe-bodied Coat of coarſe Stuff, of a Colour much like our Chimney-ſweepers, with ſorry Caps; their Boots are the Rinds of Trees wrapped about their Legs, with the thicker Parts to guard the Soles of their Feet againſt the Stones; they cut their Hair cloſe like Monks, and ſhave all from their Faces but a large Whiſker. They walk gravely with a Pole-Axe in their Hand, and a Sabre by their Side, which they never put off till they go to Bed; it hangs by a Strap of Leather, to which there is faſtened a Handkerchief, Knife, and Sheath, and a ſmall Stone to whet their Knives.

In *Lithuania* the Boors Shoes are of the Barks of Trees, and their Stockings of thinner Bark, which they wrap about the Calves of their Legs. Before they enter any Town, they always take care to put on freſh Shoes; they alſo wear a Sort of Aſh-coloured Habit, with Sleeves woven all of a Piece. The Boors here are more miſerable than in *Poland*; for Gentlemen commonly go into Boors Houſes, though not their own, take all they have, and beat and wound them, becauſe they are not able to bribe ſuch as have Power to do them Juſtice. The *Pruſſian* Gentry are not ſo gaudy in their Habits as thoſe of the more ſouthern Parts of *Poland*; their Peaſants differ alſo in Habits from thoſe of *Poland*, and wear ſometimes long ſtrait Coats of Leather.

9. The *Poles* never live above Stairs, and their Apartments are not united; the Kitchen is on one Side, the Stable on another, the Dwelling-Houſe on the third, and the Gate in the Front. Their Houſes are for the moſt part of Wood, but they have ſome of Brick and Stone. Their Rooms are generally hung with Tapeſtry, or Arras, but towards *Tartary* they keep no extraordinary Furniture, becauſe of the Incurſions of that barbarous People. They content themſelves with a few ſmall Beds, with Taffaty Curtains; and if any one lodge at their Houſes they muſt carry their Bedding with them. The Moveables of the Peaſants are a few earthen and wooden Diſhes, a hard Bed, and a wretched Coverlid; their Children are not allowed Beds till they marry, but lie upon Boards by the Fire; they have have no Chimnies, but little Holes in the Tops of their Houſes. The Peaſants Children go naked till they are four or five Years old, and frequently eat in the ſame Trough with the Pigs. They crawl on their Hands and Feet till they are ſtrong enough to walk, and when they are dirty the Mother waſhes them in cold Water, which makes them exceeding hardy.

The Peaſants of *Lithuania* and *Samogitia*, build their Houſes round, narrow, and open at Top to let out the Smoke and Stink; they are generally covered with Boards, Straws, Bark of Trees, and live with the Family and Cattle under the ſame Roof. The *Poliſh* Gentry have ſeldom any Gardens or Orchards, though their Country be very proper for it, and might, by making Cyder and Perry, ſave a great deal of Corn which they conſume in Beer. Their ordinary Meat is Beef and Veal; for they leave the Mutton to their Servants. They have Store of grey but no red Partridges; many Hares, but no Rabbets, than which they ſay they would rather eat Cats; but they breed white Rabbets for the ſake of their Furs; they have many Roebucks, but few Stags; Plenty of wild Oxen, wild Boars, Hogs, Poultry, Pigeons, *&c.* There are many Heathcocks and Pheaſants in *Lithuania*, and Buſtards in *Pruſſia.* The *Baltic Sea* has ſcarce any Fiſh; but that Defect is ſupplied by great Plenty of freſh Water Fiſh from Lakes and Rivers. The *Poles* have a peculiar Way of preſerving Cabbage; they chop it ſmall, put it into a Tub between Lays of Salt, preſs it very hard, and afterwards pour warm Water upon it, which makes it ferment and ſerves them for Pickle: This they preſerve all Winter, and ſometimes the whole Year; though it ſmells ſtrong even at a Diſtance, yet they think it a great Rarity.

Their uſual Drink is Beer, which in *Pruſſia* is made only of Malt; but in the reſt of *Poland*, of Wheat ground ſmall and boiled with Hops. Sometimes they mix it with Oats and Spelt, a Kind of Wheat which grows in *Italy* and *Flanders*; in *Lithuania*, *Ruſſia*, and *Ukrain*, they make both a red and a white Liquor with Honey, which they call Mead; at *Warſaw* they mix it with Spice, and Juice of Cherries and Blackberries. The *Lithuanians* and *Poles* have Wine from *Hungary*, *Italy*, *France*, and *Germany*; that of *Hungary* exceeds *Spaniſh* Wine in Strength, is brought to *Cracow* over the *Carpathian* Mountains in large Caſks drawn by Oxen, and ſold at twenty Shillings the *Poliſh* Pot, which is about three Quarts; the *Italian* Wine is alſo brought over Land, and on that Account is dearer than the other. In the Morning, both Men and Women generally drink Ginger, Yolks of Eggs, and Sugar, boiled in Beer; they are immoderate Lovers of ruſty Bacon and Peaſe; they eat all Manner of Muſhrooms, and preſerve them for Pickles; they eat great Quantities of Poppy-ſeed, drink the Milk of them, and make it into ſeveral Diſhes and Sauces; they make likewiſe Abundance of Oil of the Seeds of Hemp and Flax, which they eat on Faſt-days; they uſe Spice to that Exceſs, that ſome great Men ſpend twenty-five hundred Pounds *per Annum* in that ſingle Commodity: They uſe Spice and Pickles in all their Sauces, which differ much from ours; ſome of them are yellow, made with Saffron; others white, made with Cream; ſome grey, made of Onions;

Onions, and others black, made of the Juice of Plumbs. They have Choice of all Sorts of Pot herbs, and ſome that were found no where elſe; they have alſo Sweetmeats of ſeveral Kinds, and make much Uſe of Piſtachio Nuts.

They generally eat a great deal of Meat to a little Bread, though they have Plenty of Corn, eſpecially Rye, which is much better than in other Countries. They are great Admirers of Roots, have a Diſh called Crakat, made of coarſe Flour of Wheat, Barley, Millet, or Oats, and ſometimes of a ſmall Grain they call Manna; on Fleſh-days they eat it with Milk and Butter, and on Faſt-days with Oil. When the Boors want Bread, they make it of Acorns dried and ground. Near the Mountains of *Hungary* there are wild Goats, which they admire as very good Meat: They alſo make a Diſh of Beavers-Tails; Bears-Paws pickled they reckon a great Dainty. When they kill Elks, they do not gut them for fourteen or fifteen Days, and in the Winter, not in a Month. When the Grandees come to the Dyet, they bring them in their Skins and Guts, and hang them at their Windows by five or ſix at a time, till they grow rank, then they roaſt ſome, and dreſs others like Beef A-la-mode; and none but great Men have this Diſh at their Tables. The *Poles* are generally courteous and hoſpitable to Strangers, invite them to their Houſes, converſe with them freely, and endeavour to imitate them. The Slavery of their Boors is ſo much the more tolerable to them, becauſe they ſeldom want Victuals and Drink; they have generally three or four Sorts of Things at a Meal, one Diſh of Peaſe with ſliced Bacon, another of Crakat, and two more of ſeveral Sorts of ſtrengthening Roots, which they have in great Plenty in *Lithuania*; their Bread is coarſe and black, made of Rye, ſmutty Wheat and Barley, all ground together.

They have abundance of Fleſh, Fiſh and Fowl; and Cattle or Poultry, they think they cannot keep in Winter, they kill in Harveſt. They are good Marks-Men, and maintain their Families, in a great meaſure, by Fowling. Every Houſe has four or five Hand-mills to grind their Corn. The Peaſants of *Samogitia* are not ſo laborious as thoſe of *Lithuania*, and conſequently have not ſuch Plenty; inſtead of Bread they eat a Sort of Turnips as big as one's Head, which grow of themſelves, without Cultivation. They quench many red hot Stones one after another, in their Beer, Metheglin, and Mead, after they have boiled it a whole Night, in order to make their Bellies ſoluble; this Liquor they put in Veſſels made of the Barks of Trees. They reward the ſtouteſt Drinkers at Feaſts with a Shirt, Handkerchief, Frock, or the like. They live longer here than in *Lithuania*, and many of them reach a hundred and twenty Years. Formerly the *Pruſſians* dwelt in Waggons or Huts made of Boughs, and the Peaſants are not yet much improved in Architecture, for they generally live in Hovels built of Stakes, Roof and all, twiſted over with Rods, without any Covering; their Furniture is not much better, for the old *Pruſſians* ſlept on the Ground, or on the Skins of Beaſts, and theſe lie upon the Straw: They are content with ſpare Diet, and more addicted to Sloth than Gluttony, yet, like the *Poles* and *Lithuanians*, they drink hard, eſpecially at Feaſts; their former Drink was Water or Mares Milk mixed ſometimes with Blood; but now it is Mead and Beer. Their ordinary Food is Fiſh; they knew not the Uſe of Roots till the Knights of the *Teutonic* Order came among them; but now the Peaſants make them their chief Dainties.

When the Gentry make a Feaſt, they never ſupply their Gueſts with Spoons, Knives, or Forks; they muſt bring them with them: They have a broad Piece of ſtarched Linnen ſewed round the Table-cloth, for Napkins; the Reaſon they give for it is, to prevent their Servants ſtealing. Their Servants have their Meat reached them by their Maſters, which they eat behind their Backs: They bring twice as much Wine as their Maſters need, and drink the Remainder themſelves; they ſeize on what is left after Dinner, and their Ladies each of them carry a Napkin for dried Sweat-meats or Fruits. Their Feaſts are made by Friends and Neighbours by Turns; Brimmers are much in uſe among the *Poles*; they will ſcarce excuſe a Man except he pledges them. This Vice reigns equally at Feaſts and Taverns; and Saints-days are not excepted out of their Drunkards Calendar. Theſe Diſorders are tolerated becauſe of the great Exciſe they bring to the State. The Maſter of the Feaſt is eſteemed a Niggard, that does not allow his Gueſts as much as will fuddle them.

The Inns in this Country are long Stables built up with Boards, and covered with Straw, without Funiture or Windows; there is a Chamber at one End, but none can lodge there; becauſe of Flies, Fleas, and noiſome Smells; ſo that Strangers chuſe rather to lodge among the Horſes, where there is alſo an intolerable Smell of rotten Cabbages, which theſe People keep always by them. Travellers are obliged to carry Proviſions with them; and when Foreigners want, they apply themſelves to the Lord of the Village, who forthwith ſupplies them. *Poland* being for moſt part a champaign Country, a Calaſh and two Horſes will rid a good deal of Ground there in a Day. Travellers ought to take more than ordinary Care as they paſs Bridges in this Country, becauſe they are generally very bad, and ſeldom repaired. When they go a hunting for Bears they catch thoſe of the biggeſt Size with Nets, and when they have hampered him, all the Hunters ride about him, and having pinned down his Head and his Feet with great wooden Forks, they bind him ſo about with ſtrong hempen Cords that he is not able to ſtir; then they roll him into a great wooden Cheſt; the Knots of the Cords are ſo contrived, that with one pull they may be untied. The Bear is kept thus, till they have a mind to hunt him, and then they let him out at a Trap-door made on purpoſe.

They ſurround wild Bulls with a great Number of Horſemen, when each of them rides up and darts an Arrow at him; upon this the Ox purſues his Enemy, then another darts him behind, and as he turns about to purſue him, they dart him ſo by turns, till the Beaſt being tired with purſuing ſo many Aſſailants, falls down, and is eaſily taken or killed. They have another way of hunting, by making the Boors fell a great Number of Trees; each Hunter ſecures his Poſt aſſigned him, at which they throw Darts, and as the Bull runs towards his Enemy, the Hunters from behind give him his Death's Wound; but if he breaks through the Incloſure, the next Hunter holds out a Piece of red Cloth, againſt which the Beaſt having an Antipathy, he immediately leaves that Perſon and runs at another, who being provided for him, commonly kills him.

10. The *Poliſh* Ladies are generally very modeſt, and not very apt to abuſe the great Liberty allowed them. They ſeldom ſtir out of Doors without a Coach and Six to Church, or to viſit a near Neighbour, and are always attended by a great Number of Servants. When they go abroad at Night, they have twenty-four or more Flambeaux carried before their Coach. Their Train is borne up by He or She-Dwarfs; and they have always an old Woman to attend them, whom they call Governante, and an old Gentleman for their Uſher. Notwithſtanding all theſe Honours, they are entirely managed by their Huſbands, and diſpoſe of no Money without his leave. When they want any thing they muſt aſk him for it, kneeling, embrace his Knees, and call him their Benefactor: But ſome few Trifles are allowed them of Courſe. The Faſhion of the Womens Cloaths comes nearer to that of the Men than in moſt other Countries. They formerly wore Garlands on their Heads, compoſed of Gold, Jewels, Flowers, Silk, and the like; but now they wear Silk Caps, lined with Fur, like the Men; in King *John* III's Time they imitated the *French* Mode, becauſe the Queen was of that Nation.

The Peaſants Daughters are ſo extremely reſerved, that they will draw a Knife at any Man that offers to kiſs them; beſides their Mothers have a watchful Eye over them, and make them wear little Bells before and behind, to give Notice where they are, and what they are doing; but theſe Precautions do not always ſecure them. The Countrywomen are habited as in other Countries; but their Petticoats are very ſhort; thoſe in *Red Ruſſia* go generally in Summer with an Apron before them that reaches lower than ordinary. The wedding Feaſts of the Gentry laſt commonly three Days. If a Lady marry any of her Waiting-Maids, ſhe coſts her almoſt as much as one of her Daughters. On the ſecond Day all the Gueſts preſent the Bride with ſomething new, which makes a good Part of her Portion. The Princeſs of *Poland*, when married to the Elector of *Bavaria*, had above one hundred thouſand Crowns preſented her.

Among the Boors a Maid never marries till ſhe be twenty-four or thirty Years of Age, and has wrought, with her own Hands, ſeveral Baſkets full of Cloths, of different Sorts; which, at the time of her Eſpouſals, ſhe is to diſtribute among the Gueſts that her Huſband brings with him. She muſt alſo have ſerved her Mother for a certain time. The ſame Right is obſerved with reſpect to their Sons; it is alſo obſervable, that thoſe employed to make up the Match, always enquire more ſtrictly into the Manners and Behaviour of the Perſons, than as to their Stock of Corn and Cattle. Their Godfathers and Godmothers are always accounted Relations, though they be nothing a-kin, and they cannot marry ſuch Kindred without a Diſpenſation from the Biſhop.

The Burials of thoſe of Quality are celebrated with ſuch Pomp and Magnificence that they are more like Triumphs. The Corpſe is carried in a Hearſe or Chariot, with ſix Horſes, all covered with black; the Coffin has a large black Velvet Pall over it, with a Croſs of red Sattin in the Middle, and ſix long black Silk Taſſels, ſupported by as many of the Deceaſed's domeſtic Servants in cloſe Mourning; ſeveral Prieſts, Monks, and others, march before the Hearſe; each of which carries a white Wax Torch in his Hand. Immediately before the Hearſe come three Men on Horſeback, who carry the Arms of the Deceaſed; one his Sword, another his Lance, and a third his Dart. After the Burial Service is over, thoſe who carry the Armour enter the Church on Horſeback, and riding furiouſly to the Coffin, break the Arms of the Deceaſed upon it, after which the Body is interred. Then there is a Feaſt, where the Lay-Gueſts not only drink to exceſs, but likewiſe force the Clergy to follow their Example. When the King dies he is laid on a Bed of State; and a certain Number of Senators, Eccleſiaſtical and Temporal, are appointed to attend his Corpſe. The Republic defrays the Expences out of the Revenues of the Crown. The deceaſed Queen has the ſame Ceremonies and Honours allowed her. When Women of Quality mourn they wear a coarſe black Stuff, and their Linnen is not much finer than Canvas; and the greater their Quality their mourning Weeds are the coarſer. All Senators, Deputies, and others, that appear at the Dyet for electing the new King muſt be in black.

21. The Language of the *Poles* is the *Sclavonian*; but there are ſo many different Dialects of it ſpoken in the ſeveral Parts of this Kingdom, that one Part of the People ſcarce underſtand the other; they all agree, however, in multiplying Conſonants; and if they did not ſound more Vowels when they ſpeak, than are contained in the Words they write, it would be impoſſible to utter them. The *Latin* is almoſt as univerſally ſpoken as the *Sclavonian*, there being a School in every Village for the teaching it; and the Girls learn it in the Nunneries. Their Terms of Art are chiefly *German*, and indeed there are whole Towns and Villages in *Pruſſia* which are of *German* Extract, and ſtill ſpeak the *German* or *High Dutch* Tongue. The *Armenian*, *Perſian*, and *Tartarian* Languages, are alſo ſpoken upon their Frontiers; and the *Jews* have introduced the *Hebrew* in ſome Places; but with all theſe Languages, it is obſerved, that their Learning is but ſuperficial.

As to their Divines, their Learning, it is ſaid, conſiſts in adapting *Ariſtotle*'s Logic and Mytaphyſics to their School-Divinty; and they value themſelves more on being verſed in the Signification of logical Terms, than in the Nature of the Things they reaſon about. They enquire but little into Church-Hiſtory, or the Practice of the primitive Times, but ſeem to have an implicit Faith, and to be entirely governed by the Deciſions of the Church of *Rome*; nor will they ſuffer any Perſon to enquire into the Reaſonableneſs of their Tenets.

There are few native *Poles* that ſtudy Phyſic. The Phyſicians are generally *Germans*, *French*, or *Italians*. An illiterate Quack of this Kingdom, Doctor *Connor* mentions, however, who lived in a Wood about ſix Miles from *Warſaw*, undertook to cure the Venereal Diſeaſe in ſeven or eight Days by Bathing and Sweating. In the Water the Bath was made of, he boiled ſeveral Plants, which the Man made a Secret of; but the Doctor ſays, as well as he could diſcover, the chief of them were Hellebore, Aſter, and the Capillus Veneris, or Maiden-hair. That he bathed his Patients in a hot Decoction of theſe Herbs for four Days together, and made them drink of it while they were in the Bath frequently; that for four Days afterwards he laid them over the Tub to receive the hot Steams, covering them with Blankets, and making them drink of the Decoction as before. And thus by ſweating, bathing, and drinking, he was aſſured he had done many wonderful Cures in venereal Caſes; and for the whole Cure demanded but two Rix-Dollars, which is leſs than ten Shillings *Engliſh*. They ſeldom uſe Salivation in this Country, though venereal Diſtempers are very common.

The Diſeaſe peculiar to the *Poles*, is that called the Plica, in which the Hair of the Head is matted together, and grows ſo long, that it ſometimes reaches down to the Middle, covering their Backs, but generally it hangs in twiſted Ropes; others have their Hair only matted cloſe to their Heads, without growing to any length; and the Hair will be thus intangled and matted together in one Night's time, though never ſo much Care is taken to prevent it; if the Hair be cut off it occaſions a Dimneſs in the Sight, and ſometimes a total Blindneſs; it alſo occaſions Pain in the Head and Limbs, and Puſtules to come out all over the Body; the Foreigners that have been infected with this Diſeaſe, relate, that they have cut off their Hair without any Inconveniency attending it. The Biſhop of *Poſen* acquainted Doctor *Connor* that he was afflicted with this Diſtemper in his Youth, and that cutting off his Hair, unknown to his Friends, he felt a thouſand racking Pains, which left him as his Hair grew again, but then the Diſtemper returned. He obſerved alſo, that on the cutting off his Hair he could ſenſibly perceive a volatile Matter paſs in great Abundance through the Tubes of his Hair which twiſted and contracted the Locks, that when he put a Cap on his Head, it occaſioned an intolerable Pain and Heat, which he ſuppoſed proceeded from the Preſſure, by which the Humours were repelled, and forced back upon the Head. As to other Diſeaſes, it ſeems, the *Poles* are very little troubled with them. The Scurvy, or malignant Fevers, and Pleuriſies, are ſeldom of ſuch ill Conſequence in *Poland* as in other Countries.

By the Laws of *Poland* the Eſtate of the Father is equally divided among his Children, except any of them go into the Monaſtery, and then their Parts are equally divided among the reſt; and the young Children here, as in other *Popiſh* Countries, are encouraged by their Parents to take the Vow upon them, that their Eſtates may be preſerved entire to the eldeſt Son, which would otherwiſe dwindle away to nothing, where there happens to be a numerous Iſſue.

12. We are ſo apt to be biaſſed in our Sentiments, by what happens in our own Times, and as it were under our own Eyes, that we can ſcarce bring ourſelves to think things ever were otherwiſe than as we now perceive them. But it is certain, that as reſtleſs and turbulent as the *Poles* now are, they were formerly of a different Diſpoſition, and very much attached to the Perſons and Families of their Princes: Thus for ſeveral Ages they obeyed the Family of *Piaſtus*, who was raiſed to the Throne by his Merit; and upon the Death of *Lewis*, King of *Poland* and *Hungary*, the laſt Male-Heir of his Family, they choſe his Daughter, and reſolved to beſtow their Crown upon her Huſband, who was *Jagello*, Duke of *Lithuania*, who took upon him the Name of *Uladiſlaus*, by whoſe Poſterity they were governed

till the Death of *Sigiſmund* II. who was the laſt of that Family, and died in 1574, when they choſe *Henry de Bourbon*, afterwards *Henry* III. of *France*, for their King; upon a Promiſe, that he would marry the Princeſs *Anne*, Siſter to their late Monarch.

When he abdicated they made choice of *Stephen Batori*, Prince of *Tranſilvania*, who actually married the Princeſs before-mentioned, but had no Iſſue by her. Upon his Death in 1586, they made choice of *Sigiſmund de Vaſa*, Prince of *Sweden*, becauſe he was the Nephew of *Sigiſmund* II. and conſequently by the Mother's Side of the Race of their antient Kings. The laſt of his Race was *Caſimir*, who abdicated the Government and retired to *France*; and in 1670 they choſe *Michael Wieſnowiſki*, whoſe Succeſſor was *John Sobieſki*; upon whoſe Deceaſe in 1696, the *Poles*, contrary to their uſual Cuſtom, rejected his Family, and made choice of *Auguſtus*, Elector of *Saxony*, the Father of the preſent King *Auguſtus* III. The Factions that have long reigned in *Poland*, have hindered theſe laſt Monarchs from making that Figure in *Europe*, which their Predeceſſors had done; but it does not follow, from hence, that the *Poles* will always continue uneaſy and diſcontented.

On the contrary, they ſeem now to have a juſt Senſe of the ill Conſequences of their Diviſions, and are endeavouring to put an End to them by deciding as faſt as poſſible the Quarrels amongſt their Grandees, which is the ſureſt Way of reſtoring the public Tranquillity: And whenever this ſhall be effectually brought about, there is no Queſtion to be made, that the antient Glory of the *Poliſh* Nation will revive; for they are ſtill poſſeſſed of very large Territories, capable of great Improvements, and are very able to raiſe a Force ſufficient to defend themſelves againſt the Incroachments of any of their Neighbours, and even to render themſelves as formidable as any of the northern Powers. It is indeed true, that in their laſt Election they were awed by the *Ruſſians*; but this did not ſo much proceed from the ſuperior Power of that Empire, as from the want of Union among the *Poles*; and perhaps before their Throne again becomes vacant, they may be in a Condition to repair their paſt Errors, and to make a free Choice of ſome Prince, capable of governing them, according to their Conſtitution, and thereby extinguiſhing thoſe Feuds and Jealouſies, which have rendered them ſo inconſiderable ſince the Days of *John Sobieſki*, the laſt of their Monarchs under whom they made any Figure; and whoſe Covetouſneſs, which proceeded from the Deſire of fixing the Crown in his Family, was the chief Reaſon that Deſign of his did not take place.

The unfortunate *Staniſlaus Lezinſki* who ſtill wears the Title of King of *Poland*, was endowed with all the Qualities requiſite to make his People happy, brave, generous, pious, juſt, and affable to all Ranks of People; he was only unhappy in being the Inſtrument of *Sweden* firſt, and afterwards of *France*; which rendered him very juſtly ſuſpected to a great Part of his Countrymen; ſo that we may reckon it an Happineſs to *Poland* that he has no Male Iſſue, and that his Daughter, the *French* Queen, has but one Son; ſince this might otherwiſe prove a new Source of Trouble, not to this Country only, but to all its Neighbours; for though in Time of Peace *Poland* has been little regarded, yet the Diſturbances there have proved more than once the Cauſe of Wars in many other Parts of *Europe*.

13. We will cloſe this Section with obſerving, that nothing ſhews more clearly the Folly of that kind of modern Policy, which conſiſts in weakening and diſtreſſing our Neighbours, than the preſent State of *Poland*. This Country, as well by its Situation, as from the natural Genius and Diſpoſition of its Inhabitants, is the proper Bulwark of Chriſtendom againſt the *Turks*, whom they have reſiſted with as much Succeſs, and over whom they have gained greater Victories, than almoſt any other Nation. If we conſider them in this Light, it is very eaſy to ſee that it can never be the true and natural Intereſt either of the Houſe of *Auſtria*, or of the *Ruſſians*, to promote Troubles in this Kingdom, becauſe the more powerful and formidable the *Poles* were, the leſs able the *Turks* would be to alarm either of theſe Potentates. The Grand Signior indeed has ſhewn a true Spirit of Policy, in never attempting to diſturb this Nation even in its loweſt Circumſtances; but contented himſelf with the Security that he reaps from their Confuſions; ſince, if he had ever attacked *Poland*, it would probably have put an End to them; and though at firſt he might have made great Conqueſts, yet when the Spirit of the Nation was once rouſed, he would have been quickly driven out of them, as he knew, from the Experience of former Times.

If the *Poles* could once ſo ſettle their Affairs as to have time to conſider the Advantages that might reſult to their Country by the extending their Commerce, it is not at all impoſſible they ſhould ſucceed therein, though they have neglected it ſo long. I have been led to this Remark by the Knowledge I have of a Project that was formed by the late King *Auguſtus*, for opening a Trade with *Aſia* by the Help of the *Crim Tartars*, and tranſporting the Commodities that are brought from the *Black Sea* by the *Nieſter* and the *Bog*. He had other great Views with Regard to *Ruſſia*, and though at preſent they ſeem to have died with him, the Time may come when they ſhall revive again, and be carried into Execution by ſome *Poliſh* Monarch, either of his or ſome other Family.

That Luxury and Wantonneſs, which are the natural Effects of Plenty, as that generally ſprings from Trade, commonly produce ſuch a Spirit of Idleneſs and Profuſion, as is inconſiſtent with the Preſervation of Manufactures and Commerce; and this occaſions thoſe Changes in theſe Bleſſings, which appear abſolutely unaccountable to the unthinking Part of Mankind. The Country of *Poland* abounds with natural Commodities, if the Inhabitants knew how to make uſe of them; and with a numerous and laborious Race of People, who would ſoon become rich if they were properly employed. We have Reaſon to expect therefore, that ſome Time or other, awakened by their own Neceſſities, or provoked by the Example of their Neighbours, they will think of improving their Lands, working up their Commodities, and vending them in different Parts of *Europe*; which, whenever they do, will infallibly make them a rich and happy Nation.

SECTION V.

A ſhort Account of the UKRAIN, *and of its Inhabitants the* COSSACKS.

Collected from the Writings of Mr. *Beauplan*, and others.

1. *An Acount of the Etymology of the Name and Origin of the People called* Coſſacks, *with the regular Detail of their Hiſtory to the Time of their being diſperſed, and obliged to put themſelves under the Protection of the* Muſcovites, Turks, *and* Tartars. 2. *A ſhort Deſcription of the* Ukrain, *and of the principal Places therein; the Nature and Extent of the Country, and the Manner in which it was ſettled, and inhabited by the* Coſſacks, *while they acknowledged themſelves Subjects to the Crown of* Poland. 3. *The Temper and Genius of the People; their ſingular Cuſtoms, and odd Way of Living; as alſo of the Rarities and Remarkables in their Country.* 4. *The Manner of their making War both by Sea and Land, the Terror ſpread by them through the whole* Turkiſh *Empire, and even through* Conſtantinople *itſelf, and the dextrous Method they uſe for marching through a flat Country, in Sight of ſuperior Bodies of Horſe.* 5. *Of the preſent State and Condition of the* Coſſacks; *with Remarks and Obſervations upon the foregoing Section.*

1. According to ſome Authors, the Word *Coſſack*, in the *Ruſſian* Tongue, ſignifies Free-booter or Banditti; others derive it from Coſa, ſignifying a Goat, becauſe of their Nimbleneſs. Some ſay, that Coſa, in the *Sclavonian* Language, ſignifies a Scythe, their ordinary Weapon. They are thought to have come firſt from the Iſlands of the *Boriſthenes*, near the Mouth of that River, and were called *Zaporowſki*, or *Zaporienſes*, from the *Porowis*, or Cataracts and Rocks in the *Nieper*. The *Turks* uſually call them *Ruſſians*. They dwell in a Part of *Red Ruſſia* in *Poland*, and in *Baſſerabia*, betwixt the Rivers *Boriſthenes* and the *Nieſter*. They are terrible to the *Turks*, becauſe of their Invaſions by the Way of the *Black Sea*. In 1548, in the Time of *Sigiſmund* I. King of *Poland*, theſe *Coſſacks* were only Volunteers of the Frontiers of *Ruſſia*, *Volhinia*, *Podolia*, and the other Provinces of *Poland*; who aſſembled together partly to defend themſelves from the *Tartars*, by ſecuring the Paſſes of the *Nieper*, and attacking them, as they returned with their Prey; and partly to rob upon the *Black Sea*, where getting rich Booty, they drew more into their Aſſociation. Sometimes they made Deſcents upon *Natolia*, and plundered the great Towns, as *Trebiſond* and *Sinope*; at other Times they have advanced within two Miles of *Conſtantinople*, and brought off Booty and Priſoners.

At firſt they were about ſix thouſand, under *Euſtachicus Doſcovitus*, their General; but their Numbers were quickly increaſed by their Neighbours, becauſe of the Gain they made by their Piracies, Part of which they laid up in their Magazine, and the reſt they brought Home to their Houſes. About the End of the Seaſon, theſe Adventurers ſeparate, and agree upon the Time and Place of Rendezvous next Spring in the Iſles and Rocks of the *Nieper*, whence they return to their Piracy. *Stephen Batori*, King of *Poland*, who began his Reign in 1576, conſidering the Service that might be made of thoſe Thieves, for guarding the Country and Frontiers againſt the Inroads of the *Tartars*, formed them into a regular Body; and they ſerved him as Foot-Soldiers; for the *Poliſh* Army conſiſts chiefly of Horſe. He gave them the Town and Territories of *Tetchtimorow*, about eighty Miles in length, in the Palatinate of *Kiow*, upon the *Boriſthenes*; which Town they made their Magazine, and the Reſidence of their Governor-General, whom they named, and gave him Power to chuſe Subalterns. *Stephen Batori* alſo joined two thouſand Horſe to this *Coſſack* Infantry, to whoſe Maintenance he aſſigned the fourth Part of his Royal Revenues, whence they are called *Quartani.* Theſe Forces ſo well ſecured the Frontier, that the Country beyond *Breſlaw*, *Bar*, and *Kiow*, betwixt the *Nieſter* and *Nieper* was re-peopled, the Towns rebuilt, and Colonies planted there from the neighbouring Places.

The *Coſſacks* being thus brought into good Diſcipline, did conſiderable Service to the Crown of *Poland*, but have ſince done the Republic much Miſchief by their frequent Rebellions; for the *Coſſacks* knowing their own Strength, and of what Importance they were to the *Poles*, began to ſet up for themſelves, and would not obey the Orders of their Superiors, and acknowledge the Power of the *Poles* over them. Their firſt Rebellion was in 1587, under their General *John Podkowa*, who was taken, and his Head ſtruck off. In 1596, *Sigiſmund* III. upon the Complaints and Threats of the Grand Signior, forbad them to pillage any more upon the *Black Sea*. They obeyed his Orders for a while, but then turned their Force againſt *Ruſſia* and *Lithuania*, under the Command of their General *Nalevakio*; and having had ſome Advantages over the *Poliſh* Army, commanded by General *Zolſkiowki*, they looked upon themſelves as invincible; yet that noble Warrior found means to block them up ſo cloſe, that he forced them to deliver him their General, who was beheaded.

In 1637 was laid the Ground of a new War with the *Coſſacks*, their Numbers being greatly increaſed by the Multitude of Boors, who frequently went over to them, to ſhare their Privileges. Some great Men in *Poland* who had got Eſtates in the Places appointed for the Quarters of the *Coſſacks*, were of Opinion, that their Revenues would be conſiderably increaſed, if the Liberties of the *Coſſacks* were abridged. Whereupon they adviſed the King to reſtrain them, and began to uſe the ſame Severity to the *Coſſacks* as to the *Poliſh* Boors, who are obliged to work three Days in a Week with Man and Horſe for their Lords, and to pay ſo much Corn, Poultry, *&c.* to carry Home their Maſter's Wood, to pay him ſo much Money, and the Tenth of their Poſſeſſions. The *Poliſh* Lords being abſolute at Home, and not puniſhed for killing their Slaves, they repreſented, That the *Coſſacks* deprived them of all Advantages they could expect from their Lands in the *Ukrain*; for when the Boors were diſobliged they went to them. Therefore they reſolved to build a Fort at *Kudac*, at a Point where the River *Ziwmer* falls into the *Nieper* or *Boriſthenes*, and therefore very convenient to bridle the *Coſſacks*; who underſtanding the Deſign, cut in Pieces two hundred Men, that guarded the Building; but being attacked by the *Poliſh* General *Potoſki*, and divided among themſelves; they were routed at *Korſun*, and forced to deliver up their General, and four more of their chief Officers, who were put to Death at *Warſaw*, though *Potoſki* had promiſed them their Lives. After this, all their former Privileges were taken from them, with their Fortreſs *Tetchtimorow*, and in their Stead a new Body of Militia was ſettled there. This inraged the *Coſſacks*, who again tried their Fortune with *Potoſki*, but were worſted, though they fought with great Bravery. Then they fortified themſelves upon the River *Mareza*, beyond the *Boriſthenes*. After this, the *Poles* having loſt ſo many Men, by endeavouring to ſuppreſs them, they were forced to promiſe that their ancient Privileges ſhould be reſtored, and that their Militia of ſix thouſand Men, ſhould be re-eſtabliſhed under a General appointed by the King. The *Coſſacks* returned to their Homes, and laying down their Arms upon the Faith of their Treaty, were killed or plundered by the *Poliſh* Soldiers, and another Militia ſet up, excluding the true *Coſſacks*; and, among other oppreſſive Methods, the *Poles* took from them ſome of their *Greek* Churches.

But the *Tartars* afterwards ruining a great Part of the *Ukrain*, convinced the *Poles* of the Neceſſity of reſtoring the *Coſſacks*. *Uladiſlaus* IV. making War upon the *Tartars*, was very careful to ſee it done, and gave them for their General *Theodore Chimielinſki*, and granted him a Privilege to build ſome Mills; but a *Poliſh* Gentleman, named *Jarinſki*, burnt them, raviſhed his Wife, and afterwards killed both her and her Son. The *Coſſacks* were alſo provoked by their Landlords, who farmed out their Lands to the *Jews*, who monopolized all the Trade of the Country, and got ſo much Power that they would not ſuffer them to marry, or baptize, but upon their own Terms. *Theodore* and his *Coſſacks* obtaining no Redreſs, or Satisfaction, for thoſe Injuries, raiſed an Army of above twenty thouſand Men, burnt, plundered, and ravaged the Country, and did what Miſchief they could to the *Poliſh* Nobility. Upon which the Senators deſired the King to march againſt them; who anſwered, that they ought not to have burnt their Mills. King *John Caſimir* favoured them underhand, and deſigned to make uſe of them for the Conqueſt of *Crim Tartary*; at which the *Poles*, being diſſatisfied, levied an Army of fifty thouſand Men, whom the *Coſſacks* defeated, killed ten thouſand upon the Spot, and took the City of *Kiow*. To revenge this Affront, the *Poles* ſummoned the ſeventh Man throughout the Kingdom, and marched againſt the *Coſſacks*, without the Conſent of the King, and were again defeated by them.

But while *Chimielinſki* was celebrating the Nuptials of his Son, with the Daughter of the Prince of *Walachia*, at *Kiow*, the *Poles* ſurprized the *Coſſacks*, plundered the City, and took the *Grecian* Patriarch Priſoner. The *Coſſacks* ſent to the King, to know whether this had been done by his Authority? He anſwered, No; and that it was done by the Nobility out of Revenge. Upon this *Chimielinſki* called in the *Crim Tartar* with one hundred thouſand Horſe, againſt whom the King went in Perſon, at the Head of the Nobility, and totally routed them, though they were three to one ſtronger than the *Poles*. *Chimielinſki* gathered up the Remainders of his ſcattered Army, and continually harraſſed the Country, ſo that the King was obliged to make an Agreement with them; but the Nobility were diſcontented at it, and alledged, the King had granted too much: This Peace was made in 1649. *Chimielinſki* fearing the *Poles* would not obſerve that Treaty, made an Alliance with the Grand Signior and the Prince of *Moldavia*, and at a Dyet he propoſed ſuch Terms as ſhewed he intended to make himſelf an abſolute Prince, under the Protection of the *Turks*.

Thus a new War broke out in 1651, when the *Coſſacks*, and their Confederates, beſieged *Smolenſko*, took it next Year, and ravaged *Lithuania*; they took *Wilna*, and ſome other Cities, where they committed great Barbarities: It was chiefly owing to them that the *Muſcovites* got Poſſeſſion of the Provinces of *Smolenſko* and *Siberia*, and the greateſt Part of the Palatinate of *Kiovia*, which were confirmed to them by the Treaty of *Oliva*, in 1666. They have ſince thoſe Days ſuffered many Changes of Fortune, as well as Diminution in Numbers; but at this Time however they are tolerably free, ſome under the Protection of the *Turk*, others under the *Poles*; but the greateſt Part of them own themſelves Subjects to *Ruſſia*. After giving their Hiſtory, which is ſingular enough, and very well deſerves the Reader's Attention, we will next conſider the Country in which they live, and which from the Flatneſs of it, has been ſuppoſed, not without great Probability, to have been left partly by the Sea, and partly by the great Rivers that run through it, in the ſame Manner as the Antients report of *Lower Egypt*, and as we know that Tract of Country was certainly left, which is called *Marſhland*, in the County of *Norfolk*.

2. The Word *Ukrain* ſignifies a frontier Country, and lies betwixt 48 and 52 Degrees of North Latitude, the *Nieſter* is their weſtern, and the *Nieper* their eaſtern, Boundary. According to ſome Authors *Kiow* is the chief Town, and belongs to the *Muſcovites*, being taken from the *Poles* in 1633, by the confederate Army of the *Muſcovites* and *Coſſacks*. This City gives Name to the Palatinate of *Kiow*, which had Princes of its own till it was reduced to a Province by *Caſimir* III. who began his Reign in the Year 1333. The Ruins of the Walls ſhew it to have been eight Miles in Compaſs: Here are to be ſeen ſtill the Ruins of many Arches, high Walls, Churches, and the Sepulchres of many Kings, with *Greek* Inſcriptions. The Church of St. *Sophia*, whoſe Walls are lined with Moſaic Work; and that of St. *Michael*, remarkable for its gilded Roof, are ſtill in a tolerable Conditon.

Betwixt this Town and the *Nieper* lies *New Kiow* along the Banks of the *Nieper*, which has about ſix thouſand Inhabitants. The Papiſts have four Churches, and the *Greeks* ten, with a ſort of an Univerſity. The ſecond Town of Note is *Pereſlaw*, on the Eaſt-ſide of the *Nieper*, upon the River *Trubicz*, which falls into the *Nieper* two Miles below it: It lies ten *German* Leagues South-eaſt from *Kiow*; is a ſtrong Town, and contains ſix thouſand Families. Here the *Coſſacks* have a Regiment, and another at *Kaniow*, a little lower on the Eaſt bank of the *Nieper*: On the ſame Side is *Cirkacſe*, the Center of all their Retreats; which was burnt by the *Polanders* in 1637.

On the ſame Side lies *Krilow*, and below that *Cremierczow*, the loweſt Town upon the River, all the Country below it being deſert. Further down the River there are many Iſles, moſt of them uninhabited, becauſe overflowed in the Spring, but much frequented by Fiſhermen. Several other Rivers increaſe the *Nieper* at *Romonow*, but chiefly *Sama*, which ſupplies the Country not only with Fiſh, but with other Commodities, as Honey, Wax, Veniſon, and eſpecially Timber: The *Coſſacks* call this River the *Holy River*: In the Spring they catch Sturgeons and Herring here.

A little below this, the *Poles* in 1635, built a Fort at *Kuda*, which is the firſt of the *Porouki*, *Conſtantinow* on the River *Sliez*, which runs into the *Nieper*. *Porowi* or *Porouki*, in the *Ruſſian* Language, ſignifies a Rock: Of theſe there are thirteen Chains that croſs the *Nieper*, and render the Navigation from the *Ukrain* to the *Black Sea* impracticable; ſo that though the *Ukrain* be fruitful in Corn, yet the Inhabitants not being able to export it, ſuffer much of it to lie untilled. Of theſe Rocks, ſome are under Water, ſome above, as big as Houſes, very near to one another, and ſtop the Courſe of the River; ſo that when it is low they make Cataracts ſometimes of fifteen Feet high; but in the Spring, when the melted Snow ſwells the River, all the Rocks are covered with Water, except the Seventh, which ſtill hinders the River from being navigable; near the loweſt *Porouki* the River is not above a hundred and fifty Paces broad, and therefore is the beſt Paſſage for the *Tartars*.

Below there lies *Tomakouka*, the Place where the *Coſſacks* rendezvous, but their principal Retreat is below the *Czertomelick*, upon an Iſland ſurrounded with a vaſt Number of ſmall ones; ſome of them dry, and others overflowed in the Spring; ſome of them are Moraſſes, but all of them covered over with Reeds and Canes as big as Pikes, which hides the Paſſages between the Iſlands, and makes it a Labyrinth, known only to the *Coſſacks*, who call it *Scarbniza-Woyſkowa*, or the Treaſury of the Army. Here they lay up their Money and Ordnance: The *Turks* have loſt many Galleys among theſe Iſlands, which not being able to diſentangle themſelves, fell into the Hands of the *Coſſacks*. From theſe *Porouki* the *Coſſacks* are called *Zaperouſki*, which is, the great Body of the Nation; and none can be liſted among their Number, till he has paſſed in his little Boat all the *Porouki's*, and from thence, by the Mouth of the *Nieper*, to the *Black Sea*.

The River there is three Miles broad; yet both the *Coſſacks*, and others, paſs it in this Manner: They furniſh themſelves with flat-bottom Boats, at the Stern of which they faſten croſs Poles of a good Length, to which they tie the Heads of their Horſes, as many on the one Side as on the other, to balance them; and putting their Baggage in the Boat, they row over, their Horſes ſwimming after them.

The *Ukrain* is a very fertile Country, though the third Part of it is ſcarcely cultivated; it produces ſuch a vaſt Quantity of Grain of all Sorts, that the Inhabitants are at a Loſs how to conſume it; they cannot export any of it, becauſe their Rivers are not navigable. They abound in Honey, Wax, Wood, Cattle, Fowl, and Fiſh. *Hungary*, *Tranſylvania*, *Wallachia*, and *Moldavia*, ſupply them with Wine; they alſo make good Beer, and *Aqua Vitæ*, out of their Corn; they have much Mead; the Salt-pits near *Cracow* furniſh them with Salt; they have alſo ſome out of the Country of *Pekutia*, on the Borders of *Moldavia* and *Tranſylvania*, where there are Salt-ſprings: Their Houſes are of Wood, and their Fortifications of Earth and Wood, which they account better againſt Cannon, than Brick Walls; but they are ſoon ſet on Fire.

The Rivers of note here are the *Boriſthenes* or *Nieper*, the *Bog*, *Tyras* or *Neiſter*, the common Border betwixt them and *Wallachia*, the *Dezna*, the *Roſs*, the *Horin*, the *Stouez*, and the *Ster*, near which was fought the laſt Battle between the *Poles* and *Coſſacks*, in 1651; which obliged the *Coſſacks* to ſeek Protection among the *Muſcovites* and *Turks*. The Language of the *Coſſacks* is a Dialect of the *Poliſh* Tongue, as the *Poliſh* is of the *Sclavonian*; but that of the *Coſſacks* is much more ſmooth, and full of Diminutives, which makes it very agreeable.

3. The common People are of the *Greek* Church: Their Worſhip is the ſame with that of the *Ruſſians*; their Metropolitan reſides at *Kiow*, is conſecrated by the Patriarch of *Conſtantinople*, and ſubject to him; the whole almoſt of their Religion conſiſts in Feaſts and Holy-days; but the greater Part of the Gentry are Papiſts, and a few Proteſtants. It is very common in this Country for Maids to woo the Men; if a young Woman be in love with a young Man, ſhe is not aſhamed to go to his Father's Houſe, and reveal her Paſſion in the moſt tender Expreſſions, and promiſes all Obedience if he pleaſe to accept of her in Marriage: If ſhe be rejected by the young Man becauſe he is too young, or not diſpoſed to marry, or the like, ſhe tells him that ſhe is reſolved never to go out of the Houſe till he conſent, and accordingly takes up her Lodgings there: To force her out would be to provoke all her Kindred; nor would the Church ſuffer them to uſe any Violence to her without inflicting heavy Penance, and branding the Houſe with Infamy; ſo that after two or three Weeks the Parents, or the young Man himſelf, being moved with the Conſtancy of the Woman, accommodate Matters as well as they can, and make up the Match.

Their Manners are like thoſe of Soldiers, not ſolicitous for what is to come, but ſpend freely what they have among their Companions, and leave Futurity to ſhift for itſelf; they are very inconſtant, mutinous, and purſue their preſent Advantage rather than their Faith and Promiſe; they are great Drinkers, but by reaſon of their Labour and Hardſhips, they have ſo much Health that Phyſicians are of little Uſe among them: They are of a good Stature, ſtrong, nimble, great Lovers of Liberty, uneaſy under any Yoke, and indefatigable: They are much given to fiſhing and hunting. None know better the Way of preparing Saltpetre, and making Gunpowder, their Country abounds with it, and ſeveral Parts of *Europe* are furniſhed from thence. This Territory was almoſt a Deſart till improved by the Induſtry of the *Coſſacks*, and other Colonies; the many Rivers which run through it add much to its Fruitfulneſs.

They have ſome Animals peculiar to their Country, ſuch as a Beaſt called *Bobac*, not unlike a *Guiney* Pig; it makes Holes in the Earth, which it enters in *October*, and never comes Abroad till *April*; within theſe Holes there are many little Apartments for their Proviſions, Lodgings, and Dead; eight or nine Herds of thoſe Beaſts live together in ſuch Caves. They are eaſily tamed, and are very diverting. When they go out for Proviſions, they place a Sentinel, who as ſoon as he ſpies any Body gives a Signal, and they all run to their Caves. The *Jounaky* is a Kind of Goat, remarkable for his beautiful Fur, reſembling Sattin, and a white Skin and ſmooth Horns; he has no Horn in his Noſe, as ſome report, but as he feeds goes backwards. They have many wild Horſes, of no Value but for their Fleſh, which they ſell in their Markets, and think it better than Beef or Veal: When thoſe Horſes come to be old, their Hoofs, never pared, ſo contract their Feet that they cannot go; in Summer they are mightily incommoded with Flies and Graſhoppers, in ſuch vaſt Numbers, that they form a Cloud of five or ſix Leagues long, and three or four broad, darken the Air in the cleareſt Day, and deſtroy all the Corn they light on in leſs than two Hours Time.

4. When they rendezvous upon the Iſlands of *Scarbniza Waſkowa*, the firſt Thing they do is to chuſe their General for that Expedition; and to make their Boats, which they call Colna, of about ſixty Feet long, twelve Feet deep, and as many wide. They are built very light, one Plank pinned on the Edge of another, and widening upwards. They have a Stern at each End, and about twelve or fifteen Oars of a Side. They have no Deck; but to prevent their ſinking, though full of Water, they compaſs them round with a Border of Reeds, as big as a Barrel, tied together, and faſtened to their Boats with Ropes; they have a ſorry Maſt and Sail, but ſeldom uſe them, except in very fair Weather. Their Proviſion is a Ton of Biſket, which they take out of the Bung as they uſe it; a Barrel of boiled Millet, and another of Paſte, made with Water, which they eat with their Millet; every Boat carries about ſixty Perſons; every Man having two Guns, and each Boat five or ſix Falconets or ſmall Pieces of Cannon. They ſet out about the Beginning of *June*, and return about the firſt of *Auguſt*.

They wait for a dark Night, that they may paſs undiſcovered by the *Turks* Galleys, which lie at *Oczakow* to intercept them. With theſe Boats they cruize over all the *Black Sea*. If they ſpy a Galley, they keep at a Diſtance till Night, obſerve the Courſe of the Veſſel, and when it is dark come up and board it; they take out all the Cannon, Money, and Merchandize, and then ſink the Ship, becauſe they have neither Skill nor Opportunity to uſe it. No ſooner have the *Turks* Intelligence that the *Coſſacks* are at Sea but the Alarm is taken immediately, which reaches quickly to *Conſtantinople*; from thence Couriers are diſpatched to the Coaſts of *Natolia*, *Romelia*, and *Bulgaria*, to bid them be upon their Guard; but the *Coſſacks* are generally too nimble for them, and are forty Hours on the Coaſts before them. If a Galley ſpy them in the Day-time (which is very uncommon, for their Veſſels are not above two Feet and a half above Water) they avoid fighting, by rowing away from her, or retiring to Shallows among Reeds, where the Galleys cannot follow them.

This was their Way of living till the Grand Signior obliged *Sigiſmund*, King of *Poland*, to prohibit thoſe Piracies. It was bad Policy in the *Poles* to let them chuſe their own General; for this General being abſolutely their own Creature, is forced to comply with their Methods. They handle their Guns very dextrouſly, and have Scythes ſet long-ways upon Poles, with which they fight very fiercely, and at the ſame Time ſkilfully; ſo that regular Troops are often beat by them. They are very indifferent Horſemen, but excellent Soldiers on Foot. They are inured to all Manner of Fatigues and Hardſhips, obedient to their Commanders, active, and dextrous in intrenching themſelves, not only in the ordinary Way, but alſo by making a Fence of their Baggage Waggons, which cover them as they march. Theſe moving Intrenchments are abſolutely neceſſary for them, when they march without Horſe in open Plains in the Deſarts of the *Tartars*, againſt whom they are forced to ſtand wherever they meet them. There have been ſeveral Inſtances, that one thouſand *Coſſack* Foot marching betwixt their Chariots and Waggons, have, in a Plain, repulſed five or ſix thouſand *Tartars* on Horſeback. Their Horſes, though ſwift, are but weak, and ſtopped by the leaſt Barricade. But, however, this Way of marching, in the midſt of their Baggage and Ammunition Waggons, would ſcarcely be practicable in any other Country but *Poland* and the Deſarts of *Tartary*, which lie upon a Level.

5. It is eaſy, from theſe Accounts, to form a juſt Notion of the original and ancient State of the *Coſſacks*; but ſome farther Explanations will be neceſſary, in order to have a juſt Idea of the Condition of this People at this Day. We will begin with what is requiſite to be ſaid of their Country. In its utmoſt Extent, it may be conſidered as three hundred Miles long, and in ſome Places above a hundred broad; but then this comprehends the Territory, inhabited by all the *Coſſacks*; for they are, at preſent, diſtinguiſhed into various Nations. When we reflect on the Manners of the *Muſcovites*, *Poles*, *Turks*, and *Tartars*, and remember that their Dominions border upon each other, we ſhall very eaſily conceive, that the Frontiers could not afford very ſafe or pleaſant Habitations, and ſhall not be ſurprized to hear that they were deſert. Hence it was, that this otherwiſe large and conſiderable Tract of Country, came to be ſtiled *the Ukrain*, which, in our Language, properly ſignifies *the Marches*. The People who firſt ſettled on the Rocks in the *Nieper* were Vagabonds from all Countries, who built their Huts in the moſt inacceſſible Places, and were from thence called *Coſſacks* or *Goats*, becauſe, like them, they dwelt out of reach.

But, by Degrees, as theſe People became numerous, they began to plant and improve their Country, which is naturally one of the richeſt and fineſt in *Europe*; but from its very Situation, ſo liable to be ranſacked and eat up, whenever any Wars break out among the neighbouring Nations, which are none of them polite, or well governed, that we cannot expect it ſhould ever be brought into any tolerable Condition. Beſides, the *Coſſacks*, like the Buccaneers in *America*, were Planters only by Accident; they looked upon living at Home as a Hardſhip, unleſs in the Time they wanted Winter-Quarters; for their proper Buſineſs was War, and they grew rich, not by Induſtry but Plunder. They were from hence regarded as Barbarians, and in that Senſe very juſtly; becauſe, to live by ſpoiling others is the higheſt Barbarity; inaſmuch as it is that Sort of Life moſt repugnant to Reaſon and the Laws of Nature. But there is another Signification of the Word *barbarous*, which implies Stupidity and Ignorance; and this cannot, with any Degree of Juſtice, be charged upon the *Coſſacks*, who have made as great Improvements in the Art of War as any Nation in the World. It is very true, that with reſpect to us, and our manner of making War, theſe very Improvements appear barbarous, but that is for want of Conſideration in us; for, if we reflect upon the Situation of their Affairs, and on the Contrivances made uſe of by the *Coſſacks* for their own Security, we cannot but perceive the greateſt Ingenuity in them; and I think a little Time will not be ill beſtowed to ſet this Matter in a clear Light.

It has been before laid down that War was their Buſineſs; and this was of two Kinds, defenſive by Land, and offenſive by Sea. In reſpect to the former, the Country round about them was flat, and the Enemies they had to deal with were *Poles* and *Tartars*, who brought great Bodies of Horſe into the Field; to oppoſe theſe with inferior Bodies of light-armed Foot, the *Coſſacks* invented the *Tabor*, or Waggon, in theſe they carried their Baggage, Ammunition, and Proviſions upon a March; and when they encamped, they took Care to have a River in Front, and a Moraſs in the Rear; covering their Flanks with an Intrenchment of Waggons; and by the Help of this Diſcipline, they have defeated Troops, that would have appeared terrible, even to the moſt regular Armies; nay, to ſuch a Degree they carried this Art of fortifying with Waggons, that Field-Marſhal *Munich*, who was an Officer of great Skill and Experience, thought fit to adopt their Method in his laſt War againſt the *Turks*; and that with ſuch Succeſs, as enabled him to come off with Honour and Victory, when attacked by the moſt numerous Armies the *Ottoman* Power could bring into the Field. This ſhewed great Skill and military Prudence in that Officer, who alſo brought ſeveral Regiments of *Coſſacks* into the *Ruſſian* Service: I will not ſay as regular, but I may ſay as ſettled and eſtabliſhed Troops, and they have been found very ſerviceable. We muſt, however, diſtinguiſh between the *Coſſacks* in the Pay of *Ruſſia* and the *Coſſacks* under the Protection of *Ruſſia*; the former are a Body of Troops of between ten and twelve thouſand Men, that may be marched any where, as Occaſion ſhall require; but the latter are a great People, capable of bringing fifty or ſixty thouſand Men into the Field, for the Service of the *Ruſſians*, againſt the *Turks* or *Tartars*, but as ſoon as the War is over they will expect to return Home.

In their offenſive Wars, which, as we have ſhewn, the *Coſſacks* carry on by Sea, the Invention of their Boats is admirable; for, in the firſt Place, they are very light, ſo that they may be tranſported from Rock to Rock with great Eaſe. In the next Place, they are capacious, ſo as to hold a great Number of Men, which gives them ſuch a Power in boarding and attacking Places on the Sea Coaſts, as it is hardly poſſible to reſiſt. Their Method of Building without Keels, and Sheathing with Reeds, defends them from ſinking, even if full of Water. Beſides this, it makes their Boats, when filled with Men, lie ſo deep in the Water, that they are not to be ſeen at any great Diſtance, and yet they go at a prodigious Rate, ſo as to be in no Danger, when purſued by any kind of Shipping in uſe among the *Turks*.

If indeed we take theſe Bark Boats out of the Water, and conſider them independent of the *Coſſacks*, who uſe them, and of the Uſes they make of them, they will appear very poor and deſpicable Things, and we may ſay the ſame of their Waggons; but notwithſtanding this, when all Circumſtances are duly weighed, when we remember that theſe People are poor, weak, and defenceleſs, in Compariſon of their Neighbours, have very few Fortreſſes, and thoſe compoſed only of Wood and Earth; and that notwithſtanding theſe Advantages, they have made a Shift to cover their Country ſo well, and defended themſelves ſo obſtinately, as to make the *Poles* and *Tartars* weary of their Wars with them; we muſt allow them ſome Merit, with reſpect to military Skill; on the other Hand, when we call to mind, that they have no Trade, no Veſſels, no Ports to receive them, if they had any; no Yards, little Timber, no Docks, Carpenters, or Seamen, we cannot help owning that the naval Exploits of ſuch People, are in a great Meaſure aſtoniſhing.

Their Government is entirely military, inſomuch that in Time of Peace they have hardly any Magiſtrates or Laws; but when the Nation, by whom they are protected (and at preſent ſome of them are under the *Poles*, ſome under the *Turks*, but the far greateſt Part of them under the *Ruſſians*) propoſe they ſhould riſe and take the Field; the firſt Step is to give them leave to elect a General, who in their Language is called HETMAN or HATMAN, which ſome modern Writers have miſtaken for a proper Name; whereas, in reality, it is the Stile of Office, and anſwers to that of *Imperator* amongſt the ancient *Romans*; and he has the abſolute Command ſo long as the War continues; neither is it eaſy to deſpoſe him afterwards; for in this, as well as in all other Countries, Power has in it ſomething ſo pleaſing, that no ſmall Difficulty is found in reducing him who has been once a Prince, to the Rank of a private Man.

In the Hiſtories of the Wars in the North, from the Beginning of the preſent Century to the Death of *Peter the Great*, Emperor of *Ruſſia*, the HATMAN of the *Coſſacks* is often mentioned, and ſome of them made a great Figure; but of late, and indeed in all Times of Peace, we hear of no ſuch Perſon; but when the Circumſtances of Things ſhall alter (and no body knows how ſoon this may happen) it is very probable we ſhall hear of them again; as the *Croats*, *Pandours*, and *Talpatches*, with many other barbarous Nations, lay hid in their Dens and Marſhes, till the preſent War called them Abroad, and ſhewed more civilized Nations the dreadful Appearance of theſe terrible Militia. But it is right to enquire after, and have ſome tolerable Knowledge, even of the moſt obſcure Nations, that when thoſe Accidents, which are always in the Womb of Time, bring them upon the Stage; we may not be amazed at their Names, or in Doubt about their Force.

It was the Praiſe of *Ulyſſes*, the wiſeſt Man in his Day in *Greece*, That he had ſeen and was acquainted with the Laws and Cuſtoms, the Manners and Modes, of different Places and People. And this was a great Commendation, worthy the Pen and Pains of the immortal *Homer*, who has juſtly celebrated the Labours and Travels of that excellent Man: But it is the Felicity of modern Times, that every Man may be an *Ulyſſes* in his Cloſet; may ſail over the Ocean in his Elbow-chair, and travel all the World over in his Study. Neither is this a Flight of Oratory, a lively or extravagant Picture; but a plain, certain, and undeniable Truth: Books and Maps will do the Work effectually; and a ſmall Degree of Application, and that only for a few Months, will enable us to acquire more real and uſeful Knowledge than it was poſſible for any of the Ancients to become Maſter of in the Courſe of his Life; and therefore if we do not excel them, is not more their Glory than our Fault: *He who has never travelled*, ſay the *Turks*; *he who has never read*, may we ſay, *thinks all the World like his Father's Houſe*; that is, has ſuch narrow and confined Notions, as are unworthy of the human Mind, and ſubject him to Wonder and Amaze, the moſt ſhameful Marks of Ignorance and Folly, upon every new Event; for to him all Changes are ſtrange, and every Incident, becauſe unlooked for, is ſurprizing.

It was proper to throw together theſe Reflections at the Cloſe of this Section, becauſe it is the laſt in which we ſhall have occaſion to treat this Subject; for we are now to look abroad into more civilized Countries, where every thing has a ſofter Air, and the Inhabitants are learned and polite. It is true, that the viſiting Countries, like theſe, ſeems to be moſt expedient for modern Travellers, who are ſent abroad to acquire a genteel Manner, and a correct Taſte; but for ſuch as travel at home, though it is certainly more delightful and entertaining, to read the Deſcriptions of fair and fruitful Countries, thoroughly planted and carefully cultivated, abounding with rich Cities, great Towns, and pleaſant Villages, adorned in all Quarters with elegant Structures, and affording every where pleaſing Objects to the wandering Eye of the inquiſitive Beholders, yet to thoſe whoſe Studies tend to higher Purpoſes, this will ſeem no more than an Amuſement; for to them the Variation of Power, the Change of Circumſtances, the riſing and falling of Nations in the Balance of ſound Policy, ſeems to be the great, if not the only rational, End of ſuch Enquiries. An Inſtance will render my Meaning in this Reſpect perfectly clear. The Beauties of *Italy* are very far from declining, her Artiſts are as famous as ever, and her *Virtuoſi* more ſo; but it unluckily falls out, that while the *Italians* grow more polite, they ſink more and more in their Power. There was a Time when the *Italian* Liberty was talked of, and before that there was a Time when it exiſted, but now the Diſcourſe of it is as little heard as the Thing itſelf is ſeen. The great Topic now, is the Balance of Power; which is no other than a Contrivance to render Slavery lighter, or at leaſt make it appear ſo, by dividing it into ſeveral Hands. The Expedient is neceſſary and therefore proper enough, ſince a foreign Yoke cannot be thrown off, or the antient Freedom of the *Italian* States reſtored. But this is not the Caſe in the North, and amongſt Nations of whom moſt People are content to know but little: It is to combat theſe Notions that we venture upon theſe Remarks, in order to inſpire our Countrymen with an Inclination to examine into Matters of more real Importance, and which will very ſoon, perhaps while the preſent Generation ſubſiſts, more nearly concerns us.

The Power of *Ruſſia* is not yet of fifty Years ſtanding; but, in that time, it has made a prodigious Progreſs; and, at this Day, appears with formidable Greatneſs. From being inſulted by the *Poles*, trampled on by the *Swedes*, and over-run by the *Tartars*, it has not only grown ſtrong enough to keep all theſe Nations in awe, but has likewiſe made conſiderable Conqueſts upon *Perſia*, given a Check to the *Turkiſh* Power, alarmed the *Chineſe* Empire, and ſpread the Terror of its Arms among the *Japoneſe*, who have ſcarce heard the Names of other *European* Powers. It is worth while, therefore, to enquire into the State and Forces of this Empire, and to learn ſomething of that Policy, by which thirty Millions of People are kept in Subjection. We ſhall take a proper time to examine this. It is indeed true, that the Power of *Sweden* is very much decreaſed, but we cannot ſay the ſame thing of their Trade. They have lately opened a Paſſage to the *Eaſt-Indies*; and their Dyets are very intent upon promoting every Branch of their Commerce; nor is there any Reaſon to ſuſpect, that their Pains will be thrown away. The ſame Spirit exerts itſelf, with at leaſt equal Vigour, in *Denmark*; and when once the preſent War is over, and the Power of *Pruſſia* thoroughly eſtabliſhed by a general Peace, I dare propheſy, that ſome Attempts, of the ſame Kind, will be made on that Side. By Methods like theſe, the whole Face of the North will be changed, Induſtry and Navigation will become the Buſineſs of People that heretofore knew nothing of either, and in the Space of a few Years, that Emulation which appears ſo ſtrongly among thoſe Princes, muſt neceſſarily produce great Effects. All the old Ports in the North will be opened and improved, and new will be heard of, that at preſent want Names. Every Creek will be rendered advantageous, and every fiſhing Town will become a Place of Trade; new Commodities will be raiſed, new Manufactures ſet on Foot, and new Schemes formed, to render theſe beneficial to the Subjects of theſe States, under whoſe Protection they riſe.

I do not pretend to ſay, that ſuch Changes or Alterations will prove detrimental to *Great-Britain*; I hope they will not. I am far from ſuggeſting, that they ſhould become Grounds to us of Jealouſy, or Envy; but what I aim at, is to prove, that they are Objects that demand our Attention. While Deſigns, like theſe, are in their Infancy, they may be bent, and turned, by a ſuperior maritime Power, to its Advantage. We may perhaps be Gainers by the Variation, that will be occaſioned thereby in the State of commerical Affairs, and the Riſe of theſe new trading Countries may be made very profitable to our own: But, in order to this, their Views muſt be conſidered in time, and muſt be conſidered with great Coolneſs and Deliberation; that we may not attempt to oppoſe what may turn to our Intereſt, or to be drawn in to promote Projects beneficial to others and detrimental to ourſelves. Theſe are Motives, that ſhould incline us, to look very circumſpectly into the Condition of the North. We gained a great Part of the Trade we have at preſent, by doing this, in the Reign of Queen *Elizabeth*; and we loſt a Part of our Trade, by that Negligence; which, among other miſchievous Conſequences, attended our fatal Civil War. It imports us now to provide againſt any new Miſfortunes of the ſame Kind; which can be only done by a provident Application to our own Intereſts, and uſing, in due Time, the moſt effectual Means to prevent the Current of Trade from running too ſtrongly into the North; a thing that muſt be attended with extraordinary Conſequences, which it will be for the Reputation of our Governors to foreſee, and in reſpect of which it is their Duty to provide. That theſe Hints may prove ſome way uſeful to ſo great and ſalutary a Purpoſe, and prevent that Spirit from being extinguiſhed here, which begins to be ſo conſpicuous amongſt our Neighbours, is the ſole View of their Author; who, ſince he can be no otherwiſe uſeful to his Country, thinks it incumbent upon him to expreſs his good Will towards it, by furniſhing Remarks worthy the Notice of thoſe, who have more in their Power, and to whom he moſt ardently wiſhes Prudence, Diligence, and Succeſs.

CHAPTER III.

Comprehending TRAVELS through the middle Parts of *Europe*, particularly, the *United Provinces*, the *Auſtrian* Low Countries, *Germany*, *Italy*, *Switzerland*, *Savoy*, and the Territories of the Republick of *Genoa*.

SECTION I.

The TRAVELS *of Mr.* MAXIMILIAN MISSON, *through Part of* Holland, *the* Spaniſh *Low Countries*, Germany, Tyrol, *and the Biſhoprick of* Trent, *in his Way to* Italy, *containing a diſtinct Account of whatever appeared to him remarkable in the Places through which he paſſed; together with Political, Hiſtorical, and Critical Remarks upon Perſons and Things, as he has Occaſion to mention them.*

1. *A ſhort Introduction, containing ſome Account of the Author, the Occaſion of his Travels, the Nature and Deſign of his Work, the ſeveral Editions it has gone through, and what is to be expected from this Abridgement.* 2. *A Deſcription of the Country of* Holland, *the Neatneſs of the Cities and great Towns, the Conveniencies of Travelling, together with ſome Account of the two great Cities of* Amſterdam *and* Rotterdam. 3. *A Proſecution of the ſame Subject, including a Deſcription of the Town of* Delft, *the celebrated Village of the* Hague, *the Univerſity of* Leyden *and its Curioſities, and the Town of* Haerlem. 4. *A more particular Deſcription of the great City of* Amſterdam, *the publick and private Buildings there; an Account of an Order of Nuns called* Beguines, *and other Things worthy of Obſervation.* 5. *The Author's Journey from* Amſterdam *to* Utrecht, *Deſcription of the Places upon the Road, and Remarks on the Harmony which ſubſiſts in* Germany *between Perſons of different Religions.* 6. *A circumſtantial Deſcription of the great City of* Cologn, *the Capital of the Archbiſhoprick and Electorate of that Name, the publick Edifices therein, with ſome judicious Remarks upon Popiſh Superſtition.* 7. *The Author's Paſſage on the* Rhine *from* Cologn *to* Mentz, *Deſcription of the Country and Villages on both Sides that River, with a Correction of a vulgar Miſtake about the Tomb of* Druſus *at* Mentz. 8. *His Paſſage on the* Maine *from* Mentz *to* Franckfort, *Deſcription of this City; a very curious Account of the Golden Bull, the Original of which is kept there, and other Particulars.* 9. *His Journey from* Franckfort *to* Worms; *a large Account of the laſt mentioned Place, as alſo of* Frankendal, Manheim, *and* Heidelberg. 10. *His Paſſage from the laſt mentioned City, through a very pleaſant and agreeable Country, to* Nuremberg; *a Deſcription of that Place, and of the Diadem of* Charlemagne *kept there; of a Book printed by* Fauſtus *in* 1446, *and another in* 1449; *with ſome Remarks on the Invention of* Gunpowder, *and other Curioſities.* 11. *A Deſcription of* Ingolſtadt, Neubourgh, *and a very particular Account of the Imperial City of* Augſbourg, *the publick Edifices therein, the Dreſs, Cuſtoms and Manners of its Inhabitants.* 12. *An Account of the Country of* Bavaria; *of the Capital City of* Munich, *the Electoral Palace there, and other Curioſities.* 13. *A Deſcription of the Country of* Tyrol, *of the City of* Inſpruck, *of the Houſe there, the Porch of which is ſaid to be covered with Gold, the Country Palace of the Archdukes at* Amras. 14. *A View of the remaining Part of the Country of* Tyrol, *and of the Biſhoprick of* Trent, *with a Deſcription of the City of that Name, and of whatever is therein remarkable.* 15. *Remarks and Obſervations upon the foregoing Section.*

1. THERE are very few Books of Travels, that have maintained their Credit ſo well as theſe of which we propoſe in this and the following Sections to give a ſuccinct Abridgement. Mr. *Miſſon* was a Gentleman of great Reading and general Knowledge, which recommended him to the Favour and Protection of the old Duke of *Ormond*, who committed to his Care his Grandſon, the preſent Earl of *Arran*. He travelled alſo with ſeveral other Noblemen and Gentlemen, which gave him an Opportunity of examining very attentively the Places through which he paſſed, and of which he has given us a Deſcription. His Work was originally ſmall to what it now appears, but as it was very well received, he reviewed it more than once, and made large Additions from Time to Time to the ſeveral Editions of it that were printed in *French*; all of which are preſerved in the laſt *Engliſh* Tranſlation, in which we find a Multitude of Paſſages corrected, or rendered more clear and explicit, than in any of the former, and therefore we have taken Care, in reviewing this Abridgement, to compare it therewith, ſo as to render it as compleat as it is poſſible, as well as to free it from the numerous Miſtakes that had crept into the former Extract of it publiſhed by Dr. *Harris*.

The Author divided his Work in the Original into Letters, which are dated from ſeveral Places; but to render it more agreeable to the Form of this Work, we have digeſted it in the ſame Manner with the other Parts of it; which, we flatter ourſelves, will render it more eaſy and intelligible to our Readers. The great Number of Inſcriptions, literary Diſſertations, hiſtorical and critical Diſcuſſions, with which the Author, from Time to Time, augmented his original Performance, ſwelled it to four Volumes; and though many of theſe are very curious and uſeful, yet as they did not ſuit either the Deſign of our Work, or the Bounds within which we are obliged to confine it, we have contracted them as far as it was neceſſary, to bring the whole into a reaſonable Compaſs, with as little Prejudice as might be to the Sentiments of the Author.

It is requiſite farther to obſerve, that theſe Travels were made in 1687, and 1688; ſo that the Reader will make the proper Allowances for the Alterations that have happened, in reſpect both to Perſons and Things ſince that Time. The Rout he took has been eſteemed, by the ableſt Judges, one of the beſt, for making what is called the *Grand Tour*, in order to give young Travellers a View of the moſt remarkable Parts of *Europe*, and the Method he has taken in deſcribing the Countries and Cities through which he paſſed, has been looked upon as equally inſtructive and entertaining; ſo that hitherto nothing of the ſame Kind has appeared, either ſo extenſive in its Deſign, or ſo well executed in the ſeveral Parts of it. Our Author was a very zealous as well as learned Proteſtant, and he has left us great Marks of both in this Performance, which ſtirred up ſome Perſons abroad to criticiſe various Paſſages in his Travels; but he was, generally ſpeaking, ſo much in the Right, and in the Diſcourſes before-mentioned, which may be ſtill found in the laſt *Engliſh* Tranſlation of his Book, he has defended himſelf ſo well, that his Adverſaries have had no great Occaſion to triumph. Theſe Particulars, which were neceſſary for the Reader's Satisfaction, being diſpatched, there is no Neceſſity for enlarging any farther this Introduction, and therefore we ſhall proceed, as near may be, in the Author's own Words, after putting the Peruſer in Mind, that the Plainneſs and Familiarity of the Stile is ſuch as may be expected, and has been always allowed to Epiſtolary Writings.

2. H*Olland* being a flat Country, like a continued Meadow, as we approached the Shore, the Pinacles of the Steeples and the Trees appeared as riſing out of the Water. The whole Country is cut into Canals and Ditches with incredible Labour, without which the Grounds would be ſo ſoaked with Water, as would render it not habitable; whereas now, by the Induſtry of its Inhabitants, it is the richeſt and beſt peopled in the World, in Proportion to its Extent: Some make their Number amount to two Millions five hundred thouſand Souls, in the ſingle Province of *Holland*; ſome account only two Millions in all the Seven Provinces.

The Cities of *Holland* are generally very neat and beautiful, their Inhabitants ſparing no Pains or Coſt for that Purpoſe, as appears by their conſtantly waſhing them; and having the Inſides of their Houſes curiouſly painted; and their Windows, generally of Glaſs, as clear as Cryſtal: Their Cleanlineſs extends even to their Shops and Stables, which are kept neater here, than the beſt Apartments are in ſome Countries. Their Streets are ſo clean, that you ſee the Women walk almoſt conſtantly in Slippers; and the Canals being on both Sides planted with Trees, afford a moſt delightful ſhady Paſſage through all the chief Streets of the Cities, and of ſome of the Towns and Villages alſo. They reckon in the United Provinces one City (*Amſterdam*) of the firſt Rank, about twenty of the ſecond, upwards of thirty of the third, two hundred large Towns, and eight hundred Villages. But to return to their Canals.

Theſe are very convenient for travelling, which is generally performed in large Boats covered againſt the Injuries of the Air, and drawn by Horſes, which go off and bring you to your Journey's End exactly at certain Hours; they ſerve for the Tranſportation of Commdities from one Place to another: And ſome of theſe Canals afford tolerable Store of ſeveral Kinds of Fiſh.

Notwithſtanding all theſe Advantages, there are many Things wanting in *Holland*, their Supplies of Wines, nay, even of Corn, and moſt other Things neceſſary for the Suſtenance of Life, are derived from foreign Countries, which occaſions their having ſuch a prodigious Number of Ships, ſo that ſome have computed them equal to all the reſt that *Europe* can produce. But as on one Side they are chiefly obliged to the Sea for their Riches, ſo on the other Hand it proves the Occaſion of almoſt irreparable Deſolations; for though they take all poſſible Precautions to maintain their Dams and Mills for the emptying of the Water, yet ſometimes the Impetuoſity of this Element breaks through all theſe Fences, which has coſt at ſeveral Times the Lives of ſome Millions of People. Thus, *April* 17, 1429, a hundred thouſand People were drowned about *Dort*. In 1446, there were fifteen Pariſhes overflowed in the Village of *Scheveling*, 121 Houſes were carried away, and the Church, now cloſe by the Sea-ſide, ſtood in the Middle of the Place.

Another Inconveniency is, the ſudden Change of the Weather from Heat to Cold, a Thing not agreeable to thoſe who are not uſed to it. Their Impoſitions are alſo very heavy, which conſequently occaſions a Dearneſs of all Sorts of Victuals; but their Plenty of Trade ſeems to make them a ſufficient Amends for this and every other Inconveniency.

We were not a little ſurprized with the firſt Sight of *Rotterdam*, for its Canals being, for the moſt Part, ſo deep and broad, that they are capable of receiving Veſſels of a great Bulk; this affords the moſt agreeable Proſpect of a Mixture of Trees, Tops of lofty Houſes and Maſts, which at a Diſtance appear wonderfully beautiful.

The City of *Rotterdam* has not always been in the ſame flouriſhing Condition, which makes it now challenge a Place among the Cities of the ſecond Rank, its Port being both large and commodious, the City rich, populous, pleaſant, and extreamly flouriſhing; their Store-houſes for the Navy, the Town-houſe, and the Bank, are beautiful Structures; their Glaſs-houſe (famous through all the Seven Provinces) manufactures abundance of little enamel'd Bowls, and ſuch-like Baubles, curiouſly done, which are ſold to prodigious Profit to the Savages in the *Indies*.

There are two *French* Churches here: The Statue of Braſs of *Eraſmus* is fixed on a Pedeſtal of Marble in the Place called the *Great Bridge*, ſurrounded with Iron Rails. *Eraſmus* is dreſſed in his Doctor's Robe, with a Book in his Hand; and near it you ſee the following Diſtich, wrote over the Door of a little Houſe where he was born, *Octob.* 27, 1467, but died at *Baſil*, *June* 12, 1536.

Ædibus hic ortus, mundum decoravit Eraſmus
Artibus ingenuis, Religione, Fide.

There has been due Care expreſſed in this Reſpect, for the firſt Statue was erected 1540, of Wood; after that another of Stone, 1657; and this of Braſs, 1622.

We made a little Journey from hence to a ſmall Village called *Leckerkeck*, about three Leagues from the City, upon the River *Leck*, where the Lord of the Manor told us, that the Salmon-fiſhing (the fifth Part whereof belongs to him) uſed formerly to produce twenty thouſand Livres *per Annum* for his Share, but of late Years the Salmon having left that River, the Fiſhing (which they are forced to continue only to maintain their Right) does not defray the Charges.

At the ſame Place they ſhewed us a Woman, who was the Year before, *i. e.* 1686, brought to Bed of ſix Sons at one Birth, four of them were baptized, and the eldeſt lived four Months after.

At the Lord of the Manor's Houſe, we ſaw alſo a Servant-maid, named *la Bonte*, who under that Name was muſtered, and ſerved no leſs than ſeven Years in the Quality of a Muſqueteer.

We were credibly inform'd, that a few Years before there died in this Place one *Gerard Baſtianſon*, a Fiſherman, who was full eight Feet high, and though a very lean Perſon, weigh'd five hundred Weight: The Doors of his Houſe, and his Clothes, which were ſhewn, ſufficiently confirm'd what they told us of his Size.

The Tower of the great Church here is very remarkable. It leaned formerly on the Nave of the Building; that is, bent towards the North-Eaſt three Feet and a half, but by opening the Foundation, they have found Means to ſet it up quite ſtraight, as appears by a proſe Inſcription in *Dutch*; which alſo acquaints us the Ground was opened *September* the 25th, 1651, and was cloſed again *April* the 22d, 1655. The Architect who performed this ſingular Piece of Work was one *Nicholas Jeremy Perſoons*. *Dion Caſſius*, under the Reign of *Tiberius*, mentions ſomething of the ſame Sort done, and that the Artiſt was but ill rewarded.

3. The ordinary Paſſage-boat carried us in two Hours to *Delft*, a City that holds the third Rank in the Aſſembly of the States of *Holland*. One of the chief Curioſities they ſhew you in this City is, the Tomb of *William* Prince of *Orange*, aſſaſſinated here by *Balthaſar Gerard*, 1584. The Arſenal, the Townhouſe, the *Stadtholder*'s Palace, the Grand Place, and the great Hoſpital, with its Gardens, are well worth the Sight of a Traveller. The *Canal* betwixt this City and the *Hague* is not above a League in Length, in Sight of *Reſwyck* and *Voerburgh*, two pleaſant Villages, and adorn'd on both Sides with moſt delightful Summer Villa's, fine Walks, and noble Gardens.

The *Hague*, being without Gates or Walls, is reckoned among the Villages, notwithſtanding which, as it enjoys the Privilege of a City, ſo its Grandeur and Beauty ſeems to deſerve that Name, being beſides this the Reſidence of the Princes of *Orange* when *Stadtholders*, of all the foreign Miniſter, and the Place of Aſſembly of the *States General*; beſides that, the great Concourſe of Foreigners of all Sorts, renders the People more obliging and ſociable than in any other Place of *Holland*. Add to this, that the Air is very good, the Wood near the Town extremely delightful, and the Walk from thence to the Village of *Scheveling*, near the Sea-ſide, very diverting. Here they ſhew a Chariot furniſh'd both with Wheels and Sails, which is carried along by the Wind upon the Sea-ſhore, very pleaſant to walk on, it being both hard and level.

Its Situation is certainly the moſt pleaſant of any Place in *Holland*, having the before-mentioned Wood to the North, very fertile Meadows to the South, good arable Lands to the Eaſt, and the Sea to the Weſt.

The Princes of *Orange* keep their Reſidence in the Palace of the ancient Earls of *Holland*; but that called the *Old Court*, where they formerly lodg'd, is by much the more regular Structure; the Houſes of Pleaſure about the *Hague* are generally very beautiful.

We took, among other Things, a View of the Church of the Village of *Loſdun*, ſo famous for the two Baſons of Braſs preſerved there, in Memory of the three hundred ſixty-five Children of the Counteſs of *Hennebergh*, Daughter to *Florent* IV. Earl of *Holland*, that were baptiz'd in them. The Story goes, that the ſaid Counteſs having reproach'd a Beggar-woman with having too many Children, the poor Wretch, by way of Imprecation, wiſh'd her as many as there were Days in the Year; which being fulfill'd, they were all chriſtened, (the Boys by the Name of *John*, the Girls *Elizabeth*) and buried in the Church of *Loſdun*. The whole Hiſtory is painted at large in the ſaid Church, on both Ends of which Picture the two Baſons are fix'd. The Truth of it is atteſted by *Eraſmus*, *Vives*, *Guicciardine*, and others.

From the *Hague* we went forward to *Leyden*, a Place not ſo much frequented by Courtiers and Officers, nor ſo much diſturbed with Buſineſs and Traffick as the *Hague* and *Rotterdam*, but exceeding charming by its intrinſick Beauty and Quiet, ſo that you ſeem to enjoy the Benefit of a Country Life in the Midſt of a great City: Its chief Trade conſiſts in the Woollen Manufactory, which, together with the Univerſity, makes it one of the moſt conſiderable Cities in *Holland*. There are commonly about 1500 Students.

In the *Anatomy-Hall* they ſhew you a great many Skeletons both Men and Beaſts, abundance of Plants, Fruits, Animals, Arms, Habits, Pictures, Mummies, Urns, Images, *&c.* and among the reſt, the Picture of a *Pruſſian* Peaſant, who having ſwallowed a large Knife, the ſame (as they tell you) was cut out again of his Stomach, and he lived eight Years after.

In the Gallery of the Phyſick-Garden, and the adjoining Cabinet, called the *Indian Cabinet*, we ſaw divers natural Curioſities, among the reſt a wing'd Cat and Ape; the Hand of a Mermaid; a vegetable *Priapus*, a moſt curious Plant; a Monſter produced from a Hen's Egg; a Piece of Money of Paper, made during the Siege of *Leyden* by the *Spaniards* in 1574, with this Inſcription on one Side *Hæc libertatis ergo*; on the other, *Pugno pro Patria*: An *Eaſt-India* Serpent, on whoſe Skin are to be ſeen, as ſome fancy, ſeveral natural Figures reſembling *Arabick* Characters; beſides a great Number of Animals, Inſects, and other Things, preſerved in Vials fill'd with Spirit of Wine.

Before I take my Leave of *Leyden*, I muſt not forget to give you an Account of the *Rhine*, which is loſt near its Mouth, where moſt other Rivers are at the largeſt; for the *Rhine* dividing itſelf into two Branches near *Schenkerſchontz*, one of them takes the Name of *Wakle*, the other a little above *Arnheim*, that of *Yſſel*; and continuing its Courſe about ſeven or eight Leagues below that City, as far as *Duarſtadt*, is there again ſubdivided into two other ſmall Channels, the chiefeſt whereof takes the Name of the *Leck*; and the other Rivulet, which turns more to the right, retains the Name of the *Rhine*; till coming to *Utrecht*, it emits another Branch, which taking its Courſe to the North, is known by the Name of the *Vecht*; and the other continuing its Courſe, by the Name of the *Rhine*, to *Worden*, it at laſt loſes itſelf in two or three Canals at *Leyden*. The Cauſe of this odd Fate of the *Rhine*, is attributed to an Earthquake, which throwing Part of the *Downs* into the Mouth of this River, ſhut it ever ſince, the Waters were driven back, and conſequently enlarged and deepened the Channel of the *Leck* as you ſee it now.

They ſhew you here the Shopboard belonging to that noted Taylor called *John* of *Leyden*, (where he was born) the chief of the *Anabaptiſts*. His true Name was *John Bucold*.

From hence to *Haerlem* is five Hours travelling by the Paſſage-boat, the *Canal* being lined with a great Number of Country-ſeats and Summer-houſes.

Haerlem is a large and pleaſant City, and, for its agreeable Situation, may challenge the Preference before *Leyden*, moſt of its *Canals* being mix'd with the little River *Sparm*. This City is chiefly famous for the Linnen Manufactory, and that of Tape, though of late Years they have made alſo great Quantities of Silk-ſtuffs. The great Church (the largeſt in all the Seven Provinces) and the Town-houſe, are ſtately Structures; and the Wood without the City is a great Addition to its pleaſant Situation; for which it is deſervedly admired.

Lawrence Coſter, who challenges the firſt Invention of Printing, was a Native of this City; though *John Guttenbergh* of *Straſburgh*, and *Conrade* and *Arnold*, two Brothers of *Mayence*, challenge that Honour before him. However, thoſe of *Haerlem*, in reſpect to their Townſman, keep in their Town-houſe the firſt Book that ever was printed, in a Silver Caſe wrapt in Silk, the keeping whereof is committed to the Care of ſeveral of the Magiſtrates; and the Statue of *Lawrence Coſter* is to be view'd in the ſame Place. This Inſcription is to be ſeen in golden Letters over the Door of the Houſe where the ſaid *Lawrence Coſter* lived.

MEMORIÆ SACRUM,
Typographia ars artium omnium Conſervatrix, hic primum
inventa circa annum 1440.

Meyer aſſures us, that in 1403, a Mermaid was caſt aſhore by a Tempeſt near *Haerlem*, who was brought to feed upon Bread and Milk, taught to ſpin, and lived for many Years. *John Gerard* of *Leyden* adds, that ſhe would frequently pull off her Clothes, and run towards the Water, and that her Speech was ſo confuſed a Noiſe, as not to be underſtood by any body: She was buried in the Church-yard, becauſe ſhe had learnt to make the Sign of the Croſs. He ſpeaks this upon the Credit of ſeveral Perſons that had ſeen her.

4. As it would require a long Continuance in the City of *Amſterdam* to learn every Thing that belongs to it, and a large Volume to deſcribe it all, I will content myſelf with giving rather a Scheme than a Deſcription of a Place, which is, beyond all Diſpute, one of the moſt beautiful and conſiderable Cities in the World; however, for its Extent it is in no wiſe to be compared to *London*, there being, according to a good Calculation, in *London* about ſeven hundred thouſand Souls, but in *Amſterdam* not above two hundred thouſand; but for Riches and Trade it may vie with any City in the World, witneſs their *Eaſt-India Company*, which was founded in 1594, and has waged Wars againſt very potent Princes, without any conſiderable Interruption of their Trade.

This City is built upon Piles fix'd in the Marſhes on the South Side of the River *Ye* or *Tye*, which is a Branch of the *Zuyder-Zee*. Its Fortifications are very conſiderable, conſiſting of many Baſtions faced with Brick, ſurrounded with a Ditch eighty Paces broad, fill'd with running Water, which, together with the Sluices, whereby they can lay all the adjacent Country under Water, renders it almoſt impregnable; beſides the ordinary Garriſon, the Militia or Train'd Bands of the City conſiſt of ſixty Companies of a hundred and fifty Men each, commanded by Citizens.

The Town-houſe, which is reported to have coſt three Millions, is a ſpacious and moſt magnificent Structure, of hewn Stone; its Length is a hundred and ten Paces, and its Breadth twenty-four: It is highly eſteem'd for its regular Architecture; many are of Opinion, that the Foundation coſt as much as the Fabrick above Ground; however, the Doors which give Entrance to this great and ſplendid Palace ſeem to be too ſmall, in Proportion to the whole, and the Square or Space before it is not either neat or regular.

The principal Church of the City was formerly dedicated to St. *Catherine*, but is now called *The New Church*: It is not ſo large as either of the great Churches at *Leyden* or *Haerlem*; for as *Amſterdam* was no more than a poor Village within theſe five hundred Years, and its Condition, even in our Age, was not comparable to what you ſee it now, this Church was built anſwerable to its State at that Time. They affirm, that the Pulpit. made of Wood of *Gothick* Carving, with its Canopy, coſt two hundred thouſand Crowns; with the Organs (which are extraordinary fine) at leaſt a hundred thouſand Crowns, the Steeple intended to be erected remains imperfect. On the Glaſs Windows is painted the Hiſtory of the Emperor *Maximilian* V. who beſtow'd the Imperial Crown upon the Arms of this City. The Tomb of the famous Admiral *de Ruyter*, in this Church, is a fine Piece. The Synagogue of the *Portugueſe Jews* is a ſtately Fabrick; but that of the *High-Dutch* is but very indifferent. It is obſervable, that notwithſtanding the Inquiſition of *Spain* and *Portugal*, the Agents from both theſe Crown at *Amſterdam* were *Jews* in 1687.

One of their Houſes of Correction, called the *Raſphuys*, is for the young Debauchees, where they are kept to their Taſks, under the Penalty of Whipping. There is another ſuch a one for the Whores, ſtiled the *Spinhuys*, who are not treated with the ſame Severity. But there are enough of them alſo at Liberty here as well as in other great Cities.

The *Rowan* Catholicks enjoy Liberty of Conſcience as in other Parts of the Seven Provinces, tho' their Number is not ſo conſiderable as ſome have endeavour'd to perſuade us; for I have been inform'd by Perſons of Knowledge and Credit, that the *Roman* Catholiks, and all other Sectaries together, do not make a fourth Part of the Inhabitants of *Amſterdam*.

In this City remains ſtill a Convent of certain Nuns called *Beguines*, an Order erected *A. D.* 1207, compoſed of Maidens and Widows, who have no Children, and who need no other Qualifications to be admitted into this Society, than a Teſtimonial of their good Behaviour, and a Competency to live upon, either by themſelves or in Conjunction with one or more of the Siſters, as they find it moſt ſuitable to their Purpoſe. Their Convent (which contains about a hundred and thirty Siſters) is built like a little City with a Wall and Ditch about it, within which ſtands a Church, where they are obliged to perform their Devotions at certain Hours. They wear an odd looking black Habit, receive and pay Viſits, and quit the Convent when they pleaſe.

The Houſes of *Amſterdam* being founded upon wooden Piles, this is the Reaſon they will not allow any Coaches here, except to Phyſicians and to ſome Strangers of Note; inſtead whereof, they make Uſe of a Kind of Sleds made like Coaches; but this Carriage being but ſlow and uneaſy, is not generally in Faſhion.

We ſaw at *Amſterdam* a *French* Opera, but in Want both of good Machines and Actors; ſo that we were not much delighted with it.

The Muſick-houſes of *Amſterdam*, ſo much talk'd of, are publick Houſes or Taverns, where young Fellows of the Dregs of the People, come under Pretence, of Dancing, but in effect to pick up lewd Women, who reſort thither in great Numbers, and carry them to other convenient Lodgings, theſe being intended only for their meeting Places. They are generally viſited by Strangers, out of Curioſity; and you muſt either drink what they offer, or pay as if you did.

The Exchange of *Amſterdam* is two hundred Feet long, and a hundred and twenty broad: The Galleries above are ſupported by forty-ſix Pillars, but are not ſo ſpacious, nor are the Shops ſo many, as thoſe over the *London* Exchange.

The Academy, ſtiled the *Illuſtrious School*, is alſo an elegant Structure, divided into ſeveral Schools for Divinity, Philoſophy, Hiſtory, Law and Phyſick.

There are five high Towers in this City, which have each a great Clock, and are placed at ſuch a convenient Diſtance, as that the Hours of the Day are ſhown all over the Town.

I took another Turn to *Loſdun* where I obſerved, that the Inſcription in the Church of this Village differs from the Paſſage, relating to this Matter, found in the Annals, where the Biſhop that bapized the three hundred ſixty-five Children is called *Guido*, Suffragan of *Utrecht*; whereas in the Annals he is ſtiled *William*, Suffragan of *Treves*; but this might be occaſioned by the Careleſſneſs of the Tranſcribers.

5. We paſs'd ſeven Hours upon the Canal betwixt *Amſterdam* and *Utrecht* very pleaſantly; leaving on the Right-hand the old Caſtle of *Abeow*, and the Village of the ſame Name, the Boundary of the Province of *Holland* on that Side, about three Leagues from *Amſterdam*: We no ſooner came to *Utrecht*, but we found it to fall very much ſhort of that extream Neatneſs we obſerved in the Province of *Holland*, and yet it retains a ſufficient Share of it too.

This City is famous for its Antiquity, its Univerſity, and the Union made here in 1579, which was the Foundation of the whole *Dutch* Republick. The Steeple of the Cathedral is very high, and the Church contains many Relicks highly valued by the *Roman* Catholicks.

The Mall and the Walks about it, without the Gates of the City, are infinitely pleaſant, being upon that Score ſpared by the *French* King's expreſs Command, when his Troops ravaged all the Country round about. A certain Gentleman of *Utrecht* told me, that there were no leſs than forty-eight Towns within the Reach of a Day's Journey from this City, and among them thirty-three to which you may go, and come back the ſame Day. The Country about *Utrecht* has a far different Face from what you ſee in *Holland*, their Fields being for the moſt part plough'd Lands encloſed with ſtrong Hedges.

Two Hours from *Utrecht* we paſs'd in Sight of *Zeiſt*, and of the Caſtle on the Right-Hand: It is a very handſome Structure, encloſed with a Ditch full of running Water, adorn'd with Labyrinths, Gardens, Statues, Fountains, and other Ornaments, being built not many Years ago by one of the richeſt Lords of this Country. The Fields betwixt *Rhenen* and *Arnheim* are for the moſt part planted with Tobacco, propp'd by Stakes; and at *Rhincom*, a Village three Hours on this Side of *Rhenen*, you ſee a Stone, which is the Boundary betwixt the Lordſhip of *Utrecht* and the Province of *Guelders*.

Arnheim has nothing remarkable but its Fortifications. Two Hours and a half beyond it we paſs'd the *Yſſel*, divided into three Branches near each other; and afterwards continuing our Journey through *Doeſburgh*, (a little City on that River, in the Province of *Zutphen*) we dined in a poor Village, if Milk with Biſcuit may be call'd a Dinner; but the worſt is, that our Fare was no better at Night, when we lodg'd at *Yſſelburgh*, a ſmall diſmantled Town upon the Borders of *Cleves*.

Between this laſt Place and the City of *Weſel* the Country is ſandy, and full of Woods: Its Fortifications are but indifferent, but they were then buſy in erecting a Citadel betwixt this City and the Fort of *Lippe* upon the Bank of the *Rhine*. It is under the Juriſdiction of the Elector of *Brandenburgh*, who, by virtue of a Treaty made with the Duke of *Newburgh*, (now Elector *Palatine*) grants Liberty of Conſcience to the *Roman Catholicks*, the ſame being allow'd reciprocally to the *Proteſtants* in the Dutchies of *Juliers* and *Berg*, under the Elector *Palatine*'s Juriſdiction. The *Calviniſts* have two Churches, the *Lutherans* and *Roman Catholicks* each of them one, for the Exerciſe of their Divine Worſhip. The *Jews* have likewiſe a little Synagogue there.

About half an Hour beyond *Weſel* we paſs'd the River *Lippe*, which joins its Waters with the *Rhine*, and arrived before Night at *Duiſburgh*, a City of the ſame Bigneſs with *Weſel*, but without any Fortifications: It has however an Univerſity, but no great Concourſe of Scholars. The great Church belongs to the *Proteſtants*, but the *Roman Catholicks* enjoy alſo the ſame Exerciſe of their Religion, and have even the Liberty of carrying the Hoſt in publick Proceſſion, though they refrain from doing it, for Fear of giving Occaſion of Diſturbance.

Not above half a League beyond *Duiſburgh* we entred the Country of *Berg*, and in two Hours after paſs'd through the little City of *Keyſerwaert*, ſeated upon the *Rhine*, and very well fortified,

Hence we continued our Journey to *Duſſeldorp*, the Reſidence of the Electoral Prince *Palatine*. It is much larger and better peopled than *Duiſburgh*, and its Fortifications in a very good State, but has no Suburbs, any more than *Keyſerwaert*.

6. The City of *Cologne* affords a moſt agreeable Proſpect at a Diſtance, by its Situation in a plain and level Country, and the vaſt Number of Steeples, which make a moſt glorious Shew. Though it be of prodigious Extent, yet is it ſurrounded with a Wall, Towers, Baſtions, and a dry Ditch. It has twenty-four Gates, thirteen to the Land, and eleven on the *Rhine*. It is an Imperial City, govern'd by its own Magiſtrates, though the Archbiſhop and Elector of that Name has ſome Share both in the Civil and Criminal Juriſdiction, and a Prerogative of pardoning Criminals. The Oath, which the Citizens take to this Prince, ſeems to be a Kind of Homage, conceived in theſe Terms:

We the free Citizens of Cologne *do this Day, for now and for ever, promiſe to* A. B. *Archbiſhop of* Cologne, *to be faithful and favourable to him, as long as he ſhall preſerve, in our Rights and Honour, and in our ancient Privileges, Us, our Wives, our Children, and our City of* Cologne.

So God and his Saints help us.

The Anſwer of the Archbiſhop is as follows:

We A. B. *by the Grace of God, Archbiſhop of the holy Church of* Cologne, *and Arch-Chancellor of the Empire in* Italy, *to the End that an amicable Confederacy, entire Confidence, and ſincere and laſting Peace, may be cultivated betwixt Us and our dear Burgeſſes of the City of* Cologne, *do make known by theſe Preſents, and promiſe and declare ſincerely, without Fraud, that we do confirm all their Rights and Privileges, written or not written, old or new, within or without the City of* Cologne, *which have been granted to it by the Popes, Emperors, Kings, and Archbiſhops of* Cologne, *without ever doing any Thing to violate the ſame. In Teſtimony whereof*, &c.

The whole Chapter of *Cologne* is compoſed of ſixty Canons, who muſt be Princes or Counts, but the twenty-four eldeſt are the Capitularies. According to the *Golden Bull*, the Electors of *Cologne* uſed to crown the Emperor; but theſe Archbiſhops not having been Prieſts for a conſiderable Time, thoſe of *Mentz* have perform'd the ſame in their Stead, and ſince that challenge it as a Right.

There are a conſiderable Number of *Proteſtants* in this City, who have a Church not far thence, in the Territories of the Duke of *Newburgh*; they ſtile them *Gueux* or Beggars to this Day, by the ſame Name that was given at *Bruſſels* to the firſt Authors of the Agreement by the Count *de Barlemont*.

The Town-houſe is a vaſt Fabrick, after the *Gothick* Manner: Here they ſhew whole Rooms full of Bows, Arrows, Croſs-bows, Bucklers, and ſuch Sort of antick Arms. One of theſe Croſs-bows was of Whalebone, and twelve Feet long, eight Inches broad, and four Inches thick. From the Tower of this Houſe there is a moſt delightful Proſpect of the whole City and of the adjacent Country. That Part which lies oppoſite to the City, on the other Side of the River, is chiefly inhabited by the *Jews*, and belongs to the Territories of *Newburgh*. The Cathedral Church (or rather its Beginning) is ſo fine, that it is a thouſand Pities it ſhould not be brought to Perfection. Here lies entomb'd, as is pretended, the three Kings of the Eaſt, that came to worſhip our Saviour, being transferr'd hither from *Milan*, *A. D.* 1162, at the Time when *Frederick Barbaroſſa* laid that City deſolate. They report here abundance of Miracles wrought by them; and among the reſt, that an exceſſive Dearth having been occaſioned by a great Drought in *Hungary*, abundance of that Country came hither to implore the Aſſiſtance of theſe three Kings, who promiſed them Rain, which following ſoon after in great Plenty, the *Hungarians*, in Remembrance of this Miracle, come every ſeven Years in Pilgrimage to *Cologne*, where they are entertained by the Magiſtrates for a Fortnight, in a handſome Houſe built for that Purpoſe.

In the vaulted Roof of this Church, almoſt over the Chapel that contains theſe precious Relicks, is a Hole of three or four Feet wide, round the Opening of which you ſee theſe Words; *Anno* 1404, 30 *Oct. Ventus de nocte flat ingens, grandem per tectum lapidem pellit*; i. e. *On the 30th of* October, 1404, *the Wind blew very hard in the Night, and forc'd a great Stone through the Roof*: The Stone is ſtill to be ſeen upon the Floor near this Chapel; they call it the *Devil's Stone*, becauſe they were of Opinion that the Devil threw it out of Malice. Over one of the Doors of the ſame Church we ſaw thirty-ſix gilt Staves about three Feet long each, with this Diſtich under them:

Quot pendere vides Baculos tot Epiſcopus Annos
Huic Agrippinæ præfuit Eccleſiæ.

Upon Enquiry we found, that the preſent Elector was then in the thirty-ſeventh Year of his Reign, but could not learn either the true Original or Uſe of this Cuſtom.

In the Church of St. *Urſula* they ſhew you the Tombs of the eleven thouſand Virgins that were maſſacred by the *Huns* at *Cologne*, in the Year 238, together with this Saint, unto whoſe Memory is dedicated this Church;

Church. They tell you, that the Earth will not admit of any other dead Corps; for Inſtance of which, they ſhew the Tomb of a Daughter of a certain Duke of *Brabant*, who being interr'd there, rais'd up herſelf, and remaining thus in the Air, they were forc'd to put her in this Tomb, fix'd upon Iron Supporters, two or three Feet from the Ground, againſt one of the Pillars of the Church. In a great Chapel on one Side of the ſame Church, you ſee the Bones of theſe Saints hung up in as decent a Manner as you ſee the Swords and Piſtols ranged in the Guard-chamber of St. *James*, or in any other Armoury; theſe Bones have no Ornaments except the Heads, ſome of which are kept in Caſes of Silver, others are cover'd with Stuffs of Gold, and ſome have Bonnets or Caps of Cloth of Gold, Velvet, rich Silks, *&c.* Hence it is that the City of *Cologne* challenges the Title of *Cologne the holy*; and its Arms are, *Argent eleven Flames Gules, with a Chef of the Second, charg'd with three Crowns Or*; the eleven Flames intimating the eleven thouſand Virgins, and the three Crowns the three Kings. But this idle Story, which was grounded on the ignorant Miſtake of the following Inſcription, *SS. URSULA & UNDECIMILLA, V. M.* which means no more than *the Saints* Urſula *and* Undecimilla *Virgins and Matyrs*; for *Sancta Urſula & undecim millea Virginum Martyrum*, that is, *St. Urſula and eleven thouſand Virgins and Martyrs*; has been ſo fully refuted by Archbiſhop *Uſher*, and other learned Men, that no body now pays any Regard to it.

In the Church of the *Maccabees* is a Crucifix, with an everlaſting and miraculous Perriwig on its Head; for though the *Hungarian* Pilgrims, at their coming to *Cologne*, each cut a Lock of Hair off, yet has it not been diminiſh'd hitherto, by all this Polling.

At the Entrance of the Church of the *Twelve Apoſtles*, is to be ſeen a Picture, which is remarkable chiefly for the Story it repreſents: They relate, that a Burgher-maſter's Wife of this City, being, in 1571, buried in this Church, with a Ring of great Value on her Hand, the Sexton made bold to viſit the Grave afterwards for the Ring's Sake, but was not a little amaz'd, when he found the ſuppoſed dead Lady graſp him by the Hand, which made him retreat very ſpeedily. However, the Lady having made hard ſhift to get out of the Sepulchre, went to her own Houſe, where knocking at the Door, ſhe call'd to a Servant, and related unto him the whole Adventure; but the Servant taking her for a Ghoſt, ran in a Fright to recount unto his Maſter what had happened; who told him, that he would as ſoon believe his Horſes in the Garret: He had no ſooner ſaid theſe Words, but a great Noiſe being heard in the Garret, the Servant went up, and, to his great Amazement, found ſix Coach-horſes there: By this time the Woman had made ſhift to get in, and by the Care of her Servant was ſo well recovered, that there was no great Likelihood of her returning to the Grave for that Time; and the Horſes were the next Day let down out of the Garret by certain Machines. They ſhew you to this Day, in the ſame Garret, ſeveral wooden Horſes, ſaid to be covered with the Skins of thoſe that were ſeen there; and in the Church of the *Twelve Apoſtles*, there is a great Piece of Linnen-cloth, which, they ſay, was of this Woman's ſpinning after her Releaſement from the Grave, which ſhe ſurvived ſeven Years. We find ſome authentick Teſtimonies of the Truth of this memorable Story, but in them the Epiſode of the Horſes is entirely left out, as being an evident and very abſurd Fiction.

There are ſome Families now in *Cologne*, who deduce their Genealogies from the *Roman* Race, that ſettled a Colony here the firſt Time.

7. The Roads betwixt *Cologne* and *Mentz* being extremely bad, we choſe to embark upon the *Rhine*: The firſt Town we came to was *Bonn*, a ſmall inconſiderable Place, the Fortifications whereof lie neglected, and the Electoral Palace of *Cologne* made but a very indifferent Appearance.

As we came nearer to *Andernach*, at which, as well as at *Keyſerwaert*, they receive a Toll; a Burgher-maſter of that Place told us, that there were certain Gentlemen belonging to that City, who have the Title of *Free Knights*, and enjoy peculiar Privileges.

Coming to *Coblentz*, we obſerved its Situation upon a Neck of Land made by the *Moſelle*, where it joins its Current with the *Rhine*, by which it is render'd very agreeable. We were told, that it is very well fortified on the Land ſide, but near the Water-ſide we ſaw only a ſingle Wall. The Caſtle of *Ehrenbreitſtein*, i. e. *the Rock of Honour*, built juſt over againſt it, upon a riſing Ground on the other Side of the River, is very ſtrong both by Art and Nature, its Foundations being laid upon the Ruins of the old Fort of *Hermanſtein*, the Remains whereof are ſeen on one Corner only of the Rock on which the Windmill ſtands. It is always well provided with a good Garriſon, and Ammunition in Proportion. The Palace (where the Elector of *Cologne* commonly reſides) is at the Foot of the Hill, upon the very Bank of the *Rhine*, juſt under the Caſtle.

About half a League on this Side of *Baccharach*, directly over againſt *Coub*, (a Town under the Juriſdiction of the Elector *Palatine*) ſtands an old Caſtle in the Middle of the *Rhine*, called *Pfaltz*; whence ſome, but improperly, have derived the Titles of the *Pfaltz Graves*, or *Counts Palatines*.

Baccharach is a ſmall City belonging to the Elector *Palatine*, built on the Side of a Hill, chiefly famous for its excellent Wines that grow thereabouts. We dined with one of the Miniſters of the Place, who would needs frame the Etymology of *Baccharach* from *Bachi ara*, or the *Alter of Bacchus*; and for a Confirmation of his Opinion, told us, that in the ſame Neighbourhood there were four other ancient Towns which ow'd their Name to *Bacchus*, viz. *Steegbach*, which lying on a Hillock, ſignifies as much as *Scala Bacchi*, or the *Ladder of Bacchus*; *Diabach*, i. e. *Digitus Bacchi*, or the *Finger of Bacchus*; *Handbach*, or *Mannerſbach*, i. e. *Manus Bacchi*, the *Hand of Bacchus*; and *Lorch*, i. e. *Laurea Bacchi*, or the *Bays of Bacchus*.

Soon after we were paſs'd *Baccharach*, a furious Tempeſt obliged us to ſeek Shelter aſhore, a little on this Side *Rudeſheim*. In our Way we paſs'd by an old ruin'd Caſtle or ſquare Tower, known by the Name of the *Tower of Rats*, whither, they ſay, a certain Archbiſhop of *Mentz* retreated (its Situation being on a little Iſle in the *Rhine*) to avoid the Rats, that devour'd him at laſt. Some look upon it as a Fable, becauſe the old Chronicles of the Country mention different Names and Times when this Accident happened; but others, who conſider it as a Truth, (as it is generally taken for ſuch hereabouts) alledge in Behalf of their Opinion, ſeveral Hiſtories of this Nature related by Authors of unqueſtionable Authority.

From *Bonn*, as far as *Binghen*, three Leagues on this Side *Mentz*, the *Rhine* carries its Current through the Mountains, at the Foot of which you ſee all the Country on both Sides cover'd with Vineyards, interſpers'd with a great Number of ſmall Cities, good large Villages and Caſtles, of the laſt of which I counted forty ſince I parted from *Cologne*, built, for the moſt Part, upon the Aſcents of the Mountains, and ſome on the very Points of the Rocks. The Country People, in theſe Parts, but eſpecially the Women, appear in a very odd Dreſs; on their Heads they wear little Caps of ſome colour'd Stuff, border'd with an Edging of a different Colour, their Hair hanging in Treſſes quite down their Backs. Their Waiſts appear very ſhort, half a Foot below which they gird themſelves with a broad Leather Girdle, and underneath it is a thick Roll, which bears up their Petticoats almoſt as high as their Knees.

From *Binghen* to *Mentz* the *Rhine* is very broad: Here you go over a Bridge of Boats, and as ſoon as you enter the City, the Electoral Palace preſents itſelf to View, a Fabrick of a reddiſh Stone, embeliſh'd with divers Ornaments, wanting neither Regularity nor Magnificence, though built after the old *German* Faſhion. They told us, that in the Middle of the Citadel was to be ſeen the Ruins of a Tower called commonly the *Tomb of Druſus*: 'Tis true, *Druſus Germanicus*, the Brother of *Tiberius*, died in *Germany*, but not near the *Rhine*, and he was buried in the *Campo Martio* at *Rome*; ſo that in all likelihood this was one of the Statues or triumphal Arches erected near the Banks of the *Rhine* to his Memory, after the Senate had beſtowed upon him the Sirname of *Germanicus*.

The Church Ornaments in which the Elector ſays Maſs, are remarkable for their Riches; and the Canopy under which the Hoſt is carried, upon certain Feſtivals, in Proceſſion, is all covered with Pearls.

Every one of the Electors of *Mentz* bears the Arms of his own Family, but he quarters *Gules a Wheel Argent*, which are the Arms of the Electorate, the Original of which they deduce from the firſt Elector, who was the Son of a Wheelwright.

In the Cathedral you ſee a great many magnificent Tombs of the Electors interred here. The Chapter conſiſts of forty-two Gentlemen, twenty-four of which only are Capitularies. The Proteſtants are allowed Habitations at *Mentz*, but not the Exerciſe of their Religion. The City is ſufficiently large, but indifferently peopled, neither is the Univerſity in any great Eſteem now: However, its Situation is very pleaſant, in a moſt excellent Country. The Elector of *Mentz* is the firſt among the Eccleſiaſtical Electors, Chancellor of the Empire, and Dean of the Electoral College; in Right of which he preſides in the Diets, and at Imperial Elections.

8. After having croſſed the *Rhine* at *Mentz*, we embarked on the River *Maine* in the ordinary Paſſage boat, which carried us in one Day to *Frankfort*, a City much exceeding *Mentz* in Beauty, Riches, Bigneſs, Number of Inhabitants, and Strength, being fortified with eleven Baſtions, which though they have ſome Defects, yet they are in ſome Meaſure repaired by its Situation in a flat Country: The Houſes are generally built of the ſame red Stone I mentioned before, or elſe of Wood, or Plaiſter covered with Slates. The *Maine*, a conſiderable large River, leaves it on the Right, and a Stone Bridge of four hundred Paces in Length joins it with *Sakerhauſen*. The Territories of this City are of no great Extent: The Senate, as well as the greateſt Part of the Inhabitants, are *Lutherans*, though the *Roman Catholicks* are poſſeſſed of the Cathedral Church, where the Ceremony of anointing the Emperor is performed; however, they are not allowed to make any publick Proceſſions. The *Calviniſts* inhabiting here, have a Church at *Bochenheim*, a ſmall Hour's Walk from thence, in the Country of *Hanaw*, but are obliged to marry and to chriſten their Children in the *Lutheran* Churches.

In the Town-houſe is the Apartment where the Solemnity of the Election of the Emperor is performed, and where one of the Originals of the *Golden Bull* is preſerv'd. It is hung only with Tapeſtry, and furniſhed with ſome Elbow Chairs of black Velvet, and a large Table covered with a green Carpet. On one Side of this Apartment is a Hall, where certain Ceremonies are performed immediately after the Election, which being over, the Emperor goes from thence to the Church, where he is crowned.

The *Golden Bull* is a Book in *Quarto*, of twenty-four Leaves in Parchment ſtitched together, and covered with a Piece of Vellum, without any further Ornament. The Seal, which is about two Inches and a half broad, and covered with Gold, is faſtened to it by a String of twiſted Silk of divers Colours; upon this Seal, which appears not unlike a Medal, you ſee the Effigies of the Emperor *Charles* IV. ſeated and crowned, with a Scepter in his Right Hand, and the Globe in the Left, having the Shield of the Empire on his Right, and that of *Bohemia* on his Left, with this Inſcription round it.

Carolus Quartus Divinâ favente Clementiâ Romanorum
Imperator ſemper Auguſtus.

And on each Side near the two Scutcheons, *Et Bohemiæ Rex*. On the Reverſe is a Gate of a Caſtle betwixt two Towers, which denotes *Rome*, as is apparent by the following Inſcription about it.

Roma Caput Mundi regit Orbis fræna rotundi.

And upon the Gate betwixt theſe two Towers,

Roma Aurea.

This Bull, intended to be the Foundation of the Conſtitution of the Empire, was made at *Nuremburgh* by *Charles* IV. with the general Conſent of the States, in 1356, and contains the Manner of the Election of the Emperor, and of the King of the *Romans*, as alſo many Things relating to the Rank, Aſſemblies, Rights, Immunities, and Succeſſions of the Electors, and in what Manner every one of them is to perform his Function. *Frankfort* is by this Bull appointed for the Election of the Emperor; notwithſtanding which, *Henry* II. was elected at *Mentz*, and *Henry* III. at *Aix la Chapelle*; ſome others have been choſen at *Cologne*, *Augſburgh*, and *Ratiſbon*, not to mention ſeveral other Innovations introduced ſince that Time, eſpecially by the Treaties of *Weſtphalia*.

At Dr. *Peter*'s, who makes the famous Treacle of *Frankfort*, we ſaw many Curioſities, and among the reſt, a Stone taken out of a human Body, of the Bigneſs of a Man's Head, which he bought for ſixteen hundred Crowns.

There are abundance of *Jews* at *Frankfort*, but they are not near ſo rich as thoſe of *Amſterdam*, being uſed in a Manner like Slaves here, *viz.* to fetch the Water when any Fire happens to break out in the City; for the reſt, their chief Employment is to go from one Inn to another to ſell their Commodities to Foreigners, and ſo pick up a poor Living.

I need not tell you, that the three annual Fairs of *Frankfort* contribute not a little to its Fame and Riches.

The Univerſity acknowledges for its Founders, *Joachim* and *Albert* of *Brandenburgh*, in 1506.

9. As we were taking Coach to leave *Frankfort*, we obſerved the Coachman to put ſome Salt upon each of his Horſes, which he told us was a never-failing Antidote againſt Witchcraft, and other unlucky Accidents.

Having paſſed the *Rhine* at *Gernſheim*, we entred a Wood, where the Roads proved very bad; but after that, for two Leagues, till we came to *Worms*, exceeding good.

The City of *Worms* is ſeated about three or four hundred Paces from the *Rhine*, on the Left, in a moſt fruitful Country, having no other Fortifications but a double Wall: It was formerly an Archbiſhoprick, till the See was removed to *Mentz* by Pope *Zachary*, but ſtill remains a Biſhop's See, and that Prelate has great Authority there though it is an Imperial City. It is not inferior in Bigneſs to *Frankfort*, but ill peopled and poor. I ſaw a Houſe that was ſold for a thouſand Crowns, which had yielded formerly as much annual Rent; and there are ſo many void Spaces within the Compaſs of the Place, that the Vines planted there are computed to produce every Year fifteen hundred Fuders of Wine, a Fuder being a Caſk that holds no leſs than two hundred and fifty *Engliſh* Gallons. This Wine is in ſuch high Eſteem in thoſe Parts, that they have turned it into a Proverb, and ſay, *It is ſweeter than the Virgin's Milk*; whence queſtionleſs is alſo ariſen the Cuſtom of preſenting it to Perſons of Note that travel that Way, with ſome Fiſh, *&c.* and this is ſtiled Wine of Honour. Beſides that, the *Lutherans* have one Church for their own Uſe here; they preach by Turns with the *Romaniſts* in the *Dominican* Church, all the reſt being in the Poſſeſſion of the *Roman Catholicks*, who don't carry the Hoſt in publick, nor make any Proceſſion, except on the Day after *Eaſter*. The *Calviniſts* have a Church at *Newhauſel* in the Palatinate, about half a League from *Worms*, where the *Lutherans* now and then chriſten their Children, quite contrary to what is practiſed by the *Lutherans* at *Frankfort*.

The Church of St. *Paul*, as well as that of St. *John*, are very ancient Structures, the beſt of the two being built of vaſt ſquare Stones, in a very irregular Manner, with narrow Windows, and Galleries all round the Outſide juſt under the Roof; the Walls are twelve

Feet thick, and ſeem as if they were not at firſt deſigned for a Church, but rather for a Fortreſs. The Cathedral is both very long and lofty, adorn'd with a Tower on each of the four Corners; it is a ſtrong Fabrick with ſome Ornaments after the *Gothick* Way. Over one Door of this Church they ſhew you the Figure of a ſtrange Animal of the Bigneſs of an Aſs, with four Heads, one the Head of a Man, the ſecond of an Ox, the third of an Eagle, and the fourth of a Lion; the two firſt ſtand upright, and the two others hang downwards; the right Fore-foot is of a Man, the left of an Ox, and the two hinder of an Eagle and a Lion; a Woman ſits on the Back of it. The People here tell you very odd Stories concerning it, but we may ſuppoſe it to be an Hieroglyphick compoſed of the four Beaſts in the Viſion of *Ezekiel*, and the Woman to repreſent the Goſpel. Over the Altar of one of the Chapels of the ſame Church I obſerved a Picture, in which the Virgin received Chriſt as he was deſcending from the Croſs, whilſt the Angels were carrying the Inſtruments of his Crucifixion to Heaven. But the Picture at the Entrance of St. *Martin*'s Church, juſt over a moveable Altar, is of any here moſt worth the peculiar Obſervation of a Traveller; it is about five Feet ſquare, and in it God the Father is repreſented on the very Top of one Corner, from whence he ſeems to addreſs himſelf to the Virgin *Mary*, who is on her Knees in the Midſt of the Picture, holding the Infant Chriſt by the Feet, and putting his Head into the Hopper of a Mill, which is turned by the twelve Apoſtles Hands by the Help of a Wheel, aſſiſted by the four Beaſts of *Ezekiel*, who give a helping Hand on the other Side. Hard by the Pope is painted upon his Knees, receiving the Hoſts, which fall ready made from the Mill into a golden Chalice or Cup, one of which he preſents to a Cardinal, who gives it to a Biſhop, the Biſhop to a Prieſt, and the Prieſt to a Layman. There are two publick Edifices in this City, one intended for the Senate, where they meet twice a Week about Matters of State, the other for the Courts of Juſtice. It was in the firſt that *Luther* made his ſolemn Appeal, concerning which they tell you, that the Doctor being much heated with the Eagerneſs of the Diſpute, as alſo by a Fire that was near him, he deſired a Glaſs of Wine; which being brought, he forgot to drink it, but being ſtill eager in the Purſuit of his Diſcourſe, ſet it down upon a Bench, where ſoon after it broke without being touched by any body, which made it paſs for current, that there was ſome Poiſon mixed with the Wine, of which the *Lutherans* were ſo fully perſuaded, that they broke the Bench on which the Glaſs ſtood into Shivers, and kept ſome Pieces of it, which are ſtill preſerved in Memory of *Luther*'s Deliverance. We alſo took a View of the Houſe called the *Mint*, where, among other Curioſities, they ſhewed us a ſquare Piece of Parchment in a Frame, upon which there are twelve Sorts of Hands written with divers Miniatures and Draughts excellently done with a Pen, by one *Thomas Schweiker*, only with his Feet, he being born without Arms, as the following Inſcription teſtifies:

Mira vides, pedibus Juvenis facit omnia recta
Cui pariens Mater brachia nulla dedit.

In a ſpacious Portico belonging to this Houſe you ſee a vaſt Number of Bones and Horns hanging betwixt the Arches: The firſt, they ſay, are the Remnants of Giants, and the laſt of the Oxen which drew the Stones with which the Cathedral was built. The Outſide of the Houſe was adorned with Variety of Pictures, and among the reſt with many armed Giants, which, in the Inſcription underneath, are called *Vangiones*: That this Part of the *Rhine* was inhabited by a Race of People called *Vangiones*, is evident from *Tacitus* and others; but how they became Giants, I am not able to tell. Proceeding on our Journey, we paſſed by *Frankendal*, the Fortifications of which Place would not be deſpicable, if they were faced with Brick; whereas now they are ſloped too much, by reaſon of the Softneſs of the Earth, which could not be ſupported otherwiſe, but would ſink into a Heap.

The ſame Defect, but in a higher Degree, is evident in the Fortifications of *Manheim*, both which belong to the Elector *Palatine*, and are not above two Hours diſtant from each other; but the laſt has a conſiderable Advantage by its Situation in a flat Country, and its being almoſt incloſed by the *Neckar* and the *Rhine*. The moſt remarkable Piece in *Manheim* is the *Temple of Concord*, founded by the Elector *Charles Lewis*, Father of *Charles*, the laſt of that Race, who being a Perſon of no harſh Diſpoſition, eſpecially in Matters of Religion, ordered, that the *Lutherans* and *Calviniſts* ſhould by Turns exerciſe their Divine Worſhip in this Church; and the preſent Elector *Palatine*, who is a *Roman Catholick*, has thought fit to join the *Romaniſts* with the others; ſince which Time, the Miniſters of three different Religions perform, each in their Turn, their religious Service in the *Church of Concord*; ſo that in three ſucceſſive *Sundays*, each of the three Miniſters has the Privilege of beginning firſt. The Church is not very large, but exceeding neat; the Pulpit common to all three. The *Roman Catholicks*, after they have ſaid Maſs, draw a Curtain, and ſo hide the Altar, at which they have performed it.

Manheim was about forty Years ago no more than a Village, and owes its Increaſe to *Frederick* the Father of *Charles Lewis*, who at the ſame Time built and fortified it: The Streets are very ſtreight and regular, and ſome of them planted with Trees, as in *Holland*. After having paſſed the *Neckar* at *Manheim*, over a Bridge of Boats, we travelled for three Hours through a fertile Plain, extending to the Foot of the Mountains of *Heidelburgh*, which, by a continued Ridge, ſeemed to intercept our Paſſage; but that the *Neckar* paſſes thro' an Opening, and ſhews you a direct Way to *Heidelburgh*, by a covered Bridge, which brings you to the other Side, where this City is ſeated very pleaſantly among the Trees and Rocks. But as to its interior Beauties, we cannot boaſt, for the City is neither fine nor well built, moſt of their Houſes being of Wood, though they dwell among the Rocks: The Electoral Palace is of hewn Stone, ſome Parts whereof are of good Architecture, but none of them quite finiſhed. They have made divers fine Gardens among the Rocks, but at the beſt they are irregular.

Not long before the Dutcheſs of *Orleans*, Siſter to the laſt Elector, and Heireſs to Part of his perſonal Eſtate, had taken the Furniture of this Palace away, at the ſame Time they ſold every Thing, even to the Wine of the famous Tun of *Heidelburgh*. This ſo much celebrated Tun is thirty-one Feet long, and twenty-one high, unto which you aſcend by a Pair of Stairs of fifty Steps, to a Kind of Platform or Balcony of twenty Feet long incloſed with Rails: The Elector's Arms are placed on the Front of the Tun, and *Bacchus* on the Top, attended by Satyrs, Drunkards, and ſuch-like. Vines, Grapes, Glaſſes, and Leather Jacks, make a great Part of the Ornaments of this Tun, in *baſſo relievo*. Abundance of Jeſts and Apothegms, relating to the ſame Subject, are to be ſeen in *High Dutch*, on divers Parts of this enormous Tun.

The various Chances of War have reduced this Country to a poor Condition, tho' naturally very good. All Religions are tolerated, but the Magiſtrates are generally *Proteſtants*, as in other Parts of the *Palatinate*. The great Church of this City contains many magnificent Tombs of the *Counts Palatines*, and among the reſt that of *Robert* King of the *Romans*, the Founder of the Univerſity of *Heidelburgh*. You know by what ill Fate this City loſt its famous Library, which, in 1622, was tranſported thence to the *Vatican*.

9. We were ſcarce two Hours riding from *Heidelburgh*, but we met with nothing but whole Foreſts of Fir-trees, and a Country ſo poor, that about *Wiſeloth* and *Sintzheim*, you might buy a wheaten Loaf of eight Pounds for two Pence; and in four Days Journey we did not ſo much as get Sight of one conſiderable Town: The beſt of them is *Winſheim*, an Imperial City, as well as *Wimphen*,

Wimphen, both inhabited by *Lutherans*. What diverted us moſt in all this Journey was, a Meeting of the Magiſtrates of the little City of *Palemburgh*, which happening to be in the ſame Inn where we dined, we were well diverted with the Sight of twelve or fifteen Peaſants with high-crown'd Hats, covered with green and yellow Ribbon, with red or blue Veſts, Ruffs of black Taffata, their Hair cut round cloſe juſt below their Ears, and their Beards like thoſe of the *Capuchins*: In this Habit we ſaw them ſitting together, with their Elbows reſting on a Table, and explaining the Law (after their Manner) each with a good Glaſs of Wine in his Hand, every one ſtriving to get the better of another more by Strength of Voice than of Argument.

It is not to be wondered, that Drinking ſhould be ſo common in this Country, conſidering the Temptations they lie under here, for you buy four great Pots of Wine for a Penny; and if a Paſſenger happens to aſk for a Cup of Wine, they bring him a large Jack, ſcarce knowing what a little Meaſure is. As you travel from the mountainous Country into the Plains that lead to *Nurenbergh*, the Tobacco and Hops ſucceed by Degrees the Vineyards: We had a fair Proſpect of this beautiful City at a conſiderable Diſtance, as we were travelling along the Banks of the River *Pegnitz*, which runs from it, but ſerves only to turn ſome Mills, whereas without any great Difficulty it might be made navigable, and conſequently much increaſe the Grandeur of this City, ſo that the Coſt of making it ſo would be amply repaid.

However, this Defect does not hinder *Nurenbergh* from being a Place of great Trade, great Riches, and well peopled; and for its Bigneſs it is reputed to be twice as large as *Frankfort upon the Maine*, and contains under its Juriſdiction ſeven other Cities, and four hundred and eighty Boroughs and Villages: It has ſix Gates, two hundred twenty-eight large Streets, and one hundred and eighteen Fountains and Wells: Fortifications after the ancient Manner, which are of no great Conſideration, its Situation in the very Heart of *Germany* being its chief Security, and indeed this little Republick generally enjoys Peace. *Nurenbergh* is a very handſome City, its Houſes being generally lofty and ſtrong, of hewn Stone, and many adorned with Pictures on the Outſide, after the *Gothick* Manner, and conſequently not very regular: Beſides this, it has many good Braſs Fountains, one whereof we ſaw at the Artificer's Houſe, the Statues of which alone coſt ſeventy thouſand Crowns. The Streets are broad, clean, and well paved, but not ſtreight. One of the Towers of the Caſtle bears the Name of *Nero*'s *Tower*, whence ſome would look for the Original of this City as far as *Nero*, whereas 'tis more probable, that *Noriberga*, or *Mons Noricum*, as it is called in *Latin*, has its Etymology from the *Norici*, the old Inhabitants of the Country, and *Bergi*, *i. e.* a Mountain. The Caſtle is ſeated on a high Rock, though all the reſt of the City be very flat; it is irregular, being built according to the unequal Shape of the Rock. They ſhewed us a Well, which they affirmed to be ſixteen hundred Feet deep, and that the Chain of the Bucket weighed three thouſand Pounds, but we did not believe them.

In one of the Halls of this Caſtle are to be ſeen four *Corinthian* Pillars forty-five Feet high, which were brought (ſay they) from *Rome* by the Devil, upon a Challenge which a Monk made him. On the Stones of the Parapet of the Caſtle, they ſhew the Print of a Horſe's Shoe, where they ſay a Conjurer leaped over the Ditch. The Ornaments uſed at the anointing of the Emperors are preſerved in the Church of the Hoſpital; the Diadem of *Charlemagne* (called the *Inſula*) is of pure Gold, weighing fourteen Pounds, and covered with precious Stones, being not cloſed on the Top, as the Imperial Crowns are generally repreſented, but ſuppoſe, inſtead of the Fleurets on Ducal Coronets, you ſee Plates rounded on the Top, which, being joined by the Sides, make the Compaſs of the Bonnet; of theſe there are ſeven, that before exceeding the reſt in the Luſtre of the precious Stones; on the Top of all is a Croſs, and a Semicircle, supported by the two Head-plates behind, raiſed above the Bonnet, and joined to the Top of the Croſs. The Scepter and Globe are of Gold, and the Sword is ſaid to have been brought from Heaven. The Robe of *Charlemagne* is of a Violet Colour, embroidered with Pearls, and the Imperial Cloak edged with the ſame, and ſtrewed with Eagles of Gold, and a great Number of precious Stones. Here are alſo the Cope, the Stole, the Breeches embroidered with Stones, the Stockings and the Buſkins covered with Plates of Gold.

Amongſt divers other Relicks, they keep in this Church the Iron Head of St. *Longinus*'s Launce; and becauſe they are not ignorant that the ſame is ſhewn in above ten other Places in the World, they ſay all theſe are Counterfeits, and that theirs was found by St. *Andrew*, and brought from *Antioch* to this City.

Their Arſenal is one of the moſt renowed in *Germany*; in the two great Halls (each two hundred and fifty Paces long) we ſaw three hundred Pieces of Cannon, and among them many of a very large Bore, the biggeſt whereof carried a Ball of three hundred Pounds; but to ſpeak the Truth, the reſt, being Arms of more Antiquity than Uſe, ſerve only for a Shew. The publick Library is in a Cloyſter formerly belonging to the *Dominicans*, and contains, as they ſay, twenty thouſand Volumes: The moſt ancient Manuſcript is of nine hundred Years, being a Copy of the Goſpels, with the Prayers and Hymns formerly uſed in the *Greek* Church; the Characters are very different from what is uſed now: They alſo ſhewed us a Book printed at *Spires* 1446, but it ſeems as if there had been an Error in the Cyphers; for at the ſame Time we were ſhewn another of the Impreſſion of *Fauſtus* at *Mentz* in 1459, which had, by way of Advertiſement, annexed to it, *That this Book was not written by the Hand, but was printed by an admirable Secret newly invented.* They keep in this Library many Rarities, but the Cabinet of Mr. *Viati* exceeds them, it being almoſt impoſſible to conceive how a Man of a private Fortune could heap together ſo many Things brought from all Parts of the World. There is one great Apartment filled with the divers Arms of all Countries; from whence you go into another ſtored with excellent Pictures, Medals, curious Works both ancient and modern, Idols, Shells, Plants, Minerals, and other natural Productions. He ſhewed us a Wind-Gun, wherewith conſiderable Miſchief may be done at a Diſtance without any Noiſe.

The Town-houſe is a ſpacious Fabrick, with a beautiful well-proportioned Front, but no Court before it. And from hence we were carried to the publick Cellar, which is two hundred and fifty Paces long, and contains twenty thouſand middle-ſiz'd Tuns (they call them *Auns*) of Wine, a Proviſion the *Germans* always take extraordinary Care of; for it muſt be confeſſed, that the *Germans* are the moſt civil and obliging People in the World, but exceſſive Drinkers. You ſcarce enter a Houſe to make a Viſit, but before you can ſpeak three Words, you are ſaluted with a ſavoury Collation, and large Jacks of Wine: To refuſe a Health, or to leave a Drop in your Glaſs, is a capital Fault; by which Means the Cup never ſtands ſtill. This made the Duke of *Rhoan* ſay pleaſantly of the *Germans*, *That they had found out the Perpetual Motion in their Cups, which puzzled all the Mathematicians in the World*: Hence it is, that Glaſſes of all Sizes are in ſo high an Eſteem with them, that they are ranged in good Order in ſome of their beſt Apartments, and make a Part of their ornamental Furniture.

In the Evening we had the Opportunity of ſeeing Part of the Celebration of a Wedding: The Bridegroom, attended by his Friends and Kindred, marched firſt on Foot from a Houſe to the Church, which was not above two hundred Paces diſtant, his future Spouſe following ſoon after, with her Friends, from the ſame Houſe. Being come into the Church, the Bridegroom ſate down with his Relations on one Side, and the Bride on the other oppoſite to him; over each of their Heads againſt the Wall, being painted the Figure of Death: From thence they both approached to the Miniſter, who ſtood in the Midſt of the Choir, who had no ſooner performed the Ceremony, but four or five Trumpets ſounded from the Top of the Steeple; and ſo the new-married Couple returned in the ſame Manner and to the ſame Place from whence they came. The Bridegroom appeared all in black, with a Cloak trimmed with Lace, a great Ruff, and a little Crown of Gold Plate-Lace upon his Perriwig; but the Bride's Dreſs is not ſo eaſy to be deſcribed; the beſt Way to give you an Idea of it, is, to fancy a Head-tire compoſed of Plate-Wire gilt, like a Bob-perriwig, half a Foot higher than the Forehead, and frizzled out on the Sides; theſe Threads or Wires are ſo cloſe together, that there is no more Diſtance between them than is juſt ſufficient to faſten to them an infinite Number of very ſmall thin Plates of Gold, round, poliſhed, and bright, which hanging both within and without, wave with the leaſt Motion, and, in the Opinions of theſe People, are very ornamental. Her Habit was a Kind of black Veſt with long Skirts, reſembling the *Hongrelines* uſed not long ago in *France*; and the Body of this Caſſock, which was cut very ſhort, was covered with Gold Lace all over the Seams, as the Skirts were with little cloſe Knots of black Sattin Ribbon, and the ſtreight Cuffs reach down below the Wriſts. Over this ſhe wore a Neckband of very fine antique Lace, ſhaped before like a Man's Band, but ending behind in a Point, which reached down to the Middle of her Back: About her Shoulders ſhe had a Gold Chain like the Collar of ſome Order; and ſuch another Chain inſtead of a Girdle. The Petticoat was pretty ſhort, trimmed towards the Bottom with Gold Fringe and black Bone Lace. We ſaw this Bride dance at the Wedding with one of the Senators in a great Ruff; and, to tell you the plain Truth, the Cuſtoms I obſerved at this Feaſt were ſo very different from ours, that I rather fancied myſelf in *China* than in *Europe*. It would be an endleſs Piece of Work, if I ſhould deſcribe to you all the other Habits I ſaw here; but I will only tell you, that as odd and fantaſtical as they appear at firſt Sight, they are not unbecoming, as indeed what are on agreeable Perſons?

Nurenbergh can boaſt of better Artiſans and greater Numbers than perhaps any City in *Europe*: Some have attributed to them the Invention of Fire-arms, and of Gunpowder, by *Bertold Swartz* a Monk; though others would have the ſame to owe its Origin to the City of *Chioggia* in the *Venetian* State, and others to *Denmark*. But the curious Works of *Nurenbergh* of Wood, Ivory, Alabaſter, nay, of Paper and Starch, are famous over all *Europe*. Their Houſes are both ſpacious and neat, and I never ſaw one Cieling in all the City, but what had ſome Underſetting of curious Joiners-work. They have here a peculiar Reſpect for Horns, for with them they adorn even their beſt Apartments and Chambers. All the Way betwixt *Heidelburgh* and *Nurenbergh* we met with very poor Entertainment, but the Inns of *Nurenbergh* made us an ample Amends for it, where, among other Things, we had every Day a Deſert of late Fruit, and Plenty of very good Fiſh, at very reaſonable Rates. In the Church of St. *Sebald* you ſee a wooden Crucifix, which is eſteemed a great Maſter-piece; but the Church of St. *Lawrence* exceeds all the reſt in Bigneſs. They are both built after the *Gothick* Manner, but the laſt has eight Doors. The great Church-yard is worth the Obſervation of a Traveller, for it has above three thouſand Tombs with Epitaphs and Coats of Arms wrought in Braſs. The *Jews* are reſtrained to a Village near the City, from whence they may come daily into the Town for a ſmall Piece of Money, but muſt return before Night. The few *Roman Catholicks* that inhabit here have the Privilege of performing their Religious Service in one of the *Lutheran* Churches, at certain Hours when their Service is over. The *Calviniſts* have their Church a League from the City, in the Marquiſate of *Anſpach*, and baptize their Children in the *Lutheran* Churches, as at *Frankfort*.

10. From *Nurenbergh* the Roads are very bad and woody till you come towards *Ingolſtad*, where you meet with a well cultivated champaign Country. *Ingolſtad* (under the Juriſdiction of the Elector of *Bavaria*) ſtands upon the *Danube*, of an indifferent Bigneſs and Strength, with broad, ſtreight, and well-paved Streets, and pleaſantly ſituated, but poor and ill peopled; the Houſes are on the Outſide, for the moſt Part, painted white. They told us Wonders of their Arſenal, but as they were very unwilling to ſhew it, I ſuppoſe its Fame ſurpaſſed its Worth, it being generally obſervable, that Things of this Nature are ſeldom kept from the Sight of Strangers, unleſs not worth their ſeeing. I took Notice at *Ingolſtad* (as in many other Cities of *Germany*) of certain Veſſels of Wood or Braſs mounted upon four Wheels; near the Fountains, which are kept to carry Water when any Fire breaks out, and for that Purpoſe are very convenient.

From *Ingolſtad* we travelled to *Newburgh*, a little City without any Strength, ſituated on the right Bank of the *Danube*, where this River begins to be pretty broad and rapid: We paſſed it over a Bridge, which brought us into the City, where, at our firſt Entry, we took a View of the Caſtle, built on a Rock, the Apartments whereof, eſpecially on the Ground-floor, are very handſome and convenient, though all the Furniture had been lately removed from thence to the Caſtle of *Heidelburgh*, there remaining only a Cabinet full of rare Pictures and other Curioſities; among the reſt I obſerved a round hard Stone, which weighed four Pounds, and was found in the Body of a Horſe. This, in my Judgment, might be called Bezoar. The Church of the *Jeſuits* is the handſomeſt in the City, though that of St. *Peter* has of late Years rendered itſelf famous by a pretended Miracle that happened to the *Capuchin*, *Mark de Avilano*, who made himſelf ſo much talked of during the *Hungarian* War. This Father coming ſome Years ago to *Newburgh*, and perceiving an old *Noſtre Dame* of Wood in one Corner of the Church of St. *Peter*, that was all covered with Duſt, the good Father proſtrated himſelf before it, and whilſt he was offering his fervent Prayers, he cried out on a ſudden, *A Miracle!* proteſting that the *good Lady* had lifted up her Eyes towards him: The Story, backed by the Reputation of the Father, ſoon got ſuch univerſal Credit among the Inhabitants, that they went in Proceſſion to St. *Peter*'s Church, whence they took the Statue, and having cleaned and dreſſed it in a ſumptuous Habit, placed her on the high Altar, where ſhe is viſited by a great Number of Pilgrims from all Parts, and is famous by the Title of *Our Lady of Newburgh*.

The Country betwixt *Newburgh* and *Augsburgh* is very fruitful and pleaſant, except that near the laſt the Grounds are boggy and barren; notwithſtanding which, the *Augsburghers* boaſt their City to be the faireſt in all *Germany*, and that in Bigneſs it exceeds *Nurenbergh* itſelf, though they own it not ſo well peopled; beſides, though their Streets are broader and ſtreighter, their Houſes are not near ſo handſome, few of them being built with hewn Stones, but for the moſt Part plaiſtered only, and whitened without, and ſometimes adorned with Pictures; however, the Floors of their Apartments are for the moſt Part paved with a Kind of yellowiſh Marble, brought thither from *Tyrol*; and their Cielings are either of curious Joiners-work divided into Compartments, or of a certain Cement well poliſhed, which is very durable: The worſt of their Buildings is, that their Chambers have no regular Figure, the Stairs which lead to them taking away all their Uniformity.

Augsburgh is the Metropolis of *Swabia*: *Auguſtus* ſent thither a Colony, and gave it the Name of *Auguſta Vindelicorum*, from the *Vindelici*, a People inhabiting about the Rivers *Vindo* and *Licus*, called at this Day the *Werda* and *Leck*, between which alſo the City of *Augſburgh* is ſeated, to diſtinguiſh it from *Auguſta Trevirorum*, *Taurinorum*, &c. but this City having been ſo often pillaged, (eſpecially by *Attila*) there are ſcarce any Remainders of Antiquity to be found here. However, not long ſince there was dug out here a Pillar of five or ſix Feet high, with the Figure of a Pine-Apple on the Top of it: They alſo found certain Medals of *Auguſtus* with ſuch a Pillar on the Reverſe: It is very probable that this Pillar was intended to mark out the Boundary of the Empire on that Side: For it being a conſtant Cuſtom among the *Romans* to diſtinguiſh the Limits of a new-conquered Country by ſome Mark or other diſtinct from the reſt, and by ſomething relating more peculiarly to that Country; it is likely that they choſe the Pine-apple for this Pillar, becauſe this Part of *Germany* abounds in Fir and Pine-trees; and it is perhaps for the ſame Reaſon that *Augsburgh* bears the Pine-apple in its Arms.

Though the Fortifications of this City are not very conſiderable, the Inhabitants of this City have endured divers Sieges with a great deal of Bravery. The Senate here is compoſed of Half *Lutherans* and Half *Roman* Catholicks, tho' the Biſhop has alſo a conſiderable Sway, who has a Palace in the City, (but he reſides generally at *Dillengen*) and is Maſter of the greateſt Part of the Territories belonging to this City. The *Roman* Catholicks make publick Proceſſions here, and carry the Hoſt through the Streets, which the *Lutherans* ſalute by pulling off their Hats; for as they live in a good Correſpondence with each other, ſo they avoid all Opportunites of giving Scandal, the Poor of both Religions being maintained in one Hoſpital. The *Jews* are confined to a ſeparate Place, and for every Hour they ſtay in the City are obliged to pay a Florin, which amounts to three of our Shillings.

The Town-houſe is a lofty and ſpacious ſquare Fabrick, of very fine hewn Stones; the Portal is of Marble, and almoſt all the Rooms wainſcotted and cieled with *Poliſh* Aſh, which looks very fine. The great Hall makes a very noble Appearance, being a hundred and ten Feet long, fifty-eight broad, and fifty two high, with a fine Jaſper Floor. The Walls are adorned with Paintings intermixed, according to the *German* Cuſtom, with Emblems and Devices relating to the Government; but the Roof exceeds all the reſt for its ſingular Beauty, being compoſed of regular Compartments, the Squares and Pannels whereof are enriched with Sculptures richly gilt, and beautified with curious Pictures and other Ornaments. The Arſenal is alſo a very large Structure; the two Halls below are full of Cannon, moſt of which are of Braſs; but among the reſt, there is a Culverine, a ſix Pounder, of Leather, twenty-ſix Feet long; the other Arms are kept above Stairs. During the Wars of this laſt Age, the *Augsburghers* uſed to keep frequently their Gates ſhut, for Fear of a Surprize; but at laſt, for the Conveniency of admitting Strangers and others without Danger into the City, they contrived a ſecret Gate, which remains ſtill, with all its Locks and Engines, the Deſign of which is very nicely and well contrived, but too tedious and difficult to deſcribe.

Augsburgh was formerly a City of great Traffick, whilſt all the Merchandize from the *Mediterranean* was landed at *Venice*, and from thence, by the Way of *Augsburgh*, diſperſed through all *Germany*: But ſince *Holland* has almoſt engroſſed all that Trade, *Augsburgh* bears its Share in the general Loſs, as well as *Venice*, *Milan*, *Antwerp*, and many other Cities, that were formerly famous for Commerce. In the Biſhop's Palace they ſhew you the Apartment where the Confeſſion of *Augsburgh* was preſented to the Emperor *Charles* V. in 1540, by *Luther* and *Melancthon*. The Cathedral here has a Gate of Braſs, over which are repreſented ſeveral hiſtorical Paſſages of the Holy Scripture in *baſſo relievo*. In the Hiſtory of the Creation the Virgin *Mary* is repreſented framing *Eve* out of one of *Adam*'s Ribs; which paſſes here for a great Elegance.

The Artiſans of *Augsburgh* are not inferior to thoſe of *Nurenbergh*; nay, they even excel them in Clocks, Goldſmiths Work, and in Ivory. They ſhewed us here ſeveral Clocks valued at fifteen or twenty thouſand Crowns a-piece; but the worſt is, they are ſo very nice that they are not durable. Their Ivory Work is no leſs admirable, and among the reſt certain Cups hollowed and well ſhaped, with a Ring made of the ſame Piece in turning, which plays betwixt the Foot and the Bowl of the Cup, without Poſſibility of coming off. Of theſe there are an hundred, with their Rings in a Pepper-corn of an ordinary Size: I have ſome of them. Upon Examination I obſerved diſtinctly the Traces of the Tool wherewith they are turned, which ſhews it a pure Work of the Eyes and Hand, and no Artifice. They have another curious Bauble, *viz.* Fleas faſtened about the Neck with Chains of Steel, ſo finely wrought, that though they are a Span long, they are ſo light, that a Flea will lift it up when it leaps. They ſell one of theſe Fleas, with Chain and all, for ten Pence.

The Singularity and Variety of Habits is ſtill more conſpicuous at *Augsburgh* than at *Nurenburgh*, that Affair being ſo exactly regulated here by the Magiſtrates, that the Difference of Religion, and Quality of People, is for the moſt Part ſeen by their Cloaths. As for Inſtance, I ſaw a *Roman* Catholick Merchant's Widow in Mourning for her Huſband; ſhe had a Kercher well whited and ſtarched, with Wings and Cornets belonging to this Dreſs; a black Petticoat, and black Cloak, made like that of a Man, reaching down to her Knees; a great white Veil behind, hanging at the Tail of the Kercher down to her Heels, enlarging itſelf by Degrees; a Piece of the ſame Linnen with the Kercher, four Feet long, and at leaſt two broad, which is very much ſtarched and ſtretched on a ſquare Wire Thread, faſtened juſt below the Hips, and covers all the Forepart of the Body.

They have found Means to turn a Branch of the River *Leck* into the City, the Waters whereof are exceeding clear and good. Upon this Channel ſtand four or five Towers, on the Tops of which are certain Ciſterns, which are filled by the Help of ſeveral Pumps moved by Mills, from whence the Water is conveyed into all Parts of the City. A Thing not to be admired only, but imitated. I muſt not forget to tell you, that *Augsburgh* has many Fountains, ſome of which are not inferior to the magnificent Fountain of *Nurenbergh*, which I formerly deſcribed.

11. As we were leaving *Augsburgh*, we took Notice upon the Road, that they cover the Vines and Fig-trees hereabouts with Straw or Mats againſt the Cold, which is ſharper than in *England*, though they do not lie ſo far to the North. The Country is all upon a Level betwixt *Augsburgh* and *Munich*, but none of the beſt, being full of Woods of Fir-trees.

Munich is a beautiful City, built *A. D.* 965, but very indifferently fortified, ſcarce half ſo big as *Augsburgh*, and of no Trade; the chief Thing it has to boaſt of being the Reſidence of their Prince, and his magnificent Palace. The firſt Thing we did, was to viſit the *Jeſuits* Library, of which we had heard Wonders, but found it far below our Expectation; and the Library-keeper, or his Deputy, who was ordered to ſhew it us, was ſo prodigious a Blockhead, that we could ſcarce imagine there could be ſo much Ignorance found among thoſe of that Order. However, both their Convent and Church are exceeding fine, and the laſt very large, light, and lofty; the Veſtry is very rich, and among their Relicks they ſhew a Joint as big as that of an Elephant, which, they told us, was one of St. *Chriſtopher*'s Joints of the Back-bone. In the *Auſtins* Church they have many excellent Pictures; and that of the *Cajetans* is an handſome Structure. The City of *Munich* bears a Monk in its Arms, which ſeems to confirm the common Opinion, that it got the *Latin* Name of *Monacum* or *Monachium*, from a Monaſtery that ſtood formerly on the Place where it was built.

In the Church of *Noſtre Dame* is the magnificent Tomb of the Emperor *Lewis* IV. beautified with many Marble and Braſs Figures. About ten or twelve Steps from the Entrance of the great Door of the Church, one of the Stones of the Pavement is marked with a double Croſs; and if you ſtand upright upon this Stone, you find the Pillars of the Church ſo placed, that you can't ſee one of the Windows of the Church. The Outſide of the Electoral Palace is no Way anſwerable to the Beauty of its Inſide, though, at the ſame Time, moſt of its Apartments are not very regular; for this vaſt Structure being not built by one Perſon, nor at the ſame Time, it differs according to the various Fancies of the Perſons that had the Management of its Fronts; notwithſtanding all which, it is, one the whole, a very beautiful Fabrick. The great Hall of the Elector's

Apartment is an hundred and eighteen Feet long, and fifty-two broad; it is truly magnificent, eſpecially in reſpect of its curious Pictures, which are all *Hiſtories*, the ſacred on one Side, and the profane on the other, every *Hiſtory* having a *Latin* Inſcription in Verſe, one of the beſt of which is the Diſtich annexed to that of *Suſannah.*

Caſta Suſanna placet ; *Lucretia cede Suſannæ,*
Tu poſt, Illa mori, maluit ante ſcelus.

In the little Chapel belonging to the Apartment of the Electoreſs, you ſee nothing almoſt but Gold, Pearls and Gems. Among the Relicks they ſhew you a Piece of Gold Mohair, which they pretend to be Part of the Virgin's Robes. The Parlour of Perſpectives is extremely fine; but the Hall of Antiquities, that were brought hither from *Rome*, exceeds all the reſt; we counted no leſs than one hundred ninety-two Buſts, and four hundred other Pieces here, all highly eſteemed for their exquiſite Workmanſhip and Antiquity. The Furniture of this Palace is rich beyond what can be imagined, and they told us, that beſides the Tapeſtry in Uſe, there were laid up in the Wardrobe to the Value of eight Millions of Crowns; but here, I am afraid, they overſhoot the Mark. The Treaſury contains whole Services of Gold, and many other precious Veſſels, vaſt Quantity of Pearls, Diamonds, Rubies, and other precious Stones, beſides an infinite Number of rare Pictures, curious Works, Medals, and valuable Rarities; among the reſt is a Cherry-ſtone, upon which you ſee diſtinctly engraven one hundred and forty Heads; with a Gondola of Palm-tree Wood turn'd into Stone, with this Inſcription:

Palma fui, cœpi lapideſcere, cymbula nunc ſum,
Si non Neptunus, Navita Bacchus erit.

Wherever you turn your Eyes in this Palace, you ſee nothing but Marble, though, to unravel the Secret, it is to be told, that this is only a certain Compoſition, which they know how to harden and poliſh ſo artificially, that it appears like, and laſts as well as, Marble. They have divers ſubterraneous Walks or Galleries, leading from the Palace to all the Churches and Convents of the City. The Arſenal was at that Time almoſt unfurniſhed, moſt of the beſt Arms and Cannon being carried from thence into *Hungary.* The ſhewed us here the Grand Vizier's Tent taken in the laſt Battle, which was more remarkable for its Bigneſs than its Beauty; the Materials were only of painted Callico, with fine Sattin Strings, covered with Silk Braid, and the Lozenges of the ſame, interwoven betwixt the Strings. This Country produces no Wine, and as they know no other Religion but the *Roman*, ſo they look upon thoſe of another Perſuaſion as Monſters rather than Men.

12. After we had travelled for ſome Time along the Banks of the River *Iſer*, (upon which *Munich* is ſeated) we paſſed through a Foreſt, and immediately on our coming out from thence, diſcovered the ſnowy Tops of the *Alps*, which at a Diſtance appeared like the foaming Waves of a raging Sea: We came the ſame Day to a Village called *Legrem*, ſeated near a ſmall Lake of freſh Water at the Foot of the Mountains; we eat here ſome Fiſh of a Kind which we had never ſeen before. We coaſted along the Mountains for two Hours, and by Degrees got within the Rocks covered with Fir-trees and Snow, being a moſt deſolate Place, and deſtitute of Inhabitants, except that near two or three Lakes you meet with a few Fiſhers Huts, made of the Roots of Fir-trees, well joined together, their Boats being made of the ſame Trees hollowed out, like *Indian* Canoes. At the Village of *Mittenwald*, three Leagues within the Mountains, ſeated in a pleaſant Valley ſurrounded with Rocks, they treated us with ſome Goats Fleſh and Salmon Trouts. Our Hoſt ſhewed us a certain Kind of round Stones of the Bigneſs of a Hen's Egg, which he aſſured us were found in the Stomach of their Goats, and reſembled a ſoft, imperfect *Bezoar*; he aſked ten Crowns a piece for them.

We were not gone far from this Village, but we met a Troop of Beggars acting the *Hiſtory of the Fall*; for they had planted a Tree loaden with red Fruit in the Way, climbing up againſt which was a little Devil in the Shape of a Crocodile, whilſt a Girl with long diſhevelled Hair approached towards it, and an old Fellow clad in black, with a young Boy clad in white, holding a Sword in his Hand, ſtood at a little Diſtance, and upon our Approach the Play began. The little Boy with the Dagger repreſented *Michael* the Archangel; I need not ſay in what Character the OLD MAN appeared, though he told me in very plain Terms. The Reader will eaſily judge what terrible Effects, in regard to true Religion, ſuch Follies muſt produce.

Within a Quarter of an Hour after, we paſſed by the Fort *Chernitz*, built betwixt two inacceſſible Rocks, being the common Boundary of *Tyrol*, and the Biſhoprick of *Freiſingen*, the firſt whereof belongs to the Emperor, the laſt is Part of the Country of *Bavaria.* At Night we came to the Village of *Leefeld*, where is a Convent of *Auſtin* Friars: In their Church they ſhew you two or three pretended Miracles, and among the reſt, a chewed and bloody Hoſt, in a Repoſitory of Glaſs: They tell you, that a Gentleman named *Milſer*, Lord of the Caſtle of *Schleſburgh*, being ſo vain as to oblige them to give him the great Hoſt, which is only for the Uſe of the Clergy, he had no ſooner put it into his Mouth, but it caſt out a Flood of Blood, and at the ſame Time his Legs ſunk into the Pavement up to his Knees; they ſhew you the Hole to this Day in the Pavement near the Altar, and the Print of his Hand on one of the Stones of the ſame Altar, where he would have ſupported himſelf. His Repentance however ſaved him, and left theſe Veſtiges to deter others from attempting the like mighty Crime in the Sight of the Prieſts. This Hoſt alſo works Miracles, amongſt which we may very well reckon the Inhabitants believing implicitly every Word of this Story.

About two Leagues beyond *Seefeld* we began to deſcend into a Valley, at leaſt a Mile in Breadth, ſprinkled with divers pretty little Villages, watered by the River *Ihn*: We paſſed only on the right Side of it, along the Foot of the Mountain, where, after we had travelled a League further, they ſhewed us a ſtreight and craggy Rock, called the *Emperor's Rock*, above a hundred Fathoms high (as they aſſured us), at about three Quarters of the Height of which we could obſerve a Niche dug, in which ſtood a Crucifix, with a Statue on each Side: They tell you, that the Emperor *Maximilian* I. being in chaſe of a wild Goat, purſued her to this Place, where alighting from his Horſe, he durſt not remount it, but was forced to be brought down by the Help of Engines. There is indeed another Account of this Matter, which has received the Sanction of many great Names, particularly of *Stephen Pigghius*, who relates, that the Archduke *Maximilian*, after remaining two Days and two Nights in the Sight of Multitudes of People, in the Place where this Crucifix now ſtands, was at length conducted ſafely back by a Perſon unknown, and therefore ſuppoſed to have been an Angel, in Memory of which theſe Monuments are placed. Our Author added this Story in his later Editions, and brought ſome Inſtances to ſupport it, yet to many Readers, no doubt, his firſt Account will appear the moſt ſatisfactory.

Inſpruck, a City ſeated upon the River *Ihn*, about two Hours beyond the Middle of the before-mentioned Valley: Before you enter the City, you paſs that River over a Bridge, whence it received the Name of *Inſpruck*, i. e. *The Bridge of the Ihn*, and *Ænipons* or *Ænipontum* in *Latin.* The Houſes of *Inſpruck* are very fine, but their Roofs are built after an odd Manner, being flat on the Top, and the Rafters, inſtead of riſing to a Point, are reverſed, ſo that the Rain ſettles always in the Middle of the Roof. The Palace of *Inſpruck*, where the Duke of *Lorrain* reſided as Governor, is both convenient and large, but neither beautiful nor regular, having been built at different Times. There is one Thing particular here, of which I will endeavour to give you the beſt Account I can: There ſtands in the Middle of the City a Houſe called the *Chancery*, the Roof of the Porch of which, they tell you, was cover'd with Plates of Gold, by Archduke *Frederick*, after he return'd from his Exile. I made the beſt Obſervation I could concerning the Truth of this Story, and found that Plates of Braſs were faſtened to the Timber inſtead of Tiles, and that each of theſe Tiles was cover'd with another thin one of another Metal, which, if they be not Gold, I am ſure they are gilded; the Roof being about fifteen Feet ſquare, it could not by Calculation amount, ſuppoſing them to be Gold, to above two hundred thouſand Crowns. The twenty-eight magnificent Braſs Statues in the Church of the *Cordeliers*, were the Gift of the ſame *Frederick*: They are bigger than the Life, and repreſent Emperors, Archdukes, Dukes of *Burgundy*, two Empreſſ's, and two Princeſſes; the Names of whom they are not able to tell you, as much as they reverence that Family.

About half an Hour from *Inſpruck*, at the Foot of a Mountain, ſtands *Amras*, called in *Latin*, *Arx Ambroſiena*, a Country-Seat of the Archdukes, being remarkable only for its Situation and the Curioſities they ſhew to Strangers. There is a large Hall fill'd with all Sorts of Arms, which were more curious than uſeful; and among other Things, a Lance uſed by Archduke *Ferdinand* in Turnaments. They tell you moſt ſurprizing Things of the Strength of this Prince; as for Inſtance, That he could ſtop a Coach with ſix Horſes, by taking hold of a Spoke of the Wheel; and would break two Crown Pieces joined together. In an adjacent Gallery we ſaw the Effigies of many Princes mounted on their Horſes in Armour, with all the Ornaments uſed in Turnaments; and the Skin of a Serpent fifteen Feet long, taken near *Ulm*, upon the Banks of the *Danube*. At the End of this Gallery is an Apartment fill'd with the Spoils and Arms taken from the *Turks*. Here you ſee a *Baſſa* and an *Aga* of the *Janizaries* repreſented on Horſeback, in the ſame magnificent Habits and Harneſſes, embelliſh'd with Gold, Silver, and precious Stones, they had when they were taken Priſoners.

In another Gallery they ſhew'd us a double Rank of Cupboards, join'd by Backs and Sides extended along the Middle of the Gallery, there being but a little Room left to walk on both Sides: The three firſt were full of curious Works of all Sorts, as Alabaſter, Glaſs, Coral, and Mother of Pearl; the fourth contain'd Medals, and Gold and Silver Coins; the fifth, Veſſels of Porcelain and ſeal'd Earth; in the ſixth were many rare little Cabinets richly inlaid, the Drawers whereof were fill'd with Medals and little Curioſities of *Agate* and *Ambergriſe*. Beſides theſe, you ſee here ſeven large Volumes, bound in black Velvet, with Edges and Claſps of Silver, which inſtead of Leaves, contain'd ſmall Boxes fill'd with a great Number of Medals. The ſeventh Cupboard has many very ancient Arms curiouſly wrought; and amongſt the reſt, a Croſsbow with thirty-four leſſer Bows within its Compaſs, diſcharging as many Arrows at a Time. The eighth is fill'd with Animals, Plants, and ſuch-like natural Curioſities; here you ſee a Horn of an Ox of ſix Inches Diameter. The three following Cupboards are furniſh'd with Works of Ivory, of Wood, and of the Pen; the twelfth with Manuſcripts and rare Books; the thirteenth with Works of Steel, and particularly Padlocks, and other Locks of a rare Invention: In the fourteenth they ſhewed us Stones repreſenting Trees, Fruits, Shells and Animals, all the pure Productions of Nature: In the fifteenth and ſixteenth, all Sorts of Clock-work and muſical Inſtruments. The ſeventeenth contains a conſiderable Quantity of precious Stones unpoliſh'd, and of metallick and mineral Ores. The eighteenth, a good Number of ſmall Veſſels of precious Materials, and of the rareſt Shells in the World. The nineteenth ſurpaſſes all the reſt in Riches, being fill'd with Veſſels of Gold, Cryſtal, Agate, Chalcedony, Onyx, Cornelian, *Lapis Lazuli*, and other precious Stones, enrich'd with Gold and Diamonds in *baſſo relievo*, and other rare Workmanſhip. The twentieth and laſt contains Antiquities of all Sorts, Sepulchral Lamps, Urns, Idols, *&c.* and among the reſt a Piece of a Rope about the Length of a Hand, which, they tell you, is Part of the ſame wherewith *Judas* hang'd himſelf. On the Walls and Cieling you ſee an infinite Number of other Curioſities, among which the Bow of *Noah* is an admirable Piece of Painting, for which, they affirm, the Great Duke of *Tuſcany* offer'd an hundred thouſands Crowns; and in a great Cheſt you ſee a whole Cart-load of Medals laid up together; a ſure Sign they are not valuable. From hence they carried us into the Library, which we found much out of Order; and from thence into another Gallery full of Statues, Buſts, and other Pieces of Antiquity; beſides a great many other Apartments adorn'd with Pictures of a great Value. At our Inn (the *Golden Hart*) we ſaw a middle-aged Clown, who would lay his Arm ſtretch'd upon the Ground, upon which a luſty Fellow ſtanding with both his Feet, he lifted him up with the ſame Hand only, and carried him croſs the Room.

13. About a League beyond *Inſpruck* we re-enter'd the Mountains, and by a troubleſome and tedious Aſcent of ſeven Hours, came late at Night to a little Village (not quite at the Top of the Mountain) call'd *Gruſs*, i. e. *Salutation*, having acquired its Name from the Meeting of the two illuſtrious Brothers near it, *viz.* *Charles* V. and his Brother *Ferdinand*, the whole Account whereof you find engraven on a Marble Stone two hundred Paces from the Village, the exact Place where they firſt ſaluted each other. They treated us at Night with ſeveral Sorts of Wild Fowl and Veniſon; all the Hares, Foxes and Bears are white here, as well as moſt of their Partridges: They abound alſo in Heath Cocks and Hens, Pheaſants, and another Kind of large Wild Fowl, call'd by them *Schneebahn* or *Snow-gooſe*. All theſe Sorts of Wild Fowl have their Feet velveted about the Claws, with a Kind of Furr which is neither Hair nor Feathers, but ſo thick, that the Snow cannot penetrate it, a Point of natural Hiſtory that very well deſerves Notice.

This Mountain is call'd the *Brennerberg*, i. e. the *Burning Hill*, by reaſon of the piercing and burning Winds, which (together with both Thunder and Lightning) reign frequently there in the Summer Seaſon. Theſe Winds forcing their Paſſage thro' the Hollowneſs of the neighbouring Mountains, as it were thro' Pipes, raiſe ſuch furious Hurricanes, as ſometimes overthrow both Trees and Rocks. Having travell'd about two Hours the next Day, we came to the Top of the Mountain, where we diſcover'd a remarkable Spring, which diſcharging itſelf upon a Rock, there ſeparates into two Currents, which ſoon after become conſiderable Rivers, one turning to the South, and joining with the *Inn* near *Inſpruck*, the other to the North, after it has paſſed *Brixen* and *Bolſano*, diſcharges itſelf into the *Adige* a little above *Trent*. We dined at *Steerzingen*, where we eat the Fleſh of a certain Creature call'd by them *Steinbocks* or *Rock-Goats*, (*Rupæ Capræ*) Creatures betwixt a He-goat and a Doe, which were moſt excellent Meat.

From hence, the direct Way to *Trent* being very rough, we took that over *Brixen*, which is leſs dangerous: We met this Day above a hundred Waggons drawn by Oxen, the cloven Feet whereof were ſhod with Iron; they came from the Fair of *Bolſano*. We ſaw alſo, in theſe Mountains, Abundance of ſmall Carts with two Wheels, which the Peaſants draw themſelves, and chiefly make Uſe of to fetch Salt from *Hall*, a little City in the Valley of *Inſpruck*: It is made of Water boil'd into Salt. The Habits of theſe Mountaineers are very odd, ſome wearing green, others yellow, and other blue Hats, and that with ſuch little Difference in their Garments, that the Women are ſcarce to be diſtinguiſhed from the Men. *Brixen* is a very ſmall City in the Country of *Tyrol*, though it is the Reſidence of the Biſhop. They keep their beſt Apartments here in the higheſt Stories, but for what Reaſon I know not.

From hence to *Bolſano* is only ſeven Hours travelling; but as the Road lies betwixt the River and the high Mountains, if a ſudden Thaw happens to melt the Snow, it rolls down from the Precipices with ſuch Violence, that it ſwallows up both Man and Beaſt; whence it is, that on the Road you ſee ſo many ſmall Monuments, fill'd with the Hiſtories of ſuch as have

Apartment is an hundred and eighteen Feet long, and fifty-two broad; it is truly magnificent, eſpecially in reſpect of its curious Pictures, which are all *Hiſtories*, the ſacred on one Side, and the profane on the other, every *Hiſtory* having a *Latin* Inſcription in Verſe, one of the beſt of which is the Diſtich annexed to that of *Suſannah*.

Caſta Suſanna placet; *Lucretia cede Suſannæ*,
Tu poſt, *Illa mori*, *maluit ante ſcelus*.

In the little Chapel belonging to the Apartment of the Electoreſs, you ſee nothing almoſt but Gold, Pearls and Gems. The Reader will eaſily judge what terrible Effects, in regard to true Religion, ſuch Follies muſt produce.

Within a Quarter of an Hour after, we paſſed by the Fort *Chernitz*, built betwixt two inacceſſible Rocks, being the common Boundary of *Tyrol*, and the Biſhoprick of *Freiſingen*, the firſt whereof belongs to the Emperor, the laſt is Part of the Country of *Bavaria*. At Night we came to the Village of *Leefeld*, where is a Convent of *Auſtin* Friars: In their Church they ſhew you two or three pretended Miracles, and among the reſt, a chewed and bloody Hoſt, in a Repoſitory of Glaſs: They tell you, that a Gentleman named *Milſer*, Lord of the Caſtle of *Schleſburgh*, being ſo vain as to oblige them to give him the great Hoſt, which is only for the Uſe of the Clergy, he had no ſooner put it into his Mouth, but it caſt out a Flood of Blood, and at the ſame Time his Legs ſunk into the Pavement up to his Knees; they ſhew you the Hole to this Day in the Pavement near the Altar, and the Print of his Hand on one of the Stones of the ſame Altar, where he would have ſupported himſelf. His Repentance however ſaved him, and left theſe Veſtiges to deter others from attempting the like mighty Crime in the Sight of the Prieſts. This Hoſt alſo works Miracles, amongſt which we may very well reckon the Inhabitants believing implicitly every Word of this Story.

About two Leagues beyond *Seefeld* we began to deſcend into a Valley, at leaſt a Mile in Breadth, ſprinkled with divers pretty little Villages, watered by the River *Ihn*: We paſſed only on the right Side of it, along the Foot of the Mountain, where, after we had travelled a League further, they ſhewed us a ſtreight and craggy Rock, called the *Emperor's Rock*, above a hundred Fathoms high (as they aſſured us), at about three Quarters of the Height of which we could obſerve a Niche dug, in which ſtood a Crucifix, with a Statue on each Side: They tell you, that the Emperor *Maximilian* I. being in chaſe of a wild Goat, purſued her to this Place, where alighting from his Horſe, he durſt not remount it, but was forced to be brought down by the Help of Engines. There is indeed another Account of this Matter, which has received the Sanction of many great Names, particularly of *Stephen Pigghius*, who relates, that the Archduke *Maximilian*, after remaining two Days and two Nights in the Sight of Multitudes of People, in the Place where this Crucifix now ſtands, was at length conducted ſafely back by a Perſon unknown, and therefore ſuppoſed to have been an Angel, in Memory of which theſe Monuments are placed. Our Author added this Story in his later Editions, and brought ſome Inſtances to ſupport it, yet to many Readers, no doubt, his firſt Account will appear the moſt ſatisfactory.

Inſpruck, a City ſeated upon the River *Ihn*, about two Hours beyond the Middle of the before-mentioned Valley: Before you enter the City, you paſs that River over a Bridge, whence it received the Name of *Inſpruck*, i. e. *The Bridge of the Ihn*, and *Ænipons* or *Ænipontum* in *Latin*. The Houſes of *Inſpruck* are very fine, but their Roofs are built after an odd Manner, being flat on the Top, and the Rafters, inſtead of riſing to a Point, are reverſed, ſo that the Rain ſettles always in the Middle of the Roof. The Palace of *Inſpruck*, where the Duke of *Lorrain* reſided as Governor, is both convenient and large, but neither beautiful nor regular, having been built at different Times. There is one Thing particular here, of which I will endeavour to give you the beſt Account I can: There ſtands in the Middle of the City a Houſe called the *Chancery*, the Roof of the Porch of which, they tell you, was cover'd with Plates of Gold, by Archduke *Frederick*, after he return'd from his Exile. I made the beſt Obſervation I could concerning the Truth of this Story, and found that Plates of Braſs were faſtened to the Timber inſtead of Tiles, and that each of theſe Tiles was cover'd with another thin one of another Metal, which, if they be not Gold, I am ſure they are gilded; the Roof being about fifteen Feet ſquare, it could not by Calculation amount, ſuppoſing them to be Gold, to above two hundred thouſand Crowns. The twenty-eight magnificent Braſs Statues in the Church of the *Cordeliers*, were the Gift of the ſame *Frederick*: They are bigger than the Life, and repreſent Emperors, Archdukes, Dukes of *Burgundy*, two Empreſſ's, and two Princeſſes; the Names of whom they are not able to tell you, as much as they reverence that Family.

About half an Hour from *Inſpruck*, at the Foot of a Mountain, ſtands *Amras*, called in *Latin*, *Arx Ambroſiena*, a Country-Seat of the Archdukes, being remarkable only for its Situation and the Curioſities they ſhew to Strangers. There is a large Hall fill'd with all Sorts of Arms, which were more curious than uſeful; and among other Things, a Lance uſed by Archduke *Ferdinand* in Turnaments. They tell you moſt ſurprizing Things of the Strength of this Prince; as for Inſtance, That he could ſtop a Coach with ſix Horſes, by taking hold of a Spoke of the Wheel; and would break two Crown Pieces joined together. In an adjacent Gallery we ſaw the Effigies of many Princes mounted on their Horſes in Armour, with all the Ornaments uſed in Turnaments; and the Skin of a Serpent fifteen Feet long, taken near *Ulm*, upon the Banks of the *Danube*. At the End of this Gallery is an Apartment fill'd with the Spoils and Arms taken from the *Turks*. Here you ſee a *Baſſa* and an *Aga* of the *Janizaries* repreſented on Horſeback, in the ſame magnificent Habits and Harneſſes, embelliſh'd with Gold, Silver, and precious Stones, they had when they were taken Priſoners.

In another Gallery they ſhew'd us a double Rank of Cupboards, join'd by Backs and Sides extended along the Middle of the Gallery, there being but a little Room left to walk on both Sides: The three firſt were full of curious Works of all Sorts, as Alabaſter, Glaſs, Coral, and Mother of Pearl; the fourth contain'd Medals, and Gold and Silver Coins; the fifth, Veſſels of Porcelain and ſeal'd Earth; in the ſixth were many rare little Cabinets richly inlaid, the Drawers whereof were fill'd with Medals and little Curioſities of *Agate* and *Ambergriſe*. Beſides theſe, you ſee here ſeven large Volumes, bound in black Velvet, with Edges and Claſps of Silver, which inſtead of Leaves, contain'd ſmall Boxes fill'd with a great Number of Medals. The ſeventh Cupboard has many very ancient Arms curiouſly wrought; and amongſt the reſt, a Croſsbow with thirty-four leſſer Bows within its Compaſs, diſcharging as many Arrows at a Time. The eighth is fill'd with Animals, Plants, and ſuch-like natural Curioſities; here you ſee a Horn of an Ox of ſix Inches Diameter. The three following Cupboards are furniſh'd with Works of Ivory, of Wood, and of the Pen; the twelfth with Manuſcripts and rare Books; the thirteenth with Works of Steel, and particularly Padlocks, and other Locks of a rare Invention: In the fourteenth they ſhewed us Stones repreſenting Trees, Fruits, Shells and Animals, all the pure Productions of Nature: In the fifteenth and ſixteenth, all Sorts of Clock-work and muſical Inſtruments. The ſeventeenth contains a conſiderable Quantity of precious Stones unpoliſh'd, and of metallick and mineral Ores. The eighteenth, a good Number of ſmall Veſſels of precious Materials, and of the rareſt Shells in the World. The nineteenth ſurpaſſes all the reſt in Riches, being fill'd with Veſſels of Gold, Cryſtal, Agate, Chalcedony, Onyx, Cornelian, *Lapis Lazuli*, and other precious Stones, enrich'd with Gold and Diamonds in *baſſo relievo*, and other rare Workmanſhip. The twentieth and laſt contains Antiquities of all Sorts, Sepulchral Lamps, Urns, Idols, &c. and among the reſt a Piece of a Rope about the Length of a Hand, which, they tell you, is Part of the ſame wherewith *Judas* hang'd himſelf. On the Walls and Cieling you ſee an infinite Number of other Curioſities, among which the Bow of *Noah* is an admirable Piece of Painting, for which, they affirm, the Great Duke of *Tuſcany* offer'd an hundred thouſands Crowns; and in a great Cheſt you ſee a whole Cart-load of Medals laid up together; a ſure Sign they are not valuable. From hence they carried us into the Library, which we found much out of Order; and from thence into another Gallery full of Statues, Buſts, and other Pieces of Antiquity; beſides a great many other Apartments adorn'd with Pictures of a great Value. At our Inn (the *Golden Hart*) we ſaw a middle-aged Clown, who would lay his Arm ſtretch'd upon the Ground, upon which a luſty Fellow ſtanding with both his Feet, he lifted him up with the ſame Hand only, and carried him croſs the Room.

13. About a League beyond *Inſpruck* we re-enter'd the Mountains, and by a troubleſome and tedious Aſcent of ſeven Hours, came late at Night to a little Village (not quite at the Top of the Mountain) call'd *Gruſs*, i. e. *Salutation*, having acquired its Name from the Meeting of the two illuſtrious Brothers near it, *viz.* *Charles* V. and his Brother *Ferdinand*, the whole Account whereof you find engraven on a Marble Stone two hundred Paces from the Village, the exact Place where they firſt ſaluted each other. They treated us at Night with ſeveral Sorts of Wild Fowl and Veniſon; all the Hares, Foxes and Bears are white here, as well as moſt of their Partridges: They abound alſo in Heath Cocks and Hens, Pheaſants, and another Kind of large Wild Fowl, call'd by them *Schneehahn* or *Snow-gooſe*. All theſe Sorts of Wild Fowl have their Feet velveted about the Claws, with a Kind of Furr which is neither Hair nor Feathers, but ſo thick, that the Snow cannot penetrate it, a Point of natural Hiſtory that very well deſerves Notice.

This Mountain is call'd the *Brennerberg*, i. e. the *Burning Hill*, by reaſon of the piercing and burning Winds, which (together with both Thunder and Lightning) reign frequently there in the Summer Seaſon. Theſe Winds forcing their Paſſage thro' the Hollowneſs of the neighbouring Mountains, as it were thro' Pipes, raiſe ſuch furious Hurricanes, as ſometimes overthrow both Trees and Rocks. Having travell'd about two Hours the next Day, we came to the Top of the Mountain, where we diſcover'd a remarkable Spring, which diſcharging itſelf upon a Rock, there ſeparates into two Currents, which ſoon after become conſiderable Rivers, one turning to the South, and joining with the *Inn* near *Inſpruck*, the other to the North, after it has paſſed *Brixen* and *Bolſano*, diſcharges itſelf into the *Adige* a little above *Trent*. We dined at *Steerzingen*, where we eat the Fleſh of a certain Creature call'd by them *Steinbocks* or *Rock-Goats*, (*Rupæ Capræ*) Creatures betwixt a He-goat and a Doe, which were moſt excellent Meat.

From hence, the direct Way to *Trent* being very rough, we took that over *Brixen*, which is leſs dangerous: We met this Day above a hundred Waggons drawn by Oxen, the cloven Feet whereof were ſhod with Iron; they came from the Fair of *Bolſano*. We ſaw alſo, in theſe Mountains, Abundance of ſmall Carts with two Wheels, which the Peaſants draw themſelves, and chiefly make Uſe of to fetch Salt from *Hall*, a little City in the Valley of *Inſpruck*: It is made of Water boil'd into Salt. The Habits of theſe Mountaineers are very odd, ſome wearing green, others yellow, and other blue Hats, and that with ſuch little Difference in their Garments, that the Women are ſcarce to be diſtinguiſhed from the Men. *Brixen* is a very ſmall City in the Country of *Tyrol*, though it is the Reſidence of the Biſhop. They keep their beſt Apartments here in the higheſt Stories, but for what Reaſon I know not.

From hence to *Bolſano* is only ſeven Hours travelling; but as the Road lies betwixt the River and the high Mountains, if a ſudden Thaw happens to melt the Snow, it rolls down from the Precipices with ſuch Violence, that it ſwallows up both Man and Beaſt; whence it is, that on the Road you ſee ſo many ſmall Monuments, fill'd with the Hiſtories of ſuch as have either eſcaped narrowly, or periſh'd by theſe Accidents; and hence alſo it is that the Churches hereabouts, and eſpecially our Lady of *Newburgh*'s, are almoſt overladen with Preſents. We were not not a little ſurpized when we found the Valley of *Bolſano*, in the Middle of the Winter, cover'd with green Willows, Roſes and Mulberry-trees, the Reaſon whereof may be attributed to the Situation of the Valley, which on all Sides is ſhelter'd from the Winds.

The City of *Bolſano* belongs alſo to the Biſhoprick of *Trent*, but is of very little Compaſs; its chief Traffick ariſes from four Fairs a Year, each of which laſts fifteen Days, in which they exchange the Commodities brought thither from *Germany* and *Italy*. They ſhew'd us a round Hole of three Feet Diameter in the Roof of the Church, ſurrounded with a Garland of Ribbons of different Colours, on which hang a great Number of large Wafers: They told us, That an Opera being acted in that Church on *Aſcenſion Day*, the Perſon that repreſented Chriſt was taken up into Heaven thro' this Hole. The Valley of *Bolſano* is full of Vineyards, which produce a Wine much eſteemed thereabouts; but is not ſo pleaſing to Strangers, by reaſon of its fulſome Sweetneſs. The Road betwixt *Bolſano* and *Trent* (juſt a Day's Journey) is planted all along the Valley with Vines, where you ſee, at certain Diſtances, little Straw Hutts, ſupported by three high Fir-poles, like a Trevet, from whence they kill the Bears with Fuſils, that come from the Mountains to eat the Grapes.

Trent is much of the ſame Bigneſs as *Bolſano*, and ſeated after the ſame Manner, on a flat Rock of a Kind of red and white Marble, which alſo furniſhes the Materials for their Houſes. This City is ſubject to moſt dangerous Inundations, not only from the Overflowing of the River, but alſo from the Brooks of *Levis* and *Ferſena*, which ſometimes diſgorge themſelves with ſuch Impetuoſity from the adjacent Mountains, that they force great Rocks along with them even into the Town. *Trent* is fortified only with a ſingle Wall, waſh'd by the River *Adige*. The Bridge and Biſhop's Palace are much boaſted of by the Country People, tho' the laſt is low and but indifferently large. The Biſhop is both a Temporal and Spiritual Lord, and his Territories are of a conſiderable Extent. Some place this Country in *Germany*, others in *Italy*, becauſe the Biſhop is a Prince of the Empire; but the common Language of *Trent* is *Italian*, and the Inhabitants of the Country reckon it Part of *Italy*, in which, however, they are not follow'd by their Neighbours. In one of the Chapels of the Cathedral they ſhew a Crucifix as big as the Life, which, they very gravely ſay, bow'd its Head at the Time of the Council's being ſworn and proclaimed under it, to ſhew its Approbation of the Veracity of their Decrees. They add, That no body knows the Materials of which it is compoſed; and for that Reaſon would have you believe it was made without Hands. They are building a moſt magnificent Chapel, where it is to be placed, this being ſomewhat dark: They call it the *Holy Crucifix*.

The Church of St. *Mary major*, where this Council ſate, is a little Church, built of a kind of baſe Marble. The Organs here are worth taking Notice of, for they not only play'd to us many new Airs, but alſo counterfeited the Cries of divers Beaſts, the Beat of Drums, and ſeveral other Things of this Nature, which ſeem'd to us inconſiſtent with the Gravity of ſuch a Council, the Hiſtory whereof is painted near it.

In the Church of St. *Peter* they ſhew the Chapel of the little Saint *Simonin*, They tell you, that in 1276, the *Jews* ſtole their *Simonin*, (or little *Simon*) a Shoemaker's Son, in the 28th Month of his Age, and after having kill'd the Child in a moſt cruel Manner, to drink the Blood at one of their Feaſts, threw his Carcaſs into a Water pipe, (which now paſſes to the Houſe where the Thing was committed, and where their Synagogue was at that time) which being thence carried into the River, and found by ſome Fiſhermen, the whole Buſineſs was diſcovered, the *Jews* convicted, thirty-nine of them executed, and the reſt for ever baniſh'd the City. Pope *Sixtus* IV. canoniz'd the Child, who being embalm'd, is now to be ſeen in a Caſe upon the Altar of a Chapel dedicated to his Memory, with a Knife, Pincers, and four great Iron Needles they made Uſe of in tormenting him, and two Silver Goblets, in which they drank the Blood. The ſame Story is painted at *Frankfort on the Maine*, under the Bridge Gate. In the later Editions of our Author's Book there are many Hiſtories of the ſame Nature mentioned, to ſhew, that this is not altogether incredible.

15. The Additions and Alterations that our Author has made in the Courſe of numerous Editions through which his Book has paſs'd, renders it extremely difficult to make ſuch an Abridgement of it as was requiſite for our Purpoſe; ſince in order to this, we are obliged to run through all his Volumes, that we may bring together and unite the many different Paſſages in them that relate to the ſame Place; yet after all this is done, there remain ſome Things ſtill to be mention'd for the Satisfaction of a judicious Reader. As for Inſtance, at the End of his ſecond Volume, our Author has added a diſtinct Treatiſe under the Title of, *Inſtructions to a Traveller*, which at the Time he wrote it, was certainly one of the moſt uſeful and entertaining Parts of his Work; but we know by Experience, that the Length of Time has hurt it extremely.

He tells us therein, what Carriages a Traveller ſhould make uſe of, the Times when they ſet out and come in, and their Expence; but we know with Certainty that Things are much altered ſince, and that in this reſpect, the wiſeſt Thing a Traveller can do, is to provide himſelf with a *Dutch* Almanack for the Year in which he travels, where he will find every Thing ſet down of that Nature as it ſtands at preſent. We may ſay the ſame Thing with reſpect to the beſt Inns at every Place, and the Houſes where they ſpeak *French* and *Engliſh*, which alter ſo frequently, that they would be of little or no Uſe in a Collection of this Nature. He ſuggeſts likewiſe the Enquiries a Traveller ought to make, which is quite beſide our Purpoſe, and are alſo ſubject to many Variations.

We the rather mention theſe Particulars, that it may appear we conſider'd well what we were doing, and that we have left nothing untouch'd from Haſte or Inadvertency. There are alſo ſome long Diſſertations of his upon various Subjects, founded only upon Hints that he met with in his Travels; ſuch, for Example, as the Hiſtory of the Art of *Printing*, in which there are many Things curious and uſeful, but the taking in theſe would ſwell our Work far beyond its proper Bounds, or would oblige us to exclude other Things that the Publick have more Reaſon to expect from us; and after all, they would not anſwer very well the Intention for which they were introduced, ſince they really require much more Room than he has allowed them. But it may not be amiſs to obſerve, that what has been lately publiſhed to the World as a new Invention in this uſeful Art, under the Title of *Block Printing*, is in reality no more than what was firſt practiſed by *Coſter* and *Fauſtus*, and which was juſtly laid aſide upon *Mentel*'s inventing the Art of caſting ſeparate Letters. For according to the antient Method, which is ſtill in Uſe in *China*, the Letters were cut in Blocks of Wood or of Metal, from which the Sheets were wrought; but then it was neceſſary to cut Plates for every Page of a Book, which were of no Uſe but for the printing of that Book; and beſides their being very expenſive, took up a vaſt deal of Room, and after all, could never be brought to furniſh ſuch neat, beautiful, and correct Impreſſions, as we have from the Method that is now practiſed.

In regard to the Alterations that have happen'd in the Places through which he paſſed, with reſpect to their Change of Maſters or Forms of Government, it would be equally needleſs and endleſs to aim at Corrections, becauſe we muſt then write the Hiſtory of every City and Territory, which would require many Volumes, All that in this reſpect could be done, was to retrench ſuch Paſſages as are no longer either uſeful or entertaining upon account of ſuch Changes, and preſerving only thoſe that are and will be inſtructive and pleaſant as long as the Places remain to which they refer.

Theſe Obſervations and Remarks are placed at the End of this Section, that the Reader may the better judge of the Reaſons upon which they are founded, as well as to ſpare ourſelves and him the Trouble of repeating the ſame Things, where thoſe Reaſons have made the ſame Conduct neceſſary in the remaining Part of his Work, of which it is but Juſtice to ſay, that moſt of its Imperfections are ſuch as no Performance of the ſame Kind can be exempted from, and that moſt of his Superfluities are owing to his Endeavours to render his Book complete; which from the Nature of Things, neither it nor any of its Kind ever can be; for while Things are ſubject to perpetual Alterations, it is impoſſible to frame any Deſcriptions of them that will laſt for any conſiderable Length of Time; this therefore we hope will be a ſufficient Apology, both for him and for us, and ſhall, for that Reaſon, inſiſt upon this Subject no longer, but return again to our Author's Travels.

SECTION II.

The TRAVELS *of Mr.* MAXIMILIAN MISSON, *through a great Part of* Italy, *with a diſtinct Detail of whatever is curious or worthy of Obſervation in the Places he viſited, and many judicious and important Remarks on the Manners, Cuſtoms,* &c. *of the Inhabitants.*

1. *A Deſcription of what is remarkable in the Road to* Verona; *of that City and of the chief Edifices, and other Things that are remarkable therein.* 2. *An Account of his Journey from thence to* Vicenza; *a Deſcription of that City, and of* Padua, *with Abundance of Remarks upon the ancient and modern State of that famous Univerſity.* 3. *The Author's Paſſage from thence to* Venice; *a very large Account of that famous City, and of all the publick Buildings, and other Places of Note therein.* 4. *This Subject continued, with various Remarks upon a Multitude of curious and entertaining Topicks.* 5. *The Concluſion of this Subject, interſperſed with Obſervations upon the Government of the Republick, and the Hiſtory of the ſeveral Dukes of* Venice. 6. *A Deſcription of* Rovigo, Ferrara, Ravenna, Rimini, Peſaro, *and* Fano, *with an Account of what is remarkable in each of them, and in the Country about them.* 7. *A very copious and circumſtantial Deſcription of* Loretto, *of the holy Houſe there, with many curious and entertaining Reflections.* 8. *The Author's Journey from* Loretto *to* Rome, *with a Deſcription of all the Places of Note he paſſed through in his Way, with Obſervations upon their Situation, Produce, ancient and modern Condition,* &c. 9. *An Account of whatever is remarkable in the Way between* Rome *and* Naples; *a Deſcription of the* Roman *High-ways, and ſome Account of the City of* Naples. 10. *That Subject continued, together with a particular and moſt entertaining Relation of the Author's Journey to Mount* Veſuvius, *and other remarkable Places in the Neighbourhood of that City.* 11. *A very large and uſeful Collection of Remarks and Obſervations on the City and Republick of* Venice, *occaſioned by a long Letter written to the Author during his Stay in* Italy, *in which are contained a Multitude of very important Particulars, and wherein many vulgar Errors are enumerated and refuted.*

1. FROM hence we travelled on to *Roveredo*, a little City famous for its Trade in Silk, and ſo on to *Borguetto*, the laſt Village in the Territority of *Trent*, and to *Oſſenigo*, the firſt belonging to the *Venetians*, a little wooden Croſs being the Mark that ſhews the Boundary of theſe two States. On this Side of the firſt mentioned City, you travel thro' the *Wood of Roveredo*, as they call it, tho' there is ſcarce a Shrub to be ſeen all the Way, the Ground being covered with Rocks, that lie ſcattered up and down, at ſome Diſtance from one another. It is a dangerous Paſſage for Travellers, as well as the Foreſt of *Vergnara*, between *Oſſenigo* and the Fort of *Guardara*, by Reaſon of the Multitude of Robbers that frequent theſe deſart Places. It being too late to reach the Fort *Scluſe*, we were forced to lodge in the little Village of *Seraino*. The Fort is ſeated at the Foot of a high Rock, the Way leading to it being cut out of the craggy Rock, which is a Precipice on the Back-ſide, at the Bottom whereof the *Adige* runs with a ſwift Current.

After we had paſſed the Fort, and had coaſted for ſome Time the Banks of the ſaid River, which here glides along among the Rocks, we came at laſt into a vaſt Plain, which is ſtony and barren in divers Places, tho' in others you ſee it well planted with Olive and white Mulberry-trees for Silk-worms, as well as with Vines, the laſt of which are planted at the Foot of Cherry-trees and young Elms, and join themſelves from Tree to Tree, forming thereby a very agreeable Proſpect. Having paſſed the *Adige* in a Ferry-boat two Leagues from *Seraino*, we diſcovered ſoon after the City of *Verona*, where we arrived the ſame Day.

On that Side where we entered the Gates, we found a great many void Spaces, and the Graſs growing in the Streets, which were ſcarce half-paved; and though the reſt is ſomething better, yet, generally ſpeaking, it is a poor Place, and very indifferently peopled. The Houſes are commonly low and unequal, the Balconies for the moſt part of Wood, and the Streets dirty and generally very narrow; however, its Situation is infinitely pleaſing, and the Air very good. The *Adige* divides it in two Parts, which are joined again by four Stone Bridges. The Caſtle of St. *Peter* being ſeated upon a riſing Ground, affords a moſt admirable Proſpect of the adjacent Country. The Fort of St. *Felix* is behind that of St. *Peter*, and both together command the City; the reſt of the Fortifications are both irregular, and much out of Repair.

The Amphitheatre of *Verona* is all deſtroyed as to the Front or outward Wall, but the Benches have been kept in tolerable Repair: There are forty four of them, the Circumference of the higheſt I found five hundred and thirty Paces, and of the loweſt two hundred and fifty; each Step is a Foot and a half high, and twenty-ſix Inches broad. At each End of the *Arena*, betwixt the Benches, is a Portal of twenty-five Feet high, by which you may enter out of the Street into the *Arena*; and above each of theſe Portals, a Balcony of twenty Feet long and ten broad, ſurrounded with Marble Rails.

In the Cathedral, which is a little dark Building, you ſee the Tomb of Pope *Lucius* III. with this Inſcription only.

Oſſa Lucii III. *Roma pulſus invidia.* i. e.

The Remains of Lucius III. *enviouſly driven from* Rome.

The Church of St. *Zeno* at *Verona* acknowledges *Pepin* the Son of *Charlemagne* for its Founder; it has moſt wretched Carving on the Frontiſpiece. On the Portal I took Notice of two Birds that, I ſuppoſe, were made for Cocks, holding between them a Creature with a long Tail, intended perhaps for a Fox, by which, ſome believe, is repreſented *Pepin* and *Charlemagne*, (two *Frenchmen*) who diſpoſſeſs'd *Didier* King of the *Lombards*. On the ſame Portal is another Hieroglyphick, *viz.* a Man on Horſeback in *baſſo relievo*, over whom the following three Verſes are engraved, in half *Roman* and half *Gothick* Characters:

O Regem ſtultum, petit infernale tributum,
Moxque paratur equus, quem miſit Dæmon iniquus.
Exit aquæ nudus, petit infera non rediturus.

But though we gueſs'd at the *Rebus* of the Cocks and Fox, yet I muſt own I could not meet with any body that could give me an Interpretation of this Devil's Horſe. Near the Church of St. *Mary the Old* you ſee many magnificent Tombs of the *Scaligers*, who were Princes of *Verona* before this City was forc'd to ſubmit to the *Venetians*, and from whom the learned *Julius* and *Joſeph Scaligers* pretended to derive themſelves.

The Cabinet of Count *Maſcardo*, conſiſting of a Gallery and ſix Chambers full of Pictures, Books, Rings, Animals, Plants, Metals, monſtrous or extravagant Productions of Nature, and the moſt exquiſite Pieces of Art, is ſo admirable, and their Number ſo great, that even a Catalogue of them would fill a good Volume; however, I can't forbear to mention ſome of them, not ſpoken of before: It has many Inſtruments and Utenſils uſed in the *Pagan* Sacrifices, and divers Figures of Braſs, which they uſed to hang up in their Temples in Remembrance of ſome ſignal Deliverance; divers Pieces of Workmanſhip out of the Stone *Amianthos*, or the *Aſbeſtos*, ſpun into Thread like Cotton. Here I obſerv'd alſo many of thoſe Parts of Trees uſed among the Ancients before the inventing of Paper; two Trees of black Coral three Feet high each; a Hen's Egg of this Figure (═); a Circumciſion Knife, uſed by the *Jews* to thoſe Children that died before the eighth Day.

We ſaw a very ſingular Funeral at *Verona*, the Body being dreſt all in Black, with a white Linnen Cloak, a fine Periwig upon the Head, and a Hat adorn'd with a Garland of Flowers, was thus laid upon a Quilt, with a Counterpane of flower'd Silk yellow and red, and a Pillow of the ſame Stuff. It was carried thus open by four Men thro' the Streets, the Company following two by two, and ſuch as were never married wearing Garlands, in Imitation of the Ancients, who had their *Corona Pudicitiæ*, or *Garland of Chaſtity*. One Mr. *Montel*, a *French* Merchant living at *Verona*, and ſince in *London*, gave me an Account of a Proceſſion he had often ſeen, which I can't but give you; the Story runs thus.

Jeſus Chriſt having a Compaſſion for the Aſs he made his Entrance upon into *Jeruſalem*, gave her a Key to the Fields, where ſhe was to feed quietly all her Life-time after; but the Aſs, it ſeems, being tired with her own Country Paſture, had a Mind to try thoſe of foreign Countries, and coming to the Sea, the Waves became ſmooth and ſolid, ſo that with little Trouble ſhe viſited the Iſles of *Cyprus*, *Rhodes*, *Candia*, *Maltha* and *Sicily*, and thence coming to the Gulph of *Venice*, ſtaid for ſome Time in the ſame Place where *Venice* was built ſince; but finding the Air not very healthy, and the Marſhy Paſtures not ſweet enough for her Palate, ſhe march'd up the River *Adige* to *Verona*, where ſhe liv'd and ended her Days. This you obſerve is the Legend; now for the Proceſſion.

To preſerve the Memory of this renown'd Aſs, they have put his Relicks into the Belly of an artificial Aſs, which is kept in the Church of *Noſtre Dame* of the Organs, and which is carried two or three Times every Year, by four of the ſtrongeſt Monks of the Convent, in Pontifical Habits, in Proceſſion round the City. This I believe is more than was ever done in *Arcadia*, where they had a ſingular Veneration for this Animal, and may be juſtly ſtiled the *Proceſſion* of *Aſſes*.

I have juſt now made a ſecond Viſit to the Cabin of the Count *Maſcardo*; and the obliging Perſon who received me was pleaſed with my Curioſity, inſtead of looking upon it as a Trouble. He aſſured me that he never thought any Part of his Time ſo agreeably employed, as that which he ſpent in ſhewing his Curioſities to thoſe who love them, and that he was extreamly pleaſed he could entertain me alone without being diſturbed by the Crowd, which for ſeveral Reaſons he ſaid, made him always very uneaſy. We began immediately to take another View of many Rarities and Curioſities, and I found him more communicative than the firſt Time I ſaw him, for he talk'd very much, all he ſaid ſhewing a great deal of Knowledge and Literature. We fell upon Drawers of precious Stones, and he ſhewed me very fine Amethyſts, and quoted ſeveral Authors, who affirm that *Joſeph* preſented one ſet in a Ring to the Virgin, when he eſpouſed her; and when I was looking upon the Sapphires, he cited a Paſſage of St. *Epiphanius*, who believed that GOD wrote the Decalogue upon a Sapphire. The Virtues that are aſcribed to thoſe and other Stones, furniſhed us with Matter for a new Converſation. He has a conſiderable Number of the Stones which he calls *Saette*, *Fulmini*, *Pietre ceraunei*, and Thunderbolts. This is a Matter of Fact, that if true, deſerves to be examin'd, and perhaps I may another Time give you a more poſitive Account relating to this Subject.

But at preſent I muſt make haſte to finiſh my Letter. I took Notice of ſome Mirrors of mix'd Metal that were dug up near *Verona*, and are probably very ancient. The Uſe of Mirrors made of Glaſs, is an Invention that one may reckon amongſt thoſe that are new; but thoſe that have written, without any Manner of Diſtinction, that Mirrors in general were unknown to the Ancients, are fallen into a groſs Miſtake, for both ſacred and profane Books make frequent Mention of them. Among the great Variety of Coins that are to be ſeen in the Cabinet, there are ſome of Leather, but ſo diſfigur'd, that I could not make any certain Judgment of them. I remember the obliging and learned Mr. *Hearne*, one of the Keepers of the famous *Bodleian* Library at *Oxford*, has ſhewn me one which was better preſerved in the Cabinet of the *Schola Academica*, of which Cabinet he has the Care and Management. No Man is ignorant of the Uſe that has been made of this Sort of Money at ſeveral Times, and on different Occaſions.

2. As we travell'd from *Verona* to *Vicenza*, we found the Country very fertile, well cultivated, and generally level: Their Trees they plant here Lozenge wiſe, on which they raiſe their Vines. We dined at the little Village *La Torre*, the Boundary betwixt the *Veroneſe* and *Vincentin* Territories: Their Wines are fulſome and ſweet; their Bread, tho' made of excellent and very white Flower, is as heavy as a Lump of Earth, for want of good Management; and the reſt of our Dinner was only a Diſh of grey Peaſe fry'd in Oil, a Thing ſurprizing enough in ſo plentiful a Country, when we had better Fare among the Mountains.

Vicenza is ſcarce half ſo big as *Verona*, and but ſlenderly fortified with an old Wall. There are four Rivulets meet near it, but none are navigable. Among their Churches, the *Coronata* is finely paved and wainſcotted; and that of the Religious of St. *Catherine* is remarkable for three very fine Altars, as the Cathedral is for divers good Pictures. Their Town-houſe, though much boaſted of by the *Italians*, is but an indifferent Structure, as indeed are many others, which paſs among them for mighty magnificent Buildings, there being nothing more natural to the *Italians*, than to be laviſh in their Titles, whence they give frequently the Name of a *Palace* to thoſe Structures that would ſcarce paſs for a handſome Seat in other Parts; as they often ſtile that a *Chamber of Audience*, which in *England* they call a large *Parlour*. Among other Fabricks, we ſaw a little Country Seat belonging to the Marquiſs of *Capra*, about half a League from the City: It is a ſquare Building, in the Midſt whereof is the Hall, under a ſmall Dome, having at each Angle of the Square two Chambers and a Cloſet: It has ſome good Pictures, and its Situation on an Aſcent makes it very pleaſant.

In our Return we look'd upon the Church of our Lady of *Montberic*; the Prior gravely told us, that this Image of our Lady came out of the Earth, in the ſame Place where ſhe now ſtands, and from whence ſhe is not to be removed; for if you will believe him, ten thouſand Men have been employ'd to carry her to *Vicenza*, but could not perform that Taſk. The Picture by the Hand of *Paul* of *Verona*, in the Dining-Room, repreſenting St. *Gregory* at Dinner with ſome Pilgrims, is a moſt excellent Piece. The Ruins of the old Amphitheatre at *Vicenza* are hid under other Buildings. The Theatre, which is in the Academy of the *Olympicks*, is the Work of the great Architect *Palladio*; as is the Triumphal Arch without the Gates that lead into the Plain call'd the *Field of Mars*, in Imitation of the Ancients.

The Garden of the Count *Valmanara* is a Thing much boaſted of among the *Vincentins*: It is, indeed, true, it has a handſome Canal, curious Diviſions, Knots, and Cloſets, and a moſt delightful Alley of Oranges and Citrons; but, after all, it wants much of being an accompliſh'd Piece, ſuitable to the Inſcription over the Garden Gate, which begins (and is continued) in the following pompous Strain.

> *Stop, dear Traveller, thou who ſearcheſt for rare Things and enchanted Places, for here thou mayſt find Satiſfaction: Enter into this delicious Garden, and take a full Taſte of all Sorts of Pleaſures; the Count* de Valmanara *gives thee Leave*, &c.

The Road betwixt *Vicenza* and *Padua* is much the ſame as betwixt *Verona* and *Vicenza*. We paſſed the *Tezenza* about an Hour after we left *Vicenza*, and the *Brenta* an Hour on this Side of *Padua*, call'd, on Account of its Univerſity, *the Learned*, a large and yet a very poor City, ſeated in the Midſt of a moſt fruitful Country, having many void Places without Houſes, and many Houſes without Inhabitants; which is alſo the Caſe of ſome other neighbouring Places. This City fell into the Hands of the *Venetians* in 1406, and in 1519, they included the Suburbs within the Fortifications, which are now ready to fall. The Streets of this City are lined on both Sides with Portico's or Piazza's, which, tho' they afford a convenient Shelter againſt the Rains and Sun-beams, make them narrow and dark, and give Opportunity to many Murders, Robberies, and other Inſolencies committed by the Scholars, known by the Name of the *Qui-va-li* of *Padua*.

Theſe Scholars had a Cuſtom of going abroad arm'd in the Night-time in whole Troops, and lurking between the Pillars of theſe *Piazza's*, aſſault ſuch as happen to paſs by that Way; for whilſt one aſks the Queſtion, *Qui-va-li?* Another immediately cries *Qui-va-la?* And ſo, without giving Time to the Paſſenger to recollect himſelf, knock him down, and ſometimes break an Arm or a Leg, or perhaps give him a Paſſport to the other World. Some underſtanding Perſons in theſe Parts are of Opinion, that *Padua* was formerly a Sea-port, by reaſon of its ancient Grandeur and Riches, and that now they ſometimes dig Maſts and Anchors out of the Ground; but theſe may perhaps be the Remnants of Ships left in a Canal leading to that City.

The *Paduans* boaſt of *Antenor* as their firſt Founder; but not to inſiſt upon the Improbability of this Aſſertion, or enquire whether *Padua* be the *Patavium* of *Antenor*, I will only tell you, that their pretended Tomb of *Antenor* is a mere Impoſition upon the World; for, about four hundred Years ago, as they were laying the Foundation of an Hoſpital, they happened to dig up a Leaden Coffin, near which lay a Sword; the Coffin was without any Inſcription, but the Sword had ſome Verſes in *barbarous Latin*, having but very little Relation to what was uſed in *Antenor*'s Days: Notwithſtanding which, the *Paduans* in general, but eſpecially one *Lupatus*, a Man of ſome Learning, and who was one of their Magiſtrates, were ſo much prepoſſeſs'd with the Conceit of their pretended Founder, that they would needs erect this Monument at the Entrance of St. *Lawrence*'s Street, and beſtow the Title of *Antenor*'s *Tomb* upon it, with the following Inſcription in *Gothick* Characters:

C. *Inclytus, Antenor. patriam vox niſa quietem,*
Tranſtulit huc Enetum Dardanidumque fugas
Expulit Euganeos, Patavinam condidit Urbem
Quem tenet hic humili, marmore ceſa domus.

Several Criticiſms have been made upon this Inſcription, but among all the reſt, no body has been able to find out yet the Intention of the C. at the Beginning of theſe Verſes. The Tomb of *Lupatus* ſtands juſt by that of his dear *Antenor*, to whom he gave a Name, tho' not a Being.

The Church of St. *Anthony* of *Liſbon*, otherwiſe call'd St. *Anthony* of *Padua*, is both very large and exceeding magnificent in Carving and Painting, and many very ſumptuous Tombs; among the laſt are that of *Alexender Contarini* the *Venetian* Admiral, and of Count *Horatio Sicco*, kill'd at the laſt Siege of *Vienna*. The Picture in *Freſco* in the Chapel of St. *Felix*, done by the famous *Giotto*, is a moſt admirable Piece: But the moſt conſiderable Piece of all in this City, is, the Chapel of St. *Anthony*, which is forty Feet long, and twenty-five broad; his Body lies entomb'd under the Altar, which is very magnificent and rich: They pretend that his Bones ſend forth an odoriferous Scent, for which Reaſon there is kept a Place behind the Altar, which being not well joined, it is no difficult Matter to put ſome Balſam into the Opening. The Chapel is cover'd all over with a *Baſſo relievo* Work of white Marble, repreſenting the Miracles wrought by this Saint, the Works of *Tullius Lombardus* and *Sanſovin*. Before the Altar hang thirty-ſix great Silver Lamps, which burn Night and Day, to the Honour of this Saint.

The Church of St. *Juſtina* is both very large and very magnificent, tho' not brought yet to its full Perfection; the Pavement is compoſed of red, black, and white Marble Squares; and the Roof of the great Church hath ſeven Domes, which afford it both Light and Ornament, and two more on each Arm of the Croſs: In it there are twenty-four fine Marble Altars, all of a different Colour, beſides the *great Altar*, which is a moſt magnificent Work: They ſuffer no Monuments to be erected in this Church. The *Baſſo relievo* of the Benches of the Choir, repreſenting the Prophecies of the *Old Teſtament* concerning Chriſt, with their Accompliſhment in the *New*, is almoſt ſurprizing: It was not finiſhed in leſs Time than twenty-two Years. The Hiſtory of the Martyrdom of St. *Juſtina* over the *great Altar*, is of the excellent Hand of *Paul* of *Verona*. The Monaſtery is a vaſt Pile of Building, having no leſs than ſix Cloyſters, and as many Courts and Gardens: I will not trouble you with the Story of the Image of the Virgin, which flew from *Conſtantinople* when the *Turks* became Maſters of that City, no more than with an Account of the other Saints that are kept in this Church. The great Place near it, 256 Feet long, and 86 broad, was formerly called the *Field of Mars*, but has ſince changed its Name into that of *Prato della Valle*, or the *Meadow of the Valley*. The Hall of the Town-houſe is a hundred and ten Paces long, and forty broad, but dark: It contains many Monuments of illuſtrious Perſons. The *Paduans* have had no leſs Succeſs in finding the Tomb of their Countryman *T. Livius*, than in that of *Antenor*, for in 1413, a Shrine of Lead having been found in the Gardens of St. *Juſtina*, they did not in the leaſt queſtion but that this Coffin muſt be that of *Titus Livius*, conſidering this noted Hiſtorian was the *Prieſt of Concord*, and that this Monaſtery of the *Benedictines* of St. *Juſtina* was built upon the Ruins of the ancient *Temple of Concord*.

To be ſhort, this pretended Coffin of *Livius* being changed for one of Wood, was carried with a great deal of Pomp to the Palace of Juſtice, where they erected the ſame Monument that is ſeen to this Day, and afterwards added the following Inſcription, which was found in the Neighbourhood of the Place where the *Temple of Concord* formerly ſtood:

V. F. (*)
Titus Livius
Liviæ T. F.
Quartæ L.
Halys
Concordialis
Patavi
Sibi & ſuis
Omnibus.

(*) *Vivens Fecit.*

Over this Inſcription they have placed a Head of Marble, which paſſes for that of *Titus Livius*; but tho' both the Head and the Inſcription are ancient, yet *Orſato* has, in his late Diſſertation, ſufficiently proved, that the *Titus Livius*, mentioned in this Inſcription, was no more than a freed Man of one of the Daughters of *Titus Livius* the Hiſtorian. But ſatisfying the Learned and the People are two Things.

To leave the Fables and Incertainties of Antiquity, I ſhall give you an Account of another Monument which we ſaw in the ſame Hall, and which is worthy of Obſervation. Some have exalted *Suſannah* above *Lucretia*; but it may be juſtly ſaid, that the Marchioneſs *d'Obizzi* ſurpaſſed *Suſannah* and *Lucretia* both. Since when ſhe ſaw Death preſent before her, ſhe reſolved to ſuffer it courageouſly, rather than to permit her Chaſtity to be violated. A Gentleman of *Padua* was paſſionately in Love with this young and beautiful Lady, and found an Opportunity to get into her Chamber when ſhe was in Bed, in the Abſence of the Marquis *d'Obizzi* her Huſband. It is probable that he tried the ſofteſt and moſt gentle Ways before he proceeded to Acts of Violence: But at laſt, when he ſaw he could not prevail, his Love turned to Fury, and he was ſo tranſported with Rage, that he ſtabb'd this virtuous Lady. Here is the Inſcription.

Venerare, Hoſpes, Pudicitiæ Simulacrum & Victimam,
Cui hanc Aram Patavini erexere Proceres:
LUCRETIAM, *ſcilicet*, DE DONDIS AB HOROLOGIO,
Quæ Latinam Lucretiam Intemerati Thori
Gloria vicit.
Hæc, inter Noctis Tenebras Maritales aſſeruit Tedas,
Et furiales recentis Tarquinii faces,
Caſto Cruore extinxit.
Per Januas Saucii oris juguli Pectoriſque
Impiâ Novacula reſoratas,
Candidam efflavit Animam.
Tam fortis Heroinæ
Quam Numen Pio ANEÆ *ex* OBIZZONIBUS,
Orciani Dynaſtæ Connubio junxit,
Gloroſis Manibus,
Patria Lacrymis, Italia Atramento
Parentavit.
Anno M.DC.LXXII.

You will, doubtleſs, commend the *Paduans* for taking Care to eternize the Memory of ſo rare a Virtue, that met with ſuch a barbarous Treatment: And perhaps your Curioſity will prompt you to deſire the Continuation of the Story. When the Marchioneſs was ſurprized in her Bed, her only Son, about five Years old, was with her; but the Murderer having carried him into a neighbouring Chamber before he perform'd his horrid Villainy, the Child could not ſee all that paſſed. The Thing being brought to Light, the ſaid Murderer was taken into Cuſtody upon Suſpicion. It was known that he had an Inclination to the Marchioneſs. The Child gave ſome Information: Some Neighbours affirm'd, they had ſeen the Gentleman in that Part of the City. They found a Button of his Sleeve upon the Bed, Fellow to that which he ſtill wore; and theſe Things were ſtrong Preſumptions of his Guilt. They then put him to the Torture, both ordinarily and extraordinarily; but he ſtill denied the Fact, and after fifteen Years Impriſonment, his Friends, by their Importunity, ſaved his Life, and even, as I ſuppoſe, obtained his Liberty, which yet he enjoyed not long; for ſome Months after his Deliverance, the young Marquiſs, which was the Child I ſpoke of, ſhot him with a Piſtol in the Head, and ſo revenged the Death of his Mother. He is at preſent (1687) in *Germany* in the Emperor's Service.

The Amphitheatre of *Padua* exceeded that of *Verona*; however, nothing is to be ſeen of it now, but an Heap of Ruins. I muſt tell you, to ſhew how different People's Notions are, that going into a Tennis-court here, I found the Walls white, the Balls black, and the Rackets of the Bigneſs of a large Sieve.

3. We left *Padua* the 20th of *December*, and came to *Venice* the ſame Night in good Time. By the Way we ſaw many good Villages and fine Country-houſes belonging to *Noble Venetians*. Coming to *Meſtre*, a little City on the Shore of the Gulph, five Miles from *Venice*, we took a *Gondola*, which carried us in an Hour and a half thither.

To give a true Idea of *Venice*, I muſt ſay ſomething of the Waters, in the Midſt whereof it is built. It is certain, that the Grounds upon which *Venice* now ſtands were, thirteen or fourteen hundred Years ago, drowned by the Sea, till afterwards they were raiſed out of the Water, and Channels made betwixt them, for the more convenient Approach of Veſſels to the City, ſome of them being capable of admitting Ships of the greateſt Burthen; whereas ſome cannot carry Veſſels of above two hundred Tons. To empty the Mud out of theſe Channels, they have Mills and other Engines, and have turn'd the Mouth of the *Brent* and other Rivers, to prevent their forcing the Sands into the Lagunes or Channels, for Fear the Earth ſhould gain upon them, who put their greateſt Safety and Strength in their watery Situation: But as they are obliged on one Side to keep the Depth of their Waters, ſo on the other Hand, it is not for their Intereſt that theſe Channels ſhould be of an equal Depth in all Places, this being one of their main Securities, which has ſtood them in good Stead at ſeveral Times, witneſs the Miſcarriage of *Pepin*'s Veſſels in theſe Channels, and of the *Genoeſe* Fleet about three hundred Years ago.

Imagine then, a City with thirty or forty tall Steeples to riſe from among theſe Channels, at a League and a half Diſtance from the Continent, without any other Defence than the Waves of the Sea, and you will have a tolerable Idea of *Venice*.

I know that all Geographers agree, that *Venice* is compoſed of ſeventy-two Iſles; nor will I controvert ſo received an Opinion: But I muſt confeſs, that I can by no Means conceive where theſe ſeventy-two Iſles ſhould be; and I dare aſſure you, that this Account gives a falſe Notion of the Situation of this City. It ſhould ſeem by this Deſcription, that there were ſeventy-two little Hills, one near the other; and that theſe little Eminencies being all inhabited, had at laſt formed the City of *Venice*; which is not true. *Venice* is generally flat, built on Piles in the Water, which waſhes the Foundations of the Houſes, to the Height of four or five Feet. It is true, they have made the beſt Uſe of ſeveral Spaces of Ground of a reaſonable Bigneſs, which may, indeed, give Occaſion for one to believe, there was formerly ſome Land there; but not ſeventy-two Iſles, or any Thing like them. For the Streets, they are very narrow, and the moſt Part of them ſeem to have been filled up, and raiſed with Mud and Rubbiſh, eſpecially along the Canals; but it is not at all probable, that they have a ſolid natural Ground at the Bottom. If all the Diviſions which the Canals make, were reckoned for Iſles, we ſhould find near two hundred inſtead of ſeventy two. It muſt be farther obſerved, that the Number of theſe Iſles might be arbitrarily increaſed, and new ones made in any Place, by fixing Piles, and building Houſes upon them, as Bridges are built by Means of *Baſterdeaux*, in the deepeſt and moſt rapid Rivers; nay, even in the Sea alſo, as at *Pozzuolo* and *Dunkirk*, beſides ſeveral Moles. So that taking the Thing after this Manner, they could make ſuch artificial Iſlands wherever they pleaſed.

We are not to give Credit to what is commonly ſaid of the Extent of *Venice*; ſome reckon it eight Miles in Circuit, and others allow but ſeven; as for me, I aſſure you, *Venice* is not either eight or ſeven Miles in Compaſs; they reckon five Miles from *Meſtre* to *Venice*, which Way we came in an Hour and an Half with two Rowers, and we took a Turn about *Venice* in the ſame Space of Time with two other Rowers, who made neither more nor leſs Haſte than thoſe of *Meſtre*. Judge then by this of the Circuit of that City; conſider too, that our Gondola was frequently obliged to deſcribe a larger Compaſs, to avoid the little Capes which the City makes in ſeveral Places; and by Conſequence the Line that it made, was much greater than the true Circuit of the City. Add to all this, that to mark the Circumference of a City, without conſidering its Figure, is not a competent Way to determine the Largeneſs of its Extent. One might eaſily demonſtrate, without great Help of Mathematicks, that a City which is eight Miles in Compaſs, for Example, may contain a leſs Number of Houſes, than a City which is only four Miles or leſs, if you pleaſe. This depends upon the Regularity or Irregularity of the Figure.

The Number of Inhabitants is another Thing which has often been determined, but ſeldom well examined. It is commonly reported at *Venice*, that there are two hundred thouſand Souls in the City, and ſome have advanced the Number to three hundred thouſand; but we muſt not rely upon thoſe frivolous Opinions: When the Trade of *Venice* flouriſhed, it is probable enough that the Number of its Inhabitants was much greater than it is at preſent; but if we may give Credit to the Report of a Perſon who hath been ſettled here for a long Time, and aſſures me that his Calculation is very exact, *Venice* does not at preſent contain more than an hundred and thirty or forty thouſand Souls, comprehending the Iſle of *Giudeca*. Thoſe who pleaſe themſelves with repreſenting *Venice* as a very populous City, take great Care to put us in Mind, that it has neither Gardens, void Places, or Church-yards, and that the Streets are very narrow. But when, on the other Hand, they would deſcribe the Beauty of *Venice*, they magnify its Gardens, its Places or Squares, and the Breadth and Number of its Canals. I read the other Day, in a *Venetian* Author, that he counted in *Venice* fifty-three publick Places, and three hundred and thirty-five Gardens. Thus you may ſee how variouſly Things are repreſented. But to ſpeak freely, there is a Mixture of Truth and Falſhood on both Sides. I will not deny that there may be fifty-three Spaces, great and ſmall, to which this Author hath thought fit to give the Name of Places; and the ſame might be ſaid of his Gardens; but if we take a particular View of thoſe Places and Gardens, we muſt conclude him to be too prodigal of ſuch honourable Titles. To ſpeak properly, there is but one Place at *Venice*, the famous and magnificent Palace of St. *Mark*. But let us allow him the Liberty of that Name to five or ſix void Spaces more, which are neither large nor beautiful; yet all this comes far ſhort of fifty-three Places. There are alſo ſome Gardens here, and particularly towards *Santa Maria del' Orto*, but if we ſet aſide fifteen or twenty, or ſhould even allow thirty or thirty-five to be ſo called, I can poſitively aver, that the three hundred which remain would not, one with another, be ten Feet ſquare; and are not theſe very noble Gardens? Nor is the other Account exactly true, for beſides the Gardens and void Spaces that are in *Venice*, there are many Places very thinly inhabited. It is true, indeed, there are no Church-yards.

As for the Argument that is brought from the Narrowneſs of the Streets, it is a Sophiſm eaſy to be cleared. The Streets are narrow, I confeſs, and ſo narrow, that the Joſtling of Elbows, in the moſt frequented of them, is very troubleſome; but then, ſure, the Canals ought to be reckoned inſtead of Streets? If the Canals were filled and paved, the Narrowneſs of the Streets could not be alledged. I muſt tell you, ſince we are on this Subject, that all the City is ſo divided with theſe Canals and Streets, that there are but few Houſes which you may not go to by Water as well as by Land, though every Canal is not bordered with a double Quay, as in *Holland*; for the Conveniency of thoſe who go on Foot, there are indeed ſome of thoſe, but very often the Canal takes all the Space from one Row of Buildings to another. The Streets are in the little Iſles that are borrowed from the Canals, and there are about four hundred and fifty Bridges diſperſed among thoſe Canals; ſo that there are few Parts of the City to which one may not go either with or without a Gondola. It is true, all theſe little Paſſages, and all the Turns that muſt be made to find the Bridges, make *Venice* a true Labyrinth; but the beſt Way of giving you a true Idea of the Plan of *Venice*, is to ſend you a Draught of it, which is the moſt exact of all thoſe that have been ſeen by me:

The firſt Place we viſited was the Palace of St. *Mark*, the Glory of *Venice*; the Church of St. *Mark* fronts one End of it, and that of St. *Geminian* the other; and betwixt both theſe Churches, the *Procuraties*, or Inns of Court and Officers of Lawyers; built very regularly of fine Marble, border both Sides of it with lofty Piazzas. This Place is two hundred and eighty Feet long, and one hundred and ten broad. As you are going from the Church of St. *Geminian* towards that of St. *Mark*, and inſtead of entering there, to the right Hand you come into another Square two hundred and fifty Paces long, and eighty broad, called the *Broglio*, the Extremity of which reaches to the Sea-ſide. The *Doge*'s Palace takes up one Side of it, and the *Procuraties* are continued on the other.

The Tower of St. *Mark* being near the Angle of the Square within, does in ſome Meaſure ſpoil the Symmetry of the Place; its Height is three hundred and ſixty Feet, including the Angel that ſerves for a Weathercock; formerly it was finely gilt, and could be diſcerned thirty Leagues at Sea, but the Gold being now worn off, it appears at no great Diſtance. The *Broglio* is the Place where the Nobles walk, who ſometimes take one, ſometimes the other Side, according to the Conveniency of the Sun or Shade, and no body elſe is admitted to mix with them on that Side of the Walk, but the other is free for every body; they are ſo nice in this Point, that when a young Nobleman comes to an Age that qualifies him for the Council, and to take the Robe, four Noblemen of his Friends introduce him the firſt Day into the *Broglio*; and if any Nobleman is excluded from the Council, he is no longer admitted into the *Broglio*.

About the ninth Age, the Merchants of *Venice* tranſported the Body of St. *Mark* from *Alexandria* in *Egypt* to *Venice*; and as Chriſt is ſaid to have ſaluted this Evangeliſt in Priſon with theſe Words, *Peace be unto thee*, Mark, *my Evangeliſt*; ſo the Body of this Saint was received with the ſame Words by the Senate of *Venice*; who ordered the ſame to be written in the open Book held by the Lion of St. *Mark* in the Arms of *Venice*, and the Church of St. *Mark* to be built to his Honour, though at the ſame Time they were ſo careleſs in obſerving his Shrine or Tomb, that now they can't preciſely tell where it is. I will not detain you with the Story of his Apparition, when he ſhewed his Arm to the *Doge*, and beſtowed upon him the Golden Ring, which is carried with great Solemnity in Proceſſion every Year on the 28th of *June*, becauſe it is fabulous.

The Patriachal Church, dedicated to St. *Peter* and St. *Mark*, is no more than the *Doge*'s Chapel, and the *Primicerio* or Dean of the Canons of St. *Mark* wears a Mitre and Rochet like a Biſhop, and has no Dependance on the Patriarch; I ſaw him officiate in great Pomp on *Chriſtmas-Day*; he muſt be always a noble *Venetian*, and his annual Revenue may be about a thouſand Pounds Sterling.

The Church of St. *Mark* is a ſquare Structure after the *Greek* Way, being a Croſs ſhortened, but not very lofty, and ſomewhat dark; its chief Ornaments conſiſt in excellent *Moſaick* Work and Marble; the Roof has ſeveral Domes, among which, that in the Middle exceeds the reſt: It has a vaſt Number of Statues on the Outſide, among which, the *Adam* and *Eve*, by *Ricedo*, are chiefly remarkable: I don't ſpeak, in this Place, of the four Brazen Horſes over the Porch, as being foreign Pieces brought thither by Accident. A certain learned Antiquary told me, that theſe Horſes belonged formerly to the Chariot of the Sun, which was made as a ſingular Ornament to a triumphal Arch erected by the *Roman* Senate to the Honour of *Nero*, after his Victory over the *Parthians*; *Conſtantine the Great* carried them from *Rome* to *Conſtantinople*, where they ſtood in the *Hippodrome* till the *Venetians* brought them from thence: One may ſtill ſee they were gilt when firſt erected. But the greateſt Curioſity belonging to the Church of St. *Mark* is the vaſt Quantity of *Moſaick* Work wherewith both the Roof and Pavement is covered. To give you ſome Idea of this Work; it deduces its Origin from *Greece*, though they tell you that its Uſe has been in *Italy* near two thouſand Years; for *Vitruvius* (who lived under *Auguſtus*) calls it *Opus ſectile*, *Pavimenta ſectilia*, *Opera muſæa* and *muſiva*; by others it is called *Opus vaniculatum* or *teſſalaum*. All Works therefore compoſed of ſmall inlaid Pieces, whether of Stone, Wood, Ivory, or any other Matter, let their Repreſentations be what they will, come within the Compaſs of what is called *Moſaick* Work: The moſt curious Works made out of *Florence* Stone, come alſo under this Denomination; but inſtead of natural Stones, which would take up too much Time to be poliſhed and prepared, they have made Uſe here of a certain Compoſition of Glaſs and Enamel, melted together in a Crucible, which takes a moſt lively and bright Colour, that never fades nor ſtains. Every Piece of the *Moſaick* of St. *Mark* is a little Cube; the Field is *Moſaick* finely gilt, and incorporated in the Fire, upon the Superficies of one of the Faces of the Square, all the Figures (with their Draperies and Ornaments) being coloured according to Nature, by the artificial joining together of all the Pieces of the Work, according to the Deſign which the Workman has before him, being nicely fixed in the compound Matter or Plaiſter prepared to receive them, which immediately after becomes ſo hard and ſolid, that this Work has laſted near eight hundred and fifty Years without loſing any Thing of its Beauty.

The Pavement of the Church is not inferior to the Roof, being compoſed of Jaſper, Porphyry, ſpotted-green, Marble of ſeveral Colours, which make Compartments different from each other. Among all the Relicks, miraculous Images, and other holy Rarities kept here, I will mention only the Rock which *Moſes* ſtruck in the Wilderneſs, in the Chapel of *Madona della Scarpa*, at the End of the Font, of a greyiſh Marble; the three Holes out of which the Water iſſued, are placed triangularwiſe, about two Inches aſunder; but as each of them is no bigger than a Gooſe Quill, how theſe could furniſh Water ſufficient, in ſo ſmall a Time, to quench the Thirſt of ſix hundred thouſand Men, with their Wives, Children and Cattle, is what I am not able to determine. In the Middle of the Portico of the Church, over-againſt the Door, they ſhew a Piece of Porphyry enchaſed in the Pavement where Pope *Alexander* III. ſet his Foot on the Neck of the Emperor *Frederick Barbaroſſa*.

From the Church of St. *Mark* we were conducted to the Treaſury, of which three Procurators of St. *Mark* are always Guardians, and which is never opened but in the Preſence of one of them. In the firſt Apartment they ſhew you ſome Relicks, ſeveral Pieces of the true Croſs, the Hair and Milk of the Virgin. Thence you go into another Room, where the real Treaſure is kept, moſt of which was brought from *Conſtantinople* with the before-mentioned brazen Horſes. The moſt conſiderable Pieces here are the two Crowns of the Kingdoms of *Cyprus* and *Candia*, Abundance of precious Veſſels of Agate, the Root of an Emerald and of Rock Cryſtal; all theſe, they tell you, belonged to *Conſtantine*'s Cupboard: A Seal eight Inches deep, and as many in Diameter, made of one ſingle Granate; a Sapphire weighing ten Ounces; twelve Croſlets of Gold, adorned with Pearls; as many Head-tires in Form of a Crown, worn upon certain Feſtivals by the Maids of Honour to the Empreſs *Helen*; a Cup made out of a ſingle *Turquoiſe*, with *Egyptian* Characters; it is ſeven Inches Diameter, and three and a half deep; a Picture of St. *Jerome* in curious *Moſaick*; and many other rich Things of this Nature: But the Duke's *Corno* is, in my Opinion, the fineſt Piece of all, (which *Camerarius* values at no more than two hundred thouſand Crowns) the Circle is of Gold, the Bonnet of Crimſon Velvet, enriched all over with precious Stones and Pearls of a large Size: *Charles Paſchal* is of Opinion, that this *Corno* is the *Phrygian* Bonnet or *Trojan* Mitre brought into *Italy* by *Antenor*, the Figure whereof is expreſſed in ſeveral ancient Pieces, as in the Statue of *Ganymede*, which is to be ſeen in the Porch of the Library of St. *Mark*, upon ſome Medals of the God *Lunus*; in ſome others where *Æneas* carries *Anchiſes* upon his Back, and in the Miniatures of the ancient Manuſcript of *Virgil* in the *Vatican*.

This Manuſcript puts me in Mind of another, *viz.* the ſo much celebrated *Goſpel of St. Mark*, kept in this Treaſury, which I had Leave, by a ſpecial Favour, to conſider all over; its Leaves are of Parchment looſened from each other, very much worn and torn, defaced, and ſo rotted, that wherever you touch it ſomething will ſtick to your Fingers; it is very hard to diſcern any thing diſtinctly of it; it was in Quarto, of the Thickneſs of two Fingers, and the Remnants of this precious Treaſure are kept ſhut up in a Box of Vermillion gilt, made in the Shape of a Book. Here and there you may ſtill diſcern the Traces of ſome imperfect Characters upon the moiſt Parchment, but ſo as ſcarce to be diſtinctly ſeen what they were; by a nice Inſpection I diſcovered three or four Letters well formed, and met with the Word KATA diſtinctly written as you ſee it here. The Abbot *Lith*, Library-keeper of St. *Mark*, aſſiſted me in turning over, with a great deal of Exactneſs, all the Leaves, but could diſcover nothing material, except that it had a very broad Margin, and the Lines were placed at a great Diſtance from one another, ruled with two parallel Lines, to make the Writing equal and ſtreight. The before-mentioned Word KATA, with one Δ and one Σ, which we alſo plainly diſcerned, prove that it is a *Greek* Manuſcript; *Alphonſus* ſays 'tis *Latin*, and *Baronius* confirms it; but that it ſhould be of St. *Mark*'s own Hand-writing, I can't find ſufficient Reaſon to believe, being rather of Opinion, that (the Manner of Writing conſidered) it is the Work of ſome profeſſed Tranſcriber; and as for the reſt, we muſt rely upon Tradition and common Fame, that it is the Goſpel of St. *Mark*; it being ſo much defaced by the Injuries of Time, that few Letters can be decypher'd in it, and conſequently it is a difficult Taſk to prove or diſprove whether it really be, or not, what they pretend it is.

In the Year 1427, one *Stamati*, a *Candiot* by Birth, robbed this Treaſury, and broke the Wall, but was taken, and every Thing recovered, and he ſentenced to be hanged, which was executed accordingly betwixt the Marble Pillars which ſtand at the Entrance of the Palace over-againſt the *Lagietta*: They ſay, he begged of the Judges that he might be hanged in a golden Halter, which was granted. Next adjoining to the Church of St. *Mark* is the Palace of St. *Mark*, a great Maſs of Building after the *Gothick* Manner, but nevertheleſs very magnificent: It has been very often defaced by Fire, ſo that the Reparations made at divers Times, have made it not ſo uniform as it would be otherwiſe. That Part which faces the Canal, is built of a very hard Kind of Stone brought from *Iſtria*, and excellently well deſigned; were all the reſt like this, it might paſs for an equiſite Piece of Architecture; as it is, it is very venerable. It is in this Place that the Duke keeps his conſtant Reſidence; and here it is that the Council of State and the other Aſſemblies meet. The Apartments are ſpacious and lofty enough, and well wainſcotted, but want Light in reſpect to our modern Way of Building.

The Hall appointed for the Meeting of the Great Council (where, in Effect, the Sovereignty is lodged) is of a large Size, and adorned with curious Paintings here you ſee the Pictures of all their Dukes, the Hiſtory of the taking of *Conſtantinople* in 1192, but was loſt again within ſixty Years after; among the reſt they ſhew you the Hiſtory of Pope *Alexander* and *Frederick Barbaroſſa*, with the Pope's Foot on the Emperor's Neck, or rather his Shoulder, as it is expreſſed here. If you remember the Story of the Rebellion of *Bajamonta* againſt the Senate, in 1210, I muſt tell you, that this was the Occaſion of the little Arſenal kept in this Palace, from whence there is a Paſſage to the Hall of the *Great Council* where the Nobility aſſemble, that in Caſe ſuch another Deſign ſhould break out whilſt they are aſſembled in Council, they might readily be ſupplied with Arms from thence for their Defence. It was upon the ſame Score that they built the little Judgment-Seat called the *Loggietta*, at the Foot of St. *Mark*'s Tower, in Sight of the Palace and the *Grand Council* Chamber: Here are always ſome Procurators of St. *Mark* upon the Watch whilſt the *Great Council* meet, and deliberate of Matters of State, for the Security of the Republick.

This Arſenal is provided with a good Number of Fuſils and Muſquets ready charged, beſides many other Arms. Here they have an Engine that will light five hundred Matches at once: They preſerve here alſo ſome very curious Arms of an ancient Make, and among the reſt, the Sword of the ſamous *Scanderbeg*. Here alſo they ſhew you the Buſt of *Francis Carrara*, the laſt Lord of *Padua*, who for his Cruelties was ſtrangled, with four of his Children, by the Command of the Senate of *Venice*, in 1405. I obſerved likewiſe a little Trunk with ſix little Guns, which the ſame *Carrara* ſent for a Preſent to a Lady, and was ſo contrived by certain Springs, that upon opening of the Trunk the Guns all fired at once, and killed the Lady. They alſo ſhewed us ſome little Pocket Croſs-bows and Arrows of Steel of this Tyrant, with which his Cuſtom was to kill ſuch as paſſed by, without knowing from whence they received their Wounds; and various whimſical Sorts of Locks and Bolts he uſed, to keep his Concubines confin'd. Here I alſo ſaw the two little Statues of *Adam* and *Eve*, which *Albert Durer* made in Priſon with the Point of his Penknife only, and which purchaſed him his Liberty. We muſt not forget the antick Mouths under the inner Portico of this Palace, and in divers Places of the Galleries, into the Throat of which any body may caſt a Note, to give Advice or Notice of any Thing he is able to the Inquiſitors, who have the Keys of theſe Boxes, and ſometimes reward thoſe who make what they call the *Secret Accuſation*, who, to diſcover themſelves, tear a Piece off the Billet, and by joining it again are known.

The Library is kept in the *Procuraties* oppoſite to the Palace, on the other Side of the *Broglio*; it is none of the moſt numerous, rare, and beſt conditioned, and has but few Manuſcripts, which are, for the moſt Part, *Greek*; though they alſo ſhew you a Treatiſe, entituled, *De Conſideratione Dei*, attributed to St. *Auſtin*; but to make Amends, it has many excellent Pictures, done by *Titian* and other great Maſters, and ſeveral exquiſite *Greeks* Statues, as that of *Ganymede*, a *Venus*, an *Apollo*, and two Gladiators. It is the Opinion of ſome, that *Venice* has as many rare Pictures as *Rome*; I will not pretend to determine that Matter, but only tell you, that the three moſt celebrated Pieces we could ſee, either in the Churches or in any other publick Place, are the Wedding of *Cana* by *Paul Veroneſe*, in the Refectory of St. *George Major*; the Preſentation of the Virgin in the School of Charity; and St. *Peter Martyr*, in St. *John* and St. *Paul's*, both by *Titian*. *Venice* is the propereſt Place in *Europe* for young Painters to improve themſelves, for in both the Academies they have the Opportunity of viewing naked Perſons of both Sexes, in what Poſture they pleaſe.

In Anſwer to your Queſtion concerning the Flux and Reflux, I can only tell you, that the Sea flows ſix Hours, and ebbs as many; it is later every Day about three Quarters of an Hour, as it is generally upon the Coaſts. The Tide commonly riſes at *Venice* four Feet, or four and a half, ſometimes more, ſometimes leſs. The Shore beyond *Venice* is extremely pleaſant, the long and narrow Iſles encloſing this City from North to South, in the Form of a Semicircle. The main Sea affords ſome Shell-fiſh, and abundance of Oyſters, but they are neither ſo ſavoury nor ſo wholeſome as ours.

The *Venetians* boaſt much of their *Policy* and *Liberty*; for the Proof of the firſt they generally alledge, that they have maintained themſelves for thirteen hundred Years. This Reaſon might perhaps ſtand, if they could boaſt to have maintained the ſame Form of Government; whereas it is beyond all Contradiction, that the Government of *Venice* has often changed its Conſtitution, ſince their Dukes were heretoſore as abſolute as *Cæſar* was at *Rome* not long before his Death. Another Conſideration is, that the Republick of *Venice* being confined to ſuch narrow Bounds, in Compariſon of the more powerful States of *Europe*, and ſurrounded by Neighbours leſs potent than itſelf, it ſeems not to require ſuch profound Maxims of Policy to maintain itſelf, by living quietly and peaceably with the reſt; and notwithſtanding all this, the Senate of *Venice* have, with all their Policy, not been able to prevent the Declenſion of their State at divers Times. As for their Liberty, of which they ſo loudly talk, it amounts chiefly to this; that provided they do not intermeddle with State Affairs, and commit no enormous Crime, that muſt of Neceſſity, or by its Notoriety, fall under the Cenſure of Juſtice, every body is at Liberty to live as he pleaſes: Hence it is that the *Greeks*, *Armenians*, and *Jews*, are allowed the publick Exerciſe of their Religions; and all the other Sects are tolerated, or at leaſt connived at, provided they manage with a little Diſcretion: It is true, the worſhipping of Images and Relicks, and ſuch-like Superſtitions, abound as much among the common People of *Venice*, as in other Places, but the better Sort ſet no great Value upon them. They are now as jealous of the Liberty of the *Venetian* Church, as the *French* were of the *Gallican*; and it is for this Reaſon they keep the Jeſuits ſo much in Awe; they allow none in their Convents but their own Subjects, and will not admit any Superior, except a Native of the City. They do not heſitate to permit theſe Fathers to wear Maſks during the Carnival, to entertain their Concubines, to ſing on the Stages, and what elſe they think fit, provided only they keep their Fingers out of publick Affairs.

Concerning the Faith of the *Greeks* here, I cannot but be of Opinion, that they differ in many Points from the *Greek* Churches of the *Eaſt*, though they exclaim heavily againſt the Uſurpation of the Church of *Rome*; they declare for Tranſubſtantiation; they make uſe of common Bread, mingle Water with Wine, and communicate under both Kinds. In their Churches they have two Altars, one called the *Altar of Preparation*, and the other of *Conſecration*; the firſt they make uſe of to cut the Bread with a Knife ſhaped like the Iron Point of a Lance, where they alſo mix the Water and Wine, and the Prieſt takes it with a Sponge out of the Veſſel in which it was firſt mixed, and afterwards ſqueezes it into the Chalice. They embrace one another before they have communicated, and the Communicants receive the Bread ſteeped in the Wine, the Prieſt putting it with a Spoon into their Mouths: Of all this I was an Eye-witneſs. The Archbiſhop officiated in a Mitre not unlike an Imperial Crown, and all his Ornaments were exceeding magnificent, and were changed ſeveral Times, according to the different Parts of the Service. They abound in myſterious Ceremonies; whenever the Biſhop bleſſes the People, he has in his Right-hand a three-branched Candleſtick, with as many lighted Tapers; this, they ſay, is an Emblem of the Trinity, as the Candleſtick with two Branches he holds in his Left, is of the two Natures of *Jeſus Chriſt*. They divide their Churches into four ſeveral Parts; the Altars ſtand at one End, which they call *holy*, none but the Prieſt who officiates, and his Attendants, are admitted there; the next to that is appointed for the other Service; the third is where the Men are ſeparated from the Women by little Balluſters; the Women ſitting behind Lattices at the other End of the Church, or in the Galleries. They perform their Divine Service in the vulgar *Greek*, and highly condemn the Uſe of an unknown Language in the Church. They worſhip ſtanding, bow their Heads, and put their Hands at the ſame Time on their Breaſts. Marriage is among them no Bar to Prieſthood, but if they are ſingle at the Time of their being admitted into Orders, they muſt not marry afterwards, and they forbid the fourth Marriage for Decency ſake, deny the Popiſh Purgatory, and yet pray for the Dead. They uſe Confeſſion, but not after the Manner of the *Romaniſts.* Concerning the Article of the *Proceeding of the Holy Ghoſt*, they ſay as little now as they formerly diſputed upon it, looking upon it as a Point that has more of Nicety than Uſe; they alſo preſerve Relicks, but never worſhip them.

I have made the beſt Enquiry I was able about the Doctrines of the *Armenians*, but their Church being repairing at preſent, I have had no Opportunity to ſee their Worſhip, nor to learn the Truth of it from others, except that a Friend of mine told me, that they were of very different Opinions in reſpect of ſeveral Articles, but that theſe four or five were moſt generally received among them, *viz.* They communicate under both Kinds, they give the Sacrament even to Infants, acknowledge the Sequeſtration of Souls as the *Greeks* do, allow of Divorces, and believe, that at the Time of the Reſurrection there will be no Difference of Sexes.

4. Before I leave *Venice*, I muſt add ſome few other Obſervations to what I have already ſaid concerning this City, and all the Curioſities therein. The Bridge of *Rialto* challenges the firſt Place, founded on ten thouſand Elm Piles, and which coſt two hundred and fifty thouſand *Venetian* Ducats. It is built over the Middle of the great Canal which divides this City in the Figure of an S. The *Venetians* are ſo much taken with this Bridge, that they often want Terms to expreſs its Grandeur, whereas it is certain that it has nothing extraordinary belonging to it, except that it is built upon one Arch: As I took particular Care to meaſure it, ſo I can give you an exact Account of it. The Compaſs of the Arch makes the third Part of a Circle; the whole Extent, from one Extremity of the Arch to the other, on the Level of the Canal, is ninety Feet, and its Height twenty-four. I know ſome have blamed the Architecture, which, according to the ſtrict Rules of Art, might, for its greater Strength, be an exact Semicircle; but, in my Opinion, this Objection may ſoon be anſwered, it being reaſonable to ſuppoſe, that the remaining Part of the Semicircle is taken up in the Foundation under Water. It is ſtrongly built of great Pieces of a kind of white Marble; it has two Rows of Shops, which divide it into three Streets, *viz.* one large one in the Middle, and two other little ones, between the Rails and the Backſides of the Shops. Almoſt all the other Bridges of *Venice* have but ſingle Arches, and Steps of a white and hard Stone, and moſt commonly very ſlippery, which in Part has given Occaſion to the common Proverb of *Venice*,

Beware here, of White Stones,
Whores, Prieſts, and Pantaloons.

All the beſt Houſes ſtand on both Sides of the *Great Canal*, among which are the magnificent Palaces of *Piſani, Moroſini, Loredano, Roſini, Vandramino*, and *Grimani*, but their chief Beauty conſiſts in their Frontiſpieces, which commonly are of two or three Sorts of Architecture, the reſt being but very indifferent. The *Lagunes* contribute not a little to the Unwholſomneſs of the Air of *Venice*, though the *Venetians* are very unwilling to own it, but their Water is generally bad; for among an hundred and fifty Springs they have here, there are not above two or three that afford good Water, which is the Reaſon that moſt private Perſons of Note are forced to preſerve the Rain-water in Ciſterns. The Wines generally drank here are either fulſomely ſweet, or ſour and eager: Their Bread is alſo very ill made, for let it be never ſo freſh, it is as hard as a Biſcuit, and muſt be broken with a Hammer. The little Opportunity a Stranger has of converſing with the *Venetians* in their Houſes, makes me give you no Account of their Manner of Houſe-keeping, but it puts me in Mind of what I read the other Day in a Preface of *Henry Stephens*, That in his Time, a Woman that appeared bare-necked abroad, was looked upon with a very indifferent Eye in *France*; whereas in *Italy*, and eſpecially in *Venice*, every old Hag ſhewed her withered Neck, but at preſent none but declared Whores ſhew their Necks bare; nay, the Women of Quality do not even ſhew their Faces in the Churches, the only Places where they appear in Publick; and the ordinary Women wear over their Heads a great Scarf, opening only a little about the Eyes. Their Females they educate in the Convents, from their tender Age till they are married, which is done commonly by their Parents or Kindred, without letting them ſee their future Huſbands: For it is to be obſerved, that among Perſons of Quality there are no Regards in Reference to this Point, but a good Family and Riches, the reſt being left to Chance: Whence it is that the Men commonly remedy the Defects of their Wives, by maintaining Concubines: They have here a peculiar Way of cohabiting with certain Women, much uſed among thoſe of a tender Conſcience: It is a Kind of clandeſtine Marriage, the Ceremony whereof is not performed ſometimes till many Years after they have lived together, and often not till a few Days or Hours before the Death of one of the Parties: But the moſt general Way is, to keep their Miſtreſs at a certain Allowance as long as both Parties agree; and this is ſo frequently practiſed here, that ſuch as are not able to keep one ſingly, join with two or three more, who enjoy the Woman, without the leaſt Jealouſy, each in his Turn.

This Kind of Libertiniſm is ſo general at *Venice*, that the Mothers of young Noblemen are commonly the firſt who agree with a poor Maiden's Father or Mother, for the Uſe of their Sons, at a certain Rate, to be paid monthly or yearly, as they can agree beſt. I have it from credible Hands, and *Roman Catholicks*, that the Confeſſors look upon this as ſuch a Trifle, that they take not the leaſt Notice of it in their Confeſſions. For Strangers and Paſſengers you have whole Streets filled with Ladies, eaſily diſtinguiſhed from others by their Habits, being dreſſed in red and yellow, with naked Breaſts, painted Faces, and Noſegays above their Ears; whereas all the other Ladies appear in black. The Carnival commences here the ſecond Holiday in *Chriſtmas*; then it is they begin to wear Maſks, and open their Playhouſes and Gaming-houſes: The Place of St. *Mark* is filled with *Mountebanks, Jack-puddings, Pedlars, Whores*, and ſuch Sort of Cattle, who flock thither from all Parts. In the Beginning they act with ſome Moderation; but the nearer they come towards *Shrove-Tueſday*, the more their Madneſs encreaſes. The Senate of *Venice* allow theſe Extravagancies, to divert the People from feeling the heavy Burthen of their Government, which, without ſuch like Amuſements, would be inſupportable to them: Beſides that, the vaſt Number of Strangers, which come from all Parts to *Venice*, to the Diverſions of the *Carnival*, brings a vaſt Sum of Money to the City: I was credibly informed, that during the laſt *Carnival*, there were no leſs than ſeven Sovereign Princes, and thirty thouſand other Foreigners there.

To give you my Opinion of the *Operas* and *Comedies* of *Venice*, in reſpect to thoſe of *Paris*, I muſt be plain with you, That the Ornaments of the firſt are infinitely inferior to thoſe of *France*: Their Habits are mean, without Dances, and generally without any Machines or Illuminations, except here and there a few Candles, ſcarce worth mentioning. I will not venture to contradict the general Opinion of the World concerning the *Italian* Muſick; and it muſt really be confeſſed, that they have ſome excellent Airs, and moſt exquiſite Voices: But, to tell you my Sentiment of the Matter, there is a certain unpleaſant Confuſion in ſeveral Songs of their *Operas*, and they dwell many Times longer in one Quavering, than in ſinging four whole Lines, and immediately after they run ſo faſt, that you cannot tell whether they ſing or ſpeak, or do both by Turns. It is certain, that the overſtrained Scream is not ſo pleaſing to Foreigners as to the *Italians*. The Orcheſtre is much leſs than at *Paris*; but this may perhaps be eſteemed rather a Perfection than a Fault. There is another Thing I cannot paſs by without a Remark, I mean the prepoſterous Figure which their Eunuchs make on the Theatre: It is a very odd Sight to ſee one of theſe mutilated Fellows act the Part of a Bully with his effeminate Voice; and another to repreſent a young Lover, with his withered wrinkled Face.

There are at preſent no leſs than ſeven *Operas* at *Venice*, which by Foreigners are frequented chiefly for the good Company's Sake: They have a Buffoon in every *Opera*, who intermixes his Fooleries, without Diſcretion, with the moſt ſerious and tragical Part of the Play. Their Comedies are fill'd with ſuch ridiculous Buffooneries, that in other Parts they would not paſs for tolerable Farces, *Harlequin* being commonly the Head Actor, who is back'd in his Grimaces with the moſt rank Bawdry that can be invented, to make the Spectators laugh; and for Fear they ſhould be diſappointed in their Aim, they admit whole Troops of the *Gondoliers*, or Watermen, into the Playhouſe for nothing, when they are ready to begin: Theſe are very diligent on this Occaſion, by bawling and clapping their Hands, to extort, as it were, a general Applauſe from the Spectators. Theſe Theatres belong to ſome Noblemen, who make a conſiderable Profit of them during the Carnival.

Their Aſſemblies, where they play at Baſſet, they call *Ridotti*, which are kept open as long as the Theatres: They allow none but Noblemen to cut: You ſhall ſee ſometimes ten or twelve Rooms on a Floor, with Gaming-tables in all, crowded with Gameſters maſked, with Courteſans and Ladies of Quality, who, under this Diſguiſe, have the Privilege of enjoying all the Diverſions of the Carnival, provided they can get a little out of the Way of their Spies or jealous Huſbands. They have alſo certain Rooms, where they ſell Liquors, Sweatmeats, and ſuch-like Things, to relieve ſuch as are fatigued with ſtanding. Every one thus maſked, provided he be in good Apparel, has the Liberty of talking to the Ladies even of the higheſt Quality, no body, not even the Huſband himſelf, taking Notice at that Time what is ſaid to his Wife, becauſe the Maſk is ſacred: Though this ſometimes gives Occaſion to an Intrigue, in a Place where the Scarcity of Opportunity prompts them to do more with the Wink of an Eye, than in other Countries with a longer Courtſhip.

But the chief Place for Maſquerading is the Place of St. *Mark*, where you may put yourſelf in what Diſguiſe you pleaſe, provided you can maintain the Figure of the Perſon you aſſume; for here you ſee the *Harlequins* jeer one another handſomely; thoſe who perſonate Doctors, diſpute learnedly; and ſo with the reſt: But ſuch as have no Inclination to venture upon theſe Engagements, may appear in the Habit of a Nobleman, or ſome foreign Dreſs, and be only Spectators. All the Maſquers muſt appear without Swords. Here you ſee, beſides *Puppet-players*, *Rope-dancers*, and *Fortune-tellers*, whoſe little Stages are fill'd with *Globes*, *Spheres*, and other *Aſtronomical Inſtruments*: They make Uſe of a Tube of Tin to ſpeak into the Ears of thoſe who conſult them; and it is a pleaſant Sight to ſee the Prieſts and Monks more frequently taking up the Tube than the reſt.

I will not pretend to give you an Account of their *Bull-baitings*, *Gooſe-hunting*, *Wreſtling*, or *Boxing*, *Balls*, *Races* upon the Water, or of their *Feaſt* on *Shrove-Tueſday*, when they cut off a Bull's Head in the Preſence of the whole Senate, in Memory of a Victory in *Friuli*: But I muſt not omit to tell you, that the Carnival is not the only Time when *Maſks* are in Requeſt at *Venice*, there being no Feaſt of Pleaſure where they are not uſed more or leſs, as at the Audiences of Ambaſſadors, on *Aſcenſion day*, &c. All theſe Days are very profitable to the Watermen, who knowing all the Turns and By-ways, keep Correſpondence with the Waiting-women, and for a good Reward will furniſh Ladders of Cords for an Intrigue, one of their main Buſineſſes being Pimping; in which Art they are ſo well verſed, that they will depoſit a Sum of Money, as a Security, that their Ware ſhall prove good. They hire *Venetian Gondola's*, or *Boats*, either from Place to Place, or by the Hour, or by the Day. You may have one of the beſt for five or ſix Shillings a Day. Theſe Boats are prettily contrived, and very light: Their Length is generally thirty or thirty-two Feet, and their Breadth four or five, in which you may ſit with a great deal of Conveniency, under a Cover like a Coach, with Glaſſes on both Sides; the left is reckoned the beſt Place, becauſe there you can beſt ſee the Boatman, and command him as you pleaſe. Theſe Fellows are very dextrous in their Buſineſs, and will, with a ſurprizing Facility, manage their Oars, ſtanding with their Faces towards the Place where they are to go All the *Gondola's*, or *Boats*, muſt be black, even the little Chamber, which is generally covered with black Cloth or Serge; but Foreigners are not ſo ſtrictly tied to this Rule; the *Gondola's* eſpecially of the Ambaſſadors are generally exceeding magnificent: They have commonly four or five, and make their Entries in them.

The Arſenal of *Venice* challenges Precedence among the firſt of *Europe*; but as it muſt be confeſs'd, that it is a Place of great Conſequence, ſo on the other Hand it ought to be conſider'd, that it is the only one the *Venetians* have in *Italy*, and that in its Encloſure it comprehends all their Ammunition, Stores for their Navy, Caſting-houſes, Rope-yards, Forges, Lodges for the Galleys, and Galeaſſes, and the *Bucentoro* itſelf, beſides the Docks for refitting their Ships: And notwithſtanding all this, you muſt not believe above half they tell you upon this Head. I remember that our Guide would fain have perſuaded us, that it contained no leſs than two thouſand five hundred Pieces of great Cannon, Arms for a hundred thouſand Foot, and compleat Accoutrements for twenty thouſand Horſe; but theſe are only Words. Among their Men of War, that call'd *The Redeemer* is the biggeſt, and, as they told us, carried eighty Pieces of Cannon and fourteen Pattareroes, and is now at Sea. Their Galeaſſes have three Rows of Guns in the Prow, but only two in the Poop; their Complement of Slaves is ninety-two, ſix on a Bench. The *Bucentaure* is a large Galeaſs of State finely carved and gilt, in which the Doge and Senate, with many of the Nobles, go out to Sea every Year on *Aſcenſion-day*, to perform the Ceremony of marrying the Sea.

As to the Rank the Noblemen of *Venice* aſpire to, which they have puſh'd to that Degree, that they pretend their Nobility to comprehend all other Titles, ſo as even to compare themſelves with Princes of Royal Blood; I muſt tell you, that it appears to me rather founded upon Opinion than ſolid Reaſon. It is true, that conſidering the *Noble Venetians*, by Right of Inheritance, are Members of the great Council, which gives Life to all the reſt; they are born with ſome Character of Sovereignty, but at that Rate the Nobility of *Genoa* might challenge the ſame Prerogative; and, after all their Boaſting, the Commands, great Offices, Wealth, and ancient Extraction, make new Diſtinctions among them; and they are not ſo nice, but that they will ſell this Title for a certain Sum of Money. They never appear in Publick but in their Robes, which are of black Cloth, and ought to be lined with greyiſh Cloth in the Winter, and Ermine in the Summer. The Stole is of the ſame Cloth, as well as the Girdle, which, being about four Inches broad, is adorned with Silver Buckles and Plates. Their Bonnets are no more than a Kind of Caps of black Worſted, with a Fringe of the ſame Stuff, which they commonly bear in their Hands, becauſe they are unwilling to incommode their great Periwigs; however, the Procurators of St. *Mark*, the *Sacri Grandi*, and ſome others of the great Officers of the State, are diſtinguiſhed by their peculiar Habits: Thoſe that have been Ambaſſadors have the Privilege of wearing a Stole of Cloth of Gold, and Golden Buckles on their Girdles, but they generally content themſelves with a little Gold Galloon upon their black Stole.

The *Phyſicians*, *Advocates*, *Notaries*, and all thoſe they call *Cittadini*, wear the ſame Habits as the *Nobles*; they challenge the Title of *Excellency*, and the Manner of ſaluting them is to kiſs their Sleeve, which about the Elbow is as big as a moderate Sack, and ſerve ſometimes to carry Proviſions in from the Market, becauſe they ſcarce ever appear with any Attendance at their Heels. They are never ſaluted in the Street, except by thoſe who wear the ſame Robe, being rather fear'd than lov'd by the People, not ſo much on account of the Hardſhips they ſuffer from them, as for want of knowing them, the Nobles being not permitted to converſe familiarly with any body. The Nobility of *Venice* is not reſtrained to the eldeſt Sons, as in *England*, but they are not permitted to traffick, much leſs to marry with Foreigners. Thoſe *Marquiſſes*, *Counts*, and other titular Nobles belonging to the *Venetian* State, are no Noblemen of *Venice*, but either ſuch as really enjoy'd theſe Dignities in their reſpective Countries before they became ſubject to the *Venetians*, or by the *Venetians*, ſince their Conqueſts, have been dignified with theſe Titles to humble the reſt, and by a Confuſion of new Titles, abate the Pretenſions of the ancient Nobility of thoſe Countries. There are a third Sort of titular Nobility in the *Venetian* State, whoſe Anceſtors, though not fully entitled to thoſe Dignities, yet had ſome Pretenſions to them, and upon the Change of the Government, aſſumed theſe Titles by the Connivance of the *Venetians*.

Your Information concerning the Duke or Doge of *Venice*, is wrong in all its Parts; for, I can aſſure you, he bears only the Figure of a Prince, and the Shadow of Greatneſs without any real Subſtance; much in the ſame Manner the Dukes of *Aquitain* and *Normandy* do at the Coronation of a King of *England*. It is true, he has ſome outward Marks of Grandeur annex'd to his lofty Title, but theſe are beſtow'd on him no otherwiſe than as he is a Repreſentative of the Republick, as Ambaſſadors are of their Maſters. That this is true beyond all Contradiction, you will very clearly perceive, if you conſider, that all his Counſellors have a conſtant Eye over all his Actions, and have an Authority to viſit his Cloſet every Hour. It is not in his Power to pardon any Criminal; he can't ſo much as paſs over to the Continent without Permiſſion from the State; and he no ſooner ſets Foot aſhore on that Side, but his Ducal Authority and Dignity ceaſe, and he is conſider'd as nothing more than a bare Nobleman of *Venice*; immediately all his Kindred, that were before in any Offices, are turn'd out, and when he dies, there is no ſuch Things as the leaſt publick Mourning upon that Occaſion. He is, beſides this, as much ſubject to the Law as the meaneſt Perſon, and the Inquiſition of State is chiefly levell'd at his Power, which is ſo ſtreightned, that except two or three inconſiderable Privileges, he poſſeſſes nothing beyond other Noblemen; theſe are, that he has a double Voice in the *Grand Council*, and the Diſpoſal of divers little Offices belonging to the Palace, and the Nomination of the *Primicerio* and Canons of St. *Mark*. The Honours, as I told you before, which are paid to him, being nothing elſe than the Marks of the Sovereignty of the Common-wealth in their Repreſentative; it is in this Senſe he bears the Title of Duke and of *His Serenity*, (a Title eſteemed here beyond that of *Highneſs*) and when he appears abroad upon any ſolemn Occaſion, has a Torch carried before him, a folding Chair (having two Arms and no Back) with its Cuſhion, eight Silver Trumpets, and as many Standards with the Arms of *Venice*, and perhaps ſome Hautboys: Of theſe Standards two are white, two red, two violet, and two blue, which, they ſay, ſignify, *Peace*, *War*, *Truce*, and the *League*: They ſhew'd us that the two red ones were carried firſt, the State being then engaged in a War againſt the *Turks*, whereas in Time of Peace, the white ones precede the reſt. He has alſo a Kind of Umbrello carried after him.

Upon theſe Occaſions the *Doge* is generally accompanied by the *Nuncio*, and the Ambaſſadors reſiding at *Venice*, except the Miniſter of *Spain*, who never appears at theſe Solemnities, to avoid diſputing with the *French* Ambaſſador about Precedence; all theſe Miniſters have their Hats on; the Duke never pulls off his ducal Coronet, except when the Hoſt is elevated, or when he is viſited by a Prince of Royal Extraction, or by a Cardinal, who ſits in a like Chair with the Duke, and even on his right Hand. After theſe march the chief Senators, before whom is carried the Sword of State, as an evident Mark of the Sovereignty of the Council. It is true, upon their Coin the Duke's Name is ſtamp'd, but on the Reverſe you ſee him on his Knees, at the Feet of the *Primicerio*, who ſits and repreſents St. *Mark*; of him the *Doge* takes the Oath of Fidelity, with the Maſs-book in one Hand, and with the other receiving the Standard of *Venice*; ſo it is evident, that his Image bears no more Marks of Honour here than that of the *Primicerio*. The Letters of foreign Princes are alſo directed and delivered to the *Doge*, but he is ſo far from having any Power of opening them, that he muſt deliver them to the Council: The ſame Thing is obſerved in reſpect to Ambaſſadors; for after Matters have been deliberated and concluded in the Council, the Anſwer is put ſo exactly into the Duke's Mouth, that ſhould he commit the leaſt Miſtake, he is corrected upon the Spot. Thus in all Acts or Declarations, of State, he is no more than the Herald, who has the Honour of publiſhing what is enacted by the Senate.

I will not pretend to unravel to you the Myſteries of the *Venetian* Common-wealth, the ſame being above my Purpoſe, and even out of my Knowledge, for want of ſufficient Time to be fully inſtructed in ſo many Things: I will only add concerning the Patriarch of *Venice*, that after he is elected by the Senate, he receives his Confirmation from the Pope: Though his Station is very eminent, yet his Authority is kept within very narrow Bounds; for, except two or three Benefices, the People of each Pariſh chuſe their own Curates, and the Clergy acknowledge no Superiority but that of the Senate. This Prelate muſt always be choſen out of the Nobility, and his Garment is of a Violet Colour; he ſtiles himſelf *Divini Miſeratione Venetiarum Patriarcha*, i. e. *by God's Mercy Patriarch of* Venice; but not as others do, *Et Sanctæ Sedis Apoſtolicæ Gratia*; *and by the Grace of the Holy Apoſtolick See*; the *Venetians* acknowledging no ſuch Superiority. For the reſt, this Election is commonly carried on by Intereſt and Intrigue, as in the chuſing of a Pope, little Regard being had to Merit; and it is beyond all Diſpute, that the Ignorance of the Clergy here is greater than what can well be expreſs'd or imagin'd; to remedy which, as alſo their Licentiouſneſs, and the too free Converſation with the Nuns, Cardinal *Barberigo*, Biſhop of *Padua*, a wiſe and venerable Perſon; has taken a great deal of Pains of late Years, but to little Purpoſe.

I muſt not forget to tell you a pleaſant Secret they make uſe of here, in Behalf of ſome Prieſts that are Muſicians: You are not ignorant, that one of the main Qualifications belonging to a Prieſt, is to be a compleat Man; but as the Sweetneſs of the Voice is of great Uſe, both in their Operas and Churches, they have found out this Expedient, that a Prieſt thus fitted for Muſick, may exerciſe the Functions of Prieſthood, provided he carry the ſame Implements that belong'd to his Body in his Pocket. Is not this a moſt religious Diſtinction!

Father *Mark Aviano*, whom I mention'd in my Letter from *Augsburgh*, is here at preſent, but I could never hear him preach, the Crowd of the People being ſuch, that they were forc'd to break a Hole through the Wall of the Church, to let him go into it from a neighbouring Houſe.

5. It is one of the Peculiarities of *Venice*, that ſome of the Churches are dedicated to Saints that were never canonized, ſuch as the good Man *Job*, the Prophets *Moſes*, *Samuel*, *Jeremiah*, *Daniel*, and *Zachary*, to whom there might be ſome others added. I had the Curioſity to viſit the Temples that are conſecrated to thoſe illuſtrious Names, but could not find any Thing more extraordinary in them, than their Dedication. One of the fineſt of thoſe ſacred Structures is that which is dedicated to St. *Moſes*; it has a majeſtick Front, which was built by *Alexander Tremignone*, at the Charge of the Procurator *Vincint Vini*. They preſerve ſeveral Re-

licks in this Church, and pretend, that they are both very authentick and potent; however, ſince they conſiſt only of Arms, Legs, and Jaw Bones, I will not trouble you with a Catalogue of them: But when I meet with ſome holy Curioſity, which deſerves to be particularly taken Notice of, as ſome Foreſkin of a *Philiſtine*, ſome Peaſe of St. *Francis*'s Iſſue, or a Shoe of the *Trojan* Horſe, you may expect to hear of it. As for the Church of St. *Samuel*, it will be ſufficient to tell you, that there is nothing remarkable to be ſeen in it: St. *Job*'s is a very fine Building. In the Veſtry they keep a Body of St. *Luke*, and the *Benedictins* of St. *Juſtina* at *Padua*, have another: But ſince the Pope declared for the former, the Monks of *Padua* have very prudently taken the Reſolution to be ſilent.

At St. *Jeremy*'s, which is a fine Edifice, they have one of that Prophet's Teeth, and it is reaſonable they ſhould have a Relick of their Nation. If the reſt had imitated ſo judicious an Example, we might, perhaps, have had the Pleaſure to have ſeen one of *Moſes*'s Horns and *Job*'s Scabs. The great Altar, and the Tomb of St. *John* the Martyr, Duke of *Alexandria*, are the moſt remarkable Things I obſerved at St. *Daniel*'s. St. *Zachary*'s is a fine Building. The Architecture is not modern, but the Front is enriched with fine Marble, and the Inſide beautified with many Ornaments. There are alſo magnificent Altars in it. The famous Church of St. *Mark* is ſo enriched with *Moſaick* Work, that, in this Reſpect, the Churches of St. *George Major* and *della Salute* ought not to come in Competition with it: But if we conſider the Architecture of St. *Mark*, it is an obſcure Place, in Compariſon to thoſe Churches. The beſt Judges give the Preference to St. *George*'s, but common Eyes find ſomething in the Church *della Salute* that is more agreeable to them. The Deſigns are quite different: St. *George*'s is not unlike to St. *Juſtina*'s at *Padua*, for the Contrivance or Guſto is the ſame in both. It is true, St. *Juſtina*'s is larger, and perhaps more magnificent within, but its Outſide is naked; whereas the other is adorned with an admirable Front. The great Altar in this Church is enriched with Marble of the fineſt Sort, and curiouſly wrought: It is alſo adorned with ſeveral Statues, the chief of which are the four Evangeliſts ſupporting a World, on which there is a *Padre Eterno*. The whole is of Braſs gilt. The Seats of the Canons round the Choir are of Walnut Tree, on which the Life of St. *Benedict* is deſcribed in very fine *Baſſo relievo*, where the Rules of Perſpective are well obſerved. In a Chapel near the Tomb of the Procurator *Vincent Moroſini*, thoſe, who have good Eyes, obſerve on a Marble Pillar, and on ſome Places on the Balluſters, Fiſhes, Birds, and other Things naturally figured, and even an entire Crucifix; I mean the Eyes of Imagination; for there is nothing like it in Reality, though certain little Books, that are to be bought at *Venice*, ſay ſo.

In this Church they have the Body of St. *Stephen* the Proto-martyr, which a pious Woman called *Juliana*, brought from *Jeruſalem* to *Conſtantinople*, from whence it was afterwards tranſported to *Venice* by one *Peter* a Monk. The whole Story is deſcribed at Length in two long *Latin* Inſcriptions, which I had the Patience to tranſcribe, but I am afraid you would not have the Patience to read. The Choir, Altars, Floor, Dome, and Veſtry, of the Church *della Salute*, are all extremely beautiful: The Foundations of this Structure were laid *March* the 25th, 1631, two Years being ſpent in fixing the Piles. The Occaſion is related in an Inſcription which was placed on the firſt Stone; importing a Vow to the Virgin for Deliverance from the Plague. This Church was built by *Balthaſar Longhena*: It is adorned both without and within with about one hundred and thirty Marble Statues. It was erected at the Charge of the Publick; whereas moſt of the other Churches were built by private Families, and conſequently may be looked upon as ſo many Marks either of their Vanity or Piety, and at the ſame time, of their vaſt Riches. On the great Altar there is a Statue of the Virgin holding the little *Jeſus* in her Arms. The *Genius* of *Venice* on her Right Hand imploring her Aſſiſtance to ſtop the Progreſs of that mortal and contagious Diſtemper: On the other Side is *Peſtilence* flying, purſued by an Angel with a Torch in his Hand. St. *Mark* is preſent with the bleſſed *Lawrence*, *Juſtiniani*, and ſeveral others. All theſe Statues are of fine Marble, and wrought by a curious Hand. I dare not undertake to deſcribe all the Embelliſhments of this noble Structure.

St. *James de Rialto* is ſaid to be the firſt Church that was built on theſe Spots of Ground on which *Venice* is founded; but it has been ſo often deſtroyed and rebuilt, that it may be reckoned a new Church, notwithſtanding all its boaſted Antiquity. The Altar in the great Chapel is of white Marble, and adorned with a fine Statue of St. *James* by *Alex. Victoria*. St. *Mark*'s Church is but a Chapel to the Doge's Palace. St. *Peter di Caſtello* is the Epiſcopal and Patriarchal Church, pretty large, and the Front deſerves to be taken Notice of for its beautiful Simplicity; and though no extraordinary Care has been taken to embelliſh this Church, there are ſome very conſiderable Ornaments, and ſeveral remarkable Things to be ſeen in it. The great Altar was erected by the Senate, in Purſuance of a Vow they had made during the War againſt the *Turks* in 1649. It is dedicated to the *Beato Lorenzo*; and the Body of that Demi-Saint is placed there, in a ſtately Marble Tomb, ſupported by Angels and Apoſtles. The Statue of *Beato* ſtands upon the Tomb, and that contains his Bones. I have ſeen ſome devout Perſons kiſs a Stone Chair, which is kept in this Church, on the Right Hand as you enter betwixt the ſecond and third Altar, by the Wall. They pretend that St. *Peter* made Uſe of it when he was at *Antioch*; and a Sacriſtan informed me, that it was a Preſent of *Michael Palæologus*, Emperor of *Conſtantinople*. The ſame Perſon told me a Story of a Brazen Croſs that was found floating in ſome Part of the Lagunes, and brought with a great deal of Ceremony to this Church. They have a Veneration for it, but the Croſs could never tell them what kept it from ſinking when it was in the Water; and though it is evidently miraculous, no body may ſay that he remembers to have ſeen it working any Miracle: So that notwithſtanding every Church, and almoſt every Chapel, is abundantly provided with Pieces of the true Croſs, this brazen one, as extraordinary as it is, is ſomewhat neglected.

The Monks of St. *Michael*, betwixt *Venice* and *Murano*, have, in the Chapel of the Family *Priolo*, a fine one, which is endued with a particular Virtue to appeaſe Tempeſts: The Hiſtory of it is full of ſurpriſing Wonders: It is written on a Scroll of Vellum in ſo antique a Manner, that this Conſideration alone would be ſufficient to prove the Truth of the Relation, though they had no other Arguments to confirm it. It was in Uſage heretofore, that never any Veſſel ſet ſail from the Port of *Venice*, till the Pilot and all the Ship's Crew had recommended themſelves to the Protection of this miraculous Croſs: But the Heat of this Devotion is much abated, for it ſeems it is the Miſfortune of *Venice*, as well as of other Places, that good Cuſtoms are ſooner forgotten than bad ones. The Choir of the Church is much commended for the Richneſs and Beauty of the Work. In a little Chamber near the Choir there is a Map of the World drawn with the Hand, and adorned with Miniatures, which is certainly a curious Piece. He that made it was a Monk of this Convent, as it appears by the Medals that were ſtruck on that Occaſion, with this Motto, *Frater Maurus S. Michaelis, Merianenſis, de Venetiis, Ordinis Camaldulenſis, Coſmographus incomparabilis.* The Monk, who ſhewed us theſe Things, carried us to a little but magnificent Chapel near the Church: He ſaid, the People generally believed that it was built by a Courtezan, with the Profits of her Vocation; yet at the ſame Time he aſſured us, in ſtrong Terms, that they were miſtaken. But what ſignifies it, whether true or falſe. *Solon* built a Temple to *Venus*, with the Money that was earned by common Proſtitutes; and why ſhould they not do the ſame at *Rome* and *Venice*, where ſuch lewd Women are not only tolerated, but invited, protected, countenanced, and publickly allowed? The Convent cannot be termed a magnificent Structure, but it is certainly a great Building and agreeably ſituated, for from hence you have the Proſpect of *Venice*, *Murano*, *Lido*, *Terra Firma*, and ſeveral Places in the *Lagunes*, without mentioning the Walks and Gardens that belong to the Convent. In the Year 1497, a *Spaniſh* Ambaſſador was ſo charmed with the Beauties of this Place, that he reſolved to ſpend the Remainder of his Days in it: They made us take Notice of his Epitaph, which they told us was written by the famous *Aldus Manutius*.

I will not trouble you with any Account of the other Tombs and Epitaphs that are to be ſeen in this Place; but ſince we are ſo near the Glaſs-houſes of *Murano*, I ſhall take this Occaſion to make ſome Remarks upon them. *Murano* is one of the largeſt and moſt agreeable Iſlands in the *Lagunes*, about a ſhort Mile from *Venice*: It contains fifteen Churches, comprehending thoſe of the Convents. There are ſome fine Houſes in it, and a great many more Gardens proportionably than at *Venice*. There is a Canal which runs croſs the Iſland, which is larger than the other Canals in the ſame Place, and the famous Glaſs-houſes which you have heard ſo often mentioned, are ſeated on this Canal. You muſt not imagine that there is any Thing at all extraordinary in theſe Buildings; they are divided into ſeveral Lodgings, Halls, Warehouſes, Furnaces, *&c.* as in other Places. Formerly, the Glaſs called *Venice Cryſtal* was the fineſt in *Europe*, but at preſent it does not merit that Title, not that it is coarſer than before, but becauſe they have found the Secret in other Places to make Glaſs at leaſt as fine as that of *Venice*. Mr. *de S. Didier* writes, that he heard a Maſter of a Glaſs-houſe at *Venice* offer an hundred thouſand Franks to any Man that would teach him the Secret of making Glaſs as white as that of a Cup that was brought from *Paris*; and one of my Friends aſſured me, that a few Years ago having carried a Vial of the fineſt Cryſtal of *Murano* to *London*, the Workmen there were ſo far from looking upon it as extraordinary or inimitable, that they ſaid they could, and ſometimes did, make finer Work. The Skill they have acquired in other Countries, and the Manufactures they have erected, have almoſt ruined the Trade of *Murano*. Their whiteſt and pureſt Glaſs is made of certain Stones that are found in *Jeſina*, the Aſhes of ſeveral Herbs that are found in the Country about *Tripoli* in *Barbary*, and the other uſual Ingredients; they make it alſo of certain Stones that they found in the *Adige*, and the Sand that is gathered on the Shore of the Gulph on the *Dalmatian* Side: But this is only for common Glaſs. The Glaſs-makers of *Murano* ſtile themſelves Gentlemen, ſince they were ennobled by *Henry* III. who had the Curioſity to ſee them at work when he paſſed through *Venice*, and they enjoy all the Privileges of the *Citadinance*.

But let us return to our Churches. I will not loſe Time in deſcribing that which bears the Name of St. *Nicholas of the Lettice*, which was founded by the famous *Nicholas Leono*, on Occaſion of his being cured by the ſanctified Lettices that were ſent to him by the Monks. Nor that of St. *Maria Cæleſtis*, which took its Name from an Image that fell from Heaven, and is enriched with a precious Leg of St. *Lawrence*, which ſerves to extinguiſh Fire; nor will I trouble you with an Account of *Jonas*'s Head, which is kept at St. *Appollinaris*'s; nor of St. *Claras*'s Nail; nor of the Coif at St. *Lawrence*'s; nor of other Rarities of the ſame Nature, which perhaps you would look upon as Trifles. *Sancta Maria Glorioſa* is another of the principal Churches in *Venice*; it is large, and very much embelliſhed with divers Ornaments. They pretend that the Seraphick St. *Francis*, in proper Perſon, marked the Place where it ſhould be built. I ſpent two whole Afternoons in viewing and decyphering the Epitaphs that were to be ſeen in it, but I only tranſcribed two of them; one of a Woman, which is the only Monument of that Kind I obſerved there; and the other of a *Doge*, who is made to ſpeak his own Elegy. It is *Francis Foſcari* who was depoſed, or rather removed from his Seat of Authority and Power to that of a private Perſon, in the 84th Year of his Age, as not being capable of performing longer any Function belonging to his Ducal Office, in which he had honourably acquitted himſelf for the Space of thirty-four Years. In all States they depoſe their Princes when they become traiterous to their Country, and declare themſelves Enemies inſtead of nurſing Fathers and Protectors of it, according to natural Equity, and the ſolemn Oath they are obliged to take on the Day of their Inſtallment. They depoſe alſo Fools and Madmen, ſuch as *Alphonſo* of *Portugal*, Uncle to the preſent King; and when they fall into an irrecoverable State of Infirmity, why ſhould they not exhort them to make an honourable Reſignation of their Power? Does a General of an Army that grows old and infirm, make any Scruple of reſigning his Poſt to another? I ſhall take this Occaſion to obſerve, that by the Epitaphs I have ſeen in this Place, I find that a conſiderable Number of the Perſons on whom they are written, died above eighty Years old; a Sign that the Air of *Venice* is not ſo bad as is commonly reported.

I liked much the greater Altar of St. *Juſtina*'s, with the Tabernacle; the devout Adorers of that Saint are always careful to viſit the Stone where ſhe left the Print of her Knees when ſhe ſaid her laſt Prayer before her Martyrdom, as the Story is related in an Inſcription beneath the Stone. Thoſe who chuſe the huge St. *Chriſtopher* for their Patron, have an extraordinary Veneration for a Statue of that Saint, which is to be ſeen in the Church of St. *Maria del Horto*, on the great Altar. It was made by an excellent Sculptor, according to the Proportion of a Bone of the Original, which was heretofore brought from *England* by a very curious Perſon, who was a nice Judge of Relicks; ſo that a devout Spectator has the Pleaſure to behold the exact Dimentions of that Saint; and this Conſideration has ſo enhanced the Value of the Statue, that thoſe who have moſt Experience in Affairs of this Nature, are confident that it will quickly begin to work Miracles. I could eaſily reckon up a vaſt Number of fine Paintings with which the Churches are adorned, but I know not whether you would have the Patience to read ſuch a dry Catalogue, nor will I undertake to give you an Account of thoſe half ſacred Places, which are here called *Scuole*; theſe are publick Edifices divided into Chapels, Halls, Chambers, and Lodgings, which belong to Fraternities of Monks, or ſome other particular Societies. I have ſeen at leaſt thirty-five of them, and I doubt not but that there are more. Among the reſt there are ſix called *Scuole grandi*, which are embelliſhed with ſo much Art and Coſt, that they may vie with the fineſt Churches both in the Richneſs and Beauty of their Ornaments.

In many Churches and Fraternities, there are annual Funds eſtabliſhed to raiſe Portions and procure comfortable Matches for poor Maids; and generally over all *Italy* Care is taken by ſuch charitable Foundations to provide for the Neceſſities of the Sex. After I have given you my Obſervations on the Chriſtian Churches, you will perhaps expect an Account of the *Jewiſh* Synagogues; but all that I can ſay on this Subject is, that there are ſeven of them, and that the beſt of the ſeven is not near ſo fine as the *Portugueſe* Synagogue in *London*. If we give Credit to the vulgar Computation, there are about two thouſand *Jews* at *Venice*; ſome of them are rich, but few in Compariſon to the Poor. They are obliged to wear red Hats; but I find by *Martinelli* in his *Ritratto*, that they may be exempt from that diſagreeable Diſtinction by paying a ſmall Sum of Money. They have a Sort of Court that determines petty Suits among themſelves. They are generally a Kind of People that never refuſe any Sort of Employment, and are made uſe of on ſeveral Occaſions, eſpecially by the Nobles, who are a very great Support to them. They may take the Degree of Doctors in Medicine at *Padua*, and practiſe Phyſick any where in the City and State of *Venice*.

6. The only Thing worth taking Notice of betwixt *Padua* and *Rovigo* is the Country, which is flat and fruitful, adorned with Vineyards, Groves, Meadows, and well-tilled Grounds, and watered by many Rivulets. Upon the Road you ſee ſome Houſes of Pleaſure belonging to the *Venetians*, but the Country People about *Rovigo* dwell only in Huts made of Reeds. The City of

Rovigo itſelf is very poor, and of no great Extent, and yet it is the Reſidence of the Biſhop of *Adria*, that famous City, which imparted its Name to the Gulph, though now no more than a half-drown'd Village.

Ferrara is a large and beautiful City, but poor and ill peopled: We went on Purpoſe to one of the beſt Places of the whole City, where four Streets meet, but could not perceive one Perſon in any of them, though the Country about it is one of the beſt in *Lombardy*, but wants Tillage for Want of Inhabitants, this fruitful Country being almoſt deſolate, by the Severity of the Papal Government. *Ferrara* was united to the Eccleſiaſtical State under the Pontificate of *Clement* VIII. who built a very ſtrong Citadel, which is ſtill in good Repair. Of the ancient Univerſity of *Ferrara*, there remains only a poor College, belonging to the *Jeſuits*. Near the Cathedral ſtand ſome Statues on Horſeback of Braſs; and directly over againſt the Palace of the Nobility is one of Duke *Hercules* II. on Horſeback, on the Pedeſtal of which is an Inſcription granting a Sanctuary to Criminals for twenty Paces round it. We alſo ſaw the Ducal Palace, the Houſe of the Marquiſs *de Villa*, and divers Churches and Convents, which have all their peculiar Beauties; and, among the reſt, took Notice of the Tomb and Epitaph of *Arioſto*, in the Church of the *Benedictins*. In the Opera we heard a pretty little Songſtreſs of twelve or thirteen Years of Age; moſt of the Boxes were filled with Jeſuits and Clergymen.

From *Ferrara* to *Ravenna* is fifty Miles; all the Way we ſaw not one Town or Village worth taking Notice of. The firſt Day's Journey was very paſſable, but afterward the Road becomes very deep, betwixt the Branches of the *Adige* and the *Po*: The ancient Geographers deſcribe its Situation like that of *Venice*, amongſt the Waters, and it is certain this was the beſt Harbour the *Romans* were Maſters of in the *Adriatick* Gulph, but ſince that the *Lagunes* are dried up, and the Sea is at leaſt three Miles from it, the City being now ſurrounded with the moſt fruitful Fields of *Italy*: Neither is there the leaſt Doubt, but that the preſent *Ravenna* ſtands in the ſame Place where the ancient *Ravenna* was, there being in the Walls that face the Sea-ſide many great Iron Rings, by which they uſed formerly to faſten their Veſſels; and the Ruins of the ancient Beacon are to be ſeen to this Day. This City is ſeated in a flat Country, is not above half as big as *Ferrara*, but meanly built, and as thinly peopled. Without the Walls, near the ancient Harbour, you ſee the *Mauſoleum* erected to the Memory of *Theodoric* King of the *Oſtrogoths*, by *Amalaſintha* his Daughter; it is ſince turned into a little Church called the *Rotunda*; it is covered with one hewn Stone of thirty-eight Feet Diameter, and fifteen in Thickneſs, on the Top of which ſtood the Tomb of *Theodoric*, ſurrounded by the Statues of the Twelve Apoſtles, which were deſtroyed during the laſt Wars of *Lewis* XII. together with the Tomb of *Porphyry*, which ſince has been fixed in the Wall of an ancient Palace within the City.

The Cathedral is a very ancient Structure, ſupported by fifty-ſix Pillars of Marble of the *Archipelago*, placed in a double Range on each Side. The Choir is vaulted with excellent *Moſaick* Work, where they ſhew you, as a precious Relick, one of the Stones with which St. *Stephen* was martyred. But the great Door of this Church is the moſt curious Thing, and deſerves moſt a Traveller's Obſervation, being made of Planks of Vines, ſome of which are twelve Feet high, and fourteen or fifteen Inches broad; for it is to be obſerved, that hereabouts, in thoſe Places that were formerly covered by the Sea, the Vines grow to a prodigious Bigneſs. In the Church of the *Theatins* (or *Jeſuits*) they ſhew a little Window juſt over the Altar, with the Figure of a white Pigeon upon it, placed there, as they tell you, in Memory of a Miracle that happened at the Election of the ſecond Biſhop of *Ravenna*, after the Death of St. *Apollinarus*, when a Pigeon coming into the Window, perched upon him who was to be elected; and the ſame Thing happened eleven Times after ſucceſſively.

The Churches of St. *Vitalis*, St. *Apollinarius*, St. *Romualdus*, and St. *Andrew*, have many ſtately Pieces of *Marble* and *Porphyry*, brought from *Greece* during the Time of the *Exarchy*, or while under that Name it continued a Province of the *Greek* Empire. The Tomb of *Galla Placidia*, the Daughter of *Theodoſius the Great*, is to be ſeen in the Church of St. *Celſus*, between thoſe of *Valentinian* and *Honorius*.

In the *Grand Place* you ſee a noble Statue of Braſs of Pope *Alexander* VII. And at the other End of the ſame Square, two Columns, on which formerly ſtood the ancient Patron and the Arms of *Venice*, whilſt *Ravenna* was under their Juriſdiction; the like Columns they erect in all Cities belonging to their State; but ſince that Time the Pope has put the Statues of St. *Victor* and *Apollinarius* upon the ſame Columns. Near them, under a Portico, they ſhew the Gates of Braſs, and ſome other Spoils, thoſe of *Ravenna* took from thoſe of *Pavia*.

We had ſcarce travelled a good Hour from *Ravenna*, but we entered a Foreſt of Pine-trees, which is four Miles long, after which we travelled within Sight of the Sea to the left, and the Marſhes to the right.

Having paſſed the River *Savio* in a Ferry-boat, we continued our Journey thro' the little City of *Cervia*, ſeated among the Bogs; the Inhabitants live by making of Salt. We dined at *Coſenate*, near the Sea-ſide, and before we had made three Miles more, came to the Banks of the famous River *Rubicon*, called alſo the *Piſatello*, and by ſome the *Frumicino*; and we were not a little ſurprized to ſee our Coach paſs it without a Bridge or Ferry-boat, yet *Lucan* in his Time gives it the following Character:

Fonte cadit modico, parviſque impellitur undis.

Within an Hour after we travell'd cloſe along the Sea-ſhore, which was even, ſandy, and firm, without any Rocks or Shells, till within a Mile of *Rimini*, where we were forced to travel deeper into the Country, for the Conveniency of paſſing the River *Ariminum*, which waſhes the Walls of the City of *Rimini*; it is now called *Marechia*.

Rimini is a ſmall and poor City, ſeated in a rich Country. On the Bridge of Marble are two entire Inſcriptions, intimating, that *Auguſtus* and *Tiberius* were the Founders of this City, and that the triumphal Arch was built by the firſt. Behind the Gardens of the *Capuchins* are to be ſeen the Ruins of an Amphitheatre, and five hundred Paces thence, without the City, a Brick Tower, which was the *Pharos* of the ancient Harbour, but is now encompaſſed with Gardens, the Sea being retired at leaſt half a Mile thence.

The Church of St. *Francis* was built out of the Ruins of the Harbour, which was once one of the beſt in *Italy*. The Library of the Count *de Gambalonga* is numerous, but without any rare Books that deſerve Notice. In the Midſt of the Market is a Marble Pedeſtal with theſe Words upon it, *Caius Cæſar Dict: Rubicone ſuperato civili bell: Commilit: ſuos hic in foro Ar: adlocutus.* In another Place you ſee the brazen Statue of *Paul* V. and near it a curious Marble Fountain.

From *Rimini* we travelled for fifteen Miles along the *Downs* betwixt the Sea and the Fields. As we paſſed thro' the Village *Catholica*, we found over the Portal of the great Church an Inſcription, by which it appeared that this Village received its Name from certain Orthodox Fathers, who, during the Council of *Rimini* in 359, compoſed, for the moſt Part of *Arians*, uſed to perform their religious Service here, in Spite of that Aſſembly. About ten or twelve Miles thence, towards the *Apennines*, we diſcovered the City and little Republick of *Marino* on the Top of a Mountain, at the Foot of which are the Limits of its Territories: This ſmall and inconſiderable Commonwealth being below the Envy and Jealouſy of its Neighbours, has maintained its Liberty for many Ages. The Country between *Catholica* and *Peſaro* is for ſeven Miles together very well inhabited and cultivated.

The City of *Peſaro* exceeds *Rimini* as well in Bigneſs and the Pleaſantneſs of its Situation, upon an eaſy Aſcent, as in the Neatneſs and Beauty of its Buildings. Nothing can be more pleaſant to the Eye, than the little Hills that ſurround it, with the agreeable Mixture of *Paſtures*, *Vineyards*, and *Orchards*. Their Olives are very good, but their Figs are abſolutely eſteemed the beſt in *Italy*. Meat is ſo cheap here, that you may buy a Pound (which contains eighteen Ounces here) for leſs than a Halfpenny; Bread and Wine are cheaper in Proportion than Meat; and as both the Sea and Rivers furniſh them with Plenty of Fiſh, ſo this City abounds in all Things neceſſary for Life. Its Fortifications are none of the worſt, conſidering they are after the old Faſhion. In the Market-place is a fine Fountain, and a Statue of Pope *Urban* VIII. under whoſe Pontificate this City and the Dukedom of *Urbin* were incorporated with the Eccleſiaſtical State, as they have ever ſince continued.

From *Peſaro* we continued our Journey along the ſandy Shore for ſeven Miles, as far as *Fano*. We ſaw Abundance of Walnuts, Cheſnuts, Ruſhes, and many other Things, forced by the Winds from the neighbouring Rivers to this Shore. One of our Company, among the reſt, took up here a certain little Fiſh called *Cavaletto* by the *Italians*, in *France*, *Cheval Marin*, or the *Sea-horſe:* It is frequently to be met with in Cabinets, being eaſily dried and preſerved; its Head and Neck has ſome Reſemblance to thoſe of a Horſe. The *Italians* attribute to it a peculiar Quality of curing the Bite of a mad Dog, if eaten roaſted, and applied to the affected Part, ſkined and beaten with Honey and Vinegar. *Fano* itſelf is a ſmall but neat City, having nothing in it worth taking Notice of, except one Triumphal Arch, but the Inſcription on it is quite defaced. It is compoſed of three diſtinct Gates.

About a Mile from *Fano* we travelled over a wooden Bridge five or ſix hundred Paces long, built over the ſeveral Branches of the *Pongio*, which overflow all the circumjacent Country, when the Snow begins to melt on the *Apennines*; afterwards coaſting along the Sea-ſide for fifteen Miles, we came to *Senegallia*, an old City, encloſed with a ſtrong Wall, and ſome Baſtions, but not very regular. Our Wearineſs, after a tedious Day's Journey, proved the Occaſion of our good Fortune, without which we had run the ſame Danger that beſel ſeveral of the Inhabitants, who were the ſame Night at a Play acted at the Governor's Houſe, but the Arch, which ſupported the Stage, with ſome of the neareſt Seats, being overladen, gave Way, and above thirty Perſons were killed, and many more wounded by this Accident.

From *Senegallia* we kept ſtill all along the Shore, but for ſeventeen Miles met with no Houſes, except an old Caſtle and ſome Inns, about a hundred Paces from the Sea-ſide. Near a little Village called *Turreet*, about three Miles from *Ancona*, we turned into the Land-way, where we arrived in a good Time. This City is ſeated upon a double Hillock, at the very Point of the Cape, being much larger than any of the four or five laſt-mentioned Cities, but not much richer, though the Excellency of its Harbour, and the Fertility of the adjacent Country ſeems to entitle it to Traffick, of which it had a ſufficient Share formerly, but is much decayed of late Years, by being under the Papal Dominion. The Streets of *Ancona* are both narrow and dark, and their Buildings but indifferent; beſides that, its Situation up and down Hill renders it very inconvenient. The Citadel is ſeated on the firſt Hill, which commands both the City and Harbour; and on the other, which makes the Point of the Cape, ſtands the Church of St. *Cyriaca*, being a low dark Fabrick, the Front whereof is of Marble, but without any Ornament. Here they boaſt of the Body of St. *Urſula*, as well as thoſe of *Cologne*, beſides many other Saints and Relicks, in high Veneration among the People. From hence we had a very delightful Proſpect of the Sea, City, and Country at once.

At the Entrance of the Mole is a magnificent triumphal Arch of white Marble, erected to the Honour of *Trajan*, by the Senate, in Acknowledgment of the Charge he had been at in repairing this Harbour, as the Inſcription, which is not in the leaſt defaced, tells the Reader; but it was with ſome Difficulty defended from the Monks, who would often have demoliſhed it to repair their Convents. The Exchange where the Merchants meet, is built in the Nature of a Portico of an indifferent Bigneſs; at the four Corners ſtand as many Statues, repreſenting *Faith*, *Hope*, *Charity*, and *Religion*, the laſt of which was thrown down by an Earthquake, and the reſt ſhaken. Before I leave *Ancona*, I muſt tell you ſomething of the Oddneſs of the Dreſs of the Inhabitants: We ſaw the chiefeſt Burghers, on a Holiday, appear in a black Cloak lined with green, with blue or fillemot Stockings, Shoes whitened with Chalk, and tied with Ribbons of all Sorts of Colours; their unbuttoned Doublets were embroidered with divers Colours, and the great Sleeves of their Shirts hung down to their Fingers Ends. The ordinary Sort of Women wear a Kind of Coif, with a long Fringe hanging over their Faces; the Body of the Gown is generally red or yellow, faſtened on four Sides with Laces, and trimmed all over with coloured Galloon; their Waiſtcoats and Petticoats are both very ſhort, and of various Colours. The Ladies of Quality imitate in their Dreſs the *French* Faſhion, but after ſo aukward a Manner, that they appear more ridiculous than the others in their own Country Dreſs.

We obſerved another Cuſtom upon this Road, which, they told us, runs from *Ferrara* all over *Italy*; I mean their Paper Windows, which being always torn, prove very inconvenient in the Winter, and afford a very odd Proſpect to Foreigners, as well as very inconvenient. To compleat our Miſery, they would commonly bring a Fricacy of three Eggs, and perhaps as many Pilchards, for a Supper for five or ſix Perſons, and at laſt make us pay as dear as if we had extraordinary good Cheer, our Dinner and Supper amounting generally to four Shillings a Head. The Flux and Reflux of the Sea increaſe and decreaſe according to the Diſtance from the Extremity of the Gulph; for at *Venice* the Tide riſes about four Feet, near *Ravenna* to three, at *Peſaro* two, and ſcarce above one at *Ancona*, and ſo decreaſes till at laſt it comes to nothing.

7. The Country between *Ancona* and *Loretto* is the beſt in *Italy*, but the Roads the worſt, which obliged us to alight ſeveral Times to eaſe the Coach. I don't queſtion but you have ſeen ſeveral Accounts of our famous Lady of *Loretto*; but ſince Matters of this Nature are variouſly repreſented, the Curioſity of the Thing deſerves very well an exact Abridgement of what I was able either to learn or ſee, which I will give you with great Fidelity. This Houſe, ſo much celebrated among the *Roman Catholicks*, is the ſame (if you will take their Word for it) in which the Virgin was born, where ſhe was betrothed and married to *Joſeph*, where ſhe received the Salute of the Angel, and where the Son of GOD was incarnate. This Houſe was from *Nazareth* tranſported by the Angels into *Dalmatia*, and placed on the Hill of *Terſatto*, 10 *May*, 1291, where, after it had continued for three Years and ſeven Months, the Angels removed it from thence into the Middle of a Foreſt in the Territory of *Recanati*, Part of the Marquiſate of *Ancona*; but this Wood being famous for many Robberies committed thereabouts, this *Holy Houſe* was, after eight Months, removed a third third Time from thence, to the ſame Hill on which it now ſtands; but ſoon after a Controverſy ariſing betwixt two Brothers, Coheirs of the Ground on which it ſtood, about the Poſſeſſion of this Houſe, it was in four Months after placed by the Angels ſome Paces from thence, in the high Road, where it is to be ſeen to this Day.

To prevent all Inconveniencies that might happen to ſo ſacred a Place, they built a moſt ſumptuous Church about it, in the Middle of which it ſtands free from all Injuries; and for its better Preſervation, they have ſince erected four Walls, which encloſe it on all Sides like a Box, without touching the Walls of the *Santa Caſa*, or *Holy Houſe*; all that Painting, Sculpture, and Architecture, were able to perform in the Beginning of the laſt Age, has been beſtowed on this Fabrick, which is built of white Marble of *Carrara*, after the *Corinthian* Order, adorned adorn'd with the moſt exquiſite *Baſſo relievo*, in which the whole Hiſtory of the Virgin is repreſented. Between the double Pillars are two Niches, one above the other; the ten Niches below contain the Statues of the ten Prophets, and thoſe above, the ten *Sybils*. In the Middle of this, the *Santa Caſa*, or *holy Houſe*, is enclos'd, which is only a ſingle Chamber forty-four Palms long within, eighteen broad, and thirteen high, each Palm and a half being equivalent to thirteen Inches of our *Engliſh* Meaſure. To make the Story of the Removal of this Hall or Chamber the more probable, they pretend it to be built of ſome unknown Stones; but, upon the ſtricteſt Examination I could make, I found the ſame to be true Brick, of a different Bigneſs and unequal Shape, mix'd with ſome flat, greyiſh, or reddiſh Stones, which are very common here; the whole is cemented with Lime and Sand, but the Pieces are ill join'd, as if it had been done in great Haſte: The Maſon's Work is almoſt open to View on the Inſide, except in ſome Places, where you ſee certain Fragments of Plaiſter-work cover'd with Painting, repreſenting the Virgin, with the little *Jeſus* between her Arms; this appears plainly in five or ſix different Places. The *holy Houſe* ſtands from Eaſt to Weſt, a Thing not much uſed in *Italy*; on the Eaſt Side is a little Chimney, over which, in a Niche, ſtands the Image of the great Lady of *Loretto*, made, as they ſay, of Cedar Wood, and by the Hands of St. *Luke*, being about four Feet high. Her Ornaments are of an ineſtimable Value, and if we may believe thoſe that live thereabouts, ſhe has a great many Robes for Change, and ſeven different Mourning Habits for the Holy Week: Her triple Crown, which is all over cover'd with precious Stones, was the Preſent of *Lewis* XIII. King of *France*; they told us this Diſtich was engraven upon it;

> *Tu Caput ante meum cinxiſti*; VIRGO, *Coronæ*
> *Nunc Caput ecce tenet noſtra Corona tuum.*

He gave alſo a Crown to the Infant.

On both Sides of the Niche are Cupboards fill'd with ancient Ornaments of this Statue; and in a little Window in the Wall, on the South-ſide, they ſhew you ſome Earthen Diſhes which were uſed by the holy Family; ſome of theſe Veſſels have ſince been edg'd with Gold, but that which they ſhew'd us was a Porringer with a Silver Foot at the Bottom, done on Purpoſe to perſuade the World that it was made of a ſtrange Earth, whereas it is no more than Potters Ware, the Glazing whereof is not ſo nicely taken off, but that ſome Parts of it remain to be diſcover'd by a curious Eye. At the Weſt end, juſt oppoſite to our Lady, they ſhew you a Window about three Feet ſquare, through which the Angel enter'd: The preſent Arch of this Houſe being of a modern Fabrick, I aſk'd them what was become of the old Roof, but they could tell me no Tidings of it. Here are alſo two remarkable Things, which, they ſay, were tranſported at the ſame Time with the Houſe, *viz.* the Altar made by the Apoſtle's own Hands, and the Stone on which St. *Peter* celebrated Maſs the firſt Time; it is cover'd with Silver, and kept as a precious Relick under the Altar where they uſually officiate. The Floor of the *Santa Caſa* is of Squares of red and white Marble; but this is not the old Floor, becauſe that was left, together with the Foundations, at *Nazareth*. This ſacred Place has three Doors, two of which are at the End facing the Eaſt, and give Paſſage to croſs from North to South; here the Pilgrims are let in: The other is on the South-ſide, and leads to the Sanctuary, *i. e.* the Space between the Altar and the End of our Lady's Chamber.

To enumerate all the Riches of this Place, would be an endleſs Piece of Work, the infinite Number of precious Stones wherewith the Mantle of this Image is adorn'd, are alone ſufficient to dazzle the Sight of the Spectators; beſides that, all about you ſee nothing but Lamps, Statues, Buſts, and other Figures of Gold and Silver, not including the twenty-eight Candleſticks of Silver and Vermilion, and the twelve of maſſy Gold of twenty-ſeven Pounds Weight each. They have a Cuſtom of expoſing the laſt Offering of Value for a certain Time, before the Eyes of our Lady, in a Place made for that Purpoſe. That which we ſaw there was an Angel of Gold, with a Heart of the Bigneſs of an Egg in his Hands, ſet all over with Diamonds of a great Value. Our Conductor being an *Engliſh* Jeſuit, did not forget to tell us, that it was a Preſent of the Queen of *England*, and that the ſaid Princeſs had conceiv'd at the ſame Minute the ſaid Preſent was offer'd to our Lady, and was then big with Child. He had taken the Pains to make a whole Copy of Verſes upon this Subject, by Way of Dialogue between our Lady and the Angel, and took a great deal of Care to recite them to us more than once with an audible Tone, and would at laſt force a Copy of them upon me. This Queen was *Mary* of *Eſtè*, Conſort to *James* II.

Round the Walls of the Chapel that encloſe the *holy Houſe*, you ſee a vaſt Number of branch'd Candleſticks, to illuminate the whole Fabrick: But the greateſt Curioſity is the Proceſſions of thoſe Devotees, who crawl round the *holy Houſe* upon their Knees, ſome five Times, other ſeven, and others twelve Times, according to the different Degrees of their Devotions; ſome of theſe creep along from one Side, whilſt others meet them coming from the other, but all furniſh'd with Beads, and muttering *Pater noſters*; but as they all covet to come neareſt to the holy Place, this ſometimes occaſions no ſmall Confuſion, which is the Reaſon that this is never done but when there is only a ſlender Number of Pilgrims. The chief Reſort is at *Eaſter*, and the Virgin's Nativity, which they celebrate in *September*: I had it from credible Hands, that in ſome Years they have had here above two hundred thouſand Pilgrims during theſe two Feaſts. It is no unpleaſant Sight to obſerve the Caravans of theſe Pilgrims of both Sexes, who commonly come in Societies: As for Inſtance; a certain Body of Men join at *Bologna*, each of whom has a Frock of coarſe Linnen, and a Cawl of the ſame made like a Strainer for *Hippocras*, which covers their Head, leaving only three Holes for the Eyes and Mouth. They appear in different Colours, each Society chuſing their own, but are all provided with Beads, Girdles, Pilgrims Staves, and the Arms of the Society, which are either painted or wrought on the Back and Breaſt of every Member of the Fraternity. They commonly ride on Aſſes. The Women appear in as rich Apparel as poſſibly they can, and fix to the Bodies of their Gowns a little Pilgrim's Staff of the Length of a Hand, ſome of which are of Gold and Silver, adorn'd with Gems and Pearls, others of Ebony, Ivory, *&c.* artificially wrought. The Ladies commonly ride in Calaſhes, attended by whole Squadrons of Aſs-troopers.

After the extraordinary Things that have been ſaid of the *holy Houſe*, the Treaſury infinitely ſurpaſſes it in Riches; this is a ſpacious Chamber or Hall, wainſcotted, with ten large Preſſes with folding Doors, the arched Roof being a moſt curious Sort of Plaiſter, divided by gilt Compartments, beautified with excellent Pictures. Formerly they were glad to keep Abundance of Silver Work here, but the ſame having ſince given Place to Gold, is laid up elſewhere in great Heaps in private Places, and perhaps for private Uſes. Theſe Preſſes therefore are now quite fill'd up with nothing but pure Gold, precious Jewels, among which they ſhew a Pearl of an ineſtimable Value, ſhap'd after the Faſhion of a *Gondola*, or ſuch Veſſels and Ornaments as exceed the Value of Gold and Gems, by their Rarity. It would be a Piece of Folly to attempt a particular Account of what exceeds even Imagination itſelf; the beſt Idea I am able to give you of this Treaſure is, that you muſt conſider, that all the People, Princes and States, who acknowledge the papal Authority, have, for theſe four hundred Years paſt, endeavour'd to outvie each other in beſtowing the richeſt Preſents that could be had upon this *holy Houſe*. They have, beſides this, a ſettled Revenue, and vaſt Tracks of Land belonging to it; and the Boxes in which they gather the Alms of the Pilgrims, furniſh them every Year with more Money to make freſh Purchaſes. To excite the Charity of the Pilgrims, they do not forget to give it out, that the annual Charges of maintaining all that belong to the *holy Houſe*, amounts to no leſs than 38634 Crowns, whereas their ordinary yearly Revenue is no more than 27000 Crowns.

From the Treaſury we were conducted to a little Arſenal, which has ſcarce any Thing remarkable but ſome Arms taken from the *Turks*, who about fifty Years before (under the Reign of *Mahomet* II. and *Selim*) made a Deſcent thereabouts, to plunder this ſacred Place, but were ſtruck blind by our Lady, as they were endeavouring to break into the Houſe. From the Windows of this Arſenal, they ſhew you that Part of the Sea over which the Houſe was carried by the Angels; and our Jeſuit made moſt ſolemn Proteſtations, that ever ſince there remains a certain white Track on the Water, and that he had often obſerved it. I can't paſs by in Silence, that as we were going towards the *holy Houſe*, the Rabble flock'd about us, telling us, that we muſt not approach the holy Place without confeſſing and communicating, unleſs we would throw ourſelves into manifeſt Danger of ſudden Death.

From hence we went to the great Wine Cellar, ſtor'd with an hundred and fifty Tuns of excellent Wine. And in the *Apothecary*'s Office they ſhew'd us an hundred and forty-five Earthen Veſſels, highly eſteem'd, becauſe they believe them to have been painted by *Raphael*. On five of the largeſt are painted St. *Paul* and the four *Evangeliſts*, the reſt being adorn'd with the Hiſtories of ſome Saints, the Metamorphoſes of *Ovid*, *&c.* The City of *Loretto* is but ſmall, yet well fortified, and has the Title of a Biſhoprick. In the *Great Place* ſtands a moſt noble Fountain of Marble, beautified with divers Braſs Statues, and another erected by the Citizens of *Loretto*, in Acknowldgement of certain Privileges granted them by Pope *Sixtus* V. The Inhabitants get their Livelihood by making and ſelling Medals, Roſaries, ſanctified Beads, Images, *Agnus Dei*'s, Meaſures of the Height of the Image of our Lady, and ſuch Trifles. They ſell here Chaplets, the Beads of which were as big as Gooſe-Eggs, and are uſed on Days of extraordinary Devotion. The Tradition of the Removal of the *holy Houſe* is ſo ſtedfaſtly maintain'd in this Place, that there is ſcarce an Inhabitant ſo mean, but pretends to be deſcended from the Race of thoſe that ſaw the *holy Houſe* fix'd where now it is, by which Means they tranſplant this Tradition from Father to Son *in infinita*

8. Travelling from hence through *Recanati*, a little City ſeated on the Top of a Hill, three Miles from *Loretto*, I look'd into the great Church, where I could ſee nothing worth mentioning but the Tomb of Pope *Gregory* XII. who was depoſed from the Pontificate by the Council of *Piſa*. Ten Miles further, in a moſt fertile Country, on the Bank of the *Cotenza*, we paſſed thro' the Ruins of the City formerly known by the Name of *Helvia Ricina*, where we ſaw vaſt Fragments of an Amphitheatre built of Stone and Brick mingled together. We travell'd on this Side of the River for two Miles among the Hills, till we came to *Macerata*, where we lodg'd that Night; it being foul Weather, we could not ſtir abroad, but were told by the Inhabitants, that it was a pretty large and pleaſant Place. The Country between *Macerata* and *Tolentino* lies all upon a Level, and is extremely fruitful, but very indifferently peopled. They prop their Vines with Reeds, and plough with Buffaloes, theſe Beaſts being ſtronger than Oxen, and eaſier fed.

Tolentino is ſeated on a riſing Ground; for the reſt, a Place that has nothing remarkable belonging to it. The next Place we came to was *Belfort*, built all of Stone: A Mile beyond it begins the Province of *Umbria*, where we enter into the *Apennine*. I remember we fell into the Company of a Gentleman, who was going from *Macerata* to *Foligno*, who, after ſome Diſcourſe relating to the Lady of *Loretto*, told us, among other Things, that they were extremely pleaſed in *Italy* at the News they had lately received from *England*, that their King was turn'd Chriſtian. I deſir'd him to explain his Meaning, which he did in ſuch Terms, that I could not but ſtand amaz'd at his Ignorance, his Notions of the *Proteſtants* being very near the ſame the *Pagans* entertain'd of the *Primitive Chriſtians*, ſo that with all the Art I had, I could not perſuade him that we uſed Baptiſm among us: This Simplicity is ſo univerſal in this Country, that they are more ignorant of our Religion than the *Chineſe* themſelves, in which they are encourag'd by their Clergy, who leave no Stone unturn'd to make the *Proteſtants* odious to the People at any rate.

After we had left *Tolentino*, we travell'd for forty Miles among the Rocks; the chief Villages we took Notice of in our Way, were *Valcimara*, *Ponte di Trava*, *Metia*, *Dignano*, *Colſiorito*, *Caſa Nuova*, &c. We left the Mountains near the Village of *Pala*, from whence we diſcover'd the Plain of *Foligno*, which affords the moſt delightful Proſpect from the Hill, being water'd with many Rivulets, well inhabited, and extraordinarily improv'd; ſo that we had no ſooner quitted the Mountains, but we found ourſelves, as it were, on a ſudden, in a ſweet and agreeable Climate, where we ſaw the Almond-trees already in Bloſſom, after we had ſcarce recover'd ourſelves from the Cold of the froſty Rocks. Having continued our Journey for four Miles in a continual eaſy Deſcent, we came into a narrow level Way, on one Side whereof runs a ſmall and clear River, at the End of which lies *Foligno*, in the moſt fertile Country in the World; it has the Reputation of a better Traffick than moſt of the other Cities in the Eccleſiaſtical State; their Trade conſiſts chiefly in Draperies, Gold and Silver Laces, Silk Stuffs, and Spices. Soon after we came out of *Foligno*, we diſcover'd, on the other Side of the Plain, upon an Eminency, the Town of *Monteſalco*, famous for the Interment of St. *Clara*. They ſhew here the three Stones of the Bigneſs of ſmall Nuts, ſaid to be found in the Heart of that Saint, upon which the Hiſtory of the Paſſion is engrav'd. Near the Village of *Peſignano*, between *Foligno* and *Spoletto*, at the Foot of the Hill which encloſes the Plain, a large Spring ariſes through four ſeveral Outlets from under the Rocks, which make a ſmall Lake by their Conjunction, and thence ſend forth a pleaſant Rivulet, which waters the adjacent Country.

Not above two hundred Paces from the Spring-head, you ſee, near the Road, a ſmall Temple of the *Corinthian* Order, called St. *Salvatore*, where the Biſhop of *Spoletto* ſays Maſs once a Year. We obſerved the three following Inſcriptions on the Front, and on both Sides;

(1.) + S. C. S. *Deus Profetarum qui fecit Redemptionem.*

(2.) *Deus Angelorum qui fecit Reſurrectionem.*

(3.) + S. C. S. *Deus Apoſt.* * * *

the reſt being quite defac'd; which together with its Manner of building Croſs-wiſe and Eaſtward, as moſt other Churches, and the Croſſes carv'd in divers Parts of the Pediments, ſufficiently contradict the Opinion of thoſe who would have this Temple to have been conſecrated to *Clitumnus*, though perhaps it may have been erected upon or out of the Ruins of that of *Clitumnus*. But it is much more probable what I heard a ſkilful Antiquary ſay at *Spoletto*, *viz.* that the River before-mentioned is the *Clitumnus* mention'd by the Ancients, and among the reſt, by *Virgil*, in the ſecond of his *Georgicks*.

From *Peſignano* to *Spoletto* you travel for ſeven Miles in a plain Country, at the Foot of the Hills, full of Inhabitants. *Spoletto* is ſeated within the Mountains, beyond the before-mention'd Plain, a poor, ill-built, and thinly-peopled City. The Cathedral is celebrated for its Height, which however is not extraordinary. The Pavement is inlaid with ſmall Pieces of Marble, like St. *Mark*'s Church at *Venice*, and the Pediment of the great Portal is very fine *Moſaic* Work on a golden Ground. The Caſtle is ſeated on the higheſt Ground, and has nothing to boaſt of but its Situation. About five hundred Paces without the City, is a Church conſecrated to *Concord*, and ſince called the Chapel of the Crucifix. *Spoletto* has alſo ſome Remnants of Antiquity, a triumphal Arch half ruin'd, and the Fragments of an Amphitheatre with divers looſe Marble Stones, without Inſcriptions, except that the Arch ſtill retains a few Characters. The moſt remarkable Thing here is, the Aqueduct, which joins the Mountain of St. *Francis* to that of *Spoletto.* It is a *Gothic* Work, and remains entire and uſeful to this Day: Its Length is three hundred and fifty Paces, and its Height, from the Bottom of the Valley, two hundred and thirty.

Three Miles beyond *Spoletto* we paſs'd the higheſt Mountain hereabouts, called *Semma*; and after we had travell'd about five or ſix Miles among the barren Rocks, we found the ſucceeding Hills, for four or five Miles, covered with Laurels, wild Olive-trees, Tamarinds, Junipers, ever-green Oaks, and divers other ſempervirent Trees and Shrubs, which is very pleaſant. At our Approach to *Terni*, the Mountains, which had encloſed us in a ſtreight Paſſage upon the Brink of a Torrent, which runs at the Bottom of the Valley, extended themſelves by Degrees to a great Foreſt of Olive-trees laden with Fruit, which they generally ſuffer to hang till they drop off themſelves: The Olives for Pickling are gathered before they are ripe, and their Bitterneſs is removed by Art; the ripe are as bitter as the green ones, notwithſtanding which they produce the ſweeteſt Liquor that can be imagined.

From this Wood of Olives we travell'd for a Mile in an agreeable Plain, which brought us to *Terni*, ſeated upon the River *Nera*, in a moſt fruitful Country. This City is not ſo large in Compaſs as *Spoletto*, but much more populous; they ſell Abundance of Oil: We were told, that during ſix Months of the Year they make here an hundred Charges of Oil every Day, each Charge weighing ſix hundred Pounds, and is generally ſold at the Rate of twelve *Engliſh* Crowns. By an Inſcription to be ſeen on the Porch of the Seminary near the Cathedral, it appears, that it may contend for its Antiquity with *Rome* itſelf; the Inſcription being made for *Tiberius*, is dated thus;

Poſt Interamnam conditam DCCIIII.

Terni being anciently called *Interamna* and *Interamnium*, from its Situation *inter amnes*, or the two Branches of the River that waters it. On the Bridge is to be ſeen another Inſcription, put there in the Time of Pope *Urban* the Eighth, intimating, that this Bridge was built by *Pompey the Great*. About three Miles from *Terni* is the famous Water-fall of Mount *del Marmore*; the Way that leads up to it is very rocky, ſo that we were forced to alight often from our Horſes. By the Way we obſerved, on the South Side of the Mountain, divers Corners, which never felt the Rigour of the Winter-Seaſon, and among the Buſto's Abundance of *Jeſmins*, *Laurels*, *Myrtles*, *Roſemary* as freſh then (in *February*) as they are with us in *April*.

As we were aſcending the Hill *Papirio*, we obſerved, in a Valley near the Bank of a River, a Tract of Ground planted with at leaſt ſeven hundred Orange trees, a Thing rarely to be ſeen in the open Field, where they have no Shelter. But to retrun to our Cataract. The River *Valerio* has its Riſe among the Mountains, twelve or thirteen Miles from the Place where the Water falls down. At about nine Miles from its Head Spring it falls into the Lake of *Luco*, whence continuing its Current, with a much larger Stream than before, to a Plain, which, in reſpect of the Depth below it, proves a Mountain, it falls with great Force down from a craggy Rock three hundred Paces high, into the Concavity of another Rock underneath it, againſt which the Waters break with ſuch a violent Agitation, that it riſes like a Cloud of Duſt twice as high as the Fall, and occaſions a kind of perpetual Rain in all the adjacent Parts: The Repercuſſion of the Sun-beams in this pulverized Water produces an infinite Number of Rainbows, according to the various rebounding and ſpurting of this watery Cloud, the Sight whereof fills the Spectators with Amazement; at laſt all theſe Waters gather into an Abyſs, occaſioned by the continual Falling down of the Waters, and from thence break forth with incredible Force through the Crevices of divers Rocks, and ſo continuing their Courſe with a murmuring Noiſe a little further, at laſt join themſelves with the little River *Nera*, which is much enlarged by the Acceſſion of theſe Waters.

From *Terni* to *Narni* you travel for ſeven Miles thro' a plain and fertile Country; it affords an indifferent good Proſpect from the adjacent Hills on the Side you come from *Terni*, but deceives you in your Expectation after you come into it, being in a Manner deſtitute of Inhabitants, with narrow dirty Streets, and ſo uneven, that you cannot go five Steps without aſcending or deſcending; and their Paper Windows make a very beggarly Show. I took Notice *en paſſant*, of two tolerable handſome Fountains of Braſs. The Emperor *Nerva* was a Native of this City. A little before you enter the City, you ſee the Ruins of a Bridge, ſaid to have been built under the Reign of *Auguſtus*: It is admirable both for its Height and Structure, becauſe, after having joined the Mountain of *Spoletto* to another neighbouring Mount, it ends in the high Road towards *Pemſa*. The vaſt Pieces of Marble, which are the Materials of this Bridge, are joined together without any Cement or Iron-work: It hath four or five Arches, of which only one remains entire, the Top of the Mould of the largeſt being broken. I was credibly inform'd, that this Arch is a hundred and ſeventy Feet in Extent, which, if ſo, far exceeds the celebrated Bridge of *Rialto*.

We had no ſooner left *Narni*, but we found ourſelves again among the Mountains. Thus travelling on for eight Miles, we came to the Town of *Otricoli*, near which, at the Entrance of a Plain, are to be ſeen the Ruins of the ancient *Ocriculum*; but we could find nothing worth our Obſervation among them. Not long after we paſſed the *Tyber* over a Stone Bridge, that owes its Foundation to *Sixtus* V. and its Perfection to *Urban* VIII. as the Inſcription tells you. We came very late to *Citta Caſtellana*, and departed again early in the Morning, this Place having nothing that could invite us to ſtay therein. Near to *Regnano* we found the old *Via Flaminia*, with its Pavement entire, having not perceived any Footſteps of it before ſince we left *Rimini*, to which Place it extended itſelf, as ancient Authors inform us. After we had dined at *Caſtel Nuova*, an inconſiderable Place as well as *Regnano*, we continued our Journey to *Rome*, through an infinite Number of ancient Ruins; but moſt of the Country lay untill'd, and almoſt deſtitute of Inhabitants. Having repaſs'd the *Tyber* by the *Pons Milvius*, (as the ancient Authors call it) ſince by Corruption call'd *Ponte Molle*, we came upon a paved Way, which brought us betwixt many Gardens and Summer-ſeats, to the famous City of *Rome*.

9. After we had rambled two or three Days about *Rome*, good Company invited us to haſten our intended Journey for *Naples* which is reckon'd eight Days diſtant from *Rome*. About twelve Miles from this City we came to *Marino*, a great Town now belonging to the Prince *Colonna*, and formerly known by the Name of *Villa Mariana*. From *Marino* we aſcended a rocky Mountain, where we ſaw nothing but Wood and Buffaloes: Of the Lake of *Caſtel Gondalfo*, which we coaſted near an Hour, we ſhall have Occaſion to ſpeak in our Return. About five Miles after we had left the Lake, at the Deſcent of the Mountain, we diſcovered the Sea, and on our Right Hand, on a little Hillock, the City call'd *Citta de la Vigna*, being the ancient *Lanuvium*, a Municipal City, which gave Birth to *Antoninus Pius*, but not the *Lavinium* of *Æneas*, according to the common Opinion: *Lavina littora* is twelve Miles thence, towards *Prattica*.

It was late before we reached *Velitri*, a little City ſeated on a Hill, and ſurrounded by a Wall; it was anciently a conſiderable Place, when it durſt ſtrive with *Rome* itſelf, but now makes a very indifferent Figure. The People here are generally of Opinion, that *Auguſtus* was a Native of this City; and one of the Servants in the Inn was ſo communicative as to tell us ſo; but being aſk'd who that *Auguſtus* was, he anſwer'd, He was the firſt Chriſtian Emperor; for you muſt obſerve, that nothing is more common in *Velitri*, among the *Italians*,

Italians, than to canonize all the illuſtrious Men of Antiquity, whether *Chriſtians* or *Pagans*. It is certain that *Auguſtus* was born at *Rome*, under the Conſulate of *Cicero* and *Anthony*, as *Suetonius* poſitively affirms: It is however true, that his Family deduced its Origin from *Velitri*, *Gentem Octavium Velitris præcipuam olim fuiſſe, multa declarant.* The ſame Author tells us, that the Chamber in which he was nurs'd, near *Velitri*, was held in the ſame Veneration as now the *holy Houſe* of *Loretto: Huc introire*, ſays he, *niſi neceſſariò & caſtè religio eſt. Temerè adeuntibus metus & horror objiciebatur.* In the Midſt of the Market-place of *Velitri* ſtands a curious Brazen Statue of Pope *Urban* VIII. ſitting, as generally all the Statues of Popes are repreſented, to denote (as I ſuppoſe) their Superiority over other Princes. The Marquis *de Ginetti*'s Houſe is worth viewing, both for its pleaſant Situation, and the many Antiquities preſerved there; which are fine and judiciouſly choſen.

Deſcending from the Hill of *Velitri*, we took Notice of a great many Caves dug on purpoſe to keep their Wines cool; after which we travell'd for fifteen Miles through a poor Country, to the Foot of the Mountain, on the Top whereof ſtands the little City of *Lermonetta*, built upon the Ruins of the old *Lera*. About four Miles further we ſaw, on the Left Hand, about fifty Paces from the Highway, certain ancient Ruins, which they told us were the Remains of the Place called by St. *Paul* the *Three Shops*, but now the *Three Taverns*. On the Right Hand we diſcovered the Cape called now-a-days *Monte Circello*, ſuppoſed by ſome to have been an Iſland formerly: Here it was that the jealous *Circe* changed her Rival *Scylla*, the Miſtreſs of *Glaucus*, into a Sea Monſter, and *Ulyſſes*'s Companions into Hogs. A little Way from the *Three Taverns* you ſee the City of *Letia*, ſeated on a Mountain; its ancient Fame for the Goodneſs of its Wine is now quite loſt, the Mountain producing nothing of that Nature at preſent. It is true, the Woods, wherewith theſe Mountains are almoſt covered, produce Abundance of thoſe Trees, called *Ficus Indica*, ſome of which grow up to the Height of thirty or forty Feet, with Trunks as thick as a Man: Laurels and Myrtles you find in great Plenty in the Hedges, and Abundance of Orange-trees in the open Field.

Not far from *Letia*, at the Village of *Caſa Nuova*, you may take Boat upon the Lake, which brings you to *Terracina*, but we continued our Journey by Land, and turning to the Left, entered into a Valley, which brought us to the Mountain and City of *Piperno*. In our Paſſage thither I obſerved a Church-yard planted with Orange-trees, a Thing not uſually ſeen in *Italy*, where all People of Faſhion have their Chapels or Vault in ſome Church or Convent, and the poorer Sort are buried in ſome private Corner, without the Cities; beſides, whenever they have any Church-yards, they plant them with Pines, Yew-trees or Cypreſſes, but never with Orange-trees.

Piperno is a modern City, built near the Place where the ancient *Privernum* ſtood, the Metropolis of the *Volſei*, and the Reſidence of their King *Metabus*, Father to the famous *Camilla*. The Biſhoprick of *Piperno* was united with that of *Terracina*, by Reaſon of its Poverty: They keep the Biſhop's Chair in the Choir of the Cathedral. In the Church of St. *Benedict* they ſhew you an Image of our Lady, made by St. *Luke*, which, they ſay, could not be burnt at the Time of the Conflagration of *Piperno*. On the Hill of *Piperno*, called *Colle roſſo*, the Lilies and Daffodils grow naturally in great Plenty: This Hill alſo affords a peculiar fine Earth for Potters Ware. From the Top of this Hill you may ſee a little City called *Mayença*, near which is a Lake, the Waters whereof riſe conſiderably two Days before Rain.

From *Piperno* we travell'd over ſandy Hillocks, cover'd with various Sorts of ſempervive Shrubs; we got afterwards into a Wood, where we ſaw Abundance of Cork-trees much reſembling an ever-green Oak, and, to ſpeak Truth, I believe it to be a Kind of Oak, ſince it bears Acrons: It has this peculiar Quality, that the more you ſtrip it of its Bark, the ſtronger it grows, and produces immediately a new one, which renders it very profitable. Soon after we came out of the Wood, we went to ſee the Abby of *Foſſa Nuova*, ſaid to be built upon the Ruins of the *Forum Appii*, about ſome three hundred Paces from the high Road. The Story the Monks told us concerning *Thomas Aquinas* is a very odd one; they affirm, that the ſaid *Thomas Aquinas*, in his Way from *Fondi* to the Council of *Lyons*, finding himſelf very ill, alighted from his Mule, and faſtning a Stick in the Ground, tied his Mule to it, whilſt he laid himſelf down to ſleep in a Corner of the Wood not far from the Church; the Mule getting looſe, ran ſtrait to the Church, and ſetting his Feet in the Choir, ſunk in an Inſtant into the Pavement, where he died. They ſhew you the Print of his Feet, over which they have laid an Iron Grate. However, as they ſearch'd after the Maſter, to chaſtiſe him for his Negligence, they met with St. *Thomas*, who was ſo afflicted at the Loſs of his Mule, that he died within a few Days after in this Convent, where his Body was entomb'd in the Church, and was from thence afterwards removed to *Fondi*, and from *Fondi* to *Tholouſe*.

About ten Miles thence we began to diſcover certain Remnants of the ancient high Road call'd *Via Appia*, made by *Appius Claudius* when he was Cenſor: You ſee it come out of a deep Marſh, which is at preſent inacceſſible, whereas formerly it was the direct and common Road from *Capua* to *Rome*; a convincing Inſtance of the perpetual Viciſſitude of worldly Things. The ſame Thing we obſerved in our Way betwixt *Citta Caſtellana* and *Rome*, of the *Via Flaminia*, of which we ſaw now and then conſiderable Tracts preſerved entire, as on this Side *Regnano*, and towards *Caſtle Nuova*, fifteen Miles from *Rome*; whereas in other Places it mounts up to inacceſſible Mountains, and in other Places it is ſwallowed up in deep Marſhes and Valleys, occaſioned queſtionleſs by Winds, Rains, great Floods, Earthquakes, and other ſuch-like Accidents, which produce ſuch ſtupendeous Changes upon the Surface of the Earth.

In my Opinion theſe famous Roads are more ſurprizing than moſt other Pieces of Antiquity, conſidering that an infinite Number of Paſſengers, Horſes and Chariots ſhould inceſſantly, for ſo many Ages, tread on this Pavement, and yet ſo many conſiderable Fragments of it remain entire. The Stones which compoſe this Pavement are not all of the ſame Bigneſs, (*Procopius* ſays they were all ſquare, but he is in an Error) of a grey and reddiſh Colour, not unlike ruſty Iron, very hard, and ten or twelve Inches thick; generally ſpeaking, thoſe of the largeſt Size are above two Feet, and the leaſt not leſs than one. Notwithſtanding the great Difference in their Shape and Figure, they have been join'd ſo nicely, that in thoſe Places, where the Pavement is quite entire, you cannot thruſt the Point of a Sword betwixt them. Theſe Ways, which they call *Viæ Conſulares*, had on each Side Borders of the ſame Stone raiſed about two Feet above the reſt: I have obſerved them very entire in ſome Places: They called them *Cippo* or *Margines*, or *Marginationes Viarum*; and it is betwixt theſe Borders the true Breadth of theſe Highways ought to be taken, according to which I found the two Ways, *Via Appia* and *Via Flaminia*, twenty Palms broad, with very little Difference, which makes fourteen Feet, bating four Inches, *Engliſh* Meaſure. In ſome Places you ſee Ruts made by the Chariot-wheels three or four Inches deep, the Tract whereof, from one Pavement to another, is the ſureſt Mark of its ancient Situation; for the reſt, the Pavement is whole and even, without any viſible Impreſſions made by the Horſeſhoes. They told us, that the Foundation of this Pavement was another very thick Lay of Stone, fix'd on a Bed of Sand, which keeps it from ſinking. All along the Road to *Terracina* are to be ſeen the Ruins of many ancient Monuments, erected formerly for Ornament Sake, as on other great Roads.

Trachina (ſo call'd from its Situation upon a Rock of difficult Acceſs) or *Terracina*, is the *Anxur* of the Ancients, now a poor and ill-peopled Place, ſeated in a deſolate Country. A little beyond *Terracina* one may plainly

lainly diſcover divers Parts of the Pavement of the *Via Appia* to have been cut through the Rock called *Piſca Marina*, which being near a hundred twenty-ſix Feet high, the ancient Cyphers are marked from ten to ten in a capital *Roman* Character, on the Inſide of the Rock, which is cut perpendicular; ſo that the Cypher on the Top is CXX. A certain Antiquary of *Rome* told me, that having meaſured theſe Diſtances, he found them almoſt all unequal; whence ſome conjecture, that theſe Marks were only made for the Direction of the Head Workman, without any farther Deſign. Others are of Opinion, that the Diſtance of each Cypher marks the Diviſion of the Work of every ten Days, and that the Inequality muſt ariſe from the greater or leſs Difficulty the Workmen met with in cutting the Stone. The Narrowneſs of the Rock towards the Top, and the greater Diſtance in Proportion to it, ſeem to confirm this Opinion, were it not that, according to this Suppoſition, the firſt Tenth muſt have been marked above, and the Cypher CXX at the Bottom, it being very probable that they begun at the Top of the Rock. We continued our Journey over the Hills covered with Cork-trees, the Marſhes and the Sea on our Right; and thus keeping near the old Pavement, we arrived at Night at *Fondi*. In our Way, about three Miles beyond *Terracina*, we ſaw an old Wall, which, they told us, was the Boundary between the Eccleſiaſtical State and the Kingdom of *Naples*.

Fondi is ſeated in a flat Country, not far from a Lake bearing the ſame Name, which extends itſelf into a large Compaſs among the Marſhes, betwixt the Hills and the Sea. The Eels of this Lake are highly celebrated for their extraordinary Bigneſs. This City was entirely ruined in 1534, by *Hariaden Barbaroſſa* Admiral of the *Turkiſh* Fleet, the Hiſtory of which is painted in the Church of the *Annunciata*. *Fondi* is paved with the Stones taken from the *Via Appia*, but are not near ſo exactly joined. Not far from the Caſtle they ſhew you a Garden, which (they ſay) belonged to *Cicero*. The *Dominicans* preſerve, with a great deal of Veneration, the Chamber and Auditory of *Thomas Aquinas*, as alſo an old Orange-tree which he planted; he died in 1273, ſo that certainly this is the oldeſt Orange-tree that ever was heard of. I remember they told us ſtrange Things of this Tree, and among the reſt, that its Leaves were of a quite different Shape from thoſe of other Orange-trees; but we could not find the leaſt Difference, and were convinced by our own Eyes, that the Winter had not ſpared the Oranges of this Tree, any more than the reſt in other Places. After we had left *Fondi*, we travelled for ten Miles upon the old Pavement to *Mola*, among the Mountains.

Near *Itru*, a ſmall City ſeated upon a Rock about ſix Miles from *Fondi*, I took Notice of certain large Trees, called thereabouts *Soucellè*; the Fruit is a Cod of half a Foot long, of the Thickneſs of a Bean-cod; they dry them, and then they taſte like Honey or Manna; their true Name is *Carobba*. About ten o'Clock in the Morning we came to *Mola*, a little City ſeated upon the Sea-ſhore: Here are to be ſeen vaſt Heaps of Marble Stones and other Ruins, of *Formiæ*, once a glorious Place, built by *Antiphates* King of the *Leſtrygons*. The Air is infinitely ſweet here, and the Hills on the Gulph between *Cajeta* and *Mola* produce moſt excellent Fruits and Wines, as the Sea affords them vaſt Quantities of Fiſh. They ſhewed us in particular the Ruins of a certain old Palace, which, they tell you, belonged to *Cicero*, and was for the moſt Part deſtroyed by the Sea. The various Pieces of *Moſaick*, which are plainly to be diſtinguiſhed yet in ſeveral Parts, ſufficiently teſtify it was no ordinary Structure; and they aſſure you, with a great deal of Confidence hereabouts, that certain Inſcriptions have been taken from thence, which made it plainly appear to have been *Cicero*'s.

It blowing then a very briſk Gale, we were at a Stand whether we ſhould venture over the little Gulph (which is four Miles broad) to *Gaïeta*, ſeated on the very Point of the Cape, directly oppoſite to *Mola*; but at laſt having reſolved on the Paſſage, we found *Gaïeta* of a pretty large Extent, ſtrong by Art and Nature, by its difficult Acceſs upon the high Rock. The Harbour is alſo very good. Here is to be ſeen the Tomb of *Charles* of *Bourbon*, Conſtable of *France*, who was ſlain in the ſacking of *Rome* by the Imperial Forces: And the ancient *Mauſoleum* of *Munatius Plancus*, commonly called the Tower of *Orlando*. The Epitaph of the firſt is as follows:

> *Aucto Imperio, ſuperatâ Italiâ, devicto Gallo, pontifice obſeſſo, Româ captâ, Bourbonii hoc marmor cineres continet.* i. e.

> *The Empire enlarged,* Italy *ſubdued, the* Gaul *beaten, the Pope beſieged,* Rome *taken, the Aſhes of* BOURBON, *(by whom all this was done) this Marble contains.*

From hence we were conducted to the Cleft Mountain called *La Spaccata*, juſt at the Edge of the Sea-ſhore: It is ſeparated from the Top quite to the Bottom, where it is about four or five Feet aſunder, but grows broader and broader towards the Height: The Concavities on one Side, and the Protuberances on the other, directly oppoſite to one another, ſeem to be evident Marks of its being really divided, which, they ſay, happened at the Time when our Saviour gave up the Ghoſt. Upon one of the Inſides of this Rock they ſhew you the Print of a Hand, which ſoftened under it on the Challenge of a certain incredulous Perſon: Beneath it you ſee this Diſtich:

Improba mens verum renuit, quod fama fatetur
Credere: at hoc digitis ſaxa liquata probant.

Th' unbelieving Mind the Truth denies;
Tradition proves: The Rock new Proof ſupplies.

This Rock being a famous Pilgrimage, there are ſmall Steps contrived, which lead down to a little Chapel dedicated to the Holy Trinity. The Curate would have given us ſome Pieces he cut off with a Hammer; but finding us not willing to overcharge ourſelves with ſuch Sort of Baggage, he ſeemed to be offended at our Refuſal, and at the loſing of his own Pains.

From thence taking our Way to the Cathedral, we were ſhewed, among other Antiquities, a pretended Pillar of the Temple of *Solomon*; four ſuch-like are to be ſeen at the high Altar of St. *Mark*'s Chapel at *Venice*. Here is alſo a very ancient Veſſel of white Marble, ſaid to have been found at *Mola*, which now ſerves inſtead of a Font in the Baptiſtery: It is a moſt curious Piece, and moſt admirably preſerved: Its Shape reſembles a Bell about four Feet high, ſupported by four Lions of the ſame Materials. The *Baſſo relievo* is eſteemed excellent Workmanſhip, eſpecially the little *Bacchus* riſing out of *Jupiter*'s Thigh, put by *Mercury* into the Hands of *Ino*. All round it you ſee *Satyrs* and *Bacchanals*, and among the reſt a *Faunus* playing on two Pipes at once, as I have ſeen the Shepherds do in *Tyrol*; the Workman's Name is engraven on the Veſſel, ΣΑΛΠΙΩΝ ΑΘΗΝΑΙΟΣ ΕΠΟΙΗΣΕ. Not far from the Garden of the *Franciſcans*, called *Zoccolanti*, is a Buſh of Thorns, which has ſcarce any Pricks, which they ſay has grown thus ever ſince St. *Francis* rolled himſelf there to extinguiſh his Luſt. Near the Place called *Della Foglia*, they ſhew you where he preached to the Fiſh.

As you go up by the little Door of the Epiſcopal Palace, over-againſt the Altar of the *Holy Sacrament*, there is a Marble Statue of about four Palms high, repreſenting an old Man ſetting his Feet upon a little Dog, underneath which is a Death's Head, and a Serpent, whoſe Tail is placed on the Dog, wraps itſelf about the old Man, and reſts on his Head, and has an Eagle on his. This is generally ſuppoſed to be the Statue of *Æſculapius*, with his Serpent, the Dog ſignifying Vigilance required in a Phyſician, and the Eagle the Empire of God; the Death's Head is an Emblem of human Nature, ſubject to that Deity, or the Object of the Art of Phyſick. After a ſhort Stay at *Gaïeta* we returned to *Mola*, and then coaſting the Sea upon the *Via Appia* for eight Miles, came to the Ruins of the ancient City of *Minturna*, in the Neighbourhood of which *Marius* ſheltered himſelf after his Army had been defeated by *Sylla*, as Hiſtory informs us.

We took Notice in our Paſſage of the Ruins of an old Amphitheatre, and the Remnants of an Aqueduct which came from the little City of *Tajetto*, two Miles further on the Left Hand. The River *Garigliano* (formerly called *Lyris*) runs juſt by *Minturna*; we paſſed it in a Ferry-boat, and quitting the old troubleſome and ſlippery Pavement, travelled through the Meadows to the Village of St. *Agatha*, where we lodged that Night. The Country between this Village and *Capua* (which is ſixteen Miles) is very level, and extremely fruitful near *Capua*. Not far from St. *Agatha* they ſhewed us, at ſome Miles Diſtance, the Hills which formerly produced the famous *Falernian* Wine, that inſpired the *Roman* Poets, but are at preſent barren.

Capua is ſeated upon the Bank of the *Volturno*, the chief River of the Kingdom of *Naples*, though of an indifferent Bigneſs; it has various Inſcriptions and Marble Stones, brought thither from the ancient *Capua*, the Ruins whereof we viſited, about two Miles from thence, near the Mountains to the Eaſtward, the Town called St. *Mary*'s being built out of the Ruins of this once ſo celebrated City: The many little Temples and old Caſtles, the Remnants of two Amphitheatres, one of the Gates, and a great Number of broken Pillars, and other magnificent Fragments of Architecture, are undeniable Proofs of its former Grandeur. The Country People brought us Variety of Medals to ſell, but as they are cunning enough to carry the beſt to the Antiquaries of the neighbouring Cities, who pay them a good Rate for them, ſo they ſeldom offer any Thing but their Refuſe to Travellers. The Campaign betwixt *Capua* and *Naples* (which is ſixteen Miles, and Part of the Province of *Terra di Lauro*) is perhaps the moſt fruitful Soil in the World, whence it is that they have given it the Name of *Campagna Stellata*, to ſignify the benign Influence of the Stars upon this Country, as if Fertility proceeded wholly from thence. Among other Places we paſſed through *Averſa*, built (as they tell you) out of the Ruins of *Atella* by the *Normans*, after they had driven the *Saracens* and *Greeks* out of *Naples*.

The City of *Naples* was rebuilt by the *Cumani*, who gave it the Name of Νεάπολις, to diſtinguiſh it from the Remnants of the high City, unto which they gave the Name of Παλαιόπολις, for both were before that Time called *Parthenope*, from the Mermaid *Parthenope*, who, after *Ulyſſes* and his Companions had eſcaped her Snare, threw herſelf, out of Deſpair, headlong from a Precipice, and was interred at *Palaiopolis*; though ſome others derive its Etymology from *Parthenope* the Daughter of *Eumelus* King of *Theſſaly*, who ſettled a Colony there, and changed its ancient Name into that of *Parthenope*. Theſe *Grecian* Names ſeem ſufficiently to evince, that the *Greeks* were the Founders of this City, which is very large and populous, though I am not able to give you an exact Account of the Number of its Inhabitants: Its Figure is very irregular, and its Circuit, according to the Computation of ſome who have walked round the Wall, is about nine Miles, not including the Suburbs, which, amounting to nine more, make the whole Circumference up eighteen: It is paved all over with ſquare Stones of the ſame Bigneſs, the Streets being generally ſtreight and broad, the Houſes lofty, flat-roofed and uniform, in which it exceeds the Buildings of *London*, *Paris*, *Venice*, and even *Rome* itſelf, all which have very fine Palaces, but theſe are mixed with a great Number of ordinary Houſes, whereas at *Naples* they are, generally ſpeaking, very handſome Fabricks. To the South it is encloſed by a little Bay, and to the North by very fertile Hills, which riſe, by an eaſy Aſcent, into *Campagna Felice*; to the Eaſt lies the Plain which leads to Mount *Veſuvius*, and on the Weſt Side the *high Town*, where are the *Chartreux*, and the Caſtle of St. *Eraſmus*, the Proſpect of which Aſcent is very charming to the Beholders.

Beſides theſe fine private Houſes, there are a great many may be ranked among the Number of the beſt Palaces; as for Inſtance, thoſe of the Dukes of *Matalone*, *Gravina*, *Airola*, and *de la Tour*; of the Princes of St. *Agatha*, *Montmilet*, *Botera*, and *Cellamare*; the Palace of the Viceroy ſtands in a *Great Place*, its Front is very regular, and adorned with three Orders of Architecture; its whole Length is near four hundred Feet, and was built by the famous *Montana*. The three Caſtles of *Naples*, the Academy called *Studii Nuovi*, the School for riding the great Horſe, the Convents in general, the Hoſpitals, the Arſenal, and the Magazines for their Galleys, are all very remarkable Structures. The whole City is adorned with a conſiderable Number of Fountains, among which three are of an incomparable Grandeur and Beauty: But the Churches here, both for their Number and Beauty, ſurpaſs all the reſt; their Frontiſpieces, Portals, Chapels, Altars and Tombs, being the moſt exquiſite Pieces of Architecture that Art ever produced; they are filled with Pictures, Sculptures, and Gold and Silver Veſſels, and their Arches, Wainſcots and Walls are covered with the moſt precious Marble curiouſly laid together, or with Compartments of *Baſſo relievo*, or of gilt Joiners Work, and beautified with the Performances of the greateſt Painters. To be ſhort, wherever you turn your Eye, you are dazzled with the curious Works of *Jaſper*, *Porphyry*, and *Moſaick* of all Sorts, and the moſt exquiſite Products of Art. The Church of the *Jeſuits* is an excellent Fabrick, embelliſhed with magnificent Ornaments from Top to Bottom. The Painting of the Dome is the Work of *Lanfranc*; that of St. *Mary* of the *Annunciata* is not inferior to it; and the famous Hoſpital (which has two hundred thouſand Ducats annual Revenue) is exceeding rich, as are thoſe of St *Philip* of *Neri*, St. *Maria la Nuova*, St. *Severin*, St. *Paul*, St. *Dominick*, the Church and Convent of Mount *Olivet*, the Church of the *Holy Apoſtles*, St. *John Carbonara*, of the *little Hoſpital*, and St. *Maria della ſanità*, not to mention many more, which are all very fair, and have their Veſtries and Treaſuries crowded with Riches. I remember that two *Theatines*, as they were conducting us into their Church of the *Holy Apoſtles*, made heavy Complaint of the Poverty of their Order, (they having no Poſſeſſions, and at the ſame Time not being permitted to beg like the *Mendicants)* but after they had ſhewed us the Magnificence of their Church, and fourteen large Cupboards in the Veſtry filled with Gold and Silver Veſſels, and other precious Things, we had ſufficient Reaſon to believe that they had no great Occaſion to go a Begging. In *Italy* all Monks are at once Miſers and Mendicants.

The ſpacious Convent of the *Chartreux* of St. *Martin*, is every where full of curious and magnificent Pieces; and the Church, though none of the largeſt, yet is a compleat Piece, both for the Materials and Exquiſiteneſs of the Art. The Monks that were our Conductors aſſured us, that under one Priorate there were beſtowed among them above five hundred thouſand Ducats in Silver Plate, Sculptures and Pictures: The Nativity of Chriſt is a moſt exquiſite Piece, done by *Guido*; the four Pictures of the Laſt Supper are of the Hands of *Eſpagnolet*, *Hannibal Carrache*, *Paul Veroneſe*, and Cavalier *Maſſimo*, the laſt of which has repreſented Chriſt ſtanding, giving his Sacrament to his Apoſtles, who are upon their Knees; beſides many other Pieces of high Value, and exquiſite in their Kind.

The Pavement of the Cloyſter (which is an hundred Paces ſquare) is of Marble inlaid in Boughs and ſuch-like Ornaments, the four Galleries being ſupported by ſixty Pillars, each of one entire Piece of the beſt white Marble of *Carrara*. Every Friar has his own Chamber, a Cloſet and Library, beſides a little Garden; and the Prior's Lodgings are fit for the Reception of a Prince: Here it is they ſhew the famous Crucifix of *Michael Angelo*, done, as they ſay, to the Life, after a Peaſant, who, to that End, was crucified by the Painter; it is of Wood, and not above half a Foot high: It is obſervable, that the Crucifix holds his Head ſtreight, which looks not very like the Poſture of an expiring

Perſon on the Croſs. They have alſo a St. *Lawrence*, by *Titian*; and ſome Deſigns of *Rubens* and *Albert Durer*, which are valued at a high a Rate, and are very fine.

From this Aſcent you have the moſt delightful Proſpect that can be well conceived; you have at one View the Sea and many Iſlands, and among theſe that of *Caprea*, the famous Seraglio of *Tiberius*, as likewiſe the whole City of *Naples*, with its three Caſtles, *viz.* of the Egg, the new Caſtle, and that of St. *Elmo*; the Harbour, Mole, and Lantern; and along the Sea-ſhore, the Creeks and Inlets mixed with little Capes, as alſo a great Number of Villages built along the Sea-ſide; towards the Land-ſide, the Gardens and fertile Hills leading into *Campania Felice* are the moſt agreeable Objects in the World; and at a greater Diſtance you may behold the horrible Smoke of Mount *Veſuvius*. To deſcribe all the Relicks, Statues, or miraculous Images, as they ſtile them, would be endleſs; I will only mention a few of them: At St. *Lewis* they keep ſome of the Virgin's Milk, which becomes liquid on all our Lady's Feſtivals; at St. *John Carbonara*, the Blood of St. *Januarius* is boiled up when any one approaches his Shrine, as the Blood of St. *John Baptiſt* (preſerved at St. *Maria Donna Romita*) does, whilſt they ſay Maſs for his Beheading. I paſs by the Pieces of the true Croſs, the Nails, the Branches of the Crown of Thorns, the Images ſaid to be made by St. *Luke*, and ſuch-like Rarities. At St. *Dominick the Greater*, they ſhew the Crucifix that ſpoke to St. *Thomas Aquinas*; and another in that of the *Benedictins*, which, if you will believe them, ſpoke more to Pope *Pius* V. At the Church of St. *Agnello*, in the Chapel of the *Monaci*, they ſhew you alſo a ſpeaking Crucifix, with a long Inſcription underneath relating to the Story; and another in the ſame Church, which, they tell you, uſed to hold Dialogues with *Jane* the Mother of St. *Agnello*, and with St. *Agnello* himſelf; this they ſtile the Image of St. *Mary of Interceſſion*. Among the miraculous Crucifixes here, that of St. *Mary* of the *Carmelites* muſt not be paſſed by in Silence; for when Don *Pedro d'Arragon* beſieged *Naples* in 1439, it bowed its Head at the Sight of a Cannon-ball, which only beat off the Crown of the Crucifix.

The Churches contain a vaſt Number of Tombs and Epitaphs: In that of St. *John the Evangeliſt*, are ſix or ſeven Epitaphs made by *Joh. Jovianus Pontanus*, among which one is for his Daughter *Lucia*, another for his Son, and two more for his Wife and himſelf. At St. *Clara*'s you ſee the Epitaph of King *Robert*, ſirnamed the *Good* and the *Wiſe*. At St. *Domin. maj.* one for a Lord of the noble Family of *Caraffa*, and another for the Cardinal *d'Ariano* of the ſame Houſe. In the Veſtry of this Church you ſee many of the Tombs of the Kings and Queens of *Naples*, among which, thoſe of *Iſabel* of *Arragon*, Daughter of *Alphonſus* I. and Wife of *John Galeazzo* Duke of *Milan*, and of *Joan* the firſt Queen of *Jeruſalem* and both the *Sicilies*, deſerve to be remembered: The firſt runs thus:

Hic Iſabella jacet, centum ſata ſanguine Regum,
Quâcum Majeſtas Itala priſca jacet;
Sol qui luſtrabat radiis fulgentibus orbem,
Occidit, inque alio nunc agit Orbe diem.
Obiit die 11 *Febr.* 1524.

The ſecond thus:

Inclyta Parthenopes jacet hic Regina Joanna
Prima; priùs fœlix, mox miſeranda nimis.
Quam Carolo genitam, mulctavit Carolus alter
Quâ morte illa virum ſuſtulit ante ſuum.

She was the Daughter of *Charles* of *Sicily*, Duke of *Calabria*, and was ſtrangled by *Charles Duras*, whom ſhe had adopted, and who rebelling againſt her, accuſed her of having ſtrangled *Andrew* of *Hungary*, her firſt Huſband, whoſe Tomb is to be ſeen in the Cathedral.

In the ſame Place is alſo to be ſeen the Tomb and Epitaph of the famous Marquiſs of *Piſcara*, by *Arioſto*; and in the Church of St. *Mary of Concord*, a long Inſcription upon the Tomb of a King of *Fez*, who having embraced the *Roman* Faith, and fought under the *Imperial* and *Spaniſh* Banners, died an hundred Years old in 1641. The Tomb of *Innocent* IV. who died at *Naples* in 1254, is to be ſeen in the Cathedral, with two long Epitaphs, one whereof is in *Leonine* Verſe. In the Church of St. *Agnello* is the following Epitaph for a Biſhop who refuſed the Cardinal's Cap.

Sigiſmundo Pappacudæ Franc. F. Tropeienſium Præſul; viro opt. & Juriſconſulto, qui cum in cœtum Cardinalium fuiſſet a Clemente VII. adſcitus, maluit in Patriæ Epiſcopus vivere. Vixit Ann. 80. *M.* 6. *D.* 10. *Obiit* 1536.

In the Church of St. *Severin* of the *Benedictines*, in the moſt beautiful Chapel belonging to the Family of St. *Severin*, are to be ſeen the Tombs and Inſcriptions of three young Lords, Brothers, poiſoned by their Uncle; as alſo that of their Mother, lamenting the untimely Death of her Sons. Directly oppoſite to the Church of the *Carmelites* you ſee a kind of Chapel, erected by Order of *Charles* I. King of *Naples*, in the ſame Place where he cauſed the Head of the unfortunate *Conradin* to be cut off, and at the ſame Time that of his Couſin *Frederick* Marquiſs of *Baden* and Duke of *Auſtria*, with five or ſix other Lords, the whole Hiſtory of which is painted in *Freſco* on the Inſide of the Walls of the Chapel, in the Middle of which ſtands a Pillar of *Porphyry*, and round about it this Diſtich:

Aſturis ungue Leo, pullum rapiens Aquilinum
Hic deplumavit, Acephalumque dedit.

The *Carmelites* ſhewed us in their Convent the Place where the famous Rebel *Thomas Aniello* (commonly called *Maſſaniello*) was ſlain, after he had been the Head of the Rebels eighteen Days: I have a Piece of Money that was coined whilſt this Rebellion laſted, with this Inſcription, *S. P. Q. N.* As we paſſed by the Church of St. *Mary major*, our Conductor told us, there was a brazen Hog to be ſeen there, made by *Pomponius* Biſhop of *Naples*; it ſeems the Place where this Church now ſtands was haunted by the Devil in the Shape of a Hog, which ſo terrified the Inhabitants, that they left their Houſes, till this holy Biſhop being bid by the Virgin to build a Church for her in the ſame Place, the infernal Hog diſappeared.

10. The City of *Naples* having been ſubject to ſo many Maſters and various Revolutions, has loſt the greateſt Part of its Antiquities; however, in the Front of St. *Paul major* you ſtill ſee the Frontiſpiece of the antient Temple of *Apollo*, afterwards dedicated to *Caſtor* and *Pollux* by one *Tiberius Julius Tarſus*, his Name being to this Day diſtinctly to be ſeen on one of the Frieſes of this Frontiſpiece.

ΤΙΒΕΡΙΟΣ ΙΟΥΛΙΟΣ ΤΑΡΣΟΣ.

The Portico reſts upon eight twiſted Pillars of the *Corinthian* Order, and the Pediment is adorned with *Baſſo relievo*, repreſenting the Deities. The Columns of the *Riſtituta* are ſaid to have been taken from the ancient Temple of *Neptune*. Here are alſo to be ſeen ſome Ruins of an Amphitheatre, and an ancient Statue of the *Nile* upon a Crocodile. The Houſe of D. *Diomedes Caraffa* contains many Sculptures and ancient Inſcriptions; in the Court you ſee the Head and all the Creſt of a brazen Horſe, that had no Bridle, which being an Emblem of the Liberty of *Naples*, whilſt yet a Common wealth, ſtood in one of the greateſt Places, but King *Conrad* having ordered a Bit to be put on this Horſe, directed the following Diſtich to be ſet on the Pedeſtal:

Hactenus effrænis, Domini nunc paret habenis
Rendomat hunc æquus Parthenopenſis equum.

On the Hill, where it is ſuppoſed the ancient *Palæpolis* ſtood, are a great many old Ruins, and divers Collections

tions of Medals, which contribute not a little to the true Underſtanding of the Hiſtory of *Naples*, are to be found in the Cabinets of the Antiquaries of this City, and eſpecially in that of Mr. *Richetti*. Of the Catacombs I ſhall have Occaſion to ſpeak hereafter.

After Pope *Sixtus* V. had cleared the Eccleſiaſtical State of the *Banditti*, they became more numerous in the Kingdom of *Naples*; ſo that even within theſe few Years Travellers were forced to go in Caravans to ſecure themſelves againſt their Inſolencies; but the Honour of freeing this Country from theſe dangerous Vermin is due to the Marquiſs *del Carpio* late Viceroy of *Naples*, who put a great Number of them to Death; and I remember we ſaw lately above five hundred of them at Work in the Arſenal, who had ſurrendered under Condition that their Lives ſhould be ſaved, and not to be made Galley-ſlaves. But notwithſtanding all this, it muſt be owned, that the Generality of the *Neapolitans* are a very wicked Generation. We were credibly informed, that in two Priſons only there were no leſs than four thouſand Malefactors at that Time. This has queſtionleſs given Occaſion to the noted Proverb, *That* Naples *is a Paradiſe inhabited by Devils.*

Beſides this, notwithſtanding all the outward Grandeur of this City, it has ſeveral Things which not a little overcloud its Luſtre; for Women are as hard to be ſeen here, as in any Part of *Italy*. The Habits and Equipages of Perſons of Quality are all black, not being allowed the Wearing of Gold and Silver, and the greateſt Lord has no more than two Footmen; beſides, moſt of their Coaches are drawn by Mules; and they generally appear in the *Spaniſh* Dreſs. The Viceroy's Court is very ſilent and melancholy: Their Trade is alſo much decayed, their chiefeſt Commodities at this Time being Soap, Snuff, Stockings, Waiſtcoats, ſome Silk Manufactories, *&c.*

From *Naples* to the Top of Mount *Veſuvius* is eight Miles, of which I ſhall endeavour to give you a more exact Account than you have ſeen hitherto. The firſt four Miles, as you paſs along the Sea-coaſt, you go through many good Villages, and the Grounds are very well cultivated, yet from Place to Place you ſee great Stones, thrown thither by the Eruptions of that Mountain: The laſt of theſe Villages is called *Reſina*; when turning to the Left, we began to aſcend, but ſtill on Horſeback, for two good Miles further, among looſe Stones, and Heaps of burnt Earth; the nearer you come to the Top, the more you find the Ground cracked and covered with theſe burnt Stones; and in ſome Places you ſee the Tracts of the Channels of Sulphur, which have been forced down from the Top towards the Bottom. About the Middle, the Aſcent beginning to grow extream rough, you muſt alight to paſs on Foot, which is not done without a great deal of Difficulty, the Aſhes, or rather calcined Duſt, not affording any ſure Footing: But at laſt, after ſeveral ſmall Reſtings, we came up to the ancient Gulph or Hollowneſs, for of late conſiderable Alterations have happened in this Mountain. The Circumference of this firſt Gulph has about a Mile in Diameter, to the beſt of our Gueſs; the Edges being worn into ſeveral rugged Elevations, you may go down into it ſeveral Ways about a hundred Paces below the firſt Circle, being the whole Depth of this old Mouth; for this vaſt Abyſs was by an extraordinary Eruption, almoſt quite filled up with a Mixture of Sulphur, Alom, Bitumen, Saltpetre, and Nitre, which, after the Violence of the Eruption was paſt, turning into a hard Cruſt, produced a Level in this Gulph not above a hundred Paces below its exterior Brims; but ſome Time after, a furious Eruption having ſhaken and broken through this Cruſt, tumbled the hardened Pieces one upon another, as we ſee the broken Ice of a Pond congealed by a ſudden Froſt. This unequal Superficies is interſperſed with burning Funnels, which emit continual Exhalations; and in ſome Places we could feel the Heat through our Shoes. You muſt know, that in the Middle of this Superficies (which is almoſt of a circular Figure) another moſt violent Eruption has forced its Paſſage, and caſt up a new Mountain, which is likewiſe round and about a Quarter of a Mile high.

After we had traverſed that rough Space of about three hundred Paces broad, between the greater and leſſer Mountain, we aſcended this little Mountain with as much Pains as we had done the firſt, which we found full of ſmoaking Chinks, and in many Places lay a pure Sulphur mixed with a Kind of *Sal Armoniac*, of a Citron Colour. In ſome Places we ſaw a reddiſh porous Subſtance, like the Dregs or Scum of Iron as it comes from the Smiths Forge. The Top of this leſſer Mountain hath its Mouth as well as the great one, which is about one hundred Paces broad, and the Inlet to this vaſt ſubterraneous Abyſs, ſends forth a thick Flood of Smoak, which fills up the whole Concavity; the Winds forcing it ſometimes on one Side, and ſometimes on the other, we had an exact View of the Height of its Entrance or Brink, which is perpendicular within, except in one Place, where it is ſloping enough to deſcend into it, which we did after our Guide for ſixty or eighty Paces, when coming to the very Brink of this Precipice, we rolled down many Stones we broke off near it: We found them ſometimes to ſtop at the firſt or ſecond Falling, and ſometimes to take a long Courſe rebounding with a great Noiſe. We could not perceive any conſiderable Increaſe of the Smoak by the tumbling in of theſe Stones; and if they had been much bigger, they would perhaps have produced no other Effect, there being no great Reaſon to imagine that the ſulphureous Lake is perpendicularly under the Opening of this Mountain: I know ſome have had the Curioſity to blow up Part of theſe Rocks with Gunpowder; but this ſeems to me a dangerous Piece of Curioſity, where it is not ſafe to ſtay too long, by reaſon of the ſudden Eruptions that happen now and then; witneſs the famous *Pliny*, who was ſurprized with ſuch an one, though at a conſiderable Diſtance; and the furious Eruptions in 1682, 1685, and 1687, not to mention thoſe recorded by the more ancient Anthors.

The little Time we had to ſtay about *Pozzuolo* did not permit us to take ſo particular an Account of all the Curioſities there, as we might have done, had we been more at Leiſure; however, I do not queſtion relating ſomething that is new concerning this Journey. In our Way from the Suburbs of *Naples* to *Pozzuolo* we ſaw the Hill known by the Name of *Pauſilypus*: To confeſs the Truth, it is moſt delicious, of an infinitely charming Situation, extreamly well cultivated, full of Summer Seats, and planted with moſt excellent Vines. The Aſcent to this Hill was not ſo ſteep, but that it might have been made eaſy enough, but, moved by an extravagant Humour, they reſolved to pierce the Mountain, and by that Means made indeed a ſhorter Way, and of an extraordinary Contrivance, but much more troubleſome than the Aſcent would have been. This Cave is generally called the *Grott of Pozzuolo*, being in ſome Places cut through the Rock, in others through the Sand; its whole Length is near a Mile, the Height between thirty and forty Feet, and eighteen in Breadth, affording an eaſy Paſſage for two Coaches: It has no other Light than at the two Extremities, and a little Hole in the Middle over the Oratory, which is made in the Rock by enlarging that Part ſomewhat beyond the reſt. The Duſt which is raiſed by the Paſſengers is very troubleſome, to avoid which you cover your Face with a Handkerchief; and to avoid running againſt each other, you cry as you paſs along, *To the Right*, or *to the Left?* This is an ancient Work, *Seneca* in his Time complained of its Duſt and Darkneſs; it is attributed to one *Coccejus*, who (according to ſome ancient Annals) is ſaid to have employed a hundred thouſand Men in it, who finiſhed it in fifteen Days; but it is not known who this *Coccejus* was, ſome believe him to be a Prince or Governor of that Part of the Country, ſome only the Head Workman, or Undertaker of the Deſign.

A little beyond *Pauſilypus* lies the Lake of *Agnano*, between two Hills, almoſt round, and two Miles in Circumference: The Water is very clear, and without any ill Taſte, and though it ſeems continually boiling, produceth not the leaſt Heat, but abounds with great Plenty of Tench and Eels. Near the Banks of this Lake are the two celebrated Caves, known by the Names of the *Baths of St. German*, and the *Grotta di Cane*, or *Grott of the Dog*; the Etymology is ſo fabulous, that I will not pretend to enlarge upon it; thus much is certain, that after you have deſcended three or four Steps into theſe Baths, you on a ſudden feel Heat, and a ſulphureous Smell, which put you immediately into a Sweat, and is accounted very ſalubrious to gouty Perſons, and thoſe afflicted with ſome other Diſeaſes, who come hither in Crowds for that Purpoſe.

The *Grotto of the Dog* is no more than the Opening of a Cave, at the very Foot of a Hill, being no more than nine Feet long, four and an half broad, and five high, and not made by Art; the Bottom is pure Earth, and the Sides have nothing but what is natural: I obſerved ſome Drops falling from above, which, they told us, were produced by the Condenſation of the Exhalations or Vapours raiſed from below; though I am rather of Opinion, that they diſtil from the Mountain, and pierce the Top of the Cave, out of the Bottom of which ariſes a ſubtile penetrating Exhalation, without any viſible Smoak, being a ſulphureous Steam, which ſtops the Breath in a Minute. We ſaw him who keeps the Key of this Cave, as well of the aforeſaid Baths, make the Experiment with a Dog in the following Manner. He enters as upright as he can, proceeds to the Middle of the Cave, where bowing and kneeling by Degrees, holding his Head as upright as he can, he ſits down upon his Heels, ſo that with his Hands he can hold a Dog by all his four Feet down cloſe to the Ground: The poor Creature is ſeized in an Inſtant with violent Convulſions, ſtretches himſelf without crying, and becomes ſtiff, when he that holds him throws him out of the Cave, and being preſently caſt into the Lake, which is not above twenty Paces diſtant, he recovers his Breath in a Minute, and ſwims out of the Water. The ſame Experiment has been made upon Men and ſeveral Sorts of Animals with the ſame Effect; the Viceroy D. *Pedro de Toledo* made it with two of his Slaves, who died. Two Feet from the Ground, and even lower, there is nothing to be ſeen of this Nature. The Keeper ſhewed us another Experiment with two lighted Torches, one of which he put near the Ground, and it was extinguiſhed immediately without the leaſt Smoak; then lighting it by the other, he put that near the Ground as the former; which being likewiſe put out, he rekindled that by the firſt, and ſo by Turns.

The like ſulphureous Exhalations are ſaid to be in a Cave at *Zoli* in *Hungary*; and *Pliny* calls this we are ſpeaking of now, *Spiraculum Puteolanum.* All the adjacent Country ſeems to be filled underneath with Brimſtone, eſpecially about *Monte Secco* and *Solfatara*, where we ſaw ſubterraneous Holes filled with Sulphur and Allum, which ſend forth Flames and Smoak with the ſame Smell and Noiſe as we ſee in *Veſuvius.* They prepare Abundance of Roch-Allum on the *Solfatara*, which is a yellow and white Mountain, dried up and conſumed by its own Fire; they work in ſmall Huts, and the Cauldrons boil only by the Heat coming out of the Openings. The Top of this Hill has a Kind of oval Baſon about 1250 Feet long, and a Mile in Breadth, the Exhalations of which are often ſmelt at *Naples*, and blacken their Marble and other Ornaments, nay, even corrupt the neighbouring Waters; whence it is that the *Capuchins* of St. *Januarius*, who live near it, have been forced to raiſe their Ciſterns from the Ground upon Pillars. Moſt of the Inhabitants in the City, and about it, will tell you, that theſe ſmoaking Holes of *Solfatara* are actually the Chimnies of Hell itſelf: *Capaccio* is of the ſame Opinion, and aſſures us, that the *Capuchins* hear often moſt dreadful Howlings, and are frequently diſturbed with Hobgoblins.

From hence we deſcended towards *Puzzoli*, anciently a famous City, as a vaſt Number of ſtately Ruins ſufficiently teſtify, though at preſent it is but an inconſiderable Place. Near to St. *James*'s Church you ſee the Ruins of a magnificent Amphitheatre, the *Arena* whereof was an hundred ſeventy-two Feet long, and eighty-eight broad, built of hewn Stone: Here they tell you St. *Januarius*, with ſix other Chriſtians, being thrown before the Beaſts, they adored inſtead of devouring them; but not long after theſe ſeven had their Heads cut off near *Solfatara*, in the ſame Place where the Church dedicated to St. *Januarius* now ſtands. On the Altar you ſee theſe Words:

> *Locus decollationis S. Januarii & ſociorum ejus.* i. e.
>
> *The Place where St.* Januarius *and his Companions were beheaded.*

Cloſe to the Amphitheatre remain ſtill vaſt Ruins, but buried almoſt under Ground, looked upon by ſome as the Remainders of a Labyrinth, though I am rather inclined to believe it a Fiſhpond like the *Piſcina Mirabilis.* The Cathedral is built not only upon the Ruins of the Temple of *Jupiter*, but alſo of Part of its Materials. In the Frontiſpiece you ſee theſe Words, *Calſurnius Luc. Fil.* which ſhew evidently by whom it was built.

Between the City and the Amphitheatre are to be ſeen alſo the Ruins of the Temple of *Diana:* In tempeſtuous Weather the Sea throws aſhore, near the *Dominicans* of *Jeſus Maria*, many new Marks of the ancient Magnificence of *Puzzoli*, as Cornelians, Agates, Jaſpers, Amethyſts, as likewiſe divers other Sorts of Stones, upon which are found engraved all Sorts of Figures, as Cocks, Eagles, Swans, Hares, Serpents, Graſhoppers, Ants, Vine-branches, Grapes, Ears of Corn, Heads of Men, and Mottos in *Greek* and *Latin.* The Sand of *Puzzoli*, uſed in their Building, is much commended both by *Vitruvius* and *Pliny*; and, in effect, if mixed with a certain Sort of Mortar, becomes as hard as Marble, even in the Sea itſelf. As we paſſed along in our Boat to go to the Lake of *Lucrin*, two Miles diſtant from *Puzzoli*, we had the Opportunity of taking a full View of the famous Arches, generally ſuppoſed to be the Remnants of a Bridge built by *Caligula* from *Bajæ* to *Puzzoli*, whence to this Day they are known by the Name of *Caligula*'s *Bridge* among the Inhabitants; but if we will attend to the Words of *Suetonius*, nothing is more evident, than that this pretended Bridge of *Caligula* was not of Stones or Brick, but of Boats; theſe are his Words: *Bajaram medium intervallum Puteolanas ad Moles trium millium & ſexcentorum ferè paſſuum ponte conjunxit, contractis undique onerariis navibus, & ordine duplici ad anchoras collocatis, ſuperjectoque aggere terreno, ac directo in Viæ Appiæ formam*, &c. The Words *Puteolanas Moles* plainly diſcover what theſe Arches we now ſee were, *viz.* belonging to a Mole that defended the Harbour againſt the Violence of the tempeſtuous Waves: Neither is it a ſufficient Objection to ſay, that we do not build our modern Moles with Arches, ſince Things of the ſame Nature may be done variouſly at ſo great Diſtances of Time; beſides that, ſome will maintain, that a Mole with Arches might be more durable than one without, and be nevertheleſs ſufficient to break the Waves, and to defend the Harbour.

The Lake of *Lucrin*, ſo famous in ancient Times, is now no more than a little Pond of about one hundred Paces broad, and a Quarter of a Mile long, being for the moſt Part filled up with the *New Mountain.* It is now about ſixty or eighty Leagues from the Sea, whereas anciently it joined with it; for if we may credit *Pliny*, they were forced to make Uſe of many Engines to ſeparate them: The Water of this Lake is always ſalt; it was highly celebrated among the Ancients for its Oyſters: *Nuptiæ videbant Oſtreas Lucrinas*, ſaith *Varro*; and *Concha Lucrini dilicacior ſtagni*, Martial. I ſuppoſe you remember the Story related by *Pliny* and ſeveral other Authors concerning a Dolphin, frequently fed with Bread by a Boy that went every Day to School from *Bajæ* to *Puzzoli*, became at laſt ſo familiar with the Boy, that he uſed to carry him often on his Back over the little Bay; *Appian* tells us he was an Eye-witneſs of it, beſides many more that flocked from all Parts to *Puzzoli* to ſee it; and *Solinus* affirms, that at laſt it was ſo common, that it was ſcarce regarded as an extraordinary Thing. I remember, that in my Travels I ſaw a Sea-calf, ſo very tame, that it would do as many Tricks as a Spaniel.

In the Year 1538, in the Night between the 19th and 20th of *September*, the Earth produced on a ſudden a certain Mountain never ſeen before, which for that Reaſon has ſince retained the Name of *Monte Nuovo*, or the *New Mountain*. Thoſe who have meaſured it, make its Height perpendicularly four hundred Toiſes, and its Circumference three large Miles. The Gulph or Opening of fifty Paces diameter on the Top of this *New Mountain*, ſufficiently proves its Production to have been cauſed by an Eruption, though it never ſent forth either Fire or Smoke ſince its firſt Eruption, which was attended with a moſt dreadful Earthquake, that put all the neighbouting Country under great Conſternation, the Sea recoiling, many Churches and Houſes being burnt or ſwallowed up, a vaſt Number of Men and Beaſts periſhing by this prodigious Birth of the *New Mountain*. Your Mountain of *Markle-hill*, in the County of *Hereford*, was uſhered into the World after a much eaſier and more pleaſant Manner, becauſe it moved with a gentle Pace for three Days and Nights, with Houſes and Trees, for about four hundred Paces.

On the other Side of the *Lucrin* Lake, you ſee another famous Hill called *Monte di Chriſto*, the Story whereof runs thus: A moſt violent Earthquake having made an Opening in this Hill, which reached from the Superficies to the very *Limbus Patrum*, *Jeſus Chriſt* entered through this Cavern, where being joyfully received by the Souls that were deſtined to heavenly Felicity, he led them through this Paſſage up to the Top of the Mountain, from whence they were lifted up to Heaven. A fine *Italian* Fable!

The Lake of *Averno* is not above a Mile from the Lake of *Lucrin*, being much about the ſame Bulk as the Lake *Agnano*; it is beyond Queſtion, that what *Virgil*, *Lucretius*, *Pliny*, and others ſay of its deadly Vapours, is not ſo at preſent, the Birds flying over it without the leaſt Detriment, which is the Reaſon that *Pliny* is reckoned, by ſome modern Authors, to have advanced a maniſeſt Falſhood. But if the Matter be truly weighed, it will ſufficiently appear, that *Pliny* only quotes *Varro* in what he ſays of this Lake, but ſpeaks not as an Eye-witneſs; for, diſcourſing of the Lakes which have extraordinary Qualities, he cites *Cteſias*, a *Greek* Hiſtorian, who mentions a Lake in the *Indies* on which nothing ſwims, and afterward alledges the Teſtimony of *Varro* about the *Averno*. Add to this, that *Strabo* attributes the Cauſe of this Stench in the *Averno* to the Thickneſs and Number of the Trees that ſurrounded it on all Sides, which, he ſays, being removed by *Auguſtus*, the Air became pure and ſweet: And *Boccace*, who lived not above three hundred Years ſince, aſſures us, that ſome ſubterraneous Channel of Sulphur being mixed with the Waters of the *Averno*, they became ſtinking, and killed many of the Fiſh, which he ſaw with his own Eyes: Two maniſeſt Inſtances, that this Lake hath been at different Times in very different Conditions. *Virgil* derives the Word *Avernus* from *Aornus*, notwithſtanding which, this Name ſeems to have been the ancient Appellation of ſulphureous Gulphs in general, which makes *Lucretius* call theſe Kind of Pools *Averna Loca*.

The Ruins to be ſeen to this Day about the *Averno*, plainly demonſtrate, that the adjacent Hills were well peopled after the before-mentioned Trees were cut down. The Antiquaries do not agree, whether the Ruins next to the Lake belonged to a Temple of *Mercury*, or of *Neptune*; but certain it is, it could not be the Temple of *Apollo*. As we approached the *Averno*, I could plainly perceive ſomething of a nauſeous Smell, but whether it proceeded from the Lake, or not, I will not pretend to determine; for the Lake abounds with Fiſh, its Waters are freſh and pretty clear, only inclining ſomewhat to a Blue; I taſted them in divers Places, and found them to have a pretty ſharp Twang of ſome Mineral, but what I could not diſtinguiſh.

Not far from hence is the ſubterraneous Paſſage and Cave, commonly known by the Name of the *Sybil's Grott*, the chief Entrance whereof is ſaid to have been near *Cuma*, four Miles from *Averno*, but it is all filled up on that Side. We went into it through a narrow Paſſage, every one with a lighted Torch in his Hand, the Paſſage being on both Sides overgrown with Briars and Thiſtles. This ſubterraneous Paſſage is dug under Hillocks, without any Ornaments, except in the Place I am going to deſcribe to you: It is about ten Feet broad, and twelve high. After you have gone two hundred and fifty Paces in a ſtreight Line, you meet with a ſquare Grott on the right, and ſeventy or eighty Paces further a little Cell of fifteen Feet long, and eight or nine broad. You may perceive, by various Remains, that the Roof was formerly painted and the Walls adorned with *Moſaick* Work. After I had read the learned Treatiſe of Mr. *Blondel* concerning theſe pretended *Sybils*, and their Writings, I was ſufficient Proof againſt all the vulgar Opinions of this Grott; notwithſtanding what divers ancient Authors have told us concerning the *Sybilla Cumæa* and her Cave, which by the *Italians* has been applied to this ſubterraneous Paſſage, I am not ignorant of the Deſcription of *Virgil*,

Quo lati ducunt aditus centum, oſtia centum
Unde ruunt totidem voces ———

but at the ſame am convinced, that *Virgil* ſpoke of it only as a fabulous Tradition; for what elſe will you ſay to the *centum aditus*, and *centum oſtia*, which are not to be found here or any where elſe? In my Opinion, this might be ſuch another Paſſage as the Grott of *Pauſilypus*, and the painted Cell appropriated to ſome Deity. *Strabo* relates, upon the Credit of *Ephorus*, an ancient Hiſtorian of *Cumæ*, that the *Cimmerians* of *Italy*, (to diſtinguiſh them from thoſe inhabiting near the *Boſphorus*) did inhabit in ſubterraneous Caverns between *Bajæ* and the Lake *Averno*, from whence they ſallied out in the Night-time to perpetrate their Murders. The digging of this Cave ſeems more properly to belong to them, were it not that the *Moſaick* Work in the Cell hath as little Reſemblance to their Way of living, as to the Habitation of a pretended Mad-woman, ſuch as the *Sybil* is ſuppoſed to have been.

From this Cave we took a Turn to *Bajæ*, the moſt pleaſant and magnificent Place in the World in ancient Times; *Horace*, *Martial*, *Joſephus*, *Seneca*, *Albinus*, and others, have left us ſuch a Character of it, as might put this Aſſertion beyond all Queſtion, were not the Ruins of many Temples, Baths, and Palaces, which are to be ſeen round the Bay, and even in the Sea itſelf, undeniable Proofs of its former Grandeur. The Bay of *Bajæ* is infinitely pleaſant, the Air exceeding ſweet, and the adjoining Hills, with eaſy Aſcents, charming beyond what can be expreſſed or imagined; but alas! that vaſt Number of Summer-ſeats which adorned the Neighbourhood of this City, are now nothing but a vaſt Heap of Ruins, and a diſmal Solitude. Between *Bajæ* and *Miſeno* is the Precinct called *Bauli*, where you ſee the Tomb of *Agrippina*, and near it the Remnants of the Fiſhpond of *Q. Hortenſius*, Colleague of *Q. Cecil. Metellus*.

Not far from this are very great Ruins, commonly called *Mercato di Sabbato*, which ſome pretend to be the Remainders of a *Circus*. At the very Sea-ſide are to be ſeen conſiderable Ruins of the Country-houſe of *Hortenſius*; and near his Fiſhpond, the Remainders of a Temple ſaid to have been dedicated to *Diana*. Not many Years ſince, a moſt noble Statue of *Venus*, twice as big as the Life, was dug up in this Neighbourhood, holding a Globe in her Right-hand, and three Oranges in the left. *Capaccio*, who has given an exact Deſcription of it, ſays, that this Statue was found in the ſame Place where anciently ſtood the Temple of *Venus Genitrix*. From *Bajæ* it is not above a large Mile to that delightful Plain called the *Elyſian Fields*, ſituate between the Sea and that ſtinking Marſh *Acheron*, called by *Virgil*, *Tenebroſa Palus*, now *Lago della Coluccia*. I might farther ſpeak of the Academy of *Cicero*, now turned into an Ox-ſtall, of the Baths of *Tritoli*, the Tomb of *Agrippina* Mother of *Nero*, of the *Piſcina mirabilis*, or Fiſhpond of *Agrippa*, and the other Fiſhpond called *Cento*

Cento Camerelle, beſides a great many other remarkable Remnants of Antiquity, but that I had not ſufficient Leiſure to make ſo exact an Obſervation of them as was ſufficient to give you a full Deſcription of them.

From *Bajæ* we took Boat to *Puzzoli* again, and thence went on Horſeback to *Naples*. But before we depart, I muſt ſay a Word or two of the Tomb of *Virgil*. At the Entrance of the Grott of *Pauſilypus*, which leads to *Puzzoli*, ſtands an ancient Monument ſhaped like a Pyramid, but above half deſtroyed. Some modern Hiſtorians aſſure us, that in their Time there were nine ſmall Columns of Marble in the little Chamber of this *Mauſoleum*, which ſupported an Urn of the ſame Subſtance, with this Diſtich upon it:

> *Mantua me genuit, Calabri rapuere, tenet nunc*
> *Parthenope*; *cecini, paſcua, rura, Duces.*

But now there are neither Columns nor Urn to be ſeen here. The *Mauſoleum* is built of very large ſquare Stone, notwithſtanding which, it is almoſt covered with Buſhes and Shrubs, that have taken Root between the Stones; among the reſt there grows a Laurel on the Top of it, which, if you will believe the Inhabitants, has been often cropped and plucked up, but always grows again.

Virgil is looked upon by many of the Inhabitants of this Country as a great Sorcerer; whence it is that they have attributed to him the making of the Grott of *Pauſilypus*, as alſo of the brazen Horſe, the Head whereof, as I told you before, is ſtill preſerved at the Palace of D. *Diomedes Caraffa*. Unto this Horſe they attributed, for the ſame Reaſon, a ſecret Virtue of curing all Sorts of Diſeaſes in Horſes, and of preſerving them from ſiniſter Accidents, and for a conſiderable Time uſed to bring their Horſes from the remoteſt Parts of the Kingdom of *Naples*, to lead them in Proceſſion round this pretended Horſe of *Virgil*; till at laſt the Horſe was, by the Order of a certain Archbiſhop of that Kingdom, removed from thence, and a great Bell caſt of its Body, which remains in the Cathedral, and is of ſomewhat more Uſe than the Horſe. The Houſe of *Sannazarius*, which ſtood on the Seaſide, at the Foot of the Hill of *Pauſilypus*, being deſtroyed by the War, a Church was built in the ſame Place, dedicated to the moſt *holy Birth of the Mother of God*, where his Tomb is now to be ſeen in one of the Chapels. The Tomb is of white Marble, done by the excellent Hand of St. *Croce*: Upon it you ſee the Buſt of *Sannazarius* crowned with Laurel, and on each Side the Statues of *Apollo* and *Minerva*, which they commonly call *David* and *Judith*. I ſuppoſe you are informed, that *James Sannazarius* changed his Name into that of *Actius Sincerus*, according to the Cuſtom or rather Affectation of thoſe Times.

11. Your Letter I received with a great Pleaſure, in Return whereof I will endeavour to ſatisfy your Curioſity, in reſolving your Queſtions concerning *Venice*, in the ſame Order you have propoſed them; after which I will proceed to give you an Account of *Rome*.

I. Whatever your Friend may ſay on Pretence of his being a Citizen of *Venice*, of the Number of Inhabitants in that City, which he makes amount to 250,000, I cannot allow him a competent Judge; though on the other Hand I muſt tell you, that you carry the Matter too far, when you declare, that it is impoſſible to know the exact Number of Inhabitants in great Cities, Sir *William Petty* having propoſed to us a rational Method of making ſuch a Computation, without any remarkable Error. I ought however not to paſs by in Silence, that in my Computation I included the Inhabitants of the Iſle of *La Giudeca*, but not the Iſle of *Murano*.

II. The two Columns of *Granite* in the Place of the *Broglio*, ſome ſay, were brought from *Egypt*, others from *Conſtantinople*, (perhaps they were brought from *Egypt* to *Conſtantinople*.) Upon one of theſe Columns ſtands the Arms of *Venice*, *viz.* the *winged Lion* of St. *Mark* holding an open Book, with the Inſcription of *Pax tibi Marce*. On the other you ſee the Statue of St. *Theodore*. The like Columns the *Venetians* erect in all the great Cities under their Juriſdiction, as Trophies of the Republick. The ſame *Venetian* alſo miſinformed you about the three great Banners ſet on Feſtival Days upon the brazen Pedeſtals oppoſite to St. *Mark*'s Church, *viz.* That they repreſent the *Venetian* State, and the two Kingdoms of *Cyprus* and *Candia*, the Republick's Arms being to be ſeen without the leaſt Alteration in all the three Banners. Another vulgar Error is, That the *Venetian Signiory* has no Coat of Arms, though the *Lion* is to be ſeen in all thoſe Places where the Arms of a State are generally to be ſeen. The Lion of St. *Mark* takes its Origin from the Viſion of *Ezekiel*, and not from the imaginary Transformation of St. *Mark* into a Lion, to check the inceſtuous Love of his Siſter. Hence it is, that the *Venetian* Ambaſſador being aſked, what Country it was that produced thoſe *winged Lions?* replied, The ſame that brought forth the double-headed Eagles; alluding to the Arms of the Empire, *Ruſſia*, and other Sovereignties.

III. What I told you concerning the Air of *Venice* muſt be taken with ſome Grains of Allowance, though the Air of *Venice* is none of the worſt. In the *Lagunes* it is ſo bad, that the Inhabitants of the leſſer Iſles commonly leave their Habitations in the hot Seaſon, and retire elſewhere. But this is not peculiar to *Venice*, but is alſo common in ſeveral other Parts of *Italy*, eſpecially in the Country about *Rome*.

IV. That the Doge of *Venice* continues for Life, whereas the Doge of *Genoa* reigns only for two Years, is ſufficiently known. The Revenues of the Doge of *Venice*, ſo far as I was able to learn, do not amount to quite 3000 *l.* Sterling *per Annum*; but the Frugality wherewith the *Venetians* manage their Government, has taught them not to allow their Spouſes any Share in thoſe uſeleſs Honours they pay to their Huſbands.

V. Concerning the Libertiniſm in the Monaſteries of *Venice*, as I will not profeſs myſelf to be acquainted with it in particular, ſo I can only tell you, that it is generally acknowledged here, that the Nuns are often viſited by Perſons in Maſquerade at the Grates; that they go to *Plays* and other Places in Diſguiſe; that they have made Tables on Purpoſe for Entertainments, one half within, and the other half without the Grates; nay, that they are often engaged in Intrigues; and that the Friers are guilty of ſuch Debaucheries as can ſcarce be imagined. Theſe, I ſay, are common Reports, but I do not affirm them.

VI. What your Friend has been pleaſed to alledge againſt the Sovereignty of the Doge, is not worth taking Notice of, the ſame being ſufficiently known to all that have had any Inſight into the *Venetian* State, or enquired into the Principles of their political Conſtitution.

VII. The whole Revenue of this Commonwealth, according to the beſt Computation, amounts annually to ſix Millions of Crowns, including the Sale of Offices and Nobility, Confiſcations, *&c.*

VIII. They permit ſome *Jews* to live at *Venice*, who are rich, eſpecially the *Portugueſe*: Their Quarter is called *Il Ghetto*, or the *Jewry*; their Hats are covered with Scarlet, lined and edged with Black. The poorer Sort are contented with waxed Linen. By the Help of Money this Badge may be diſpenſed with.

IX. The whole Number of their Nobility, arrived to a proper Age of ſitting in the *Great Council*, amounts to about thirteen hundred; but one half of them being generally Abroad in Civil or Military Employments, this Aſſembly ſcarce ever exceeds ſix or ſeven hundred; yet theſe ſeem too many for the Management of thoſe Matters of Conſequence that come before them, which hath given Birth to this Proverb, *Troppo Teſte, troppo Feſte, troppo Tempeſte*; *Too many Heads, too many Feſtivals, and too many Tempeſts.* And as the firſt is meant of the Great Council of *Venice*, ſo their Feſtivals are ſo frequent, that they exceed thoſe obſerved in *France* by one third Part, and they are commonly peſtered with *Storms* in the Summer.

X. The *Golden Book* I have mentioned, contains a Catalogue of all the Noblemen in their State; and as all the Brothers of every Family have an equal Share in the Nobility, ſo their Names are regiſtered in this Book as ſoon as they are born. Upon this Occaſion I cannot forbear to add ſomething in Reference of what has been told you againſt the Account I gave you of the Haughtineſs of the *Venetian* Nobles: There is ſcarce any body that is acquainted at *Venice*, but will eaſily agree with me, that the *Venetian* Nobles are not only extreamly conceited of their Nobility, but alſo very difficult of Acceſs to Strangers of great Note; though the laſt may be attributed either to Cuſtom, or rather to the Politicks of their Government: And though they are not very ſparing of Salutations when they are walking at the *Broglio*, yet they always appear very reſerved and proud in the Company of the Citizens; nay, they give and receive but few Viſits among themſelves. It muſt however be confeſſed, that in private Converſation, eſpecially if their Intereſt be concerned, they will be as obliging as moſt Men, and will ſometimes enter into a familiar Acquaintance with Strangers, provided both Sides be not of more than ordinary Quality, for this would have ill Conſequences.

What I told you concerning the great Sleeves of the Noblemen, that they ſerve inſtead of a Baſket at certain Times, was not a bare Jeſt; for I remember I ſaw once a good Sallad, and at another Time an excellent Cod'stail, thus carried out of the Market. There are beſides this, about two or three hundred *Barnabotes*, ſo called from a cheap Place in the City, where they live, (a Sort of poor Gentlemen, that ſerve for a Foil to the richer) who both beg about the Streets, and would be glad to earn a Penny in carrying Home Proviſions for other People. In the Summer theſe Noblemen have their Veſts without Furs, but the turning up on the Edges remains always furred.

XI. It was not from my Ignorance of your Inclination, or rather Love to Painting, that made me guilty of that Negligence with which you upbraid me, in giving you ſo imperfect an Account of thoſe curious Pieces that are to be ſeen at *Venice*. However, in Obedience to your Deſire, I ſhall endeavour in ſome Meaſure to ſupply that Defect, by adding ſome new Obſervations, though I am afraid my Memory will not furniſh me with many.

There were formerly, in the Hall of the great Council, ſome Pictures done by *Gentil Bellini*, and *John* his Brother, which excelled the beſt Pieces of that Age, but they were conſumed, with almoſt the whole Palace, in 1577. The ſame Hiſtories were copied five Years after by *Frederick Zucchero*, and ſet up again in the ſame Order in which they ſtill remain. *Pordenone*'s Pictures in *Freſco*, in the Cloyſter of St. *Stephen*, are very much eſteemed, as are likewiſe his St. *Sebaſtian* and St. *Roch*, at St. *John de Rialto*. *Pordenone* was an excellent Painter; his Deſigns are eſteemed very judicious, and his Colours admirably well managed. He emulated *Titian*, and with ſome Degree of Succeſs.

The St. *Peter Martyr* of *Titian*, is reputed to be one of the fineſt Pictures that ever was made, but it begins to be much defaced. The beſt Judges are charmed with this Piece, though it has loſt all that Luſtre which raviſhes an unſkilful Eye. They think they can never enough admire the Beauty and Richneſs of its colouring, and judicious Diſpoſition of the Lights, the Roundneſs of the Figures, the Paſſion and Life that is obſerved in the Face, and Strength of Expreſſion which reigns through the whole Piece. There are ſeveral other Pictures by the ſame Hand in the Churches, St. *Mark*'s Palace, the Library, Convents and Fraternities. There are alſo ſome Pieces by *Schiavoni* in the Library, which have been frequently taken for *Titian*'s. *Horace Vecelli* his Son has almoſt equalled him in ſome Works, and the Picture in the Hall of the Great Council, which repreſents the Battle fought by the *Romans* againſt the Troops of *Frederick*, is the Work of *Horace*, though it is commonly aſcribed to his Father.

The Wedding Dinner at *Cana* by *Paul Veroneſe*, in the Refectory of the *Benedictine* Monks in the Iſle of St. *George*, is eſteemed to be the Maſter-piece of that Painter, who, you know, is famous for the ſame Excellencies that we admire in *Titian*. His Works are particularly remarkable for the beautiful Diſpoſition of the Figures, judicious Choice of Colours, a ſublime Genius, vaſt Ideas, the greateſt Eaſineſs imaginable, and the moſt charming Variety. This Piece takes up all the Bottom Wall of the Refectory, it is two and thirty Feet broad, and contains one hundred and twenty-five Figures.

In the Church of St. *Sebaſtian*, the Feaſt of *Simon* the *Leper* is one of the moſt celebrated Pieces of the ſame Artiſt. There are alſo three other Pictures by the ſame Hand in the Arch of St. *Mark*'s Library, which, if my Memory do not deceive me, repreſent Geometry, Arithmetick, and the Glory which is acquired by Learning.

The *Paradiſe*, by *Tintoret*, in the Hall of the Great Council, is a famous Piece. It was ſaid of *Tintoret*, that he united the Deſigns of *Michael Angelo* with the colouring of *Titian*, which certainly was a very noble Character. Beſides, he had the moſt fruitful Invention, and at the ſame Time the quickeſt Hand of the Age. A Painter who was with me in the Fraternity, or, as they call it at *Venice*, the School of St. *Roch*, made me obſerve with Admiration that rare Picture which *Tintoret* finiſhed almoſt in a Moment, while *Paul Veroneſe*, *Salviati*, and *Frederick Zucchero*, his Competitors in the ſame Work, were ſtill buſy upon the rough Draught which was to be preſented to thoſe who deſigned to employ them. I have ſeen ſeveral Pieces by the ſame Hand in the above-mentioned School, at St. *Maria dell' Oro*, at St. *Mark*'s School, and other Places. There are ſome of *Baſſani*'s Works at St. *Mary major*. *Schiavoni*'s Pictures in the Library are, I think, Emblems of *Valour*, *Sovereignty*, and *Sanctity*.

XII. I told you, if I remember right, that their Gondola's or Boats have black Tilts; I will add, that no body (except the Doge) can be attended by Servants in Liveries; though the Ladies of Noblemen, during the firſt and ſecond Years of their Marriage, are allowed to give what Colours they like beſt to their Gondoliers or Boatmen, and to uſe Jewels; but that Time being once expired, this Courteſy ceaſes, and they are not permitted to appear in Jewels unleſs on ſome high Feſtivals, and during the Carnival; whence it is that the rich Courtezans rather pay the Fine than debar themſelves of theſe Ornaments. What you heard affirmed by ſome, that the *Venetian* Ladies enjoy a greater Share of Liberty than thoſe of *England* or *France*, ſeems to me to be the Effect of a fond Spirit of Contradiction; for, ſuppoſing the Ladies of *Venice* have the Liberty in Carnival-time to go to Plays, Operas, Fairs, or Gaming-houſes, in Diſguiſe, what Advantages can they reap from the Diverſion of ſo ſhort a Time, eſpecially conſidering that all this while they are conſtantly attended by their Huſband's *Spies*, who cannot but put them in Mind of the Slavery they are to undergo for ten or eleven Months in the Year? What Compariſon is there between this Confinement and the entire Liberty the *Engliſh* and *French* Ladies enjoy in their Walks, Viſits, Meetings, and Divertiſements, without the leaſt Reſtraint?

XIII. The young Noblemen are permitted to be as ſplendid in their Gold and Silver Laces, Stuffs, Plumes, and Embroideries, as they think fit: They put on the Gown at fifteen Years of Age, tho' they have no Vote in the Great Council till they are five and twenty. They have alſo the Liberty of wearing what Habits they like beſt on the Continent, the Juriſdiction of the Tribunal that regulates Habits, not extending beyond the *Lagunas*.

XIV. When we were viewing the Treaſury, no Mention was made by our Guides of St. *Mark*'s Thumb, and that he was diſmembred to prevent his being a Prieſt; but they were not ſo forgetful as not to tell us the Tradition of the Loſs of his Ring, and how it was recovered, and the Story runs thus: In the Year 1339, three Men came to a Gondolier in very tempeſtuous Weather, and having conſtrained him to carry them two Miles to the *Lido*, they found there a whole Shipful of Devils, that were buſied in raiſing a Tempeſt by their Enchantments; but theſe three Men had no ſooner given them a ſevere Reprimand, but the Tempeſt ceaſed. The firſt of theſe three Perſons made the Boatman carry him back to the Church of St. *Nicholas*, the ſecond to that of St. *George*, and the third to that of St. *Mark*; but the laſt, inſtead of paying the Boatman, gave him a Ring, ordering him to carry it to the Senate, and told him at the ſame Time, that he who went on ſhore firſt was St. *Nicholas* himſelf, the ſecond St. *George*, and that he was St. *Mark*. The Boatman, aſtoniſh'd at his Words, related the whole Matter to all the Senate, who, receiving the Ring, beſtowed a conſiderable Reward upon him.

XV. They ſuffer *Proteſtants* to be buried in their Churches; the Reaſon is, becauſe they take no Notice of them here as *Proteſtants*, all ſuch as are neither *Jews*, *Greeks*, nor *Armenians*, being reputed *Roman Catholicks*.

XVI. Your Admirer of the Palaces of *Venice* hath miſtaken my Aim, becauſe I did not deny that there were ſome ſtately Palaces there, and made particular Mention of ſeveral of them; but notwithſtanding all this, what I ſaid of the *Italian* Palaces in general, is true beyond Contradiction: And becauſe you own that he hath no Skill in Architecture, you will do very well not to rely too far upon his Judgment in this Point, any more than in what you have been informed concerning the Machines in the *Venetian Opera's*, and that *Venice* is, for Neatneſs, to be compared to *Holland*.

XVII. I told you, that there is a Paſſage by Water to all the Houſes in *Venice*; I am well ſatisfied you did not take this Part abſolutely according to the literal Senſe, becauſe there may be perhaps about five or ſix in a thouſand that can't be approach'd but by Land, and in this I ſpeak the outſide; for what your young Traveller has aſſur'd you, that there was no Canal within five hundred Paces of the Houſe where he lodg'd, and that there are twenty ſuch Places in the City, is a Contradiction in itſelf, for at this Rate, how many Spaces of a Mile in Diameter muſt there be in *Venice*? And whether this is poſſible, I leave to your own Determination, if you will carefully examine the Platform of this City, which I ſend you, and is founded upon unqueſtionable Evidence.

SECTION III.

The TRAVELS *of Mr.* MAXIMILIAN MISSON *continued, from his Arrival at* Rome, *to his Departure out of* Italy; *with Obſervations and Remarks.*

1. *A ſuccinct Deſcription of* Rome; *a more particular Account of the famous Church of St.* Peter; *a View of the Palace and Library of the* Vatican; *with various Remarks and Obſervations.* 2. *The Author's Viſit to Queen* Chriſtina *of* Sweden; *the Deſcription of* Rome *reſum'd, with a Multitude of curious Particulars reſulting from the Author's Obſervations while reſident in that City and in its Neighbourhood.* 3. *The Solution of various Queries relating to the Antiquities of* Rome; *the Story of Pope* Joan; *an Account of* Albano, *and other Places in the Vicinity of that great City.* 4. *Some farther Remarks on the Hiſtory of the* Female Pope; *the State of the* Greeks, Armenians, *and* Jews, *at* Rome; *together with additional Remarks on the Antiquities and Curioſities there and thereabouts.* 5. *The Author's Travels reſum'd; an Account of* Viterbo, Siena, Piſa, Leghorn, Lucca, *and ſeveral other Places.* 6. *The noble City of* Florence *deſcrib'd, the Great Duke's Palace there, the moſt remarkable Churches, and Monuments in them; with other curious and entertaining Particulars.* 7. *A View of the Country between* Florence *and* Bologna, *the laſt mentioned City deſcribed, and the moſt remarkable Places therein; and the Author's Journey from thence to* Modena. 8. *An Account of* Reggio, Parma, Placentia, Cremona, Mantua, Breſcia, Bergamo, *and ſeveral other Places.* 9. *The large and famous City of* Milan *deſcribed, with a diſtinct View of its principal Edifices; an Account of* Pavia, *and other Places.* 10. *The Author's Journey from* Pavia *to* Genoa; *Hiſtorical Obſervations on that City and Republick.* 11. *A Deſcription of* Alexandria, Caſal, Turin, *and of the Country of* Piedmont. 12. *Some Obſervations of the Author in relation to* Italy *in general.* 13. *Remarks upon the two foregoing Sections; with an Account of ſome of the principal Miſtakes, charged upon our Author by later Writers, and thoſe Charges impartially diſcuſs'd.*

1. WE will now come to *Rome*, which being thoroughly deſcrib'd by ſeveral Perſons of Note, who had all poſſible Opportunities of giving the beſt Account of it, I will pretend to no more, than to give you a general Idea of this great and famous City, together with what Obſervations I was able to make upon ſuch Matters as were then altogether new, or but little known, and have Relation to your Queſtions. I need not tell you, that before the Reign of *Servius Tullius* it comprehended no more than ſeven Hills, whence it got the Name of *Septicollis*, or *Seven Hills*; but being much enlarg'd ſince, contains no leſs than twelve; *viz. Monte Capitolino*, *Palatino*, *Aventino*, *Celio*, *Eſquilino*, *Viminato*, *Quirinale* or *Monte Cavallo*, *Janiculo*, *Pincio*, *Vaticano*, *Citorio*, and *Giordano*; however, you muſt not imagine them to be huge Mountains, but only little Hills, the Aſcent whereof is ſcarce diſcernible.

Vopiſcus (who flouriſh'd under *Diocleſian*) would make us believe, that the Walls of *Rome*, built by *Aurelian*, were no leſs than fifty Miles in Compaſs; but there muſt be an enormous Error in this, ſeeing that the preſent Walls of *Rome* are very near the ſame with thoſe *Aurelian* erected, and yet are not above thirteen Miles in Circumference, this being the largeſt Compaſs *Rome* ever had, though its Suburbs perhaps extended far beyond them on all Sides. But of what is encloſ'd within the Walls, there is not above one third Part inhabited at preſent, the reſt, (*viz.* to the South and Eaſt) being either *Gardens* or *Ruins*. Moſt of the Houſes are of Brick, and plaiſter'd over on the Outſide; the Roofs are ridg'd, but the Angle on the Top is very obtuſe; and ſome are built, as we call it in *France*, *à la Manſarde*. Neither the Houſes nor Streets are very beautiful, and the Pavements narrow and not very neat.

Which Way ſoever you approach *Rome*, you may diſcover St. *Peter*'s Cathedral above all the other Spires and the Tops of the higheſt Edifices. The Courſe of the *Tyber* (which makes a little Iſland here) is from North to South: That Part on the right Side, called *Traſtavera*, is not above the ſixth Part of the other. The firſt Proſpect of this great City does not ſurprize the Traveller, but the longer he ſtays in it, the more frequent Opportunities he will meet with of obſerving ſomething worth his Attention, in ruminating upon the Remnants of the Spoils of the Univerſe, which made once the *Porphyries*, *Granites*, and the pureſt *Oriental Marble*, to be more common at *Rome*, than the Bricks or Stones out of the neighbouring Quarries; the *Coloſſes*, *Temples*, *Palaces*, *Amphitheatres*, *Arches*, *Baths*, *Cirques*, *Columns*, *Fountains*, *Aqueducts*, *Obeliſks*, *Mauſoleums*, and other magnificent Structures, being for the moſt Part of theſe precious Materials, which tho' buried now in Ruins, yet ſtill retain ſome Remains of their ancient Splendor.

The Country about *Rome*, for ten or twelve Miles, is flat, but uneven, ill peopled, unhealthy, and barren in many Places. As to the Number of the Inhabitants, they are generally computed to be two hundred thouſand; but I will not be anſwerable for this Computation, theſe Things being founded upon uncertain Conjectures, ſo that even the Paſſages in the ancient *Roman* Authors are very hard to be reconcil'd in this Point, ſome telling us of three Millions one thouſand and thirty-ſeven, under the Reign of *Auguſtus*, others of four or five Millions, whereas *Suetonius* computes no more than one Million and ſix hundred thouſand under *Tiberius*, the immediate Succeſſor of *Auguſtus*; and I remember that *Werner Rookwink*, in his *Faſciculus Temporum*, does not heſitate at making them amount to twenty-ſeven Millions and eighty thouſand. I ſuppoſe he included all ſuch as had the Privilege of *Roman Citizens* in his Account.

Two Days after our Return from *Naples*, we happen'd to ſee the Ceremony of making either Wives or Nuns, of three hundred and fifty Maidens, the Fund for which was raiſed by a Club of ſixty charitable Gentlemen. This Ceremony is perform'd every Year on the Feſtival of the *Annunciation*, when the Pope and the ſacred College meeting at the *Minerva*, the Pope, (or in his Abſence ſome Cardinal) ſays High Maſs, and all the Girls confeſs, and receive the Sacrament, being cloath'd in white Serge, with Veils over their Heads, having only one Opening for their Sight; they enter thus two and two into the Choir, where proſtrating themſelves at the Pope's or Cardinal's Feet who officiates, near whom ſtands an Officer with a Baſon full of little white Bags, each of which contains either a Bill of fifty Crowns for ſuch Maidens as chuſe Marriage, or a Bill of an hundred Crowns for thoſe that are willing to embrace a religious Life. Each Maiden having declared her Choice, receives her Bag hanging on a little String, with a Kiſs, and ſo goes off to make Room for another. Thoſe that have choſen a religious Life are crown'd with Garlands of Flowers, and have the firſt Place aſſign'd them in the Proceſſion. At that Time there were no more than thirty-two of theſe among the three hundred and fifty.

Having taking a full View of the *Minerva*, (where we ſaw the famous Statue of Chriſt embracing the Croſs, the Work of *Michael Angelo*) we went to the beautiful *Borgheſe* Palace, the Portico of which is ſupported by ninety-ſix antique Pillars of *Egyptian Granite*. In the lower Rooms alone are no leſs than ſeventeen hundred original Pictures, by the beſt Maſters of *Europe*, among which, that of *Venus* blindfolding *Cupid*, done by *Titian*, far excels the reſt. The Picture of *Paul* V. (who was of this Family) in moſt exquiſite *Moſaick* Work, is reputed to contain above a Million of Pieces, which however I cannot find by my Calculation. We alſo ſaw here a Crucifix of the ſame Bigneſs with that ſhewn us by the *Carthuſians* at *Naples*, and they aſſured us that this is that celebrated Original of *Michael Angelo*. The Name of *Rotundo* was given to the *Pantheon* by common People, by reaſon of its circular Figure. *Boniface* IV. dedicated it to the *Virgin* and all the *Martyrs*, whence he call'd it St. *Maria ad Martyres*: And another Pope would needs comprize all the *Saints* with the *Martyrs*. The Origin of its ancient Name is likewiſe ſomewhat doubtful, ſome deriving the Etymology of the *Pantheon*, and aſcribing its Convexity to the Reſemblance of the Heavens; others alledging, that it was dedicated to *Jupiter*, and *Cybele* the Mother of the Gods, others, to *Jupiter*, and *all the Gods*. This laſt Opinion ſeems to be founded upon the many Niches which are ſeen in the Inſide, and were (queſtionleſs) full of Idols: But if we may believe *Varro*, who tells us of no leſs than thirty thouſand Gods worſhipped at *Rome*; and the Philoſopher *Bruxillus*, who, in his Speech to the Senate, makes them amount to no leſs than two hundred and eighty thouſand; there are not near Niches enough to accommodate all theſe Deities.

This Temple, though deſpoiled of its beſt Ornaments, yet is one of the faireſt and moſt entire Pieces of Antiquity in *Italy*. The Columns of the Portico of this Church are all of one Piece of *Granite*, of the *Corinthian* Order, not equally big, but, according to the moſt exact Meaſure I could take, they were fifteen Inches in Compaſs, ſome few Inches leſs or more: That Piece of *Granite*, in which the Opening of the great Gate is cut, is forty Feet high, and near twenty broad. The two Lions under the Portico of the *Pantheon* ſtood formerly on the Front of the Temple of *Iſis*. *La Guillitiere* (who is follow'd by *Meurſius*) would needs perſuade us, that the *Pantheon* of *Athens* ſurpaſſes that of *Rome* in Magnificence, having miſtaken the Temple of *Minerva* for the *Pantheon*, into which Error they have ben miſled by the erroneous Account of *Theodoſius Zygomala*, in his Letter to *Martin Cruſius*; or perhaps by the miſtaken Name of *Parthenion*, which *Pauſanias* gives it.

It being not my preſent Purpoſe to give you a particular Deſcription of Churches, I will only communicate to you my Obſervations upon them. That of St. *Peter* has the Reputation of the moſt magnificent and largeſt Church in the Univerſe: He that is willing to give a true Judgment of it, muſt not be ſparing of his Pains in viewing it frequently, as well on the Top into the very Ball, as the Church under Ground. You no ſooner enter this great Structure, but your Eyes are ſurprized with the incomparable Proportions of the niceſt Pieces of Architecture, and a moſt exact and unparallel'd Order, rather to be admired than deſcribed: And ſince you are pleaſed to rely upon my Fidelity and Judgment, I will ſend you the principal Dimenſions of this Structure, as I have taken them with the Aſſiſtance of very ſkilful Perſons, more than once. 1. The Length of the Church, taken on the Outſide, including the whole Portico and the Thickneſs of the Walls, 722 *Engl.* Feet. 2. The Length of the Church within, not reckoning either the Portico or the Thickneſs of the Walls, 594 Feet. 3. The Length of the Croſs of the Church on the Outſide, 490 Feet. 4. The Length of the ſaid Croſs within, 438 Feet. 5. The Breadth of the Body of the Church, 86 Feet, 8 Inches. 6. The perpendicular Height of the Body of the Church, 144 Feet. 7. The Bigneſs or outward Circumference of the Dome, 620 Feet. 8. The Diameter of the Dome within, 143 Feet. 9. The Breadth of the Front of the Church, 400 Feet. 10. The compleat Height of the Church, from the Floor to the Top of the Croſs, which is over the Ball, 432 Feet. 11. The Diameter of the Ball, 8 Feet, 4 Inches. 12. The Height of the Statues on the Cornice of the ſecond Order of the Front, 18 Feet. *Michael Angelo* and *Bramante* were the two chief Architects of this noble and majeſtical Structure, the firſt under Pope *Paul* III. the ſecond under *Julius* II. The Chair of St. *Peter* is ſupported by the four Doctors of the Church: The Statues of Braſs gilt, and the Tombs of *Urban* VIII. *Paul* III. *Alexander* VII. and the Counteſs *Maud*, are moſt magnificent and curious Pieces of Workmanſhip, worthy of the Edifice in which they are placed.

In ſhort, wherever you turn your Eyes, you meet with nothing but gilt Work, excellent Pictures, and Statues of Braſs and Marble, and theſe diſpoſed in ſo excellent an Order, that their Multitude does not cauſe the leaſt Confuſion. The Inſide of the Cupola is of *Moſaick* Work, and the Arch of the Nave of a certain fine Clay, with Compartments of raiſed Work gilt; all the Pilaſters are deſigned to be over-caſt with the ſame Matter, as well as the remaining Part of the Inſide of the Church. The High Altar ſtands in the Midſt of the Croſs, directly under the Dome, the Pavilion being ſupported by four wreath'd Pillars of Braſs,

Braſs, beautified with Foliages and Bees, the Arms of Pope *Urban* VIII. On each of theſe Columns ſtands a Braſs Angel ſeventeen Feet high, and on the Cornice you ſee Children playing and walking up and down: The whole Height amounts to ninety Feet. Under this Altar is a Pair of Stairs leading to the Chapel under Ground, where St. *Peter*'s Body is kept, and to ſome other ſacred ſubterraneous Places belonging to this Church. At the Entrance down theſe Stairs I ſaw a Bull engraven in Marble, forbidding any Woman to enter there, except on *Whitſun-Monday*, when Men are prohibited to enter, under Pain of being anathematized: The Place being very dark, we were told by the Sexton, that this Prohibition was occaſioned by an amorous Intrigue. An Indulgence of ſeven Years is granted for every Step of the Stairs leading to St. *Peter*'s Chapel, to all ſuch as deſcend them with Devotion.

The double Row of Pillars (286 in Number) which ſurround the Great Place before the Church, and lead to the ſame by a double Portico on each Side, is a ſurpriſing Piece to behold. The two magnificent Fountains in this Place are highly worth a curious Traveller's Obſervation, as well as the Obeliſk that ſtands in the Middle, of one entire Piece of *Granite* ſeventy-eight Feet high, with either the Pedeſtal or Croſs placed on the Top of it by *Sixtus* V. when he ſet up this ancient Monument here, which in 1586, weighed 956,148 Pounds without the Baſe. It is a general (but erroneous) Opinion, That the Globe of Braſs, which was there formerly, contained the Aſhes of *Auguſtus*; but *Dominicus Fontana*, the famous Architect, upon Examination, found it not fit for that Uſe, but to be only an Ornament to this Obeliſk, which was conſecrated to *Auguſtus* and *Tiberius*; as is apparent from the Inſcription, which remains ſtill undefaced:

Divo Cæſari, divi Julii F. Auguſto
Tiberio Cæſari D. Aug. *F. Auguſto ſacrum.*

The Palace of the *Vatican*, ſo called from the God *Vaticanus*, who gave his *Vaticinia* or Oracles here, is conveniently ſeated for the Pope near St. *Peter*'s Church, but by its too near Neighbourhood takes off Abundance of the Proſpect, as well as ſome other Edifices near it. This Palace is not one entire regular Structure, but a Compoſition of many beautiful Pieces, ſaid to contain 12,500 Chambers, Halls, and Cloſets, which may in ſome Meaſure be diſcovered in the Model which is ſhewed of it in Wood.

The *Belvedere*, belonging to the *Vatican*, received its Name from its delightful Proſpect: We were ſo ſurprized with the moſt excellent Pieces of *Raphael*, *Michael Angelo*, *Julius Romanus*, *Pinturiccio*, *Rolidorus*, *John d'Udina*, *Daniel Volterra*, and other great Maſters, and they found us ſo much Diverſion, that we neglected to take Notice of all the other Perfections of this beautiful Edifice. I have often, with a great deal of Delight, ſeen the moſt curious Perſons in *Rome* gaze with great Amazement upon the Hiſtory of *Attila*, (the Work of the incomparable *Raphael*, who was born 1483, and died when he was thirty-ſeven Years old) and admire its Beauty and Perfections, nay, even put their Wits on the Rack to find out Expreſſions ſuitable to the ſeveral Excellencies of this marvellous Piece; when after all, ſome nice Judges have, and not without very good Reaſon, found Fault with the Dreſs in which *Raphael* has thought fit to repreſent *Leo* I. and two Cardinals, being after the ſame Manner as they are worn by them now-a-days; whereas it is evident, from the Hiſtory of thoſe Times, that Pope *Conſtantine*, and the other Popes, (two hundred and fifty Years after *Leo* I.) wore plain Camblet Garments. Thus *Titian* hath painted *Roſaries* at the Girdles of the two Diſciples that met Chriſt in his Way to *Emmaus*; and another celebrated Painter, *Roſſo*, has repreſented Monks in their Habits as Gueſts at the *Virgins Weddings*. I remember that at *Soeſt*, a Town of *Weſtphalia*, there is a Picture of our Saviour's Laſt Supper painted in a Glaſs Window of a Church, wherein that Painter has put a *Gammon of Bacon* inſtead of the *Paſchal Lamb*. Nay, even *Michael Angelo*, in his moſt celebrated Piece of the Laſt Judgment, has introduced many indecent Poſtures, Angels without Wings, nay, even the Ferryman *Charon* with his Boat full of Souls.

In the Hall where the Pope gives Audience to Ambaſſadors, are three large Pictures repreſenting the Hiſtory of the Admiral *Coligni*; the firſt ſhews you the Admiral as he was caried to his Houſe, after his being wounded by the Ruffian *Morevel* (fifty thouſand Crowns were ſet upon his Head) at the Bottom whereof you read this Inſcription:

Gaſper Colignius Ammiralius, accepto vulnere domum
refertur. Greg. XIII. Pontif. Max. 1572. i. e.
The Admiral Gaſper Coligni *carried home wounded.*

The ſecond repreſents him murdered in his own Houſe, with his Son-in-law *Teligny* and others, with this Motto underneath.

Cædes Coligni & Sociorum ejus.
i. e. *The Slaughter of* Coligni *and his Adherents.*

In the third the News of this Murder is brought to the King, who ſhews a Satisfaction in his Countenance, with this Inſcription:

Rex Coligni necem probat:
i. e. *The King approves of the Slaughter of* Coligni.

Beſides theſe Trophies of ſo barbarous an Action, the ſame Pope cauſed Medals to be coined with this Inſcription, *Gregorius XIII. Pont. Max. an.* 1. and on the Reverſe an Angel with a Croſs in one Hand, and a Sword (with which he ſeems to thruſt) in the other, with this Inſcription, *Ugonottorum Strages* 1572, i. e. *The Slaughter of the Hugonots* 1572. I obtained one of theſe Medals, though they are become very rare of late Years.

Of the Gardens of *Belvedere*, and the Statues there, I will put you in Mind only of the invaluable Marble Statue (of one entire Stone) of *Laocoon*, the Work of *Ageſander*, *Polydorus*, and *Athenadorus*, three *Grecian* Sculptors; of the Trunk without Head, Arms, or Legs, with the Sculptor's Name engraven on the Pedeſtal,

ΑΠΟΛΛΟΝΙΟΣ ΝΗΣΤΟΡΟΣ ΑΘΗΝΑΙΟΣ· i. e.
Apollonius, *the Son of* Neſtor, *an* Athenian.

The *Vatican* Library owes much of its Contents to that of *Heidelbergh*, and of the Duke of *Urbino*; the Number of Books it contains is ſo variouſly reported, that I thought it beſt to determine nothing upon that Head. The Pictures repreſent for the moſt Part the *Sciences*, *Councils*, noted *Libraries*, *Inventors of Letters*, and ſome Pieces relating to the Life of *Sixtus* V. The old MS. of *Virgil* is in Quarto, but of greater Breadth than Length, in capital Letters, without Points, or any other Diſtinction of Words. The *Gothick Letters*, as well as the Miniature, ſhew it not to be written in the firſt Ages of Antiquity, as ſome would have it. Among the Manuſcripts of the latter Ages, I took Notice of ſome Letters written to and by Cardinals, wherein they give one another no other Title than Mr. *Peter* and Mr. *Julius*. They alſo ſhewed us a Volume in Quarto, of the Thickneſs of a Finger, containing Letters from King *Henry* VIII. to *Anne Bullen*. I alſo took particular Notice of the *German Bible* which you mentioned, and, as they ſay, tranſlated by *Luther*, and written with his own Hand; which might have ſome Probability of Truth, were it not that a certain extravagant Prayer, written apparently with the ſame Hand, at the End of it, did deſtroy it; the Words are thus in the Original:

O God, durch deine Gute
Beſchere uns Kleider and Hute,
Auch Mäntel and Röcke
Fette Kälber and Böcke,

Oxen, Schaſa and Binder,
Viele Weiber, wenig Kinder;
Slechte, Spaiſe and Trank
Machet cikem das Yahr lang.

i. e. *O God, thro' thy Mercy, grant us Clothes and Hats, Cloaks and Gowns, fat Calves and Goats, Oxen, Sheep and Bulls, many Wives, and few Children: Indifferent Meat and Drink makes the Year paſs away very ſlowly.*

In the Arſenal, they tell you, the Pope preſerves conſtantly Arms for forty thouſand Foot and twenty thouſand Horſe; but I am ſure there were not half enough for that Number, and thoſe very indifferent. I told you that the Pope may, with great Conveniency, deſcend from the *Vatican* to St. *Peter*'s Church; and on the other Side he may, with the ſame Eaſe, make a ſecret Retreat from thence into the Caſtle of St. *Angelo*, through a Gallery built by *Alexander* VI. It was *Urban* VIII. fortified it with four Baſtions, unto which he gave the Names of the four Evangeliſts. In the Chapel you ſee a Picture repreſenting Pope *Gregory* I. proſtrated at the Feet of an Angel that appeared to him on the Top of the *Moles Adriani*, or *Adrian*'s *Mauſolæum*, and ſheathing his Sword, foretold the Pope the Deliverance of the City of *Rome* from a moſt violent Peſtilence; whence this Place received the Name of St. *Angelo*.

In the little Arſenal belonging to this Caſtle, we ſaw, beſides the Papal Triple Crown, an Armoury full of prohibited Arms, taken, for the moſt Part, from ſuch unfortunate Perſons as were executed on that Account. Among the reſt, they ſhewed us the Piſtols of *Ranuccio Farneſe*, Son and Heir of *Alexander Farneſe*, Duke of *Parma* and Governor of the *Netherlands*, who uſually carrying Piſtols about him, contrary to the expreſs Prohibition of *Sixtus* V. who being a rigorous Perſon, and of a Diſpoſition very forward to maintain his Authority, ordered *Ranuccio* to be ſeized in one of the Chambers of the Palace, as he was going to deſire Audience of his Holineſs, and to be carried Priſoner to the Caſtle of St. *Angelo*. Cardinal *Farneſe*, *Ranuccio*'s Uncle, left no Stone unturned to procure his Liberty, but in vain; for one Evening, about ten o'Clock, whilſt the Cardinal was ſoliciting his Releaſement with the Pope, he ſent his Orders to the Governor of the Caſtle of St. *Angelo*, to have the Prince *Ranuccio* beheaded: This done, the Pope not queſtioning but that his Orders had been executed immediately, and willing to make a Shew of obliging the Cardinal, gave him a new Order about eleven o'Clock, enjoining the Governor of the Caſtle to ſet *Ranuccio* at Liberty. The Cardinal, who knew nothing of the firſt Order, made all the Haſte he could thither, but was highly ſurpriſed when he found his Nephew preparing himſelf for preſent Death in the Arms of a Confeſſor, the only Reaſon that had delayed his Execution; but the Cardinal, overjoyed to have nicked the Time ſo exactly, and producing his new Order to the Governor, had his Nephew put into his Hands, who, by his Uncle's Procurement, took Poſt immediately, and ſo eſcaped the Hands of his Executioners.

During our Stay here, there was a certain Priſoner of Note kept in the Caſtle of St. *Angelo*, named *Borri*, a Gentleman of *Milan*, and a good Phyſician and Chymiſt, accuſed of Hereſy in receiving the Errors of the *Collyridians* in the fourth Age, who paid a Kind of Adoration to the *Virgin*, nay, ſome ſay that he made her a fourth Perſon in the Godhead: However, he has the Liberty of viſiting ſome of his Patients of the beſt Quality in the City, being ſuppoſed not to be in his right Wits at certain Times.

I am not well able to reſolve your Queſtion concerning Dr. *Molinos*, for though I have ſeen thoſe Propoſitions that are ſaid to be his, yet will I not preſume to give my Judgment of them, unleſs I could hear *Molinos* himſelf; however, as they are publiſhed, ſome of them are dangerous, others ambiguous, ſeveral of them indifferent, and many very reaſonable and orthodox. As to his Perſon he has a very bad Character, being reputed a Villain and lewd Fellow, who, by his pretended *Inſenſibility* and *Extaſy*, has deluded a great Number of Nuns, of which they tell you a thouſand Stories, which have procured him his ignominious Confinement to a Cell for his Life. I have however obſerved, that his moſt inveterate Enemies have a much better Opinion of his Followers, who have embraced *Quietiſm*, and other Opinions you have heard ſo often attributed to *Molinos*.

2. The Queen of *Sweden*, *Chriſtina Vaſa*, is a Princeſs about ſixty Years of Age, of a low Stature, and very fat; her Complexion, Voice, and Countenance are maſculine, with a great Noſe, large and blue Eyes, and yellow Eyebrows; her double Chin is ſtrewed with ſome few long Hairs, and her under Lip ſticks out a little; her Hair is of a light Cheſnut Colour, of a Hand-breadth long, powdered and curled up in Puffs, without any other Headdreſs; her Air is very pleaſing, and ſeldom without a Smile. As for her Habit, imagine a Man's *Juſtaucor* of black Sattin reaching to the Knees, and buttoned quite down; a very ſhort black Petticoat, which plainly diſcovers a Man's Shoe; a Knot of black Ribbon inſtead of a Neckcloth, and a Girdle above the *Juſtaucor*, which ſupports the Belly. The Queen having left us, we took a View of the Palace *Riari* her Reſidence, where we met with many ancient Pieces; the moſt exquiſite of them are, the *Auguſtus*, of the rareſt tranſparent oriental Alabaſter, but the Head and Feet are modern, and of Braſs gilt, ſixteen ancient Columns of *Giallo*, with two Pillars of tranſparent oriental Alabaſter ſeven Feet high; the *Venus*, whoſe mangled Legs are ſo admirably ſupplied by new Pieces, that the Joining is not to be perceived; the *Caſtor* and *Pollux* on each Side of their Mother *Leda*, all of one Piece of Marble; the Sons are bigger than the Mother: The Altar of *Bacchus*, of beautiful white Marble, is adorned with moſt exquiſite Sculptures in *Baſſo relievo*. Old *Silenus* going home drunk from the Feaſt of his Foſter-child, ſupported by two Men; the *Bacchantes* appearing in the Poſture of Mad-women. In another Place we ſaw a Goat flea'd alive, for cropping the Vines; and a Boar, which is waſhed, in order to be ſacrificed.

Among the Pictures, the Piece of *Correggio*, repreſenting the Intrigue of *Jupiter* with *Leda* in the Shape of a Swan, is exceeding fine; as are the *Virgin* with the Infant *Jeſus*; the little St. *John*, by *Raphael*; the *Danae*, by *Carrachio*; beſides ſeveral other rare Pieces of *Titian*, *Paul Veroneſe*, *Guido*, and other great Maſters. It would be much beyond the Compaſs of a moderate Treatiſe to enter upon a Deſcription of all the rare Medals to be ſeen in this Palace, I will therefore content myſelf with mentioning only the beſt: The *Otho*, of Braſs, an *Egyptian* Piece, with *Serapis* on the Reverſe of it; the *Pertinax*, a ſmall *Latin* Medal, on the Reverſe whereof you ſee that Emperor offering a Sacrifice; the *Antouinus Pius*, another *Latin* Medal, having on the Reverſe *Victory* and *Plenty* offering him Fruit; another little Medal of the ſame *Antonin*, called by Mr. *Bellori*, *l'Anno Nuovo*, or, *the New Year*, from the four Letters *A. N. F. F.* which he interprets *Annum Novum*, *Fauſtum*, *Felicem*; and a Medal of *Nero*, with *Hercules* on the Reverſe; the *Cicero*, of Onyx, the Head white on a brown Ground, a moſt curious Piece. But we will paſs from hence to ſome other Curioſities: In St. *Sabina*'s Church, on Mount *Aventine*, we ſaw a great Stone, which, they tell you, the *Devil* of *Colen* hurled down from the Top of an high arched Roof, to knock out St. *Dominick*'s Brains, after he had been diſappointed in his Deſign of beating down the Chapel of the Three Kings.

The Crucifix in St. *Paul*'s Church, which ſpoke to St. *Bridget*, was the Work of *P. Cavallini*; it was made in the Year 1360; beſides which, they have ſeveral other talking Images at *Rome*, as, the Crucifix of St. *Mary Tranſportin*'s, which ſpoke ſeveral Times to St. *Peter* and St. *Paul*; our Lady of St. *Coſmo* and *Damian*, (formerly the Temple of *Remus* and *Romulus*) which chid St. *Gregory* for paſſing by without ſaluting her: They ſhew you certain *Latin* Verſes (attributed by ſome to the Abbot *Joachim*, by others to *Beda*) containing the whole Dialogue betwixt the Image and the Saint: Another at St. *Mary's the Empreſs*, and one more in St. *Gregory's* on Mount *Cælio*, have now and then given ſome Proofs of their Faculty of ſpeaking, as divers others (if you will believe them) have not been ſparing with their Tears; as at St. *Mary's of Peace*, St. *Mary's in Valicella*, and another St. *Mary'i* call'd *del Pianto*, and that in the Church of the *Holy Ghoſt*, has ſhed whole Floods of Tears, as theſe credulous People believe. The Image of Chriſt at St. *Sylveſter's* in the *Campo Martio*, done by himſelf, as they ſay, and ſent by him to King *Abagarus*, is the rareſt Picture in *Rome*. *Euſebius* mentions the Letter paſs'd between Chriſt and *Abagarus*, but ſays nothing of the Image, the Story being of much later Date.

This City abounds alſo in Variety of Relicks; as, the Ark of the Covenant, *Moſes* and *Aaron's* Rods, and the Fountain of Chriſt preſerved at St. *John Lateran*; a Piece of the ſame Money *Judas* received, his Lanthorn is alſo ſhewn at St *Denis* in *France*, and the Croſs of the *Good Thief*, are ſhewn at the Church of the *Holy Croſs of Jeruſalem*, with the Tail of *Balaam's* Aſs and St. *Paul's* Thorn; St. *Roch's* Bowels are kept at St. *Marcell's*. The Beams of the Star that conducted the Wiſemen have been evaporated of late Years, as well as the Sound of the *Jeruſalem* Bells; but *Moſes's* Horns, it ſeems, are ſtill preſerved at *Genoa*. The Navel of Chriſt is preſerved at St. *Maria del Popolo*, concerning the Foundation of which they tell you the following Story: In the very ſame Place ſtood a large Walnut-tree, on the Branches of which uſed to perch a certain Troop of Devils, who guarded the Aſhes of *Nero* in an Urn near it: This being very injurious to the Neighbourhood, they prevailed with Pope *Paſchal* II. to rid them of this helliſh Company: After ſome Time ſpent in Faſting and Prayer, it was revealed to him, that he ſhould pull up the Tree by the Root, and build a Church; and this being done accordingly, he gave in the Name of St. *Mary of the People*.

In the Church of St. *Giacomo Scoſſa Cavalli*, or St. *James Shake-horſes*, they ſhew the Stone on the Altar of the Preſentation, on which Chriſt was circumciſed, with the Impreſſion made by one of his Heels upon the Marble; as alſo another Marble Table on St. *Anne's* Altar, on which *Abraham* intended to ſacrifice his Son: Theſe Relicks, they ſay, were ſent by the Empreſs *Helena*, to be kept in St. *Peter's* Church; but the Waggon was no ſooner come near St. *James's* Church, but the Horſes ſtopp'd; ſo that the Drivers not being able to make them go one Step farther, ſome Myſtery was ſuppoſed to be hidden in this unaccountable Accident; and it being conſider'd at laſt, that St. *Paul* call'd St. *James*, as well as St. *Peter*, the *Pillar of the Church*, they reſolved to leave them at St. *James's*, and to preſerve the Memory of the Miracle, gave that Saint the Name of *Scoſſa-Cavalli*, or *Shake-horſes*.

You may eaſily imagine, that my Curioſity might lead me to hear ſome of their Preachers, who, generally ſpeaking, expreſs themſelves more in fantaſtical Geſtures, wry Mouths, and odd-compoſed Faces, than in their Arguments, or a fine Diſpoſition of Words, ſerving more for Diverſion than Inſtruction. I muſt farther tell you, that each Order has its peculiar Way of preaching; the *Jeſuits* declaim very well, without thoſe Geſtures and Motions the reſt are guilty of, but their Stile is extravagant. The *Capuchins* thunder out nothing but Hell and Deſtruction, and make a hideous Noiſe; whence it is that a certain *Italian* Author ſays pleaſantly, That when a *Capuchin* preaches, the Dogs run out of the Church. In ſhort, their Diſcourſe has neither Strength nor Gravity, a confuſed Noiſe and Heat, without Senſe or Reaſon. I remember I heard once a *Carmelite* preaching before the *Penitent Whores of the Holy Croſs*, concerning *Mary Magdalen*, who ſpent at leaſt a Quarter of an Hour in repreſenting all her Features to the greateſt Nicety, not like a Preacher, but like a Painter.

The Queſtion you put to me, Whether there are more Courteſans at *Rome* or *Venice*, I am not able to anſwer; for though I ſee not ſo many here as at *Venice*, I have it from credible Perſons, that their Number is almoſt infinite. *Sixtus* V. endeavour'd to root out this Evil; but after he had done all he could with Baniſhments and otherwiſe, was forced to recal them again, as *Sixtus* IV. did before, to prevent, as they ſay, greater Diſorders. Upon this Occaſion I cannot but remember an ancient Picture of a Wedding at the *Aldobrandin* Palace. This is a Piece of Frize, brought hither with the ſame Part of the Wall on which it is painted, being highly valuable both for its Antiquity and Workmanſhip. I need not tell you, that the Marriage Ceremonies were very different among the *Romans*, the Bride being ſeated ſometimes upon a Sheep's Fleece, ſometimes on a Figure of the God *Priapus*, ſometimes in another Poſture. In this Picture ſhe is ſeated on the Bed-ſide, her Head hanging down with an Air of Coyneſs, whilſt a Matron ſitting by her puts her in Mind, with a ſmiling Countenance, of her Duty. The Bridegroom, in an odd Dreſs, with an Ivy Garland on his Head, is ſeated near the Bed, waiting, with an eager Impatience expreſs'd in his Looks, for the Compliance of his whining Spouſe, whilſt divers Maids are buſy in preparing Baths and ſweet-ſcented Ointments, and a ſhe-Muſician plays upon the Harp, whilſt another ſeems to ſing ſome *Hymenia! O Hymenæe*, ſome *Epithalamium*, or laſcivious Song, to diſpel the Charms. This Picture on the *Frize*, and another on the *Pyramid* of *Ceſtius*, are the only Remnants of the true ancient Painting in *Rome*. This Pyramid is ſquare, ending in a ſharp Point; it is of Brick, but cover'd with white Marble; it was repair'd 1673, and reſtored to its former Beauty by *Alexander* VII. and, as appears by the Inſcription, was erected to the Memory of *C. Ceſtius*, one of the Seven Magiſtrates appointed to take Care of Religious Feaſts.

You enter the *Mauſoleum* through a narrow Opening in the Middle of the thick Wall, and thence into a vaulted Room nineteen Feet long, thirteen broad, and fourteen Feet high, plaiſter'd over with a certain white poliſh'd Mortar, on which are ſeen ſeveral Pictures of Women, Veſſels, and other Ornaments.

To enter into a particular Deſcription of ſo difficult a Subject being beyond my Scope, I will content myſelf to tell you, that I found the Antiquaries here of different Opinions in reference to theſe Figures, ſome pretending that they repreſent the Preparatives for a Funeral Show, others a Banquet, as a Memorial of the Office of the Deceaſed. One of the Figures holds a Veſſel, into which ſome others pour luſtral Water, and others Wine. Another Figure you ſee with large Pipes, deſigned, as ſome ſay, for Mirth, and according to ſome, for Mourning, both Parties pretending to back their Opinions by this Diſtich in *Ovid's Faſti*.

Cantabat Fanis, cantabat Tibia Ludis
Cantabat mæſtis, Tibia funeribus.

There is one Thing, *viz.* the different Colours of the Figures, which ſeem to intimate, that theſe Habits were not intended for Funeral Ceremonies; and as, according to the Inſcription of a Pedeſtal dug up near this Pyramid, this *Ceſtius* died in the Beginning of *Auguſtus's* Reign, ſo it is beyond Diſpute, that the Women were cloath'd in White at the Funerals in his Reign, the Faſhion of Mourning in Black being aboliſh'd in the Beginning of *Cæſar's* Dictatorſhip. Perhaps theſe Pictures were deſigned only for an Ornament to the Tomb, without the leaſt Reſpect either to Feaſts or Funerals, as the Sepulchre of the *Naſo's* has many ſuch hiſtorical Ornaments, the bare Product of the Painter's Fancy. The like is to be ſeen in ſeveral other Tombs, and eſpecially Urns. The greateſt Curioſity in theſe Pictures is the Durableneſs, eſpecially of their Colours, which were only mix'd with Water, and do not even penetrate the Plaiſter; beſides that, Painting in Oil is an Invention of the latter Ages, by *John de Bruge*, about 1450.

This Pyramid is about two hundred Paces diſtant from the Hill call'd *Diliolo* or *Monte Teſtacco*, i. e. *the Hill of Potſheards*, which ſome would have derive its Name from the broken Pieces thrown there by the Potters,

ters, that were obliged to live near the *Tyber*, to prevent its Inundation on that Side, by caſting together the Pieces of the broken *Idols*, *Bathing-tubs*, *Statues*, *Tiles*, and other Sorts of earthen *Veſſels*, which amounting to a vaſt Quantity in ſo great a City, produced this Hillock.

But as probable as this Opinion appears at firſt View, I have upon ſtrict Examination of the Matter, obſerv'd Things which induce me to believe otherwiſe; for having ſeen, at ſeveral Times and at ſeveral Places, the People dig Caves under this Hill to keep their Wine in, I could never obſerve them bring out any Fragments of *Images*, *Tiles*, &c. but only the Remnants of *Urns*; whence I conjecture, that whilſt the Cuſtom of burning the Dead continued, a prodigious Quantity of earthen *Urns* were made for the common People, and as of Neceſſity many of them muſt be broken, the Reverence they had to thoſe *Veſſels*, that had contain'd the Aſhes of the dead Bodies, had induced them to aſſign a certain Place for theſe Fragments to be laid up in a Heap, juſt as we, out of Reſpect to the Dead, preſerve their Bones.

Your Curioſity concerning the famous *Paſquin* and his Antagoniſt *Marforio*, I will ſatisfy as well as I can: This *Paſquin* was a Taylor, a jovial ſmart Fellow, at whoſe Houſe the Newſmongers uſed to meet; his *Lampoons* were called *Paſquinades*, and theſe, as well as all the other *Libels* of the Town, were affix'd to a Statue which ſtood near his Gate: It is a mangled Statue, thought by ſome to be a *Roman* Soldier; it ſtands leaning againſt a Houſe at the Corner of a Place where ſeveral Streets meet. Pope *Alexander* VI. being adviſed to throw this *Paſquin* into the *Tyber*, he anſwer'd, *I ſhould be afraid it would turn into a Frog, and trouble me Day and Night with its Croaking.* *Marforio* is likewiſe a maim'd Statue, ſaid by ſome to be made for *Jupiter*, others for the *Rhine*, or for *Nera*, which runs by *Terni*: It ſtands in one of the Courts of the Capitol; and *Marforio* commonly aſks the Queſtions which are reſolved by *Paſquin*.

You will perhaps expect me to relate Wonders of *Tivoli* and *Freſcati*, and it is not to be denied but that they are *pleaſant*, or (if you will have it ſo) *fine Places*; but if Things are beſt diſtinguiſhed by Way of Compariſon, (as for Inſtance, betwixt *Freſcati* and *Verſailles*, or even ſome other that are not Royal Seats) I dare boldly affirm, that both *Tivoli* and *Freſcati*, and all the other celebrated Places about *Rome*, in reſpect to their *Gardens* and *Water-works*, are only *Toys*. *Freſcati* is a ſmall Town ſeated on the Brow of a Hill, twelve Miles from *Rome*; it has ſeveral beautiful Country Seats, the three principal of which are, *Monte Dracone*, belonging to Prince *Borgheſe*; *Belvedere*, to the Prince *Pamphilio*; and the *Villa Ludoviſia*, to the Dutcheſs of *Guadagnola*, the Conſtable *Colonna*'s Siſter; all which are in Compariſon to *Verſailles* the ſame as *Freſcati* is to *Rome*. *Monte Dracone* is a very large Structure, ſeated on an Aſcent, from which you may ſee *Rome* and the interjacent Plain; but as the City lies at too great a Diſtance, and the Plain is not embelliſh'd with that Variety of Things which render a Landſkip agreeable, ſo the Proſpect of *Paris* from St. *Clou* is infinitely more delightful: On the Side of *Monte Porcio* there is much greater Variety in the Proſpect, but more ſtraitned. The Avenues to the Houſe are but indifferent, and very difficult, and the Gardens and Fountains much out of Order. The Situation of *Belvedere* is near the ſame with *Monte Dracone*; it has a pretty Caſcade and a Grotto, where you ſee *Apollo* with the *Nine Muſes* on *Parnaſſus*. The chief Ornament of the *Villa Ludoviſia* is the *Caſcade*; but the Furniture of all theſe Houſes were but very indifferent.

Tivoli is ſuch another ſmall Town, about eighteen Miles from *Rome*: Here is a Country Seat belonging to the Duke of *Modena*, commonly in the Poſſeſſion of the Cardinals of that Family; it is very ſpacious, but wants both convenient Apartments and good Furniture; the beſt Thing belonging to it are three Rooms painted in *Freſco* by *Raphael*, and ſome ancient Statues: The Gardens, though but ſmall, yet are adorn'd with moſt delightful Terraſs Walks and curious Water-works, far beyond thoſe of *Freſcati*, and perhaps all other Works of this Nature in *Italy*; but at preſent, what with the Stoppage of the Canals, and the Defect of the Pipes, every Thing is ſo much out of Order in this Houſe, that you ſee only the Remains of its Beauty. This Sight, as well as of moſt other celebrated Country Seats, puts me in Mind, after the ſurprizing Things I had heard concerning the *Italian* Water-works, that if formerly they did ſurpaſs thoſe of *France*, the Face of Affairs is much altered now; and allowing even what they ſay of the Palace *d'Eſte*, that the Water-works coſt no leſs than three Millions, it is nevertheleſs beyond all Diſpute, that the Water-works and other Beauties of *Verſailles* abundantly exceed all thoſe at *Tivoli*. The Caſcade or Cataract of the River *Treverona* (which produces white ſmooth Flints call'd the *Hailſhot of Tivoli*) in this ſmall Town is very pleaſant, being not very high. Near it you ſee the Ruins of an ancient Structure, reputed by ſome to have been the *Sybils Houſe*, by others a Temple of *Hercules*: In the Court ſtand two ancient Statues of a reddiſh Granite ſpeckled with Black, repreſenting (according to Mr. *Spon*'s Opinion) the Goddeſs *Iſis*, which he ſuppoſes to have been brought by *Adrian* out of *Ægypt*, to adorn his Country Seat.

The Hill near this Place has many Ages ago, and ſtill affords moſt of the Stones uſed in *Rome*, called commonly *Travertin* by Corruption, inſtead of *Tiburtin*: The Front of St. *Peter*'s Church is built of the ſame, as well as the *Colliſſeum*, which is quite cover'd with it: The Stone is very excellent, but yellowiſh and porous, and not ſo ſerviceable as your *Portland* Quarry, and thoſe of *Paris* and *Caen*. *Alexander Taſſoni*, in his *Various Thoughts*, ſays, That ſome Workmen having cleft a great Piece of one of the Stones of *Tivoli*, found in the Middle of it, in an empty Space, a *Crayfiſh* weighing four Pounds, which they boil'd and eat. *Alexander ab Alexandro* aſſures us, that he found a wrought Diamond in the Heart of a great Piece of Marble, and at another Time a conſiderable Quantity of ſweet-ſcented Oil in another Piece of Marble. *Baptiſta Fulgoſus* ſpeaks of a Worm found in the Middle of a Flint. The before-mentioned *Taſſoni* relates, (to ſhew the Spirit of the Man) that a Cat ſuckled a Rat at *Tivoli*.

About three Miles from *Tivoli* we ſaw a ſmall Lake called *Lago de Bagni*, or *Solſatara*, called by the Vulgar the *Sixteen Barges*, from the ſame Number of ſmall floating Iſles that are upon it: It is no more than a large round Pond, of about two hundred Paces Diameter, the Water whereof is very tranſparent, and of a blueiſh Colour; it gives Riſe to a ſmall Rivulet which, after a ſhort but rapid Courſe, joins its Waters with the *Anieno*; they ſay the Waters of the *Anieno* whiten the Teeth. The Lake as well as the Brook emit a very ſtrong ſulphureous Scent. The late Cardinal *d'Eſte* in vain attempted to ſound the Depth of this Lake, though two *Divers* were prevailed upon to enter into it, one of whom never return'd, and the other related, that coming at a certain Depth, he found the Water ſo hot, that he was not able to endure it, though on the Surface it is very cold: The Sound cauſed by the treading of the Horſes thereabouts, makes it apparent, that there is a Hollowneſs underneath the Ground near the Banks of this Lake. It is not unlikely that the Circumference of this Lake is only the Mouth of a much larger Abyſs extending a great Way under-ground on all Sides, and that the Diver, who was never ſeen again, happened to be carried into the ſubterraneous Gulph, and could not find out again the Entrance of the Lake, for he never appeared afterwards upon the Surface of the Water. Near the Bank of this Lake are ſeen ſome Ruins, ſuppoſed by many to be the *Baths* of *Agrippa*: The largeſt of the floating Iſlands is of an oval Figure, not above fifteen Feet long: As the leaſt Touch puts them in Motion, ſo they are eaſily carried by the Wind which Way ſoever it blows. Two of our Company got upon the leaſt of theſe Iſlands, and puſh'd it from the Bank only with the Points of their Swords.

The *Villa Borgheſe* is in my Opinion one of the moſt pleaſant and the beſt kept of any about *Rome*; it is all cover'd covered on one Side with moſt curious ancient Pillars of *Baſſo relievo*, ſo naturally diſpoſed, as if they had been made for thoſe Places where you ſee them. All the Apartments are filled with admirable Statues and Pictures, among the firſt, the *Gladiator* made by *Agaſias* Son of *Doſitheus* the *Epheſian*, as the *Greek* Inſcription on the Baſe expreſſes it, a Copy whereof in Braſs ſtood at the End of the Canal in St. *James*'s Park in *London*, (ſince removed to *Hampton Court*) is an excellent Piece, as well as the *Juno* of *Porphyry*; *Romulus*'s Wolf of the fineſt *Egyptian* Marble; the Buſts of *Hannibal*, *Seneca*, and *Pertinax*; the *Hermaphrodite*; the old *Silenus*, with *Bacchus* in his Arms; the *David* throwing a Stone out of his Sling at *Goliah*, *Æneas* carrying his Father, and the Transfiguration of *Daphne*, three modern Pieces of *Bernini*, yet deſerve to be ranked among the beſt of the former Ages. Among the Pictures, which are numberleſs here, the St. *Anthony* by *Caracchio*, and the *dead Chriſt* by *Raphael*, are preferred before all the reſt. In ſhort, the *Villa Borgheſe* is a moſt delicious Seat, and if it wants ſomething of that Royal Magnificence which gives a Luſtre to ſome Palaces, its ſweet and natural Beauties ſeem to make an ample Amends for it: Beſides that, for Statues and Sculptures the Seat of a *Roman* Gentleman may challenge the Precedency before all the other Palaces in the World. In the Garden, the Gardener ſhewed us a double white *Hyacinth*, the Root of which, he told us, coſt five hundred Crowns the Year before; a Thing not much ſurpriſing to me, when I had known the Fondneſs (to ſpeak no worſe) of ſome People to proceed to that Extravagancy in Flowers, as to give four or five hundred Piſtoles for a Tulip-root in *Flanders*.

The *Villa Ludoviſa*, though much out of Order otherwiſe from the Poverty of the Prince of *Piombino* its Maſter, yet is very remarkable for a vaſt Number of Statues, and thoſe for the moſt Part very ancient and valuable. The *Fauſtina* embracing a Gladiator, her Lover; the two Gladiators, one a dying *Mirmillo*, and the other repoſing himſelf after the Engagement. The Statues of *Bacchus*, *Mercury*, and *Concord*, are all moſt curious Pieces: The choiceſt Pictures and richeſt Furniture are removed from hence to other Places, the only Thing of Value remaining there, being the Bedſtead, which, they ſay, coſt twenty thouſand Piſtoles, but was much out of Order. In the ſame Chamber they ſhewed us ſome Bones, which, they would make us believe, were the Skeleton of a petrified Man; but, upon a ſtrict Search, I found theſe Bones not petrified, but covered only with a ſtony Cruſt; not that I believe it impoſſible for Bones to be liable to Petrifaction as well as other Things, having in my Travels had the Opportunity of ſeeing great Variety of petrified Fruits, Flowers, Trees, Woods, Plants, Fiſhes, broad Pieces of Fleſh, and Animals of all Sorts: *Paræus* ſpeaks of a whole Child petrified in the Mother's Womb; and *Kircher* relates the ſame of the Town of *Biedoblo* in *Afric*, that it was petrified in one Night, with Men, Beaſts, Trees, and every Thing that was in it.

The *Villa Chigi* is famous for its curious little Waterſpouts, and the Cabinet of Curioſities, in which the *Adrian* of oriental Jaſper excels the reſt, and is really invaluable. The curious Walks of the *Villa Montalto* or *Savelli*, are not inferior to any of *Rome* for valuable Statues and Pictures; among the firſt, the *Germanicus*, the *Peſcennius Niger*, the *Scipio*, the Goddeſs *Nænia*, the *Adonis*, and the *Gladiator*, are moſt excellent Pieces of Antiquity; and among the Pictures, the *dead Chriſt* by *Raphael*, the St. *Francis* by *Caracchio*, the *Virgin* and the *Bacchus* by *Guido*, and the St. *John* by *Pomarancio*. I obſerved here an unuſual Figure of *Abraham*'s Sacrifice, by *l'Eſpagnolet*, who, inſtead of a Cymetar, or ſhort two-handed Sword, as *Abraham* is commonly painted with, has, more agreeable to Truth, given him him a plain ſacrificing Knife, to cut his Son's Throat.

The Gardens of the *Villa Pamphilia* would, for their Exactneſs and orderly Diſpoſition, challenge the Preference before many others, were they kept in better Repair, the Houſe being adorned on the Outſide with excellent *Baſſo relievo*, like that of the *Villa Borgheſe*, and is as well furniſhed within, but that the beſt Statues are much diſordered by an odd Accident; for the Prince *Pamphilio* being very young, and much bigotted to the Jeſuits, theſe holy Fathers, under a Pretext of Devotion, prevailed upon him ſo far, as to have all his Marble Statues, Men, Women, and Children, quite laid over with Plaiſter-work in divers Parts of their Bodies, except a little *Bacchus*, who had the good Fortune to eſcape their ill-placed Zeal; and a poor *Venus*, the Maſterpiece of *Caracchio*, her Beauties hid by Smutt from Head to Foot. After ſome Time, however, the Prince being got out of the Hands of theſe pretended Zealots, ordered the naſty Clay or Plaiſter to be taken off again, which was done accordingly; but he found, to his no ſmall Regret, that the clumſy Plaiſterers had mangled ſeveral Parts of the Statues to make their Clay ſtick the better.

The *Vigne Madame*, a Country-ſeat belonging to the Duke of *Parma*, is neither ſpacious nor magnificent, but very regular and pleaſantly ſeated, being the Deſign of *Julius Romanus*: On one Side it has a moſt delightful Proſpect of *Rome*, with many Gardens and adjacent Seats; and on the other, a moſt beautiful Landſkip of little well-cultivated Hills. Over againſt it you ſee the *Tyber* flow through the pleaſant Meadows and Fields, and at a Diſtance the ſnowy Tops of the *Apennines* riſing up among the Clouds; behind it is a Wood of tall Trees, divided into cool and ſhady Walks; the Gardens riſe by Degrees into Terraſs Walks, and are well adorned with Statues and Fountains. Having ſufficiently tired your Patience with the Deſcription of Statues and Pictures, I will ſay nothing of the Houſes of *Medicis*, *Matthæi*, *Lanti*, *Cæſarini*, *Juſtiniani*, and many others.

3. I will at preſent begin with anſwering your Queſtions concerning the *Tyber*. As on one Hand it owes its chief Reputation to that famous City that was built upon its Banks, ſo on the other Hand, it has been repreſented by ſome with too much Contempt, its Breadth being by a general Computation at *Rome* about three hundred Feet, as may be ſeen by the Bridges of St. *Angelo* and of *Sixtus*; the firſt is three hundred and thirty, and the laſt three hundred Feet long; beſides that, it has a rapid Current, and a conſiderable Depth. What ſome Antiquaries would maintain, that it was unlawful to erect Houſes upon the Banks of the *Tyber*, may be ſufficiently refuted out of *Claudian* and other Authors. *Suetonius* ſays, that *Auguſtus* ordered it to be cleaned, and enlarged its Channel, to render the Paſſage eaſier to the Current; whoſe Example has been followed by ſeveral other Princes, to prevent its Inundations, but without any remarkable Succeſs; for the South-Eaſt Wind off the *Mediterranean* (here called the *Sea Wind*) ſometimes blows with ſuch Violence, that it ſtops the Waters of the *Tyber* at its Outlet, which if it happens at a Time when (either by continual Rains, or the Melting of the Snow in the *Apennines*) the Torrents of the leſſer Rivers that join with the *Tyber* are ſwoln, this Concatenation of Accidents produces thoſe Inundations, which are looked upon as the Scourge of *Rome*, as the ſulphureous Eruptions of Mount *Veſuvius* are the Scourge of *Naples*; and of theſe, one of the moſt fatal happened under *Clement* VIII. in *December* 1698.

The Waters of the *Tyber* appear always muddy and yellowiſh, but if they are ſet by for a Night to ſettle, they will become clear and limpid, and are then accounted very good; notwithſtanding which, the *Romans* have been anciently, and ſtill are, at a vaſt Charge to convey other Waters to *Rome*, through the Mountains, by the Means of coſtly Aqueducts. The *Aqua Felice* coſt Pope *Sixtus* V. near four hundred thouſand Crowns to bring them twenty Miles to *Rome*; and as the Waters of the Fountain of *Monterio* were carried at a greater Diſtance by Pope *Paul* the Fifth, 1612; ſo it is probable they coſt a great deal more Money in the Materials neceſſary for their Carriage.

On the High Altar of the Church of the *Franciſcans* at *Monterio*, is to be ſeen that moſt excellent Piece of the *Transfiguration*, which is the laſt Work and Maſterpiece of *Raphael Urbin* the greateſt Painter of his Time.

Not far from thence ſtands the Chapel, built in the ſame Place, as they believe, where St. *Peter* was crucified; for which Reaſon they ſhew a deep Hole in the Chapel, where they affirm the Croſs was fixed. The Picture of this Crucifixion, with the Head downwards, is to be ſeen at St. *Paul's at the three Fountains*, by the Hand of *Guido*; where they alſo ſhew you the Pillar, on which, they ſay, St. *Paul* was beheaded. In the Cloyſter of St. *John de Lateran* they ſhew the Column on which St. *Peter*'s Cock crew; and another, which, they tell you, was cleft aſunder from the Top to the Bottom, on the Day of Chriſt's Paſſion: Here you ſee alſo the Meaſure of Chriſt's Height, and the Stone on which *Pilate*'s Soldiers caſt Lots for Chriſt's Garments; it is of Porphyry, four Feet long, and three broad; the Dice they pretend to be kept at *Umbriatico* in *Calabria*. I will not trouble you with many other Curioſities pretended to be preſerved here, but cannot forbear to mention the Chair I ſaw there, being a kind of armed Chair of one ſingle Piece of Porphyry, about which you deſire to be informed, as being that which was formerly made uſe of in the Ceremony inſtituted to prevent all Doubts concerning the Pope's Sex.

I will not be too curious to enquire into the Reaſon and End of that Search, but ſince you have given me ſufficient Occaſion to make the beſt Reflections I can upon the Subject of the *She-Pope*, I muſt frankly confeſs, that I have not hitherto met with the leaſt Solidity, either in your Objections, or any made by others, againſt the Truth of this Hiſtory; though I am not ignorant that ſome Proteſtant as well as Roman Catholick Doctors of the laſt Ages, have rejected the ſame as a Fable. For, what Reaſon can be given to rank this among many other extraordinary Events recorded in Hiſtory, when ſeventy or eighty Authors (*Blondel* ſays ſeventy-one *Greek* and *Latin*, ſome too canonized Writers) all Men of Senſe, not prompted either by Intereſt or Honour, have related the ſame at divers Times; nay, when the Intereſt of Religion, and Fear of Puniſhment, might, in all Likelihood, rather have deterred them from publiſhing the ſame? It is a very ſlender Objection to alledge the Difficulty of the Thing, the ſame not being ſufficient to diſprove a Matter founded upon ſo unqueſtionable Authority, eſpecially if we give ſome Allowance for the Diverſity of Times, it being certain that People living then in an Age of Ignorance and Stupidity, they might be ſooner impoſed upon than in this crafty Age; beſides, that Things which ſeemed to be involved in inſurmountable Difficulties, have nevertheleſs been brought about by Time and Chance; witneſs *Joan* of *Arc*, known by the Name of the *Maid of Orleans*, born in the Village of *Damremy*, in the Year 1429, who at the Age of eighteen or twenty, from a poor Shepherdeſs, became at once a great General: Beſides, the Difficulties objected by our Adverſaries are of ſuch a Nature, as cannot render this Hiſtory fabulous, all the Circumſtances attending the ſame, being, if not altogether probable, are at leaſt within the Compaſs of Poſſibility.

The beardleſs Chin objected to *her Holineſs* is of little Validity, when we conſider that the Papal Chair has at other Times been filled with beardleſs Youths, witneſs *Benedict* IX. and *John* XII the firſt of whom was choſe at ten or eleven, and the laſt at eighteen Years of Age. Perhaps this *She-Pope* might be of the Number of thoſe *Viragoes*, who have not only a maſculine Mien and Beard, but alſo the Courage and other Qualifications of great Men; and why might not ſuch a one, in Diſguiſe, have as fair a Pretenſion to the Papal Chair as a begging Vagabond, ſuch as *Adrian* IV. or a Swineherd, like *Sixtus* V. and others who might be mentioned? But, ſay they, how could a Woman hide her great Belly ſo long, and at laſt expoſe herſelf to the Danger of being delivered in a ſolemn Proceſſion? As to the firſt Part of your Objection, What Difficulty is there for a Woman that is taken for a Man to hide her great Belly, any more than for a Man that has a ſwelled Belly to be imagined to be with Child? And to as the pretended Imprudence of our *She-Pope*, it is to be conſidered, that certain Things in this World are involved in ſuch Difficulties as muſt be overcome at any Rate, maugre all the Danger that attends them; beſides that, it is no hard Matter to ſuppoſe that ſhe might be delivered before her Time.

You alledge the different Calculations of the Time, but the Reaſon is obvious, thoſe who have expunged the *Popeſs*'s Name out of the Catalogue of Popes, being forced to extend the Reigns of the preceding Popes, to fill up the Breach they made themſelves. The next Objection concerning her Voyage to *Athens*, when ſhe was but a young Scholar, is founded upon a frivolous Suppoſition, which I may ſoon anſwer, by telling you, that perhaps ſhe was old enough to be admitted among the Auditors of the *Athenian* Philoſophers; beſides that, it is not all the Authors who mention her, ſpeak of her going to *Athens*: And though from theſe various Relations of my Authors you may ſeem to hope for an Advantage on your Side, I muſt tell you, that even in *ſacred Hiſtory* there are not wanting Inſtances of Variations in Circumſtances of this Nature, and that theſe Variations, provided they do not amount to Contradictions, do not in the leaſt weaken, but rather ſtrengthen the Credit of ſuch a Relation; for had there been a Combination ſet on Foot on Purpoſe to uſher a fabulous Story, as that of Pope *Joan* is pretended to be, they would have certainly agreed in all the Circumſtances relating to the Story.

The ſtrongeſt Argument (in your Opinion) againſt us, is the Silence of thoſe Authors who were Contemporaries of Pope *Joan*; but you will find this as weak as the reſt, if you conſider that *Marianaus Scotus*, who died at *Fulda* in *Germany*, 1086; *Sigebert* a learned Monk, who died in the Beginning of the twelfth Century, and divers other more ancient Authors, did in all Probability take it from thoſe Authors that had mentioned the ſame before them, there being not the leaſt Likelihood that they invented it, for the Reaſons before-mentioned: Beſides, let me tell you, your Argument is built upon a wrong Bottom; for the Editions of *Anaſtaſius* (ſurnamed the *Bibliothecary*, who was a *Roman* Abbot, a Perſon of Learning, and Contemporary of Pope *Joan*) which have eſcaped Caſtration, give a very circumſtantial Account of the whole Matter. But ſuppoſe they did not, what Wonder is it, if Fear and Shame did impoſe Silence to the Writers of that Age, when the Invention of Printing was unknown as yet in the World, which could not be kept ſecret afterwards? As we ſee that the worſt of Princes have been flattered during the Age they lived in, whom afterwards Poſterity, not cowed by Fear, hath painted in their true Colours. I cannot ſee why the Church of *Rome* ſhould make ſuch a Stir to hide this Diſgrace, when *Baronius* beſtows the Title of *Monſters* upon ſeveral other Popes, and not without Reaſon, conſidering the Enormities the Popes have been guilty of, in diſtributing Scepters, and treading crowned Heads under their Feet, notwithſtanding they retained the Quality of Prieſts; and what is worſe than all the reſt, to ſet a certain Rate of Abſolution upon the moſt abominable Crimes that can be committed, as appears from the Book entituled, *The Rates of the Apoſtolical Chamber*, which I bought ſome Days ago. It is true, they have ſince endeavoured to ſuppreſs the Book, by inſerting it in the *Index Expurgatorius* of the Council of *Trent*, but continue nevertheleſs in ſelling their Diſpenſations.

—— *Venalia nobis,*
Templa, Sacerdotes, Altaria, Sacra, Coronæ
Ignis, Thura, Præces, Cœlum eſt venale, Deuſque.
B. Mant.
i. e.
Prieſts, Temples, Altars, all with us are ſold,
Fire, Inceuſe, Pray'rs, Heaven, God *himſelf for Gold.*

I will appeal to all unbiaſſed Perſons, when once Poſterity ſhall read the Hiſtory of the Perſecution of *France*, as repreſented by *Maimbourg*, *Varillas*, the Biſhop of *Meaux*, and others of the ſame Stamp, I ſay, when they ſhall read the ſame in theſe Authors, whether they would not be apt to imagine that theſe poor Wretches were uſed with all imaginable Moderation, if it were not manifeſt from irrefragable Authority, that theſe unfortunate Creatures ſuffer'd all the Cruelties that could be invented by their implacable Enemies. Before I take my Leave of Pope *Joan*, I cannot forbear mentioning what *Mezeray* ſays (in the Life of *Charles the Bald)* upon this Subject, *viz.* That *this Opinion was generally received as an undoubted Truth for five hundred Years together.* If you are curious to know the Reaſon why the Uſe of this Chair is laid aſide now-a-days, the following Epigram of *Pannonius* will ſatisfy your Curioſity.

Non poterat quiſquam reſerantes Æthera Claves
Non exploratis, ſumere Teſticulis:
Cur igitur noſtro mos hic nunc tempore ceſſat?
Ante probat quod ſe quilibet eſſe marem.
The Senſe is this:
The ſacred Keys none could of old obtain
Unleſs by Search *his Manhood was made plain*;
Why does not to our Days this Rule extend?
More certain Signs *they give ere they pretend.*

Paſquin, in his Verſes on *Paul* II. and *Innocent* VIII. gives you the ſame Reaſon;

Pontificis Pauli *Teſtes ne* Roma *requiras,*
Filia quam genuit, ſat docet eſſe marem.
In *Engliſh*:
That PAUL'*s a Man* Rome *need no Proof require',*
Except the Maid *that calls the Pontiff* Sire.

Octo Nocens *pueros genuit, totidemque puellas,*
Hunc merito poteris dicere Romæ *patrem.*
That is,
Eight Boys, eight Girls, begot; *He well may claim,*
Tho' not a holy, *yet a* Father's *Name.*

The Church of St. *John Lateran* is celebrated for its ſpacious Magnificence, and the Title ſhe bears of *The Head and Mother of all Churches*, according to the Inſcription engraven on the Portico:

Dogmate Papali, datur ſimul Imperiali
Ut ſim cunctarum mater Eccleſiarum.

Sixtus V. built a large Palace near this Church, but it was never inhabited. Next adjoining to this Structure is the *Sancta Scala*, ſo called from the twenty-eight Steps of white Marble, pretended to be the ſame by which Chriſt aſcended into *Pilate*'s Houſe, which no body is permitted to aſcend but kneeling, though there are two little Stairs, on each Side one, by which every one is permitted to walk up into the Chapel called *Sancta Sanctorum*, or the *Holy of Holies*, except Women, who are forbid to enter there. It has this Name from an Image of Chriſt, which, they ſay, was made by Angels: I ſaw it, and can aſſure you it is very ill-ſhapen, and very unworthy of the pretended Workmen.

From hence we paſſed by St. *Mary major*, a ſumptuous Fabrick. A certain devout *Roman* Lord being warn'd in a Dream to go to Mount *Eſquilin*, and there to build a Church to the Honour of the *Mother of God*, in the Place where he ſhould find Snow; and Pope *Liberius* having at the ſame Time ſuch another Viſion, they walk'd thither the next Morning; and notwithſtanding it was then in *Auguſt*, *Anno* 355, they found Snow, which they removed with their own Hands, and laid the Foundation of a Church in that Place. The Chapel of *Sixtus* V. the Work of *Dominick Fontana*, which coſt ſeven hundred thouſand *Roman* Crowns, and of *Paul* V. are very magnificent Structures; in the laſt of which they ſhew you the Manger of *Bethlehem*, and the Picture of the Virgin done by St. *Luke*. Near it ſtands the little Church of St. *Anthony*, where all the Horſes of the City receive Benediction every Year on that Saint's Feſtival. Soon after we took a Turn to *Caſtel Gondolfo*, ſixteen Miles from *Rome*, a Palace belonging to the Pope, but has little remarkable in it. About a Mile from this Caſtle we ſaw the little Town of *Albano*, where in former Ages ſtood the famous City of *Alba*, which, they ſay, extended from the Lake of *Caſtel Gondolfo* to this Town of *Albano*; but this is a Matter of Fact, queſtion'd by ſome.

We were ſhewn at *Albano* the Ruins of a *Mauſoleum* not unlike an old Tower, called commonly the Tomb of *Aſcanius*, but with the ſame Uncertainty. There is another very ancient Tomb near *Albano*, ſuppoſed to be the Sepulchre of the two *Horatii*, and the three *Curiatii*, occaſion'd, queſtionleſs, by the five Pyramids ſtanding on this Tomb; but *Livy* expreſly contradicts this Opinion, *viz.* that their Sepulchres were erected in the ſame Places where each of them expired, *viz.* thoſe of the *Horatii* near *Alba*, and thoſe of the *Curiatii* not far from *Rome*. They told us that the Lake of *Caſtel Gondolfo* was ſix or ſeven Miles in Circumference, encloſed on all Sides with riſing Grounds in the Form of an Amphitheatre. In two Places the Depth of this Lake cannot be ſounded, and ſometimes the Waters of this Lake ſwell on a ſudden to the very Brink of theſe high Banks, occaſion'd, without doubt, by ſome ſubterraneous watery Receptacles which diſcharge themſelves into it. Near *Genſana*, about half a Mile from this Lake, is another little one, called by the Moderns the *Lake of Nemi*, but by the Ancients *Speculum Dianæ*, from a Grove and Temple conſecrated to that Goddeſs, which formerly were very near the Banks of this Lake.

Between *Albano* and *Caſtel Gondolfo* are to be ſeen the Ruins of an ancient Amphitheatre; and we were not a little ſurpriz'd to ſee ſeveral large Trees, that had taken Root without, to have forc'd their Paſſage thro', and cleft aſunder the beſt cemented Stone and Brick. The Country about *Albano* and *Genſana* is very fertile, affording the beſt Wines and Fruits, and the Inhabitants ſtill hold their moſt ancient Cuſtom of cultivating *Leeks* and *Onions*;

Mittit præcipuos nemoralis Aricia porros. Mart.

Before I leave the *Roman* Palaces, I muſt tellyou alſo ſomething of thoſe within the City, which I will do with all the Brevity that is poſſible.

At the Palace *Juſtiniani* there is a Catalogue of Antiquities of 1867 Pieces, and of 638 curious Pictures, the moſt excellent of which are, the *Nero*'s Head, the *Minerva*, *Venus* coming out of a Bath, and the three little *Cupids* ſleeping and leaning one upon another. Cardinal *Chigi*'s Palace is ſcarce inferior to any in *Rome*, the Gates are over-cruſted with an old green Marble: The Statues of the two *Venus*'s, of *Marſias* flea'd, and of the dying Gladiator, are admirable Pieces. The *Farneſian* Palace was begun by *Antonio de S. Gallo*, but brought to Perfection by the famous *Michael Angelo*; the Front being in Breadth one hundred and eighty Feet, and ninety Feet high. The Gates, Corner-pieces, Croſs-bars of the Windows, Cornice, and in ſhort, all the principal Stones of this beautiful Structure, were the Spoils taken from the great *Colliſeum*, which admirable Monument of Antiquity has furniſh'd Materials alſo not only to the Palace of the *Chancery* and St. *Lawrence*'s Church, but alſo to ſome Part of the City Walls. Thus *Innocent* VIII. deſtroyed the *Gordian* Arch to build a Church; and *Alexander* VI. that moſt beautiful Pyramid of *Scipio*, to pave the Streets with the Stones.

The Marble Steps to the Church of *Ara Cœli* belong'd formerly to the Temple of *Romulus*: St. *Blaiſe*'s Church owes its Ornaments to the Spoils of the Temple of *Neptune*, as St. *Nicholas of the Souls* was built out of the Ruins of the *Circus Agonalis*; and had it not been for *Sixtus* V. we might now look in vain for any of the precious Remnants of Antiquityin *Rome*.

The *Hercules* and *Bull* in the *Farneſian* Palace are celebrated throughout the World; and the Gallery by *Caracchio*, the Hall by *Salviati*, and the *Venus* and *Adonis* by *Titian*, are alſo excellent Pieces. The Library in the Palace of *Altieri* contains a good Number of the beſt Books. The whole Stair-caſe, and eſpecially the Statue of a Captive King at the Foot of it, (found five hundred Years ago in the Place called

Navona) is very fine. It has very ſpacious Apartments well filled with curious Pictures and rich Furniture. I ſaw here a *Looking-Glaſs* of *Rock-Cryſtal*, ten Inches long and ſix broad, in a Frame of Gold ſet with precious Stones of a conſiderable Value. They alſo ſhew'd us a little Earthen Diſh carefully kept in a rich Frame, as being ſuppoſed to be the Work of *Raphael*, and is of the ſame Kind with the Veſſels of *Loretto*; but diſcourſing upon this Subject with the noted *Carlo Moratti*, he aſſured me, that *Raphael* never drew a Stroke on any of theſe Diſhes, but that, by the Reſemblance of the Way of working, ſome of his Scholars painted the ſame, in Imitation of his Deſigns.

The Palace *Barberini*, called the *Paleſtrina*, containing four thouſand Chambers, is the largeſt in *Rome* next to the *Vatican*, and has abundance of Antiquities; the little *Diana* of Oriental Alabaſter, is of great Repute; the *Tullia*, Daughter of *Servius Tullius*, and Wife to *Tarquin the Proud*, is very rare, and ſaid to be the only one of that Kind in *Rome*: Here I alſo ſaw the God *Oſiris*, with his Hawk's Head on a human Body, which was found with the Obeliſk of *Minerva*, under the Ruins of the Temple of *Iſis*; and a Marble Buſt of Pope *Urban* VIII. made by a blind Man, and yet the beſt that is extant of that Pope. The other Palace of *Barberini*, towards the four Fountains, is fill'd up with Rarities, Antiquities, and Curioſities of all Sorts: They told us, that the Library contains four thouſand Volumes. In the Halls of the Palace *Colonna* you ſee the Pictures of two Popes, *Adrian* I. and *Martin* V. two of the beſt that ever ſate in the Chair, nineteen Cardinals, and fifty-four Generals, all deſcended from the Houſe of *Colonna*. In this Palace are nine very ſpacious Apartments, eight thouſand original Pictures, a little Arſenal, Buſts, antique *Baſſo relievo*, Statues, and rich Furniture, in conſiderable Quantities.

As for their Way of Building in general, I told you before, that they cover their Houſes with ridged Roofs, found out by our famous *Manſard*, and much preferable to flat Roofs; and upon this Occaſion I muſt intreat you to lay aſide that partial Opinion you ſeem to have conceiv'd of the entire Perfection of the *Roman Architecture*, which, as well as in other Places, varies according to the Difference of the Age and peculiar Mode of the Country, and is not always ſuited to the Regularity and Magnificence of juſt Architecture. The *Obeliſks* in *Rome* are quadrangular, ending in a ſharp Point, their Angles reſpecting the four Corners of the World, and denoting the four Elements, as the whole reſembled the Rays of the Sun, the chief Divinity adored by the *Egyptians* under the Name of *Oſiris*. The *Hieroglyphick Characters* on theſe *Obeliſks*, ſuppoſed by ſome to have been the Elogies or Hiſtories of great Actions, erected by the *Egyptians* in Honour of the Heroes of their Nation, have ſince been clearly demonſtrated to contain the Secrets of their *Divinity*, *Aſtrology*, *Metaphyſicks*, *Magick*, and ſuch other Sciences as were in Vogue among the *Egyptians*: All theſe *Obeliſks*, (not one of them being made at *Rome*) are of *Granite*, a Kind of very hard Marble, which, they ſay, will reſiſt the Fire for a conſiderable Time, and without Queſtion induced the ancient *Egyptians* to make Choice of it for ſuch laſting Monuments. The *Obeliſk* of St. *John Lateran* has ſtood three thouſand Years, and that of St. *Peter* nine hundred Years longer: The firſt, which is the biggeſt of the two, is an hundred and eight Feet high, without including the Pedeſtal or the Croſs. There are alſo ſome *Granites* of *Corſica* in this Place, but their Grain is much coarſer than thoſe of *Egypt*.

4. Since you deſired me to give you my Obſervations upon what Mr. *Chevreau* hath alledged, in his Hiſtory of the World, concerning Pope *Joan*, I will write you my Sentiments upon this Head. That Gentleman acknowledges, That *a conſiderable Number of famous Authors have mentioned that Story, and poſitively aſſerted the Truth thereof*: And what Reaſon, I pray, can he alledge, why ſo many unbiaſs'd Witneſſes of unqueſtionable Credit, who unanimouſly atteſt that Matter, ſhould not be credited? He ſays, *The more judicious and cautious Part of Mankind, relying on the Silence of ſeveral other Authors, have examined and rejected the ſame.* It is certainly a very weak Way of arguing, to ſay, That a Thing atteſted by the unanimous Voice of ſeventy or eighty Men, all of the *Roman Catholick* Religion, moſt of them Clergymen, and ſome canoniz'd Saints, all which is confeſs'd by the *Romaniſts*, ſhould be invalidated by the Silence of ſome other Authors. But, ſays Mr. *Chevreau*, Anaſtaſius *the Bibliothecary makes no Mention of the She-Pope* Joan: But this Author, as well as *Onuphrius*, who alledges the ſame Argument, is miſtaken. If you will be pleaſed to conſult Mr. *le Sueur*'s *Eccleſiaſtical Hiſtory*, and *Colomeſius*'s *Hiſtorical Miſcellanies*, you will hear there of an *Anaſtaſius* in the *French* King's Library, containing a circumſtantial Account of this female Pope; beſides two other Copies of the ſame Author, ſeen by the great *Salmaſius* at *Augsbourg*, and another at *Milan*, which give an Account of the ſame Pope *Joan*. Theſe before-mentioned Books tell you further, that the Jeſuits of *Mentz* having only ſuffer'd two Copies to be wrought off conformable to the Original, (which they do not deny themſelves to be true) ſuppreſs'd what diſpleaſed them in the reſt of the Edition. Upon this Occaſion, I cannot but put you in Mind to weigh ſtrictly the Authority of the Teſtimony of *Anaſtaſius*, (he wrote the Lives of the Popes to *Nicholas* I. the Succeſſor of *Benedict* III.) who being a Man of ſingular Learning, lived at *Rome*, and was Contemporary with this female Pope.

I cannot forbear, in the next Place, to give you my Thoughts upon the Reflections made by Mr. *Chevreau* on *Martinus Polonus*, or the *Pole*, Archbiſhop of *Cozenza*, and Penitentiary to *Innocent* IV. and (according to the Opinion of ſome) to *Nicholas* III. whom he calls a ſilly Monk; and, I pray, for what Reaſon? *Since*, ſays he, *in his Treatiſe of the Wonders of* Rome, *he miſtakes the Gate of* Oſtia *or of St.* Paul, *and of* Capenna *and St.* Sebaſtian, *for another which he calls* Collina, *inſtead* (*as we may probably ſuppoſe*) *of* Collatina *or* Pinciana, *the* Pantheon *for a Temple of* Cybele, *and the* Amphitheatre *for a Temple of the* Sun, *we may the eaſier forgive his Blunder in Hiſtory when he miſtakes a* Pope *for a* Popeſs. If this Argument holds, *That ſuppoſing* M. Polonus *had miſtaken one Gate for another, therefore he muſt take a* Pope *for a* Popeſs, I might with the ſame Reaſon retort it upon *Chevreau* himſelf, that *ſince his Reflections on* M. Polonus *are groundleſs, therefore he miſtakes a* Popeſs *for a* Pope. That his Reflections are groundleſs, appears, (1.) That Mr. *Chevreau* himſelf knew not that there was ſuch a Gate at *Rome* as the *Collina*, when he ſays, *that* Polonus *took the Gate of* Oſtia, *and the Gate* Capena, *for another which he call'd* Collina, *inſtead of* Collatina, *or* Pinciana; it being certain that *Collina* was the Name of a Gate as well as *Collatina*, and had its Name *à Colle Quirinali*, mention'd by *Ovid*:

> *Templa frequentari Collinæ proxima portæ*
> *Nunc decet*, ——————— Faſt. 4.

being now call'd *Solacro*. (2.) The Gate *Collatina*, ſo called from the Town of *Collatium*, is different from the *Pinciana*, as *F. Nardin* hath ſufficiently demonſtrated. (3.) Mr. *Chevreau* has as little Reaſon to find Fault with *Polonus* for calling the *Pantheon* the Temple of *Cybele*, the ſame being founded upon the Opinion of ſeveral learned Antiquaries, who believe it to have been conſecrated by *Agrippa* to *Jupiter* the *Avenger*, and to *Cybele* the Mother of all the Gods, who was ſometimes worſhipped under the Names of *Ops*, *Rhea*, *Veſta*, *Berecynthia*, *Dindymene*; ſometimes under the Names of *Tellus*, *Magna Pale*, *Magna Mater*, and frequently ſtiled *Natura Rerum Parens*. (4.) Mr. *Chevreau* ſpeaks ſo ambiguouſly concerning the *Roman Amphitheatre*, that his Meaning is not eaſily to be underſtood; for ſince there were ſeveral *Amphitheatres*, the Ruins of ſome of which are ſtill remaining, I ſuppoſe he means the great *Amphitheatre* called *Colliſeum*, built by *Veſpaſian*, and dedicated by *Titus*. (5.) It is certainly too great an Abſurdity to believe, that *Polonus* could miſtake this *Colliſeum* for the Temple of the *Sun*; which makes me imagine,

imagine that ſome of his Expreſſions muſt not be well underſtood, and that inſtead of ſaying the *Colliſeum* as a Temple of the *Sun*, he might ſpeak of the Temple near the *Amphitheatre*.

You tell me you have ſeen a Manuſcript of *Polonus*, where this Story is written in the Margin by another Hand; and what can be inferred from thence, except, that the Author having been mutilated by ſome body or other, a more equitable Perſon ſupplied the Defect, *Bellarmine* himſelf making not the leaſt Scruple to confeſs, that *M. Polonus* wrote the Hiſtory of the *Popeſs?* For the reſt Mr. *Chevreau* being not a little puzzled to give the World a probable Account of the firſt Riſe of this Story, is forced to have Recourſe to *Onuphrius*, (though he conceals his Name) who pretends, that Pope *John* was nick-nam'd *Joan*, from a favourite Concubine he had of that Name; though neither of them can produce any other Authority for this Aſſertion than their own, or make it appear that Pope *John* had ſuch a Concubine: It is true, they cite *Luitprand* in their Behalf, but erroneouſly, the Widow's Name he ſpeaks of being *Anne*, and not *Joan*. And Mr. *Chevreau*, it ſeems, was ignorant that Mr. *du Pleſſis Mornay* had already made a Diſcovery of this Forgery of *Onuphrius*, and that this Pope *John* filled the Chair a hundred Years after Pope *Joan*.

What he affirms of the *Chair not being bored*, I can contradict as an ocular Witneſs, having ſeen it more than once; and it is bored after the Manner of Cloſe-ſtools. There are two of them, (both of Porphyry) one broken and the other entire, both made after the ſame Manner. *Platina* affirms poſitively, after *Chalcondylas* an *Athenian*, who flouriſhed about the Middle of the fifteenth Century, and other approved Authors, that the new elected Pope was placed in the bored Chair, and that the youngeſt Deacon uſed to thruſt his Hand through the Hole to feel whether he had the true Marks of Virility. This was, queſtionleſs, the primitive Uſe of this Chair; and though this Cuſtom was laid aſide by Degrees, they continued however for ſome Time to ſet the Popes on the ſame Chair, to put them in Mind, as Mr. *Chevreau* affirms after *Fauchet*, that they were ſtill ſubject to the common Infirmities of human Nature.

What Mr. *Chevreau* tells us concerning the Deputies of the Council of *Soiſſons*, ſent to Pope *Leo* IV. who was deceaſed before their Arrival, is of little Conſequence, ſince he mentions a Council of *Soiſſons* without any peculiar Diſtinction, and without the leaſt Proof, which ought to have been founded upon Manuſcripts of *uncontroverted Antiquity* and *Credit*, to extricate himſelf and his Adherents out of the Labyrinth in which they have entangled themſelves, by confounding the Succeſſion of the Popes that preceded and followed the Popeſs *Joan*; whence it is, that whereas *Platina*, *Garenza*, and other unbiaſſed Hiſtorians, compute twenty-four Popes that bore the Name of *John*, (the reſt count but twenty-three) and thus introduce an irreparable Confuſion in Hiſtory. But it is Time to have done with Mr. *Chevreau*; I will only add, that it ought not to ſeem ſtrange to you, that our Popeſs is ſometimes called *Anglicus*, ſometimes *Moguntinus*; the Author of the *Faſciculus Temporum* (*Werner Wolninck* a *Weſtphalian*) has unfolded the Riddle in theſe Words, *Joannes Anglicus cognomine, ſed natione Moguntinus*: Her Name was *Joan Engliſh*, but was born at *Mayence*. Neither muſt the Variations obſerved in Manuſcripts diſturb you, who are not ignorant of a thouſand Inſtances of what Forgeries have been introduced by Tranſcribers, any more than the doubtful Expreſſions you meet with in ſome Authors that relate this Hiſtory, it being to be conſidered, that as the Force of Truth prompted them to ſpeak, ſo Fear, on the other Hand, was a ſufficient Bridle to reſtrain them from ſpeaking too freely of the Matter: But as, notwithſtanding all this, ſome Authors have broken through all theſe Obſtacles, and given us a poſitive and circumſtantial Account of the whole Matter, all the *negative Authorities* in the World cannot be ſufficient to counterbalance the *Credit of ſo many authentick Witneſſes*, and of a Relation ſo generally and ſolidly atteſted. To bring up the Rear of your Arguments, you have called to your Aid ſome of the *Proteſtant Doctors*, who deny the Story of Pope *Joan*, and among the reſt the famous *David Blondel*, a Man of Learning and Wit: But, to deal frankly with you, as the Author's Name is the ſtrongeſt Argument in his Book; ſo it is an unaccountable Piece of Prejudice to build blindly upon the Opinion of any Man not divinely inſpired, let his Name be ever ſo great in the World for Learning and Knowledge.

For my Part, I cannot reconcile his Argument when he confeſſes that *the Hiſtory of the Female Pope is contained in the* Augſburgh *Copies of* Anaſtaſius, but in Oppoſition to theſe pretends to cite (and that without quoting any entire Paſſage) a certain private Copy of *Anaſtaſius*, to be met with (which we muſt take upon his Credit) at *Paris*, the Certainty whereof he ſeems to queſtion himſelf, when he tells us, that *it has often been miſtaken for* Platina; ſo that in the main this Book may, without much Difficulty, be refuted by itſelf, the reſt being a confuſed Medley of Chronological Cavils, and an Heap of needleſs Quotations, ſerving more for Oſtentation and to confound than demonſtrate the Matter he has taken in Hand, to ſtand either one Way or other. To conclude the whole, and to tell you my Thoughts with all imaginable Freedom, I have a great deal of Reaſon to believe, that it was rather Intereſt and Oſtentation than the Love of Truth that engaged our Author in this Deſign; for I was aſſured by a Perſon of Honour at *Paris*, who knew the Author very well, that he had it from the firſt Hand, that he was hired to write a Treatiſe againſt the *Hiſtory* of Pope *Joan*. And as my Author is a Perſon of unqueſtionable Reputation, ſo the only Thing that can be ſaid upon this Head is, that Mr. *Blondel* is not the firſt Man that has been overcome by the Force of Gold.

All that I am able to anſwer to your Queſtions concerning the *Armenians* and *Greeks* is, That as they have each their peculiar Ceremonies, ſo they officiate according to their own Rites; but before they can ſettle at *Rome*, are obliged to acknowledge the Pope's Supremacy. Some Antiquaries ſay, the little *Armenian* Church was formerly one of the Temples of the *Sun* and *Jupiter*. Before the Pontificate of *Paul* IV. the *Jews* lived pretty eaſy in any Part of *Rome*, but this Pope confined them to a certain Quarter of the City, whither they were to retire at Sun-ſet, forced them to ſell their Poſſeſſions, and allowed them to deal only in old Cloaths, and for Diſtinction Sake to wear yellow Hats. *Gregory* XIII. obliged a certain Number of them to hear a *Chriſtian* Sermon every *Saturday* in the Afternoon; but I had no Opportunity to ſee this Aſſembly. The *Italian Jews*, and eſpecially thoſe of *Rome*, religiouſly obſerve that Cuſtom of marrying before the twentieth Year of Age: Their Number may amount in *Rome* to about ſix or ſeven thouſand; but they are generally poor and deſpiſed.

If any *Jew* or other *Infidel* has a Mind to be baptized, the Ceremony is generally put off to *Saturday* in the *Holy Week*, and is then performed in the Church of St *John Lateran*, becauſe they believe *Conſtantine the Great* was baptized here. We ſaw ſix *Turks* baptized; they wore white Damaſk Cloaks, and a large Band, with a Silver Croſs hanging at their Necks; the Cardinal that was to officiate, attended by the Canons of the Church, began the Ceremony with bleſſing the Water; then the new Converts being preſented by their reſpective God-fathers, advanced one after another, and having declared their Willingneſs to receive Baptiſm, they leaned over the Font, and the Cardinal baptized them by pouring Water upon their Heads with a large Silver Spoon; and having given each his Name, they were, with Wax Tapers in their Hands, conducted to the Chapel of the Baptiſtery, to be confirmed, and from thence went to hear Maſs in the ſame Church.

The *Thurſday* before we were preſent at the Ceremony of waſhing the Feet of thirteen Pilgrims, in one of the Chapels of the *Vatican*: They appeared all in white, with a Kind of Hood and ſquare Cap, ſeated in a Row upon a Bench. After they had pulled off their

Shoes and Stockings, a great Baſon was brought, and Ewers of Vermilion, one for each Pilgrim; then the Cardinal that officiated inſtead of the Pope, putting their Feet in the Baſon, waſhed and rubbed them with his own Hands, and at laſt wiped and kiſſed them: Soon after, each of them being regaled with two golden Medals, they went all together to an Apartment of the Palace, to partake of a magnificent Entertainment prepared for them; they were placed in one Row at a Table, the Cardinal dining at the ſame Time at another in the ſame Room.

The Pope [*Innocent* XI.] though really old and infirm, yet often makes the Want of Health ſerve for a Pretence to excuſe his Abſence at thoſe numerous Ceremonies uſed at *Rome.* I had it from very credible Perſons, that he did not approve of the *French* Way of converting People by *Dragooning*, and ſhewed a great deal of Averſion to thoſe who pretended to propoſe certain Methods of Accommodation to him with the Crown of *France.* His Retirement is the Occaſion he is ſeldom ſeen by Strangers; nay, it is a Rarity to meet any of his Coaches, Footmen, or others belonging to his Retinue. If he happens to ſtir Abroad, it is in a large Litter lined with Crimſon Velvet, without and within adorned with Gold Galoons and Fringes, the Harneſſes of the Mules covered with the ſame Stuff. He ſits always alone in his Litter, with a little Table before him. All the Popes have the ſame Livery, *viz.* Scarlet, with a double Velvet Galoon of the ſame Colour; even the Apartments of the *Vatican* and *Monte Cavallo* are hung with Red Damaſk intermixed with Edges of Gold Galoons, and adorned above with Gold Fringes.

The Situation of the Gardens of *Monte Cavallo* is very delightful, but their Contrivance is not very regular, nor are they well kept. The two Marble Horſes before this Palace are generally reputed to be made by *Phidias* and *Praxiteles*, whoſe Names are engraven upon them.

Opus Phidias, Opus Praxiteles.

Some will have them to be the Statues of *Bucephalus*, the Horſe of *Alexander*, which theſe Artiſts made in Emulation of each other; but there is a Miſtake in this Tradition, conſidering that *Phidias* flouriſhed a whole Age before *Prexiteles*, and *Alexander the Great* reigned fifty Years after *Praxiteles.* The two Marble Horſes in the Court of the Capitol, were brought thither from the Theatre of *Pompey*, and the *Equeſtris Statua* of Braſs, placed here by *Paul* III. is ſuppoſed to be the Statue of *Marcus Aurelius.* The Capitol is a modern Structure, built not only upon the Ruins, but even upon Part of the Foundations of the ancient Fabrick, the old Foundations ſtill appearing.

The Antiquities here being ſo many, that a Deſcription of them would require an entire Volume, I will only mention ſome of the principal: The *She-Wolf* giving Suck to the two Brothers, on which is to be ſeen the Mark of the Thunderbolt mentioned by *Cicero*, (*Orat.* 3. *contr. Cat.*) four great *Baſſo relievos* repreſenting divers Paſſages of the Hiſtory of *M. Aurelius*; the *Columna roſtrata* of *Duilius*, the firſt that was honoured with a naval Triumph at *Rome*; the Meſſenger pulling out a Thorn in the Senate-houſe; the Buſt of *Cicero* with his Vetches; the four ancient Meaſures, one for Oil, two for Wine, and the fourth for Grain; the Buſt of *Virgil*; *Nero*'s Nurſe holding him by the Hand; the Goddeſs of *Silence*; the God *Pan*; the three Furies; a Statue of *Cæſar* in Armour; another of *Auguſtus*; thoſe of *Caſtor* and *Pollux*; the Fragments of the *Coloſſes* of *Apollo*, *Domitian*, and *Commodus*; the Lion devouring a Horſe; and the Trophies of *Trajan*, but believed by others to have belonged to *Marius.* The Pictures in *Freſco* in the great Hall are of Cavalier *Joſeph*'s Hand; in my Opinion they repreſent the Battle of the *Romans* with the *Sabines.*

I am ſomewhat doubtful what Account to give you of the Pillar called the *Milliarium*; it is of white Marble eight Feet and a half high, with a Cypher [I] marked on the Top, and on the Chapiter a Braſs Globe of two Feet Diameter: It is the general Opinion, that this Pillar ſtands in the Center of *Rome*, from whence they uſed to compute the Diſtances from that City, divided into Miles by other Pillars erected on all the great Roads of *Italy*; but there are ſeveral Arguments which contradict this Opinion, for the Column in the *Forum Romanum* was, according to *Suetonius*, *Tacitus*, and other ancient *Roman* Authors, either of Braſs or Braſs gilt, with the Names of the great Roads and Diſtances of the chief Cities engraven upon it, nothing like which appears on the *Milliarium* in the Capitol. If you object, that perhaps the brazen *Milliarium* being loſt, this was ſet up inſtead of it; the Inſcription engraven on one of the Faces of the Pedeſtal will tell you, that it was found near the *Appian* Highway.

S. P. Q. R. *Columnam Milliariam primi ab Urbe lapidis indicem ab Imperatore Veſpaſiano & Nerva reſtitutam de ruinis Suburbanis Viæ Appiæ in Capitolium tranſtulit.*

And it ſeems not likely that this Column was from the Center of the City tranſpoſed to a Mile's Diſtance from the Walls; then which Way can you give a true Explication of theſe Expreſſions, *primus*, or *ſecundus*, *ab Urbe lapidis*, if theſe Stones or Pillars were not without the City, the Words *ab Urbe* ſhewing plainly that they were not within? And ſince this *Milliarium* was found in one of the Suburbs near the Highway, I cannot but perſuade myſelf that it then ſtood in its proper Place, and that the Number of thoſe firſt Columns was equal to that of the great Roads. Whether we ſuppoſe the gilt *Milliarium* to be the only firſt Pillar, and the ſecond Columns to have been placed at the Diſtance of one Mile from it; or that the gilt Column in the Center of the City was the Head-mark from whence all the Diſtances were computed, and that the next Columns were called the firſt *Milliariums*, and marked with an Inſcription like that you ſee in the Capitol; it is evident from either of theſe Suppoſitions, that conſidering the Extent of *Rome*, none of theſe firſt or ſecond Columns but muſt be within the City; and that conſequently this Expreſſion, *primo ab Urbe lapide*, could not take Place, but inſtead thereof, the *primus lapis* muſt have been *in Urbe*, and not *ab Urbe.*

There is a very ancient Inſcription in the Palace called *Palæſtrinum*, which contains the Statues of a College of *Æſculapius* and of *Health*, unto which *Salvia Marcellina* bequeathed a Temple, a Place or Court, and a Walk, the whole ſituate on the *Appian Way*, near the Temple of *Mars*, *Intra milliarium primum & ſecundum ab Urbe euntibus*, i. e. *Between the firſt and ſecond Mile as you go from the City*; which Words, joined to the Opinion of the beſt Antiquaries, that there was a Temple of *Mars* without the City, and on the *Via Appia*, are a ſufficient Inducement to convince me, that the gilt *Milliarium* was erected as a publick Mark to know where all the great Roads begun, and to compute the Diſtance of great Cities; but that all the firſt Columns were each one Mile diſtant from the Walls of *Rome.* The two following Inſcriptions are engraven on the Body of the *Milliarium* in the Capitol:

IMP. CÆSAR VESPASIANUS PONTIF. MAXIM.
TRIB. POTESTAT. XVII. IMP. XVII. P. P.
CENSOR. COS. VII. DESIGN. VIII.

IMP. NERVA CÆSAR AUGUSTUS PONTIFEX MAXIMUS TRIBUNITIA POTESTATE
COS. III. PATER PATRIÆ REFECIT.

Adjoining to the right Wing of the Capitol is the Church known by the Name of *Ara Cœli*: They tell you, that *Auguſtus* having for a conſiderable Time, but in vain, ſolicited the Oracle of *Delphos* to know his Succeſſor in the Empire, the Oracle at laſt declared, that his Mouth was ſtopt by the *Hebrew* Child, who was the Son of God, and God himſelf; and that *Auguſtus* finding this to agree with the *Sibyllin* Prophecies, ordered an Altar to be built in the Capitol to the Honour of the *Hebrew* Child, unto which he gave the Name of the *Ara primogeniti Dei*, *The Altar of the Firſt-born of God.* The before-mentioned Church being built in the ſame Place where *Auguſtus*'s Altar ſtill remains near the Choir, had thence the Name of *Ara Cœli.*

Near unto this Place is a Chapel called St. *Pietro in Carcere*, built in the ſame Place where St. *Peter* and St. *Paul* were kept in Priſon, after their Condemnation, and, according to the Opinion of the beſt Antiquaries, is the *Tullianum* finiſh'd by *Servius Tullius*, or *Tullius Hoſtilius*, and uſed as a Priſon for condemned Malefactors only. Here they ſhew you a Spring (they tell you that the Water has a milky Taſte) which, they ſay, guſhed out of the Rock at the Prayer of St. *Peter*, in order to baptize certain Proſelytes; as alſo an Impreſſion in the Wall, made (as they ſay) by that Apoſtle's Face, the Stone yielding as he was thruſt with his Head againſt it by a Soldier.

Among the Multitude of ancient Ruins behind the Capitol, is the famous *Tarpeia*, (ſo called from one *Tarpeia* a *Roman* Lady) that once ſo dreadful Precipice, which is now not above twenty Feet high. The Triumphal Arch erected to *Titus* after his Conqueſt of *Jeruſalem*, the *Baſſo relievo* repreſenting the Candleſtick, Table, Trumpets of the Jubilee, and ſome Veſſels taken out of the Temple, is highly worth a Traveller's Obſervation. The Arch of *Conſtantine* is very near entire, except that you ſee ſome Statues thereon without Heads, ſuppoſed to be carried privately by *Lawrence de Medicis* to *Florence*; and as the niceſt Judges have obſerved a conſiderable Difference in the Beauty of the *Baſſo relievo*, it is ſuſpected that ſome of the beſt Pieces were taken off when it was erected. The Lake of *Curtius* was in the Middle of the *Forum Romanum*, but was already loſt in *Ovid*'s Time:

> *Curtius ille Lacus, ſiccas qui ſuſtinet aras*
> *Nunc ſolida eſt tellus: ſed fuit antè Lacus.*

The vaſt *Amphitheatre* call'd *Colliſeum*, from a *Coloſſus* that was near it, is of a circular Figure on the Outſide, though the *Arena* is oval; it was capable of containing eighty-five thouſand Spectators, not including the twenty thouſand *Excuneati* who ſtood in the Paſſages, and conſequently four Times as many as the Amphitheatre of *Verona*. The Pillars of the third Order, and the Pilaſters of the fourth, had *Corinthian* Chapiters. Though I cannot engage to anſwer your Queſtions concerning the Senate of Women inſtituted by *Heliogabalus*, yet I can thus far ſatisfy your Curioſity, that the little Edifice at *Monte Cavallo*, by ſome ſuppoſed to have been the Temple of the *Sun*, by others the Temple of *Health*, is ſuſpected to have been the Meeting place of that ſage Aſſembly.

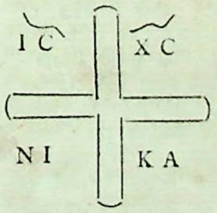
The Columns of *Trajan* and *Antoninus* are truly magnificent Monuments of Antiquity, adorn'd with moſt excellent *Baſſo relievo*, aſcending in a ſpiral Line from the Baſe to the Chapiter, and repreſenting the great Actions of thoſe great Princes. The firſt is compoſed of twenty-four Stones, each containing eight Steps, erected by the Senate to the Honour of *Trajan*, and ſerved afterwards for his *Mauſoleum*, his Aſhes being placed in an Urn of Gold, on the very Top of it; in lieu of this Urn was afterwards placed the Statue of St. *Peter*, of Braſs gilt, by *Sixtus* V. The whole Height of the Body of this Column is 128 *Roman*, or 124 *Engliſh* Feet; and you aſcend to the Top by 123 Steps. The ſecond, compoſed of twenty-eight Stones, was likewiſe built by the Senate, to the Honour of *Antoninus Pius*, with the Statue of that Emperor on the Top of it, but has ſince been forced to make Way for St. *Paul*, whoſe Statue of Braſs is now placed there, and gilt like that of St. *Peter* on *Trajan*'s Pillar. The Body of this Column is 160 *Roman*, or 155 *Engliſh* Feet high; and the Stairs leading to the Top conſiſt of 206 Steps.

One Day as we were viſiting the Caves, known generally by the Name of *Catacombs*, we entered into the *Mauſoleum* of *Cecilia*, the Daughter of *Metellus*, ſurnamed *Creticus*, where, at the very Entrance of it, we were ſhewn a Hole, into which, but a few Weeks before, a certain Gentleman (D. *Malateſta Strinati* of *Ceſena*) happened to tumble deep under Ground, unperceived by his Company; his Friends being amazed and not knowing what was become of him, after they miſs'd him, went in Search of him; but whether it was the Depth of the Pit, or that he was ſtunn'd by the Fall, he was not able to cry, or at leaſt not loud enough to be heard by them, ſo that they were forc'd to return without him: The poor Gentleman having continued in this deplorable Condition for ſixty Hours, at laſt found Means to open a Paſſage, and ſo clambering out of the Pit with a great deal of Difficulty, got to an adjacent Houſe, where being comforted with ſome good Broths, he ſoon after recover'd his Strength. I am apt to believe there is no Place in the World that can compare with *Rome* for ſubterraneous Paſſages; and though the Earth has ſtopt up the Entrances of ſome, yet there are ſtill left a prodigious Number of Caves, generally known by the Name of *Catacombs* among the modern Authors, though they cannot well ſupport the Etymologies they produce.

Theſe Catacombs are not ſingle Vaults, but rather whole ſubterraneous Cities, with Turnings and Windings like Streets; as for Inſtance, thoſe of St. *Agnes*, St. *Sebaſtian*, &c. There are ſome Caverns; as, thoſe of the Gate *Pinciana*, and thoſe near St. *John* and St. *Paul*, which ſeem never to have been made Uſe of as Burial-places, and are known by the Name of *Grotto*'s.

The Catacombs of *Rome* extend under all its Suburbs, but thoſe of *Naples* only under one Part of that City; theſe are dug out from among the Rocks, each Paſſage being commonly betwixt fifteen and eighteen Feet wide, and twelve or fifteen Feet high: The hollow Niches in both Sides of the Walls are ſhaped like Cheſts, of divers Sizes, placed in Rows above one another without the leaſt Order, in which were laid the Bodies without any Coffins, cover'd only with flat Stones like Tiles, cemented with a Kind of Mortar or Mixture of Chalk and Sand. Beſides theſe, the Catacombs of *Naples* have divers Tombs of an indifferent Bigneſs, with ſeveral Figures of Heads, Half Lengths, *&c.* with the Names of the Perſons entombed, as *Paulus*, *Nicolaus*, *Proculus*, *&c.* and ſometimes *hic jacet*, or *quieſcit* underneath it.

On one of theſe Tombs I ſaw a blue and yellow Croſs with the following Characters.



Ἰησῦς Χριστὸς νικᾷ.

Jeſus Chriſtus vincit.

Jeſus Chriſt overcame.

Where it is to be obſerved, that the *Greeks* wrote their Σ almoſt like our *Latin* C, during the three firſt Ages. Among all the Catacombs of *Rome*, thoſe of St. *Sebaſtian* are the greateſt; their Height is the ſame as thoſe of *Naples*, but the Paſſages are not above two Feet and a half broad, by reaſon the ſandy Ground could not be eaſily underprop'd, of which thoſe at *Naples*, hewn out of the Rock, do not ſtand in Need. We ſaw one of theſe Niches opened, where we found a Skeleton moulder'd away into whitiſh Aſhes, yet we could perceive that the Corps had been laid on its Back.

The *Roman Catholicks* have taken a great deal of Pains to perſuade the World, that *theſe ſubterraneous Vaults were dug by the Chriſtians in primitive Times, to bury their Dead in, with the Excluſion of all Pagans*; *that they uſed to perform their Religious Worſhip in them during the Times of Perſecution*; *and that conſequently they contain an inexhauſtible Store of Relicks of Saints and Martyrs interr'd in them.*

Though the Proof of this Aſſertion lies at the Door of the *Romaniſts*, and hitherto they have ſcarce attempted any Thing on that Head, yet will I ſubjoin ſome few

Obſervations which ſeem to contradict this Opinion. The firſt Thing I have to offer upon this Subject is, a Deſcription of *Horace* of the *Puteculi*, or *publick Burying-places* of the poorer Sort, which is exactly applicable to the Catacombs;

Huc prius anguſtis ejecta Cadavera Cellis
Conſervus vili portanda locabat in arcâ:
Hoc miſeræ plebi, ſtabat commune ſepulchrum.

The ſecond Obſervation are the Words *Fata*, *Diis manibus*, *Domus æterna*, and ſuch like, found in the Epitaphs of ſome Tombs in the Catacombs, which I cannot conceive to have been in the leaſt ſuitable to the Simplicity and Piety of the Inſcriptions of Chriſtian Tombs in primitive Times. I remember Mr. *Spon*, that moſt celebrated Antiquary, is of the ſame Opinion, in his Voyage to *Greece*, where he looks upon the Words *Æthera* and *Superis* as ſufficient Proofs to ſhew, that the Tomb, which contain'd them, belonged to a Heathen.

The Glaſs Phials and little metallick Veſſels frequently found in the Catacombs, ſeem to be additional Marks of *Paganiſm*; and though the *Romaniſts* pretend thoſe Veſſels formerly contain'd the Blood of the Martyrs, (this is rather a Conjecture than a Proof) whereas it is certain, that the *Roman* Pagans uſed to put *Lachrymatories* (in which they gather'd the Tears of certain Women hired for that Purpoſe) into their Urns and Tombs. I remember a certain Paſſage in *Tertullian*'s *Apologetick*, which does not at all agree with the Pretenſions of the *Roman* Church; he ſays, The *Pagans* uſed to take the dead Bodies of the *Chriſtians* out of their Tombs, and drag them about the Streets; whence it ſeems very probable, that they would have deprived them of their Caves, had they diſcover'd them. Beſides, how can it be conceived that the *Chriſtians* ſhould be able to dig thoſe vaſt ſubterraneous Paſſages without being perceived? And, how could they diſpoſe of the Rubbiſh? They will tell us perhaps that they did not do it in ſecret, and that the Sand of the Catacombs was ſold by the poor *Chriſtians*, who, for this Reaſon were nicknam'd *Arenarii*; but this is not applicable to the Catacombs of *Naples*: Beſides that, it does not appear that the poor *Chriſtians* were the only People that employed themſelves in the Selling of Sand about the City.

The Cyphers of the *Name of Chriſt*, *Palm-branches*, *Doves of Peace*, *Croſſes*, *Crowns* and other Marks of Chriſtianity, to be ſeen upon the Stones of theſe Sepulchres, are ſo far from proving, that theſe Burial-places were peculiar to the *Chriſtians*, that they rather appear to be intended as Marks to diſtinguiſh them from the *Infidels*. The ſame may be ſaid of the *Chriſtian* Epitaphs, the Queſtion being, not whether the Bodies of ſome *Chriſtians* were buried here, (which is beyond all Diſpute) but whether all others were excluded from being interr'd in the ſame Vaults, ſet apart for the Dregs of the People. The Pictures and Altars of different Sorts and Ages, found in the Catacombs of *Naples* and *Rome*, have been the Product either of the zealous Covetouſneſs of the Popes, who, looking upon the Catacombs as a profitable Source of Relicks, have repair'd and made ſuch Alterations in them, as they found moſt agreeable to encourage the Concourſe of the Pilgrims. *Pancirollus* gives us a large Account of theſe Reparations. Moſt of the Bodies now to be ſeen in the Catacombs of *Naples*, were buried there forty Years ago, during the great Plague that raged in that City.

About a hundred and ſixty Paces diſtant from the Catacombs of St *Agnes*, ſtands an ancient Temple of a circular Figure, reputed by ſome to have been the Temple of *Bacchus*, on account of the Repreſentations of certain Vines on the Roof, and ſome Vine-branches, Grapes, Veſſels, and ſuch like Inſtruments on a Tomb of *Porphyry* in the ſame Temple; but it being certain that *Bacchus* did not die at *Rome*, it Nearneſs, to the Church of St. *Agnes* (built by *Conſtantine*) ſeems to be a ſufficient Proof, that it was built by the ſame Emperor, to ſerve for a Baptiſtery to the ſaid Church. The Tabernacle of St. *Agnes*'s Church is ſupported by four Pillars of the beſt poliſh'd Porphyry: The Statue of *Agnes* you ſee there, is ſuppoſed to have been anciently the Statue of ſome *Pagan Deity*, the Mantle whereof is chiefly remarkable.

As it is beyond the Compaſs of a moderate *Treatiſe* to comprehend an exact Deſcription of all the Antiquities and other Curioſities I obſerved in the Cabinets here, ſo I will content myſelf with mentioning only the moſt remarkable of thoſe in the Cabinet of Mr. *Bellori*, which, for their Number, exceed all that ever I ſaw of this Kind. His *Fortuna Panthea* of Braſs is not above half a Foot high, this little Goddeſs being a Compoſition of all the Characters of Divinity appropriated to other Gods, for ſhe appears with the Beauty of *Venus*, *Juno*'s Crown, *Diana*'s Creſcent, the Mitre of *Iſis*, the Horn of Plenty of *Ceres*, *Minerva*'s Robe, the Wings of *Fame*, *Cupid*'s Quiver, the Goat-ſkin of *Bacchus*, the Serpent of *Eſculapius*, *Fortune*'s Rudder, and ſeveral other characteriſtical Marks of different Deities; the *Fauſtina* defied with her Veil ſtrew'd with Stars; the *Magna Mater*, or *Natura rerum parens*, ſuckling Animals of different Kinds at all her Breaſts; the Goddeſs *Fortune* with the Horn of Plenty in one, and the Nail of Neceſſity in the other Hand; the Buſt of a young *Roman*, with his Golden Bull hanging at his Neck; the *Ciſtrum*, or an Inſtrument uſed by the *Egyptians* to call the People together to the Sacrifice, and afterwards introduced among the *Romans* for the ſame Purpoſe: It is a moſt curious Piece of Antiquity, reſembling a ſmall Racket, the Wood pierced with four Pieces of Braſs like Cords or Rods, which play and make a Noiſe; an ancient brown earthen Veſſel extremely fine, and of the ſame Sound as the true Porcelain, with Pictures upon it repreſenting the ancient Cuſtoms of Bathing: Among others, you ſee a Woman holding in one Hand a *Strigil* or Inſtrument for rubbing off Sweat, and in the other, a *Guttum* or Veſſel with ſweet-ſcented Liquors, not to mention the *Urns*, *Sepulchral Lamps*, *Lachrymatories*, *Pictures*, &c.

Father *Kircher*'s Cabinet was once one of the moſt celebrated in *Europe*, and notwithſtanding its being garbled of late Years, retains ſtill a good Collection of natural Curioſities and mechanical Engines. The *Roman College*, or chief Houſe of the *Jeſuits*, (where it is to be ſeen) is perhaps one of the fineſt Palaces in *Rome*: The Library is numerous, but without any ancient Manuſcripts, or other Rarities. In the Great Hall of this Society you ſee the Picture of the famous Jeſuit *Garnet*, who was executed in *England* on Account of the Gunpowder Plot, with an Angel at his Side ſhewing him the Way to Heaven, open'd to receive him. This Hall is adorn'd with the Pictures of many other Jeſuits that ſuffer'd Martyrdom.

During the laſt three Days in the *Holy Week*, we ſaw the Streets of *Rome* crowded with Proceſſions and Penitents with Hoods over their Heads, ſome in white, others in violet Colour, blue, yellow, and other Colours; ſome laſhing their naked Bodies with Whips of ſmall twiſted Cords, which made more Noiſe than they did Execution: It is ſufficiently known that ſome of them are hired for this Purpoſe. However, the Concourſe of Pilgrims was not ſo great this Year as it had been at ſome other Times. I remember I read, in an Account of *Trinity Hoſpital*, that in 1600, (being the laſt Jubilee Year) that Houſe entertained or provided for (according to Cuſtom) 440, 500 Men, and 2500 Women. The *Italian* Pilgrims are entertain'd here three Days, but Foreigners four Days, and are ſerved at Table by Princes, Princeſſes, Cardinals, and the Pope himſelf. One Thing I muſt not paſs in Silence, *viz.* that we never met the Sacrament in *Rome*, or any other Town of *Italy*, except at *Venice*, where we ſaw it twice carried in great State under a magnificent Canopy, attended by a great Number of Torches

I muſt do this Juſtice to the *Italians*, that they are not poſſeſs'd with the Spirit of Perſecution, at leaſt againſt Strangers; and I don't remember that in all our Travels through *Italy*, not excepting even *Rome* and *Loretto*,

Loretto, we were in the leaſt affronted on the Account of not worſhipping Relicks or Images, the worſt we ever heard upon that Score being ſtiled now and then, *Non ſano Chriſtiani, no ſound Chriſtians.*

5. The Way between *Rome* and *Viterbo* has little remarkable, except ſome Remnants of the *Via Emilia*, which we found of the ſame Breadth with the other Conſular High-roads. The ancient *Lacus Cyminus* (now Lake *de Vico*) is at the Foot of a very high Hill, but of an eaſy Aſcent, bearing the ſame Name with the Lake. It is almoſt covered with Sycamores and Cheſnut-trees, and produces vaſt Quantities of Primroſes, Narciſſus's, Hyacinths, and many other Flowers. The City of *Viterbo* is built of Stone, and ſurrounded with a Wall: Beſides its Steeples, it has eight or ten ſquare Towers, built by the Inhabitants for Retreats during the inteſtine Commotions of the *Guelph* and *Gibellin* Factions. The following Inſcription on the Town-houſe, gives you an Account of the Reſtoration of the ancient *Tuſcan* Name *Viterbo.*

> *Deſiderius ultimus Inſubrium Rex* Longulam, Vetuloniam *atque* Volturniam *mœnibus cingit: &* Etruriæ *priore Nomine inducto,* Viterbium, *mulcta capitis indicte, appellari jubet.* Sal. An. DCC.LXXIII.

Schroder ſays he ſaw another ancient Inſcription.

> *M. T. Ciceronem ob egregias ejus virtutes ſingulareſque animi dotes: per totum Orbem noſtris armis virtuteque perdomitum; ſalvum & incolumen eſſe jubemus.*

In the before-mentioned Place is to be ſeen another authentick Inſcription, confirming the Donation made by the Counteſs *Maud* to the See of *Rome:*

> *Æternæ memoriæ inclytæ Mathildis, quæ ob præſtabile Religionis ſtudium, ac pietatem, ſedi Pontificiæ ſuum hoc patrimonium, Divi Petri in Thuſcia dein nuncupatum elargitur. Et in veterem Urbis ejus ſplendorem intuens, Paſchalis* II. *Bleden Pontif. Max. ejus Metropolim, ut ante Viterbium conſtituit.* An. S. 1113.

It would be a fine Thing for the *Romaniſts*, if they had ſo good a Plea for the Donation of *Conſtantine*; the *Latin* Verſion of it is to be ſeen in *Barth. Picerna* and *Aug. Steuchus*, pretended to be done after the *Greek* Original in the *Vatican*; it is alſo inſerted in *Gratian*'s *Decretals*, but St. *Antonin* of *Florence* aſſures us it is not in the old Decretals; and divers noted Authors have refuted this Fable.

This puts me in Mind of a witty Repartee of *Hieronymo Donato*, *Venetian* Ambaſſador to *Alexander* VI. who being aſked by the Pope where their Title of Sovereignty to the *Adriatick Gulph* was recorded? replied, That *his Holineſs might find their Title written on the Back of the Donation of* Conſtantine. Notwithſtanding the Inſcription of *Deſiderius* mentions only three Cities united under the Name of *Viterbo*, yet I remember that this City is ſometimes ſtiled *Tetrapolis*, and its Inhabitants *Quaterni Populi*; the Names of the four Cities are expreſſed in a Diſtich written on the Top of the Stair-caſe in the Town-houſe:

> *Hanc* Fanum, Arbanum, Vetulonia, Longula *quondam*
> *Oppida, dant Urbem: prima Elementa.* F. A. V. L.

Some deduce the Origin of the ancient *Viterbium* from *Iſis* and *Oſiris*, for which they produce ſome *Greek* and *Latin* Inſcriptions; but being informed by credible Perſons that they were ſuppoſititious, and ſuppoſed to have been contrived by *John Annius* the *Dominican*, known commonly by the Name of *Annius Viterbienſis*, an Author of no Reputation, I will not inſert them here.

In one of the Halls of the Town-houſe you ſee a Picture repreſenting an innumerable Swarm of Locuſts, which darkened the Sun and covered the Earth, devouring every thing they met with upon the Ground about *Viterbo*. This happened in 1526. *Mezeray* relates ſuch another Story, which happened in *France* in 873, and was followed by a great Plague; and *Oſorius* another Inſtance of the ſame Nature, which, he ſays, happened in *Afric* in the Year of the World 3825.

We were no ſooner come within Sight of *Montefiaſcone*, a little Town ſeated on a little Hill within eight Miles of *Viterbo*, but the Children came out and aſked us, whether we would not take a View of the *Eſt, eſt, eſt?* The Story, I know, has been mentioned by others, but perhaps not with all its Circumſtances: A certain Abbot or Biſhop travelling from *Germany* to *Italy*, uſed to ſend a Servant before, to know in which Inn he could meet with the beſt Wine, and to mark it with the Word *Eſt* over the Door. Coming to *Montefiaſcone*, the Servant was ſo highly pleaſed with the *Muſcatello*, that he writ three *Eſts* over the Door, which inviting his Maſter to drink more plentifully than he uſed to do, he fell ſick, and died on the Spot; his Monument ſtands in St. *Flavian*'s Church, about two hundred Paces from the Town; he is repreſented with a Mitre on his Head, with two Eſcutcheons (*quarterly in the firſt a Lion, in the ſecond two Feſſes, the Shield not blazoned*) and as many Drinking-glaſſes on each Side of him; at his Feet you ſee the following Inſcription in *Gothick* Characters, by Way of Epitaph, made in all Probability by his Servant:

> *Eſt, Eſt, Eſt, propter nimium Eſt,* Joh. de Fuc. *D. meus mortuus eſt.*
>
> That is,
>
> *Eſt, Eſt, Eſt, by taking too much of Eſt,*
> John de Fuc, *my Lord, died like a Beaſt.*

His true Name was *John de Fucris*, and he was of a great Family in *Augſburgh.*

All the Way between *Montefiaſcone* and *Bolſena*, we paſſed near the Banks of the Lake of that Name; it is of an oval Figure, and forty Miles in Compaſs; it contains two Iſlands, called *Martana* and *Paſſentina*; the firſt is celebrated for the Baniſhment of *Amaleſuntha*, the Daughter of *Theodoric* King of the *Goths*, who was afterwards murdered there by the Command of her Couſin *Theodat*, whom ſhe had made her Aſſociate in the Government. *Bolſena* is a very indifferent Town, formerly an Epiſcopal See, till it was tranſlated to *Orvieto*. Behind it you ſee the Ruins of the ancient *Volſinium*, which, as *Pliny* relates, was burnt by Lightning. The Country between *Bolſena* and *Aquapendente*, is the worſt in the whole World; the laſt of theſe two is poor and almoſt deſolate, yet retains the Title of an Archbiſhoprick ever ſince the Deſtruction of *Caſtro*. *Centino*, a little Village at the Foot of the Hill *Radicofani*, is the utmoſt Boundary of the Pope's Dominions on that Side; the Town and Citadel, built by *Deſiderius* the laſt King of the *Lombards*, bearing the Name of the ſaid Hill upon which they ſtand, are for half the Year concealed in the Clouds. In our Way hence towards *Siena*, we ſaw for eight or ten Miles nothing but barren Mountains; but as we came towards St. *Quirico*, the Country began to grow better and better, though this laſted not long, for near *Torrinieri* the Land grew worſe than before, and continued thus, with ſome ſmall Alteration, till we came to *Siena.*

Siena, the third City, and perhaps the moſt pleaſantly ſituated in all *Tuſcany*; its Air is excellent, the Streets though not level, yet very neat, being paved with Bricks laid ſideways; the Houſes are handſomely built, and the Water very good; beſides that, the *Tuſcan* Language is ſpoken here in its utmoſt Purity, without the Roughneſs of the *Florentine* Dialect.

The Cathedral of *Siena* is a *Gothick* Structure, but very beautiful, and one of the moſt perfect among all the great Churches of *Europe*, being covered within and without with Marble; the Pavement is of black and white Marble *a la Moſaique* in the Choir. On the Corridor running round the Body of the Inſide of the Church, are to be ſeen the Statues of the Popes, and among the reſt there is one ſmooth chin'd Creature, which, as is ſaid, was placed there in the Room of the Popeſs *Joan*: *Baronius* ſays, it was taken away and broken to Pieces; *Launoy* ſays it was to be ſeen in 1634, and *Blondel* acknowledges the ſame, as alſo the Statue erected in the Place where Pope *Joan* was delivered; Father *Mabillon* confeſſes the ſame Statue, and ſays, that the Name *Johannes* VIII. *Fœmina Angliæ* was added to it. All the Authors that ever I ſaw, who inveigh againſt the Story of this female Pope, and mention this Statue, acknowledge that it is ſtill remaining, or at leaſt, that it really ſubſiſted heretofore. This Structure was begun by *Duccio*, and finiſhed by *Dominic Beccafumi.* That Part next the Choir is beautified with the Pictures of *Abraham*'s Sacrifice, and the Paſſage of the *Iſraelites* through the Red-Sea; the arch'd Roof is azur'd, intermix'd with Stars of Gold. From the Church you paſs into the Place where the Library was kept formerly; here we ſaw thoſe glorious Pieces in *Freſco* repreſenting the Life of *Pius* II. deſigned by *Raphael*, but painted by *Peter Perugin* his Maſter, with *Bernardin* and *Pinturicchio*; moſt of the Faces repreſent Perſons then alive; among others, the Pope's Soul ſoaring upwards in the Shape of a *Paradiſe* Bird, and the *Hermit* gazing on it, is an exquiſite Piece.

I will not detain you with the Story of St. *Katherine* of *Siena*, but I cannot paſs by in Silence the old Citadel with fifteen or twenty ſquare Towers; among theſe the Tower of *Mangiana* is mightily extolled for its Height, but it is by thoſe who have ſeen but few others. The Arms of *Siena* are, the famous *She-wolf* that gave Suck to *Romulus* and *Remus*, founded upon a Fable, that *Siena* was built by the Children of *Remus.* Travelling between the City of *Siena* and the River *Arno*, we found the Ground grow better and better the nearer we came to the River, eſpecially about *Camiano*, *Granayola*, *Ponte d'Era*, and between *Pontgibon* and *Piſa*. Near *Pontgibon* or *Poggi-bonzi* (famous for its Tobacco) we met whole Troops of Girls going from Houſe to Houſe ſinging and wiſhing a merry *May*; their Songs are compoſed of a Number of pleaſant Wiſhes, every Stanza concluding with *a merry*, *merry*, May.

On ſeveral ſandy Hills near *Certaldo*, we ſaw great Quantities of ſeveral Sorts of Shells, as we had before at *Monte-Mario*, a Mile from *Rome*, in the *Alps* in *France*, and other Places; the ſame have been obſerved by *Olearius*, *Steno*, *Cambden*, *Speed*, and others. I received your Obſervations with a great deal of Satisfaction, but, to deal frankly with you, I muſt tell you, that I differ with you in Opinion; for if theſe Shells were the Remainders of the Deluge, I ſee no Reaſon why the ſame ſhould not rather have been left in the Valleys, and more univerſally ſpread upon the Surface of the Earth; whereas now they are only gathered into Heaps in certain Places. Nor ſee I any ſufficient Cauſe to have Recourſe to ſuppoſed Inundations, Tempeſts, and Eruptions; for though ſome ſuch Thing might rationally be concluded in reference to certain Places ſubject to Earthquakes, (as for Inſtance, the *New Veſuvius*, or *Monte Nuovo*) yet as the ſame Reaſon does not hold in all other Places where theſe Shells are found, ſo the Solution of this *Phænomenon* may with much more Eaſe be looked for in the ſame Property upon the Land which produces theſe Shells at Sea. You will perhaps tell me that Shells are inſeparable from Fiſhes, Snails, &c. but you may eaſily anſwer yourſelf, if you will but conſider, that Shells have been found in the Stomachs, Kidneys, and other Parts of human Bodies. But we will proceed on our Journey.

Piſa is the ſecond City of *Tuſcany*, formerly a conſiderable Republick, ſeated in a level Plain on the River *Arno*, dignified with the Title of an Archbiſhoprick and an Univerſity; its Streets are ſpacious, ſtreight, and well paved with broad Stones, and generally well built. The *Arno*, which is navigable here, and twice as broad as the *Tyber* at *Rome*, divides the City into two Parts; it is at preſent very poor and ill-peopled, its deſolate Condition muſt be attributed to their Wars with the *Florentines*, who, after the Conqueſt of this Place, founded the great Mart of *Legborn* upon the Ruin of *Piſa*. The Cathedral here is very like that of *Siena*, but not quite ſo large; it is a regular Structure, and over-cruſted with curious Marble. The Baptiſtery is of a circular Figure an hundred and eighty Feet in Circumference, and arched, ſurmounted by a *Cupola*: By an Inſcription on a Pillar of this Baptiſtery it appears, that the Church was finiſhed 1153. Here is an Echo, which magnifies a Noiſe to ſuch a Degree, that the Sound thereof laſts as long as the Tinkling of a great Bell. Travellers make a great Wonder of the Leaning Tower, which ſome pretend to appear leaning on all Sides, by a peculiar Art of the Architect, when, in Effect, its Inclination is only on one Side, occaſioned by the Sinking of the Foundation: Its whole Height is a hundred and eighty-eight Feet, and is of the Figure of an exact Cylinder. I let down a Plummet from the Balcony on the Top, on that Side where it inclines moſt, and after ſeveral Trials both to the Right and Left, found that the Lead touched fifteen Feet diſtant from the Foundation.

The famous Burying place of *Siena*, called *Campo Santo*, (becauſe the Earth was brought from the *Holy Land* 1228) is a Kind of Cloyſter, one hundred and ninety Paces long, and ſixty-ſix broad. On a Wall under one of the Portico's I ſaw an Inſcription, being a Decree of the Senate of *Piſa* upon the Death of *Cæſar*, ordering their Subjects to appear in Mourning for a whole Year, and to abſtain from all publick Divertiſements. I will not trouble you with their Phyſick-garden, as having nothing memorable in it; but I muſt not quite forget the Knights of St. *Stephen*, who have their Reſidence here: They muſt be of noble Blood, and born in Wedlock: They vow Conjugal Chaſtity, and ſay a hundred *Pater Noſters* and *Ave Maria*'s every Day. This Order was founded by the Great Duke *Coſmo* I. 1561, the ſixth of *Auguſt*, after he had gained the Battle of *Marciano*; his Statue ſtands directly oppoſite (in the Place) to the Church.

Legborn is about fourteen Miles diſtant from *Piſa*, the Country between them being very level, but woody, filled with Oaks, Cork-trees, and wild Myrtles: They tell you, that theſe Woods were formerly all covered by the Sea, which reached within three Miles of *Piſa*, where you ſee a large Church at the Entrance of theſe Woods, which, they tell you, was built in the ſame Place where St. *Peter* was ſhipwrecked one Day when he was fiſhing. I need not tell you, that *Legborn* is a modern City, built on a level Ground, and ſtrengthened with good Fortifications faced with Brick-work; its Streets are large, ſtreight, and uniform, the Houſes generally of the ſame Height, and painted on the Outſide. In our Journey from *Legborn* to *Lucca*, paſſing a ſecond Time through *Piſa*, we ſaw, three Miles on this Side of it, the craggy Mount of St. *Julian*, the Boundary betwixt *Tuſcany* and the Republick of *Lucca*.

The City is moſt pleaſantly ſeated in a fruitful Plain of fifteen or twenty Miles in Extent, encloſed by very rich and well-cultivated Hills; its Fortifications are regular, and faced with Bricks: We walked round the Ramparts in an Hour's Time: But though it is not ſo big as *Piſa*, it contains many ſtately Houſes, and is very well peopled. They ſhewed us the Palace of the Republick, where the *Gonfalonier*, or Standard-bearer, with the ſeven *Anziani*, or Counſellors, lodge and eat together. The State of *Lucca* is a Fief of the Empire; its Government is Ariſtocratical, managed by the Council of two hundred and forty Nobles, divided into two Bodies, who rule alternately every ſix Months, with the *Gonfalonier* at their Head. This chief Magiſtrate bears ſome Reſemblance to the Doges of *Venice* or *Genoa*, but continues no longer than two Months in this Dignity; from whence he reaps no other Profit but maintaining of his Table at the publick Charge: His Dreſs is a Robe of Crimſon Velvet, with a Bonnet and Stole, and his Title, *His Excellency*; his Guard conſiſts of ſixty *Switzers*, and he may not be choſen to the ſame Dignity till after ſix Years. Their Arſenal is abundantly provided with Arms, and thoſe very well kept.

In the Cathedral we ſaw the Chapel of the *Volto Santo*. They tell you, that *Nicodemus* having ſeveral Times attempted in vain to paint the Crucifix, was at laſt aſſiſted by the Angels, who guided his Pencil to finiſh it: They are not able to tell you how this Picture came to St. *Fredian*'s Church, but are poſitive that it removed from thence to the Cathedral, where it hung in the Air, in the Place where we ſaw it, till they built an Altar under it, on which it reſted, and about which they afterwards built a magnificent Chapel. This Crucifix is in ſuch high Eſteem with them, that they ſtamp it on their Coin, with the Arms of the Signiory. In St. *Fredian*'s Church is a Marble Table, ſeventeen Feet long, ſix and a half broad, and fourteen Inches thick; the whole Story whereof is expreſſed in the following Inſcription:

> *O quiſquis legis, lapis es, ni lapis hic moveat in admirationem & cultum D.* Frediani, *qui templo huic conſtruendo, molem hanc in montibus ad quartum lapidem nactus, viribus impar, ſed ſpiritu fervens; mirâ facilitate manibus humeriſque ſuis, & Canonicorum in plauſtrum binis indomitis vacculis trahendum impoſitum, ſexto ſalutis ſæculo, hâc in æde ſtatuit ſacrum monumentum.*

In the Midſt of the ſame Church is to be ſeen a Tomb ſtone with this Inſcription:

> *Hic jacet Corpus Sancti Riccardi Regis Angliæ.*
> *Here lies the Body of St.* Richard *King of* England.

Who this Royal Saint was I am not able to imagine; for *Richard* I. (ſurnamed *Lyonheart)* died in *France*, and was interred in the Abbey of *Fontevraut*; *Richard* II. was, after his dethroning, ſtabbed at *Pomfret*, and buried firſt in St. *Paul*'s, from whence he was carried to *Langley*, and afterwards to *Weſtminſter*; and *Richard* III. being ſlain in the Battle of *Boſworth* in *Leiceſterſhire*, his Body was interred in the City of *Leiceſter*. I do not remember ever to have heard any thing of a King *Richard* before the *Heptarchy*.

In the Church of St. *Auſtin* you ſee an Image of *our Lady*, with the little Jeſus in her left Arm, concerning which they tell you the following Story: A certain Soldier having loſt all his Money at Dice, fell into ſuch a Rage, that after having given a great many ill Words to the Image of our Lady, placed then againſt the Wall of the Guard-houſe, he threw a Stone levelled directly at the Head of the little Jeſus; but our Lady perceiving the Danger, toſſed the Child in an Inſtant from her right Arm into the left, where it remains ever ſince; the inſolent Soldier was ſwallowed by the Earth, the Hole being ſhewn to this Day. About the Time of the Reformation divers noble Families retired from *Lucca* to *Geneva*, where ſome ſtill flouriſh.

Half Way betwixt *Lucca* and *Florence* ſtands *Piſtoya*, *viz.* twenty Miles from each; the Country thereabouts is extremely fertile, and well cultivated, but the City is almoſt deſolate, having loſt all its Trade with its Liberty: It is much bigger than *Lucca*; and its large and regular Streets and beautiful Buildings are ſufficient Teſtimonies of its former Grandeur.

The Inhabitants of *Piſtoya* have a moſt profound Veneration for St. *James* and his Relicks; the Altar of his Chapel in the Cathedral is covered with Plates of Silver, and adorned with very rich Lamps. Here I obſerved, in a peculiar Prayer directed to him, theſe Words, *Tu qui primatum tenes inter Apoſtolos, imo qui eorum primus*, i. e. *Thou that waſt the firſt, nay, the chief among the Apoſtles*, &c. There are not a few who pretend to look for the Original of the *Guelph* and *Gibellin* Factions among the *Piſtoyans*, where, they ſay, lived two Brothers called *Guelph* and *Gibel*, the elder of which ſided with Pope *Gregory* IX. whilſt the younger embraced the Intereſt of the Emperor *Barbaroſſa*; but, in my Opinion, thoſe come much nearer the Mark, who derive the Names of thoſe two famous Factions from the illuſtrious and potent Families of the *Guelphs* and *Gibellines*, (upon the Borders of *Germany* and *Italy)* who were at open Enmity a conſiderable Time with each other, before one declared for the Emperor and the other for the Pope.

6. My laſt being written the next Day after our Arrival at *Florence*, I will in this give you a brief Deſcription of this City, and afterwards communicate ſuch Obſervations as I have had Occaſion to make during our Stay. *Florence*, the Capital of *Tuſcany*, dignified with the Title of an Archbiſhoprick, and the ordinary Reſidence of the Great Dukes, is ſeated upon the River *Arno*, as it were within the *Arena* of an Amphitheatre, being encloſed at four or five Miles Diſtance, (except on that Side towards *Piſtoya)* with very fruitful Hills, riſing by an eaſy Aſcent till they unite with the high Mountains: If you take a full View from one of the Towers of *Florence*, of the Villages and Houſes of Pleaſure in the Plain and Hills, it ſeems to be only the Continuation of Suburbs, this Valley being perhaps the beſt peopled Place of that Kind in the Univerſe.

I was credibly informed, that the Circumference of the Walls of *Florence* is 15,240 Fathoms, and that the River *Arno*, which runs through it, is 500 Fathoms broad; ſo that adding the double Breadth of the River to the Compaſs of the Walls, the whole Circuit of *Florence* amounts to 16,240 Fathoms, three of which are equivalent to five Feet eight Inches *Engliſh* Meaſure, according to which Computation it amounts to 36,675 Feet: It is almoſt of a circular Figure. The ſame Perſon told me, that there are in *Florence* about eight thouſand eight hundred Houſes, ſixty thouſand Souls, twenty-two Hoſpitals, eighty-nine Convents, eighty-four Fraternities, one hundred and fifty-two Churches, eighteen Halls belonging to Merchants, ſeventy-two Courts of Juſtice, ſix Columns, two Pyramids, four Bridges, ſeven Fountains, ſeventeen Places or Squares, and one hundred and ſixty publick Statues. The Streets are paved with broad Pieces of a grey Stone called *Pietra forte*, and moſt of the Houſes are built of the ſame; theſe are brought from the neighbouring Quarries.

The Great Duke's Palace (called *Pitti)* is a moſt noble Structure, but has this Defect, that the Court is not ſpacious enough in Proportion to the Edifice, which being one hundred and twenty Feet high to the Cornice of the third Order, cannot be ſeen without Trouble in any Part of the Court, which is only one hundred and ſixty Feet long, and one hundred and forty broad. As we were entering the old Ducal Palace, (the Receptacle of the ſo much celebrated Curioſities) we took a full View of the four Statues of white Marble on the Bridge of the Trinity, repreſenting the four Seaſons of the Year, made by *Michael Angelo*. The chief Curioſities we obſerved here were, the *David*, the Work of *Michael Angelo*; the *Judith*, by *Donatello*; the *Sabin* Women carried off by Violence, by *John* of *Bologna*; the *Perſeus* of Braſs, by *Coligni*; the *Hercules* and *Cacus*, by *Bandinelli*; and the Braſs Statue on Horſeback of *Coſmo* I. by *John* of *Bologna*; all theſe are moſt exquiſite Pieces. The three *Baſſo relievo's* on the Pedeſtal of that Statue repreſent *Coſmo* I. kneeling before the Pope as he was giving him the Title of *Great Duke*; the ſame Prince entering *Florence* in a triumphant Chariot; and the Reſignation of the Sovereignty to him by the Senate of *Florence*. The great Gallery of the Palace is four hundred Feet long, where we paſſed between two Rows of ancient Statues and Buſts. Above them, againſt the Wall, we ſaw the Pictures of the ancient Philoſophers on one Side, and thoſe of great Generals on the other.

Among theſe Statues, that ſuppoſed to be *Scipio*'s, in a Robe of Braſs, excels all the reſt, the Characters on the Hem of his Garment are of the old *Hetruſcan*; the *Leda* embracing *Jupiter* with a Pleaſure mixed with Shame; the *Bacchus*, with a Copy of the ſame by *Michael Angelo*, not inferior to the Original; *Julia* the Daughter of *Auguſtus*, the *Pomona*, the *Venus*, the *Diana*, the *Apollo*, another *Bacchus*, the Peaſant ſtriking a Boar, the Buſts of all the Emperors to *Galienus*, and eſpecially thoſe of *Adrian*, *Pertinax*, and *Severus*, are excellent Pieces.

In the Chambers behind this Gallery, we obſerved in the firſt a great branched Candleſtick of Amber, an admirable Column of *Oriental* Alabaſter, a *Rhinoceros*'s Horn of an extraordinary Bigneſs, Abundance of *Baſſo* *relievo's*, and a great Number of ancient Sculptures, Medals, Idols, ſepulchral Lamps, Stones, Minerals, and other natural Curioſities: The ſecond is filled with Pictures; the third, called the *Mathematical Chamber*, (here uſed to be kept the Iron Nail, one half of which was pretended to be tranſmuted to Gold, but is not ſhewn now, it having been found to be no more than a Soldering) has, among other Things, Globes and Spheres of ſeven Feet Diameter: The fourth has likewiſe nothing but Pictures, which excel thoſe of the ſecond, except the Ornaments of Ivory, Amber, and precious Stones in a peculiar Cabinet, and among the reſt, a large rough Emerald rooted in its Rock, and the Platform of *Leghorn* on a Table of *Lapis Lazuli:* In the fifth Chamber you ſee the Pictures of moſt of the illuſtrious Perſons of the preſent Age; among the Generals are *Cromwell*, *Monk*, and the late Earl of *Oſſory:* The ſixth contains a hundred and thirty-ſeven Pictures of the moſt famous Painters, done by themſelves: The ſeventh is filled with Porcelain Veſſels, and the five following with all Manner of ſurpriſing Curioſities, and great Quantities of Arms of all Countries; the Horſe-tail of twenty Feet long, preſented to the Great Duke by the late *Charles* Duke of *Lorrain*, is none of the leaſt among theſe Rarities; but the moſt precious Things are preſerved in an octagonal Apartment called the *Tribune*, built by *Buontalenti*, being twenty Feet in Diameter; the Floor is paved with Marble of divers Colours, artificially joined like inlaid Work; the Hangings are of Crimſon Velvet, the Windows of Cryſtal, and the Inſide of the Lanthorn covered with Mother of Pearl. You have queſtionleſs, heard of that moſt celebrated Diamond, which weighs 139½ Carats; *Tavernier* ſays, it is Pity that the Water is yellowiſh. Among the other Rarities the following are the choiceſt; an antique Head of *Julius Cæſar*, of one entire *Turquoiſe* of the Bigneſs of an Egg; a Cupboard filled with Veſſels of Agate, *Lapis Lazuli*, Cornelian, and Rock-cryſtal ſet with Gold and precious Stones; a large Table and Cabinet of inlaid Work of Oriental Jaſper, Calcedony, Rubies, Topazes, and other precious Stones, excellently well contrived; a Collection of the beſt Medals; a vaſt Number of carved and engraved Pieces nicely kept; ſome Maſter-pieces of the moſt excellent Painters; ſix very beautiful *Grecian Statues*; two Wreſtlers; the Peaſant whetting his Bill, and at the ſame Time liſtening to the Conſpirators, *Cataline*'s Aſſociates; a *Tauro*, a *Cupid* ſleeping, a *Venus* ſix Feet high, and another five Feet, both of white Marble, the fineſt Piece of Workmanſhip in the World; the Head turns a little towards her left Shoulder, with her right Hand before her Boſom, yet at ſome little Diſtance, and covering her Nudity with the other, but without touching; ſhe ſtands bowing gently with her right Knee forward, the better to hide herſelf. This baſhful Poſture is accompanied with all the Marks of Modeſty and Chaſtity in her Face, and with an incomparable Beauty, Sweetneſs, and youthful Air; her Neck is exceeding beautiful; and, in ſhort, this Maſter-piece is the moſt exquiſite Imitation of the Perfection of Nature. On the Marble Baſe are theſe Words:

ΚΛΕΟΜΕΝΗΣ ΑΠΟΛΛΟΔΟΡΟΣ ΑΘΗΝΑΙΟΣ ΕΠΩΕΣΕΝ.
Cleomenes, *Son of* Apollodorus *the* Athenian, *made it.*

From this Palace paſſing through a ſmall Gallery, we came into the ancient Palace of the Republick, where the Great Duke's Wardrobe is kept; and among other Things we ſaw there the rich Coach made for the Solemnity of the Great Duke's Marriage. The Hall of this Palace is a hundred and ſeventy-two Feet long, and ſeventy-four broad. The Cathedral is a large and ſtately Building, though for the moſt Part of a *Gothick* Architecture, being over-cruſted within and without with the fineſt poliſhed Marble of ſeveral Colours: Its whole Length is four hundred and ninety Feet, and its Height, to the Top of the Croſs on the Globe, three hundred and eighty Feet; the worſt is, that it has no Frontiſpiece. The rareſt Statues in this Church are, St. *James*, by *Sanſovin*; the *Adam* and *Eve*, by *Bandinello*; the Statue of *God the Father*; the *dead Chriſt*, and an Angel ſupporting him by the ſame Hand, on the high Altar: The *Eve* was ſomething larger than *Adam*. The *Reſurrection* painted in the Dome is a moſt excellent Piece, though the Criticks find Fault with *Fred. Zucchero*, who made it, becauſe he has repreſented the riſing Bodies with Clothes on: Beſides this, we took Notice of a greater Blunder in the ſame Church, committed by no leſs famous a Painter than *Paul Urcello*, who has painted Sir *John Hawkwood*, whom the *Italians* call *Acutus*, an *Engliſhman*, General of the *Piſans*, on Horſeback, and his Horſe reſting on two Legs on the ſame Side, while the other two are in Motion.

The Pieces of the Rods of *Aaron* and *Moſes*, ſhewn in the Cathedral, are queſtioned by ſome, becauſe theſe Rods are ſaid to be entire at the Church of St *John de Lateran*. The Steeple (near the Church) is a Tower of one hundred and eighty Feet high, over-cruſted with ſquare Pieces of red, black, and white Marble, and beautified with ſeveral excellent Statues: The old bald Man, by *Donatelli*, is highly eſteemed.

The Baptiſtery is not unlike that of *Piſa*, and covered like the Church; ſome ſay it was anciently the Temple of *Mars*, and that after its being converted into a Baptiſtery, it was dedicated to St. *John Baptiſt*. The *Moſaick* Work on the arch'd Roof is eſteemed excellent, and among the Statues here, the *Magdalen* of Wood, by *Donatelli*, excels all the reſt: But the moſt ſurpriſing Pieces are, the three Gates of Braſs, whereon are repreſented ſome ſacred Hiſtories in *Baſſo relievo*. The Back-Gate, with this Inſcription, *Andreas Ugolini de Piſis me fecit* 1330, is not altogether ſo beautiful as the other two, which put *Michael Angelo* into ſuch a Rapture, that he ſaid, they deſerved to be placed at the Entrance of Heaven:

Dum cernit valvas aurato ex ære nitentes
  In templo Michael Angelus, *obſtupuit*;
Attonituſque diu, ſic alta ſilentia rupit;
  O Divinum Opus! O Janua digna Polo!

The Senſe of which is,
Theſe Gates of burniſh'd Braſs when he beheld,
Great ANGELO, *beſt Judge of what excell'd*;
Amaz'd he ſtood, long ſilent, and then ſigh'd!
O Work Divine! O worthy Heaven! he cry'd.

The Statue of Juſtice near the Church of the *Trinity* is ſupported by a Column of Porphyry, ſaid to have ſtood formerly in the *Pantheon*. In the Court before the middle Gate of the Baptiſtery, you ſee two Columns of Porphyry at ſome Diſtance from each other, and yet chain'd together, which, they ſay, were brought from *Majorca*, and beſtowed upon the *Florentines* by the *Piſans*, for the Aſſiſtance they gave them in the Conqueſt of Part of that Iſle. Near them ſtands another Column, erected in Memory of a pretended Miracle wrought by the Body of St. *Zenobius*, when it was removed from St. *Lawrence* to the Cathedral Church, for his Shrine touching by Chance the Trunk of a dry Tree that lay upon the Ground, it bloſſom'd immediately, and produced Fruit.

The Church of St. *Lawrence* is both ſpacious and rich, and the Chapel, I muſt confeſs, when finiſhed, will be the moſt exquiſite Structure that ever was ſeen of this Kind; it is both very large and magnificent: In the Middle of each Face of the Hexagon ſtands a double Pilaſter of Jaſper, with a double Chapiter of Braſs gilt, the Baſe being the ſame. The Emblematical Figures on the Pedeſtals of theſe Pilaſters are very artificially made of precious Stones: In the ſix Angles are placed as many rich Tombs of Porphyry, Oriental Granite, and ſome other of the moſt precious Kinds of Marble; on each Tomb lies a great Pillow of Jaſper, valued each at ſixty thouſand Crowns, enrich'd with precious Stones, and upon each Pillow ſtands a Crown, exceeding in Richneſs the Pillow itſelf: The Baſe ſupporting the Tombs is over-cruſted with Porphyry and Calcedony, on which will be engraven the Epitaphs of the Princes for whom theſe Tombs are deſigned, and their Statues of Braſs gilt, twice as big as the Life, are to be placed in the Niches of black Marble that are over the

Tombs. The inner Roof of the Dome is intended to be covered with *Lapis Lazuli*, intermixed with Roſes and other Carvings gilt; and the reſt of the Walls are over-cruſted in Compartments with the fineſt Agate, Granite, Onyx, and other precious Stones, each Pannel being divided into Squares, embelliſhed with various Sorts of Ornaments of Copper gilt; and the high Altar is likely to ſurpaſs all the reſt.

The Library of St. *Lawrence*, which is eighty Fathom long, and twenty broad, is celebrated for its Manuſcripts; as for Inſtance, that of *Virgil* of the Age of *Theodoſius*, and a very ancient *Greek* MS. of the Chirurgery of the Ancients, of *Hippocrates*, *Galen*, *Aſclepiades*, *Bithynus*, *Apollonius*, *Archigenes*, *Nymphodorus*, *Heliodorus*, *Diocles*, *Rufus Epheſius*, and *Apollodorus Citienſis*, with the Manner of curing Diſlocations, and Figures painted on Vellum, the only ancient Work of this Nature now extant. Mr. *Magliabecchi*, the Bibliothecary, was very ſorry he could not communicate to me St. *Chryſoſtom*'s Letter to *Cæſarius*, having received expreſs Orders to the contrary from the Great Duke; but he poſitively aſſured me, that the Paſſage cited by *Martyr*, is contained *verbatim* in that Manuſcript.

In the Church of the *Holy Croſs* we ſaw the Tomb of *Michael Angelo*, which, in my Opinion, bears no Proportion to the Merit of ſo famous a Perſon. In this Church is a Chapel belonging to the Family of the *Zanchini*, on the Altar of which is a Picture of Chriſt delivering the Souls of the Fathers, and among them many female Spirits, the Work of *Angelo Bronzini*: Some are of Opinion, that ſhe who repreſents *Eve* is the true Reſemblance of *Bronzini*'s Miſtreſs, and that the Man in the right Corner of this Piece, gazing upon this pretended *Eve*, is the Painter himſelf; juſt as *Pinturicchio* painted in the *Vatican*, Pope *Alexander* VI. proſtrate at the Feet of *Julia Farneſe*, under Pretence of adoring the holy Virgin.

In the *Annunciata* are kept two of the thirty Pieces *Judas* received to betray his Maſter; and in the Church of the *Carmelites*, the Crucifix that ſpoke to St. *Andrew d'Urſini*. Among the ſeveral fine Seats belonging to the Great Duke, we had only the Opportunity to ſee *Poggio Imperiale* and *Pratinola*; it muſt be confeſſed they are very delightful Places, and have even a ſufficient Share of Beauty; but ſince our Gardens and Water-works are advanced to that Height in *France*, the only Way to maintain the ancient Reputation of the *Italian* Seats, is to paſs by in Silence their pretended miraculous Ornaments.

The Arſenal and Citadel of St. *John Baptiſt* are kept in very good Order, but the Forts of *Belvedere* and St. *Miniato* are much out of Repair. The Great Duke alſo maintains various Kinds of wild Creatures, and Nurſeries for them. In the Hoſpital *ad Scalas* is the Tomb and Epitaph of a human Monſter, with two Heads and four Hands on one Body, named *Peter* and *Paul*; one of theſe Heads would often weep, whilſt the other laugh'd, and this ſlept often whilſt the former was awake. The Mountains near *Florence* produce certain Stones, which being ſawed in the Middle and poliſhed, repreſent ſometimes Trees of divers Sorts, ſometimes whole Towns, and the Ruins of old Caſtles; the firſt are called *Dendrites* by *Kircher*.

To conclude, I muſt tell you, that though *Florence*, for its Situation, and other Advantages, may be reckoned among the fineſt Cities in the whole World, yet to thoſe who know the Pleaſures of Society, and eſpecially of Converſation with the fair Sex, the inſupportable Conſtraint, and unavoidable Ceremonies uſed at *Florence*, appear an intolerable Burthen, except to thoſe that are inured to this Kind of Slavery from their Infancy.

7. The Road between *Florence* and *Bologna* being one continued Ridge of the *Apennine* Mountains, and conſequently not very fit for Calaſhes, we were forced to hire Horſes, all the Littermen being taken up in carrying Monks (by what Accident I know not) over the Mountains. For two Days together we paſſed through a barren and mountainous Country; the higheſt Mountain we met with in our Paſſage, was that called *Monte Juovo*; however, the Valleys of *Sarperia* and *Fiorenzola* (which ſome think to be the *Fidentia* of the Ancients) are not quite ſo deſolate as the reſt; the firſt is famous for Knives and other Cutlers Work made there; it was deſtroyed by an Earthquake in 1642. We took Notice, that near the Village of *Pietra Mala* the Air ſparkled in the Night. At the Village of *Scarica l'Aſſino*, between the laſt named Place and *Loyano*, we ſaw a Poſt the Boundary of the Pope's and Great Duke's Territories, the Arms of the firſt being affixed on one, and the *Florentine* Arms on the other Side. From the Top of the laſt Hills of the *Apennine*, as we approached *Bologna*, and arrived by an eaſy Deſcent near that City, we had the moſt glorious Proſpect in the World, of the extenſive and delightful Plain of *Lombardy*, extending along the *Po*, from the *Apennines* to the *Alps*.

Bologna, the Seat of an Archbiſhop, who has the Title of a Prince of the Empire, and the ſecond City in the Eccleſiaſtical State, is ſeated at the Foot of the *Apennine* Hills, at their opening into the Plain, upon the *Via Emilia*. The faireſt Proſpect of *Bologna* and the adjacent Country is from the Convent of St. *Michael in Boſco*, where at the ſame Time you may have the Pleaſure of ſeeing one of the moſt magnificent Monaſteries in *Italy*, comparable for its Beauty to moſt of the Royal Palaces of *Europe*; and to ſpeak the Truth, as *Bologna* is larger and more populous, nay, even richer than *Florence*, ſo its Convents are generally very ſpacious and exceeding magnificent. The City is ſurrounded only with a ſingle Wall without a Citadel; for when they ſurrendered to Pope *Nicholas* in 1278, it was under Condition, that they ſhould not be bridled by a Citadel, their Eſtates not be liable to any Confiſcations, and ſhould be allowed an Auditor of the *Rota*, and an Ambaſſador of their own at *Rome*; which Privileges have not been hitherto infringed. The Univerſity acknowledges for its Founder *Theodoſius* the younger, in 425, but owes its chief Splendour to *Charles the Great*; hence it is that the Motto *Bononia docet*, is ſeen on the Coin of this City, as the Word *Libertas* is in their Arms.

In one of the Halls of the Univerſity College is a Monument erected to the Memory of a certain noted Chirurgeon named *Gabriel Taglicozzo*, who made artificial Noſes, Lips, *&c.* of Fleſh, mentioned by *Butler* in his *Hudibras*. The Canal which joins the *Arno* with the *Po*, is a great Conveniency for the Commerce of this City, the Inhabitants of which trade in Wax, Hemp, Flax, Hams, Sauſages, Soap, Tobacco, and Perfumes, beſides that they have near four hundred Silk-mills; formerly they uſed to ſell their little Dogs at a high Rate. The Houſes of this City are generally of Stone, or Brick plaiſtered over; the Streets have Portico's on both Sides, like thoſe of *Padua*, but are higher and larger, and are for the moſt Part very ſtreight; the Women are handſome, and not kept under ſo much Reſtraint as at *Florence*; the better Sort are inclined to follow the *French* Mode. In General *Caprara*'s Palace, one of the beſt in the whole City, we ſaw many rich Spoils taken from the *Turks*.

The publick Palace of this City is appointed for the Lodging of the Cardinal Legate, and the *Gonfalonier* and his Counſellors. Over the Portal ſtands a Braſs Statue of *Gregory* XIII. and on one Side of it that of *Boniface* VIII. with this Inſcription;

Bonifacio VIII. *P. M. ob eximia erga ſe merita*, S. P. Q. B.
Ann. MCCC.

Here you are alſo ſhewn the Cabinet of Curioſities of *Ulyſſes Aldrovandus*, joined with that of the Marquis of *Coſpi*, both belonging to the Publick. Among the reſt we took Notice of the Picture of a certain Woman, who (as *Aldrovandus* ſays of his own Knowledge) had a long and thick Beard like a *Capuchin*. M. *Lotier*, a Banker of this City, has alſo an excellent Collection of Medals, in which are to be ſeen two *Otho*'s in Braſs of unqueſtionable Antiquity. In a Chamber near it they ſhewed us one hundred and eighty-ſeven Volumes in *Folio*, all of *Aldrovandus*'s own Hand-writing, and about two hundred Bags full of looſe Papers; the Margins were pretty large, and the Lines not very cloſe.

On the Front of this Palace, between the Statues of the Popes, is a *Latin* Inſcription, intimating, that the Emperor *Charles* V. and Pope *Clement* VIII. meeting at *Bologna* in *November* 1529, reſtored the Peace of *Italy*, and that afterwards the ſaid Emperor was crowned King of *Lombardy* in the Church of St. *Petronius*; the Emperor had been crowned before, *Oct.* 22, 1520, at *Aix la Chapelle.* In another Place of this Palace, you ſee the Picture of one named *Ugolino* on the Wall, hanging by one Foot, with this Subſcription, *Ugolino traditore, ſtatugliero alla Patria*; perhaps this might be Count *Ugolin* of *Piſa*, one of the Heads of the *Guelphs.* In another Place you ſee an Inſcription beginning thus: *Adeſte O Sol & Lunæ Teſtes*, &c. relating to a Miracle wrought by an Image of our Lady, who delivered *Bologna* from the Peſtilence. That great and ſtately Fountain which faces this Palace, is the Work of the famous Architect and Sculptor *John* of *Bologna*, ſaid by ſome to have coſt ſeventy thouſand Crowns.

In the Church of St. *Petronius* (the biggeſt in the whole City) is to be ſeen the ſo much celebrated *Meridian* Line of *Caſſini*, engraven on a Copper Plate of 222 Feet long, and fixed in the Pavement. It begins at the Entrance of the great Body on the left Hand, and paſſes between the Pillars, without the leaſt Obſtacle, to the End of the little Nave of the Church, the Situation of which is almoſt *Eaſt* and *Weſt.* In the arched Roof of the laſt Nave is a Hole, directly over the Noon-point of this Line, through which a Ray of the Sun entering, marks the Solſtices and Equinoxes upon the Line. The ſame Operation may, without much Difficulty, be performed in any other convenient Place, the whole Myſtery conſiſting only in meaſuring the Degrees on the Line, proportionably to the Height of the Hole through which the Ray enters.

In the Church of *Corpus Domini* they ſhew an embalmed Body of St. *Catherine Vigni*, which has wrought many Miracles: But the Image of our Lady, ſaid to be made by St. *Luke*, is in much greater Veneration with them; her Reſidence is at the Mount *la Guardia*, eight Miles from the City (they were then making a covered Way to that Mountain) from whence they bring her at certain Times in Proceſſion into *Bologna* with more than ordinary Magnificence, attended by the ſeveral Companies of the Artiſans, the Fraternities, Convents, Heads of the Pariſhes, Magiſtrates, the *Gonfalonier*, and the *Legate* himſelf: The Image is always carried under a rich Canopy, the People upon their Knees ſaluting it as it paſſes by, with the moſt zealous Ejaculations that can be conceived.

In the Church of the *Dominicans* you ſee the moſt magnificent Chapel and Tomb of St. *Dominick*; the inlaid Work of different Colours on the Benches of the Choir, done by *Damian* of *Bergamo*, a Monk, are highly eſteemed to this Day, though it is beyond all Diſpute, that ſince the finding out of the Art of imprinting natural Colours on Wood, this Kind of Work has been brought to much greater Perfection. In the ſame Church is to be ſeen the Tomb of *Hentius* or *Enzelin* King of *Sardinia* and *Corſica*, natural Son to the Emperor *Frederick* II. The Epitaph gives you an Account of his being taken Priſoner by the *Bononians*, who detained him twenty-two Years, nine Months, and ſixteen Days in Captivity, till his Death, which happened in *March* 1272. The Tower called *Gariſenda* is about 130 Feet high, and leans like that of *Piſa*; it is a ſquare Tower built of Brick, and its Inclination to one Side proceeds, queſtionleſs, from the ſame Reaſon (*viz.* from the Sinking of the Foundation) as does that of *Piſa.* The bright Stones, known by the Name of *Bononian* Stones, are the Product of the Hill of *Paderna*, about three Miles diſtant from the City.

The Heats being almoſt as troubleſome here as in the *Apennines*, the Men uſe Fans as well as the Women, ſome of which are of Paper, and ſold for a Penny a-piece. In our Inn they had a Way of driving away the Flies by a Machine; they often treated us with *Lake Tortoiſes* of the Bigneſs of a good Trencher; their Fleſh is pretty firm, and not ill taſted.

Leaving *Bologna* about Sun-ſet, we travelled ten Miles to *Samogia*, a ſmall Village about half Way between this City and *Modena.* They told us, that from this Place to the *Alps*, the Country is as level as a Bowling-green, and that the Roads are lined on both Sides, either with Cornfields or Vineyards; the Vines are ſupported by Fruit-trees planted Chequer-wiſe, as we had ſeen them already in ſeveral Parts of *Lombardy*, and afforded a very delightful Proſpect at firſt, but at Length grew offenſive to the Eyes of us Travellers, for Want of that Variety which is diverting to the Sight, and without which nothing is diverting. The ſame Night, as we came near to the Village, we were ſurprized with the Sight of a prodigious Quantity of *ſhining Flies*, called *Lucciole*, with which the Hedges were covered to ſuch a Degree, that they ſeemed to be on Fire; they are not unlike the Locuſts in Shape, but not ſo large; the ſhining Part is a certain yellow hairy Down under the Belly, which being ſtretched at every Motion of their Wings, ſends forth a bright Glance like Fire.

Early in the Morning we purſued our Journey to *Modena*, where we arrived in two Hours. In our Way we paſſed by the Fort of *Urban* VIII. defended by four Baſtions bearing the Names of St. *Mary*, St. *Peter*, St. *Paul*, and St. *Petronius*; and a little on this Side of it we croſſed the River *Panaro*, the Boundary between the *Bolonian* and *Modeneſe* Territories. The City of *Modena* itſelf is ſeated in a fertile Country, but for Want of Trade makes but an indifferent Appearance; for its Fortifications are much decayed, the Streets are narrow and dirty, the Portico's on both Sides of them low and narrow, and even the Churches contain nothing worth taking Notice of; ſo that were it not for its ancient Reputation, and the Reſidence of the Dukes of that Name, it would ſcarce deſerve a Place among the Cities of *Italy.* The old Palace is an inconſiderable Edifice, but the new one promiſes much better.

8. We travelled in Calaſhes in four Hours from *Modena* to *Reggio*, a City as barren in Curioſities as *Modena*, but better built, and its Situation very pleaſant. The Inhabitants tell you Wonders of their Churches, but theſe Things they muſt tell to thoſe that have not ſeen *Rome* or *Naples*; their chief Pretenſions lie in the Workmanſhip of Bones, of which they make ſeveral Sorts of Toys not worth the mentioning, and ſold miſerably cheap. They told us of certain ancient Inſcriptions found at *Reggio*, in which this City was called *Regium Lepidi*, the other *Reggio* in *Calabria ulterior*, being known by the Name of *Regium Julium*, and its Inhabitants *Regienſes*, whereas thoſe of the firſt were called *Rhegini.* They ſtile their Prince Duke of *Reggio* and *Modena*, juſt as in *Scotland* (before the Union) they put the Name of their Country before *England* in the Title of the King. About eight Miles from *Reggio* we paſſed the Bridge over the River *Lenſa*, on the other Side of which begins the Dutchy of *Parma*, being a plain Country, moſtly Paſture, whereas about *Bologna* and *Modena* the Grounds are generally tilled.

The City of *Parma* is ſeventeen Miles from this Bridge, very pleaſantly ſeated, and ſeen at a conſiderable Diſtance, by reaſon of the Streightneſs of the Road leading to it, and the Height of its Spires. Over the Gate, through which we entered, we ſaw the Arms of Pope *Paul* III. the ſame who beſtowed the Dukedoms of *Parma* and *Placentia* upon his natural Son *Lewis.* The River of *Parma* divides it into two Parts, but is not navigable; its Fortifications are very good, and the Citadel deſigned after the Model of that of *Antwerp*, formerly eſteemed a Maſter-piece.

The Ducal Palace is a very indifferent Building, but the new one is likely to be much larger and handſomer. The Wardrobe is well furniſhed, and ſo are the Stables, and the Coaches very rich. The great Theatre is beyond any of that Kind I ever ſaw, either at *Paris* or *Venice*; the ſofteſt Whiſper may be heard through any Part of it, though it is of a very large Extent; there are no Boxes, but only Benches raiſed one above the other,

other as in an Amphitheatre. The Pit is alſo very ſpacious, and may be filled with Water to the Height of three Feet, in which they repreſent Naval Combats with whole Squadrons of little gilt Boats.

Beſides the Schools of the Univerſity, they have here a College, wherein they receive young Gentlemen of all Nations, but none except ſuch as are capable of being admitted Knights of *Malta.* They eat together according to the different Sciences they learn; their Number at this Time amounted to two hundred and thirty. The Dome of the Cathedral is painted by the Hand of *Correggio*, and in the Churches of St *John* and St. *Anthony* are various excellent Pieces. At the Race we ſaw Abundance of very good Company taking the *Tour à la Mode* in their Coaches; but they obſerve here the ſame Cuſtom that is practiſed upon this Account at *Rome*, *viz.* that the Women never go with the Men in the ſame Coach, but always appear in Coaches by themſelves. In our Journey from hence to *Placentia*, we ſaw not any Village or River worth mentioning, except the little diſmantled Town of St. *Domino*, tho' they are thirty-five Miles diſtant one from another.

The City of *Placentia* is ſeated in a pleaſant Plain about ſix hundred Paces from the *Po*; its Circumference is larger than that of *Parma*; the Houſes are of Brick, neatly built, but very low, and on each Side of the Houſes Foot-ways fenced with Poſts, as in *London*, eſpecially in the *Race-ſtreet*, which is as ſtreight as a Line, of an equal Breadth from one End to the other, and three thouſand Feet long. The Statues of the famous *Alexander Farneſe*, Governor of the *Netherlands*, and of his Son *Ranuccio* I. adorn the *Great Place*, or, in plain *Engliſh*, the *great Square.* From the Top of one of the higheſt Steeples we had a full a View of the Country round about, embelliſh'd with the various Windings of the *Po*, and could plainly diſcern *Cremona*, though at twenty Miles Diſtance. The Cathedral has ſome Pictures, done by the Hand of *Carache*; and that of St. *Sixtus*, an Image of our Lady, by *Raphael.* To conclude, *Placentia* is ill-peopled, and the Fortifications are but indifferent, though much extolled by the *Italians*; and their Weights, Meaſures, and Coins, are different from thoſe of *Parma.* We coaſted the Banks of the *Po*, but at ſome Diſtance from the River, following the Current till we came over-againſt *Cremona*, where we paſſed in a Ferry-boat, for there are no Bridges upon the *Po* below *Turin.*

The City of *Cremona* is ſeated on the *Milaneſe* Side of that River; it is very large, but poorer and leſs populous than *Placentia.* The Caſtle, though much extoll'd by the romantick *Italians*, is an antick ſhapeleſs Heap of Ruins; the Inhabitants of this City boaſt exceedingly of its Antiquity, but can produce no authentick Proofs for it. This City is forty Miles from *Mantua*, and in the Way between both you meet with no conſiderable Town except *Buzzolo*, a ſmall City ſurrounded with ſome inconſiderable Works, which among ſome People paſs for Fortifications; however, it bears the Title of a Dukedom, and its Prince is at the ſame Time Sovereign of the adjacent Country for four or five Miles about it. We paſſed the River *Oglio*, which riſes with a large and rapid Current out of the Lake of *Iſco*, and falls into the *Po.*

Almoſt all Deſcriptions I ever ſaw of *Mantua*, have given a very imperfect Account of the true Situation of this City, which is generally repreſented to be in the Midſt of a Lake; but to ſpeak the Truth, this pretended Lake is no more than the Waters of the River *Mincio*, ariſing from the Lake of *Guarda*, which overflowing the flat Country, makes a kind of Marſh fourteen or fifteen Times longer than it is broad, in which, but toward one Side of it, the City of *Mantua* is built on a firm Tract of Ground. The Cauſey over which we paſſed, was between two and three hundred Paces long, but on the Side towards *Verona* it is of a larger Extent. In ſome Places of theſe Marſhes, the Water is always in Motion, but as it ſtagnates in moſt Places, the beſt Part of the rich Inhabitants leave the City during the Summer Seaſon. *Mantua* has only a Wall for its Defence, but the Citadel is very ſtrong: For the reſt, it is about the ſame Bigneſs as *Cremona*, but much better peopled; the Streets are broad and ſtreight, but the Houſes indifferently built.

The *Italians* will tell you ſtrange Things of the Magnificence of the Palace, though, in Effect, it has neither Beauty nor Regularity, and the beſt Idea I can give you of it, is to compare it to *Whitehall*, *viz.* that it is large and commodious, without the other Qualifications belonging to a Royal Palace. We were aſſur'd, that this Palace was moſt magnificently furniſh'd before it was pillaged by the *Imperaliſts*, *July* 18, 1639, but even as you ſee it now, the Duke's Lodgings want nothing of what is requiſite to render them both convenient and ſplendid: The Hall is filled with rare and ancient Pictures, and the Cabinet of Curioſities wants not Materials to entertain the induſtrious Traveller. The Duke of *Mantua* has ſeven or eight Country Seats, among theſe we only ſaw *la Favorite* and *Marmirol*, the laſt of which is very pleaſantly ſeated near a delightful Brook and Wood, and well furniſh'd with Pictures and Antiquities, with Gardens, Orange-walks, Aviaries, and moſt curious Fountains belonging to it. In the Church of St. *Andrew* they ſhew the St. *Longin*, with ſome Drops of that miraculous Blood found in this City in the Time of *Leo* III. which afterwards gave the Occaſion (*viz.* in 1608) to the Inſtitution of the Order of *Mantua* by *Vincent Gonzaga*, who ſelected twenty Knights to be Companions of this Order. The other remarkable Things in *Mantua* are, the Churches of the Jeſuits, of St. *Barnabas*, St. *Maurice*, St. *Sebaſtian*, St. *Urſula*, and St. *Barbara*, the Town houſe, Theatre, Manufactory Halls, the Mill of the twelve Apoſtles, the Synagogue and Shambles. But before we part with *Mantua*, we muſt remember the Village of *Andes* near this City, which gave Birth to *Virgil*;

Mantua Muſarum Domus, atque ad ſidera cantu
Evecta Andino. Sil. Ital. l. 8.

Leaving *Mantua*, we travell'd for twenty two Miles, till we came to the River which is the common Boundary between that Dukedom and the *Venetian State*, and eighteen Miles further came and lodg'd the ſame Night at *Breſcia.* We were not a little ſurpriz'd at the Sight of the Women in the Streets and Shops, a Thing we had not ſeen ſince our Arrival at *Verona.* *Breſcia* is pretty well peopled, and indifferently large; its Citadel, which is very ſtrong, ſtands on an adjacent Hill near the Foot of the *Alps*; the other Fortifications are of no great Moment. The Palace of *Juſtice* is a noble Structure, of a certain Stone not unlike Marble; on the Pediment of the Front you ſee theſe Words;

Fidelis Brixia Fidei & Juſtitiæ conſecravit.

The Armourers Shops are directly oppoſite to this Palace, under a Portico of five hundred Paces long, the Fire-arms of *Breſcia* being accounted the beſt in *Italy.* This City is watered with many fine Springs, and a commodious Rivulet, which have their Riſe among the *Alps.*

In the Cathedral they ſhew you what they call *Conſtantine's Oriſlame*, which they told us was the ſame blue Croſs that appear'd to *Conſtantine*, with this Motto, *In hoc Signo vinces.* But how is it poſſible that an Apparition in the Air could be preſerv'd? And how could it be called an *Oriſlame*, which ſignifies a Kind of gilt *Standard* or Banner? Some deriving its Etymology from *Flammula*, a Banner, and *aurea*, golden, becauſe it was affix'd to a gilt Lance; others from a Sort of gold and flame-colour'd Stuff; it was adorn'd with green Taſſels. I remember *Mezeray* tells us, that the ſecond Race of the *French* Kings uſed to have St. *Martin*'s Cope borne before their Armies, but that the *Capets* made Uſe of the Banner of St. *Dennis*, called *Oriſlame*, kept in that Saint's Church. Perhaps this *Oriſlame* of *Breſcia* is the *Labarum* in which *Conſtantine*, after his Victory over *Maccatius*, order'd a Cypher, which conſiſts of the initial Letters of the Name of Chriſt, to be inſerted.

As we travelled from *Breſcia* to *Bergamo*, we paſſed conſtantly along the Ridge of the *Alps* on our right Hand, at the Diſtance of two or three Miles.

At *Palazzuolo*, a Place ſeated half Way between both theſe Cities (*viz.* fifteen Miles diſtant from each) we paſſed the *Oglio* a ſecond Time. Coming to *Bergamo*, we found it both a trading and a ſtrong Town, its Situation being at the Foot of the *Alps*. The Fortifications are well faced and kept, and the Citadel, with ſome Outworks, defend the riſing Grounds about the City, which has no leſs than five good Suburbs. In the Cathedral you ſee the Tomb of the great *Barth. Cogliano*, General of the *Venetian* Forces againſt the *Milaneſe*; and in that of the *Auſtin* Friars, the Tomb of the famous *Ambroſe Calepin*, a Native of *Calepio*, a Village not far from *Bergamo*. In the Choir of the Cathedral you ſee ſome inlaid Work on the Benches, done after the ſame Manner, and by the ſame Hand, as that we ſaw in the Church of the *Dominicians* at *Bologna*. The *Bergameſe* Jargon is very groſs, beſides which, the Inhabitants have, for the moſt Part, ſcrophulous Tumours on their Throats, which appear very nauſeous to Strangers, though to them it appears ſo natural, that they queſtion whether it be a greater Perfection to have or be without theſe Tumours, and are inclined to hold the former.

The Grounds about *Bergamo*, and generally all over the *Milaneſe*, being watered with many Rivulets ariſing from the *Alps*, the Country People have from thence derived an infinite Number of Channels, whereby they prevent the Inconveniency of Drought, and render their Grounds fertile. The River *Adda* (ariſing out of the Lake of *Como*) having at this Time overflown its Banks, we were obliged to quit our Calaſh at *Canonica*, a Village about twelve Miles from *Bergamo*, and to paſs the River in a Boat, not without ſome Danger, by reaſon of the Violence of the Current. Two Miles above *Canonica*, on the oppoſite Side of the River, lies *Trezzo*, where we embark'd on the Canal called *Navilio della Marreſana*, which reaches in a ſtreight Line within half a Mile of *Milan*, its Length being about twenty Miles. It is ſupplied with Water by the *Adda*, which River having in many Places very ſteep Cataracts or Waterfalls before it comes into the flat Country, is near *Canonica* twenty-five or thirty Feet lower than the Canal; which is the Reaſon that ſo many Attempts were made in vain to bring the Waters of the *Adda* to *Milan*, till at laſt that moſt celebrated Architect and Engineer *Leonardo da Vinci* undertook this Work, and brought it to Perfection. Mr. *Felibien* gives this great *Florentine* the following Character; That he was of a very large Stature, and of ſuch Strength, as to be able to twiſt the Clapper of a Bell with one Hand; he was an excellent Horſeman, a fine Dancer, and very dextrous in the Management of Arms, and all other Gentleman-like Exerciſes; he was one of the beſt Painters of his Age; he and *Michael Angelo* having engaged *Raphael* to leave his firſt Way of Drawing; beſides which, he was a ſkilful Architect, a good Sculptor, and great Engineer; a learned Mathematician, Muſician, Anatomiſt, Philoſopher, Poet, and Hiſtorian; all which, join'd with his courteous and generous Behaviour, certainly render'd him one of the moſt accompliſh'd Perſons the World ever ſaw. He died in the 75th Year of his Age, in the Arms of *Francis* I. King of *France*, who giving him a Viſit, and our illuſtrious *Leonardo* endeavouring to ſhew his Acknowledgment by raiſing his Body in the Bed, the King advanc'd with his Arms to hinder him, and ſo he expir'd. From this Canal we had a moſt delightful Proſpect of the adjacent Country, border'd in many Places with Summer-houſes, Gardens, and Orchards, like ſome of the Canals in *Holland*.

9. Scarce any City in *Europe* hath been ſo entirely deſtroyed by the two terrible Scourges of Mankind, *War* and *Peſtilence*, as *Milan*; notwithſtanding which, it may at this Day be rank'd among the fineſt Cities in the World: It was quite deſtroy'd by *Frederic Barbaroſſa* in 1162. It is almoſt of a circular Figure, about ten Miles in Compaſs, and is ſaid to contain no leſs than thirty thouſand Inhabitants. There are but few Inſtances of ſuch great Cities built in the Middle of the Land without the Conveniency of either the Sea or a River, the Defect of which is ſupplied by many Springs and Rivulets that water the Country adjoining, and the Canal deriv'd from the River *Adda* fills the Ditch of the inward Encloſure of the City with running Water. The Fortificatians, or outward Encloſure, were made ſince the Deſtruction of this City by *Barbaroſſa*. Near the Gate of *Pavia* is to be ſeen the Beginning of a Canal, intended to be drawn from thence to the City of *Pavia*, by *Galeazzo Viſconti*, but the Execution thereof was ſtopt by his Death. A certain *Latin* Author (*Werner Roolwink*) derives the Etymology of *Mediolalum*, *à Sue dimidia lanata*, i. e. from a Sow half cover'd with Wool, found in the ſame Place where this City was founded.

The firſt Thing we thought worthy our Attention, was the famous Cabinet of the late Canon *Manfredi Settala*, a Man equally learned and judicious, not only in his Choice, but alſo in working many curious Things with his own Hands. We ſaw here various Machines, invented for the Diſcovery of the *Perpetual Motion*; Looking-glaſſes of ſeveral Sorts, Dials, Muſical Inſtruments ancient and modern, and ſome of his own inventing; Books, Medals, curious Locks and Keys, Seals, Rings, Pictures, *Indian* Works, Mummies, Arms, ſtrange Habits, Lamps, Urns, Idols, and a great Number of all Sorts of Antiquities; Fruits, Stones, Minerals, Animals, Variety of Shells, Curioſities in Steel, Wood, Amber, and Ivory; a Piece of Cloth made of the Stone *Amianthos*, Monſters, *&c.* But the Diſh of yellow Amber, two Feet in Diameter, is a moſt exquiſite Rarity: There are divers other Pieces of rough Amber with Ants, Flies, Spiders, and other Inſects, encloſed in the Subſtance of them, a convincing Proof, in my Opinion, that Amber is a Kind of Gum or Bituminous Matter harden'd by the Air, the Sea, or ſome other Cauſe, ſo that when (for Inſtance) an Ant happens to light upon a raw and clammy Piece of this Bituminous Matter, ſhe is entangled in this unctuous Subſtance, and it growing harder and bigger by Degrees, the Inſect is encloſed in it. This Opinion is exactly the ſame *Martial* had of it;

Dum Phaëtonteâ formica vagatur in umbrâ
Implicuit tenuem ſuccina Gutta feram:
Sic modò quæ fuerat vitâ contempta manente
Funeribus facta eſt nunc pretioſa ſuis.

There are three or four pretended *Unicorns Horns* in this Cabinet; for though, beyond all Diſpute, they are properly no more than the Teeth of a certain Fiſh found in the *Northern Seas*, yet here, as well as in the *Venetian Treaſury*, and other Places where they are preſerv'd, they retain ſtill the Opinion, that they grow on the Head of that imaginary Creature. There are alſo ſome *Foſſil Horns* exactly like thoſe that grow on Fiſhes, though of a very different Matter. The *Remora*, a Fiſh about the Bigneſs of a Herring, ſhewn in many Cabinets, is of the ſame fabulous Kind; I am ſure I have ſeen no leſs than twelve of them in ſeveral Places, but never two of the ſame Kind.

The Cathedral, founded by *John Galeas Viſconti*, firſt Duke of *Milan*, 13 *June* 1386, and which ſtands in the Center of the City, is a Structure of a prodigious Bulk, though (according to my Computation) a ſixth Part leſs than St. *Peter*'s at *Rome*, but is infinitely beyond it in the Curioſity of the Ornaments and Sculptures, wherewith it is cover'd both within and without, there being not the Breadth of a Hand to be ſeen in the whole that is unwrought. It is built after the *Gothick* Manner, and to form a true Idea of this Edifice, you muſt repreſent to yourſelf a vaſt Collection of *Roſes*, *Trees*, *Animals*, *Groteſques*, *Pyramids*, *Niches*, *Statues*, and a thouſand other Varieties, affording an agreeable Confuſion to the Eye: However, there are only ſome Parts of this Church compleatly finiſh'd, the Canons of the Chapter thinking it their Intereſt not to proceed with too much Vigour in a Thing of this Nature, which brings vaſt Sums of Money by *Donations*, *Legacies*, &c. into their Coffers, Part of which they know how to employ to other Uſes. According to an Inſcription in Gold Letters, engraved on a Piece of Marble in the ſame Church, one *John Peter Carcannis*, a Native of *Milan*, left by his Will the Sum of 230,000 Crowns of Gold, toward the Building and Adorning the Front of this Church, which, nevertheleſs, remains to this Day almoſt naked. There may, perhaps, alſo be another Reaſon why the ſame is not finiſhed; for conſidering that there are two Sorts of Architecture in that Part of it which is already begun, it ſeems as if the Undertakers were not a little puzzled how to reconcile the Uniformity of the Architecture to the *Gothick* Structure of the whole Body of the Church.

Martin the Fifth's Statue ſtands in the Choir of this Church, without a Beard, and a very young Face, though he was near fifty Years old when he was choſen Pope; the Inſcription ſays, it exceeds *Praxiteles*:

> *Præſtantis Imaginis author,*
> *De Tradate fuit Jacobinus in arte profundus,*
> *Non* Praxitele *minor, ſed major, ſarier auſim.*

Near it is the Statue of *Pius* IV. Behind the Choir are two Marble Tables, containing a Catalogue of all the Relicks preſerved in this Church, among which is a Piece of *Moſes*'s Rod, though at the ſame Time they pretend to have it entire at St. *John de Lateran*'s. Beſides this Piece, there is another preſerved at *Florence*, and *Baronius* ſays another was found at *Sens* 1008. On the great Altar you ſee the Nail of the Crucifixion, of which it is ſaid *Conſtantine* made a Bit for a Bridle; five Lights burn conſtantly round it Day and Night.

The Pavement of this Cathedral is more curious and more ſolid than that of St. *Peter*'s at *Rome*, the Marble whereof being very thin, is almoſt worn out. The whole Charge of this Pavement (when finiſhed) is computed at 66,290 Crowns, not including the Choir. We had from the Steeple of this Church a full View of *Milan*, beſides other Cities in the Plain of *Lombardy*, and the Conjunction of the *Alps* and *Apennines* near *Genoa*. The great Bell, called St. *Ambroſe*, is ſeven Feet in Diameter, and weighs thirty thouſand Pounds. In the great Square before the Church we obſerved generally about thirty Coaches; but their ordinary *Tour à la Mode* is a ſpacious unpaved Street, (called *Strada Marina*) ſprinkled every Day with Water.

The *Ambroſian* Library obtained its Name from being dedicated to St. *Ambroſe*, by *Frederick Borromeo* Archbiſhop of *Milan*. A certain Author, in his Deſcription of this Library, printed at *Tortona*, makes the Number of its MSS. amount to 12,000, and the printed Volumes 72,000; but the Library-keeper told us, there were not above 40,000 in all. Among the firſt, *Ruffinus*'s Verſion of *Joſephus* challenges the Precedency for its Antiquity. The great Hall is ſeventy-five Feet long, and thirty broad; it is kept open two Hours in the Forenoon, and as many in the Afternoon. Among other Rarities, we were ſhewn a large Volume of mechanical Draughts, done, as they ſaid, by *Leonardo da Vinci*'s own Hand; the Writing is ſo bad, that it is not to be read without a Perſpective-glaſs. An Inſcription on the Wall near it tells you, that a King of *England* offered three thouſand Piſtoles for it, but mentions not his Name. In the Academy for Painting, adjoining to this Library, we ſaw a Picture of *Clement* X. reſembling a Print ſo exactly, that we were all deceived in it. The Citadel is a regular Hexagon Fortification, well faced, and ſtrengthened with a good Ditch and Counterſcarps. The principal Structures, beſides the Churches and Convents are, the two Palaces of the Governor and Archbiſhop, the Houſes of Marquis *Homodeo*, Count *Barth*, *Areſe*, and Signior *Martini*.

The Seminary (founded by *Charles Borromeo*) has a double Portico, 176 Feet three Inches long, and 16 Feet 10 Inches and a half broad, extending round the Inſide of the great ſquare Court; the firſt Order is *Doric*, the ſecond is *Ionic*. Over the high Portal you ſee the Statue of Piety. The Town-houſe and the Great Hoſpital, the great Court of which is 120 Paces ſquare, about the Inſide whereof are two Rows of Portico's, ſupported on each Side by forty-two Pillars of a certain Kind of Marble found in the *Alps*, each Pillar conſiſting of one ſingle Piece of Stone. The Body of the Structure is of Brick; the old Hoſpital is united with it, but the *Lazaret* or Hoſpital for infected Perſons lies about three hundred Paces without the City; *Bramante* was the Architect. This large Structure is compoſed of four Galleries joined in a Square, each of which contains ninety-two Chambers, about twenty-four Feet broad; ſo that the whole Length of each Gallery (including the Walls) amounts to eighteen hundred Feet. The Inſide is ſurrounded with a Portico ſuſtained by Marble Pillars, and the Square within is a Meadow, watered by ſeveral Springs and Brooks, in the Middle of which ſtands an Altar under a Dome, ſupported by Pillars, by which Means the Sick may hear Maſs ſaid from their Chambers.

The Church of St. *Ambroſe* hath many Statues and Pictures, which were the Production of the ignorant Ages: Among the reſt, you ſee here a Dragon of Braſs, reſting upon a Column of Marble; ſome think it to be the Serpent of *Æſculapius*, others an Emblem of the Serpent in the Deſart; but the common Opinion is, that this Dragon was caſt out of the Fragments of that Serpent; which makes many Pilgrims flock thither to worſhip it, as *Boſſi* and *Charles Torre* aſſure us by their own Experience. In the Church of St. *Euſtorgia* they ſhew ſtill the Tomb that contained the Bodies of the three Kings that were afterwards removed to *Cologne*; they pretend, that it retains to this Day a certain Virtue of curing Diſtempers; for it is to be obſerved, that the Inhabitants of the *Milaneſe* are not behind-hand with the reſt in magnifying their Relicks, of which they have Abundance, for at St. *Alexander*'s there are no leſs than 144,000 Martyrs of the Catacombs of St. *Sebaſtian*.

The chief Curioſities made in *Milan* are Works of ſeveral Sorts in Steel and Rock-Cryſtal, with which they are furniſhed by the neighbouring *Alps*; of the largeſt Pieces they make Looking-glaſſes, but they are ſeldom above a Foot ſquare. It is to the Curioſity of their Workmanſhip that ſome attribute the Original of the old Proverb, *viz. He that wiſhes well to* Italy, *muſt deſtroy* Milan: Meaning, that thereby its Riches would be diſperſed through the whole Country; though ſome explain the ſame Proverb of the fatal Wars that have afflicted *Italy* on the Account of this City, it having been forty Times beſieged, and two and twenty Times taken. The Houſe of the Marquis of *Simonetta*, two Miles without the City, hath an Echo which repeats the laſt Syllable about forty Times: We heard it in a covered Gallery in one of the Wings of the Buildings, where the Echo anſwering from the other Wing, we found the Sound to decreaſe like the Reboundings of an Ivory Ball.

In our Way from *Milan* to *Pavia* (which is only fifteen Miles) we went to take a View of the famous Convent in the Plain of *Barco*, founded by *John Galeazzo Viſconti* firſt Duke of *Milan*. The Church is of a *Gothick* Architecture, but the Chapels and Altars not inferior to any in *Italy*; the Cloyſters are wonderfully handſome, and the Gardens, Parks, Brooks, and Avenues exceeding delightful; it contained then about fifty-eight Friers, who lived there very deliciouſly. The once famous, but now inconſiderable, City of *Pavia*, is ſo much fallen from its ancient Luſtre, that its poor Remains bear ſcarce any Reſemblance to what in ancient Times its Buildings were, when the Metropolis of a Kingdom, and the Reſidence of no leſs than twenty Monarchs, the Caſtle being now no more than an old Heap of Stones, and the Fortifications quite neglected. The Univerſity (founded by *Charlemain*, and re-eſtabliſhed by *Charles* IV.) is not much better than the Town; it hath, however, five Colleges, among which that of *Borromeo* is worth taking Notice of, for the Beauty of its Structure; the Scholars of every College wear different Gowns; which Diſtinction is of great Service.

The Cathedral is a low, dark, and very old Edifice;

over againſt it is an *Equeſtrian* Statue of Braſs, called the *Regiſol*, which ſome think to be the Statue of *Antoninus Pius*; *Platina* gives it the ſame Name, and ſays it was brought from *Ravenna* after that City had been ſacked by King *Luitprand*, the ſame who (as they ſay) brought St. *Auſtin*'s Body from *Sardinia* to *Pavia*, where it was buried in St. *Peter*'s Church, now in the Poſſeſſion of the *Auſtin Friers*, though it is certain that they cannot ſhew the Place where the Body lies, the Marble Tomb in the Chapel on one Side of the Church being erected only in Honour of that Saint. *Bernard Saccus*, (l. 10. c. 3.) a Native of *Pavia*, in his Hiſtory of that City, gives us the following Account of the Tranſlation of St. *Auſtin*'s Body: *In templo D. Petri à Luitpranda ædificato conditum Auguſtini corpus fuit; & ne facile reſciri poſſet, ferunt Luitprandum tribus locis effoſſis, ſtructiſque, ſepulchris, alibi deinde nocte, paucis operi adhibitis, juſſiſſe corpus condi, omnibus ſepulchris eadem nocte, occluſis, ut certa corporis ſede ignorata, difficilior in ævum fieret occaſio, ejus perquirendi rapiendique. Conſtructum deinde alio ſeculo ſacellum D. Auguſtino fuit, juxta Templum D. Petri, in quo ſacello Arca marmorea & celebris, compoſita eſt, Auguſtina ſepulchrum repreſentans.* The ſame Author makes the following Obſervations concerning *Pavia*, That the Grounds thereabouts produce naturally Aſparagus twice every Year, which are eaten raw by the Country People; and that the *Po*, which now is five or ſix Miles from that City, reached formerly within five hundred Paces of it; which explains ſeveral Paſſages in the ancient Geographers, who place *Pavia* near that River: *Padus*, adds *Saccus*, *ſæpe totus ab alveo proſiliens alium ſibi extemplo alveum ſine foſſoribus eruit. Si ab Apennino aquarum copia irruat, fluctus in adverſam ripam torquet, contra vero ſi ab Alpium latere aquarum impetus fiat: ſi ex utraque parte, effertur ſupramodum.*

Coming out of *Pavia*, we paſſed the River *Teſin* (*Ticinum*) over a covered Bridge, being the moſt rapid and largeſt River of all that fall into the *Po*. It is ſubject to great Inundations, which ſometimes prove fatal to the adjacent Fields; they ſay, that if theſe Inundations continue for eight Days, (which, however, happens rarely) the Coldneſs of the Waters deſtroys the Herbs to that Degree, that they ſcarce recover in ſeveral Years after.

The River *Ticinum* had formerly communicated its Name to the City of *Pavia*, built upon its Bank; *Saccus* ſays, in the Year 472, its Name was changed in the Time of *Odoacer*, who, after he had deſtroyed it, granted Immunity for five Years to the Inhabitants, in order to rebuild the City; whence the City was called *Papia quaſi piorum patria*, from the Piety of its Citizens, who went to *Ravenna* to implore the King's Pardon, not for their embracing the Chriſtian Religion, which they had done long before. *Me ſi audieritis*, ſaid one of their Envoys after their Return, *nomen inveniemus, quod noſtræ pietatis officia in patriam reſtituendam, paucis ſyllabis poſteritati atteſtabitur, & Ticini nomen aquis reſtituetur. Papia piorum Patria*, &c. I ſhall add only, that *Pavia* is famous for the Misfortune of two Kings taken Priſoners there, *viz.* *Deſiderius* by *Charlemain*, and *Francis* I. by *Charles* V.

10. We dined at *Voghera*, a Town about fifteen Miles from *Pavia*, and lodged the ſame Night at *Novi*, a City ſeated at the Foot of the *Apennines*, thirty Miles from *Genoa*, under whoſe Juriſdiction it is; the Road betwixt both is very mountainous. The Situation of *Genoa* is at the End of a Gulph, partly on the Brow of a Hill, which forms a Creſcent round the Gulph, and partly on a little Plain betwixt the Foot of the Hills and the Seaſhore; the Streets are narrow, and the Houſes in the lower Part of the City ſix or ſeven Stories high, but are lower by Degrees as the Aſcent riſes; this affords a pleaſant Proſpect at a Diſtance, but carries with it divers Inconveniencies, eſpecially for Coaches, which for that Reaſon are not much in Faſhion here, the Ladies being generally carried in Litters, and Gentlemen uſing Calaſhes they drive themſelves. It is ſtrengthened by a double Fortification, reaching on both Sides to the Shore, the innermoſt incloſes the Body of the City, and the ſecond the riſing Grounds about it. When I had taken a View of the City of *Genoa*, I could not but be ſurprized at what is commonly reported of it, *viz.* that it is built all of Marble, whereas it is beyond all Contradiction, that (except ſome Houſes in the *Strada Nuovo*, that are either adorned with, or have whole Fronts of Marble) their ordinary Materials for Building are Brick and Stone, or both together, and their Houſes are generally plaiſtered over on the Outſide. Notwithſtanding this, *Genoa* is not deſtitute of beautiful Structures, eſpecially in five or ſix of the beſt Streets, and in the Suburbs of St. *Pietro d' Arena*; beſides that, *Genoa* has this Advantage in Building, that Slates and Glaſs are as plentiful here as they are rare in other Parts of *Italy*.

The pretended *Gardens in the Air* in *Genoa*, compared by ſome to the penſile Gardens of *Semiramis*, owe their Original to nothing elſe but the Scarcity of Ground, which obliges the Inhabitants to put their Flower-pots in their Balconies, and ſometimes to cover them with Earth. The beſt Edifices of *Genoa* eſcaped the Fury of the *French* Bombs, which being levelled againſt the middle Part of the City, did moſt dreadful Execution, there being to this Day (1688) above five hundred ruined Houſes in that Part of the City. In the Church of *our Lady of the Vineyards* they ſhewed us a Bomb which fell there without the leaſt Detriment; had not the *French* Bombs thrown down four or five Churches and as many Convents at the ſame Time, they would certainly make the World believe that the Bombs had a Reſpect for ſo ſacred a Place. During this Conflagration, the Doge, with thirty Perſons more, ſheltered themſelves in the great Hoſpital called the *Albergo*, whither many of the Inhabitants alſo carried their beſt Effects. To prevent the like for the future, they are at preſent buſied in making a third Mole, which is to ſtretch further into the Sea than the two former. The Harbour of *Genoa* is capacious enough, and of a good Depth, but is expoſed to the *Lubeccio* or the *African* South-Weſt Wind, the moſt dangerous that reigns in this Part of the *Mediterranean*. This obliged them to make another leſſer Port within the great one, for the Security of their Galleys, which are now reduced to ſo ſmall a Number as ſix, an inſignificant Squadron in Compariſon of what the *Genoeſe* Navies were in former Times.

Thoſe that intend to have a compleat Idea of *Genoa*, muſt view it diſtinctly from three ſeveral Places, from the Top of the *Pharos* or Water-Tower; from the Sea at a Mile's Diſtance; and from the Top of the Hill. The publick Palace, or *Palazzo Reale*, where the Doge, and ſome of the Senators lodge with their Families, is a very large Structure. In the little Arſenal of this Palace we were ſhewn a Roſtrum of an ancient *Roman* Ship; it was of Iron, with a Boar's Head at the End of it: The Inſcription tells you, that it was found in the Harbour of *Genoa*, as they were cleanſing it. Here are alſo ſome Cuiraſſes, ſaid to have belonged to certain Ladies of this City who fought againſt the *Turks*.

The Ladies generally dreſs themſelves after the *French* Mode, but the ordinary Sort make Uſe of a Kind of little Fardingals. The Noblemen, though not obliged to any particular Habit, yet wear, for the moſt Part, Black and Cloaks; they aſſume the Titles of Dukes, Marquiſſes, Counts, *&c.* which the *Venetian* Nobility do not, but they wear no Swords.

The Doge (who muſt be fifty Years old at leaſt) is ſtiled *His Serenity*, the Senators *Their Excellencies*, and the Noblemen *Moſt Illuſtrious*, a Title of no great Moment in *Italy*. The Doge is crowned with a Crown of Gold, and holds a Sceptre in his Hand, by Reaſon of the Kingdom of *Corſica* under the Juriſdiction of this Republick, but his Power is as much limited as that of the Doge of *Venice*; beſides that, at the End of every two Years, Deputies are always ſent to his Serenity, to give him to underſtand, that his Time being expired, he muſt leave the Palace. We ſaw once the whole Senate in their Formalities at the Proceſſion on the Feaſt of *Corpus Chriſti*, where the Doge appeared

A PROSPECT OF THE CITY OF GENOA

peared in a crimſon Robe, with a kind of ſquare Bonnet on his Head; before him were carried two Battle Axes and a Sword in the Scabbard, a Senator marching on each Side of him in a black Gown, but of the ſame Make with that of the Doge; the Streets were ſtrew'd with green Herbs, and lined on both Sides with Tapeſtry; in the Windows we ſaw the Ladies dreſs'd in their beſt Attire, with Baſkets full of Flowers, which they threw among thoſe that follow'd the Proceſſion, according to their ſeveral Inclinations, the Gentlemen receiving theſe Favours with low Reverences from the Hands of the fair Diſtributors.

The Church of the *Annunciata*, though the faireſt in *Genoa*, yet in Beauty and Magnificence is much inferior to many we have had Occaſion to deſcribe before. The moſt remarkable Thing that belongs to it is, that it owns for its Founder a Citizen of *Genoa* of the Family of *Lomellino*, who built it at his own Expence.

I will not detain you with the Dialogue between the Crucifix at St. *Jerom* and St. *Bridget*, any more than with an ample Deſcription of the great Diſh made of one ſingle Emerald, in which, they ſay, Chriſt eat the *Paſchal Lamb*, (*Beda* ſays it was a Silver Diſh) *Du Val* would have this Emerald Diſh to be one of the Preſents made by the Queen of *Sheba* to *Solomon*.

At St. *Mary of the Caſtle* there is another *ſpeaking Crucifix*; for a certain Gentleman, it ſeems, having made a Promiſe of Marriage to his Miſtreſs in a Place of the City where a Crucifix ſtood, which he afterwards refuſed to fulfil; the Lady accuſed him before the Judges, where, being upon the Point of loſing the Cauſe for Want of ſufficient Witneſs, ſhe appeal'd to the ſaid Crucifix; and ſome Perſons being ſent thither, and the Queſtion propoſed to the Crucifix, it anſwer'd with a Nod, which made the Judges determine in Favour of the injured Lady; which is the Reaſon that this Crucifix is particularly reverenc'd by Maids. But I cannot ſay how far it is truſted. The Aſhes of St. *John Baptiſt* are preſerved in the Cathedral, in a Shrine ſupported by four beautiful Columns of Porphyry, brought from *Smyrna* in 1098. This Saint and the Emperor are the two Protectors of *Genoa*, and the Image of the firſt is ſtamp'd on its Coin, which is the faireſt and beſt in *Italy*, commonly called *Genouines*.

The *Traffick* of *Genoa* conſiſts chiefly in *Velvets*, *Points*, *Gloves*, *Anchovies*, dry *Confections*, and various Sorts of *Fruits*, but is much decay'd; for though ſome private Perſons are ſtill exceeding rich, yet the Generality grow poor; the Government monopolizes the Trade of Wine and Corn, ſo that the *Tavern* and *Innkeepers* muſt buy their Wines out of the Cellar of the State, and the Bakers fetch their Corn from the publick Granaries.

11. Taking our Way from *Genoa* towards *Caſal*, we came back the ſame Way we went as far as *Novi*, where, hiring a Coach to *Turin*, we dined the next Day at *Alexandria*, a little City, provided with ſlender Fortifications; notwithſtanding which, it maintain'd a Siege of ſix Months againſt *Frederick Barbaroſſa*, who gave it the Name of *Cæſarea*, which *Alexander* III. changed into *Alexandria*. What ſome affirm, *viz.* that the Emperors uſed to be crown'd here with a Crown of Straw, is a mere Fable, whence (they ſay) it got the Name of *Alexandria di Paglia*, or *of Straw*, which, indeed, it retains to this Day, though the Reaſon of it is not known. *Caſal* is a ſtrong City, ſeated on the right Bank of the *Po*; beſides the old Caſtle, it has a new Citadel, fortified with ſix Royal Baſtions, Halfmoons before the Curtains, and a large and deep Ditch full of Water, and an Arſenal ſtored with Arms for ten thouſand Men. Since the *French* have been in Poſſeſſion of this Citadel, they have made conſiderable Alterations in the Fortifications, eſpecially in the Baſtions, which being very large, they made a ſecond Rampart, and new Baſtions within the other.

From *Caſal* we paſs'd the *Po* a fourth Time, the Banks of which our Coach follow'd for a conſiderable Time; we paſs'd in Sight of *Terni*, a ſmall fortified Place in that Part of *Monſerrat* under the Juriſdiction of the Duke of *Savoy*. *Verrue* lies on the right Side of the *Po*, and is much ſtronger than the other. After we had travell'd eight Miles from *Caſal*, we entred *Piedmont*, the Ground being ſtill level, but not long after found ourſelves among the Mountains, in a large and flat Valley, almoſt ſurrounded with the *Alps*: The Grounds in ſome Parts of this Plain are exceeding rich, but in ſome others very indifferent. In our Paſſage we ſaw two or three large Spots of Ground, where two Days before had ſtood the fineſt Corn in the World, now laid quite Waſte by the Hailſtones, the very Straw being beaten into the Ground, and the Vines, Walnut and other Trees broke all to Pieces. It is generally reckon'd but forty-five Miles from *Caſal* to *Turin*, but the *Montferrat* Miles, as well as thoſe in *Piedmont*, are much longer than thoſe in *Lombardy*.

The City of *Turin* is ſeated in a Plain upon the River *Doire*, three hundred Paces from the *Po*; not only the Town, but alſo the Avenues leading to it, are very pleaſant; but what moſt pleaſes Strangers is, that here they are rejoic'd with the frank Converſation of the Inhabitants, after they have been almoſt tired out with the ſtarched and jealous Reſervedneſs of the *Italians*, it being certain, that their Manner of living at *Turin*, may be compar'd to the moſt polite City of *France*, and that Language is as commonly ſpoken here as the *Italian*, the People generally following the ſame Steps in their Converſation, and it may be ſaid without the leaſt Exaggeration, that the Court of *Savoy* is as ſprightly and gay as any in *Europe*. The old Part of *Turin* is ſomewhat indifferently built, but to make Amends for this, the new Part has broad ſtreight Streets, and the Houſes are large, high, and pretty uniform. The Street that paſſes through the two Squares, and reaches from the Caſtle to the new Gate, is one of the faireſt in *Europe*. The Houſes in the new Square are adorn'd with large Portico's that encloſe them on all Sides. The Duke's Palace has very good Apartments, though it appears with no great Luſtre on the Outſide. The Palace of the *Jeſuits*, and of the Prince of *Carignan*, (but lately finiſh'd) are both magnificent Structures. *Turin* is but of an indifferent Bigneſs, encloſ'd with a regular Fortification by the preſent Duke; but the Citadel exceeds the reſt both in Strength and Beauty, but was not quite finiſh'd. The Walks of Oaks on the Ramparts are very delightful to behold at a Diſtance, and afford an agreeable Shade to thoſe that divert themſelves here, with the moſt delicious Proſpect towards the Rivers; but the general Meeting-place of the Gentry is near *Valentia*, a Country Seat of the Duke upon the Banks of the *Po*, about a Mile from *Turin*, beſides which the Duke has ſeven or eight more, all well furniſh'd. Before we leave *Turin*, we muſt not forget to ſay ſomething of the new Chapel dedicated to the *holy Handkerchief*, in the Cathedral; it is, beyond all Queſtion, a very glorious Piece of Workmanſhip, but what ſome have pretended, *viz.* that it excels the Chapel of St. *Lawrence* at *Florence*, is ſo far from being true, that it is not comparable to it; they are indeed both of the ſame Figure, but that of *Turin* is much leſs, and will be embelliſh'd only with black Marble. I muſt upon this Occaſion put you in Mind, that inſtead of one, there are at leaſt five or ſix of theſe pretended *holy Handkerchiefs*, *viz.* two at *Rome*, in St. *Peter*'s and St. *John de Lateran*; one at *Cadoin* in *Perigort*; one at *Beſançon*, one at *Compeigne*, one at *Milan*, and another at *Aix la Chapelle*; they all produce papal Bulls to maintain their Titles, in which Point the Handkerchief of *Cadoin* has the Preference, being authorized by no leſs than fourteen Bulls, whereas that of *Turin* has only four.

12. Since we are going to leave *Italy*, I have a Mind to entertain you with ſome Obſervations, which I had not the Opportunity to inſert in any of my former Letters. Our ſhort Stay in the Places through which we paſſed, would not ſuffer us to ſpend much Time in making Acquaintance with the People of the Country; and conſequently, we could not be ſo particularly informed of their Cuſtoms; neither do I intend to enter on that Subject, but only to communicate ſome Remarks to you, without any other Order than as they ſhall

offer themſelves to my Memory. I could not give you an Account of thoſe Academies of the *Virtuoſi*, that are eſtabliſhed in almoſt all the Towns in *Italy*, becauſe I had not Time to enquire particularly about them; but if I may give Credit to the Information I received from ſeveral Perſons, they are certainly, notwithſtanding the Noiſe they make about them, but very inconſiderable Societies, as I have intimated before. The affected Oddneſs of their Titles are very whimſical, they are not much unlike the Names which the Grooms in *France* and *England* give to their Horſes. I ſhall only mention a Dozen of them. Thus the *Academiſts* of *Genoa* call themſelves *Addormentati*, i. e. *Drowſy*; thoſe of *Naples*, *Ardenti*, i. e. *Burning*; thoſe of *Alexandria*, *Immobili*, i. e. *Immovable*; thoſe of *Rome*, *Fantaſtic* and *Humoriſti*, i. e. *Fantaſtical* or *Humourous*; thoſe of *Viterbo*, *Oſtinati*, i. e. *Obſtinate*; thoſe of *Siena*, *Intronati*, i. e. *Giddy-headed*, or *Block-heads*; at *Peruſa* they ſtile themſelves *Inſenſati*, i. e. *Mad*; at *Parma*, *Innominati*, i. e. *Harmleſs*; at *Bologna*, *Otioſi*, i. e. *Idle*; at *Milan*, *Naſcoſti*, i. e. *Concealed*; at *Ancona*, *Caliginati*, i. e. *Obſcure* and *confuſed*; at *Mantua*, *Invaghiti*, i. e. *Eaſy* or *Pliable*; and at *Macerata*, *Catenati*, i. e. *Chained*. I perceive I have ſkipped from Place to Place without any Order, but that is not material in a Thing of this Nature.

We were treated with a great deal of Civility and Kindneſs by the *Italians*, as far as we could judge by outward Appearances; but to deal plainly, their Complaiſance is a Mixture of Flattery and Deſign. We found alſo by Experience, that the People of this Nation are very ſober. The Inns in the little Towns, eſpecially on certain Roads, are very ill furniſhed with Proviſions. The firſt Courſe they call the *Antipaſto*, is a Diſh of Giblets boiled with Salt and Pepper, and mixed with Whites of Eggs; after which Courſe, comes two or three ſmall Diſhes, one after another, of different *Ragous*. Between *Rome* and *Naples* the Traveller is ſometimes regal'd with *Buffaloes* and *Crows*. Some Hiſtorians relate, that the firſt *Buffaloes* that were ſeen in *Italy*, were brought thither *Anno Dom.* 595; the *Buffaloe*'s Fleſh is black, ſtinking, and hard; there are none but the moſt beggarly *Jews* at *Rome* who eat it, and the Beaſt muſt be hunted, otherwiſe it is impoſſible to chew its Fleſh. They have all the various Kinds of Wine in *Italy*, but the beſt Sorts are ſcarce. About *Rome* there is the Wine of *Genſano*, *Albano*, and *Caſtle Gandolfo*, in which Places the Soil is the ſame; the *Greco* of *Naples* and the *Lacryma Chriſti* are ſtrong, but the ſmall *Aſprino bianco*, and the *Chiarello piccante*, ſeemed more agreeable to our Taſte, though they are much leſs eſteemed. At *Florence* and *Monteſiaſcone* the richeſt Wines are pleaſant, and have no more Fire than what is convenient for ordinary Drink; but there is no great Quantity of them. The Great Duke's delicate *Moſcadello* grows in a little Vineyard, and is conſecrated to his own Uſe, or to be ſent as Preſents, but never diſperſed through the Country. There are alſo ſome good Sorts of Wine near *Verona*, and in the State of *Genoa*. About *Loretto* the Caſks are made ſhort and broad, like a *Dutch* Cheeſe, but towards *Pavia* their Length is about ſeven Times their Diameter. Towards *Parma* and *Placentia*, where there are excellent Paſtures, they make Cheeſe of all their Milk. Butter is ſcarce in *Italy*, inſtead of which they uſe Oil in all their *Ragous* and Fricaſies; but though they draw it from their own Olive-trees, it is oftentimes worſe than in thoſe Countries where none of theſe Trees grow; for what will yield the Price and keep longeſt is always tranſported for the ſake of Gain. We have not ſeen the chief Seaſon for Fruit in this Country. At *Venice*, where we ſtaid two Months in Winter, we had white Grapes of *Bologna*, very firm, and of a moſt delicious Taſte. At *Naples* we eat Winter Melons, and at *Genoa* we were entertained with all Sorts of ſmall Fruits, and I never ſaw ſo good and large Cherries as there. The *Riviera di Genoa* is peculiarly famous for excellent Fruit; it may be truly ſaid of *Genoa, that its Hills are without Wood*, but all the reſt of the Proverb is falſe, *Men without Faith, Ladies without Shame, and Sea without Fiſhes*. There are both Rogues and honeſt Men every where, and we found by Experience, that there are very good Fiſh in the Sea of *Genoa*. I took Pleaſure two or three Times to go in the Morning to ſee the Fiſh-market at *Naples*, *Venice*, *Ancona*, and *Leghorn*, and other Places, where I obſerved ſeveral Sorts that I had never ſeen in other Places. The Gulph of *Cajeta* abounds with Sturgeon, ſome of which are alſo found in the *Tyber*; it is excellent when roaſted freſh.

In all our Travels through *Italy*, we never ſaw either a Hare or Partridge in the Fields; and I might alſo add, we ſaw as few in the Inns. It is very ſtrange, in my Opinion, that theſe Animals are not more plentiful, ſince the Country is not wholly deſtitute of them. There are large Extents of Ground in *Italy*, which are almoſt uninhabited, and conſequently ought to abound with Game, proportionable to the like Places in the reſt of the World. And again it might be reaſonably ſuppoſed, that the Game ſhould be more here than in other Places, becauſe the Lords of theſe Grounds are never wont to reſide on them, and yet are no leſs jealous of their Rights than the Gentlemen of other Countries. In *England* and *France*, there are many Perſons of Quality who paſs their Time in the Country, but that is not the Cuſtom in *Italy*, where all Perſons of Note live in the Cities, out of which there are no Caſtles or great Houſes to be ſeen, which belong to private Perſons, or at leaſt they are very rare, eſpecially if we compare this Country with *France* and with *England*. To return to our Game; it muſt be acknowledged, that Quails are not ſo great Rarities here as Partridges, for on the Approach of Spring they come in Bevy's from *Africa* and cover the whole Country. Theſe poor little Creatures are ſo tired with their long Paſſage, that they throw themſelves into Ships, and wherever they can find a Place to repoſe themſelves. They may be caught in Heaps without the leaſt Trouble; but ſince they are extremely lean, they who take them uſually feed them, for ſome Time, before they eat them. I believe it is a Queſtion not yet reſolved, whether theſe Birds fly over the Sea at one Flight, or whether they do not ſometimes ſwim to take Breath? It is indeed hard to conceive that the Quail, which has not a ſtrong Wing, and flies heavily, ſhould be able to continue its Flight ſo long. But on the other Side, I am inclined to believe, that the Water would ſo moiſten and drench the Feathers, that it could never ſpread its Wings again; and beſides, its Leanneſs and Wearineſs, the Dangers to which it expoſes itſelf, and its Eagerneſs to find a Reſting-place, are, in my Opinion, convincing Arguments, that it flies all the Way without Intermiſſion, though, it muſt be confeſſed, this Notion is ſubject to Difficulties.

I ſaw but one *Scorpion* in *Italy*, and I could not learn that theſe Animals are very miſchievous in this Country: There are ſeveral Ways to guard againſt them; but I never ſaw any of thoſe hanging Beds that are uſually talked of as common there. The People about *Verona* make Uſe of Iron Bedſteads, which they place at ſome Diſtance from the Walls, that thoſe Inſects may neither breed in them, nor be able to come upon the Beds, and the Feet of the Bedſteads are filed and poliſhed for the ſame Reaſon. If the Animal itſelf can be caught and bruiſed, on the Part which it ſtung, it is a certain Remedy; and there are alſo Salts and Oils extracted out of it, which produce the ſame Effect: But after all, the Stinging of Scorpions is not mortal in *Italy*; and beſides, ſuch Inſtances happen ſo very rarely, that they who are deſirous to travel into that Country, ought not to be diſcouraged by them. There are two Sorts of Animals to which the *Italians* give the Name *Tarantula*; one is a Sort of *Lizard*, whoſe Biting is reputed mortal; it is found eſpecially about *Fondi*, *Cajeta*, and *Capua*: But this is not that, which other Nations call *Tarantula*. The true *Tarantula* is a Spider, and lives in the Fields; there are many of them in *Abruzzio*, *Calabria*, and they are alſo found in ſome Parts of *Tuſcany*. Such as are ſtung by this Creature, make a thouſand different Geſtures in a Moment; for they weep, dance, tremble, laugh, grow pale, cry, ſwoon away, and, after a few Days of Torment, expire, if they be not aſſiſted in Time. They find ſome Relief by Sweating and Antidotes, but *Muſick* is the great and ſpecifick Remedy. A learned Gentlemen of unqueſtionable Credit told me at *Rome*, that he had been twice a Witneſs both of the Diſeaſe and of the Cure. They are both attended with Circumſtances that ſeem very ſtrange; but the Matter of Fact is well atteſted, and undeniable. I think I could produce natural and eaſy Reaſons to explain this Effect of Muſick; but without engaging myſelf in a Diſſertation that would carry me too far, I ſhall content myſelf with relating ſome other Inſtances of the ſame Kind: Every one knows the Efficacy of *David*'s Harp to reſtore *Saul* to the Uſe of his Reaſon. I remember *Lewis Guyon*, in his Leſſons, has a Story of a Lady of his Acquaintance, who lived one hundred and ſix Years without ever uſing any other Remedy than Muſick; for which Purpoſe ſhe allowed a Salary to a certain Muſician, whom ſhe called her Phyſician; and I might add, that I was particularly acquainted with a Gentleman, very much ſubject to the Gout, who infallibly received Eaſe, and ſometimes was wholly freed from his Pains by a loud Noiſe. He uſed to make all his Servants come into his Chamber, and beat with all their Force upon the Table and Floor; and the Noiſe they made, in Conjunction with the Sound of a Violin, was his Sovereign Remedy. Highway Robbers (about which Reports prevail ſo ſtrongly) are not more frequent or dangerous in this Country, than Scorpions or Tarantulas, for there have not been any Banditti at *Rome* ſince the Pontificate of *Sixtus* V. And I think I told you, that the Marquis *del Carpio* hath extirpated them out of *Naples*. I do not remember that ever any Perſon was put to Death in all the Places through which we travelled, during the Time we ſtaid in them. There is not a City, perhaps, in the whole World, where Executions are ſo rare as at *Venice*. They who are under the Patronage of a Nobleman, which is a Thing very eaſily obtained, may do what they pleaſe; only they muſt take Care never to commit a Villainy in a publick Place, or that may make too great a Noiſe. At our Entry into moſt Cities our Piſtols were taken from us; but we always found them at the other Gate at our Departure. This is a troubleſome Thing, for at the End of the Voyage the Charge amounts to as much the Piſtols are worth. It is not lawful to wear Swords either at *Genoa* or *Lucca*, but that Privilege is readily granted to Strangers, when they deſire it; and both this and the former Cuſtom are daily declining, ſo that, in all Probability, they will be very ſoon out of Date.

The Bayonet is prohibited in Cities, but in the Country every one may wear what Arms he pleaſes; and even thoſe who travel on Horſeback, oftentimes carry Fuſees. The *Stiletto*'s of *Milan* are famous, for they do their Work effectually. Love and Jealouſy are the two Furies that ſhed moſt Blood in *Italy*. The *Italians* are ſaid to be jealous without Reaſon, and the leaſt Suſpicion puts them into a Fit of implacable Rage. Not only at *Venice*, but every where elſe, the Girls are ſent to Nunneries in their Infancy, and they are uſually married, or at leaſt contracted, without ſeeing their future Huſbands; the Girls of the loweſt Rank are ſuffered to remain with their Parents, and for that Reaſon it is not without much Difficulty that they are able to find Huſbands. I am not ſo well acquainted with the Cuſtoms of other Places, but at *Rome* there are ſeveral Funds eſtabliſhed, either to marry poor Maids, or to confine them for ever to a Convent. Theſe Charities are diſtributed with almoſt the ſame Ceremonies that are obſerved at the *Minerva*, which I deſcribed. I obſerved in the Churches at *Rome*, that in Lent the Women hearing Sermons, are ſhut up in a Place under the Pulpit, with an Incloſure of well-joined Boards ſix Feet high. There are ſeveral Trees and Plants in *Italy*, which grow neither in *England*, nor, for the moſt Part, in *France*, unleſs perhaps in the Southern Parts of it. The Palm-tree is a Stranger in *Italy*, and rarely bears Fruit there. In the Garden of Simples at *Piſa*, there is a Male and Female Palm-tree planted together, agreeable to the ancient Error of thoſe who thought ſuch a Marriage was neceſſary to make thoſe Trees fruitful. But this is a mere Fable, for I obſerved a Palm-tree alone full of Dates at the *Villa Madome* on *Mount Mario* at *Rome*. We went to the Pope's Chapel on *Palm Sunday*, where all the Cardinals were aſſembled, and he who officiated for the Pope, preſented a Palm Branch to every one of the reſt. Theſe Branches were almoſt five Feet long, and the Leaves were woven together into Knots of ſeveral Figures with great Art. We ſaw that which was ſent to the Pope. All the Prelates and other Eccleſiaſticks had alſo Branches, which were either greater or ſmaller, according to the Dignity of thoſe who bore them; the Laicks uſe only Olive Branches. In M. *Badouer*'s Garden at *Verona*, there are Cypreſs-trees an hundred Feet high, and two hundred Years old; the Citrons of *Florence*, called *Cedratti*, are the moſt excellent of all this Kind of Fruit. Silk-worms were brought into *Italy* from *Japan* and *China*. I have already told you, that we obſerved ſeveral Sorts of Trees commonly planted in the Ground in *Italy*, which they are forced to put into Pots or Boxes in the colder Countries, that they may carry them in Winter into Green-houſes, to preſerve them from the Rigour of the Seaſon. Such are the Orange-trees and Lemon-trees, the Pomgranate-trees, the Olive-trees, the Myrtles, the *Ficus Indica*, the Caper-trees, and many others. They have commonly alſo the Plane-tree, the Cork-tree, the Scarlat Oak, the Jujub-tree, the Carob-tree, Cypreſs, Sena, Lentiſk, *&c.* The Roads are lined, in ſeveral Countries in *Italy*, with white Mulberry-trees, for the Nouriſhment of Silk-worms. Thoſe who love Simples, will find enough to gratify their Curioſity on the *Apennine* Mountains between *Loretto* and *Rome*, and every where in the *Alps*, but they muſt have more Time than we had.

I gathered certain Sorts of Sponges on the Sea-ſide towards *Terracina*, of which, two were in a Manner rooted on very hard Flints, the reſt lay looſe on the Shore. Theſe Sponges put me in Mind of Pumice-ſtones; and I muſt not forget to tell you, that I ſpent ſome Time to no Purpoſe, in ſearching for thoſe Stones on Mount *Veſuvius*, though it is generally ſaid, and even by very learned Men, to be full of them. This is a very great Miſtake, there are indeed many porous and calcined Stones, which have ſome Reſemblance to Pumice-ſtones, but the Difference is ſoon perceived, tho' Pumice-ſtone is a Production of Nature, and it is ſo far from being true that they are made ſo by the Fire of *Veſuvius*, or any other, that ſuch a Fire would certainly deſtroy them, as it deſtroys all other Subſtances that are within its Reach. Over-againſt the Cape of *Mycæne* there is a little Iſland where thoſe Stones grow. When the Sea is agitated by a Storm, it looſens and carries away ſome of them that are ſwimming, and the Wind drives aſhore a great many ſmall Pieces between *Puzzola* and *Cumæ*, eſpecially towards *Bajæ*, where I have gathered ſome that were very fine. You may then be aſſured, that there are no Pumice-ſtones to be found about *Veſuvius*, and that all that you have read about it in the Books of Travellers and Naturaliſts, ought to be reckoned among the groſſeſt popular Errors. The Mountains of *Italy*, and particularly the *Apennine* Hills, abound with Metals, Mineral Waters, Cryſtal, Alabaſter, a Kind of Agate, and ſeveral Sorts of Marble, but the Marble of the *Archipelago* has brighter Colours. The white Marble of *Cararo* is one of the fineſt Sorts in *Italy*, and a great deal of it is tranſported to *France*. The Winter had been very long and ſharp, almoſt all the Oranges and Citrons were frozen, and the Ground under the Trees was covered with them in the above-mentioned Places, where theſe Fruits are moſt common.

I obſerved that they take a great deal of Care at *Rome*, to preſerve themſelves from the Inconveniencies occaſioned by the Heats which are uſually very troubleſome in that Place. The People of Quality have low Apartments, where the Sun never appears, which are paved with Marble, and furniſhed with Fountains and Water-Spouts; and beſides, the Doors and Windows are ſo contrived, that they are never without a kind of cool Breeze. The Beds are encompaſſed at ſome Diſtance with a Curtain of Gauſe or Tiffany, which is joined cloſe to the Boards of the Floor and Ceiling above and below, and hinders them from being tormented with Gnats. It is alſo the Cuſtom to ſleep two Hours immediately after Dinner, but they never lie down, for they have a Sort of folding Chairs which have Backs that riſe and fall with a Spring. The Uſe of Umbrello's is common every where. The *Serain*, or Evening Dew, in the *Campagna di Roma*, is eſteemed mortal during three or four Months in the Summer, and great Care is taken to avoid it. Travellers double their Pace to arrive at *Rome* in Time, or ſtay at the Diſtance of eighteen or twenty Miles from it. I found the following Verſes over the Gate of a Houſe at *Rome*; they contain the Rules that ought to be obſerved for the Preſervation of Health in that City, according to the Opinion of the Author.

Enecat inſolitos reſidentis Peſſimus Aer
Romanus; *ſolitos non bene gratus habet.*
Soſpes ut hic vivas, lux ſeptima det medicinam
Abſit odor fœdus; *ſit medicuſque labor.*
Pelle Famam & Frigus, Fructus, Femurque relinque,
Nec placeat gelido fonte levare ſitim.

That is,

The pois'nous Air of ROME, *all Strangers fear,*
Nor wholly ſafe e'en thoſe eſtabliſhed here.
Would'ſt thou eſcape? Take Phyſick once a Week,
Ill Smells avoid, nor too much Labour ſeek.
Fly Hunger, Cold; *from Fruit, from Females, fly,*
Nor taſte Spring Water,—if you do—you die.

You may obſerve by the Way, that the Author choſe rather to run the Hazard of a falſe Quantity, than to loſe the Jingle of his four *F*'s; he might have ſaid *Venerem* inſtead of *Femur*, the firſt Syllable of which is ſhort. I have not given you an Account of the Antiquity of ſeveral Cities, though Enquires of that Nature are ſometimes curious; but beſides, that they require a great deal of Time and Labour, and have been proſecuted already by very able Pens. I find that theſe Controverſies are very often Queſtions only about the Places where thoſe Cities ſtood, for in many of them there is not the leaſt Remains, or any Proof of their firſt Foundations. They have been ſubject to the ſame Alterations which the Veſſel of the *Argonauts* underwent of old; beſides, the Sight of the Places might perhaps raiſe a Traveller's Curioſity, but wears off by Degrees when they are only the Objects of his Imagination. I muſt tell you now I think on it, that in all *Italy* we obſerved but one Windmill, or rather the Ruins of one, at *Leghorn*. They uſe no Tin Veſſels in this Country, becauſe of the Scarcity of that Metal; all their Veſſels are made of Earth leaded, or of Earthen Ware; we have ſeen it made in ſeveral Places, but they have none that reſembles *China* ſo exactly as that of *Delft*. Whereas we place the Beginning of the natural Day immediately after Midnight, the *Italians* make it begin after Sun-ſetting, and their Clocks ſtrike always four and twenty Hours, from one Sun-ſetting to another. You may eaſily perceive, that according to this Computation, the Hour of Noon varies daily, for when the Sun ſets at Four o'Clock according to our Calculation, they reckon One when we count Five, and conſequently it is Noon at twenty Hours; and in like Manner when the Sun ſets at Eight on our Dials, it is One o'Clock with them when we reckon Nine, and it is juſt Noon at Sixteen Hours. Nevertheleſs, with reſpect to the artificial Day between Sun-riſing and Sun ſetting, they uſe the Words Yeſterday and To morrow as we do. The *Babylonians* began their natural Day at Sun-riſing, and the *Jews* at Sun-ſetting, as the *Italians* do at preſent. The Inhabitants of the Province of *Umbria*, with *Ptolemy*, and ſome others, in former Times, reckoned the Beginning of the Day at Noon, and the *Egyptians* at Midnight, as we do. The ancient *Romans* alſo began the Day at Midnight,, but their Hours are unequal. I cannot forbear acquainting you, that we left *Rome* without ſeeing the Pope; there were, doubtleſs, ſome Reaſons, that would not permit him to appear in Publick; and there were others that hindred us from paying him a Viſit. I ſhall conclude this Account with telling you, that we bought ſome modern Medals at *Rome* from the famous *Hameranus*, who is reputed to excel in that Sort of Workmanſhip. Of all the Medals we ſaw of Queen *Chriſtina*, this, in my Opinion. is the moſt heroical, and moſt worthy of that great Princeſs. Her Dominions are on the Reverſe, with the whole Hemiſphere, and this Motto, *Ne mi beſogna ne mi baſta*, I don't want them, and they are not ſufficient to me. *Alexander the Great* could uſe the laſt Part of this Motto, but inſtead of reigning over himſelf, his Ambition made him deſire more Worlds.

15. The Account we have of our Author's Voyages, contains alſo the Hiſtory of his Return through *Swiſſerland*, Part of *Germany*, and the Low Countries; but as we have a much better Deſcription of thoſe Countries by Biſhop *Burnet*, who, without Queſtion, had his Head better turned for writing upon ſuch Subjects, and for giving his Readers uſeful and important Relations, rather than a bare Detail of Roads, Churches, Inns, Tombs, and Inſcriptions, we have choſen rather to omit the Remainder of his Travels in Haſte through theſe Places, and to give thoſe of that learned Prelate, who though he was the Author of many Books, upon a great Variety of Subjects, all of which have been received with Applauſe, at leaſt by a great Part of the World, yet perhaps there are none of them that will do him greater Honour with Poſterity than the Letters he publiſhed containing the Account of his Travels.

But before we part entirely with *Miſſon*, it may not be amiſs to make ſome few Obſervations upon his Writings, for the Sake of doing Juſtice to Truth, to our Readers, and to his Reputation. It muſt be confeſſed, that there are a great Variety of curious, uſeful, and entertaining Remarks to be met with in his Travels, and that as his Deſign was to render them as uſeful as poſſible to the World, ſo the Pains he took for that Purpoſe were very great and very laudable; but on the other Hand it muſt be alſo allowed, that his Method is very far from being ſo juſt or ſo judicions as might be wiſhed.

The Reader will eaſily obſerve, and, indeed, he confeſſes it himſelf, that he made but a very ſhort Stay in many Places; but then he viſited many of thoſe Places afterwards, which gave him an Opportunity of enlarging, altering, and correcting thoſe Obſervations; but then the Method in which he has done this is alſo none of the beſt, for inſtead of reviewing and reforming his firſt Book, he has inſerted new Letters, Supplements, Diſſertations, critical Diſcourſes, and perpetual marginal Notes; which ſo diſtract and diſturb the Narration, that one is frequently obliged to run over his whole four Volumes, in order to draw together his diſperſed Accounts of the ſame Thing.

We have removed, as far as it were in our Power, this Difficulty in the Abridgement we have given of his Travels; but without Doubt it would give a great Satiſfaction to the Publick, and add very much to the Value of this Work, if, in the next *Engliſh* Edition of it, Care was taken to digeſt the whole into Chapters rather than Letters, to bring the ſeveral Notes, Diſſertations, and Supplements into their proper Places, and to throw out all the unneceſſary Repetitions, which would at once reduce the Size, augment the Credit, and add to the Utility of the Book, which would be then much ſuperior to any Thing of its Kind.

We have already obſerved, that in the Author's Life-time his Book had been attacked by ſeveral Writers, againſt whom, however, he defended himſelf with equal Spirit and Succeſs; and wherever he found himſelf in the wrong, he took Care immediately to correct it. There were, however, ſome Things in his Diſpoſition, which led him to write upon ſome very tender Subjects, not to be touched even by the niceſt Hand, without giving Offence to great Bodies of People: As for Inſtance, his laying open the ſuperſtitious

Follies of the Papiſts, the Artifices of their Prieſts, the Credulity of the common People, and the Injuries done to the Chriſtian Religion by ſuch Practices on the one Hand, and Bigottry on the other.

He has been condemned for this as a very partial Writer by the *Romaniſts*, which is natural enough, but he has not been refuted. It is no Wonder at all, that in the Reign of King *James* II. when the Papiſts thought themſelves ſecure of reviving their Religion in *England*, Men firmly attached to the Proteſtant Cauſe ſhould likewiſe ſhew their Zeal; and it was ſtill the more excuſable in Mr. *Miſſon*, as he had been very lately baniſhed out of his native Country on the Score of Religion. The learned Father *Labat* cannot forgive him the Pains he has taken to reſtore the Credit of the Pope or Popeſs *Joan*. He ſays very truly upon that Subject, that ſeveral learned Proteſtants have given it up beſides *David Blondel*, ſuch as *Chamier*, *Du Moulin* and *Bochart*: But what then? Can there be a clearer Anſwer given to this than that which Mr. *Miſſon* has given, *viz.* That this Story was written and believed for many Ages by the Papiſts themſelves? We may add to this, that it would be no difficult Taſk to ſhew, that ſome very learned Papiſts ſtill believe it.

Miſſon has very honeſtly and very ingeniouſly confeſſed, that the Fact is of no great Importance with reſpect to any religious Diſpute; and ſurely this was as much as could be expected from him, and is a very great Mark of his Impartiality. With regard to his Arguments, there has been little or nothing ſaid againſt them; and I am perſuaded that it would be a very difficult Matter to overturn them. The ſame Writer, I mean Father *Labat*, is very angry with him about the *Sella ſtercoraria*, or Cloſe ſtool Chair, but he does not contradict him with reſpect to the Fact, he only ſays it is a Kind of Cloſe-ſtool, and that the Uſe of it was to put the Pope in Mind that his Exaltation to that Dignity did not releaſe him from the Infirmities incident to human Nature. This he gives us as his Opinion, and a very probable Opinion it is; but I do not ſee why *Miſſon* was not as much at Liberty to give us his Sentiment upon the ſame Subject, more eſpecially as he gives his Authorities, which very plainly prove, that what he thought upon this Point was once the common Opinion of the *Romaniſts* themſelves, and therefore it is hard to aſſign a Cauſe for blaming him upon this Head.

It muſt however be obſerved, that *Labat*, in many other Places, commends the Travels of *Miſſon*, and is only in Pain, that an Author who wrote ſo well, ſhould treat various Subjects in ſuch a Manner, as to expoſe the Cauſe which he found himſelf bound to eſpouſe, and at the ſame Time he has himſelf taken the Liberty to treat very freely the ridiculous Superſtitions of the *Italians*; and if with all his Reſpect for their Faith he has uſed this Freedom, one cannot help being ſurprized that he ſhould take it ill, that a Proteſtant Writer carried his Remarks a little farther, and much more that he ſhould charge him with Impiety, ſince throughout his whole Book there is nothing that has the leaſt Tendency that Way; and upon many Occaſions he ſhews himſelf very ready to refute vulgar Prejudices, and to do Juſtice to the Papiſts. As for Inſtance, he allows that they are very far from having a Spirit of Perſecution in *Italy*, and that he never knew them carry their Reſentment farther againſt Proteſtants, than ſaying they were not *ſound Chriſtians*.

The Hiſtorical Remarks he has given us are, generally ſpeaking, very correct as well as curious, though now and then he falls into Miſtakes; as for Example, when he ſays that *Francfort* has an Univerſity erected by the Houſe of *Brandenburgh*, he is ſpeaking there of *Francfort* upon the *Maine*; but the Univerſity he means, is at *Francfort* upon the *Oder*. It is no Wonder at all that in ſuch a Multitude of critical Remarks, he ſhould now and then be guilty of an Overſight. He retained all his Life a ſincere Love for his Country, which diſcovers itſelf frequently in his Writings, more eſpecially in preferring the Palaces and Gardens of *France* to thoſe of *Italy*. There might, perhaps, in this, be a little Partiality, and yet, generally ſpeaking, he is in the right, and the Noiſe which the *Italians* have made about the Wonders that are to be found in their Country, might well enough deſerve the critical Remarks he has made upon them.

As for his Digreſſions with Reſpect to Natural Hiſtory, they may very well be regarded as the moſt curious Pieces in his Work, are ſo allowed to be by the beſt Judges. His Conjectures in relation to the Formation of Shells in Mountains and other Places at a Diſtance from the Sea, are very judicious as well as highly probable. We may ſay the ſame Thing with regard to the Curioſities of this Country, and particularly what he has inſerted in Relation to the *Tarantula*, about which however there have been very warm Diſputes; but he lays down nothing but from Authority, and therefore is not at all intereſted in the Event of thoſe Diſputes, ſo that his Character cannot ſuffer in the Judgment of the Learned, however they may be at laſt determined.

As he mentions only ſuch Curioſities as came in his Way, and he had an Opportunity of viſiting, examining and enquiring, we need not wonder at his Silence as to many curious Particulars. As for Example, that we may conclude this Section with ſomething more entertaining than dry Remarks, let us mention one, *Grotta dei Serpi* is a ſubterraneous Cavern, near the Village of *Saſſa*, eight Miles from the City of *Braccano* in *Italy*, deſcribed by *Kircher* thus:

The *Grotta dei Serpi* is big enough to hold two Perſons; it is perforated with ſeveral fiſtular Apertures, ſomewhat in the Manner of a Sieve, out of which, at the Beginning of the Spring Seaſon iſſue a numerous Brood of young Snakes of divers Colours, but all free from any particular poiſonous Quality. In this Cave they expoſe their Lepers, Paralyticks, and elephantiack Patients, quite naked, where the Warmth of the ſubterraneous Steams reſolving them into Sweat, and the Serpents clinging variouſly all around, licking and ſucking them, they become ſo thoroughly freed of all their vicious Humours, that upon repeating the Operation for ſome Time, they become perfectly reſtored.

This Cave *Kircher* viſited himſelf, and found it warm, and every Way agreeable to the Deſcription given of it: He ſaw the Holes, and heard a clamorous hiſſing Noiſe in them, though he miſſed ſeeing the Serpents, it not being the Seaſon of their creeping out; yet he ſaw a great Number of their *Exuviæ* or Sloughs, and an Elm growing hard by laden with them. The Diſcovery of this Cave was by the Cure of a Leper going from *Rome* to ſome Baths near this Place, who loſing his Way, and being benighted, happened upon this Cave, and finding it very warm, pulled off his Cloaths, and being weary and ſleepy, had the good Fortune not to feel the Serpents about him, till they had wrought his Cure.

One might ſuſpect, that our curious Traveller had not heard of this Curioſity, which, by the Way, is now totally loſt, and loſt by the ſtrangeſt Means in the World, otherwiſe one could hardly think he would have omitted it. But we will repair that Miſtake from the Works of his Antagoniſt Father *Labat*, who travelled through *Italy* twelve or fourteen Years later than *Miſſon*, and viſited this Cave in Perſon; but it had then loſt its Virtue and its Serpents, as he aſſures us in the following Manner.

It was found neceſſary, in order to diſpoſe the Patients quietly to endure the Operation neceſſary to their Cure, to compoſe them by a Doſe of *Opium*, and for this, Recourſe was had to the Phyſicians, who perceiving that their Buſineſs was much leſſened by this new Method, ſo that *Æſculapius* was in Danger of being devoured by his own Serpent, they reſolved to out-do the Cave, and to prevent ſuch Patients from having any Diſeaſes for the future. In ſhort, they gave ſo much *Opium* to their Patients that were ſent to the Grotto, that they not only lay ſtill for a Night, but for ever.

This Scheme, though well laid, did not take, the People continued obſtinate, and were reſolved rather to truſt the Serpents than the Doctors. They took therefore their Opium at Home, and the Cures were as frequent and as effectual as ever. The Phyſicians had then

Recourſe to a new and more ſucceſsful Contrivance than the former; they had in vain tried to keep the People from the Serpents, they reſolved to try next, whether it might not be poſſible to keep the Serpents from the People: And with this View, in the Midſt of a dry Summer, they cauſed the Buſhes to be ſet on Fire that grew upon the Mountain, by which that Generation of Serpents was totally deſtroyed; and the Grotto has remained uſeleſs ever ſince.

Let us now take Leave of this Subject, and of the Travels of *Miſſon*, obſerving only, that in a ſubſequent Voyage of his, he had the Misfortune to be taken by a *French* Privateer, and carried to *Dünkirk*, where he ſuffered a ſevere Impriſonment, chiefly on the Score of his being a Proteſtant, and having on that Account, as we obſerved before, been baniſhed *France*. But his Friends having applied themſelves to the King on his Behalf, he was immediately ſet at Liberty, which contributed not a little to confirm that high Spirit of Loyalty with which he had been poſſeſſed, and of which he has left abundant Teſtimonies in his Works, by defending, as much as in his Power lay, the Character of *Lewis* XIV. for though he could not prevail upon himſelf to be a good Catholick, yet a better *Frenchman* or a better Subject that great Monarch had not in all his Dominions; which is a plain Proof that *Lewis* XIV. with all his Policy, ſerved the Prieſts much more than himſelf or his Family, in driving ſo many Thouſands of Proteſtants out of his Territories.

SECTION IV.

TRAVELS through *Switzerland*, Part of *Italy*, ſome Provinces of *Germany*, and the *Low Countries*, in which are contained many curious Hiſtorical and Political Remarks on the Manners of the People, the Forms of Government, and the State of the Countries before mentioned.

Extracted from the Letters of Doctor GILBERT BURNET, *(afterwards Biſhop of* Saliſbury) *to the Honourable* Robert Boyle, *Eſq; written in the Years* 1685, *and* 1686.

1. *The wretched Condition of the Country between* Paris *and* Lyons; *Antiquities obſervable in thoſe Parts, with ſome literary and critical Remarks.* 2. *A large Deſcription of the City of* Geneva, *of the Manners and Cuſtoms of the Inhabitants, of the Form and Maxims of Government in that little Republick.* 3. *A Deſcription of the City and Canton of* Bern, *the Manners of its Inhabitants, their Riches and Induſtry, the Modeſty of their Women, and the martial Virtues of their Men.* 4. *The Reaſons which induced the* Swiſs *to overlook the Conqueſt of the County of* Burgundy *by the* French, *which has proved ſo much to their Detriment.* 5. *The Hiſtory of the War between the* Proteſtant *and* Popiſh *Cantons in the Year* 1656, *and the Means by which thoſe Diſputes were compromiſed.* 6. *A moſt curious and entertaining Account of the ſcandalous Cheat and Impoſture of the* Dominicans *at* Bern *in* 1509. 7. *A Compariſon between the Country of* France *and that of* Switzerland, *with ſome Remarks upon the Government in both Countries, ſhewing that Tyranny will turn a Paradiſe into a Deſert, and Liberty convert a Wilderneſs into a Land of Plenty.* 8. *Of the miſerable Bigottry of the People in the Popiſh Cantons, from the Number of the Jeſuits and Monks, and of their immenſe Wealth in thoſe Countries.* 9. *Of the Canton of* Zurich, *its Wealth, Forces, Manufactures, Trade, Frugality in the Adminiſtration of Publick Affairs, and other Particulars.* 10. *Some general, uſeful, and entertaining Remarks on the State of the* Swiſs Cantons, *and a full Diſplay of the pernicious Spirit of Popery.* 11. *A Deſcription of the Country of the* Griſons, *with an Account of the City of* Coire, *and of the Character of the Biſhop at that Time.* 12. *A diſtinct View of the Government of the* Griſons, *the Manner of their obtaining their Liberty, the Diviſion of their Country, and of their Diets.* 13. *Of the* Valteline, Chavannes, *and* Bormio *Territories which they poſſeſs in* Italy, *and how they obtained them; with an Account of the Fertility of the Soil in the* Valteline, *and of the Liberty that thoſe Diſtricts enjoy under the Leagues.* 14. *Of the Maſſacre in the* Valteline, *of the War that followed it, and of the State of that Country.* 15. *Of the Remains of the ancient* Waldenſes, *the true Character and religious Sentiments of the People ſo called.* 16. *Of* Chavannes, *with an Account of the moſt obſervable Villages upon the Road, of its Situation, the Fertility of the Soil, Eaſineſs of the Government, Plentifulneſs of Proviſions, with an Account of the Nature of their Wine, and the Manner how they make and preſerve it, with other Particulars.* 17. *Some other Curioſities in this Part of the Country, together with an Account of a Town and all its Inhabitants overwhelmed by the Fall of a Mountain.* 18. *A Deſcription of the* Borromean *Iſlands, eſteemed beyond Compariſon the moſt beautiful Part of* Europe. 19. *A large Account of* Lombardy, *and the City of* Milan, *with many curious Obſervations made by the Author during his Stay in thoſe Parts.* 20. *A Collection of uſeful, judicious, and entertaining Remarks on ſeveral Parts of* Italy, *in which Care is taken to avoid repeating any thing contained in the former Section.* 21. *The ſame Subject continued in relation to other Parts of* Italy *not hitherto mentioned.* 22. *Concluſion of thoſe Obſervations and Remarks, comprehending the Characters and Hiſtories of ſeveral remarkable Perſons, written with great Impartiality and Freedom.* 23. *A Deſcription of* Marſeilles, *and ſome Reaſons given for the extenſive Commerce and great Wealth of that Port, in Compariſon of any other in* France. 24. *Some other Obſervations on the Country thereabouts.* 25. *Deſcription of the Town of* Baſil, *the Places moſt worthy of Notice there, together with the*

the Manners, Cuſtoms, and Government of the Inhabitants. 26. *An Account of* Huningen, Briſac, *and* Straſbourg, *with a particular Account of the Manner in which the* French *made themſelves Maſters of this laſt mentioned City.* 27. *An Account of the Fortreſs of* Phillipſbourg, *and its great Importance to the Empire.* 28. *A Deſcription of the City and Biſhoprick of* Spire, *and of the Country thereabouts.* 29. *A large, diſtinct, and entertaining View of the* Lower Palatinate, *of the famous City of* Heidelberg, *and the Hiſtory of ſome of the Electors Palatine.* 30 *The pleaſant and delightful Country between the laſt mentioned City and* Francfort; *with other Remarks and Obſervations.* 31. *The like Deſcription of the City and Electorate of* Mentz, *with a clear Account of the Revenues, Strength, and Trade of that Country.* 32. *A large and curious Account of the City and Electorate of* Cologne, *of the Cities of* Duſſeldorp, Keyſerwart, *and* Weſel. 33. *Obſervations made by the Author in his Journey through the Dutchy of* Cleves, *the Town of* Nimeguen, *and other Places in the Low Countries.*

1. IT is ſo common to write TRAVELS, that for one who has ſeen ſo little, and as it were in Haſte, it may look like a preſumptuous Affectation to be reckon'd among VOYAGERS, if he attempts to ſay any Thing upon ſo ſhort an Excurſion, and concerning Places ſo much viſited, and which are conſequently ſo well known: Yet having had Opportunities that do not offer themſelves to all that travel, and having join'd to thoſe a Curioſity almoſt equal to the Advantages I enjoy'd, I fancy it will not be an ungrateful Entertainment, if I give you ſome Account of thoſe Things that pleaſed me moſt, in the Places through which I have paſs'd. But I will avoid ſaying ſuch Things as occur in ordinary Books, for which I refer you to them. For as you know that I have no great Inclination to copy what others have ſaid, ſo a Traveller has not Leiſure, or a Diſpoſition ſuited for ſo dull an Employment.

As I came all the Way from *Paris* to *Lyons*, I was amaz'd to ſee ſo much Miſery as appear'd, not only in Villages, but even in big Towns, where all the Marks of an extreme Poverty ſhew'd themſelves both in the Buildings, the Cloaths, and almoſt in the Looks of the Inhabitants; and a general diſpeopling, in all the Towns, was a very viſible Effect of the Hardſhips under which they lay.

I need tell you nothing of the irregular, and yet magnificent Situation of *Lyons*, of the noble Rivers that meet there, of the Rock cut from ſo vaſt a Height for a Priſon, of the *Carthuſians* Gardens, of the Town-houſe, of the *Jeſuits* College and Library, of the famous Nunnery of St. *Peter*, of the Churches, particularly St. *Irenée's*, of the Remnants of the Aqueducts, of the Columns, and the old *Moſaick* in the Abbey *Dene*.

The Speech of *Claudius*, engraven on a Plate of Braſs, and ſet at the End of the low Walk in the Town-houſe, is one of the nobleſt Antiquities in the World, by which we ſee the Way of Writing and Pointing in that Age very copiouſly. The Shield of Silver of twenty-two Pounds Weight, in which ſome Remains of Gilding do yet appear, and that ſeems to repreſent the generous Action of *Scipio*, in reſtoring a fair Captive to a *Celtiberian* Prince, is certainly the nobleſt Piece of Plate that is now extant; the emboſſing of it is ſo fine and ſo entire, that it is indeed invaluable; and if there were an Inſcription upon it, to put us beyond Conjecture, it were yet much more eſtimable.

A great many Inſcriptions are to be ſeen of the late and barbarous Ages, as *Bonum Memorium*, and *Epitaphium hunc*. There are twenty-three Inſcriptions in the Garden of the *Fathers of Mercy*, but ſo placed, as ſhew how little thoſe who poſſeſs them either underſtand or value them. I ſhall only give you one, becauſe I made a little Reflection on it; though perhaps not too well grounded, becauſe none of the Criticks have conſider'd it. The Inſcription is this:

D. M.
Et Memoriæ Eternæ
SUTIÆ ANTHIDIS,
Quæ vixit annis xxv. M.XI.D.V.
Quæ dum Nimia Pia fuit, facta eſt Impia:
Et ATTIO PROBATIOLO, CECALIUS CALISTIO
Conjux & Pater,
Et ſibi vivo ponendum curavit,
Et ſub aſcia dedicavit.

This muſt be towards the barbarous Age, as appears by the falſe *Latin* in *Nimia*. But the Inſcription ſeems ſo extravagant, that a Man dedicating a Burial ſtone for his Wife and Son, and under which himſelf was to be laid with Ceremonies of Religion, ſhould tax his Wife of Impiety, and give ſo extraordinary an Account of her becoming ſo through an Exceſs of Piety, that it deſerves ſome Conſideration.

It ſeems the Impiety was publick, otherwiſe a Huſband would not have recorded it in ſuch a Manner; and it is plain, that he thought it aroſe from an Exceſs of Piety. I need not examine the Conjectures of others; but will chuſe rather to give you my own, and ſubmit it to your Cenſure.

It ſeems to me, that this *Sutia Anthis* was a Chriſtian; for the Chriſtians, becauſe they would not worſhip the Gods of the Heathens, nor participate with them in their ſacred Rites, were accuſed both of Atheiſm and Impiety. This is ſo often objected, and the Fathers in their Apologies have anſwered it ſo often, that it were loſt Labour to prove it. So this Wife of *Cecalius Caliſtio* having turn'd Chriſtian, it ſeems he thought he was bound to take ſome Notice of it in the Inſcription: But by it he gives an honourable Character of the Chriſtian Doctrine, at the ſame Time that he ſeems to accuſe it, *viz.* that through an Exceſs of Piety his Wife was carried to it; ſince a Mind, ſeriouſly poſſeſs'd with a true Senſe of Piety, could not avoid falling under a Diſtaſte of Paganiſm, and becoming Chriſtian.

At *Grenoble* there is not much to be ſeen. The learned Mr. *Chorier* has ſome Manuſcripts of conſiderable Antiquity. In one of *Vegetius de Re Militari*, there is a clear Correction of a Paſſage, that in all the printed Editions is not Senſe. In the Chapter of the Size of the Soldiers, he begins, *Scio ſemper menſurum a Mario Conſule exactam. A* is in no Manuſcript, and *Mario Conſule* is a Miſtake for *trium Cubitorum*; for III. which are for *trium*, have been read for *M*; and *C*, which ſtands for *Cubitorum*, as appears by all that follows, was by a Miſtake read *Conſule*. So the true Reading of that Paſſage is, *Scio menſuram trium cubitoram fuiſſe ſemper exactam.* He ſhew'd me another Manuſcript of about five or ſix hundred Years old, in which St. *John*'s Revelation is contain'd, all exemplified in Figures; and after that comes *Æſop*'s Fables likewiſe, all deſigned in Figures; from which he inferr'd, that thoſe, who deſigned thoſe two Books, valued both equally, and ſo put them together.

I will not deſcribe the Valley of *Dauphine*, or entertain you with a Landſkip of the Country, which deſerves a better Pencil than mine, and in which the Height and Rudeneſs of the Mountains, that almoſt ſhut it up, together with the Beauty, the Evenneſs and Fruitfulneſs of the Valley, that is all well water'd with the River *Liſerre*, make ſuch an agreeable Mixture, that this vaſt Diverſity of Objects at once fill the Eye, and give it a very entertaining Proſpect.

Chambery has nothing in that deſerves a long Deſcription; and *Geneva* is too well known to be much inſiſted on. It is a little State; but it has ſo many good Conſtitutions in it, that the greateſt may juſtly learn of it. The Chamber of Corn there has always two Years Proviſion for the City in Store, and forces none but the Bakers to buy at a fixed Price; and ſo it is both neceſſary againſt any Extremities under which the State may fall, and is likewiſe of great Advantage; for it produces a good yearly Income, that has helped the State to pay a Debt of near a Million, contracted during the Wars; and the Citizens are not oppreſs'd by it, for every Inhabitant may buy his own Corn as he pleaſes, only publick Houſes muſt buy from the Chamber.

At *Rome* the Pope buys in all the Corn of the Patrimony; for none of the Landlords can ſell it either to Merchants or Bakers. He buys it at five Crowns their Meaſure, and even that is ſlowly and ill paid; ſo that there was eight hundred thouſand Crowns owing upon that Score when I was at *Rome*. In ſelling this out, the Meaſure is leſſened a fifth Part, and the Price of the whole is doubled; ſo that what was bought at five Crowns, is ſold out at twelve; and if the Bakers, who are obliged to take a ſettled Quantity of Corn from the Chamber, cannot retail all that is impoſed upon them, but are forced to return ſome Part of it back, the Chamber diſcounts to them only the firſt Price of five Crowns: Whereas in *Geneva*, the Meaſure by which they buy and ſell is the ſame; and the Gain is ſo inconſiderable, that it is very little beyond the common Market-price: So that upon the whole Matter, the Chamber of Corn is but the Merchant to the State. But if the Publick makes a moderate Gain by the Corn, that and all the other Revenues of this ſmall Commonwealth are ſo well employ'd, that there is no Cauſe of Complaint given in the Adminiſtration of the publick Purſe, which, with the Advantages that ariſe out of this Chamber of Corn, is about an hundred thouſand Crowns Revenue. But there is much to go out of this: Three hundred Soldiers are paid, an Arſenal is maintain'd, that, in Proportion to the State, is the greateſt in the World, for it contains Arms for more Men than are in the State There are a great Number of Miniſters and Profeſſors, in all twenty-four, beſides all the publick Charges and Offices of the Government. Every one of the leſſer Council of twenty-five having an hundred Crowns, and every Syndick having two hundred Crowns Penſion; and, after all this, come the accidental Charges of the Deputies, that they are obliged to ſend often to *Paris*, to *Savoy*, and to *Switzerland*; ſo that it is very apparent no Man can enrich himſelf at the Coſt of the Publick. And the Appointments of the little Council are a very ſmall Recompence for the great Attendance that they are obliged to give the Publick, which is commonly four or five Hours a Day. The Salary for the Profeſſors and Miniſters is indeed ſmall, not above two hundred Crowns; but to balance this, thoſe Employments are here held in their due Reputation; and the richeſt Citizens in the Town breed up their Children ſo as to qualify them for thoſe Places. And a Miniſter, that is ſuitable to his Character, is thought ſo good a Match, that generally they have ſuch Eſtates either by Succeſſion or Marriage, as ſupport them agreeable to the Rank they hold. And in *Geneva* there is ſo great a Regulation of Expences of all Sorts, that a ſmall Sum goes a great Way. It is a ſurprizing Thing to ſee ſo much Learning as one finds in *Geneva*, not only among thoſe whoſe Profeſſion obliges them to ſtudy, but among the Magiſtrates and Citizens; and if there are not many Men of the firſt Form of Learning among them, yet almoſt every body here has a Tincture of a learned Education, inſomuch that they are Maſters of the *Latin*, they know Hiſtory and the Controverſies of Religion, and are generally Men of good Senſe.

There is an univerſal Civility, not only towards Strangers, but one another, that reigns all the Town over, and leans to an Exceſs: So that in them one ſees a Mixture of a *French* Openneſs, and an *Italian* Exactneſs; but there is, indeed, a little too much of the laſt.

The publick Juſtice of the City is quick, and is more commended than the private Juſtice of thoſe that deal in Trade; a Want of Sincerity is much lamented by thoſe that know the Town well. There is no publick Lewdneſs tolerated, and the Diſorders of that Sort are managed with great Addreſs. Notwithſtanding their Neighbourhood to the *Switzers*, drinking is very little known among them. One of the beſt Parts of their Law is the Way of ſelling Eſtates, which is likewiſe practiſed in *Switzerland*, and is called Subhaſtation, from the *Roman* Cuſtom of ſelling *ſub haſtâ*. A Man that is to buy an Eſtate, agrees with the Owner, and then intimates it to the Government, who order three ſeveral Proclamations to be made ſix Weeks after one another, of the intended Sale, that is to be on ſuch a Day; when the Day comes, the Creditors of the Seller, if they apprehend that the Eſtate is ſold at an Under-value, may out-bid the Buyer; but if they do not interpoſe, the Buyer delivers the Money to the State, who upon that grant him his Title to the Eſtate, which can never be ſo much as brought under a Debate in Law; and the Price is paid to the State, and is by them given either to the Creditors of the Seller, if he owes Money, or to the Seller himſelf.

This Cuſtom prevails likewiſe in *Switzerland*, where twelve Years Poſſeſſion gives a Preſcription; ſo that in no Place in the World are Titles to Eſtates ſo ſecure as here. The Conſtitution of the Government is the ſame in *Geneva* and in moſt of the Cantons. The Sovereignity lies in the Council of *Two Hundred*; and this Council chooſes out of its Number *Twenty-five*, who are the leſſer Council; and the Cenſure of the *Twenty-five* belongs to the Great Council. They are choſen by a Sort of Ballot, ſo that it is not known for whom they give their Votes; which is an effectual Method to ſuppreſs Factions and Reſentments, ſince no Man can know who voted for him or againſt him; yet the Election is not ſo carried, but that the whole Town is in an Intrigue concerning it; for ſince the being of the little Council leads one to the Sindicate, which is the chief Honour of the State, this Dignity is ſought for here with as active and ſolicitous Ambition, as appears elſewhere for greater Matters. The Two Hundred are choſen and cenſured by the Twenty-five; ſo that theſe two Councils, which are both for Life, are Checks upon each other: The Magiſtracy is in the former, and the Sovereignty in the latter. The Number of Twenty-five is never exceeded in the leſſer Council; but for the great, though it paſſes by the Name of the Council of Two Hundred, yet there are commonly eight or ten more; ſo that notwithſtanding the Abſence or Sickneſs of ſome of the Members, they may ſtill be able to call together near the full Number. There is another Council beſides theſe two, compoſed of Sixty, conſiſting of thoſe of the two hundred that have borne Offices, ſuch as Auditors, Attorney-generals; or thoſe that have been in other Employments, which are given for a certain Number of Years. This Court has no Authority, but is called together by the Twenty-five when any extraordinary Occaſion makes it adviſable for them to call for a more general Concurrence in the Reſolutions they are about to take. And this Council is of the Nature of a Council of State, that only gives Advice, but has no Power in itſelf. The whole Body of the Burgeſſes chooſe the Syndics the firſt *Sunday* of the Year; and there are ſome other Elections that likewiſe belong to them. The Difference between the Burgeſſes and Citizens is, that the former Degree may be bought, or given to Strangers, and they may be of the two hundred; but none is a Citizen, but he that is the Son of a Burgeſs, and that is born within the Town.

This little Republick's chief Support is in the firm Alliance that has ſubſiſted ſo long between it and the Cantons of *Bern* and *Zurich*; and it is ſo viſibly the Intereſt of all *Switzerland* to preſerve it, that if the Cantons had not forgot their Intereſt ſo palpably, in ſuffering the *French* to become Maſters of the *Franche Comté*, one would think that they would not be capable of ſuffering *Geneva* to be touch'd: For all that can be done in fortifying the Town, can ſignify no more, than to put it in a State to reſiſt a Surprize or Scalade; ſince if an Army comes to beſiege it in Form, it is certain, that unleſs the *Switzers* come with a Force able to raiſe the Siege, thoſe within will be able to make but a very ſhort Reſiſtance.

2. From *Geneva* I went through the Country of *Vaud*, or the *Valley*, and *Lauſanne* its chief Town, in my Way

to *Bern.* The Town of *Lauſanne* is ſituated on three Hills, ſo that the whole is Aſcent and Deſcent, and that very ſteep, chiefly on the Side on which the Church ſtands, which is a very noble Fabrick. The South Wall of the Croſs was ſo ſplit by an Earthquake about thirty Years ago, that there was a Rent made from Top to Bottom above a Foot wide; which was again ſo cloſed up ten Years after by another Earthquake, that now one only ſees a Crack where the Breach was. This extravagant Situation of the Town was occaſioned by a Legend of ſome Miracles wrought near the Church; which prevail'd ſo much on the Credulity of that Age, that by it the Church, and ſo in conſequence the Buildings near it, were added to the old Town, which ſtood on the other Hill, where there was a Town made on the Highway from the Lake into *Switzerland*, to which the chief Privileges, particularly the Judicature of Life and Death, ſtill belong. Between *Geneva* and this lies the Lake, which at one End is called the Lake of *Geneva*, at the other the Lake of *Lauſanne*. I need not mention the Dimenſions, which are ſo well known, only in ſome Places the Depth has never been found. The Banks of the Lake are the moſt beautiful Plots of Ground that can be imagined, for they look as if they had been laid out by Art; the Sloping is ſo eaſy and ſo equal, and the Grounds are ſo well cultivated and peopled, that a more delightful Proſpect cannot be ſeen. The Lake is well ſtock'd with excellent Fiſh, but their Numbers ſenſibly decreaſe, and one Sort is quite loſt. It is to be aſcribed not only to the Ravenouſneſs of the Pikes that abound in it, but to another Sort of Fiſh that they call Moutails, which were never taken in the Lake till within theſe ſix Years laſt paſt. They are in the Lake of *Neufchatel*, and ſome of the other Lakes of *Switzerland*; and it is likely, that by ſome Conveyance under Ground, they have come into Channels that fall into this Lake. The Water of the Lake is all clear and freſh. It is not only a great Pond made by the *Rhone*, that runs into it, but does not paſs through it unmix'd, as ſome Travellers have fondly imagin'd; becauſe ſometimes a ſoft Gale makes a Curling of the Water in ſome Places, which runs ſmooth in the Places over which that ſoft Breath of Wind does not paſs, the Gale ſhifting its Place often; but it is believed, that there are alſo many great Fountains all over the Lake. Theſe Springs may very probably flow from ſome vaſt Cavities that are in the neighbouring Mountains, which are as great Ciſterns, that diſcharge themſelves in the Vallies which are covered over with Lakes. And on the two Sides of the *Alps*, both North and South, there are ſo great a Number of thoſe little Seas, that it may be eaſily gueſſed they muſt have vaſt Sources, that feed ſo conſtantly theſe huge Ponds.

One Hill not far from *Geneva*, call'd *Maudit*, or *Curſed*, of which one Third is always cover'd with Snow, is two Miles perpendicular in Height, according to the Obſervation of that incomparible Mathematician and Philoſopher, *Nicolas Fatio Duilier*, who, at twenty-two Years of Age, is one of the greateſt Men of his Age, and ſeems born to carry Learning beyond what it has yet attained.

But I will now entertain you a little with the State of *Bern*; for that Canton alone is above a third Part of *Switzerland*. I will ſay nothing of its Beginning or Hiſtory; nor will I enlarge upon the Conſtitution, which are all well known. It has a Council of *two hundred*, that goes by that Name, though it conſiſts almoſt of three hundred; and another of *twenty-five*, as at *Geneva*. The chief Magiſtrates are two *Advoyers* who are not annual, as the *Syndics* of *Geneva*, but for Life, and have an Authority not unlike that of the *Roman* Conſuls, each being his Year by Turns the *Advoyers* in Office. After them there are the *four Bannerets*, who anſwer to the Tribunes of the People in *Rome*; then come the *two Burſars* or Treaſurers, one for the ancient *German* Territory, the other for the *French* Territory, or the Country of *Vaud*; and the two laſt, choſen of the twenty-five, are called the *Secrets*; for to them all Secrets relating to the State are diſcovered; and they have an Authority of calling the *two hundred* together when they think fit, and of accuſing thoſe of the Magiſtracy, the *Advoyers* themſelves not excepted, as they ſee Cauſe; though this falls out ſeldom.

3. The whole Canton of *Bern* is divided into ſeventy-two Bailiages, and in every one of thoſe there is a Bailiff named by the Council of *two hundred*, who muſt be a Citizen of *Bern*, and one of the *two hundred*, into which Council no Man can be choſen till he is married: Theſe Bailiages are Employments both of Honour and Profit, for the Bailiff is the Governor and Judge in that Juriſdiction; ſince though he has ſome Aſſeſſors, who are choſen out of the Bailiage, yet he may by his Authority carry Matters which Way he will againſt all their Opinions, and the Bailiffs have to their own Uſe all the Confiſcations and Fines; ſo that drinking being ſo common in this Country, and that producing many Quarrels, the Bailiff makes his Advantage of all thoſe Diſorders; and in the ſix Years of his Government, according to the Quality of his Bailiage, he not only lives by it, but will carry perhaps twenty thouſand Crowns with him back to *Bern*, on which he lives till he can carry another Bailiage: For one is capable of being twice Bailiff; and though ſome have been thrice Bailiffs, this is very extraordinary. The Exactions of the Bailiff are the only Impoſitions or Charges to which the Inhabitants are ſubjected; and theſe, falling only on the Irregularities and Diſorders of the debauch'd, makes this Grievance, though in ſome particular Caſes it preſſes hard, yet not ſo univerſally felt; for a ſober and regular Man is in no Danger. Many in this Canton are Lords of Caſtles or Manors, and have a Juriſdiction annex'd to their Eſtates, and have their Magiſtrate, who is called the *Caſtellan*. In Matters of ſmall Conſequence there lies no Appeal from him to the Bailiff; but beyond the Value of two Piſtoles an Appeal lies; and no Sentence of Death is executed, till it is confirmed at *Bern*. There lies alſo an Appeal from the Bailiff to the Council at *Bern* There are many Complaints of the Injuſtice of the Bailiffs; but their Law is ſhort and clear, ſo that a Suit is ſoon ended; two or three Hearings are the moſt that even an intricate Suit amounts to, either in the firſt Inſtance, or in the ſecond Judgment at *Bern*. The Citizens of *Bern* conſider theſe Bailiages as their Inheritance; and they are courted in this State perhaps with as much Intrigue, as was uſed among the *Romans* in the Diſtribution of their Provinces: And ſo little ſignify the beſt Regulations, when there are radicated Diſeaſes in the State, that though there is all poſſible Precaution uſed in the Nomination of theſe Bailiffs, yet that has not preſerved this State from falling under ſo great a Miſchief by thoſe little Provinces; that as it has already in a great Meaſure corrupted their Morals, ſo it may turn in Concluſion to the Ruin of this Republick. All the Electors give their Voices by Ballot, by which they are free from all Aftergame in the Nomination of the Perſon. All the Kindred of the Pretenders, even to the remoteſt Degree, are excluded from Voting, as are alſo all their Creditors; ſo that none can vote but thoſe who ſeem to have no Intereſt in the Iſſue of the Competition: And yet there is ſo much Intrigue, and ſo great a Corruption in the Diſtribution of theſe Employments, that the whole Buſineſs, in which all *Bern* is continually in Motion, is, the Catching of the beſt Bailiages, on which a powerful Family will have its Eye for many Years before they fall. For the Counſellors of *Bern* give but a very ſmall Share of their Eſtates to their Children when they marry them; all that they propoſe is to make a Bailiage ſure to them; for this they feaſt and drink, and ſpare nothing by which they may make a ſufficient Number of Votes; but it is the Chamber of the *Bannerets* that admits the Pretenders to the Competition. When the Bailiff is choſen, he takes all poſſible Methods to make the beſt of it he can, and lets few Crimes paſs with Impunity, that produce either Confiſcations or Fines: His Juſtice alſo is generally ſuſpected. It is true, thoſe of the Bailiage may complain to the Council at *Bern*, as the oppreſſed Provinces did anciently to the Senate of *Rome*; and there have been ſevere Judgments againſt ſome Bailiffs; yet as Complaints are

not made, except upon great Occaſions, which are not often given, ſo it being the general Intereſt of the Citizens of *Bern* to make all poſſible Advantages of thoſe Employments, the Cenſure will be but gentle, except the Complaint is very crying.

In *Bern* there is very little Trade, only what is neceſſary for the Support of the Town. They maintain Profeſſors in the Univerſities of *Bern* and *Lauſanne*; the one for the *German* Territory, which is the ancient Canton, and the other for the new Conqueſt, which is the *French*: In the former there are about three hundred Pariſhes; in the latter there are about one hundred and fifty: But in the Benefices of the *German* Side, the ancient Rights of the Incumbents are generally preſerved ſo, that ſome Benefices are worth a thouſand Crowns; whereas in the *Païs de Vaud* the Proviſions are ſet off as Salaries, and are generally from one hundred to two hundred Crowns. It is viſible that thoſe of *Bern* truſt more to the Affections and Fidelity of their Subjects, than to the Strength of their Walls; for as they have never finiſh'd them, ſo what is built cannot be eſteem'd a regular Fortification; and is not preſerv'd with any Care, nor furniſh'd with Cannon; but if they have none on their Ramparts, they have Abundance in their Arſenal, in which, they ſay, there are Arms for forty thouſand Men.

The Peaſants are generally rich, chiefly on the *German* Side, and are all well armed. They pay no Duties to the Publick, and the Soil is capable of great Improvements; in which they ſucceed ſo well, that I was ſhewed ſome that were by Accident at *Bern*, who, as I was told, had Eſtates to the Value of an hundred thouſand Crowns, but that is not ordinary; yet ten thouſand Crowns for a Peaſant is no extraordinary Matter. They live much on their Milk and Corn, which in ſome Places, as about *Payern*, yields an Increaſe of fifteen for one. They breed many Horſes, which bring them in a great deal of Money. The worſt Thing in the Country is the Moiſture of the Air, which is occaſioned by the many Lakes that are in it, and by the neighbouring Mountains that are cover'd with Snow, ſome all the Summer long, and the reſt till *Midſummer*, alſo by the vaſt Quantity of Fir-trees, which ſeem to fill very near the Half of their Soil: And if theſe were for the moſt Part rooted out, as they would have much more Soil, ſo their Air would be purer; yet, till they find either Coal or Turf for their Fuel, this cannot be done. I was told that they had found Coal in ſome Places; if this Coal is conveniently ſituated, ſo that by their Lakes and Rivers it may be eaſily carried over the Country, it may ſave them a great Extent of Ground, now cover'd with Wood, and their Air become thereby the more clear and the more wholeſome.

They have ſome Fountains of Salt Water, but the making Salt conſumes ſo much Wood, that hitherto it has not turn'd to Account.

The Men are generally ſincere, but heavy: They think it neceſſary to correct the Moiſture of the Air with liberal Entertainments; and they are well furniſh'd with all neceſſary Ingredients; for as their Soil produces good Cattle, ſo their Lakes abound in excellent Fiſh, and their Woods in Fowl; the Wine is alſo light and good. The Women are generally employ'd in their domeſtick Affairs; and the Wives, even of the chief Magiſtrates of *Bern*, look into all the Concerns of the Houſe and Kitchen, as much as thoſe of the meaneſt Peaſants. Men and Women do not generally converſe together; and the Women are ſo much amuſed with the Management at home, and enter ſo little into Affairs, that among them, as an eminent Phyſician told me, they know not what Vapours are, which he imputed to the Idleneſs and the Intrigues that abound elſewhere; whereas, he ſaid, with them the Blood was cleanſed by their Labour; and as that made them ſleep well, ſo they did not amuſe themſelves with much Thinking, nor did they know what Amours were. The third Adultery is puniſh'd with Death; which is alſo the Puniſhment of the fifth Act of Fornication, of which I ſaw an Inſtance while I was in *Bern*: For a Woman, who confeſs'd herſelf guilty of many Whoredoms, and deſign'd to be revenged on ſome Men that did not furniſh her with Money as ſhe expected, was upon that condemned and executed. The Manner was ſolemn; for the Advoyer comes into a Place prepared in the Middle of the Street, and for the Satisfaction of the People, the whole Proceſs is read, and Sentence pronounced in the Hearing of all; the Counſellors, both of the great and leſſer Council, ſtanding about the Advoyer, who, after Sentence, took the Criminal very gently by the Hand, and pray'd for her Soul; and after Execution there was a Sermon for the Inſtruction of the People.

4. The whole State is diſciplined for War; for every Man that can bear Arms is liſted, and knows his Poſt and Arms; and there are Beacons ſo laid over the Country, that the Signal can run through the whole Canton in a Night; and their military Liſts are ſo laid, that every Man knows whether he is to come out upon the firſt or ſecond, or not till the general Summons. They aſſured me at *Bern*, that, upon a general Summons, they could bring above eighty thouſand Men together. Theſe Men are robuſt and ſtrong, and capable of great Hardſhip, and of good Diſcipline, and have generally an eager and quick Senſe of Liberty, and a great Love to their Country; but they labour under a Want of Officers. And though the Subjects of the State are rich, yet the Publick is poor; they can well reſiſt a ſudden Invaſion of their Country, but they would ſoon grow weary of a long War; and the Soil requires ſo much Cultivation, that they could not ſpare from their Labour the Men neceſſary to preſerve their Country. They were, indeed, as happy as a People could be, when the Emperor had *Alſace* on the one Hand, and the *Spaniards* had the *Franche Comté* on the other: They had then no Reaſon to fear their Neighbours; but now that both thoſe Provinces are in the Hands of the *French*, the Caſe is quite alter'd; for as *Baſil* is every Moment in Danger from the Garriſon of *Hunningen*, that is but a Cannon-ſhot diſtant from it; ſo all the *Païs de Vaud* lies open to the *Franche Comté*, and has neither fortified Places nor good Paſſes to ſecure it. Their Error therefore in ſuffering this to fall into the Hands of the *French* was ſo groſs, that I took ſome Pains to be informed concerning it, and will give you this Account that I had from one who was then in a very eminent Poſt; ſo that as he certainly knew the Secret, he ſeemed to ſpeak ſincerely to me. He told me, that the Duke of *Lorrain* had often moved in the Councils of War, that the Invaſion of *France* ought to be made on that Side in which *France* lay open, and was very ill fortified. This he repeated often, and it was known in *France*; ſo that the King reſolved to poſſeſs himſelf of the *Comté*, but uſed that Precaution, that fearing to provoke the *Switzers*, he offered a Neutrality on that Side: But the *Spaniards* who judged right, that it was as much the Intereſt of the Cantons, as it was theirs, to preſerve the *Comté* in their Hands, refuſed to conſent to it; but they took no Care to defend it, and ſeem'd, for that Reaſon, to leave that to the *Switzers*.

In the mean while, the *French* Money went about very liberally at *Bern*; and after thoſe that were moſt likely to make Oppoſition were gain'd, the *French* Miniſter laid before them the Neceſſity in which his Maſter found himſelf to ſecure that Side; but that ſtill he would grant a Neutrality on their Account, if the *Spaniards* would agree to it; and with this, all the Aſſurances that could be given in Words were offered to them, that they ſhould never find the leaſt Prejudice from the Neighbourhood of the *French*, but, on the contrary, all poſſible Protection. There was juſt Cauſe given by the *Spaniards* to conſider them very little in their Deliberation; for they would neither accept of the Neutrality, nor ſend a conſiderable Force to preſerve the Country, ſo that it ſeemed almoſt inevitable to give Way to the *French* Propoſition. But one propoſed that which an unbiaſs'd Aſſembly would certainly have accepted, that they ſhould themſelves ſeize the Country, and by ſo doing ſecure the Neutrality, which was all that the *French* pretended to deſire; and they might eaſily ſatisfy the *Spaniards*, and reimburſe themſelves the Expence of the Invaſion, by reſtoring the Country to them, when a general Peace ſhould be made. He laid out the Miſery to which their Country muſt be reduced by ſo powerful a Neighbour, but all was loſt Labour; ſo he went out in a Rage, and publiſhed through the Town that the State was ſold, and all was loſt. They now ſee their Error too late, and would repair it if it were poſſible; but the Truth is, many of the particular Members of this State do prey ſo much upon the Publick, that unleſs they, with one Conſent, reſolve to reform thoſe Abuſes, they will never be in a Condition to do much; for in many of their Bailiages, of which ſome are Abbies, the Bailiffs not only feed on the Subjects, but likewiſe on the State, and pretend they are ſo far ſuper-expended, that they diſcount a great deal of the publick Revenue (of which they are the Receivers) for their Reimburſement. Which made Mr. *D'Erlack* once ſay, when one of thoſe Accounts was preſented, that it was very ſtrange, if the Abbey could not feed the Monks. It is true, the Power of their Bannerets is ſo great, that one would think they might Redreſs many Abuſes. The City of *Bern* is divided into four Bodies, not unlike our Companies of *London*, which are the Bakers, the Butchers, the Tanners, and the Blackſmiths; and every Citizen of *Bern* muſt incorporate himſelf into one of theſe Societies, which they call Abbies; for it is likely they were anciently a Sort of religious Fraternity. Every one of theſe chooſes two Bannerets, who bear Office by Turns, from four Years to four Years; and every one of them has a Bailiage annexed to his Office, which he holds for Life. They carry their Name from the Banners of the ſeveral Abbies, as the Gonfaloniers of *Italy*; and the Advoyers carry ſtill their Name from the ancient Title *Ecdicus*, or Advocate, that was the Title of the chief Magiſtrates of the Towns in the Times of the *Roman* Emperors. The Chamber of the four Bannerets that bear Office, hath a vaſt Power; they examine and paſs all Accompts, and they admit all the Competitors to any Offices; ſo that no Man can be propoſed to the Council of *two hundred* without their Approbation; and this being now the chief Intrigue of their State, they have ſo abſolute an Authority in ſhutting Men out from Employments, that their Office, which is for Life, is no leſs indeed, but rather more conſiderable than that of the Advoyer, though they are inferior to him in Rank.

They manage Matters with great Addreſs, of which this Inſtance was given me in a Competition for the Advoyerſhip not long ago. There was one whoſe Temper was violent, that had made it ſo ſure among thoſe that were qualified to vote in it, as being neither of his Kindred nor Alliance, that they believed he would carry it from the other Competitor whom they favoured; ſo they ſet up a third Competitor, whoſe Kindred were the Perſons that were beſt affected to him whoſe Advancement they oppoſed, and by this Means they were all ſhut out from voting, ſo that the Election went according to the Deſign of the Bannerets. The chief Man now in *Bern*, who was the reigning Advoyer when I was there, is Mr. *D'Erlack*, Nephew to that Mr. *D'Erlack*, who was Governor of *Briſack*, and had a Brevet to be a Marſhal of *France*. This is one of the nobleſt Families in *Bern*, that acted a great Part in ſhaking off the *Auſtrian* Tyranny; and they have been ever ſince very much diſtinguiſhed there from all the reſt of their Nobility. The preſent Head of it is a very extraordinary Man; he has a great Authority in his Canton, not only as Advoyer, but by the particular Eſteem which is paid him. For he is thought the wiſeſt and worthieſt Man of the State; though it is ſomewhat ſtrange, how he ſhould bear ſo great a Sway in ſuch a Government; for he neither feaſts nor drinks with the reſt. He is a Man of great Sobriety and Gravity, very reſerved, and behaves himſelf more like a Miniſter of State in a Monarchy, than a Magiſtrate in a popular Government; for one ſees in him none of thoſe Arts that ſeem neceſſary in ſuch a Government. He has a great Eſtate and no Children, ſo he has no Projects for his Family; and does what he can to correct the Abuſes of the State, though the Diſeaſe is inveterate and ſeems paſt Cure.

5. He had a Misfortune in a War that was thirty Years ago (in the Year 1656) between the Popiſh and Proteſtant Cantons; the Occaſion of which will engage me in a ſhort Digreſſion. The Peace of *Switzerland* is chiefly preſerved by a Law agreed on among all the Cantons, that every Canton may make what Regulations concerning Religion they think fit, without Prejudice to the general League. Now the Popiſh Cantons have made Laws, that it ſhall be capital for any to change their Religion; and on a ſet Day every Year they go all to Maſs, and the Maſters of Families ſwear to continue true to the State, and firm in their Religion to their Lives End; and ſo they pretend they puniſh their falling into Hereſy, with Death and Confiſcation of Goods, becauſe it is a Violation of the Faith which is ſo ſolemnly ſworn. But on the other Hand, in the Proteſtant Cantons, ſuch as turn are only obliged to go and live out of the Canton; but for their Eſtates they ſtill preſerve them, and are permitted to ſell them. One cannot but obſerve more of the merciful Spirit of the Goſpel in the one than in the other. In two Cantons, *Appenzel* and *Glaris*, both Religions are tolerated, and are capable of equal Privileges; and in ſome Bailiages that were conquered in common by the Cantons of *Bern* and *Friberg*, in the Wars with *Savoy*, the two Cantons name the Bailiffs by Turns; and both Religions are ſo equally tolerated, that in the ſame Church they have both Maſs and Sermon ſo peaceably, that on one *Sunday* the Maſs begins, and the Sermon follows, and the next *Sunday* the Sermon begins, and the Maſs comes after, without the leaſt Diſorder, Murmuring, or other Inconvenience.

But in the Year 1656, ſome of the Cantons of *Schwitz* changing their Religion, and retiring to *Zurich*, their Eſtates were confiſcated; and ſome others that had alſo changed, but had not left the Canton, were taken and beheaded. *Zurich* demanded the Eſtates of the Refugees, but inſtead of granting this, the Canton of *Schwitz* demanded their Subjects, that they might proceed againſt them as Delinquents; and they founded this on a Law by which any of the Cantons are obliged to deliver up the Criminals of another Canton, if they are demanded by the Canton to which they belong. But thoſe of *Zurich* and *Bern* thought this was both inhuman and unchriſtian; though the Deputy of *Baſil* was of another Mind, and thought that they ought to be delivered up, which extremely diſguſted thoſe of *Zurich*. Thoſe of *Schwitz* committed ſome Inſolencies upon the Subjects of *Zurich*, and refuſed to give Satiſfaction; upon which a War followed between the Proteſtant and Popiſh Cantons. The Cantons of *Bern* and *Zurich* raiſed an Army of twenty-five thouſand Men, which was commanded by Mr. *D'Erlack*, but was diſperſed in ſeveral Bodies; and the Papiſts, who had not above ſix thouſand, ſurprized Mr. *D'Erlack* with a Body much ſuperior to theirs. Both Sides, after a ſhort Engagement, ran; the Cannon of the Canton of *Bern* was left in the Field a whole Day; at laſt thoſe of *Lucern*, ſeeing that none ſtaid to defend the Cannon, carried them off. This Loſs raiſed ſuch a Tumult in *Bern*, that they ſeemed reſolved to ſacrifice Mr. *D'Erlack*; but he came with ſuch a Preſence of Mind, and gave ſo ſatisfactory an Account of the Misfortune, that the Tumult ceaſed, and ſoon after the War ended. Upon this many thought, that though the Papiſts acted cruelly, yet it was according to their Laws, and that no other Canton could pretend to interpoſe or quarrel with thoſe of *Schwitz* for what they did upon that Occaſion. Within theſe few Years there were ſome Quarrels like to ariſe in the Canton of *Glaris*, where it was ſaid, that the equal Privileges agreed on to both Religions were not preſerved; but on this Occaſion the Pope's Nuncio acted a very different Part from that which might have been expected. For whereas the Miniſters of that Court have been commonly the Incendiaries in all Diſputes that concern Religion, he acted rather the Part of a Mediator. And whereas it was viſible, that the Injuſtice lay on the Side of the Papiſts, he interpoſed ſo effectually with thoſe of *Lucern*, which is the Chief of the Popiſh Cantons, that the Difference was compoſed.

But to return to *Bern*. The Buildings have neither great Magnificence, nor many Apartments; but they are convenient, and ſuited to the Way of living in that Country. The Streets not only of *Bern* and the bigger Towns, but even of the ſmalleſt Villages, are furniſhed with Fountains that run continually, which as they are of great Uſe, ſo they want not their Beauty. The great Church of *Bern* is a very noble Fabrick; but being built on the Top of the Hill on which the Town ſtands, it ſeems the Ground began to fail, ſo to ſupport it they have raiſed a vaſt Fabrick, which has coſt more than the Church itſelf; for there is a Platform made which is a Square, to which the Church is one Side, and the farther Side is a vaſt Wall fortified with Buttreſſes about an hundred and fifty Feet high. They told me, that all the Ground down to the Bottom of the Hill was dug into Vaults. This Platform is the principal Walk of the Town chiefly about Sun ſet; and the River underneath affords a very beautiful Proſpect. For there is a Cut taken off from it for the Mills; but all along as this Cut goes, the Water of the *Aar* runs over a ſloping Bank of Stone, which they ſay was made at a vaſt Charge, and makes a noble Caſcade.

The ſecond Church is the *Dominican* Chapel, where I ſaw the famous Hole that went to an Image in the Church from one of the Cells of the *Dominicans*, which leads me to ſet down that Story at Length: For as it was one of the moſt ſignal Cheats that the World has known, ſo it falling out about twenty Years before the Reformation was received in *Bern*, it is very probable that it contributed not a little to the preparing of the Spirits of the People for that Change. I am the more able to give a particular Account of it, becauſe I read the original Proceſs in the *Latin* Records, ſigned by the Notaries of the Court of Delegates that the Pope ſent to examine the Matter. The Record is above one hundred and thirty Sheets, writ cloſe on both Sides, being indeed a large Volume. And I found the printed Accounts ſo defective, that I was at the Pains of reading the whole Proceſs, of which I will give here an authentick though conciſe Abſtract.

6. The two famous Orders, that had poſſeſſed themſelves of the Eſteem of thoſe dark Ages, were engaged in a mighty Conteſt. The *Dominicans* were the more learned; they were the moſt eminent Preachers of thoſe Times, and had the Conduct of the Courts of Inquiſition, and the other chief Offices in the Church in their Hands. But on the other Hand, the *Franciſcans* had an outward Appearance of more Severity, a ruder Habit, ſtricter Rules, and greater Poverty, which gave them ſuch Advantages in the Eyes of the ſimple Multitude, as were able to balance the other Honours of the *Dominican* Order. In ſhort, the two Orders were engaged in a high Diſpute; but the Devotion towards the Virgin being the prevailing Faſhion of thoſe Times, the *Franciſcans* had great Advantages. The *Dominicans* being all engaged in the Defence of *Thomas Aquinas*'s Opinions, were thereby obliged to aſſert, that ſhe was born in original Sin. This was propoſed to the People by the *Franciſcans* as no leſs than Blaſphemy; and by this the *Dominicans* began to loſe Ground extremely in the Minds of the People, who were ſtrongly prepoſſeſſed in Favour of the immaculate Conception.

About the Beginning of the fifteenth Century, a *Franciſcan* happened to preach in *Frankfort*; and one *Wigand*, a *Dominican*, coming into the Church, the Cordelier ſeeing him, broke out into Exclamations, praiſing God that he was not of an Order that profaned the Virgin, or that poiſoned Princes in the Sacrament (for a *Dominican* had ſo poiſoned the Emperor *Henry* VII.) *Wigand* being extremely provoked with this bloody Reproach, gave him the Lie, upon which a Diſpute aroſe, which ended in a Tumult that had almoſt coſt the *Dominican* his Life; yet he got away. The whole Order reſolved to take their Revenge, and in a Chapter held at *Vimpfen* in the Year 1504, they contrived a Method for ſupporting the Credit of their Order, which was much ſunk in the Opinion of the People, and for bearing down the Reputation of the *Franciſcans*: Four of the Junto undertook to manage the Deſign; for they ſaid, ſince the People were ſo much diſpoſed to believe Dreams and Fables, they muſt dream on their Side, and endeavour to cheat the People as well others had done. They reſolved to make *Bern* the Scene in which the Project ſhould be put in Execution; for they found the People of *Bern* at that Time apt to ſwallow any Thing, and not diſpoſed to make ſevere Enquiries into extraordinary Matters. When they had formed their Deſign, a fit Tool preſented itſelf; for one *Jetzer* came to take their Habit as a Lay-Brother, who had all the Diſpoſitions that were neceſſary for the Execution of their Project; he was extremly ſimple, and much inclined to Auſterities; ſo having obſerved his Temper well, they began to execute their Project the very Night after he took the Habit, which was on *Lady-day*, 1507. One of the Friers conveyed himſelf ſecretly into his Cell, and appeared to him as if he had been in Purgatory, in a ſtrange Figure; he had a Box near his Mouth, upon which, as he blew, Fire ſeemed to come out of his Mouth. He had alſo ſome Dogs about him, that appeared as his Tormentors. In this Poſture he came near the Frier while he was in Bed, and took up a celebrated Story that they uſed to tell all their Friers, to beget in them a great Dread of ever laying aſide their Habit, which was, that one of the Order, who was Superior of their Houſe at *Solothurn*, had gone to *Paris*, but laying aſide his Habit, was killed in his Lay Cloaths. The Frier in the Vizard ſaid he was that Perſon, and was condemned to Purgatory for that Crime; but he added, that he might be reſcued by his Means; and he ſeconded this with moſt horrible Cries, expreſſing the Miſeries which he ſuffered. The poor Frier *Jetzer* was exceſſively frighted; but the other advanced, and required a Promiſe of him to do that which he ſhould deſire, in order to the delivering him out of his Torment. The Frier promiſed all that he aſked of him. Then the other ſaid, he knew he was a great Saint, and that his Prayers and Mortifications would prevail; but they muſt be very extraordinary: The whole Monaſtery muſt, for a Week together, diſcipline themſelves with a Whip, and he muſt lie proſtrate in the Form of one on a Croſs, in one of their Chapels, while Maſs was ſaid in the Sight of all that ſhould come to it; and he added that if he did this, he ſhould find the Effects of the Love that the Bleſſed Virgin bear him, together with many other extraordinary Things; and ſaid he would appear again, accompanied with two other Spirits; and aſſured him, that all he ſuffered for his Deliverance ſhould be moſt glorioufly rewarded. Morning was no ſooner come, than the Frier gave an Account of this Apparition to the reſt of the Convent, who ſeemed extremely ſurprized: They all preſſed him to undergo the Diſcipline that was enjoined him, and every one undertook to bear his Share; ſo the deluded Frier performed it exactly in one of the Chapels of their Church. This drew a vaſt Number of Spectators together, who conſidered the poor Frier as a Saint; and in the mean while the four Friers that managed the Impoſture, magnified the Miracle of the Apparition to the Skies in their Sermons. The Frier's Confeſſor was in the Secret; and by this Means they knew all the little Paſſages of the poor Frier's Life, even to his Thoughts, which helped them not a little in the Conduct of the Matter. The Confeſſor gave him an Hoſtie, with a Piece of Wood, that was, as he pretended, a Piece of the true Croſs; and by theſe he was to fortify himſelf, if any other Apparitions ſhould come to him; ſince evil Spirits would be certainly chained up thereby. The Night after that, the former Apparition was renewed, and the maſqued Frier brought two others with him in ſuch Vizards, that the Frier thought they were Devils indeed. The Frier preſented the Hoſtie to them, which gave them ſuch a Check, that he was fully ſatisfied of the Virtue of this Preſervative.

The Frier, that pretended he was ſuffering in Purgatory, ſaid ſo many Things relating to the Secrets of his Life and Thoughts, which he had from the Confeſſor, that the poor Frier was fully poſſeſſed of the Reality of the Apparition. In two of theſe Repreſentations, that were both managed in the ſame Manner, the Frier in the Maſque talked much of the *Dominican* Order, which he ſaid was exceſſively dear to the bleſſed Virgin, who knew herſelf to be conceived in original Sin, and that the Doctors who taught the contrary, were in Purgatory: That the Story of St. *Bernard*'s appearing with a Spot on him, for having oppoſed himſelf to the Feaſt of the Conception, was a Forgery; but that it was true, that ſome hideous Flies appear'd on St. *Bonaventure*'s Tomb, who had taught the contrary: That the Bleſſed Virgin abhorr'd the *Cordeliers* for making her equal to her Son: That *Scotus* was damned,' whoſe Canonization the *Cordeliers* were then ſoliciting at *Rome*; and that the Town of *Bern* would be deſtroy'd for harbouring ſuch Plagues within their Walls. When the injoined Diſcipline was fully performed, the Spirit appeared again, and ſaid, he was delivered out of Purgatory; but before he could be admitted to Heaven, he muſt receive the Sacrament, having died without it; and after that he would ſay Maſs for thoſe, who had by their Charities reſcued him out of his Pains. The Frier fancied the Voice reſembled the Prior's a little; but he was then ſo far from ſuſpecting any Thing, that he gave no great Heed to this Suſpicion. Some Days after this, the ſame Frier appeared as a Nun all in Glory, and told the poor Frier that ſhe was Saint *Barbara*, for whom he had a particular Devotion; and added, that the Bleſſed Virgin was ſo much pleaſed with his Charity, that ſhe intended to come and viſit him. He immediately call'd the Convent together, and gave the reſt of the Friers an Account of this Apparition, which was entertained by them with great Joy; and the Frier languiſh'd for the Accompliſhment of the Promiſe that St. *Barbara* had made him. After ſome Days the long'd for Deluſion appear'd to him, cloathed as the Virgin uſed to be on the great Feaſts, and indeed in the ſame Habits. There were about her ſome Angels, which he afterwards found were the little Statues of Angels, which they ſet on the Altars on the great Holidays. There was alſo a Pulley faſtened in the Room over his Head, and a Cord tied to the Angels, that made them riſe up in the Air, and float about the Virgin, which increaſed the Deluſion. The Virgin, after ſome Endearments, extolling the Merit of his Charity and Diſcipline, told him that ſhe was conceived in original Sin, and that Pope *Julius* II. that then reign'd, was to put an End to the Diſpute, and was to aboliſh the Feaſt of her Conception, which *Sixtus* IV. had inſtituted; and that he was to be the Inſtrument of perſuading the Pope of the Truth in that Matter. She gave him three Drops of her Son's Blood, which were three Tears of Blood that he had ſhed over *Jeruſalem*; and this ſignified, that ſhe was three Hours in original Sin, after which ſhe was by his Mercy delivered out of that State. For it ſeems the *Dominicans* were reſolved ſo to compound the Matter, that though they ſhould gain the main Point, of her Conception in Sin, yet they would comply ſo far with the Reverence for the Virgin with which the World was then poſſeſſed, that ſhe ſhould be believed to have remained a very ſhort while in that State. She gave him alſo five Drops of Blood in the Form of a Croſs, which were Tears of Blood that ſhe had ſhed while her Son was on the Croſs. And to convince him more fully, ſhe preſented an Hoſtie to him, that appeared as an ordinary Hoſtie, and of a ſudden it appeared to be of a deep red Colour. The Cheat of thoſe ſuppoſed Viſits was often repeated; at laſt the Virgin told him, that ſhe was to give him ſuch Marks of her Son's Love to him, that the Matter ſhould be paſt all Doubt. She ſaid, that the five Wounds of St. *Lucia* and St. *Catherine* were real Wounds, and that ſhe would alſo imprint them on him; ſo ſhe bid him reach his Hand. He had no great Mind to receive a Favour in which he was to ſuffer ſo much; but ſhe forced his Hand, and ſtruck a Nail through it. This Hole was as big as a Grain of Peaſe, and he ſaw the Candle clearly through it. This threw him out of a ſuppoſed Tranſport into a real Agony: But ſhe ſeem'd to touch his Hand, and he thought he ſmelt an Ointment with which ſhe anointed it; though his Confeſſor perſuaded him that that was only an Imagination; ſo the ſuppoſed Virgin left him for that Time.

The next Night the Apparition return'd, and brought ſome Linnen Clothes, which had ſome real or imaginary Virtue to allay his Torment; and the pretended Virgin ſaid, they were ſome of the Linnen in which Chriſt was wrapped; and with that ſhe gave him a ſoporiferous Draught, and while he was faſt aſleep, the other four Wounds were imprinted on his Body in ſuch a Manner, that he felt no Pain.

But in order to this, the Friers betook themſelves to Charms; and the Sub-prior ſhewed the reſt a Book full of them; but he ſaid, that before they could be effectual, they muſt renounce God; and he not only did this himſelf, but by a formal Act of Writing, ſigned with his Blood, he dedicated himſelf to the Devil: It is true, he did not oblige the reſt to do this, but only to renounce God. The Compoſition of the Draught was a Mixture of ſome Fountain Water and Chriſm, the Hairs of the Eyebrows of a Child, ſome Quickſilver, ſome Grains of Incenſe, ſomewhat of an *Eaſter* Wax-candle, ſome conſecrated Salt, and the Blood of an unbaptized Child. This Compoſition was a Secret, which the Sub prior did not communicate to the reſt. By this the poor Frier *Jetzer* was made almoſt inſenſible. When he was awake, and came out of this deep Sleep, he felt this wonderful Impreſſion on his Body; and now he was raviſh'd out of Meaſure, and came to fancy himſelf to be acting all the Parts of our Saviour's Paſſion: He was expoſed to the People on the great Altar, to the Amazement of the whole Town, and to the Mortification of the *Franciſcans*. The *Dominicans* gave him ſome other Draughts, that threw him into Convulſions; and when he came out of thoſe, a Voice was heard, which came through that Hole, which yet remains, and runs from one of the Cells, along a great Part of the Wall of the Church: For a Frier ſpoke through a Pipe, and at the End of the Hole there was an Image of the Virgin's, with a little *Jeſus* in her Arms, between whom and his Mother the Voice ſeemed to come. The Image alſo ſeem'd to ſhed Tears; and a Painter had drawn thoſe on her Face ſo lively, that the People were deceived by it. The little *Jeſus* aſked why ſhe wept? And ſhe ſaid, it was becauſe his Honour was given to her, ſince it was ſaid that ſhe was born without Sin. In Concluſion, the Friers ſo overacted this Matter, that at laſt even the poor deluded Frier himſelf came to diſcover it, and reſolved to quit the Order.

It was in vain to delude him with more Apparitions, for he well-nigh kill'd a Frier that came to him perſonating the Virgin in another Shape with a Crown on her Head. He alſo over-heard the Friers once talking among themſelves, of the Contrivance and Succeſs of the Impoſture, ſo plainly, that he diſcover'd the whole Matter; and upon that, as may be eaſily imagined, he was filled with all the Horror with which ſuch a Diſcovery could inſpire him.

The Friers fearing that an Impoſture, which was carried on hitherto with ſo much Succeſs, ſhould be quite ſpoil'd, and turn'd againſt them, thought the ſureſt Way was to own the whole Matter to him, and to engage him to carry on the Cheat. They told him in what Eſteem he would be, if he continued to ſupport the Reputation that he had acquired; that he would become the Chief of the Order; and in the End they perſuaded him to go on with the Impoſture. But at laſt, fearing leſt he ſhould diſcover all, they reſolved to poiſon him; of which he was ſo apprehenſive, that once a Loaf being brought him, that was prepared with Spices, he kept it for ſome Time, and it growing green, he threw it to ſome young Wolf's Whelps that were in the Monaſtery, which died immediately. His Conſtitution was ſo vigorous, that though they gave him Poiſon five ſeveral Times, he was not deſtroyed by it. They alſo preſs'd him earneſtly to renounce God, which they judged neceſſary, that their Charms might have their Effect on him; but he would never conſent to that. At laſt they forced him to take a poiſoned

Hoſtie, which yet he vomited up ſoon after he had ſwallowed it. That failing, they uſed him ſo cruelly, whipping him with an Iron Chain, and girding him about ſo ſtrait with it, that to avoid further Torment, he ſwore to them in a moſt imprecating Stile, that he would never diſcover the Secret, but would ſtill carry it on; and ſo he deluded them, till he found an Opportunity of getting out of the Convent, and of throwing himſelf into the Hands of the Magiſtrates, to whom he diſcovered all.

The four Friers were ſeized and put in Priſon, and an Account of the Matter was ſent firſt to the Biſhop of *Lauſanne*, and then to *Rome*; and it may be eaſily imagin'd, that the *Franciſcans* took all poſſible Care to have it thoroughly examined. The Biſhops of *Lauſanne* and *Zyon*, with the Provincial of the *Dominicans*, were appointed to form the Proceſs. The four Friers firſt excepted to *Jetzer*'s Credit; but that was rejected: Then being threaten'd with the Queſtion, they put in a long Plea againſt that; but though the Provincial would not conſent to that, yet they were put to the Queſtion: Some endured it long, but at laſt they all confeſſed the whole of the Impoſture. The Provincial appeared concerned; for though *Jetzer* had opened the whole Matter to him, yet he would give no Credit to him; on the contrary, he charged him to be obedient to them; and one of the Friers ſaid plainly, that he was in the whole Secret; and ſo he withdrew, but he died ſome Days after at *Conſtance*, having poiſoned himſelf, as was generally believed. The Matter lay aſleep ſome Time, but a Year after that, a *Spaniſh* Biſhop came, authorized with full Power from *Rome*, and the whole Cheat being fully proved, the four Friers were ſolemnly degraded from their Prieſthoods, and eight Days after, it being the laſt of *May*, 1509, they were burnt in a Meadow on the other Side of the River, over-againſt the great Church. The Place of their Execution was ſhewed me, as well as the Hole in the Wall through which the Voice was conveyed to the Image. It was certainly one of the blackeſt, and yet the beſt carried-on Cheat that has been known; and, no Doubt, had the poor Frier died before the Diſcovery, it had paſſed to Poſterity as one of the greateſt Miracles that ever was; and it gives a ſhrewd Suſpicion, that many of the other Miracles of that Church are of the ſame Nature, but more ſucceſsfully finiſh'd.

7. *Switzerland* lies between *France* and *Italy*, both Countries incomparably more rich, and better furniſhed with the Conveniencies of Life than it; and yet *Italy* is almoſt diſpeopled, and the People in it are reduced to Miſery that can ſcarce be imagined but by thoſe who have ſeen it: And *France* is in a great Meaſure diſpeopled, and the Inhabitants reduced to ſuch Poverty as appears in all the Marks in which it can ſhew itſelf, in their Houſes, Furniture, Cloaths, and Looks.

On the contrary, *Switzerland* is full of People, and in ſeveral Places, in Villages as well as in Towns, one ſees all the Marks of Plenty and Wealth. Their Houſes and Windows are in good Order, the Highways are well maintained, People are well cloathed, and every one at his Eaſe. This Obſervation ſurpriſed me ſtill more in the Country of the *Griſons*, where there is hardly any Soil at all, the Vallies being almoſt waſhed away with the Torrents that fall down from the Hills, and ſwell their Brooks ſometimes ſo ſuddenly, that in many Places the whole Soil is carried away; and yet thoſe Vallies are well peopled, and every one lives happy under a gentle Government: Whilſt rich and plentiful Countries are reduced to ſuch Miſery, that as many Inhabitants are forced to change their Seats, ſo thoſe who ſtay behind can ſcarce live, and pay thoſe Impoſitions that are laid upon them. The common People generally reaſon very ſimply of Government; but they feel truly though they argue falſe. So an eaſy Government, though in a Country with an ill Soil, and accompanied with great Inconveniencies, draws, or at leaſt keeps People in it; whereas a ſevere Government, though it may in Speculation appear reaſonable, drives its Subjects even out of the beſt and moſt deſirable Seats.

8. In my Way from *Bern*, I paſſed by *Solothurn*, and I came through *Fribourg* in my Way to *Bern*. Theſe are two of the chief Popiſh Cantons after *Lucern*; and one ſees in them a Heat and Bigottry beyond what appears in *France* or *Italy*. Long before they come within the Church, they kneel down in the Streets, when Maſs is ſaying. The Images are extreme groſs. In the chief Church of *Solothurn*, there is an Image of God the Father, as an old Man with a black Beard, having our Saviour on his Knees, and a Dove over his Head. Here alſo begins Devotion at the *Ave-Mary* Bell, which is ſcarce known in *France*, but is practiſed all over *Italy*: At Noon, and at Sun-ſet, the Bell rings, and all ſay the *Ave-Mary*. But whereas in *Italy* they content themſelves with putting off their Hats, in *Switzerland* they kneel down in the Streets, which I ſaw no where practiſed except at *Venice*, and there it is not commonly done. But notwithſtanding this, all the *Switzers* ſee their common Intereſt ſo well, that they live in a very good Underſtanding one with another. This is chiefly owing to the Canton of *Lucern*, where there is a Spirit in the Government very different from what is in the other Popiſh Cantons. The Jeſuits begin to grow as powerful in *Switzerland*, as they are elſewhere; they have a noble College and Chapel in the beſt Place of *Fribourg*. It is not long ſince they were at *Solothurn*, where there was a Revenue of a thouſand Livres a Year ſettled for the Maintenance of ten of them, with this Proviſion, that they ſhould never exceed that Number. But where once ſettled, they find Means to break through all Limitations; and are now become ſo rich there, that they are raiſing a Church and College, which will coſt, before finiſhed, above four hundred thouſand Livres, to which the *French* King gives ten thouſand Livres for the Frontiſpiece; for as this is the Canton in which his Ambaſſador reſides, he thought it for his Glory, to have a Monument raiſed by an Order, that will never be wanting to flatter their Benefactors, as long as they can find their Account in it.

In the ſame Canton there is an Abbey, that has one hundred thouſand Livres of Revenue; there is alſo a very rich Houſe of Nuns that wear the Capuchins Habit, that had ſixty thouſand Livres of Revenue, and but ſixty Nuns in it, who, having a thouſand Livres a-piece, may live in all poſſible Plenty, in a Country where a little Money goes a great Way. But that which ſurpriſes one moſt at *Solothurn* is, the great Fortification they are building about the Town, the nobleſt and ſolideſt that is any were to be ſeen. The Stone with which it is faced, is a Sort of coarſe Marble, but many Stones are ten Feet long, and two Feet thick: But though this will be a Work of Expence and Beauty, yet it would ſignify little againſt a great Army that attack'd it vigorouſly. The Wall is finiſhed on the Side of the River, the Ditch is very broad, and the Counterſcarp and Glacis are alſo finiſhed, and they are working at a Fort on the other Side of the River, which they intend to fortify in the ſame Manner. This has coſt them near two Millions of Livres, and this Expence has made them often repent the Undertaking; and it is certain, that a Fortification able to reſiſt their Peaſants in caſe of a Rebellion, is all that is needful. This Canton has two Advoyers, as *Bern*; the little Council conſiſts of thirty-ſix: They have twelve Bailiages, which are very profitable to thoſe that can carry them; one Burſar, and but one Banneret. All the Cantons have Bailiages; but if there are Diſorders at *Bern* in the Choice of Bailiffs, there are far greater among the Popiſh Cantons, where all Things are ſold, as a foreign Miniſter told me; who, tho' he knew my Religion, did not ſtick to own frankly, that the Catholic were not near ſo well governed as the Proteſtant Cantons. Juſtice is generally ſold among them; and in Treaties with foreign Princes, they have ſometimes taken Money both from *French* and *Spaniſh* Ambaſſadors, and have ſigned contradictory Articles at the ſame Time.

9. *Baden* has nothing in it remarkable, except its convenient Situation, which makes it the Seat of the General Diet of the Cantons, tho' not one of them, but a Bailiage that belongs in common to eight of the an-

cient Cantons. At laſt I came to *Zurich*, which as it is the firſt and moſt honourable of all the Cantons, ſo with relation to us, it has a Precedence of a higher Nature, it being the firſt that received the Reformation.

This Canton is leſs than *Bern*, yet the Publick is much richer; they reckon that they can bring fifty thouſand Men together on twenty-four Hours Warning; their Subjects live happy, for the Bailiffs here have Appointments, and have only the Hundred Penny of the Fines; ſo that they are not tempted as thoſe of *Bern*, to whom the Fine belongs entirely. And whereas at *Bern*, the conſtant Intrigue of the whole Town is concerning their Bailiages; here it is a Service to which the Citizens are bound to ſubmit, according to their Conſtitution, but to which they do not aſpire. The Government is almoſt the ſame as at *Bern*, and the Magiſtrate called the Advoyer at *Bern*, is here called the Burgomaſter. The Revenue of the State is juſtly accounted for, ſo that the Publick is much richer than at *Bern*; the Arſenal is much better furniſhed, and the Fortifications more regular. There is a great Trade ſtirring; and as their Lake, that is twenty-four Miles long, and two or three broad, ſupplies them with Proviſions, ſo their River carries their Manufacture to the *Rhine*, from whence it is conveyed as they pleaſe. One of their chief Manufactures is Crape, in all Reſpects the beſt I ever ſaw. I will not deſcribe the Situation of the Town, but content myſelf with telling you, that it is very pleaſant, the Country about it mountainous, and the Winters hard; for the Lake freezes quite over, only in ſome Places Ice never lies, which is eſteemed a Mark that Springs riſe there and cauſe that Heat. So alſo in the Lake of *Geneva*, tho' never quite frozen, yet Flakes of Ice lie in ſeveral Parts, but are never ſeen in ſome Parts of the Lake; which is ſuppoſed to flow from the ſame Cauſe.

But to return to *Zurich*: One ſees here the ancient Simplicity of the *Switzers*, not corrupted with Luxury or Vanity. Their Women not only do not converſe with Men, except thoſe of their near Kindred, but even in the Streets make no Returns to the Civility of Strangers; for it is only Strangers put off their Hats to Women, but they make no Courteſies; and here, as through all *Switzerland*, Women are not *ſaluted*, but the Civility is expreſſed by taking them by the Hand. There is one Thing ſingular in the Conſtitution of *Zurich*, that is, their *Little Council* conſiſts of *Fifty* Perſons, but there ſit in it only *Twenty-five* at a Time; and ſo the Halves of this Council, as each of them has his proper Burgomaſter, have alſo the Government in their Hands by Turns, and they ſhift every ſix Months, at *Midſummer*, and at *Chriſtmas*. The whole Canton is divided into nine great Bailiages, and twenty-one Caſtellaneries; in the former the Bailiff reſides conſtantly; but the Caſtellan, who is alſo one of the *Great Council*, has ſo little to do, that he lives at *Zurich*, and goes only at ſet Times of the Year to do Juſtice.

The Virtue of this Canton has appear'd in their adhering to the ancient Capitulations with the *French*, and not ſlackening in any Article, which has been done by all the other Cantons, where Money has a ſovereign Influence; but here it never prevailed. They have converted the ancient Revenues of the Church more to pious Uſes, than any where elſe. They have many Hoſpitals well endowed; in one, as I was told, there was ſix hundred and fifty Poor kept: But as they ſupport the real Charities which belong to ſuch Endowments, ſo they deſpiſe that vain Magnificence of Buildings, which is generally affected elſewhere; for theirs are plain; and one of the Government ſaid to me very ſenſibly, that they thought it enough to maintain their Poor as Poor, and not lodge them as Princes.

The Dean and Chapter are ſtill continued as a Corporation, and enjoy the Revenues which they had before the Reformation; but if they ſubſiſt plentifully, they labour hard; for they have two or three Sermons a Day, and at leaſt one; the firſt begins at Five o'Clock in the Morning. At *Geneva*, and all *Switzerland* over, there are daily Sermons, which were ſubſtituted upon the Reformation. But the Sermons are generally too long, and the Preachers have departed from the firſt Deſign of theſe Sermons, which were intended to be an Explication of a whole Chapter, and an Exhortation upon it; and if this were ſo contrived, that it were in all not above a Quarter of an Hour long, as it would be heard by the People with leſs Wearineſs, and more Profit, ſo it would be a vaſt Advantage to the Preachers; for as it would oblige them to ſtudy the Scriptures much; ſo having once made themſelves Maſters of the practical Parts, ſuch ſhort Diſcourſes would coſt them leſs Pains than thoſe laboured Sermons do, which conſume the greateſt Part of their Time, and often to little Purpoſe.

I told you, in *Bern* the Bailiages are given by a Sort of Ballot, which is ſo managed, that no Man's Vote is known: But I muſt add, that ſince I was firſt there, they have made a conſiderable Alteration in the Way of Voting, when Offices are to be given; which approaches much nearer the *Venetian* Method, and which expoſes the Competitors more to Chance, and may put an End to the Intrigues that are ſo much in Uſe for obtaining thoſe Employments. There are Balls put into a Box, equal to the Number of thoſe that have a Right to vote, and are preſent; of theſe one Third are gilt, and two Parts are only ſilver'd; ſo every one takes out a Ball, but none can vote, except thoſe who have the gilt Balls; ſo that a Man may have more than two Thirds on his Side, and yet be diſappointed in a Competition.

10. There is one Thing, for which the *Switzers*, in particular thoſe of *Bern*, cannot be too much commended: They have, ever ſince the Perſecution began in *France*, open'd a Sanctuary to ſuch as retired thither in ſo Chriſtian a Manner, that it deſerves all honourable Remembrances that can be made of it. Such Miniſters and others, as were at firſt condemned in *France* for the Affair of the *Cevennes*, have not only found Reception here, but all the Support that could be expected, and indeed much more. For they have aſſign'd the *French* Miniſter's a Penſion of five Crowns a Month if unmarried, and have increaſed it to every one who had a Wife and Children, ſo that ſome had above ten Crowns a Month Penſion. They diſperſed them all over the *Pais de Vaud*, but the greateſt Number ſtaid at *Lauſanne* and *Vevay*. In order to the ſupporting of this Charge, the Charities of *Zurich* and other Proteſtant States were brought hither. Not only the Proteſtant Cantons, but the *Griſons*, and ſome ſmall States that are under the Protection of the Cantons, ſuch as *Neufchâtel*, St. *Gall*, and ſome others, have ſent their Charities to *Bern*, who diſpenſe of them with great Diſcretion, and bear what farther Charge this brings upon them. And in this laſt total Diſperſion of thoſe Churches, the Country has been animated with ſuch a Spirit of Compaſſion, that every Man's Houſe and Purſe has been opened to the Refugees, who have paſſed in ſuch Numbers, that ſometimes there have been above two thouſand in *Lauſanne* alone, and of theſe at one Time near two hundred Miniſters; and they all met with a Kindneſs that look'd more like the primitive Age, than the Degeneracy of that in which we live.

The only conſiderable Tax under which the *Switzers* lie, is, when Eſtates are ſold, the fifth Part of the Price belongs to the Publick, and all the Abatement that the Bailiff can make, is to bring it to a ſixth. This they call the *Lod*, which is drived from *Alodium*; only there are ſome Lands that are *frank-alod*, which lie not under this Tax. But this falling only on the Sellers, it was thought a juſt Puniſhment and a wiſe Reſtraint on ill Huſbands of their Eſtates.

I was the more confirm'd in the Account I have given you of the Derivation of *Advoyer*, when I found that in ſome ſmall Towns in the Canton of *Bern*, the chief Magiſtrate is ſtill ſo called, as in *Payerne*: So that I make no Doubt, but as the ancient Magiſtrates in the Time of the *Romans*, that were to give an Account of the Town, were called *Advocates*; and afterwards the Judge in Civil Matters, that was named by the Biſhops, was called at firſt *Advocate*, and afterwards

Vidam or *Vicedominus*; ſo that this was the Title that was ſtill continued in *Bern*, while they were under the *Auſtrian* and *German* Yoke, and was preſerved by them when they threw it off.

I have touch'd too ſlightly on the laſt Difference in *Switzerland*, which related to the Canton of *Glaris*. In the Canton of *Apenzel*, as the two Religions are tolerated, ſo they are ſeparated in different Quarters; thoſe of one have the one Half of the Canton, and thoſe of the other Religion have the other Half; ſo they live apart, but in *Glaris* they are mix'd; and now the Number of the Papiſts is very low; one aſſured me, there were not above two hundred Families of that Religion; and thoſe ſo poor, that their Neceſſities diſpoſe ſome every Day to change their Religion. The other Popiſh Cantons ſeeing the Danger of loſing their Intereſt entirely in that Canton, and being ſet on by the Intrigues of a Court that underſtood the Policy of embroiling all other States, made great Uſe of ſome Complaints of the Papiſts of *Glaris*, as if the prevailing of the other Religion expoſed them to much Injuſtice and Oppreſſion; and upon that they propoſed that the Canton ſhould be equally divided as *Apenzel* was. This was extremely unjuſt, ſince the Papiſts were not the tenth, perhaps not the twentieth Part of the Canton. It is true, it was ſo ſituated, that the Proteſtant Cantons could not eaſily come to their Aſſiſtance; but thoſe of *Glaris* reſolved to die rather than ſuffer this Injuſtice; and the Proteſtant Cantons reſolved to engage in a War with the Popiſh Cantons, if they impoſed on their Brethren of *Glaris*. At laſt this Expedient was found, that in all Suits between thoſe of different Religions, two Thirds of the Judges ſhould be of the Religion of the Defendant. But while this Conteſt was on Foot, thoſe who fomented, if they did not ſet it on, knew how to make their Advantage of the Conjuncture; for then was the Fortification of *Hunningen* at the Ports of *Baſil* much advanced, of which they are now very apprehenſive when too late. There are ſix noble Families in *Bern* that have this Privilege, that when any of them are choſen of the Council, they take Place before the ancient Counſellors; whereas the reſt take Place according to the Order in which they were choſen.

11. After a ſhort Stay at *Zurich*, we went down the Lake, where we paſſed under the Bridge at *Ripperſwood*, which is a noble Work for ſuch a Country. The Lake is there about half a Mile broad, the Bridge about twelve Feet broad, but hath no Rails on either Side; ſo that if the Wind is high, which is no extraordinary Thing, a Man is in great Danger of being blown into the Lake. This Defect I found in almoſt all the Bridges of *Lombardy*, which ſeemed very ſtrange; for ſince that Defence is made at ſo ſmall an Expence, it was amazing to ſee Bridges ſo naked, and more ſurpriſing in ſome Places, where the Bridges are both high and long: Yet I never heard of any Miſchief that followed; but thoſe are ſober Countries, where Drinking is not much in Uſe. After two Days Journey we came to *Coire*, the chief Town of the *Griſons*, and where we found a General Diet of the three Leagues ſitting; ſo that having ſtaid ten Days there, I came to be informed of a great many Particulars which are not commonly known. The Town may contain between four and five thouſand Souls. It lies in a Bottom upon a ſmall Brook, that a little below the Town falls into the *Rhine*. It is environed with Mountains, ſo that they have a very ſhort Summer; for the Snow is not melted till *May* or *June*, and it began to Snow in *September* when I was there. On a riſing Ground at the Eaſt End of the Town is the Cathedral, the Biſhop's Palace, and the Cloſe where the Dean and ſix Prebendaries live: All within the Cloſe are Papiſts, but the Town are Proteſtants, and they live pretty well together. Above a Quarter of a Mile up the Hill, one goes by a ſteep Aſcent to St. *Lucius*'s Chapel: My Curioſity carried me thither, though I gave no Faith to the Legend of King *Lucius*, and his coming ſo far from Home to be the Apoſtle of the *Griſons*. His Chapel is a little Vault about ten Feet ſquare, where there is an Altar, and Maſs is ſaid upon ſome great Feſtivals. It is ſituated under a natural Arch in the Rock, which is given out to have been the Cell of a Hermit. From it ſome Drops of a Fountain fall down near the Chapel. The Biſhop aſſured me it had a miraculous Virtue for weak Eyes, and that it was oily; but neither Taſte nor Feeling diſcovered to me any Oilineſs. I believe it may be very good for the Eyes, as all Rock Water is. But when I offered to ſhew the good old Biſhop that the Legend of *Lucius* was a Fable, and moſt remarkably ſo in that which related to the *Griſons*, that we had no Kings in *Britain* at that Time, but were a Province to the *Romans*; that no ancient Authors ſpeak of it, *Bede* being the firſt; and that the pretended Letter to Pope *Eleutherius*, with his Anſwer, bear evident Characters of Forgery; it ſignified nothing to the Biſhop, who aſſured me, that they had a Tradition in their Church, and it was inſerted in their Breviary, which he firmly believed. He alſo told me the other Legend of King *Lucius*'s Siſter, St. *Emerita*, who was burnt there, and of whoſe Viel there was yet a conſiderable Remnant among their Reliques. I confeſs I never ſaw a Relique ſo ill diſguiſed, for it is a Piece of worn Linnen Cloth lately waſhed, and the Burning did not ſeem to be a Month old; and yet when they took it out of the Caſe, there were ſome there that with great Devotion rubbed their Beads upon it. The Biſhop had ſome Conteſts with his Dean, and being a Prince of the Empire, he had proſcribed him. The Dean alſo behaved himſelf ſo inſolently, that by an Order of the Diet he was put in Priſon as he came out of the Cathedral. By the Conſent both of the Popiſh and Proteſtant Communities, a Law was long ago made againſt Eccleſiaſtical Immunities; this Attempt on the Dean was made four Years ago. As ſoon as he was let out, he went to *Rome*, and made great Complaints of the Biſhop, and it was thought the Popiſh Party intended to move in the Diet while we were there, for the repealing that Law, but they did it not. The Foundation of the Quarrel between the Biſhop and Dean was, the Exemptions to which the Dean and Chapter pretend, and upon which the Biſhop made ſome Invaſion. I took Occaſion to ſhew him the Novelty of thoſe Exemptions, and that in the Primitive Church it was believed, that the Biſhop had the Authority over his Preſbyters by a divine Right; and if it was by a divine Right, then the Pope could not exempt them from his Obedience. But the Biſhop would not carry the Matter ſo high, but contented himſelf with two Maxims; one was, that the Biſhop was Chriſt's Vicar in his Dioceſe; and the other, that what the Pope was in the Catholick Church, the Biſhop was in his Dioceſe.

He was a good-natur'd Man, and did not make uſe of the Authority that he had over the Papiſts, to ſet them to live uneaſily with their Neighbours of another Religion. That Biſhop was anciently a great Prince, and the beſt Part of the League, that carries ſtill the Name of *the Houſe of God*, belonged to him; though I was aſſur'd that *Pregallia*, one of thoſe Communities, was a free State above ſix hundred Years ago; and that they have Records extant that prove this: The other Communities bought their Liberties from ſeveral Biſhops ſome Time before the Reformation, of which the Deeds are yet extant; ſo that it is an impudent Thing to ſay, that they ſhook off his Yoke at that Time.

The Biſhop hath yet a Revenue of about a thouſand Pounds a Year, and every one of the Prebendaries hath near two hundred Pounds a Year. It is not eaſy to imagine how the Riches of this Country are raiſed; for one ſees nothing but vaſt Mountains, that ſeem barren Rocks, and ſome little Vallies among them not a Mile broad, and the beſt Part of theſe waſh'd away by the *Rhine*, and ſome Brooks that fall into it. But their Wealth conſiſts chiefly in their Hills, which afford much Paſture; and in the hot Months, in which all the Paſture of *Italy* is parched, the Cattle are driven into theſe Hills, which brings them a clear Revenue of above two hundred thouſand Crowns a Year. The Publick is indeed poor, but particular Perſons are ſo rich, that I knew a great many there, who were look'd on to have Eſtates to the Value of one hundred thouſand Crowns. Mr. *Schoveſtein*, accounted the richeſt Man in the Country, is believed to be worth a Million of Livres. The Government here is a pure Commonwealth; for in the Choice of their Magiſtrates, every Man above ſixteen Years old hath his Voice, which is alſo the Conſtitution of ſome of the ſmall Cantons. The three Leagues are, the League of the *Griſons*, that of the *Houſe* of *God*, and that of the *Ten Juriſdictions*.

12. They believe, that upon the Incurſions of the *Goths* and *Vandals*, as ſome fled to the *Venetian* Iſlands, out of which roſe that famous Commonwealth, ſo others came and ſhelter'd themſelves in theſe Vallies. They told me of an ancient Inſcription lately found on a Stone, where on the one Side is graven, *Omitto Rhetos indomitos*, and *Ne plus ultrà* is on the other; which they pretend was placed by *Julius Cæſar*. This Stone is upon one of their Mountains; but as I did not paſs that Way, ſo I can make no Judgment concerning it. After the firſt forming of this People, they were caſt into little States, according to the different Vallies which they inhabited, and in which Juſtice was adminiſtred; and ſo they fell under the Power of ſome little Princes, that became ſevere Maſters. But when they ſaw the Example that the *Switzers* had ſet them, in ſhaking off the *Auſtrian* Yoke, above two hundred Years ago, they combined to ſhake off theirs; only ſome few of thoſe ſmall Princes uſed their Authority better; and concurred with the People, and ſo they are ſtill Parts of the Body; only *Haldenſtein* is an abſolute Sovereignty. It is about two Miles from *Coire* to the Weſt, on the other Side of the *Rhine*. The whole Territory is about half a Mile long, at the Foot of the *Alps*, where there is ſcarce any Breadth. The Authority of theſe *Barons* was formerly more abſolute than now, for the Subjects were their Slaves: But to keep together the little Village, they have granted them a Power of naming a Liſt for their Magiſtrates, the Perſon being to be named by the Baron, who hath alſo the Right of Pardoning, of Coining, and every Thing elſe that belongs to a Sovereign. I ſaw this little Prince in *Coire*, in an Equipage not ſuitable to his Quality; for he was in all Points like an ordinary Gentleman. There are three other Baronies that are Members of the Diet, and ſubject to it; the chief belonged to the Archdukes of *Inſpruck*; the others to Mr. *Schovenſtein*, and Mr. *de Mont*; they are the Heads of thoſe Communities of which their Baronies are compoſed; they name the Magiſtrates out of the Liſts that are preſented to them by their Subjects, and have the Right of Pardoning, and to Confiſcations. That belonging to the Houſe of *Auſtria* is the biggeſt: It hath five Voices in the Diet, and can raiſe twelve hundred Men. One *Travers* bought it of the Emperor in the Year 1679; he entered upon the Rights of the ancient Barons, which were ſpecified in an Agreement that paſſed between him and his Peaſants, and was confirmed by the Emperor. *Travers* made many Encroachments upon the Privileges of his Subjects, who made their Complaints to the League; but *Travers* would have the Matter judg'd at *Inſpruck*, and the Emperor ſupported him in this Pretenſion, and ſent an Agent to the Diet. I was preſent when he had his Audience, in which there was nothing but general Compliments. The Diet ſtood firm to their Conſtitution, and aſſerted, that the Emperor had no Authority to judge that Matter, which belong'd only to them: So *Travers* was forced to let his Pretenſions fall.

All the other Parts of this State are purely *Democratical*: There are three different Bodies or Leagues, and each of theſe an entire Government; and the Aſſembly or Diet of the three Leagues is only a Confederacy, like the United Provinces, or the Cantons. There are *ſixty-ſeven Voices* in the Diet, which are thus divided: The League of the *Griſons* hath *twenty-eight* Voices, that of the *Houſe* of *God twenty-four*, and that of the *Juriſdiction fifteen*. The *Juriſdictions* belonged anciently to the Houſe of *Auſtria*; but having ſhaken off that Authority, were incorporated into the Diet: But in the laſt Wars of *Germany*, the *Auſtrians* thought to have brought them again under their Yoke; yet they defended their Liberty with ſo much Vigour, that the *Auſtrians* thought the Conqueſt would not quit the Coſt. They were affrighted by two extraordinary Actions; in one Village, which was quite abandoned by all the Men, who left the Women in it, ſome Hundreds, as I was told, being there quartered, were apprehenſive of no Danger from their Hoſteſſes: But the Women intended to let their Huſbands ſee, that they were capable of contriving and executing a bold Action, though it muſt be confeſs'd it was a little too barbarous for the Sex. They enter'd into a Combination to cut the Throats of all the Soldiers at one Time. The Woman that propoſed this, had four lodged with her, and ſhe, with her own Hands, diſpatched them all; and ſo did the reſt, not one Soldier eſcaping to carry away the News. In another Place, a Body of the *Auſtrians* came into a Valley that was quite abandoned; for the Men having no Arms but their Clubs and Staves, had got up to the Mountains: But they took their Meaſures ſo well, and poſſeſſed themſelves of the Paſſes in ſuch a Manner, that they came down upon the Soldiers with ſo much Fury, that they defeated them, ſo that very few eſcaped; and it is certain, that the ſubduing them would have proved a very hard Work. It is true, they are not in a Condition to hold out long, the Publick is ſo poor; ſo that though particular Perſons are rich, yet they have no publick Revenue, but every Man is concerned to preſerve his Liberty, which is more entire here than even in *Switzerland*; but often ſwells too high, and throws them into Convulſions. The League of the *Griſons* is the firſt and moſt ancient, and is compoſed of *eight* and *twenty* Communities, of which there are *eighteen* Papiſts, and the reſt are Proteſtants. The Communities of the two Religions live neighbourly together, yet do not ſuffer thoſe of another Religion to live among them; ſo that every Community is entirely of the ſame Religion; and if any changes, he muſt go into another Community. Each Community is an entire State within itſelf, and all Perſons meet once a Year to chuſe the Judge and his Aſſiſtants, whom they change or continue from Year to Year, as they ſee Cauſe. There is no Difference between a Gentleman and Peaſant, and the Tenant hath a Vote as well as his Landlord; nor dare his Landlord uſe them ill when he votes contrary to his Intentions, for the Peaſants would conſider this as a common Quarrel. An Appeal lies from the Judge of the Community to the Aſſembly of the League, where all Matters end; for their lies no Appeal to the General Diet of the three Leagues, except in Matters that concern the conquer'd Countries, which belong in common to the three. There is one choſen by the Deputies for the Aſſembly of the League, who is called the Head of the League, that calls them together as he thinks proper, and can bring a Cauſe that hath been once judged to a ſecond Hearing. *Ilants* is the chief Town of this League, where their Diet meets. The ſecond League is that of the *Houſe* of *God*, in which there are *four* and *twenty* Communities. The Burgomaſter of *Coire* is always the Head of this League, which at this Time is almoſt wholly Proteſtant; and the two Vallies of the Upper and Lower *Engedin*, are pointed out by the Papiſts as Canibals towards ſuch Catholicks as come among them. But Frier *Sfondrato*, Nephew to Pope *Gregory* XIV. whoſe Mother the Marquiſs of *Bergominiero*, that was in *England*, married, found the contrary of all this to be true, to his great Regret. About eighteen Years ago he was believed to have wrought Miracles; and he became ſo much in Lovewith the Crown of Martyrdom, that he went through the *Engedin*, not doubting but he would find there what he deſired. His Brother had come ſometime before into the Country to drink the Mineral Waters, and was well known to the Gentry; ſo ſome of theſe hearing of the Frier's coming, went and waited on him, and he was entertained in their Houſes, and conveyed through the Country, though he took all impoſſible Methods to provoke them; for he was often railing at their Religion, but to all that they made no Anſwer, only they continued their Civilities; which ſo enraged the warm Frier, that he went to *Bormio*, and there died of Grief. An Accident fell out five Years ago, that the People of the Country eſteemed a Miracle. The Papiſts, in their Proceſſions, go out of one Community into another; and when they paſs through Proteſtant Communities, they lower the Croſs, and give over ſinging till they come again upon Popiſh Ground; but then they went on bearing up the Croſs, and ſinging; upon which the Proteſtants ſtopp'd them. They, finding that they were not equal in Number to the Proteſtants, ſent to a Catholick Community, and deſired their Aſſiſtance. Two thouſand came, and in all Appearance the Diſpute would have had a bloody Iſſue; for the Proteſtants were reſolved to maintain the Rights of their Community, and the others no leſs reſolved to force their Way. But an extraordinary thick Miſt roſe, and through it the Papiſts fancied they ſaw a vaſt Body of Men, which was no other than a Wood; but terrified with the Appearance, they retired, and this ſaved a Battle that probably would not only have ended in the Shedding much Blood, but might have diſorder'd the whole Conſtitution of their Leagues. The Papiſts of Quality endeavour to keep their People in Order; but they acknowledge, that the Proteſtants are much more peaceable than the Catholicks. The *Juriſdictions* have fifteen Votes in the General Diet; yet they are generally called the Ten Juriſdictions, and the greater Part of them are likewiſe of the Proteſtant Religion: For upon the general Computation of the *three* Leagues, the Proteſtants are about *two* Thirds. In their Diets there are three Tables, one in the Middle, and two on either Side. At every Table ſits the Head of the League, and a Secretary near him; and from the Table there go down Benches on both Hands for the Deputies from the Communities of that League. They hold their Diets by Turns, in the chief Towns of the ſeveral Leagues, and it happened to be the Turn of the *Houſe* of *God*, when I was there; ſo they met at *Coire*.

13. The three Leagues, or *Griſons* in general, have a conquered Country in *Italy*, divided into three Diſtricts; the *Valteline*, *Chavennes*, and *Bormio*. When *John Galeaſſe* poſſeſſed himſelf of the Dutchy of *Milan*, and drove out *Barnabas*; *Maſtinus*, one of *Barnabas*'s Sons, to whom his Father had given thoſe three Branches of the Dutchy of *Milan*, retired to *Coire*, and being hoſpitably received and entertained by the Biſhop, when he died, he gave his Right to thoſe Territories to the Cathedral of *Coire*; ſo the Prelate had a Title, without a Force able to make it good. But when the Wars of *Italy* were on Foot, the three Leagues being much courted by both the Crowns, ſince they were Maſters of all the Paſſes, through which either the *Switzers* or *Germans* could come into *Italy*, they reſolved to lay hold on that Opportunity: Yet they had not Zeal enough for their Biſhop, to engage upon his Account; but agreed to pay him ſuch a Revenue, and he transferred his Title to them, and they were ſo conſiderable to the *Spaniards*, that they yielded thoſe Parcels of the Dutchy of *Milan* to them, and by this Ceſſion they are poſſeſſed of them. Thoſe Acceſſions to this State are much better than the Principal; for as the *Valteline*, which is above forty Miles long, and two broad, is one of the richeſt Vallies in the World, in which there are three Harveſts ſome Years; ſo the *Chavennes* and *Bormio*, though not ſo good as that, are much preferable to the beſt Vallies of the *Griſons*. Yet the Engagement that People have to their Homes appears ſignally here, ſince the *Griſons* have not forſaken their Country, that they might plant themſelves ſo advantageouſly: But they love their rugged Vallies, and think the Safety they enjoy in them, beyond the Pleaſures of their acquired Dominions; which they govern by Bailiffs and Podeſtas, and other Officers whom they ſend among them; and all the Advantage that they draw from them is, that the Magiſtrates they ſend enrich themſelves in the ſame Manner as the Bailiffs in *Switzerland*. All thoſe Offices go round the ſeveral Communities, which have the Right of Nomination in their Turn: But if there is none of the Community proper, any one of another Community may buy of them the Nomination for that Turn, and the Community diſtribute among them the Money that he gives them. The Publick draws nothing out of thoſe Parts, except the Fines, which in ſome Years amount to no conſiderable Sum; and ten or twelve thouſand Crowns is thought a great deal to be raiſed in a Year: So that their Subjects live happy, and free of all Taxes, which made their laſt Revolt appear the more extraordinary. It was, indeed, the Effect of a very ſurpriſing Bigottry, when a People, who had no other Grievance, but that now and then their Magiſtrates were of another Religion, and that Proteſtants were tolerated amongſt them, would therefore throw off their Rulers, cut the Throats of their Neighbours, and caſt themſelves into the Hands of the *Spaniards*, who are the worſt Maſters in the World.

14. To give a more particular Relation of that Matter, and tell the Circumſtances which ſeem a little to leſſen that Rebellion and Maſſacre, I muſt give an Account of a Part of this Conſtitution that is very terrible, and which makes the greateſt Men tremble. The Peaſants come ſometimes in great Bodies, and demand a Chamber of Juſtice from the Diet, and they are bound to grant it when thus demanded, which happens generally once in twenty Years. This Tumult of the Peaſants is ſet on by ſome of the Malecontent Gentry, and generally there are a great many Sacrifices made. This Court is compoſed of Ten Judges out of every League, and twenty Advocates, who manage ſuch Accuſations as are preſented. It is ſuperior to all Law, and acts like a Court of Inquiſition: They give the Queſtion, that is, put to the Torture, and do every Thing that they think neceſſary to diſcover the Truth of ſuch Accuſations as are preſented to them; and the Deciſions of this Court can never be brought under a Review, though there is one Exception to this; for about a hundred Years ago, one Court of Juſtice reverſed all that another had done. The Peaſants are in as great Jealouſy of the *Spaniards*, as the *Switzers* are of the *French*; and the good Men among them are ſenſible of a great Corruption of Morals, that the *Spaniſh* Service brings among them. For there is a *Griſon* Regiment kept in Pay by the *Spaniards*; there are in it twelve Companies of fifty a-piece, and the Captains have a thouſand Crowns Pay, though they are not obliged to attend the Service. This is a Penſion paid under a more decent Name to the moſt conſiderable Men of the Country; and is ſhared among them without any Diſtinction of Proteſtant and Papiſt, and is believed to ſway their Councils too much. The Peaſants are apt to take Fire, and to believe they are betray'd by theſe Penſioners of *Spain*; and when Rumours are blown about among them, they come in great Numbers to demand a Chamber of Juſtice. The common Queſtion that they give, which is alſo uſed through all *Switzerland*, and in *Geneva*, is, they tie the Hands of the ſuſpected Perſon behind his Back, and pull them up to his Head, and ſo draw them about; by which the Arms, and chiefly the Shoulder-blades, are disjointed. And when a Perſon put to the Queſtion confeſſes his Crime, and is upon that condemned to die, he is obliged to renew his Confeſſion, upon Oath, at the Place of Execution; and if he goes off from it then, and ſaith, That his Confeſſion was extorted by the Violence of the Torture, he is put again to the Queſtion; for this paſſes for a Maxim, That no Man muſt die, unleſs he confeſſeth himſelf guilty. Generally when the Fury of demanding this Chamber ſpreads among the People, the Gentry run away, and leave the whole Matter in the Power of the Peaſants; for they know not where it will end: And ſo the Peaſants being named Judges, the Juſtice goes quick, till ſome Sacrifices appeaſe the Rage. Two Years ago, upon the Sale of a Common to the Biſhop of *Como*, to which he had ancient Pretenſions, the Peaſants having no more the Liberty of the Common, were enraged at their Magiſtrates, and a Report was ſpread abroad, of which the Author could never be diſcovered, that the *Spaniards* had ſent a hundred thouſand Crowns among

them to corrupt all their Magiſtrates. Upon this they were ſo on Fire, that it was generally thought there would have been many Sacrifices made: But the Gentry happened to be then ſo much united, that there was none of them engaged among the Peaſants, or that directed their Rage. A Chamber of Juſtice was granted, but the Matter was ſo ordered, that it did not appear that any was guilty: Yet ſome that had dealt in that Tranſaction were fined, not ſo much for any Fault, as to raiſe a Fund to pay the Expences of the Chamber. And becauſe they could not find Colour to raiſe ſo much out of the Fines, there was a Fine of five hundred Livres laid on every one of the *Spaniſh* Companies.

In the Year 1618, there was a Report that the *Spaniards* had a Treaty on Foot to take away the *Valteline* from the Leagues. This was ſupported in Credit by the Fort *Fuentes*, that the Governor of *Milan* was building upon the Lake of *Como*. Near the *Valteline* there was one *Ganatz* a Miniſter, but a bloody and perfidious Man, that managed the Rage of the Peaſants; and there was great Reaſon to ſuſpect ſome under-hand Dealing, though he threw it which Way he pleaſed. A Chamber of Juſtice was appointed to ſit at *Toſſano*, which is a conſiderable Town, twelve Miles from *Coire*, on the Road to *Italy*, near *Alta Rhetia*, which is an high but ſmall Hill, to which there is no Acceſs but on one Side, where there are the Ruins of a Caſtle and a Church, and which they believe was the Palace of *Rhetus*, the firſt Prince of the Country. There was ſevere Juſtice done in this Chamber; a Prieſt was put to the Queſtion, and ſo ill uſed, that he died in it, which is a crying Thing among them. The chief Suſpicion lay upon one *Pianta*, who being of one of the beſt Families of the *Griſons*, was then one of the Captains in the *Spaniſh* Regiment: He withdrew himſelf from the Storm; but the Peaſants led on by *Ganatz*, purſued him ſo cloſe, that at laſt they found him, and hewed him in Pieces, *Ganatz* himſelf ſtriking the firſt Stroke with an Ax, which was taken up, and preſerved by his Friends; and four and twenty Years after, fifty or ſixty of this Gentleman's Friends fell upon *Ganatz* in *Coire*, and killed him with the ſame Ax. *Ganatz* had, during the Wars, abandon'd both his Religion and his Profeſſion, being a Diſgrace to both, and had ſerved firſt in the *Venetian*, and then in the *Spaniſh* Troops. After the Peace was made, he became ſo conſiderable, being ſupported by the *Spaniſh* Faction, that he was choſen Governor of *Chavennes*, and was come over to *Coire* to a Diet, being then in ſo important a Charge. Yet he was ſo much hated, that though the Murthering of a Magiſtrate in Office, and at a publick Aſſembly, in ſo terrible a Manner, ought to have been ſeverely puniſh'd; yet no Enquiry was made into the Crime, nor was any Man ſo much as queſtioned for it. In that Chamber many that were put to the Queſtion confeſſed enough to hang them; ſome endured the Queſtion, and eſcaped with the Loſs of the Uſe of their Arms. Thoſe of the *Valteline* have pretended this Severity was that which gave the Riſe to the Maſſacre; and it is very probable this might have drawn in ſome that would have been otherwiſe more moderate, and that it did likewiſe precipitate that barbarous Action. But it was afterwards diſcovered, that the Plot had been formed long before; ſo that the Induſtry and Rage of the Prieſts, managed by *Spaniſh* Emiſſaries, working upon the Bigottry of the People, was the real Cauſe; and this only made Uſe of as a Pretext to give ſome Colour to the Maſſacre, which was executed ſome Months after this Chamber was diſſolved. It began while the Proteſtants were at Church: There were ſome Hundreds deſtroyed, the reſt got all up into the Mountains, and ſo eſcaped into the Country of the *Griſons*; and thoſe of *Chavennes* got likewiſe up to the Hills, for they are ſituated juſt at the Bottom of them.

I ſhall not proſecute the reſt of that War; the *French* ſaw of what Advantage it was to them, not to let this Paſs from *Italy* into *Germany* fall into the Hands of the *Spaniards*; ſo *Baſſompiere* was ſent to *Madrid*, and obtained a Promiſe, that Things ſhould be put into the ſame State in which they were before the Year 1618. But when that Order was ſent to the Governor of *Milan*, it was plain he had ſecret Inſtructions to the contrary, for he refuſed to execute it. So a War followed, in which the *Griſons* found it was not eaſy for them to ſupport the Charge of it, without having Recourſe to the Aſſiſtance of the *French*. But the *Spaniards* pretended to have no other Intereſt in the Affairs of the *Valteline*, than the Preſervation of the Catholick Religion; and to ſhew their Sincerity, they put the Country into the Pope's Hands, knowing that he could not preſerve it but by their Aſſiſtance, or reſtore it without ſecuring it from all Change of Religion. The *French* willingly undertook the Cauſe of the *Griſons*, and becauſe the Duke of *Rohan* was like to be the moſt favoured General, as being of their Religion, he was ſent to command ſome Forces that march'd thither. But he ſaw that if the *French* once made themſelves Maſters of the Paſſes of the Country, it would turn to their Ruin; and finding the *Griſons* repoſed an entire Confidence in him, he thought it unbecoming him to be an Inſtrument in that he ſaw muſt be fatal to them. The *Spaniards* ſeeing the *French* engage in the Quarrel, and fearing they ſhould poſſeſs themſelves of the Paſſes, offered to reſtore all the Territory in *Italy*; for *Chavennes* and *Bermio* had likewiſe revolted, only the Proteſtants got away ſo quick upon the Diſorders in the *Valteline*, that they prevented the Rage of the Prieſts. The *Spaniards* ſtood upon theſe Conditions; That an Amneſty ſhould be granted for what was paſt: That there ſhould be no Exerciſe of the Proteſtant Religion tolerated in the Country: And that the Bailiffs and other Magiſtrates of that Religion, who were to be ſent into the *Valteline*, ſhould not openly practiſe their Religion: And as for other Perſons, that none of that Religion might ſtay above ſix Weeks at a Time in the Country. The Duke of *Rohan*, ſeeing that Conditions of ſo much Advantage to the Leagues were offered to them, did under-hand adviſe thoſe of that Religion to accept of them, at the ſame Time that he ſeem'd openly to oppoſe the Treaty ſet on Foot on thoſe Terms; and that he might get out of this Employment with the leſs Diſhonour, he adviſed their clapping him up in Priſon, till they had finiſh'd their Treaty with the *Spaniards*. So that they very gratefully to this Day own, that they owe the Preſervation of their Country to the Advices of that great Man. Many that were of that Religion returned to their Houſes and Eſtates; but the greateſt Part have ſince changed their Religion, others ſold their Eſtates, and left the Country; ſome ſtay ſtill, and go two or three Hours Journey to ſome of the Proteſtant Communities, where they have the Exerciſe of their Religion; and though they may not ſtay in the *Valteline* above ſix Weeks at a Time, yet they avoid that by going for a Day or two out of the Country once within that Time; nor is that Matter at preſent ſo ſeverely examined, becauſe there is a Calm among them as to thoſe Matters. But when it comes to the Turn of the Proteſtant Communities to ſend one of their Religion to thoſe Employments, he is often much embarraſſed by the Biſhop of *Como*, to whoſe Dioceſe thoſe Territories belong: For if the Biſhop fancies that they do any Thing contrary to the Eccleſiaſtical Immunities, he excommunicates them. And tho' this may appear a ridiculous Thing, ſince they are in a worſe State by being Hereticks, yet it produces a very ſenſible Effect; for the People, who are extremely ſuperſtitious, will not come near ſuch Magiſtrates: So that about three Years ago, a Bailiff found himſelf obliged to deſire to be recalled, though his Time was not out, ſince being excommunicated, he could no longer maintain the Government.

Among the *Griſons* the *Roman* Law prevails, modified a little by their Cuſtoms: One a little particular was executed when I was there. A Man, that hath an Eſtate by his Wife, enjoys it after her Death as long as he continues a Widower; but when he marries again, he is bound to divide it among the Children he had by her. The Juſtice is ſhort, but it is thought that Bribes go here, though but mean in Proportion to their Poverty,

verty, as well as in other Places. The married Women ſcarce appear abroad, except at Church; but the young Women have more Liberty before they are married. There is ſuch a Plenty of all Things, by Reaſon of the Gentleneſs of the Government, and the Induſtry of the People, that in the ten Days I ſtaid at *Coire*, I was but once aſk'd an Alms in the Streets. There are two Churches; in the one there is an Organ, that joins with their Voices in the Singing of the Pſalms; and there was for the Honour of the Diet, while we were there, an Anthem ſung very regularly. In all the Churches both of *Switzerland* and the *Griſons*, except in this, the Miniſter preaches covered, but here he is bare-headed. And I obſerved a particular Devotion uſed here in ſaying of the Lord's Prayer, that the Miniſters, who wear Caps, put them off. The Women, as in *Bern*, turn all to the Eaſt in Time of Prayer, and in their private Devotions before and after the publick Prayers: Many alſo bow at the Name of Jeſus. They chriſten diſcovering the whole Head, and pouring the Water on the Hind-head, uſing a trine Aſperſion; which is alſo the Practice of the *Switz*. It was Matter of much Edification, to ſee the great Numbers, both here and all *Switzerland* over, that come every Day to Prayers Morning and Evening. They give here, in the Middle of the Prayer, a good Interval of Silence for the private Devotions of the Aſſembly. The Schools here go not above *Latin*, *Greek*, and *Logick*, and for the reſt they ſend their Children to *Zurich* or *Baſil*. The Clergy are very meanly provided; for the moſt Part they have nothing but the Benevolence of their People. They complained much to me of a Coldneſs in their People in the Matters of Religion, and of a great Corruption in the Morals. The Commons are extreme inſolent, and many Crimes go unpuniſhed, if the Perſons that commit them have either great Credit or much Money. The poor Miniſters here are under a terrible Slavery; for the *Griſons* pretend a Preſcription not only for the Patronage of their Churches, but a Power to diſmiſs their Churchmen as they ſee Cauſe. How it is among the Papiſts I cannot tell; but the Dean of the Synod of the *Houſe* of *God* told me, they had an ill Cuſtom of ordaining their Miniſters without a Title, upon Examination of their Abilities, which took them up generally ſix or ſeven Hours; and when this Trial was diſpatched, if the Perſon was qualified they ordained him; and it was too ordinary for thoſe to endeavour to undermine the Miniſters already in Employment, if their People grew diſguſted at them, or they became diſabled by Age; and often the Intereſt and Kindred of the Intruder carried the Matter againſt the Incumbent without any Pretence; and in that Caſe the Synod was bound to receive the Intruder. In one Half of the Country they preach in *High Dutch*, and in the other Half in a corrupt *Italian*, which they call *Romaniſh*, that is, a Mixture of *French* and *Italian*. In every League they have a Synod; and as the People chooſe their Miniſters, ſo, in Imitation of the *Switz*, every Synod chooſes their *Antiſtes*, or Superintendent. He is call'd the Dean among the *Griſons*, and hath a Sort of Epiſcopal Power; but he is accountable to the Synod: The Office is for Life; but the Synod, upon great Cauſe, may make a Change. The People are much more lively than the *Switzers*, and they begin to have a Tincture of the *Italian* Temper. They are extreme civil to Strangers; but it ſeems, in all Commonwealths Innkeepers think they have a Right to exact upon Strangers; which one finds here, as well as in *Holland*, or in *Switzerland*.

15. I ſhall conclude what I have to ſay of the *Griſons* with an extraordinary Story, which I had from the Miniſters of *Coire*, and ſeveral other Gentlemen, that ſaw in *April* 1685, about five hundred Perſons of different Sexes and Ages, that paſſed through the Town, who gave this Account of themſelves. They were the Inhabitants of a Valley in *Tyrol*, belonging to the Archbiſhoprick of *Saltzburg*, but ſome of them were in the Dioceſes of *Trent* and *Breſſe*. They ſeemed to be a Remnant of the old *Waldenſes*, they worſhipped neither Images nor Saints, and they believed the Sacrament was only a Commemoration of the Death of Chriſt; in many other Points they had their peculiar Opinions, different from thoſe of the Church of *Rome*: They knew nothing either of *Lutherans* or *Calviniſts*; and the *Griſons*, though their Neighbours, had never heard of this Nearneſs to the Proteſtant Religion. They had Maſs ſaid among them; but ſome Years ſince ſome of the Valley going over *Germany* to earn ſomewhat by their Labour, happened into the *Palatinate*, where they were better inſtructed in Matters of Religion; and theſe brought back with them into the Valley the *Heidelburg* Catechiſm, with ſome other *German* Books, which ran over the Valley; and they being in a good Diſpoſition, thoſe Books had ſuch an Effect upon them, that they gave over going to Maſs, and began to worſhip God in a Way more ſuitable to the Rules ſet down in Scripture. Some of their Prieſts concurred in this Change; but others who adhered ſtill to the Maſs, went and gave the Archbiſhop of *Saltzburg* an Account of it; upon which he ſent ſome to examine the Matter, to exhort them to return to Maſs, and to threaten them with Severity, if they continued obſtinate: So they ſeeing a terrible Storm ready to break on them, reſolved to abandon their Houſes, and all they had, rather than ſin againſt their Conſciences; and the whole Inhabitants, old and young, Men and Women, to the Number of two thouſand, divided themſelves into ſeveral Bodies; ſome to go to *Brandenburg*, others to the *Palatinate*, and about five hundred took the Way of *Coire*, intending to diſperſe themſelves in *Switzerland*. The Miniſters told me, they were much edified with their Simplicity; for a Collection being made for them, they deſired only a little Bread to carry them on their Way. From *Coire* we went to *Toſſano*, and from thence through the Way that is juſtly called *Via Mala*. It lies through a Bottom between two Rocks, through which the *Rhine* runs, but under Ground, for a great Part of the Way: The Way is cut out in the Middle of the Rock in ſome Places; and in ſeveral, the Steepneſs of the Rock being ſuch, that a Way could not be cut, there are Beams driven into it, over which Boards and Earth are laid. This Way holds an Hour; after that, there is for two Hours a good Road, and we paſs'd through two conſiderable Villages, finding good Lodging in both: From thence there is, for two Hours Journey, terrible Way, almoſt as bad as the *Via Mala*; then an Hour's Journey good Way to *Splugen*, which is a large Village of two hundred Houſes that are well built, and the Inhabitants ſeem to live at their Eaſe, though they have no Soil but a little Meadow Ground about them. This is the laſt Proteſtant Church that was in our Rout: It was well endow'd; for the Miniſter had near two hundred Crowns. Thoſe of this Village are the Carriers between *Italy* and *Germany*, and drive a great Trade; for there is here a perpetual Carriage going and coming; and we were told, that there paſs generally a hundred Horſes through this Town, one Day with another; and there are above five hundred Carriage-horſes, that belong to it. From this Place we went mounting for three Hours, till we got to the Top of the Hills, where there is only one great Inn. After that, the Way was tolerably good for two Hours; and for two Hours there is a conſtant Deſcent, which, for the moſt Part, is as ſteep as if we were going down Stairs. At the Foot of this is a little Village, called *Campodolin*; and here we found we were in *Italy*, both by the vaſt Difference of the Climate, (for whereas we were freezing on the other Side, the Heat of the Sun was uneaſy here) and by the Number of the Beggars; though it may ſeem the Reverſe of what one ought to expect, ſince the richeſt Country of *Europe* is full of Beggars; and the *Griſons*, one of the pooreſt States, have no Beggars at all. One Thing is alſo ſtrange, that among the *Griſons*, the rich Wine of the *Valteline*, after carried three Days Journey, is ſold cheaper than the Wine of other Countries at the Door; but there are no Taxes nor Impoſitions here. From *Campodolin* there are three Hours Journey to *Chavennes*, all in a ſlow Deſcent, and in ſome Places the Way is extreme rugged and ſtony.

16. *Chavennes* is very pleaſantly ſituated at the very Foot of the Mountains; there runs through the Town a charming little River. It is nobly built, and hath many rich Vineyards about it; and the Reverberation of the Sun-beams from the Mountains ſo increaſes the Heats, that the Soil is as rich here, as in any Part of *Italy*. Here one begins to ſee a noble Architecture in many Houſes: In ſhort, all the Marks of a rich Soil and a free Government appear here. The Town ſtood a little more to the North about five hundred Years ago, but a Piece of the *Alps* came down upon it, and buried it quite; and at the upper End of the Town there are ſome Rocks that look like Ruins, about which there hath been a very extraordinary Expence, to divide them one from another, and to make them fit for Forts and Caſtles: The Marks of the Tools appeared all over the Rock in one Place. I meaſured the Breadth of the one from the other, which is twenty Feet, the Length is four hundred and fifty Feet; and, as we could gueſs, the Rock was two hundred Feet high, cut down on both Sides in a Line, as even as a Wall; towards the Top of one, the Name *Salvius* is cut in large Letters a little *Gothick*. On the Tops of thoſe Rocks, which are inacceſſible, except on the one Side, and to that the Aſcent is uneaſy, they had Garriſons during the Wars of the *Valteline:* There were fifteen hundred in Garriſon in that which is in the Middle. There fall down frequently Pieces from the Hills, that extremely fatten the Ground which they cover, ſo that it becomes fruitful beyond Expreſſion: And I ſaw a Lime-tree that was planted eight and thirty Years before in a Piece of Ground which has been ſo covered, two Fathom and an half in Compaſs. On both Sides of the River, the Town and the Gardens belonging to it, cover the whole Bottom between the Hills; and at the Roots of the Mountains they dig great Cellars and Grottos, and ſtrike a Hole about a Foot ſquare, ten or twelve Feet into the Hill, which all the Summer draws a ſreſh Air into the Cellar, ſo that the Wine of thoſe Cellars drinks as cold as if it were in Ice; but this Wind-pipe did not blow when I was there, which was towards the End of *September:* For the Sun opening the Pores of the Earth, and rarifying the exterior Air, that, which is compreſſed within the Cavities that are in the Mountains, ruſhes out with a conſtant Wind; but when the Operation of the Sun is weakened, this Courſe of the Air is leſs ſenſible. Before, or over thoſe Vaults, they build little pleaſant Rooms like Summer-houſes, and in them they go to Collations generally at Night in Summer. I never ſaw bigger Grapes than here; there is one Sort larger than the biggeſt Damaſcene Plumbs that we have in *England*.

There is a Kind of Wine here and in the *Valteline*, which I never heard named any where elſe, that is called Aromatick Wine; and as the Taſte makes one think it muſt be a Compoſition, (for it taſtes like a ſtrong Water drawn off Spices) ſo its Strength, being equal to a weak Brandy, diſpoſes one to believe that it cannot be a natural Wine: Yet it is the pure Juice of the Grape without any Mixture. The Liquor being ſingular, I informed myſelf particularly of the Way of preparing it. The Grapes are red, though it appears white. They let the Grapes hang on the Vines till *November*, when they are extreme ripe; then they carry them to their Garrets, and ſet them all upright on their Ends by one another for two or three Months; then they pick all the Grapes, and throw away thoſe in which there is the leaſt Appearance of Rottenneſs, ſo that they preſs none but ſound Grapes: After they are preſſed, they put the Liquor in an open Veſſel, in which it throws up a Scum, which they take off twice a Day; and when no more comes up, which, according to the Difference of the Seaſon, is ſooner or later, (for ſometimes the Scum comes no more after eight Days, and at other Times it continues a Fortnight) then they put it in a cloſe Veſſel. For the firſt Year it is extreme ſweet and luſcious, but at the End of the Year, they pierce it a little higher than the Middle of the Veſſel, almoſt two Thirds from the Bottom, and drink it off till it cometh ſo low, and then every Year they fill it up a-new: Once a Year (in the Month of *March*) it ferments, and cannot be drank till that is over, which continues a Month; but their other Wine ferments not at that Time. Madam *de Salis*, a Lady of that Country, who entertained us three Days with a Magnificence like *London* or *Paris*, had Wine of this Compoſition that was forty Years old, and was ſo very ſtrong, that one could hardly drink above a Spoonful; and it taſted high of Spicery, though ſhe aſſured me there was not one Grain of Spice in it, nor of any other Mixture. Thus, as I conceive, the Heat that is in this Wine becomes a Fire, and diſtils itſelf, throwing up the more ſpirituous Parts of it to the Top of the Hogſhead.

Both here and in the Country of the *Griſons*, the Meat is very juicy; the Fowl are excellent, their Roots and Herbs very well reliſhed; but the Fiſh of their Lakes are beyond any Thing I ever ſaw. They live in great Simplicity as to their Habit and Furniture; but they have Plenty of all Things, and are very rich. The Family where we were ſo nobly entertained, is believed to be worth about two hundred thouſand Crowns. Here the *Italian* Cuſtom, of one only of a Family that marries, begins to take Place. There is a Sort of Pots of Stone that is uſed not only in all the Kitchens here, but almoſt all over *Lombardy*, called *Lavege*; the Stone feels oily and ſcaly, ſo that a Scale ſticks to one's Finger that touches it, and is ſomewhat of the Nature of a Slate: There are but three Mines of it known, one near *Chavennes*, another in the *Valteline*, and the third in the *Griſons*; but the firſt is much the beſt. They generally cut it in the Mine round, about a Foot and an half Diameter, and a Foot and a Quarter thick; and they work it in a Mill, where the Chiſſels that cut the Stone are driven about by a Wheel that is ſet a going by Water, and which is ſo ordered, that he, who manages the Chiſſel, very eaſily draws forward the Wheel out of the Courſe of the Water. They turn off firſt the outward Coat of this Stone, till it is exactly ſmooth, and then they ſeparate one Pot after another by thoſe ſmall and hooked Chiſſels, by which they make a Neſt of Pots, all one within another, the biggeſt being of the Size of an ordinary Beef-pot, and the inward Pot being no larger than a ſmall Pipkin: Theſe they arm with Hooks and Circles of Braſs, and ſo they uſe them in their Kitchens. One of theſe Stone-pots takes Heat, and boils ſooner than any Pot of Metal; and whereas the Bottoms of Metal-pots tranſmit the Heat ſo entirely to the Liquor within, that they are not inſufferably hot, the Bottom of this Stone-pot, which is about twice ſo thick as a Pot of Metal, burns extremely. It never cracks, or gives any Sort of Taſte to the Liquor that is boiled in it; but if it falls to the Ground, it is very brittle; yet this is repaired by patching it up; for they piece their broken Pots ſo cloſe, though without any Cement, by ſewing with Iron-wire the broken Parcels together, that in the Holes which they pierce with the Wire, there is not the leaſt Breach, except that which the Wire both makes and fills. The Paſſage to this Mine is very inconvenient; for they muſt creep into it for near half a Mile through a Rock, that is ſo hard, that the Paſſage is not above three Feet high; and thoſe, that draw out the Stones, creep along upon their Belly, having a Candle faſtened in their Forehead, and the Stone laid on a Sort of Cuſhion made for it upon their Hips: The Stones are commonly two hundred Weight.

17. But having mentioned ſome Falls or Breaches of Mountains in thoſe Parts, I cannot paſs by the extraordinary Fate of the Town of *Pleurs*, that was about a League from *Chavennes* to the North in the ſame Bottom, but on a Situation that is a little more raiſed. The Town was half the Bigneſs of *Chavennes*; the Number of the Inhabitants about two and twenty hundred Perſons, but it was much better built; for beſides the great Palace of the *Francken*, that coſt ſome Millions, there were many other Palaces erected by ſeveral rich Factors of *Milan*, and the other Parts of *Italy*, who liked the Situation and Air, as well as the Freedom of the Government; ſo they uſed to come hither

during the Heats, and gave themſelves all the Indulgencies that a vaſt Wealth could furniſh. By one of the Palaces that was a little diſtant from the Town, which was not overwhelmed with it, one may judge of the reſt. It was an Out-houſe of the Family of the *Francken*, and yet it may compare with many Palaces in *Italy*; and certainly Houſe and Gardens could not coſt ſo little as one hundred thouſand Crowns. The Voluptuouſneſs of this Place became very crying, and Madam *de Salis* told me, that ſhe had heard her Mother often relate ſome Paſſages of a Proteſtant Miniſter's Sermons, preached in a little Church which thoſe of that Religion had there, which warned them often of the terrible Judgments of God which were hanging over their Heads, and that he believed would ſuddenly break out upon them. On the twenty-fifth of *Auguſt*, 1618, a Perſon came and told them to be gone, for he ſaw the Mountains cleaving; but he was laughed at for his Pains. He had a Daughter, whom he perſuaded to leave all and go with him; but when ſhe was gone out of Town with him, ſhe called to Mind that ſhe had not locked the Door of a Room, in which ſhe had ſome Things of Value, and ſo ſhe went back to do that, and was buried with the reſt; for at the Hour of Supper the Hill fell, and buried the Town and all the Inhabitants, ſo that not one Perſon eſcaped. The Fall of the Mountains ſo filled the Channel of the River, that the firſt News thoſe of *Chavennes* had of it, was by the failing of their River; for three or four Hours there came not a Drop of Water, but the River wrought for itſelf a new Courſe, and returned to them. I could hear no particular Character of the Man who eſcaped, ſo I muſt leave the ſecret Reaſon of ſo ſingular a Preſervation to the great Diſcovery of the laſt Day. Some of the Family of the *Francken* got ſome Miners to work under Ground, to find out the Wealth that was buried in their Palace; for beſides their Plate and Furniture, there was a great Quantity of Caſh and many Jewels in the Houſe. The Miners pretended they could find nothing; but they went to their own Country of *Tirol*, and built fine Houſes, and a great Wealth appeared, of which no other viſible Account could be given but this, that they had found ſome of that Treaſure. The chief Factors of *Italy* have been *Griſons*; and they told me, that as the Trade of Banking began in *Lombardy*, ſo that all *Europe* over a *Lombard* and a *Banker* ſignified the ſame Thing; ſo the great Bankers of *Lombardy* were *Griſons*, and to this Day the *Griſons* drive a vaſt Trade in Money; for a Man there of a hundred thouſand Crowns Eſtate, hath not perhaps a third Part of this within the Country, but puts it out in the neighbouring States: And the Liberty of the Country is ſuch, that the Natives, when they have made Eſtates elſewhere, are glad to leave even *Italy*, and the beſt Parts of *Germany*, and come and live among thoſe Mountains, of which the very Sight is enough to fill a Man with Horror.

From *Chavennes* we went for two Hours through a Plain to the Lake of *Chavennes*, which is almoſt round, and is about two Miles Diameter. This Lake falls into the Lake of *Como*, over-againſt Fort *Fuentes*; when we paſſed, the Water was ſo low, that the Boat could not eaſily get over a Bank between the two Lakes. The Lake of *Como* is about eight and forty Miles long, and four broad, and runs between two Ranges of Hills. I did not ſtay long enough in *Como* to give any Deſcription of it. The beſt Thing in it is a fine Chapel, which the preſent Pope *Innocent* XI. who is a Native of *Como*, is building. From *Como* we went eight Miles to *Codelaggo*, belonging to the *Switzers*, and from thence to *Lugane* we had eight Miles on the Lake. This Lake doth not run in an even Current, as other Lakes that riſe under the *Alps*, but the Situation of the Hills about it throws it into ſeveral Courſes.

The *Switzers* have here ſeveral little Provinces, of which, during the Wars of *Italy* between the two Crowns, in *Francis* I. and *Charles* V's Time, they poſſeſſed themſelves as a Pledge for Payment of their Arrears; and they were then ſuch conſiderable Allies, that they made both the Competitors for the Dutchy of *Milan* court them by Turns, and became the peaceable Poſſeſſors of almoſt all that Tract that lies between the Lake of *Como* to the Country of the *Valeſſii*, or the *Vallies*. The Inhabitants here are ſo well uſed, live ſo free of all Impoſitions, and the Government is ſo gentle, that I muſt tell you another Paradox; this is the worſt Country, the leaſt productive, the moſt expoſed to Cold, and the leaſt capable of Trade of all *Italy*; and yet it is by far the beſt peopled of any that I ſaw in all *Italy*. There belongs to the Bailiage of *Lugane* alone ninety-nine Villages, of which a great many are very large, and all full of People. The twelve ancient Cantons have their Turns of all the Bailiages and other Offices here; but when it comes to the Turn of thoſe of the Religion, their Bailiffs muſt be content with private Devotions in their own Houſe, but can have no publick Exerciſes, nor ſo much as a Miniſter in their Houſes. For here, as in the *Valteline*, when the *Spaniards* confirmed the Right of the Cantons, they made an expreſs Proviſion, that no Religion, except the Popiſh, ſhould be tolerated here; ſo that the Bailiff, who is the Prince, often hath not the free Liberty of his Religion in theſe Parts. The Bailiffs make their Advantages, as well as in the other Parts of *Switzerland*, yet with more Caution; for they take great Care not to give the Natives any Diſtaſte, though the Miſeries to which they ſee all their Neighbours expoſed, and the Abundance and Liberty in which they live, might, in all Appearance, deliver their Maſters from any great Apprehenſions of a Revolt. A great many Mechanicks of all Sorts live in theſe Parts, who go all Summer long over *Italy*, and come back hither with what they have gained, and live free from all Taxes. I was told, that ſome Nephews of Popes, in particular the *Barberini*, had treated with the *Switzers* to buy this Country from them, and ſo to erect it into a Principality; and that they had reſolved to offer twelve thouſand Crowns to each of the twelve Cantons; but they found it would certainly be rejected, ſo they made no Propoſition to the Diet of the Cantons, as they once intended. And it is certain, whenever this Country is brought under a Yoke, like that which the reſt of *Italy* bears, it will be ſoon abandoned; for there is nothing that draws ſo many People to live in ſo bad a Soil, when they are in Sight of the beſt in *Europe*, but the Eaſineſs of the Government.

18. From *Lugane* I went to the *Lago Maggiore*, which is a noble Lake, ſix and fifty Miles long, and in moſt Places ſix Miles broad, and a hundred Fathom deep about the Middle of it; it makes a great Bay to the Weſtward, and there lie two Iſlands called the *Borromean* Iſlands, which are certainly the lovlieſt Spots of Ground in the World. There is nothing in all *Italy* that can be compared to them; they have the full View of the Lake, and the Ground riſes ſo ſweetly in them, that nothing can be imagined equal to the Terraſſes here. They belong to two Counts of the *Bomorrean* Family. I was only in one of them, which belongs to the Head of the Family, Nephew to the famous Cardinal, known by the Name of St. *Carlo*. On the Weſt End lies the Palace, which is one of the beſt in *Italy* for the Lodgings within, tho' the Architecture is but ordinary. There is one noble Apartment above four and twenty Feet high, and there is a vaſt Addition making to it; and here is a great Collection of noble Pictures, beyond any Thing I ſaw out of *Rome*. The whole Iſland is a Garden, except a little Corner to the South, ſet off for a Village of about forty little Houſes. And becauſe the Figure of the Iſland was not very regular by Nature, they have built great Vaults and Portico's along the Rock, which are all made groteſque; and ſo they have brought it to a regular Form, by laying Earth over thoſe Vaults. There is firſt a Garden to the Eaſt, that riſes up from the Lake by five Rows of Terraſſes, on the three Sides of the Garden, that are watered by the Lake; the Stairs are noble, the Walls are all covered with Oranges and Citrons; and a more beautiful Spot of a Garden cannot be ſeen. There are two Buildings in the two Corners of this Garden; the one is a Mill for fetching up the Water, and the other is a noble Summer-houſe all wainſcotted

with Alabaſter and Marble, of a fine Colour inclining to red. From this Garden one goes on a Level to all the reſt of the Allies and Parterres, Herb and Flower-gardens, in all which there are Variety of Fountains and Arbours; but the great Parterre is a ſurprizing Thing: For as it is well furniſhed with Statues and Fountains, and is of a vaſt Extent, and juſtly ſituated to the Palace, at the further End of it there is a great Mount; the Face of it, that looks to the Parterre, is made like a Theatre, all full of Fountains and Statues, the Height riſing up in five ſeveral Rows, about fifty Feet high, and about fourſcore Feet in Front; and round this Mount, anſwering to the five Rows into which the Theatre is divided, there run as many Terraſſes of noble Walks. The Walls are all as cloſe covered with Oranges and Citrons, as any of our Walls in *England* are with Laurel. The Top of the Mount is ſeventy Feet long, and forty broad; and here is a vaſt Ciſtern, into which the Mill plays up the Water that furniſhes all the Fountains. The Fountains were not quite finiſhed when I was there; but when all is complete, this Place will look like an inchanted Iſland. The Freſhneſs of the Air, it being both in a Lake, and near the Mountains, the fragrant Smell, the beautiful Proſpect, and delightful Variety that is here, makes it ſuch a Habitation for Summer, that perhaps the World hath nothing like it.

19. From hence I went to *Seſtio*, a miſerable Village at the End of the Lake; and here I began to feel a mighty Change, being now in *Lombardy*, which is certainly the beautifulleſt Country that can be imagined, the Ground lies ſo even, is ſo well watered, ſo ſweetly divided by Rows of Trees, incloſing every Piece of Ground of an Acre or two in Compaſs, that it cannot be denied that here is a vaſt Extent of Soil, above two hundred Miles long, and in many Places an hundred broad; where the whole Country is equal to the lovelieſt Spots in *England* and *France*; it hath all the Sweetneſs that *Holland* or *Flanders* have, but with a warmer Sun, and a better Air. The Neighbourhood of the Mountains cauſes a Freſhneſs here, that makes the Soil the moſt deſirable Place to live in that can be ſeen, if the Government were not ſo ſevere, that there is nothing but Poverty all over this rich Country. A Traveller in many Places finds almoſt nothing, and is ſo ill-furniſhed, that if he does not buy Proviſions in the great Towns, he will be driven to a very poor Diet, in a Country that ſeems to flow with Milk and Honey: But of this I ſhall ſay more hereafter. The *Lago Maggiore* diſcharges itſelf in the River *Teſino*, which runs with ſuch a Force, that we went thirty Miles in three Hours with a ſingle Skuller, and the Water was no Way ſwelled. From hence we went into the Canal which *Francis* I. cut from this River to the Town of *Milan*, which is about thirty Feet broad, and on both its Banks there are ſuch Contrivances to diſcharge the Water when it riſes to ſuch a Height, that it can never be fuller of Water than it is intended it ſhould be: It lies alſo ſo even, that ſometimes for ſix Miles together one ſees the Line exactly before one. It is thirty Miles long, and is the beſt Advantage that the Town of *Milan* hath for Water-carriage.

I will not entertain you with a long Deſcription of this City, which is one of the nobleſt in the World for an inland Town, that hath no Court, no Commerce either by Sea, or any navigable River, and that is now the Metropolis of a very ſmall Country; for that, which is not mountainous in this State, is not above ſixty Miles ſquare, and yet it produces a Wealth that is ſurprizing. It pays for an Eſtabliſhment of ſeven and forty thouſand Men, and yet there are not ſixteen thouſand Soldiers effectively in it; ſo many are eat up by thoſe in whoſe Hands the Government is lodg'd. But the Extent of the Town, the Nobleneſs of the Buildings, and above all, the ſurprizing Riches of the Churches and Convents, are Signs of great Wealth: The Dome hath nothing to recommend it of Architecture, it being built in the rude *Gothick* Manner; but for the Vaſtneſs and Riches of the Building, it is equal to any in *Italy*, St. *Peter's* itſelf not excepted. It is all Marble, both Pavement and Walls, both Outſide and In, and on the Top it is all flagged with Marble; and there is the vaſteſt Number of Niches for Statues of Marble, both within and without, that are any where to be ſeen. Juſt under the *Cupola* lies St. *Carlo's* Body, in a great Caſe of Cryſtal, of vaſt Value, but I could not come near it; for we were there on two Holidays, and there was a perpetual Crowd; and the Superſtition of the People for his Body is ſuch, that on a Holiday he runs a Hazard that comes near it without doing ſome Reverence. His Canonization coſt the Town an hundred thouſand Crowns. They pretend they have Miracles too from Cardinal *Frederigo Borromeo*; but they will not ſet about his Canonization, the Price is ſo high. The Plate and other Preſents made to St. *Carlo*, are Things of a prodigious Value; ſome Services for the Altar are all of Gold; ſome ſet with Jewels, others ſo finely wrought, that the Faſhion is thought equal to the Value of the Metal. The Habits, and all the other Ornaments for the Function of his Canonization, are all of an incredible Wealth. He was indeed a Prelate of great Merit; and according to the Anſwer that a Frier made to *Philip de Comines*, when he aſked him, how they came to qualify one of the worſt of their Princes with the Title of Saint, in an Inſcription which he read, which was, that they gave that Title to all their Benefactors; never Man deſerved of a City this Title ſo juſtly as Cardinal *Borromeo* did; for he laid out a prodigious Wealth in *Milan*, leaving nothing to his Family, but the Honour of having produced ſo great a Man, which is a real temporal Inheritance to it. For as there have been ſince that Time two Cardinals of that Family, ſo it is eſteemed a *Caſa Santa*, and whenever it produces an Eccleſiaſtick of any conſiderable Merit, he is ſure, if he lives, to be raiſed to this Archbiſhoprick: For if there was one of the Family capable of it, and that did not carry it, that alone might diſpoſe the State to a Rebellion; and he were a bold Man that would venture on a Competition with one of this Family. He laid out a great deal on the Dome, and conſecrated it, though the Work will not be quite finiſhed for ſome Ages; that being one of the Crafts of the *Italian* Prieſts, never to finiſh a great Deſign, that, by keeping it in an unfiniſh'd State, they may be always drawing vaſt Sums from the Superſtition of the People. He built the Archbiſhop's Palace, which is very noble, and a Seminary, a College for the *Switzers*, ſeveral Pariſh Churches, and many Convents. In ſhort, the whole Town is full of the Marks of his Wealth. The Riches of the Churches of *Milan* ſtrike one with Amazement, the Building, the Painting, the Altars, and the Plate, and every Thing in the Convents, except their Libraries, are Signs both of great Wealth and Superſtition; but their Libraries not only here, but all *Italy* over, are ſcandalous Things. The Room is often fine, and richly adorn'd, but the Books are few, ill bound, and worſe choſen; and the Ignorance of the Prieſts, both ſecular and regular, ſuch, that no Man, that hath not had Occaſion to diſcover it, can eaſily believe it. The Convent of St. *Victor* that is without the Town, is by much the richeſt; it is compoſed of Canons regular, called in *Italy*, *The Order of Mount Olive*, or *Olivetan*. That of the *Barnabites* is extreme rich; there is a Pulpit and a Confeſſional, all inlaid with Agates of different Colours, finely ſpotted Marbles, and *Lapis Lazuli*, that are thought almoſt ineſtimable. St. *Lawrence* has a noble Cupola, and a Pulpit of the ſame Form with that of the *Barnabites*. The *Jeſuits*, the *Theatines*, the *Dominicans*, and St. *Sebaſtians*, are very rich. The Citadel is too well known to need a Deſcription; it is very regularly built, and is moſt effectual to keep the Town in Order. The Hoſpital is indeed a Royal Building; I was told it had ninety thouſand Crowns Revenue. The old Court is large, and would look noble, if it were not for the new Court that is near it, which is two hundred and fifty Feet ſquare, and there are three Rows of Corridors, or Galleries, all round the Court, one in every Stage, according to the *Italian* Manner, which makes the Lodgings very convenient, and leaves a Gallery before every Door. It is true, theſe take up a great deal of the Building, being eight or ten Feet broad; but then here is an open Space, that is extreme cool on that Side where the Sun doth not lie; for it is all open to the Air, the Wall being only ſupported by Pillars, at the Diſtance of fifteen or twenty Feet one from another. In this Hoſpital there are not only Galleries full of Beds on both Sides, as is common in all Hoſpitals; but there are alſo a great many Chambers, in which Perſons, who were formerly of a diſtinguiſhed Condition, are treated with a particular Care. There is an Out-houſe, which is called the *Lazaretto*, which belongs to this Hoſpital; it is an exact Quarter of a Mile ſquare, and there are three hundred and ſixty Rooms in it, and a Gallery runs all along before the Chambers; ſo that as the Service is convenient, the Sick have a cover'd Walk before their Doors. In the Middle of this vaſt Square there is an octangular Chapel, ſo contrived, that the Sick, from all their Beds, may ſee the Elevation of the Hoſtie, and adore it. This Houſe is for the Plague, or for infectious Fevers; and the Sick, that want a freer Air, are alſo removed hither.

I need not ſay any Thing of the curious Works in Cryſtal that are ſeen in *Milan*; the greateſt Quantities that are in *Europe*, are found in the *Alps*, and wrought here. It is certain, the *Alps* have much Wealth ſhut up in their Rocks, if the Inhabitants knew how to ſearch for it: But I heard of no Mines that were wrought, except Iron Mines; yet, by the Colourings that in many Places the Fountains make as they run along the Rocks, one ſees Cauſe to believe that there are Minerals ſhut up in them. Gold hath been often found in the River *Arve* that runs by *Geneva*.

The laſt Curioſity that I ſhall mention of the Town of *Milan*, is the Cabinet of the *Chanoine Settala*, which is now in his Brother's Hands, where there are a great many very valuable Things both of Art and Nature. There is a Lump of Ore, in which there is both Gold and Silver, and Emeralds, and Diamonds which was brought from *Peru*. There are many curious Motions, where, by an unſeen Spring, a Ball, after it hath roll'd down through many winding Deſcents, is thrown up, and ſo it ſeems to be a perpetual Motion: This is done in ſeveral Forms, and it is well enough diſguiſed to deceive the Vulgar Many Motions of little Animals, that run about by Springs, are alſo very pretty. There is a Loadſtone of a vaſt Force, that carries a great Chain. There is alſo a monſtrous Child, that was lately born in the Hoſpital, which is preſerved in Spirit of Wine: It is double below, hath one Breaſt and Neck, two Pair of Ears, a vaſt Head, and but one Face. As for the Buildings in *Milan*, they are large and ſubſtantial, but they have not much regular or beautiful Architecture. The Governor's Palace hath ſome noble Apartments in it. The chief Palace was built by a Banker. There is one Inconvenience in *Milan*, which deſtroys all the Pleaſure that one can find in it: They have no Glaſs Windows, ſo that one is either expoſed to the Air, or ſhut up in a Dungeon; and this is ſo univerſal, that there is not one Houſe in ten that hath Glaſs in their Windows. The ſame Defect is in *Florence*, beſides all the ſmall Towns of *Italy*, which is an Effect of their Poverty; for what by the Oppreſſion of the Government, what by the ſqueezing Oppreſſion of their Prieſts, who drain all the reſt of their Wealth, that is not eat up by the Prince, to enrich their Churches and Convents, the People here are reduced to a Poverty that cannot be eaſily believed by one that ſees the Wealth that is in their Churches; and this is going on ſo conſtantly in *Milan*, that it is ſcarce accountable from whence ſo vaſt a Treaſure can be found; but Purgatory is a Fund not eaſily exhauſted. The Wealth of the *Milaneſe* conſiſts chiefly in their Silks; and that Trade falls ſo mightily by the vaſt Importations that the *Eaſt-India* Companies bring in to *Europe*, that all *Italy* feels this very ſenſibly, and languiſhes extremely, by the great Fall that is in the Silk Trade. There is a great Magnificence in *Milan*; the Nobility affect to make a noble Appearance in their Cloaths, their Coaches, and their Attendants; and the Women go Abroad with more Freedom here, than in any Town of *Italy*.

20. Twenty Miles from *Milan* we paſs'd through *Lodi*, a miſerable Garriſon; but indeed the Frontiers, both of the *Spaniards* and the *Venetians*, as well as thoſe of other Princes of *Italy*, ſhew, that they are not very apprehenſive one of another. And when one paſſes through thoſe Places, which are repreſented in Hiſtory as of great Strength, capable of reſiſting a long Siege, he muſt acknowledge, that the Sight of them brings the Idea that he had conceived a great many Degrees lower. For *Lombardy*, which was ſo long the Seat of War, could not reſiſt againſt a good Army now, ſo many Days as it did then Years. The Garriſon of *Crema*, which is the firſt of the *Venetian* Territory, is no better than *Lodi*, only the People in the *Venetian* Dominions live happier than under the *Spaniard*.

The Senate ſends *Podeſtas*, like the Bailiffs of the *Switzers*, who order the Juſtice and the Civil Government of the Juriſdiction aſſigned them. There is alſo a Captain-General, who hath the Military Authority in his Hands; and theſe are Checks upon each other, as the Baſhaws and the Cadis are among the *Turks*. But here in *Crema* the Town is ſo ſmall, that both theſe are in one Perſon. We were there in the Time of the Fair; Linnen Cloth and Cheeſe (which though it goes by the Name of the *Parmeſan*, is made chiefly in *Lodi*) are the main Commodities. The Magnificence of the *Podeſta* appeared very extraordinary; for he went through the Fair with a great Train of Coaches, all in his own Livery; and the two Coaches, in which himſelf and his Lady rode, were both extraordinary rich: His was a huge Bed-coach, all the Outſide black Velvet, and a mighty rich gold Fringe, lined with black Damaſk, flowered with Gold. From *Crema* it is thirty Miles to *Breſcia*, which is a great Town, and full of Trade and Wealth. Here they make the beſt Barrels for Piſtols and Muſkets in *Italy*. There are great Iron-works near it; but the War with the *Turk* had occaſioned an Order, that none might be ſold without a Permiſſion from *Venice*. They are building a noble Dome at *Breſcia*. I was ſhewed a Nunnery there, which is now under a great Diſgrace. Some Years ago a new Biſhop coming thither, began with the Viſitation of that Nunnery: He diſcovered two Vaults; by one Men came ordinarily into it, and by another the Nuns that were big went and lay-in. When he was examining the Nuns ſeverely concerning thoſe Vaults, ſome of them told him, that his own Prieſts did much worſe. He ſhut up the Nuns, ſo that thoſe who are profeſſed live ſtill there, but none come to take the Veil; and by this Means the Houſe will ſoon come to an End. The Citadel lies over the Town on a Rock, and commands it abſolutely. Both here and in *Crema* the Towns have begun a Compliment, within theſe laſt ten or twelve Years, to their *Podeſtas*, which is a Matter of great Ornament to their Palaces, but will grow to a vaſt Charge; for they erect Statues to their *Podeſtas*; and this being once begun, muſt be carried on, otherwiſe thoſe to whom the like Honour is not done, will reſent it as an high Affront; and the Revenges of the noble *Venetians* are dreadful Things, eſpecially to their Subjects. This Name of *Podeſta* is very ancient; for in the *Roman* Times, the chief Magiſtrates of the leſſer Towns were called the *Poteſtas*, as appears by that of *Juvenal*.

— Fidenarum Gabiorumve eſſe Poteſtas.

From *Breſcia*, the Beauty of *Lombardy* is a little interrupted; for as all the Way from *Milan* to *Breſcia* is a Garden, ſo here on the one Side we come under the Mountains, and we paſs by the Lake of *Guarda*, which is forty Miles long, and where broadeſt, twenty Miles over. The Miles indeed, all *Lombardy* over, are extreme ſhort; for I walked often four or five Miles by Way of Exerciſe, and I found a thouſand Paces made their common Mile; but in *Tuſcany*, and the Kingdom of *Naples*, the Mile is fifteen hundred Paces. We paſſed through a great Heath for ſeven or eight Miles on this Side *Verona*, which begins to be cultivated. *Verona* is a vaſt Town, and much of it well built. There are many rich Churches in it; but there is ſo little Trade ſtirring, and ſo little Money going, that it is not eaſy to change a Piſtole without taking their Coin of baſe Allay, which won't paſs out of the *Veroneſe*: For this ſeems a ſtrange Maxim of the *Venetians*, to ſuffer thoſe ſmall States to retain ſtill a Coin peculiar to them, which is highly inconvenient for Commerce. The known Antiquity of *Verona* is the Amphitheatre, one of the leaſt of all that the *Romans* built, but the beſt preſerved; for tho' moſt of the great Stones of the Outſide are picked out, yet the great ſloping Vault, on which the Rows of the Seats are laid, is entire: The Rows of the Seats are alſo entire; they are four and forty Rows; every Row is a Foot and a half high, and as much in Breadth, ſo that a Man ſits conveniently in them under the Feet of thoſe of the higher Row; and allowing every Man a Foot and a half, the whole Amphitheatre can hold twenty three thouſand Perſons. In the Vaults, under the Rows of Seats, were the Stalls of the Beaſts that were preſented to entertain the Company. The Thickneſs of the Building, from the outward Wall to the loweſt Row of Seats, is ninety Feet: But this noble Remnant of Antiquity has been ſo often and ſo copiouſly deſcribed, that I will ſay no more of it. The next Thing of Value is the famous *Muſæum Calceolarium*, now in the Hands of Count *Maſcardo*, where there is a whole Apartment of Rooms all furniſhed with Antiquities and Rarities. There are ſome old Inſcriptions made by two Towns in *Africk* to the Honour of M. *Craſſus*; there is a great Collection of Medals and Medallions, and of the *Roman* Weights, with their Inſtruments for their Sacrifices; there are many Curioſities of Nature, and a great Collection of Pictures, of which many are of *Paulo Veroneſe*'s Hand. There is a noble Garden in *Verona*, that riſes up in Terraſſes the whole Height of a Hill, in which there are many ancient Inſcriptions which belong to Count *Giuſto*. As we go from *Verona* to *Vincenza*, which is thirty Miles, we return to the Beauty of *Lombardy*; for there is all the Way a Succeſſion of Gardens: The Ground is better cultivated than I ſaw it in any other Part of *Italy*, but the Wine is not good; for at the Roots of all their Trees they plant a Vine, which grows up winding about the Tree to which it joins; but the Soil is too fat to produce a rich Wine, for that requires a dry Ground. There is near the Lake of *Guarda*, a very extraordinary Wine, which they call *Vino Santo*, which drinks like the beſt Sort of Canary; it is not made till *Chriſtmas*, and from thence it derives the Name of *Holy Wine*; and it is not to be drunk till *Midſummer*, for it is ſo long before it is quite wrought clear; but I have not marked how long it may be kept: We had it there for a Groat an *Engliſh* Quart; I wondered that they did not trade with it. All the Cattle of *Italy* are grey or white, and all their Hogs are black, except in the *Bologneſe*, and there they are red. I will not enquire into the Reaſons of theſe Things; it is certain Hog's Fleſh in *Italy* is much better than it is in *France* and *England*; whether the Truffles, on which they feed much in Winter, occaſion this or no, I know not; the Huſks of the preſſed Grapes are alſo a mighty Nouriſhment to them; but Cattle of that greyiſh Colour are certainly weaker: The Carriage of *Italy* is commonly performed by them, and this is very hard Work in *Lombardy*, when it hath rained ever ſo little; for the Ground being level, and there being no raiſed Highways, the Carts go deep, and are very hardly drawn.

Vincenza hath ſtill more of its ancient Liberty than any of theſe Towns, as *Padua* hath leſs; for it ſubmitted itſelf to the *Venetians*, whereas the other diſputed long, and brought it often very low. One ſees the Marks of Liberty in *Vincenza*, in the Riches of their Palaces and Churches, of which many are lately built: They have a modern Theatre made in Imitation of the ancient *Romans*. *Lombardy* differs in Climate from the Southern Part of *Italy*, for here they keep their Oranges and Citrons in great Boxes, as we do in *England*, that ſo they may be lodged in Winter, and defended from Breezes that blow ſo ſharp from the *Alps*, that they would kill thoſe delicate Plants; whereas in *Tuſcany* they grow as other Trees in their Gardens; and in the Kingdom of *Naples* they grow wild without any Care or Cultivation. We were at *Vincenza* upon a Holiday, and there I ſaw a Preparation for a Proceſſion that was to be in the Afternoon: I did not wonder at what a *French* Papiſt ſaid to me, that he could hardly bear the Religion of *Italy*, the Idolatry in it was ſo groſs. The Statue of the Virgin was of Wood, ſo finely painted, that I thought the Head was Wax; it was richly clad, and had a Crown on its Head, and was ſet full of Flowers. How they did when it was carried about, I do not know; but in the Morning all People ran to it, and ſaid their Prayers to it, and kiſſed the Ground before it, with all the Appearances of Devotion.

From *Vincenza* it is eighteen Miles to *Padua*, all a Garden: Here one ſees the Decays of a vaſt City, which was one of the biggeſt of all *Italy*: The Compaſs is the ſame that it was, but there is much uninhabited Ground in it, and Houſes there go almoſt for nothing. The Air is extreme good; and there is ſo great a Plenty of all Things, except Money, that a very little of that goes a great Way. The Univerſity here, though ſo much ſupported by the *Venetians*, that they pay fifty Profeſſors, yet ſinks extremely: There are no Men of great Fame in it, and the Quarrels among the Students have driven away moſt of the Strangers that uſed to come and ſtudy here; for it is not ſafe to ſtir abroad after Sun-ſet. The Number of the Palaces is incredible; and though the Nobility of *Padua* are almoſt quite ruined, yet the Beauty of their ancient Palaces ſhews what they once were. The *Venetians* have been willing to let the ancient Quarrels, that were in all thoſe conquered Cities, continue ſtill among them; for while one kills another, and the Children of the other take their Revenges, both come under the Bando by this Means, and the Confiſcation goes to the Senate. At ſome Times of Grace, when the Senate wants Money, and offers a Pardon to all that will compound for it, the Numbers of the guilty Perſons are incredible. In *Vincenza*, and the Country that belongs to it, I was aſſured by Monſieur *Patin*, that learned Antiquary, that hath been many Years a Profeſſor in *Padua*, that there were five and thirty thouſand pardoned at the laſt Grace; this I could hardly believe, but he bid me write it upon his Word. The Nobility of *Padua*, and of the other Towns, ſeem not to ſee what a Profit their Quarrels bring to the *Venetians*, and how they eat out their Families; for one Family in the ſame Man's Time, who was alive while I was there, was reduced, from fourteen thouſand Ducats Revenue, to leſs than three thouſand, by its falling at ſeveral Times under the Bando. But their Jealouſies and Revenges are purſued with ſo much Vigour, that, when theſe are in their Way, all other Things are forgot. There is here the Remnant of the Amphitheatre, though nothing but the outward Wall. There is here alſo, as well as in *Milan*, an inward Town, called the City, and an outward without that, called the Burgo; but though there is a Ditch about the City, the great Ditch and Wall goeth about all, and *Padua* is eight Miles in Compaſs; it lies almoſt round: The publick Hall is the nobleſt in *Italy*: The Dome is an ancient but mean Building: The Church of St. *Anthony*, but eſpecially the holy Chapel in it, where the Saint lies, is one of the beſt Pieces of modern Sculpture; for round the Chapel the chief Miracles of that Saint are repreſented in *mezzo relievo*, in a very ſurprizing Manner. The Devotion that is paid to this Saint all *Lombardy* over is amazing; he is called, by Way of Excellence, *Il Santo*, and the Beggars generally aſk Alms for his Sake. But among the little Vows that hang without the holy Chapel, there is one that is the higheſt Pitch of Blaſphemy that can be imagined, *Exaudit*, ſpeaking of the Saint, *quos non audit & ipſe Deus*: i. e. *He hears thoſe whom God himſelf doth not hear.* St. *Juſtina* is a Church ſo well ordered within, the Architecture is ſo beautiful, it is ſo well enlightened, and the Cupolas are ſo advantageouſly placed, that, if the Outſide anſwered the Inſide, it would be one of the beſt Churches of *Italy*; but the Building is of Brick, and it hath no Frontiſpiece: There are many new Altars, made as fine as they are idolatrous, all full of Statues of Marble. This Abbey hath an hundred thouſand Ducats Revenue; and ſo by its Wealth one may conclude that it belonged to the *Benedictine* Order. Cardinal *Barberigo* is Biſhop here; he ſeems to ſet St. *Carlo* before him as his Pattern; he hath founded a noble Seminary for ſecular Prieſts; he lives in a conſtant Diſcipline himſelf, and endeavours to reform his Clergy all he can; but he is now on ill Terms with his Canons, who are all noble *Venetians*, and ſo allow themſelves great Liberties, of which they will not willingly be abridged. He is charitable to a high Degree, and is, in all Reſpects, a very extraordinary Man.

In the *Venetian* Territory their Subjects live eaſy and happy, if they could be ſo wiſe as to give over their Quarrels; but though the Taxes are not high, they oppreſs their Tenants ſo ſeverely, that the Peaſants live miſerably. Yet on all Hands round about them, the Oppreſſions being more intolerable, they know not where to fly for Eaſe; whereas on the contrary, the Miſeries under which their Neighbours groan, chiefly thoſe of the Eccleſiaſtical State, ſend in Numbers among them, ſo that they are well ſtocked with People. But the *Venetians* are ſo jealous of their Subjects underſtanding military Matters, which may diſpoſe them to revolt, that they never make any Levies among them for their Wars. This Jealouſy is the true Ground of that Maxim, though another is pretended that is more plauſible, which is, their Care of their own People, whom they ſtudy to preſerve; and therefore they hire Strangers, rather than expoſe their Subjects. It is certain, a Revolt here were no hard Matter, for the Garriſons and Fortifications are ſo ſlight, that thoſe great Towns could eaſily ſhake off their Yoke, if it were not for the Factions that reign among them, by which one Party would chooſe rather to expoſe the other to the Rigour of the Inquiſitors, than concur with them in aſſerting their Liberty: And the Inquiſitors, in ſuch Caſes, proceed ſo ſecretly, and ſo effectually, that none dares truſt another with a Secret of ſuch Conſequence; and the oppreſſed Nobility of thoſe States retain ſtill ſo much of their old and unſubdued Inſolence, and treat ſuch as are under them ſo cruelly, that the *Venetians* are as ſecure, as if they had many ſtrong Citadels and numerous Garriſons among them. From *Padua* down to *Venice*, all along the River *Brent*, there are many Palaces of the noble *Venetians* on both Sides of the River, built with ſo great a Variety of Architecture, that there is not one like another. There is alſo the like Diverſity in the laying out of their Gardens; and here they retire during the hot Months, and ſome allow themſelves all the Exceſſes of diſſolute Liberty that can poſſibly be imagined. From *Lizza Fucina*, which is at the Mouth of the *Brent*, we paſs for five or ſix Miles on the *Lagunes*, or Shallows, to *Venice*. Theſe Shallows ſink of late ſo much, that the preſerving *Venice* ſtill an Iſland is like to become as great a Charge to the *Venetians*, as the keeping out the Sea is to the *Dutch*; for they uſe all poſſible Induſtry to cleanſe the Channels of the *Lagunes*, and to keep them full of Water: And yet many think, that the Water hath failed ſo much in this laſt Age, that if it continues to abate at the ſame Rate, within an Age or two more, *Venice* may become a Part of the *Terra Firma*. It is certainly the moſt ſurprizing Sight in the whole World to ſee ſo vaſt a City ſituated in the Sea, and ſuch a Number of Iſlands ſo united together by Bridges, brought to ſuch a regular Figure, the Pilotty ſupplying the Want of Earth to build on, and all ſo nobly built, which is, of all the Things that one can ſee, the moſt amazing. And though this Republick is much ſunk from what it was, both by the great Loſſes ſuffered in their Wars with the *Turks*, and by the great Decay of Trade, yet there is an incredible Wealth, and a vaſt Plenty of all Things in this Place. I will not offer to deſcribe either the Church or the Palace of St. *Mark*, which are too well known. The Painting of the Walls, and the Roofs of the Halls and publick Rooms in the Palace, are of vaſt Value. Here I ſaw that Story of Pope *Alexander* III. treading on the Neck of the Emperor *Frederick Barbaroſſa*. The Nobleneſs of the Stair-caſes, the Riches of the Halls, and the Beauty of the whole Building, are much prejudiced by the Beaſtlineſs of thoſe that walk there, and leave their Marks behind them, as if this were rather a common Houſe of Office, than ſo noble a Palace.

I went to the Convent of the *Servi*, but I found Father *Paul* was not in ſuch Conſideration there as he is elſewhere. I aſked for his Tomb, but they made no Account of him, and ſeemed not to know where it was. It is true, the Perſon to whom I was recommended was not in *Venice*, ſo perhaps they refined too much in this Matter. I had great Diſcourſe with ſome at *Venice* concerning the Memorials out of which Father *Paul* drew his Hiſtory, which are, no doubt, preſerved with great Care in their Archives; and ſince the Tranſactions of the Council of *Trent*, as they are of Importance, ſo they are become now much controverted, by the different Relations that Father *Paul* and Cardinal *Pallavicini* have given the World; the only Way to put an End to Diſputes in Matter of Fact, is to print the Originals themſelves. A Perſon of great Credit at *Venice* promiſed me to do his utmoſt to get that Propoſition ſet on Foot, though the Exactneſs that the Government hath always affected, as to the Matter of their Archives, is held ſo ſacred, that this made him apprehend they would not give Way to any ſuch Search. The Affinity of the Matter brings into my Mind a Converſation I had with a Perſon of great Eminence at *Venice*, that had been long at *Conſtantinople*, and was learned far beyond what is to be met with in *Italy*. He was at *Conſtantinople*, when the Enquiry into the Doctrine of the *Greek* Church was ſet on Foot, occaſioned by the famous Diſpute between Mr. *Arnaud* and Mr. *Claude*: And being a zealous *Roman* Catholick, was dealt with to aſſiſt in that Buſineſs; but as a Man of great Honour and Sincerity, he excuſed himſelf, and ſaid, he could not meddle in it. He hath a very bad Opinion of the *Greeks*, and told me, that none of their Prieſts were more inveterate to the Church of *Rome*, than thoſe that were bred up at *Rome*; for they, to free themſelves of the Prejudices that their Countrymen conceive againſt them, by reaſon of their Education, affect to ſhew an Oppoſition to the *Latin* Church beyond any other *Greeks*. He told me, that he knew the Ignorance of the *Greeks* was ſuch, that as they did not know the Doctrines of their own Church, ſo a very little Money, or Hope of Protection from any of the Ambaſſadors that came from the Weſt, would prevail with them to ſign any Thing deſired of them. He added one Thing, that though he firmly believed Tranſubſtantiation himſelf, he did not think they believed it, let them ſay what they pleaſed. He took his Notions of the Doctrine of their Church, rather from what they did, than from what they ſaid; for their Rites, not being changed for a great many Ages, were the true Indications of Doctrines received among them; whereas they were ignorant of Tradition, and apt to prevaricate when they ſaw Advantages or Protection ſet before them. Therefore he concluded, that ſince they did not adore after the Conſecration, that was an evident Sign they did not believe the corporal Preſence, and was well able to balance all their Subſcriptions. He added, he was often ſcandalized to ſee them open the Bag in which the Sacrament was, and ſhew it with no Sort of Reſpect, more than when they ſhewed any Manuſcript; and he looked on Adoration as ſuch a neceſſary Conſequent of Tranſubſtantiation, that he could not imagine that the latter was received in a Church that did not practiſe the former. To this I will add what an eminent Catholick at *Paris* told me, that the Originals of thoſe Atteſtations were in too exact and too correct a Style to have been formed in *Greece*. He aſſured me they were penned at *Paris*, by one that was a Maſter of the Purity of the *Greek* Tongue. I do not name theſe Perſons, becauſe they are alive, and this might be a Prejudice to them.

One of the Ornaments of *Venice*, was the young Woman that ſpake five Tongues well, of which the *Latin* and *Greek* were two. She paſſed Doctor of Phyſick at *Padua*, according to the Forms; but, which was beyond all, ſhe was a Perſon of ſuch extraordinary Virtue and Piety, that ſhe is ſpoke of as a Saint. She died ſome Months before I came; ſhe was of the noble Family of the *Cornaros*, though not of the three chief Branches, which are St. *Maurice*, St. *Paul*, and *Calle*, who are deſcended from the three Brothers of the renowned Queen of *Cyprus*, but the Diſtinction of her Family was *Piſcopia*. Her Merit made all People unwilling to remember the Blemiſh of her Deſcent on the one Side; for though the *Cornaros* reckon themſelves a Rank of Nobility beyond all the other Families of *Venice*, yet her Father having entertained a Gondalier's Daughter ſo long, that he had ſome Children by her, at laſt, for their Sakes, married the Mother, and paid a conſiderable Fine to ſave the Forfeiture of Nobility, which his Children muſt have undergone by the Meanneſs of the Mother's Birth. The *Cornaros* carry it ſo high, that many of that Family have made themſelves Nuns, becauſe they thought their own Name was ſo noble, that they could not induce themſelves to change it for another: And when lately one of that Family married the Heir of the *Sagredos*, which is alſo one of the ancienteſt Families, and extreme rich, and ſhe had ſcarce any Portion at all, (for the *Cornaros* are now very low) ſome of their Friends came to wiſh them Joy; but they rejected the Compliment, and bid them go and wiſh the *Sagredos* Joy, ſince they thought the Advantage was on their Side.

There are of the truly ancient noble Families of *Venice* four and twenty yet remaining; and among theſe, there are twelve that are thought ſuperior to the reſt in Rank. Since the firſt Formation of their Senate, they have created many Senators. In their Wars with *Genoa*, they conferred that Honour on thirty Families; ſeveral of their Generals have had it given them as a Reward of their Service: They have alſo offered it to ſome Royal Families; for both the Families of *Valois* and *Bourbon* were Nobles of *Venice*; and *Henry* III. when he came through *Venice* and *Poland*, to take Poſſeſſion of the Crown of *France*, went, ſat among them, and drew his Ballot as a noble *Venetian*: Several Popes have procured this Honour for their Nephews; only the *Barberini*'s would have the *Venetians* offer it to them without aſking it, and the *Venetians* would not give it without they aſked it, and ſo it ſtuck. But during the War of *Candia*, Cardinal *Francis Barberini* gave twelve thouſand Crowns a Year towards the War; and the Temper found for making them noble *Venetians* was, that the Queen-mother of *France* moved the Senate to grant it. In all the Creations of Senators, before the laſt War of *Candia*, they were free; and the Conſiderations were either great Services, or the Dignity of thoſe on whom they beſtowed this Honour: Thoſe new Families are divided into thoſe called *Ducal Families*, and *New Families*: The Reaſon of the former Deſignation is not rightly underſtood; all thoſe Families, ſay ſome, that are called *Ducal*, have had the Dukedom in their Houſe; but as all the old Families have had the ſame Honour, though they carry not that Title, ſo ſome of the new Families have alſo had it, yet are not called *Ducal*. Others ſay, that thoſe Families that have had Branches made Dukes without their being firſt Procurators of St. *Mark*, or that have been choſen to that Honour, without their pretending to it, are called *Ducal*. But the true Account of this is, that from the Year 1450, to the Year 1620, for an hundred and ſeventy Years, there was a Combination made among thoſe new Families to preſerve the Dukedom ſtill among them; for the old Families carrying it high, and excluding the new from the chief Honours, nineteen of the new Families entered into mutual Engagements to exclude the ancient Nobility. It is true, they made the Dukedom ſometimes fall on new Families that were not of this Aſſociation; but this was indifferent to them, as long as the ancient Families were ſhut out, and it appeared that they bore the chief Sway in the Election. This Combination was a Thing known to the very People, tho' the Inquiſitors did all they could to break it, or at leaſt to hide it; ſo that I never met with it in any Author. But this failed in 1620, when *Memmio* was choſen Duke, and was deſcended of the ancient Nobility; which was ſo great a Mortification to the *Caſe Ducale*, that one of them *(Veniero)* hang'd himſelf through the Rage to which that drove him; but his Man came in Time before he was dead, and cut him down, and he lived long after in a better Mind. Since that Time one of the *Bembos*, two of the *Cornaros*, one of the *Contarinis*, and the preſent Prince of the *Juſtiniani*, the firſt of that Family that hath had that Honour, have been Dukes, who are all of ancient Families; ſo that this Faction is ſo entirely buried, that it is not generally known (even in *Venice* itſelf) that it was ever amongſt them. And thus Time and Accidents bring about happy Events, which no Care nor Induſtry could produce; for that, which all the Endeavours of the Inquiſitors could not compaſs, came about of itſelf. It is true, the Factions in *Venice*, though violent enough in thoſe who manage them, are not derived by them as an Inheritance to their Poſterity, as formerly among the *Florentines*; who though they value themſelves as much above the *Venetians*, whom they deſpiſe as a dull Race of People, yet ſhewed how little they underſtood to conduct their State; ſince by domeſtick Heats they loſt their Liberty, which the *Venetians* have had the Wiſdom to preſerve. The Faction of the *Caſe Ducale* was perhaps willing to let the Matter fall, for they loſt more than they got by it; ſince the ancient Families in Revenge ſet themſelves againſt them, and excluded them from all the advantageous Employments of the State. For they being only united in that Point relating to the Dukedom, the ancient Families let them carry it; but in other Competitions they ſet up ſuch Candidates againſt the Pretenders of the Ducal Families, as were more eſteem'd than they, ſo that they ſhut them out of all the beſt Offices of the Republick. Such a Faction as this, if it had been ſtill kept up, might have proved fatal to their Liberty.

It is indeed a Wonder to ſee the Dignity of the Duke ſo much courted; for he is a Priſoner of State, tied to ſuch Rules, ſo ſeverely reſtrained and ſhut up as it were in an Apartment of the Palace of St. *Mark*, that it is not ſtrange to ſee the greateſt Families, in particular, the *Cornaros*, decline it. All the Family, how numerous ſoever, muſt retire out of the Senate, when a Duke is choſen out of it; only one, that is next a kin ſits ſtill, but without a Vote: And the only real Privilege that the Duke hath is, that he can, without communicating with the *Savi*, propoſe Matters either to the Council of Ten, to the Senate, or Great Council; whereas all other Propoſitions muſt be firſt offered to the *Savi*, and examined by them, who have a Sort of tribunitian Power, to reject what they diſlike; and though they cannot hinder the Duke's making a Propoſal, yet they can mortify him when he hath made it; they can hinder it from being voted; and, after voted, they can ſuſpend the Execution till it is examined over again: And a Duke that is of an active Spirit muſt reſolve to endure theſe Mortifications; for it is certain that the *Savi* do ſometimes affect to ſhew their Authority, and exerciſe a Sort of Tyranny in rejecting of Propoſitions, when they intend to humble thoſe who make them: Yet the greateſt Part of the beſt Families court the Dukedom extremely. When *Sagredo* was upon the Point of being choſen, there was ſo violent an Outcry againſt it, becauſe of the Diſgrace they thought would ariſe, if they had a Prince whoſe Noſe had miſcarried in ſome Diſorders, the Senate complied ſo far with the People, though the Inquiſitors took Care to hang or drown many of the Chief of the Mutineers, as to let the Deſign for *Sagredo* fall; upon which he retired to a Houſe he had in the *Terra Firma*, and never appeared more at *Venice*: During which Retirement he wrote two

Books; the one, *Memoire Ottomaniche*, which is printed, and he is accounted the beſt of all their modern Authors; the other was, *Memoirs of the Government and Hiſtory of* VENICE, which hath never been printed; and ſome ſay it is too ſincere and too particular, ſo that it is thought it will be reſerved among their Archives. It hath been a Sort of Maxim for ſome Time, not to chooſe a married Man to be Duke; for the Coronation of a Dutcheſs runs high, and hath coſt above one hundred thouſand Ducats.

Some ancient Families have affected the Title of Prince, and have called their Branches Princes of the Blood; and the *Cornaros* have done this more than others, yet ſome, on the Account of Principalities that their Anceſtors had in the Iſlands of the *Archipelago*, have alſo affected thoſe vain Titles: But the Inquiſitors have long ſince obliged them to lay aſide all thoſe high Stiles; and ſuch of them, as boaſt too much, find the Diſlike which that brings on them very ſenſibly; for when they pretend to any great Employments, they are always excluded. When an Election of Ambaſſadors was propoſed, or to any of the chief Offices, it was wont to be in Terms, that the Council might chooſe one of its *principal* Members for ſuch an Employment. But becauſe this look'd like a Diſtinction among the Nobility, they changed it five and twenty Years ago; and inſtead of Principal, they uſe now the Term Honourable, which comprehends the whole Body of their Nobility, without any Diſtinction. It is at *Venice*, in the Church, as well as in the State, that the Head of the Body hath a great Title and Honours; whereas this is a mere Pageantry, and under theſe big Words there is lodged only a Shadow of Authority; for their Biſhop has the ſounding Title of Patriarch, as well as the Duke is called Prince and His Serenity, and hath his Name ſtamped upon their Coin; ſo the Patriarch hath really no Authority, for not only St. *Mark*'s Church is entirely exempt from his Juriſdiction, and immediately ſubject to the Duke, but his Authority is in all Things ſo ſubject to the Senate, and ſo regulated, that he hath no more Power than they pleaſe to allow him: So that the Senate is as really the ſupreme Governor over all Perſons and in all Cauſes, as the Kings of *England* in their own Dominions ſince the Reformation. But beſides all this, the Clergy of *Venice* have a very extraordinary Sort of Exemption, and are a Body like a Preſbytery independent of the Biſhop. The Curates are choſen by the Inhabitants of every Pariſh; and no noble *Venetian* is ſuffer'd to pretend to any Curacy; for they think it below that Dignity, for one of their Body to engage in a Competition with one of a lower Order, and to run the Hazard of being rejected. I was told the Manner of thoſe Elections was the moſt ſcandalous Thing poſſible; for the ſeveral Candidates appear on the Day of Election, and ſet out their own Merits, and defame the other Pretenders in the moſt ſcurrilous Manner imaginable; the Secrets of all their Lives are publiſhed in moſt reproachful Terms; and nothing is ſo abject, that is not put in Practice on thoſe Occaſions. There is a Sort of an Aſſociation among the Curates for judging of their common Concerns; and ſome of the Laity of the ſeveral Pariſhes aſſiſt; ſo that here is a real Preſbytery. The great Libertinage that is practiſed by moſt Sorts of People at *Venice*, extends itſelf to the Clergy to ſuch a Degree, that though Ignorancee and Vice ſeem the only indelible Characters that they carry over all *Italy*, yet thoſe appear here in a more conſpicuous Manner than elſewhere, and upon theſe popular Elections all comes out.

The Nuns of *Venice* have been under Scandal for a great while; there are ſome Nunneries that are as famous for their Strictneſs, as others are for the Liberties they take; chiefly thoſe of St. *Zachary* and St. *Lawrence*, where none but noble *Venetians* are admitted, and where it is not ſo much as pretended they retired for Devotion, but merely that they might not be too great a Charge to their Family: They are not veiled; their Necks and Breaſts are bare, and they receive Company; but that which I ſaw was in a publick Room, in which there were Grills for ſeveral Parlours, ſo that the Converſation is very confuſed; for there being a different Company at every Grill, and the *Italians* ſpeaking generally loud, the Noiſe of ſo many Talkers is very diſgreeable. The Nuns talk very ungracefully, and allow themſelves a Liberty in rallying, that in other Places none could bear. About four Years ago the Patriarch intended to reform thoſe Houſes; but the Nuns of St. *Lawrence* told him plainly they were noble *Venetians*, who choſe that Way of Life as more convenient, but they would not ſubject themſelves to his Regulations; yet he came and would have ſhut up their Houſe, upon this they went to ſet Fire to it; upon which the Senate interpoſed, and ordered him to deſiſt. There is no Chriſtian State in the World that hath expreſſed ſuch a Jealouſy of Churchmen's getting into publick Councils as the *Venetians*; for as a noble *Venetian* that goes into Orders loſes his Right of going to vote in the Great Council, ſo when any of them are promoted to be Cardinals, the whole Family muſt, during their Lives, withdraw from the Council, and are alſo incapable of all Employments; and by a Clauſe which they added when they received the Inquiſition, which ſeemed of no great Conſequence, they have made it become a Court abſolutely ſubject to them; for it being provided, that the Inquiſitors ſhould do nothing but in the Preſence of ſuch as ſhould be deputed by the Senate to be the Witneſſes of their Proceedings, thoſe Deputies will not come but when they think fit, to ſtay longer then they are pleaſed with their Proceedings; ſo that either their Abſence, or their withdrawing, diſſolves the Court; for a Citation cannot be made, a Witneſs examined, or the leaſt Point of Form carried on, if theſe Deputies are not preſent. And thus, though there is a Court of Inquiſition at *Venice*, yet ſcarce any Perſon is brought into Trouble by it; and there are many Proteſtants that live there without any Diſturbance; and though there is a Congregation that have their Exerciſes of Religion very regularly, yet the Senate gives them no Trouble. It is true, the Hoſtie's not being carried about in Proceſſion, but privately by the Prieſt to the Sick, makes that uneaſy Diſcrimination of Proteſtant and Papiſt not offer itſelf here, as in other Places; for the Narrowneſs of the Streets, and the Channels through which one muſt go, makes this impracticable in *Venice*, as it is elſewhere; and from *Venice* this Rule is carried over their whole Territory, though the like Reaſon doth not hold in the *Terra Firma*.

The *Venetians* are generally ignorant of Matters of Religion to a Scandal; and they are as unconcerned in them, as they are Strangers to them: So all that vaſt Pomp in their Ceremonies, and Wealth in their Churches, is affected as a Point of Magnificence, or a Matter of Emulation among Families, rather than Superſtition; for the Atheiſm that is received by many here, is the dulleſt and coarſeſt Thing that can be imagined. The young Nobility are ſo generally corrupted, and ſo given up to ſupine Ignorance, that a Man cannot eaſily imagine to what a Height this is grown; and for Courage, there is ſcarce ſo much as the Ambition of being thought brave among the greater Part of them. It ſeem'd to me ſtrange to ſee the Broglio ſo full of graceful young Senators and Nobles, when there was a War on foot with the *Turks*; but inſtead of being heated in Point of Honour to hazard their Lives, they think it an extravagant Piece of Folly for them to go and expoſe them, when a little Money will hire Strangers that do it on ſuch eaſy Terms: And thus their Arms are in the Hands of Strangers, while they ſtay managing their Intrigues in the *Broglio*, and diſſolving their Spirits among their Courteſans: And their Service is of late Years ſo much ſunk, that is amazing to ſee ſo many come to a Service ſo decried, where there is little Care had of the Soldiers, and ſo little Regard paid the Officers: The Arrears are ſo ſlowly paid, and the Rewards are ſo ſcantily diſtributed, that, if they do not change their Maxims, they may come to feel this very ſenſibly: For their Subjects are not acquainted with War, their Nobility have no Ambition that Way, and Strangers are extremely diſguſted. It is chiefly to the

Conjuncture of Affairs that they owe their Safety; to the Feeblenefs of all their Neighbours, the *Turk*, the Emperor, the King of *Spain*, and the Pope preſerves them from the Apprehenſion of an Invaſion, and the Quarrels of their Subjects ſave them from the Fears of a Revolt; but a formidable Neighbour would put them hard to it. One great Occaſion of the Degeneracy of the *Italians*, and particularly of the *Venetian* Nobility, is a Maxim, that for the Preſervation of their Families it is fit that only one ſhould marry; to which I will not add, that it is generally believed, that the Wife is in common to the whole Family. By this Means the younger Brothers that have Appointments for Life, and no Families, are not ſtirred up by Ambition to ſignalize themſelves, and ſo give Way to all the Lazineſs of Luxury, and are quite enervated by it; whereas the beſt Services, done in other States, flow from the Neceſſities of younger Brothers, or their Families, whoſe Blood qualifies them to pretend, as their Pride and Neceſſities puſh them on, to acquire firſt a Repuation, and then a Fortune. But all this is a Myſtery to the *Venetians*, who apprehend ſo much from the active Spirits of a neceſſitous Nobility, that, to lay thoſe aſleep, they encourage them in all Things that may depreſs their Minds; and Youth naturally hates Letters as much as it loves Pleaſure, when ſo far from being reſtrained, that it is rather puſhed on to all the Licentiouſneſs of unlimited Diſorders.

Yet I muſt add one Thing, that though *Venice* is the Place in the whole World, where Pleaſure is moſt ſtudied, and where Youth have the greateſt Wealth, and moſt Leiſure to purſue it; yet it is the Place that I ever ſaw, where innocent Pleaſure is the leaſt underſtood. As for the Pleaſures of Friendſhip, or Marriage, they are Strangers to them; for the horrible Diſtruſt, in which they all live, makes it very rare to find a Friend in *Italy*, but moſt of all in *Venice*; and though we have been told of celebrated Friendſhips there, yet theſe are now no more. As for their Wives, they are bred in ſuch Ignorance, and converſe ſo little, that they know nothing but the Superſtition on Holidays, in which they ſtay in the Churches as long as they can, to prolong the little Liberty they have of going Abroad, as Children do their Hours of Play. They are not employed in domeſtick Affairs, and generally underſtand no Sort of Work; ſo that I was told, they were the inſipideſt Creatures imaginable. They are, perhaps, as vicious as in other Places, but it is among them downright Lewdneſs; for they are not drawn in by Amour; but in them the firſt Step, without any Preparative, is downright Beaſtlineſs. And an *Italian*, that knew the World well, ſaid a very lively Thing to me, that their Jealouſy made them reſtrain their Daughters and their Wives ſo much, that they could have none of thoſe domeſtick Entertainments of Converſation and Friendſhip, that the *French* or *Engliſh* have at Home. It is true, thoſe he ſaid hazard a little the Honour of their Families by that Liberty; but the *Italians*, by their exceſſive Caution, deprived themſelves of the true Delights of a married State; and notwithſtanding all their uneaſy Jealouſy, they were ſtill in Danger of a contraband Nobility. Therefore he thought they would do better to hazard a little, when it would produce a certain Satisfaction, than to watch ſo anxiouſly, and thereby have an inſipid Companion, inſtead of a lively Friend, though ſhe might perhaps have ſome ill Moments. As for their Houſes, they have nothing convenient at *Venice*; the Architecture is almoſt all the ſame, one Stair-caſe, a Hall that runs along the Body of the Houſe, and Chambers on both Hands; but no Apartments, no Cloſets, or Back ſtairs: So that in Houſes that are of an exceſſive Wealth, they have yet no Convenience. Their Bedſteads are of Iron, becauſe of the Vermin their Moiſture produces. The Bottoms are of Boards, upon which they lay ſo many Quilts, that it is a Step to get up to them. Their great Chairs are upright, without a Slope in the Back, hard in the Bottom, and the Wood of the Arms not covered. They mix Water with their Wine in their Hogſheads; ſo that for half the Year, it is either dead or ſour. They do not leaven their Bread, ſo that it is heavy; and the Oven is too much heated, ſo that the Crumb is Dough, when the Cruſt is as hard as a Stone. In all Inns they boil the Meat firſt before it is roaſted; and thus they make it tender, and quite taſteleſs and inſipid. And as for their Land carriage, all *Lombardy* over, it is extreme inconvenient; for their Coaches are faſtened to the Perch, which makes them as uneaſy as a Cart. It is true, they begin at *Rome* and *Naples* to have Coaches that are faſtened to a Sort of double Perch, that runs along the Bottom of the Coach on both Sides, which are ſo thin, that they ply to the Motion of the Coach, and are extreme eaſy; but thoſe are not known in *Lombardy*. And beſides this, their Calaſhes are open; ſo that one is expoſed to the Sun and Duſt in Summer, and to the Weather in Winter. But though they are covered as ours are, on the other Sides of the *Apennines*, yet I ſaw none that were covered in *Lombardy*. And thus, by an Enumeration of many of the innocent Pleaſures and Conveniencies of Life, it appears, that the *Venetians* purſue ſo violently forbidden Pleaſures, that they know not how to find what is allowable. Their conſtant Practices in the *Broglio* are their chief Buſineſs, where thoſe that are neceſſitous are ſuing for beneficial Employments, and thoſe full of Wealth take a Sort of Pleaſure in croſſing their Pretenſions. The Walk in which the Nobility tread, is left to them entirely; and they change the Side of the Square of St. *Mark*, as the Sun and Weather direct. Perhaps a Derivation that Mr. *Patin* gave me of *Broglio* from the *Greek Peribolaion*, a little corrupted, is not forced; and ſince they manage all their Intrigues in thoſe Walks, I am apt to think that *Broils*, *Brouillons*, and *Imbroilments*, are derived from the Agitations in thoſe Walks.

As for the late created Nobility of *Venice*, I came by ſome Particulars that are not yet ſeen in Books, which I ſuppoſe will not be unacceptable. It is certain, that if the *Venetians* could have foreſeen, at the Beginning of the War of *Candia*, the vaſt Expence in which it engaged them, they would have abandoned the Iſle, rather than waſted their Treaſure, and debaſed their Nobility. This laſt was highly ſenſible to them; for as the Dignity of the Rank they hold is the more eminent, as it is reſtrained to a ſmall Number; ſo all the beſt Employments and Honours of the State belonging to this Body, the admitting ſuch a Number into it, as muſt riſe out of ſeventy eight Families, was, in Effect, ſharing their Inheritance among ſo many adopted Brothers. This had been leſs diſagreeable, if they had communicated that Honour only to the ancient Citizens of *Venice*, or to the Nobility of thoſe States that they ſubdued in the *Terra Firma*: For as there are many Citizens, as ancient as the Nobility, only their Anceſtors not being of that Council that aſſumed the Government four hundred Years ago, they have not that Honour; ſo there had been no Infamy in promoting ſome of them to be of the Nobility. It had been alſo under Conſultation long ago, upon the Reduction of thoſe States in the *Terra Firma*, whether, according to the Maxims of the *Romans*, it was not fit to communicate that Dignity to ſome of their chief Families, as the ſureſt Way to give Contentment to thoſe States, it being a real, as well as a cheap Security, when the chief Families in thoſe Cities were admitted to ſhare the Honours of the Republick. It is true, ſome of thoſe Nobility thought they had Glory enough by their Birth, and *Zambara* of *Breſcia* refuſed this Honour from thoſe that had robbed his Country of its Liberty; but his Poſterity are of another Mind; for they came and bought in this laſt Sale of Honour that which was offered to their Anceſtor, and by him rejected.

When the Senate found itſelf preſſed for Money, it was at firſt propoſed, that ſome Families, to the Number of five, might be ennobled, they offering ſixty thouſand Ducats if *Venetians*, and ſeventy thouſand if Strangers. There was but one Perſon that oppoſed this in the Senate; ſo being paſſed there, it was preſented to the Great Council, and there it was like to have paſſed without Difficulty: But one Perſon oppoſed it with ſo much Vigour, that though the Duke deſired him to deſiſt, ſince the Neceſſities of the War required a great Supply, yet he perſiſted; and though one of the *Savi* ſet forth with Tears the Extremities to which the State was reduced, he fell upon a new Conceit that turned the whole Council. He ſaid, they were not ſure if five Perſons could be found, that would purchaſe at ſuch a Rate, and then it would be a vaſt Diſgrace to expoſe the Offer of Nobility firſt to Sale; and then to the Affront of finding no Buyers when it was offered: And by this Means he put by the Reſolution for that Time. But then another Method was taken, that was more honourable, and of a more extended Conſequence. *Labia* was the firſt that preſented a Petition to the Great Council, ſetting forth his Merits, and deſiring that he might be thought worthy to offer a hundred thouſand Ducats towards the Service of the State; that is, to be made noble at that Price. *Delfino* ſaid, he thought every Man might be well judged worthy to offer ſuch an Aſſiſtance to the Publick, and that ſuch as brought that Supply might expect a ſuitable Acknowledgment from the Senate, who might afterwards, of their own Accord, beſtow that Honour on thoſe that expreſſed ſo much Zeal for the Publick; and this would maintain that Degree, which would be debaſed, if it were bought and ſold. But it ſeems the Purchaſers had no Mind to part with their Money, and to leave the Reward to Gratitude; ſo the Petition was granted in plain Terms, and the Nobility ſo acquired was not only to deſcend to the Children of him that was ennobled, but to his Brothers, and the whole Family, to a certain Degree.

After *Labia*, a great many more came with the like Petitions, and it was not unpleaſant to ſee, in what Terms ſuch as came to buy this Honour, ſet forth their own Merits; which were, that they had furniſhed the Republick with Things neceſſary for its Preſervation. There was a Sort of a Triumvirate formed, of a *Jew*, a *Greek*, and an *Italian*, who were Brokers, and found out Cuſtomers, and at laſt brought down the Price from a hundred to ſixty thouſand Ducats; and no Qualifications were required, if they had Money enough. For when *Correge* ſaid to the Duke, that he was afraid to aſk that Honour for Want of Merit; the Duke aſked him, If he had a hundred thouſand Ducats? And when he anſwered, The Sum was ready, the Duke told him, That was a great Merit. At laſt ſeventy-eight purchaſed this Honour, to the great Regret of *Labia*, who ſaid, that if he had imagined ſo many would have followed him, he would have bid ſo high, that it ſhould have been out of their Power. It is true, many of the Purchaſers were ancient Families; but others were not only Merchants, but of the loweſt Sort of them; who as they had enriched themſelves by Trade, then impoveriſh'd themſelves by the Acquiſition of an Honour, that as it obliged them to give over, and put them in a higher Way of living, ſo it hath not brought them yet any Advantage to balance that Loſs; for they are ſo much deſpiſed, that they are generally excluded, when they contend with the ancient Nobility; tho' this is done with that Diſcretion, that the old Families do not declare always againſt the new: For that would throw the new into a Faction againſt them, which might be a Prejudice to them; for the new are much more numerous than the old. Another great Prejudice by this great Promotion is, that the chief Families of the Citizens of *Venice*, who had been long practiſed in the Affairs of State, and out of whom the Envoys, the Secretaries of State, and the Chancellor, that is the Head of the Citizens, as well as the Duke is the Head of the Nobility, are to be choſen, having purchaſed the chief Honour of the State, there is not now a ſufficient Number of capable Citizens left for ſerving in thoſe Employments; but this Defect will be redreſſed in Time.

But if this Increaſe of the Nobility hath leſſened the Dignity of the ancient Families, there is a Regulation made in this Age, that preſerves a conſiderable Diſtinction of Authority in their Hands. Crimes againſt the State, when committed by any of the Nobility, were always judged by the Inquiſitors, and the Council of Ten; all other Crimes were judged by the Council of Forty; but in the Year 1624, one of the Nobles was accuſed of Peculation committed in one of their Governments, and the *Avogadore*, in the Pleading, as he ſet forth his Crime, called him a *Rogue* and a *Robber*. Yet though his Crimes were manifeſt, there being but ſix and twenty Judges preſent, twelve only condemned him, and fourteen acquitted him. This gave great Offence; for though he was acquitted by his Judges, his Crimes were evident, ſo his Fame could not be reſtored: For the Depoſitions of the Witneſſes, and the *Avogadore*'s (or Attorney General's) Charge were heard by the People: It was propoſed to make a Difference between the Nobility and other Subjects; and ſince all Trials before the Forty were publick, and the Trials before the Ten ſecret, it ſeemed fit to remit the Nobility to be tried by the Ten. Some foreſaw that this would tend to a Tyranny, and raiſe the Dignity of the ancient Families (of whom the Council of Ten is compoſed) too high; therefore they oppoſed it upon this Ground, that ſince the Council of Forty ſent out many Orders to the Governors, it would leſſen their Authority, if they were not to be Judges of thoſe who were to receive their Orders. But, to qualify this, a Proviſo was made, that reſerved to the Council of Forty a Power to judge of the Obedience given to their Orders; but other Accuſations of the Nobility were remitted to the Council of Ten; and the Body of the Nobility were ſo pleaſed with this Diſtinction between them and other Subjects, that they did not ſee this really enſlaved them the more, and brought them under greater Danger; ſince thoſe who judge in Secret give freer Scope to their Paſſions, than thoſe in Publick; and who, in Effect, are to be judged by the Publick, which is a very effectual Reſtraint upon Judges themſelves. But the Council of Ten being in the Hands of the Great Families, whereas all Sorts are of the Council of Forty, formerly the chief Judicatory of the State, and much ancienter than that of Ten; it had been more wiſely done, to have been ſtill judged by the Forty: And if they thought it for their Honour to have a Difference made in judging the Nobility and other Subjects, it had been more for their Security to have brought the Trials of all other Offenders on with open Doors, and the Nobility, when they were judged, to have the Doors ſhut, which is what they very much deſire now, but without Hope of obtaining it: For this Power of judging the Nobility is conſidered as the Right of the Ten; and if any Man would go about to change it the Inquiſitors would be very quick with him, as a Mover of Sedition, and, in that Caſe, prove at once Judges and Parties. Yet the Inquiſitors, being apprehenſive of the Diſtaſte that this might breed in the Body of the Nobility, have made a Sort of Regulation, though it amounts not to much; which is, that the Nobility ſhall be judged before the Council of Ten for enormous Crimes; but that for other Matters, they are to be judged by the Forty; yet the Council of Ten draws all Caſes before them, and none dare diſpute with them.

This leads me to ſay a little to you of that Part of this Conſtitution ſo much cenſured by Strangers; but is really both the greateſt Glory, and chief Security of this Republick; which is, the unlimited Power of the Inquiſitors, that extends not only to the chief Nobility, but to the Duke himſelf, who is ſo ſubject to them, that they may not only give him Reprimands, but ſearch his Papers, make his Proceſs, and put him to Death, without being bound to give an Account of their Proceedings. This is the Dread not only of Subjects, but the whole Nobility, and makes the greateſt among them tremble, obliging them thereby to an exact Conduct. For though it cannot be denied, that, upon ſome Occaſions, they may have been a little too ſudden, as in the known Story of *Foſcarini*; yet ſuch Severities have occurred ſo ſeldom, that the Wiſdom of this Body, in making and preſerving ſuch an Inſtitution, cannot be enough admired. In ſhort, the Inſolence, the Neceſſities, and Ambition, that muſt needs poſſeſs many Members of ſo vaſt a Body, as the Nobility of *Venice*, muſt have thrown them often into many fatal

Convulſions, if it were not for the Dread in which they ſtand of this Court, which has ſo many Spies Abroad, among the Gondaliers, who cannot fail to diſcover all the ſecret Intrigues of *Venice:* Beſides the Advices that are thrown in at thoſe Lion's Mouths, that are in ſeveral Places of St. *Mark*'s Palace, within which there are Boxes under the Keys of the Inquiſitors; that it is ſcarce poſſible for a Man to be long in a Deſign againſt the State, and not to be diſcovered. And when they find any in Fault, they are ſo inexorable, quick, and ſevere in their Juſtice, that the very Fear of this is a Reſtraint, that perhaps the long Preſervation of *Venice*, and of its Liberty, is owing to.

The Inquiſitors are Perſons ſo diſtinguiſhed for their Merit, all of different Families, and their Authority laſts ſo ſhort a Time, that the Advantages of this vaſt Authority, lodged with them, are conſtant and viſible; whereas the unhappy Inſtances of their being impoſed on, and carrying Suſpicions too far, are ſo few, that whenever the Nobility grow weary of this Yoke, and throw it off, one may reckon the Glory and Proſperity of *Venice* at an End. It was terribly attacked not long ago by *Cornaro*, when *Jerom Cornaro* was put to Death for his Correſpondence with *Spain*. He was not a kin to the great Family of that Name; yet they thought their Honour was ſo much touched, when one of its remoteſt Branches was condemned of Treaſon, that they offered a hundred thouſand Crowns to have ſaved him, and preſerved the Family from that Infamy. But though this was not accepted (for he ſuffered, as he well deſerved) yet it was ſo viſible, that none of the Family were involved in his Crimes, that it did not at all turn to their Prejudice: But, upon the firſt Occaſion that offered after that, to quarrel with the Inquiſitors they laid hold on it, aggravated the Matter extremely, and moved for limiting their Authority: But the Great Council was wiſer than to touch ſo ſacred a Part of the Government; ſo they retain their Power, but manage it with all poſſible Caution. A Foreigner, many Years in their Service, told me, that the Stories with which Strangers were frighted at the arbitrary Power veſted in thoſe Inquiſitors, were ſlight Things in Compariſon of the Advantages they found from it; and after eleven Years ſpent in their Service, he ſaid, he never had ſo much as once received a Reprimand from them. And if the Nobility, that have any Commerce with Strangers, confeſs it, they are in no Danger; but if they conceal it, or any Circumſtances, their Proceſs will be ſoon diſpatched. I give no Credit to that which a Perſon of great Eminence aſſured me was true, that there was a Poiſoner-general in *Venice*, that had a Salary, and was employed by the Inquiſitors to diſpatch thoſe againſt whom a publick Proceeding would make too great a Noiſe. This I could not believe, though my Author proteſted, that the Brother of one that was ſolicited to accept of the Employment diſcovered it to him. There is no Place in the World where Strangers live with more Freedom, and I was amazed to ſee ſo little Exactneſs among the Searchers of the Cuſtom-houſe; for though we had a Mule's Load of Trunks and Portmanteaus, yet none offered to aſk us, either coming or going, what we were, or what we carried with us? But the beſt and nobleſt Entertainment that *Venice* afforded, while I was there, was the Company of M. *de la Haye*, the *French* Ambaſſador, who, as he hath ſpent his whole Life in publick Ambaſſies, ſo he has acquired ſo great a Knowledge of the World, with ſo true a Judgment, and ſo obliging a Civility, that he may well paſs for a Pattern; and it is no Wonder to ſee him engaged in a conſtant Succeſſion of publick Employments: And his Lady is ſo wonderful a Perſon, that I pay them but a very ſmall Part of what I owe them, in this Acknowledgment of their extraordinary Civilities: And indeed, without the Advantage of ſuch a Rendezvous, a Fortnight's Stay at *Venice* had been a very tedious Matter.

21. From *Venice* we went again to *Padua*, and thence to *Rovigo*, which is a ſmall Town, and ſo to the *Po*, which divides the Republick from the *Ferrareſe*, now the Pope's Territory; and here one ſees what Difference a good and bad Government makes in a Country; for though the Soil is the ſame on both Sides of the River, and the *Ferrareſe* was one of the beautifuleſt Spots of *Italy*, as *Ferrara* one of its beſt Towns, while they had Princes of their own, who for ſome Ages were Princes of ſuch Virtue, and of heroical Nobleneſs, that they were really the Fathers of their Country; nothing can be more changed than all this is now. The Soil is abandoned and uncultivated, nor were there Hands enough to mow their Graſs, which we ſaw withering in their Meadows, to our Wonder. We were amazed to ſee ſo rich a Soil thus forſaken of its Inhabitants; and more when we paſſed through that vaſt Town, which ſhews what it was about an Age ago, and now ſo much deſerted, that there are whole Streets without Inhabitants; and its Poverty appears ſignally in the Churches, which are mean and poor, for the Superſtition of *Italy* is ſo ravenous, and makes ſuch Progreſs, that one may juſtly take Meaſures of the Wealth of Places from the Churches. The Superſtition or Vanity of this Age is ſo much beyond that of the paſt, that all the vaſt Buildings of Churches, or rich Convents, and the ſurprizing Wealth that appears in them on Feſtival Days, are Donatives of the preſent Age. So that it is a vulgar Error ſome have taken up, who fancy that Superſtition is at a Stand, if not in Decay; unleſs it be acknowledged, that the Craft of Prieſts hath opened a new Method to ſupport their Riches, when the old ones of Purgatory and Indulgences were become leſs effectual; and that is, to engage Men in an Emulation in enriching their Churches, as much as other *Italians* have in enriching their Palaces; ſo that they have a Pleaſure as well as Vanity, in ſeeing ſo much dead Wealth in their Houſes and in their Churches. But to return to *Ferrara:* I could not but aſk, how it came, that ſo rich a Soil was ſo abandoned? Some ſaid, the Air was become unhealthy, that thoſe who ſtay were ſhort lived, but it is well known, that fourſcore Years ago it was well peopled, and thence it ſeems the ill Air is occaſioned by the Want of Inhabitants; for there not being People to drain, and to keep the Ditches clean, this makes a great deal of Water lie on the Ground and rot, which infects the Air, as is obſerved in that rich, but uninhabited Champaign of *Rome:* So that ill Air is the Effect, rather than the Cauſe, of the diſpeopling the Pope's Dominions. The true Cauſe is the Severity of the Government, the heavy Taxes, and frequent Confiſcations, by which the Nephews of Popes have devoured many Families of *Ferrara*, and have driven away many more. And this appears more viſibly, by the different State, as well as Conſtitution of *Bologna*, which is full of People that abound in Wealth; and the Soil, as it is extremely rich, ſo is it cultivated with all due Care; for *Bologna* ſubmitted itſelf upon a Capitulation, by which there are many Privileges reſerved to it. Crimes are only puniſhed in the Perſons of thoſe who commit them, but no Confiſcations of Eſtates; and though the Authority in criminal Matters belongs to the Pope, and is managed by a Legate and his Officers, yet the civil Government, the Magiſtracy, and the Power of Judicature in civil Matters, is entirely in the Hands of the State: And by this Regulation it is, that the Riches of *Bologna* amaze a Stranger, though it is neither on a navigable River, nor the Center of a Sovereignty, where a Court is kept; and the Taxes the Popes fetch from thence are ſo conſiderable, that he draws more from this Place of Liberty, than from thoſe where his Authority is unlimited and abſolute: For the Greatneſs of a Prince riſing from Numbers of Subjects, thoſe Maxims that retain the Subjects, and that draw Strangers, are certainly the trueſt for advancing the Greatneſs of the Maſter; and I could not but with Scorn obſerve the Folly of ſome *Frenchmen*, who made uſe of this Argument to ſhew the Greatneſs of their Nation, that one found many *Frenchmen* in all Places to which one came; whereas there were no *Engliſh*, *Dutch*, nor *Switzers*, and very few *Germans*; but this is juſt contrary to the Conſequence that ought to be drawn from this Obſer-

vation; for it is certain, that few leave their Country to ſettle elſewhere, if they are not preſſed at Home ſo, that they cannot well live among their Friends and Kindred.

But to return to the Wealth of *Bologna*, it appears in every Corner of the Town, and round it, though its Situation is not very favourable; for it lies at the Foot of the *Apennines*, on the North Side, and is very cold in Winter. The Houſes are built as at *Padua* and at *Bern*, ſo that one walks covered under Piazzas; but the Walks here are both higher and larger than elſewhere. There are many noble Palaces, and the Churches and Convents are incredibly rich: Within the Town the richeſt are the *Dominicans*, which is the chief Houſe of the Order, where their Founder's Body is laid in one of the beſt Chapels of *Italy*; and next to them are the *Franciſcans*, the *Servites*, the *Jeſuits*, and the Canons Regular of St *Salvator*. In this laſt there is a Scroll of the *Hebrew* Bible, which, though it is not the tenth Part of the Bible, they fancy to be the whole; and they were made to believe by ſome *Jew*, that hath no doubt ſold it at a high Rate, that it was written by *Ezra*'s own Hand, and this hath paſſed long for current; but the Manuſcript is only a fine Copy, like thoſe the *Jews* uſe in their Synagogues, that may be, perhaps, three or four hundred Years old: That Part on which I caſt my Eye, was the Book of *Eſther*; ſo by the Bulk of the Scroll, I judged it to be the Collection of thoſe ſmall Books of the *Old Teſtament*, that the *Jews* ſet after the Law. But thoſe of the Houſe fancy they have a great Treaſure in it; and perhaps ſuch *Jews* as have ſeen it, are willing to laugh at their Ignorance, and ſuffer them to go on in their Error. The chief Church of the Town is St. *Petrone*'s, and there one ſees the curious and exact Meridional Line, which that rare Aſtronomer *Caſſini* laid along a great Part of the Pavement in a Braſs Circle: It marks the true Point of Mid day from *June* to *January*, and is one of the beſt Performances that perhaps the World ever ſaw. In the great Square before the Church, on the one Side of which is the Legate's Palace; among other Statues, one ſurprized me; it was Pope *Joan*'s, or is ſo named by the People: It is true, the learned Men ſay it is the Statue of Pope *Nicholas* IV. who had a womaniſh Face; but as I looked at this Statue very attentively, through a little Perſpective that I carried with me, it appeared plainly to have the Face of a young Woman, and was unlike that of Pope *Nicholas* IV. which is in St. *Maria Maggiore* at *Rome*; for the Statue of that Pope, though it hath no Beard, yet hath an Age in it that is very different from the Statue at *Bologna*. I do not build any Thing on this Statue, for I do not believe that Story at all; and I myſelf ſaw in *England* a Manuſcript of *Martinus Polonus*, who is one of the ancient Authors of this Matter, which did not ſeem to be written long after the Author's Time; in it this Story is not in the Text, but is added on the Margin by another Hand.

On the Hill above *Bologna* ſtands the Monaſtery of St. *Michael in Boſco*, which hath a moſt charming Situation, and is one of the beſt Monaſteries in *Italy*; it has many Courts, and one that is octangular, which is ſo nobly painted in Freſco, that it is a great Pity to ſee ſuch Work expoſed to the Air; all was once retouched by the famous *Guido Reni*, but it is now much decayed: The Dormitory is very magnificent, the Chapel is little but very fine, and the Stalls are richly carved. On the other Side of *Bologna*, in the Bottom, the *Carthuſians* have alſo a very rich Monaſtery. Four Miles from *Bologna* there is a *Madona* of St. *Luke*'s; and becauſe many go in great Devotion there is a Portico building, which is carried on almoſt half Way; it is walled towards the North, but ſtands on Pillars to the South, and is about twelve Feet broad, and fifteen Feet high: It is carried on very vigorouſly, for in eight or ten Years half is built, and this may prove the Beginning of many ſuch Portico's in *Italy*; for Things of this Kind want only a Beginning, and when they are once ſet on Foot, they quickly ſpread in a Country that is ſo entirely ſubdued by Superſtition and the Artifices of Prieſts. In *Bologna* they reckon ſeventy thouſand Perſons; I ſaw not one of the chief Glories of this Place, for the famous *Malpighius* was out of Town. I ſaw a Play there, but the Poeſy was ſo bad, the Farces ſo rude, and all ſo ill acted, that I was not a little amazed to ſee the Company expreſs great Satisfaction in that which would have been hiſſed off the Stage either in *England* or *France*. From *Bologna* we go eight Miles in a Plain, and then advance into that Range of Hills that carry the Name of *Apennines*; though that is ſtrictly given only to one that is the higheſt. All the Way to *Florence* this Track of Hills continues, though there are ſeveral Bottoms, and ſome conſiderable Towns in them, but all is up-hill and down-hill, and *Florence* itſelf is juſt at the Bottom of the laſt Hill. The great Roads all along theſe Hills are kept in ſo good Order, that in few of the beſt inhabited Countries one finds the Highways ſo well maintained as in theſe forſaken Mountains; but this is ſo great a Paſſage, that all concerned in it find their Account in the Expence they lay out upon it. On the laſt, in a little Bottom in the Midſt of the Hill ſtands *Pratolino*, one of the Great Duke's Palaces, where the Retreat in Summer muſt be very agreeable, for the Air is extreme thin and pure. The Gardens in *Italy* are coſtly, the Statues and Fountains are very rich and noble, the Grounds well laid out, and the Walks long and even; but as they have no Gravel as we have in *England*, ſo the conſtant Greenneſs of the Box ſo much pleaſes them, that preferring the Sight to the Smell, their Gardens are ſo high ſcented by Box plots, that it is no Pleaſure to walk in them; they alſo lay their Walks ſo between Hedges, that one is confined in them.

I ſaw firſt, in a Garden at *Vincenza*, that which I found afterwards in many Gardens in *Italy*, which was very convenient; there went a Courſe of Water round the Walls, about a Foot from the Ground in a Channel of Stone, along the Side of the Wall; and in this there were Holes, ſo made, that a Pipe of white Iron or Wood put into them, conveyed the Water to ſuch Plants as in a dry Seaſon wanted watering; and a Cock ſet the Water a running in this Courſe, ſo that without the Trouble of drawing Water, a ſingle Perſon could eaſily manage a great Garden. *Florence* is a beautiful and noble Town, full of great Palaces, rich Churches, and ſtately Convents. The Streets are paved in Imitation of the old *Roman* Highways, with great Stones bigger than our Pavement Stone, but much thicker, which are ſo hollowed in their Joinings to one another, that Horſes find Faſtening enough for their Feet. There are many Statues and Fountains in the Streets, ſo that in every Corner one meets with many agreeable Objects. I will not entertain you with a Deſcription of the Great Duke's Palace and Gardens, of the old Palace, and the Gallery that joins it, and of the vaſt Collection of Pictures, Statues, Cabinets, and other Curioſities, that muſt needs amaze every one that ſees them; the Plate, and in particular the Gold Plate and great Coach, are ſuch extraordinary Things, that they would require a very copious Deſcription, if that had not been done ſo often. The great Dome is a magnificent Building, but the Frontiſpiece to the great Gate is not finiſhed: The Cupola is after St. *Peter*'s, the greateſt I ſaw in *Italy*; it is three hundred Feet high, and of a vaſt Compaſs; and the whole Architecture of this Fabrick is very ſingular, as well as regular; only that which was intended to add to its Beauty, leſſened it in my Thoughts; for the Walls, that are all of Marble, being white and black, laid in different Figures and Orders, looked too like a Livery and had not the Air of Nobleneſs, which in my Opinion becomes ſo glorious a Fabrick. The Baptiſtery, that ſtands before it, was a noble Heathen Temple; its Gates of Braſs are the beſt of that Sort that are in the World; there are ſo many Hiſtories ſo well repreſented in Bas relieves in them, with ſo much Exactneſs, the Work is ſo natural, and yet ſo fine, that a curious Man could find Entertainment for many Days, if he would examine the three Gates of this Temple with a critical Exactneſs. The *Annunciata*, St. *Mark*'s, St. *Croce*, and St. *Maria Novella*, are Churches of great Beauty and vaſt Riches; but the Church and Chapel of St. *Laurence* exceeds them all, as much in the Riches within, as it is inferior to them in the Outſide, which is quite flay'd. if I may ſo ſpeak, but on Deſign to give it a rich Outſide of Marble. In a Chapel within this Church, the Bodies of the Great Dukes lie depoſited, till the famous Chapel is finiſhed; but I was much ſcandalized to ſee Statues with Nudities here, which I do not remember to have ſeen any where elſe in Churches. I will not offer at a Deſcription of the glorious Chapel, which as it is, without Doubt, the richeſt Piece of Building that perhaps the World ever ſaw, ſo it goes on ſo ſlow, that tho' there are many always at Work, yet it doth not ſeem to advance proportionably to the Number of Hands that are employed in it.

Among the Statues that are to be in it, there is one of the Virgin, made by *Michael Angelo*, which repreſents her Grief at the Paſſion of her bleſſed Son, that hath the moſt Life in it of any Statue I ever ſaw. But the famous Library that belongs to this Convent, took up more of my Time than all the other Curioſities of *Florence*; for here is a Collection of many Manuſcripts, moſt of them *Greek*, that were gather'd together by Pope *Clement* VII. and given to his Country: There are very few printed Books mixed with them; and thoſe Books are ſo rare, that they are almoſt as curious as Manuſcripts. I ſaw ſome of *Virgil*'s Poems in old Capitals. There is a Manuſcript in which ſome Parts both of *Tacitus* and *Apuleius* are written; and in one Place, one in a different Hand had writ, that he had compared thoſe Manuſcripts; and he adds a Date to this in *Olibrius*'s Time, which is above twelve hundred Years ago: I found ſome Diphthongs in it caſt into one Letter, which ſurprized me; for I thought that Way of Writing had not been ſo ancient. But that which pleaſed me moſt was, that the Library-keeper aſſured me, that one had lately found the famous Epiſtle of St. *Chryſoſtom* to *Cæſarius*, in *Greek*, in the End of a Volume full of other Things, and not among the Manuſcripts of that Father's Books, of which they have a great many: He thought he remembered well the Place were the Book ſtood; ſo we turn'd over all the Books that ſtood near it, but I found it not; he promiſed to look it out for me, if I came back that Way; but I changing my Deſign, and going back another Way, could not ſee the Bottom of this. It is true, the famous *Magliabecchi*, who is the Great Duke's Library-keeper, and is a Perſon of wonderful Civility, and full of Candor, as well as learned beyond Imagination, aſſured me, that this could be no other than a Miſtake of the Library-keepers; he ſaid, ſuch a Diſcovery could not have been made without making ſo much Noiſe that he muſt have heard of it: He added, there was not one Man in *Florence* that either underſtood *Greek*, or that examin'd Manuſcripts; ſo that I could not build on what an ignorant Library-keeper had told me. *Florence* is much ſunk, for they do not reckon that there are above fifty thouſand Souls in it; and other States, that were once great Republicks, ſuch as *Sienna* and *Piſa*, while they retained their Liberty, are now ſhrunk into nothing; it is certain, that all three together are now not ſo numerous as any one of them was two hundred Years ago. *Legborn* is full of People, and all round *Florence* there are a great many Villages; but as one goes over *Tuſcany*, it appears ſo diſpeopled, that one cannot but wonder to find a Country, that hath been the Scene of ſo much Action, and ſo many Wars, now ſo poor, and in many Places the Soil is quite neglected, for Want of Hands to cultivate it; and in other Places where there are more People, they look ſo poor and their Houſes are ſuch Ruins, that it is ſcarce accountable how there ſhould be ſuch Poverty in ſo rich a Country, which is full of Beggars; and the Style a little altered from what I found it in *Lombardy*; for whereas they begged for the Sake of St. *Anthony*, here all begged for the Souls in Purgatory; and this was the Style in all other Parts of *Italy* through which I paſſed.

In ſhort, the diſpeopling of *Tuſcany*, and moſt of the Principalities of *Italy*, but chiefly the Pope's Dominions, which are more abandoned than any other, ſeemed to flow from the Severity of the Government, the Decay of Trade, and the Weight of the Taxes, which notwithſtanding that Decay of Trade, are ſtill kept up; beſides, the vaſt Wealth of the Convents, where the only People of *Italy* are to be found, that live at their Eaſe, and in great Plenty, and makes many forſake all Sort of Induſtry, and ſeek ſuch a Retreat; ſo that the People do not increaſe faſt enough to make a new Race, inſtead of thoſe whom a hard Government drives away. It muſt needs ſurprize an attentive Traveller, to ſee not only the *Venetian* Territory, which is indeed a rich Country, but the Bailiages of the *Switzers*, and the Coaſt of *Genoa*, ſo full of People, when *Tuſcany*, the Patrimony, and the Kingdom of *Naples* have ſo few Inhabitants. In the Coaſt of *Genoa* there is, for many Miles, as it were a conſtant Tract of Towns and Villages, and all well peopled, though they have ſcarce any Soil at all, lying under the Mountains, that are barren, and that expoſe them to a moſt uneaſy Sun, and lie upon a boiſterous Sea, that is almoſt always in a Storm; that affords very few Fiſh; yet the Gentleneſs of the Government draws ſuch Multitudes thither, and thoſe are ſo wealthy, that Money brings but two *per Cent.* But to balance this, ſo ſtrange and wild a Thing is the Nature of Man, at leaſt of *Italians*, that I was told, the worſt People of *Italy* are the *Genoeſe*, and the moſt corrupted in their Morals, as to all Sorts of Vice; ſo that though a ſevere Government and Slavery are contrary to the Nature of Man, and to human Society, to Juſtice and Equity, and to that eſſential Equality among Men; yet, on the other Hand, all Men cannot bear that Eaſe and Liberty that become the human Nature. The Superſtition of *Italy*, and the great Waſte of Wealth in their Churches, particularly thoſe prodigious Maſſes of Plate with which their Altars are covered on Holidays, ſink their Trade extremely; for Silver being in Commerce, what Blood is in the Body, when ſo much is dead, and cirlculates no more, it is no Wonder if ſuch an unnatural Extravaſation of Silver occaſions a great Deadneſs in Trade. I had a moſt forgot a Remark that I made on the laſt Hill of the *Apennines*, juſt above *Florence*, that I never ſaw ſuch tall and large Cypreſſes any where, as grew all over that Hill; which ſeemed a little ſtrange, that Tree being apt to be ſtarv'd by a cold Winter among us, and there the Winters are very ſevere. All the Roads in *Tuſcany* are very rugged, except on the Sides of the *Arno*; but the Uneaſineſs of the Road is much qualified by the great Care that is had of the Highways, which are all in very good Condition. The Inns are wretched, and ill furniſhed both for Lodging and Diet: This is the Plague of all *Italy*, for except in the great Towns, one really ſuffers ſo much, that the Pleaſure of Travelling is much abated by the Inconveniencies that one meets in every Stage through which he paſſes.

22. I am now in the laſt Stage of my Voyage; for ſince my laſt, I have not only got to *Rome*, but have been in *Naples*; and have now ſatisfied my Curioſity ſo fully, that I intend to leave this Place within a Day or two, and go to *Civita Vecchia*, and from thence by Sea to *Marſeilles*, and avoid an unpleaſant Winter's Journey over the *Alps*. It is true, I loſe the Sight of *Turin*, *Genoa*, and ſome other Courts; but though I am told theſe deſerve the Pains of the Journey, yet when one riſes from a great Meal, no Delicacies, how much ſoever they might tempt at another Time, can provoke his Appetite: So I confeſs freely, that the Sight of *Naples* and *Rome* have ſo filled my Stomach that Way, that the Curioſity of ſeeing new Places is now very low with me; and indeed thoſe I have of late ſeen are ſuch, that Places, which at another Time would pleaſe me, would now make but a ſlight and cold Impreſſion.

All the Way from *Florence*, through the Great Duke's Country, look'd ſo ſad, that I concluded it muſt be the moſt diſpeopled of all *Italy*; but I changed my Note when I came into the Pope's Territories at *Pont Centio*, where there was a rich Vale all uncultivated, and not ſo much as ſtocked with Cattle. But as I paſſed from *Mont Fiaſcone* to *Viterbo*, this appeared ſtill more amazing; for a vaſt champaign Country lay quite deſerted, and that wide Town, which is of ſo great a Compaſs, hath ſo few Inhabitants, and thoſe ſo poor and miſerable, that the People in the ordinary Towns of *Scotland* and worſt Places, make a much better Appearance. When I was within a Day's Journey of *Rome*, I fancied that the Neighbourhood of ſo great a City muſt mend the Matter, but was much diſappointed; for a Soil that was ſo rich, and lay ſo ſweetly, that it far exceeded any Thing I ever ſaw out of *Italy*, had neither Inhabitants nor Cattle to the tenth Part of what it could bear: The Suprize that this gave me, increaſed upon me as I went out of *Rome* on the other Side, chiefly all the Way to *Naples*, and on the Way to *Civita Vecchia*; that vaſt and rich champaign Country that runs along to *Terracina*, which from *Civita Vecchia* is above one hundred Miles long, and in many Places twelve or twenty Miles broad, is ſo abandonded, that as far as one's Eye can carry one, there is often not ſo much as a Houſe to be ſeen, but on the Hills that are on the North Side of this Valley: And by this diſpeopling of the Country, the Air is now become ſo unwholeſome, that it is not ſafe to be a Night in it all the Summer long; for the Water that lies upon many Places not being drained, it rots; and in the Summer this produces ſo many noiſome Steams, as are felt even in *Rome* itſelf; and if it were not for the Breezes that come from the Mountains, the Air would be intolerable: When one ſees all this large but waſte Country, from the Hill of *Marino*, twelve Miles beyond *Rome*, he cannot wonder enough at it. It is the Rigour of the Government that hath driven away the Inhabitants; and their being driven away, hath reduced it to ſuch a paſs, that it is hardly poſſible to repeople it; for ſuch as would come to drain and cultivate it muſt run a great Hazard; and few can reſolve on that, when they can hope for no Reward of their Induſtry.

It is the greateſt Solecism in Government, for the Prince to be elective, and yet abſolute; for an hereditary Prince is induced to conſider his Poſterity, and to maintain his People ſo, that thoſe that come after him may ſupport the Rank which they hold in the World: But an elective Prince hath nothing of that in his Eye, unleſs he hath a Generoſity which is not ordinary among Men, and leaſt of all among *Italians*, who have a Paſſion for their Families not known in other Places: And thus a Pope, who comes in late to his Dignity, which by Conſequence he cannot hope to hold long, very naturally turns to thoſe Councils, by which his Family may make all the Hay they can during this Sun-ſhine. And though anciently the Cardinals were a Check upon the Pope, and a Sort of a Council, without whom he could do nothing even in Temporals, yet now they have quite loſt that, and have no other Share in Affairs than that to which the Pope thinks fit to admit them; ſo that he is the moſt abſolute Prince in *Europe*. It is true, as to Spirituals, they retain ſtill a large Share; ſo that in Cenſures and Definitions the Pope can do nothing without their Concurrence, though it is certain, that they have not ſo good a Title to pretend to that, as to a Share in the temporal Principality. For if the Pope derives any Thing from St. *Peter*, all that is ſingly in himſelf, and it is free to him to proceed by what Method he thinks beſt, ſince the Infallibility, according to their Pretenſions, reſts in him alone; yet becauſe there was not ſo much to be got by acting arbitrarily in thoſe Matters, and a ſummary Way of exerciſing this Authority might have tempted the World to have enquired too much into the Grounds on which it is built; therefore the Popes have let the Cardinals retain ſtill a Share in this Supremacy over the Church, tho' they have no Claim to it, either by divine or eicleſiaſtical Warrants: But as for the Endowments of the See of *Rome*, to which they may juſtly lay Claim, as being in a Manner the Chapter of that See; there is ſo much to be got by this, that the Popes have engroſſed it to themſelves. And thus it is, that the Government of this Principality is very unſteady. Sometimes the papal Family are glorious and magnificent; at other Times they think of nothing but of eſtabliſhing their Houſe. Sometimes the Pope is a Man of Senſe himſelf; ſometimes he is quite ſunk, and, as the laſt Pope was, becomes a Child again thro' old Age: Sometimes he has a particular Stiffneſs of Temper, with great Slowneſs of Underſtanding, and an inſatiable Deſire of heaping up Wealth, which is the Character of him that now reigns. By this Diverſity, which appears eminently in every new Pontificate, that commonly avoids thoſe Exceſſes that made the former Reign odious, the Councils of the Popedom are weak and disjointed. But if this is ſenſible to all *Europe*, with Relation to the general Concerns of that Body, it is much more viſible in the Principality itſelf, that is ſubject to ſo variable a Head. There hath been in this Age a Succeſſion of four ravenous Reigns; and tho' there was a ſhort Interruption in the Reign of the *Roſpiglioſi*, that coming after the *Barbarini*, the *Pamphili*, and the *Ghigis*, did not enrich itſelf; and yet it diſorder'd the Revenue, by the vaſt Magnificence in which he reigned, more in twenty-nine Months Time, than any other had done in ſo many Years. The *Altieri* did in a moſt ſcandalous Manner raiſe themſelves, in a very ſhort and deſpiſed Reign, and built one of the nobleſt Palaces in *Rome*.

He that reigns now doth not raiſe his Family avowedly, but he eaſes not the People of their Taxes; and as there is no Magnificence in his Court, or any publick Buildings now carrying on at *Rome*, ſo the many vacant Caps occaſion many empty Palaces; and by this Means there is ſo little Expence, that it is not poſſible for the People to live and Pay the Taxes; which hath driven, as it is believ'd, almoſt a fourth Part of the Inhabitants out of *Rome* during this Pontificate. And as the Pre-emption of the Corn makes, that there is no Profit made by the Owners out of the Cultivation of the Soil, all that going wholly to the Pope; ſo there are no Ways left here of employing Money to any conſiderable Advantage; for the publick Banks, which are all in the Pope's Hand, do not pay in Effect three *per Cent.* tho' they pretend to give four *per Cent.* Intereſt: The Settlement is indeed four *per Cent.* and this was thought ſo great an Advantage, that Actions on the Pope's Bank were bought at an hundred and ſixteen *per Cent.* But this Pope broke through all, and declared he would give all Men their Money again, unleſs they would pay him thirty *per Cent.* for the continuing of this Intereſt: And thus for a hundred Crowns Principal, one not only paid ae firſt an hundred and ſixteen, but afterwards thirty, in all, an hundred forty-ſix for the hundred; which is almoſt the half loſt; for whenſoever the Pope will pay back their Money, all the reſt is loſt. And now, there is a Report, that the Pope is treating with the *Genoeſe* for Money at two *per Cent.* and if he gets it on thoſe Terms, he will then pay his Debts; and the Subjects, that have Money in this Bank, will by this Means loſe ſix and forty *per Cent.* which is almoſt half of their Stock. A Man of Quality at *Rome*, and an eminent Churchman, who took me for one of their Clergy, becauſe I wore the Habit of a Churchman, ſaid, it was a Scandal to the Chriſtian World, and made one doubt the Truth of the Chriſtian Religion, to ſee more Oppreſſion in their Territory, than was to be found in *Turkey*; tho' in the Hands of *Chriſt*'s Vicar. And I can never forget the Reflection a *Roman* Prince made upon the Folly of thoſe ſevere Oppreſſions, which as they drive away the Inhabitants, ſo they reduce thoſe that are left to ſuch Degeneracy of Spirit by their Neceſſities. The *Spaniards*, whoſe Dominions look ſo big in the Map, are brought ſo low, that if they had ſtill kept the Poſſeſſion they once had of the *United Netherlands*, they would ſignify no more towards their Preſervation, than their other Provinces did, which, by their unſkilful Conduct, they have diſpeopled and exhauſted: Whereas, by their loſing the Seven Provinces, thoſe States have fallen upon ſuch wiſe Notions of Government, and have drawn ſuch Wealth, and ſuch Numbers of People together, that *Spain* itſelf was preſerved by them, and was ſaved in this Age by the Loſs of thoſe Provinces in the laſt: And thoſe States, that, if they had remained ſubject to *Spain*, would have ſignified little to its Support, did now more conſiderably, by being Allies, than they could have done, if they had not ſhaken off their Yoke. Indeed, if *Spain* had been ſo happy as to have ſuch Viceroys and Governors, as at this Time in *Naples*, their Affairs could not have declined ſo faſt as they have done. The Marquis of *Carpy*, in his Youth, intended to have taken ſo ſevere a Revenge of an Injury that he thought the late King of *Spain* did him in an Amour, that he deſigned the blowing him up by Gunpowder, when he was in the Council-chamber. But that Crime was diſcovered in Time, and was not only forgiven him, in Conſideration of the Greatneſs of his Family, he being the Son of Don *Lewis de Haro*, but after that he was made for ſeveral Years Ambaſſador at *Rome*: He is now Viceroy of *Naples*, and is the only Governor of all the Places through which I paſſed, that is, without Exception, beloved and eſteemed by all Sorts of People; for during the few Years of his Miniſtry, he hath redreſſed ſuch Abuſes as ſeemed paſt Cure, or that required an Age to correct them. He hath repreſſed the Inſolence of the *Spaniards* ſo much at *Naples*, that the Natives have no Occaſion to complain of the Haughtineſs of their Maſters; for he proceeds againſt the *Spaniards* with no leſs Severity, when they give Cauſe for it, than againſt the *Neopolitans*. He hath taken the Pay of the Soldiers ſo immediately into his own Care, that they, who, before his coming, were half naked, and robbed ſuch as paſſed thro' the Streets of *Naples* in Day-light, are now exactly paid, well diſciplined, and ſo decently clothed, that it is a Pleaſure to ſee them. He examines their Muſters ſo exactly, that he is ſure not to be cheated by falſe Liſts. He hath brought the Markets and Weights of *Naples* to a true Exactneſs; and whereas the Bread was generally too light, he has ſent for Loaves out of ſeveral Places of the Markets, and weighed them himſelf; and by ſome ſevere Puniſhments on thoſe that ſold the Bread too light, he hath brought this Matter to a juſt Regulation. He hath alſo brought the Courts of Judicature, that were thought generally very corrupt, into Reputation again; and 'tis believed he hath Spies to watch in Caſe Bribes are ſtill going on. He hath fortified the Palace, which was before his Time ſo much expoſed, that it would have been no hard Thing to have made a Deſcent and ſeized it.

But the two Things that raiſed his Reputation moſt are, his extirpating the Banditti, and the Regulation of the Coin. It is well known, what a Plague the Banditti have been to the Kingdom; for they, in Troops, not only robbed the Country, but were able to reſiſt an ordinary Body of Soldiers. Theſe travelled about ſeeking for Spoil all the Summer long; but in Winter they were harboured by ſome of the *Neapolitan* Barons, who gave them Quarters, and did not only thereby protect their own Lands, but had them as ſo many Inſtruments ready to execute their Revenges on their Enemies. This was well known at *Naples*, and there was a Council that had the Care of the reducing the Banditti committed to them, who, as they catched ſome few, and hanged them, ſo they fined ſuch Barons as gave them Harbour; and it was believed, that thoſe Fines amounted to near a hundred and fifty thouſand Crowns a Year: And thus the Diſeaſe went on, only now and then there was a little Blood let, which never went to the Bottom of the Diſtemper. But when the preſent Viceroy entered upon the Government, he reſolved to extirpate all the Banditti; and he firſt let all the Barons underſtand, that, if they harboured them any more, a little Fine would not ſave them, but that he would proceed againſt them with the utmoſt Severity; and by this Means the Banditti could find no Winter Quarters, which drove them to ſome Faſtneſſes among the Hills, and they reſolved to make good the Paſſes, and to accommodate themſelves the beſt they could amidſt the Mountains. The Viceroy ſent a great Body againſt them, but they defended themſelves for ſome Time vigorouſly, and in one Sally killed five hundred Men: But at laſt, ſeeing that they were hard preſſed, and that the Viceroy intended to come againſt them in Perſon, they accepted of the Terms that he offered, which were a Pardon for what was paſt, both as to Life and Gallies, and Sixpence a Day for their Subſiſtence in Priſon during Life, or the Viceroy's Pleaſure; and ſo they ſurrendered themſelves. They are kept in a large Priſon, and now and then, as he ſees Cauſe for it, he ſends ſome few of them up and down to ſerve in Garriſons. And thus, beyond all Mens Expectations, he finiſhed this Matter in a very few Months; and the Kingdom of *Naples*, that had been ſo long a Scene of Pillage and Robbery, is now ſo much changed, that no Place in *Europe* enjoys a more entire Security. As for the Coin, it, as all the other *Spaniſh* Money, is ſo ſubject to Clipping, that the whole Money of *Naples* became light, and far below the true Value; ſo the Viceroy reſolved to redreſs this. He conſiders, that the crying-down of Money that paſſeth upon the publick Credit, is a robbing thoſe in whoſe Hands the Money happens to be, when ſuch Proclamations are iſſued; and therefore he takes a Method that is more general, in which every one bears his Share, ſo that none will be cruſhed by it. He laid Taxes on the whole Kingdom, and got a great many to bring in Plate to be coined; and when he hath thus obtained ſuch a Quantity, as may ſerve for the Circulation that is neceſſary, he intends to call in all the old Money, and to give new for it. Thus this Viceroy ſets ſuch a Pattern to the other Miniſters of the Crown of *Spain*, that, if many would follow, the State of their Affairs would be ſoon altered.

The Kingdom of *Naples* is the richeſt Part of *Italy*; for the very Mountains, that make near half the Soil, are fruitful, and produce either Wine or Oil in great Abundance. *Apulia* is a great Corn Country, but it is exceſſive hot, and in ſome Years is all burnt up. The Jeſuits are the Proprietors of near half *Apulia*, and they treat their Tenants with the ſame Rigour that the Barons of this Kingdom generally uſe towards their Farmers: For the Commons here are ſo miſerably oppreſſed, that in many Places they die of Hunger, even amidſt the great Plenty of their beſt Years: For the Corn is exported to *Spain*, but neither *Spaniards* nor *Neapolitans* underſtand Trade ſo well, as to be their own Merchants or Carriers; ſo that the *Engliſh* generally carry the Profit of this Trade. The Oil of this Kingdom is ſtill a vaſt Trade, and the Manufactures of Wool and Soap in *England* conſumes yearly ſome thouſands of Tuns. The Silk Trade is ſo low, that it only ſerves themſelves, but the Exportation is inconſiderable. The Sloth and Lazineſs of this Nation render them incapable of making thoſe Advantages of ſo rich a Soil, that more induſtrious People would find out. For it amazes a Stranger to ſee in their little Towns, the Men walking in the Market-places in their torn Cloaks, and doing nothing. And though in ſome large Towns, ſuch as *Capua*, there is but one Inn, yet even that is ſo miſerable, that the beſt Room and Bed is ſo bad, that our Footmen in *England* would make a grievous Outcry, if they were no better lodged. Nor is there any thing to be had in them; the Wine is intolerable, the Bread ill baked, no Victuals, except Pigeons, and the Oil ſtinking. In ſhort, except one carries his whole Proviſion from *Rome* or *Naples*, he muſt reſolve to endure a good deal of Miſery in the four Days Journey that is between thoſe two Places. And this is what a Traveller, that ſees the Soil, cannot comprehend. But as they have not Hands enough, ſo thoſe they have are generally ſo little employed, that it is no Wonder to ſee their Soil produce ſo little, that in the Midſt of all that Abundance Nature hath ſet before them, they are one of the pooreſt Nations in *Europe*. But beſide this which I have named, the vaſt dead Wealth that is in the Hands of the Churchmen, is another evident Cauſe of their Miſery. One that knew the State of this Kingdom well, aſſured me, that if it were divided into five Parts, upon a ſtrict Survey it would be found, that the Churchmen had four Parts of the five; which he made thus out. They have in Soil above the half of the whole; which is two and a half; and in Tithes, and Gifts, and Legacies, they have one and a half more: For no Man dieth without leaving a conſiderable Legacy to ſome Church or Convent. The Wealth that one ſees in the City of *Naples* alone, paſſeth Imagination. There are four and twenty Houſes of the Order of the *Dominicans*, of both Sexes, and two and twenty of the *Franciſcans*; ſeven of the Jeſuits, beſide the Convents of the *Olivitanes*, the *Theatines*, the *Carmelites*, the *Benedictines*; and above all, for Situation and Riches, the *Carthuſians*, on the Top of the Hill that lieth over the Town. The Riches of the *Annunciata* are prodigious; it is the greateſt Hoſpital in the World; the Revenue is ſaid to be four hundred thouſand Crowns a Year. The Number of the Sick is not ſo great as at *Milan*, yet one Convenience for their Sick I obſerved in their Galleries, which was conſiderable, that every Bed ſtood as in an Alcove, and had a Wall on both Sides, ſeparating it from the Beds on both Hands, and ſo much void Space on both Sides of the Bed, that the Bed itſelf took up but half the Room. The young Children that they maintain are ſo many, that one can hardly believe the Number they boaſt of; for they talk of thouſands that are not ſeen, but are at Nurſe. A great Part of the Wealth of this Houſe goes to the enriching their Church, which will be all over within cruſted with lovely Marble, in a great Variety and Beauty of Colours. The Plate that is in the Treaſury here, and in the Dome (which hath a noble Chapel, and a vaſt Treaſure) and in a great many other Churches, is ſo prodigious, that upon the modeſteſt Eſtimate, the Plate of the Churches of *Naples* amounts to eight Millions of Crowns. The new Church of the Jeſuits, that of St. *John* the Apoſtle, and that of St. *Paul*, are ſurprizingly rich. The Gilding and Painting that is on the Roofs of thoſe Churches have coſt Millions; and as there are about an hundred Convents in *Naples*, ſo every one of theſe, if it were in another Place, would be thought well worth ſeeing.

A new Governor of the *Annunciata* is annually choſen, who perhaps puts into his own Pocket twenty thouſand Crowns; and to make ſome Compenſation, when he goes out he gives a vaſt Piece of Plate to the Houſe, a Statue for a Saint in Silver, or ſome Coloſs of a Candleſtick; for ſeveral of thoſe Pieces of Plate are ſaid to be worth ten thouſand Crowns. And thus all the Silver of *Naples* becomes dead and uſeleſs. The Jeſuits are great Merchants here; their Wine-cellar is a vaſt Vault, and holds above a thouſand Hogſheads, and the beſt Wine in *Naples* is ſold by them; yet they do not retail it ſo ſcandalouſly as the *Minims* do, who live on the great Square before the Viceroy's Palace, and ſell out their Wine by Retail. They pay no Duty, have extraordinary Wine, and are in the beſt Place of the Town for this Retail. It is true, the *Neapolitans* are no great Drinkers, ſo the Profits of this Tavern are not ſo great as they would be in colder Countries; for here Men go for a Draught in the Mornings, or when they are dry; yet the Houſe grows rich, and has one of the fineſt Chapels in all *Naples*; but the Trade ſeems very unbecoming Men of that Profeſſion, and of ſo ſtrict an Order. The Convents have a very particular Privilege, for they may buy all the Houſes that lie on either Side, till the firſt Street diſcontinueth the Houſes; and there being ſcarce a Street in *Naples* in which there is not a Convent, by this Means they may come to buy the whole Town: And the Progreſs that the Wealth of the Clergy makes is ſo viſible, that if there is not ſome Stop put to it, within an Age they will make themſelves Maſters of the whole. It is amazing to ſee ſo profound an Ignorance reign among the Clergy; for though all the ſecular Perſons here ſpeak of them with all poſſible Scorn, yet they are the Maſters of the People. The Women are infinitely ſuperſtitious, and give their Huſbands no Reſt, but as they draw from them great Preſents to the Church.

It is true, there are Societies of Men at *Naples*, of freer Thoughts than can be found in any other Place of *Italy*. The *Greek* Learning begins to flouriſh there, the new Philoſophy is much ſtudied, and there is an Aſſembly that is held in D. *Joſeph Valeta*'s Library, (where there is a vaſt Collection of well-choſen Books) compoſed of Men that have a right Taſte of true Learning and good Senſe. They are ill-looked on by the Clergy, and repreſented as a Set of Atheiſts, and as the Spawn of *Pomponatius*. But I found no ſuch Thing; for I had the Honour to meet twice or thrice with a conſiderable Number of them during the ſhort Stay that I made. There is a learned Lawyer, *Franciſco Andria*, that is conſidered as one of the moſt inquiſitive Men of the Aſſembly. There is alſo a Grandchild of the great *Alciat*, who is very curious as well as learned. Few Churchmen come into this; on the contrary, it is plain, that they dread it above all Things. Only one eminent Preacher, *Rinaldi*, Archdeacon of *Capua*, aſſociates himſelf with them. He was once of the Jeſuits Order, but left it; and as that ſerved to give a good Character of him to me, ſo upon a long Converſation, I found a great many other Things that poſſeſſed me with a high Value for him. Some Phyſicians in *Naples* are brought under the Scandal of Atheiſm; and it is certain, that in *Italy*, Men of ſearching Underſtandings, who have no Idea of the Chriſtian Religion, but that which they ſee received, are very naturally tempted to diſbelieve it; for finding ſuch notorious Cheats as appear in many Parts of their Religion, they are, upon that, induced to diſbelieve the whole. The Preachings of the Monks in *Naples* are terrible Things. I ſaw a Jeſuit go in a Sort of Proceſſion, with a great Company about him, and calling all that he ſaw to follow him to a Place where a Mountebank was ſelling his Medicines, near whom he took his Stand, and entertained the People with a Sort of a Farce, till the Mountebank got him to give over, fearing his Action ſhould grow tedious, and diſperſe the Company that was brought together. There are no Preachers or Men of Learning among the Jeſuits. I was told they had not Men capable to teach their Schools, and were forced to hire Strangers. The Order of the Oratory hath not that Reputation in *Italy* as in *France*; and the little Learning that is among the Clergy in *Naples*, is among ſome few ſecular Prieſts.

The new Method of *Molinos* ſo much prevails in *Naples*, that it is believed he hath above twenty thouſand Followers in this City. And ſince this hath made ſome Noiſe in the World, and yet is generally but little underſtood, I will give you ſome Account of him. He is a *Spaniſh* Prieſt, that ſeems to be but an ordinary Divine, and is certainly an ill Reaſoner, when he undertakes to prove his Opinions. He hath wrote a Book, which is entitled, *Il Guida Spirituale*, which is an Abſtract of myſtical Divinity; the Subſtance of the whole is reduced to this, That in our Prayers, and other Devotions, the beſt Methods are to retire the Mind from all groſs Images, and ſo to form an Act of Faith, and thereby to preſent ourſelves before God; and then to ſink into a Silence and Ceſſation of new Acts, and to let God act upon us, and ſo to follow his Conduct. This Way he prefers to the Multiplication of many Acts, and different Forms of Devotion; and he makes ſmall Account of corporal Auſterities, and reduces all the Exerciſes of Religion to this Simplicity of Mind. He thinks this not only fit to be propoſed to ſuch as live in religious Houſes, but to ſecular Perſons, and by this he hath propoſed a great Reformation of Minds and Manners. He hath many Prieſts in *Italy*, but chiefly in *Naples*, that diſpoſe thoſe who confeſs to them to follow his Method. The Jeſuits have ſet themſelves much againſt this Conduct, as foreſeeing that it will much weaken the Empire Superſtition hath over the People, make Religion become a more plain Thing, and open a Door to Enthuſiaſm. They alſo pretend that his Conduct is factious and ſeditious, which may breed a Schiſm in the Church. And becauſe he ſaith in ſome Places, that the Mind may attain ſuch a Simplicity in its Acts, as that it may riſe in ſome Devotions to God immediately, without contemplating the Humanity of Chriſt, they have accuſed him of laying aſide the Doctrine of Chriſt's Humanity; though it is plain, that he ſpeaks only of the Purity of ſingle Acts: Upon theſe Motives they have ſet themſelves much againſt *Molinos*; and alſo pretend, that ſome of his Diſciples have infuſed into their Penitents, that they may communicate as they find themſelves diſpoſed, without going firſt to Confeſſion; which they thought weakened the Yoke whereby the Prieſts ſubdue the Conſciences of the People to their Conduct; yet he was much ſupported both in *Naples* and in *Sicily*, and had many Friends and Followers at *Rome*. So the Jeſuits, as a Provincial of the Order aſſured me, finding they could not ruin him, got a great King, that is now extremely in the Intereſts of their Order, to repreſent to the Pope the Danger of ſuch Innovations.

It is certain, the Pope underſtands the Matter very little, and that he is poſſeſſed with a great Opinion of *Molinos*'s Sanctity; yet upon the Complaints of ſome Cardinals, that ſeconded the Zeal of that King, he and ſome of his Followers were clapp'd into the Inquiſition, where they have been now for ſome Months; but they are well uſed, which is believ'd to flow from the good Opinion the Pope hath of him, who ſaith ſtill, that though he may have erred, yet he is certainly a good Man. Upon this Impriſonment, *Paſquin* ſaid a pleaſant Thing. In one Week, one Man had been condemned to the Gallies for ſomewhat he had ſaid; another had been hanged for ſomewhat he had writ; and *Molinos* was clapp'd in Priſon, whoſe Doctrine conſiſted chiefly in this, That Men ought to bring their Minds to a State of inward Quietneſs, from which the Name of *Quietiſts* was given to all his Followers. The Paſquinade upon all this was, *Si parliamo, in galere; ſi ſcrivemmo, impiccati; ſi ſtiamo in quiete, all' ſant' officio: e che beſogna fare?* "If we ſpeak, we are ſent to the Gallies; if we write, we are hanged; if we ſtand quiet, we are clapp'd up in the Inquiſition; what muſt we do then?" Yet his Followers at *Naples* believe he will come out of this Trial victorious.

The City of *Naples* is the beſt ſituated, lies in the beſt Climate, and is one of the nobleſt Cities of *Europe*; and if it is not above half as big as *Paris* or *London*, it hath much more Beauty than either of them. The Streets are large and broad, the Pavement is great and noble, the Stones being generally above a Foot ſquare; and it is full of Palaces and great Buildings: The Town is well ſupplied by Markets, ſo that Proviſions are freſh, and in great Plenty. The Wine is the beſt in *Europe*, and both the Fiſh and Fleſh are extreme good. It is ſcarce ever cold in Winter, and there is a freſh Air comes both from the Sea and the Mountains in Summer. The Viceroy's Palace is no extraordinary Building, only the Stair caſe is grand, but it is now very richly furniſhed with Pictures and Statues. There are in it ſome Statues of the *Egyptian* Deities, of Touchſtone, that are of great Value. There are no great Antiquities here, only there is an ancient *Roman* Portico, that is very noble, before St. *Paul*'s Church; but without the City, near the Church and Hoſpital of St. *Gennaro*, are the noble Catacombs; which becauſe they were beyond any Thing I ſaw in *Italy*, and to which the Catacombs of *Rome* are not to be compared, I ſhall deſcribe them more particularly.

They are vaſt long Galleries cut out of the Rock, three Stories one above another: I was in two of them, but the Rock is fallen in the loweſt, ſo that one cannot go into it, but I ſaw the Paſſage. Theſe Galleries are generally about twenty Feet broad, and fifteen Feet high; ſo that they are noble ſpacious Places, not little and narrow, as the Catacombs at *Rome*, which are only three or four Feet broad, and five or ſix high. I was made to believe, that theſe Catacombs of *Naples* went into the Rock nine Miles, but for that I have it only by Report; yet if true, they may run towards *Puzzuolo*, and ſo may have been the Burial-places of the Towns on that Bay; but of this I have no Certainty. I walked indeed a great Way, and found Galleries going off on all Hands without End: And whereas in the *Roman* Catacombs three are not above three or four Rows of Niches, that are cut out in the Rock one over another, into which the dead Bodies were laid; here there are generally ſix or ſeven Rows of Niches, and they are both larger and higher: Some Niches are for Children, and in many Places there are in the Floors, as it were, great Cheſts hewn out of the Rock, to lay the Bones of the dead, as they are dried, in them; but I could ſee no Marks either of a Cover for theſe Holes, which look'd like the Bellies of Cheſts, or of a Facing to ſhut up the Niches when a dead Body was laid in them; ſo that it ſeems they were monſtrous, unwholſome, ſtinking Places, where ſome thouſands of Bodies lay rotting, without any Thing to ſhut in ſo loathſome a Sight, and ſo odious a Smell; for the Niches ſhew plainly, that the Bodies were laid in them wrapped in the dead Cloaths, being too low for Coffins. In ſome Places of the Rock, there is as it were a little Chapel hewn out in the Rock, going off from the common Gallery, and there are Niches all round about, but I ſaw no Marks of any Wall that ſhut in thoſe Places; though I am apt to think theſe might be Burying places for particular Families.

There is in ſome Places on the Walls and Arch old *Moſaick* Work, and ſome Painting; the Colours are freſh, and the Manner *Gothick*; which made me conclude, that this might have been done by the *Normans* about 600 Years ago, after they drove out the *Saracens*. In ſome Places there are Palm-trees painted, and Vines in other Places: The Freſhneſs of the Colours ſhew thoſe could not have been done while this Place was employed for Burying; for the Steams and Rottenneſs of the Air, occaſioned by ſo much Corruption, muſt have diſſolved both Plaiſter and Colours. In one Place there is a Man painted with a little Beard, and *Paulus* is written by his Head; there is another reaching him a Garland, and by his Head *Laud* is written; and this is repeated in another Place right againſt it. In another I found a Croſs painted, and about the upper Part of it theſe Letters, J.C.X.O. and on the lower Part N I K A. are painted. A learned Antiquary agreed with me, that the Manner of the Painting and Characters did not ſeem to be above ſix hundred Years old; but neither of us knew what to make of theſe Letters: The lower ſeemed to relate to the laſt Word of the Viſion, which it is ſaid that *Conſtantine* ſaw with the Croſs that appeared to him: But tho' the firſt two Letters might be for *Jeſus*, it being ordinary in old Coins and Inſcriptions to put a C for an S, and X ſtands for *Chriſt*, yet we knew not what to make of the O, unleſs it were for the *Greek* Θ, and that the little Line in the Boſom of the *Theta* was worn out, and then it ſtands for *Theos*; and thus the whole Inſcription is, *Jeſus Chriſt God overcometh.*

Another Picture in the Wall had written over it S^{ta} *Johannes*, a clear Sign of a barbarous Age. In another Place there is a Picture high in the Wall, and three Pictures under it; that at Top had no Inſcription; thoſe below it had theſe Inſcriptions, *S. Katharina*, *S. Agape*, and *S. Margarita*: Theſe Letters are clearly modern; beſides that, *Margaret* and *Katharine* are modern Names; and the Addition of *ta* a little above the *S*, were manifeſt Evidences that the higheſt Antiquity that can be aſcribed to this Painting is ſix hundred Years. I ſaw no more Painting, and I began to grow weary of the Darkneſs and the thick Air of the Place; ſo that I ſtaid not above an Hour. This made me reflect more particularly on the Catacombs of *Rome* than I had done; I could imagine no Reaſon why ſo little mention is made of thoſe of *Naples*, when there is ſo much ſaid concerning thoſe of *Rome*; or give myſelf other Account of the Matter, than that it being a Maxim to keep up the Reputation of the *Roman* Catacombs, as Repoſitories of Reliques of primitive Chriſtians, it would much leſſen their Credit, if it were thought that there were Catacombs far beyond them in all Reſpects, that yet cannot be ſuppoſed to have been the Work of the primitive Chriſtians; and indeed, nothing ſeems more evident, than that theſe were common Burying-places of the ancient Heathens; one enters into them without the Walls of the Towns, according to the Laws of the Twelve Tables; and ſuch are the Catacombs of *Rome* that I ſaw, which were thoſe of St. *Agnes*, and St. *Sebaſtian*, the Entry into them being without the Town: This anſwers the Law, though in Effect they run under it; for in thoſe Days, when they had not the Uſe of the Needle, they could not know which Way they carried on thoſe Works, when they were once ſo far engaged under Ground as to loſe themſelves. It is a vain Imagination, to dream the Chriſtians in the primitive Times were able to carry on ſuch a Work; for as this prodigious Digging into ſuch Rocks muſt have been a very viſible Thing, by the Mountains of Rubbiſh that muſt have been brought out, and by the vaſt Number of Hands employed in it; ſo it is abſurd to think, that they could hold their Aſſemblies in the Midſt of ſo much Corruption. I found the Steams ſo ſtrong, that though I am as little ſubject to Vapours as moſt Men, yet I had all Day long, after I was in them, which was not an Hour, a Confuſion, and as it were a Boiling in my Head, that diſordered me extremely; and if there is now ſo much ſtagnating Air there, this muſt have been ſenſible in a more inſufferabe Manner, while there were vaſt Numbers of Bodies rotting in thoſe Niches. But beſides this Improbability from the Nature of the Thing, I called to mind a Paſſage of a Letter of *Cornelius*, that was Biſhop of *Rome* after the Middle of the third Century, which is preſerved by *Euſebius* in his ſixth Book, in which we have the State of the Church of *Rome* at that Time. There were forty ſix Preſbyters, ſeven Deacons, as many Subdeacons, and ninety-four of the inferior Orders of the Clergy among them: There were alſo fifteen hundred Widows, and other Poor maintained out of the publick Charities. It may be reaſonably ſuppoſed, that the Numbers of the Chriſtians were as great when this Epiſtle was writ, as at any Time before *Conſtantine*: For as this was writ at the End of that long Peace, which both *St. Cyprian* and *Lactantius* mention, of above an hundred Years; ſo after there were ſuch a Succeſſion of Perſecutions, and theſe came ſo thick, that we cannot think the Numbers of the Chriſtians increaſed much beyond what they were at this Time.

There are two Particulars in this State of the Clergy, upon which one may make a probable Eſtimate of the Chriſtians; one is, their Poor, which were but fifteen hundred; now upon an exact Survey it will be found, that where the Poor are well look'd to, they are generally the thirtieth or fortieth Part of Mankind; and this may be believed to be the Proportion of the Poor among the Chriſtians of that Age; for as their Charity was vigorous and tender, ſo we find *Celſus*, *Julian*, *Lucian*, *Porphyry*, and others, object this to the Chriſtians of that Time, that their Charities to the Poor drew vaſt Numbers of the lower Sort among them, that they might be ſupplied by their Brethren. So that this being the State of the Chriſtians, we may reckon the Poor the thirtieth Part; and the whole five and forty thouſand: And I am the more inclined to think that this riſes near the full Sum of their Numbers, by the other Character of the Amount of the Clergy; for as there were forty-ſix Preſbyters, ſo there were ninety four of the inferior Orders, who were two more than double the Number of the Prieſts; and this was in a Time when the Care of Souls was more exactly looked after, than it has been in the more corrupted Ages, the Clergy having then really more Work on their Hands, the inſtructing their Catechumens, the viſiting their Sick, and the comforting the Weak, Taſks that required ſo much Application, that in ſo vaſt a City as *Rome* in thoſe Days, in which the Chriſtians were ſcatter'd over the City, we make a Conjecture, that every Preſbyter had perhaps about a thouſand Souls committed to his Care; this riſes to ſix and forty thouſand, which comes very near the Sum gathered from the other Hint taken from their Poor: So that about fifty thouſand is the higheſt to which we can reaſonably raiſe the Number of the Chriſtians of *Rome* in that Time; and of ſo many Perſons, the old, the young, and the Women, make more than three fourth Parts; the Men therefore in Condition to work were not above twelve thouſand, and by Conſequence were in no Condition to undertake and carry on ſo vaſt a Work. If *Cornelius* in that Letter ſpeaks of the Numbers of the Chriſtians in exceſſive Terms, and if *Tertullian* in his Apology hath alſo ſet out the Numbers of the Chriſtians of his Time in a very high Strain, that is to be aſcribed to a pompous Eloquence, which diſpoſeth People to magnify their own Party; and we muſt allow a good deal to an Hyperbole. It is true, it is not ſo clear when thoſe vaſt Cavities were dug out of the Rocks: We know that when the Laws of the *Twelve Tables* were made, Sepulture was then in Uſe; and *Rome* being grown to a vaſt Bigneſs, no Doubt they had Repoſitories for their Dead; ſo that ſince none of the *Roman* Authors mention any ſuch Work, it may not be unreaſonable to ſuppoſe theſe Vaults had been wrought and cut out from the firſt Beginnings of the City, and ſo later Authors had no Occaſion to take Notice of it. It is alſo certain, that though Burning came to be in Uſe among the *Romans*, yet they returned back to their firſt Cuſtom of burying Bodies long before *Conſtantine*'s Time; ſo it was not the Chriſtian Religion that produced this Change. All our modern Writers take it for granted, that it happen'd in the Times of the *Antonines*; yet there being no Law made concerning it, and no Mention in an Age full of Writers, of any Orders that were given for Burying-places, *Velſerus*'s Opinion ſeems more probable, that the Cuſtom of Burning wore out by Degrees; and ſince we are ſure that they once buried, it is more natural to think, that the Slaves and the meaner Sort of People were ſtill buried, that being a leſs expenſive and more ſimple Way than burning, which was both pompous and chargeable; and if there were already Burying places prepared, it is much eaſier to imagine how the Cuſtom of Burying grew univerſal without any Law made to inforce it. I could not for ſome Time find out upon what Grounds the modern Criticks take it for granted, that Burying began in the Times of the *Antonines*, till I had the Happineſs to talk with the learned *Gronovius*, who ſeems to be ſuch a Maſter of all ancient Learning, as if he had the Authors lying always open before him: He told me that it was certain the Change from Burning to Burying was not made by the Chriſtian Emperors: For *Macrobius* ſays, in plain Terms, that the Cuſtom of burning Bodies was quite worn out in that Age; which is a clear Intimation, that it was not laid aſide ſo late as by *Conſtantine*; and as there was no Law made on that Head, ſo he and the ſucceeding Emperors gave ſuch Toleration to Paganiſm, that it is not to be imagined, there was any Order given againſt Burning; ſo that it is clear, the Heathens changed it of their own Accord; otherways we ſhould have found that among the Complaints made of the Grievances under which they lay from the Chriſtians. But it is more difficult to fix the Time when this Change was made. *Gronovius* ſhewed me a Paſſage of *Phlegon*'s, that mentions Bodies that were laid in the Ground; yet he did not build on that, for it may have Relation to the Cuſtoms of Burying that might be elſewhere; and ſo *Petronius* gives the Account of the Burial of the *Epheſian* Matron's Huſband: But he made it apparent to me, that Burying was commonly practiſed under *Commodus*; for *Xiphilinus* tells us, that in *Pertinax*'s Time, the Friends of thoſe whom *Commodus* had ordered to be put to Death, dug up their Bodies, ſome bringing out only ſome Parts of them, and others raiſing their entire Bodies. The ſame Author ſays, that *Pertinax* buried *Commodus*'s Body, and ſo ſaved it from the Rage of the People; and here is a poſitive Evidence that Burying was the common Practice of that Time.

The ſame learned Perſon has ſince ſuggeſted to me two Paſſages of *Feſtus Pompeius*, that ſeem to determine this whole Matter; and tell us by what Names thoſe Catacombs were known in the *Roman* time, whereabouts they were, and what Sort of Perſons were laid in them: We have alſo the Deſignation by which the Bearers were known, and the Time when they carried out the dead Bodies: And it appears particularly by them, that in the Repoſitories of which that Author makes Mention, there were no Care taken to preſerve the Bodies that were laid in them from Rotting. His Words are: *Puticulos antiquiſſimum genus ſepulture appellatos, quod ibi in puteis ſepelirentur homines; qualis fuerit locus, quo nunc cadavera projici ſolent extra portam Eſquilinam: quæ, quod ibi puteſcerent, inde prius appellatos exiſtimat Puticulos Ælius*

Ælius Gallus, qui ait antiqui moris fuiſſe, ut patres-familias in locum publicum extra oppidum mancipia vilia projicerent, atque ita projecta, quod ibi ea puteſcerent, nomen eſſe factum Puticuli. The other Paſſage runs thus: *Veſpe & veſpilliones dicuntur, qui funerandis corporibus officium gerunt, non à minutis illis volucribus, ſed quia veſpertino tempore eos efferunt, qui funebri pompâ duci propter inopiam nequeunt.* All this agrees ſo exactly, that it will not be hard to perſuade one, that thoſe Burying-places, now graced with the pompous Title of Catacombs, are no other than the *Puticuli* of *Feſtus Pompeius*, where the meaneſt Sort of the *Roman* Slaves were laid, and without any farther Care about them, were left to rot.

It is very probable, that as we ſee ſome of the *Roman* Families continued to bury their Dead, even when Burning was the more common Cuſtom; ſo perhaps others continued after this to burn their Dead, this Thing being indifferent, and no Law made about it; and therefore it was objected to the Chriſtians after that Time, that they abhorred the Cuſtom of burning the Bodies of the Dead, which is mentioned by *Minutius Fælix*; but this, or any other Evidences that may be brought from Medals after this Time, will only prove that ſome were burnt, and that the Chriſtians practiſed burying univerſally, as expreſſing their Belief of the Reſurrection; whereas the Heathens held the Thing indifferent. It is alſo clear, from many genuine Inſcriptions that have been found in the Catacombs, bearing the Dates of the Conſuls, that theſe were the common Burial-places of all the Chriſtians of the fourth and fifth Century; for I do not remember that there is any Date ancienter; and yet not one of the Writers of thoſe Ages ſpeak of them as the Work of the Primitive Chriſtians: They ſpeak indeed of the Burial places of the Martyrs; but that will prove no more, but that the Chriſtians might have their Quarters and their Walks in thoſe common Burial-places, where they laid their Dead, and which might have been known among them, though it is not likely that they would, in Times of Perſecution, make ſuch Inſcriptions as might expoſe the Bodies of their dead Friends to the Rage of their Enemies: And the ſpurious Acts of ſome Saints and Martyrs are of too little Credit to give any Support to the common Opinion. *Damaſus*'s Poetry is of no better Authority; and though thoſe Ages were inclined enough to give Credit to Fables, yet it ſeems this of the Catacombs, having been the Work of the Primitive Chriſtians, was too groſs a Thing to be ſo early impoſed on the World: And this Silence, in a ſuperſtitious Age, has much Force in it, for ſo vaſt a Work muſt have been well known to all the *Romans*. It were eaſy to carry this much farther, and to ſhew that the *Baſs Relieves* that have been found in ſome of thoſe Catacombs, have nothing of the Beauty of the ancient *Roman* Time.

This is alſo diſcernible in many Inſcriptions that are rather *Gothick* than *Roman*; and there are ſo many Inſcriptions relating to Fables, that it is plain theſe were of later Times; and we ſee by St. *Jerome*, that the Monks began even in his Time to drive a Trade of Reliques; no Wonder then, that to raiſe the Credit of ſuch a Heap as was never to be exhauſted, they made ſome miſerable Sculptures and Inſcriptions, and perhaps ſhut up the Entries with Care and Secrecy, intending to open them upon ſome Dream, or other Artifice, to give them the more Reputation; which was often practiſed, to the drawing much Wealth and Devotion even to ſome ſingle Relique; and a few being in this Secret, either thoſe died, or by the Revolutions that happen'd in *Rome*, might have been diſperſed before they made the Diſcovery: And thus the Knowledge of theſe Places was loſt, and came to be diſcover'd by Accident in the laſt Age, and ever ſince ſupplied with an inexhauſtible Magazine of Bones, which are no other than the Bones of the Pagan *Romans*, though they are now ſent over the World to feed a Superſtition that is as blind as it proves expenſive. And thus the Bones of the *Roman* Slaves, or at leaſt thoſe of the meaner Sort, are ſet in Silver and Gold, and entertain the Superſtition of thoſe who are willing to be deceived, as well as thoſe who ſeek to deceive the World. But becauſe it cannot be pretended there was ſuch a Number of Chriſtians at *Naples*, as could have wrought the Catacombs; and if it had been thought that thoſe were the common Burial-places of the Heathens, that might have induced the World to think that the *Roman* Catacombs were ſo too; therefore no Care was taken to examine theſe.

I will not enter upon a Deſcription of that which is ſo well known, as *Mont Veſuvio*: It had roared ſo loud about a Month before I came to *Naples*, that the Inhabitants could hardly ſleep in the Nights, and ſome old Houſes were ſo ſhaken by the Convulſion of the Hill, that they fell to the Ground; and the great Convulſion above fifty Years ago was ſo terrible, that there was no ſmall Fear in *Naples*, for though it lies at the Diſtance of ſeven Miles, they are very timorous, but now the Storm was choaked under Ground; for tho' it ſmoak'd much more than ordinary, yet there was no Eruption. It was indeed ſmoaking, not only in the Mouth of the little Mount, formed within the great Waſte that the Fire hath made, but along all the Bottom that is between the outward Mouth of this Mountain (which is four Miles in Compaſs) and that inward Hill. When one ſees the Mouth of this Fire, and ſo great a Part of the Hill, covered ſome Feet deep with Aſhes and Stones of metallick Compoſition, that the Fire throws out, he cannot but ſtand amazed, and wonder what can be the Fewel of ſo laſting a Burning, that hath calcined ſo much Matter, and ſpued out ſuch prodigious Quantities. It is plain, there are vaſt Veins of Sulphur all along in this Soil, and it ſeems in this Mountain they run thro' ſome Mines and Rocks; and as their ſlow Conſumption raiſes a perpetual Smoke, ſo when the Air within is ſo much rarified that it muſt open itſelf, it throws up thoſe Maſſes of Metal and Rock that are ſhut in it. But how this Fire draws Air to nouriſh its Flame, is not ſo eaſily apprehended, unleſs there is either a Conveyance of Air under Ground, by ſome undiſcover'd Vacuity, or a more inſenſible Tranſmiſſion of Air through the Pores of the Earth. The Heat of this Hill operates ſo much upon the Soil that lies towards the Foot of it, that it produces the richeſt Wine about *Naples*, and it alſo purifieth the Air ſo much, that the Village at the Bottom is thought the beſt thereabouts; ſo that many come thither from *Naples* for their Health. There is a Hill in *Iſchia*, an Iſland not far from *Naples*, which ſometimes ſpues out Fire. On the other Side of *Naples*, to the Weſt, one paſſeth through the Cave that pierceth the *Pauſalippe*, and is four hundred and forty Paces long; for I walked it on Foot. It is twenty Feet broad, and at firſt forty, afterwards but twenty Feet high. The Stone cut here is good for Building; ſo that as this opened the Way from *Puzzuolo* to *Naples*, it was alſo a Quarry for the Building of the Town. All the Way one diſcovers a ſtrange Boiling within the Ground; for a little beyond this Grott of *Pauſalippe*, as we come near the Lake of *Aniano*, there is on the one Hand a Bath, occaſioned by a Stream that riſes ſo hot out of the Ground, that as ſoon as one goes a little into it, he finds himſelf in a Sweat, which is very proper for ſome Diſeaſes, eſpecially that which derives its Name from *Naples*. And about twenty Paces from thence, there is another little Grott, that ſends out ſo poiſonous a Steam, that it puts out a Candle as ſoon as it comes near it, and infalliby killeth any living Creature within a Minute; for in half that Time a Dog, upon which the Experiment is commonly tried, (the Grott from thence called *Grotto di Cane*) fell into a Convulſion. From that one goes to ſee the poor Remains of *Puzzuolo*, and of that Bay, once a continued Tract of Towns, being the Retreat of the *Romans* during the Heats of the Summer. All the Rarities here have been ſo often and ſo copiouſly deſcribed, that I am ſenſible I can add nothing to what is ſo well known. I will ſay nothing of the Amphitheatre, or of *Cicero* and *Virgil*'s Houſes, for which there is nothing but dubious Tradition. They are ancient Brick Buildings in *Roman* Taſte, and the Vaults of *Virgil*'s Houſe are ſtill entire. The *Sulfatara* is a ſurprizing Thing; here is a Bottom, out of which the Force of the Fire, that breaks forth ſtill in many Places in a thick Smoke full of Brimſtone, threw up about an hundred and fifty Years ago a vaſt Quantity of Earth, which was carried about three Miles thence, and formed the Hill called *Monte Novo*, upon the Ruins of a Town overwhelmed by this Eruption, which is of a very conſiderable Height. They told me, that there was before that Time a Channel that went from the Bay into the Lake of *Averno*, of which one ſees the Beginnings in the Bay, at ſome Diſtance from the Shore; it carrieth ſtill the Name of *Julio*'s Mole, and is believed to have been made by *Julius Cæſar*: But by the Swelling of the Ground, upon the Eruption of the *Sulfatara*, this Paſſage is ſtopp'd, and the *Averno* is become now freſh Water. It is eighteen Fathom deep. On the Side of it is that amazing Cave, where the *Sybil* is ſaid to have given out her Inſpirations: The hewing it out of the Rock appears to have been a prodigious Work; for the Rock is one of the hardeſt Stones in the World, and the Cave goeth in ſeven hundred Feet long, and twenty Feet broad, and, as I gueſs, eighteen Feet high; and from the End of this great Gallery, there is a narrow Paſſage of three Feet broad, two hundred feet long, and ſeven high, to a little Apartment, in a conſtant ſloping Deſcent from the great Cave. Here are three little Rooms; in one of them there are ſome Remains of an old *Moſaick*, with which the Walls and Roof were laid over: There is alſo a Spring of Water, and a Bath, in which it is ſuppoſed the *Sybil* bathed herſelf; and from this it is ſaid, there runs a Cave all along to *Cuma*, which is three long Miles, but the Paſſage is now choak'd by the falling in of the Rock in ſeveral Places. This Piece of Work amazed me. I did not much mind the popular Opinion that is received here, that all this was done by the Devil. The Marks of the Chiſſel in all Parts of the Rock ſhew, that it is not a Work of Nature. Certainly they had many Hands at their Command, who ſet about it; and it ſeems to have been wrought with no other Deſign, but to ſubdue the People more entirely to the Conduct of the Prieſts who managed this Impoſture; ſo buſy hath the Ambition and Fraud of Prieſts been in all Ages, and in all corrupt Religions. But of all the Scenes of noble Objects in the Bay of *Puzzuolo*, the Remains of *Caligula*'s Bridge are moſt amazing; for there are yet ſtanding eight or ten of the Pillars, and of ſome of the Arches the half is yet entire. I had not a Line with me to examine the Depth of the Water, where the furtheſt Pillar is built; but my Waterman aſſured me, it was fifty Cubits. I have ſince inſtructed one going thither in this Particular, and have received this Account from him: That he had taken care to plum the Water at the furtheſt Pillar on the *Puzzuolo* Side, and found it ſeven Fathom and a half deep; but he adds, that the Watermen aſſured him, that on the other Side before *Baia*, the Water was twenty ſix Fathom deep: But as he had not a Plummet long enough to try that, ſo he believed a good deal ought to be abated: for the Watermen had alſo aſſured him, that the Water was ten Fathom deep on the *Puzzuolo* Side; and by this Meaſure one may ſuppoſe that the Water is twenty Fathom deep on the other Side: So that it is one of the moſt aſtoniſhing Things one can think of, that Pillars of Brick could have been built in ſuch a Depth of Water. It is a noble Monument of that profuſe and extravagant Expence of a brutal Tyrant, who made one of the vaſteſt Bridges that ever was attempted, over three or four Miles of Sea, merely to ſacrifice ſo great a Treaſure to his Vanity. As for *Agrippina*'s Tomb, it is no great Matter, only the Baſs Relieves are yet entire. The marvellous Fiſh-pond is a great Baſon of Water, wrought like a huge Temple, ſtanding upon eight and forty great Pillars, all hew'd out of the Rock, and laid over with four Cruſts of the old Plaiſter, which is now as hard as Stone. This is believ'd to be a Work of *Nero*'s. And about a Quarter of a Mile from thence, there is another vaſt Work, which leads into a Rock, but at the Entrance there is a noble Portico built of Pillars of Brick; and as one enters he finds a great many regular Rooms hewed out of the Rock, and covered over with Plaiſter, which is ſtill entire, and ſo white, that one can hardly think that it hath not been waſhed over ſince firſt made. There are a vaſt Number of thoſe Rooms; there are ſaid to be a hundred, from whence this Cave derives the Name of *Centum Cameræ*, i. e. *Hundred Chambers*. This hath been as expenſive a Work as it is uſeleſs. It is aſcribed to *Nero*, and they ſay here he kept his Priſoners. But there is nothing in all this Bay that is both ſo curious and ſo uſeful as the Baths, which ſeem to flow from the ſame Cauſe with theſe Eruptions in the *Veſuvio* and *Sulfatara*, and the Grottos formerly mentioned, that as this Heat makes ſome Fountains boiling hot, ſo it ſends up a Steam through the Rock, that doth not break through the Pores of the Stone where it is hard; but where the Rock is ſoft and ſpungy, the Steams come through with ſo melting a Heat, that a Man is very ſoon diſſolved, as it were in a Sweat: But if he ſtoops low in the Paſſages that are cut in the Rock, he finds no Heat, becauſe there the Rock is hard. Thoſe Steams, as they art hot, ſo they are alſo impregnated with ſuch Minerals as they find in their Way through the Rock; and near this Bath there are Galleries hewed out, and faced with a Building, in which there are, as it were, Bedſteads made in the Walls, upon which thoſe, that come to ſweat for their Health, lay their Quilts and Bed-clothes, and ſo come regularly out of their Sweats.

It is certain, that a Man can no where paſs a Day, both with ſo much Pleaſure, and with ſuch Advantage, as he finds in his Journey to *Puzzuolo*, and the Bay. But tho' anciently this was all ſo well built, ſo throughly peopled, and ſo beautifully laid out; yet one ſees no where more viſibly what a Change Time brings upon all Places; for *Naples* hath ſo entirely eat out this Place, and drawn off its Inhabitants, that as *Puzzuolo* itſelf is but a ſmall Village, ſo there is now no other in this Bay, which was anciently built almoſt all round; for there are ſeven big Towns upon it. I cannot paſs by that noble Remnant of the *Via Appia*, that runs along thirty Miles of the Road between *Naples* and *Rome*, without making ſome Mention of it. This Highway is twelve Feet broad, all made of huge Stones, moſt of them blue, and they generally a Foot and half large on all Sides. The Strength of this Cauſeway appears from its long Duration; for it hath laſted above eighteen hundred Years, and is in moſt Places, for ſeveral Miles together, as entire as when firſt made; and the Mending ſuch Places as have been worn out by Time, ſhews a viſible Difference between the ancient and the modern Way of Paving. One Thing ſeems ſtrange, that the Road is level with the Earth on both Sides; whereas ſo much Weight as thoſe Stones carry, ſhould have ſunk the Ground under them by its Preſſure. Beſides, that the Earth, eſpecially in low Grounds, receives a conſtant Increaſe by the Duſt which the Winds or Brooks carry down from the Hills; both which Reaſons ſhould make a more ſenſible Difference between thoſe Roads and the Soil on both Sides; and this makes me apt to believe, that anciently they were a little raiſed above the Level of the Ground, and that a Courſe of ſo many Ages hath now brought them to an Equality. Thoſe Roads were chiefly made for Foot Paſſengers; for as nothing is more pleaſant than to walk along them, ſo nothing is more inconvenient for Horſes and all Sorts of Carriage; and indeed Mules are the only Beaſts of Burthen that can hold out long in this Road, which beats all Horſes after they have gone it a little while. There are ſeveral Remains of *Roman* Antiquities at the Mole of *Cajeta*; but the Iſle of *Caprea*, now called *Crapa*, which is a little Way to Sea from *Naples*, gave me a ſtrange Idea of *Tiberius*'s Reign; ſince it is hard to tell, whether it was more extraordinary, to ſee a Prince abandon the beſt Seats and Palaces of *Italy*, and ſhut himſelf up in a little Iſland, in which I was told there was a Tradition of ſeven ſmall Palaces that he built in it; or to ſee ſo vaſt a Body as the *Roman* Empire, governed by ſuch a tyrannical Prince, at ſuch a Diſtance from the chief Seat, ſo that all might have been reverſed long before the News of it could have reached him. And as there is nothing more wonderful in Story, than to ſee ſo vaſt a State, that had ſo great a Senſe of Liberty, ſubdued by ſo brutal, and ſo voluptuous a Man as *Anthony*, and ſo raw a Youth as *Auguſtus*; ſo the Wonder is much improved, when we ſee a Prince, at an hundred and fifty Miles Diſtance, ſhut up in an Iſland, carry the Reins of ſo great a Body in his Hand, and turn it which Way he pleaſed.

But I come now to *Rome*, which as it was once the Empreſs of the World in a Succeſſion of many Ages, ſo in it there are at preſent more curious Things to entertain the Attention of a Traveller, than in any other Place in *Europe*. On the Side of *Tuſcany* the Entry into *Rome* is very ſurprizing to Strangers; coming along for a great many Miles upon the Remains of the *Via Flaminia*, which is not indeed ſo entire as the *Via Appia*; yet there is enough left to raiſe a juſt Idea of the *Roman* Greatneſs, which laid ſuch Cauſeways all over *Italy*. And within the Gate of the *Porta di Populo* there is a noble Obeliſk, a vaſt Fountain, two fine little Churches, like two Twins, reſembling each other, as well as placed one near another, and on ſeveral Hands one ſees a long Viſto of Streets. There is no City in our Part of the World, where the Churches, Convents, and Palaces, are ſo noble, and where the other Buildings are ſo mean; which, indeed, diſcover very viſibly the Miſery under which the *Romans* groan. The Churches of *Rome* are ſo well known, that I will not venture on any Deſcription of them; and indeed I had too tranſient a View, to make it with that Degree of Exactneſs which the Subject requires. St. *Peter*'s alone would make a long Letter, not to ſay a Book: Its Length, Height, and Breadth, are all ſo exactly proportioned, and the Eye is ſo equally poſſeſſed with theſe, that the whole, upon the firſt View, appears not ſo vaſt as it is found to be upon a more particular Attention; and as the four Pillars, on which the Cupola riſes, are of ſuch a prodigious Bigneſs, that one would think they were ſtrong enough to bear any Superſtructure; yet when one climbs to the Top of that vaſt Height, one cannot help wondering what Foundation can bear ſo vaſt a Weight; for as the Church is of a great Height, ſo the Cupola riſes four hundred and fifteen large Steps above the Roof of the Church. In the Height of the Concave of this Cupola there is a Repreſentation, that though it can hardly be ſeen from the Floor below, and ſo it doth not perhaps give much Scandal, yet it is a groſs Indication of the Idolatry of that Church; for the Divinity is there pictured as an ancient Man compaſſed about with Angels. I will ſay nothing of the great Altar, of the Chair of St. *Peter*, of the great Tombs of *Paul* III. *Urban* VIII. and *Alexander* VII. nor of the vaſt Vaults under this Church, and the Remains of Antiquity that are reſerved in them; or undertake a Deſcription of the adjoining Palace, where the Painting of the *Corridori*, and of many of the Rooms by *Raphael* and *Michael Angelo* are ſo rich, that one is ſorry to ſee a Work of that Value laid on *Freſco*, and which muſt by Conſequence wear too ſoon, as in ſeveral Places it is almoſt quite loſt already. I could not but obſerve in the *Sala Reggia*, that is before the famous Chapel of *Siſto* V. and that is all painted in *Freſco*, one Corner that repreſents the Murder of the renowned Admiral *Coligni*, and that hath under it theſe Words, *Rex Colinii necem probat*. The vaſt Length of the Gallery on one Side, and of the Library on another, ſurprize one. The Gardens have many Statues of exceſſive Value, and ſome good Fountains; but are ill maintained both here and in the Palace of the *Quirinal*. And, indeed, in moſt of the Palaces of *Rome*, if there were but a ſmall Sum laid out to keep all in good Condition, that is brought together at ſo vaſt a Charge, they would make another Sort of Show, and be looked at with much more Pleaſure. In the Apartments of *Rome*, there are a great many Things that offend the Sight; the Doors are generally mean, and the Locks meaner, except in the Palace of Prince *Borgheſe*; where, as there is the vaſteſt Collection of the beſt Pieces, and of the greateſt Maſters that are in all *Europe*; ſo the the Doors and Locks give not that Diſtaſte to the Eye that one finds elſewhere. The Flooring of the Palace is all of Brick, which is ſo very mean, that one ſees the Diſproportion between the Floors and the reſt of the Room, not without a ſenſible Diſlike. It is true, they ſay their Air is ſo cold and moiſt in Winter, that they cannot pave with Marble; and the Heat is ſometimes ſo great in Summer, that a Flooring of Wood would crack with Heat, as well as be eat up by Vermin that would neſt in it: But if they kept in their great Palaces Servants to waſh their Floors, with that Care that is uſed in *Holland*, where the Air is moiſter, and the Climate more productive of Vermin, they would not find ſuch Effects from wooden Floors as they pretend to fear. In a Word, there are none that lay out ſo much Wealth all at once as the *Italians* upon Building and Finiſhing of their Palaces and Gardens, and afterwards beſtow ſo little on the preſerving of them. Another Thing I obſerved in their Palaces; there is indeed a great Series of noble Rooms one within another, of which their Apartments are compoſed; but I did not find, at the End of the Apartments, where the Bedchamber is, ſuch a Diſpoſition of Rooms for Back-ſtairs, Dreſſing-rooms, Cloſets, Servants-rooms, and other Conveniencies as are neceſſary for accommodating the Apartment. It is true, this is not ſo neceſſary for an Apartment of State, in which Magnificence is more conſidered than Convenience; but I found the ſame Want in thoſe in which they lodged; ſo that, notwithſtanding all the Riches of their Palaces, it cannot be ſaid that they are well lodged in them; and their Gardens are leſs underſtood, and worſe kept than their Palaces. It is true, the *Villa Borgheſe* ought to be excepted, where, as there is a prodigious Collection of Baſs Relieves, with which the Walls are covered over, that are of a vaſt Value; ſo the Statues within, of which ſome are of Porphyry, and others of Touchſtone, are amazing Things. The whole Ground of this Park, which is three Miles in Compaſs, and in which there are ſix or ſeven Lodges, are laid out ſo ſweetly, that I thought I was in an *Engliſh* Park when I walked over it. The *Villa Pamphilia* is better ſituated, upon a higher Ground, hath more Water-works, and twice the Extent of the other in Soil; but neither the Houſe nor Statues approach to the Riches of the other, nor are the Grounds ſo well laid out, or kept: But for the Furniture of the Palaces of *Rome*, the publick Apartments are all covered over with Pictures; and as for thoſe Apartments in which they lodge, they are generally furniſhed with red Velvet or Damaſk, with a broad Golden Galloon at every Breadth of the Stuff, and a Gold Fringe at Top and Bottom; but there is very little Tapeſtry in Italy.

I have been carried into this Digreſſion, from the general View that I was giving you of the Pope's Palace. I named one Part of it, which will engage me in a new Digreſſion, as it well deſerves, that is, the Library of the *Vatican*. The Caſe is great, but what is lodged in it much greater; for here is a Collection of Books that fill a Man's Eye: There is firſt a great Hall, and at the End there runs out on both Sides two Galleries of ſo vaſt a Length, that though the half of them is already furniſhed with Books, yet one would hope, that there is Room left for more new Books than the World will ever produce. The *Heidelberg* Library ſtands by itſelf, and fills one Side of the Gallery, as the Duke of *Urbin*'s Library of Manuſcripts fills the other. But though theſe laſt are very fair and beautiful, yet they are not of ſuch Antiquity as thoſe of *Heidelberg*. When it appeared that I came from *England*, King *Henry* VIIIth's Book of the Seven Sacraments, with an Inſcription upon it with his own Hand to Pope *Leo* X. was ſhewed me, together with a Collection of ſome Letters that he writ to *Anna Bullen*, of which ſome are in *Engliſh* and ſome in *French*. I that knew his Hand well, ſaw clearly that they were no Forgeries. There are not many *Latin* Manuſcripts of great Antiquity in this Library; ſome few of *Virgil*'s I ſaw writ in Capitals.

But that which took up half of one Day that I ſpent at once in this Place, related to the Diſpute on Foot between Mr. *Schelſtrat* the Library-keeper and Mr. *Maimbourg*, concerning the Council of *Conſtance*. The two Points in Debate, are the Words of the Decree made in the fourth Seſſion, and the Pope's Confirmation. In the fourth Seſſion, according to the *French* Manuſcripts, a Decree was made, ſubjecting the Pope, and all other Perſons whatſoever, to the Authority of the Council, and to the Decrees it was to make, and to the Reformation it intended to eſtabliſh both in the Head and the Members; which, as it implies that the Head was corrupted, and needed to be reformed, ſo it ſets the Council ſo directly above the Pope, that this Seſſion, being confirmed by the Pope, puts thoſe who aſſert the Pope's Infallibility to no ſmall Straits: For if Pope *Martin*, that approved this Decree, was infallible, then this Decree is good ſtill; and if he was not infallible, no other Pope was infallible. To all this *Schelſtrat* anſwers from his Manuſcripts, that the Words of a Reformation in Head and Members are not in the Decree of that Seſſion; and he did ſhew me ſeveral Manuſcripts, of which two were evidently writ during the Sitting of the Council, and were not at all daſhed, in which theſe Words were not. I know the Hand and Way of Writing of that Age too well to be eaſily miſtaken in my Judgment concerning thoſe Manuſcripts: But if thoſe Words are wanting, there are other Words in them that ſeem to be much ſtronger for the Superiority of the Council above that of the Pope; for it is decreed, that Popes and all other Perſons were bound to ſubmit to the Deciſions of the Council, as to Faith; which Words are not in the *French* Manuſcripts; upon this I told Mr. *Schelſtrat*, that I thought the Words in theſe Manuſcripts were ſtronger than the other, ſince the Word Reformation, as it was uſed in the Time of that Council, belonged chiefly to the correcting of Abuſes, it being often applied to the Regulations that were made in the monaſtick Orders, when they were brought to a more exact Obſervation of the Rules of their Order: So though the Council had decreed a Reformation both of Head and Members, I do not ſee that this would import more, than that the Papacy had fallen into ſome Diſorders that needed Reformation; and this is not denied even by thoſe who aſſert the Pope's Infallibility. But a Submiſſion to Points of Faith, that is expreſsly aſſerted in the *Roman* Manuſcripts, is a much more poſitive Evidence againſt the Pope's Infallibility; and the Word Faith is not capable of ſo large a Senſe, as may be aſcribed to Reformation. But this Difference in ſo great a Point, between Manuſcripts concerning ſo late a Tranſaction, gave me Occaſion to reflect on the vaſt Uncertainty of Tradition, eſpecially in Matters that are at a great Diſtance from us; when thoſe that were ſo lately tranſacted, are ſo differently repreſented in Manuſcripts, and in which both thoſe of *Paris* and *Rome* ſeem to carry all poſſible Evidences of Sincerity. As for the Pope's Confirmation of that Decree, it is true, by a general Bull Pope *Martin* confirmed the Council of *Conſtance* to ſuch a Period; but beſides that, he made a particular Bull, as *Schelſtrat* aſſured me, in which he enumerated all the Decrees that he confirmed, and among thoſe, this Decree concerning the Superiority of the Council is not named. This ſeemed to be of more Importance, and therefore I deſired to ſee the Original of the Bull, for there ſeem to be juſt Reaſons to apprehend a Forgery here: He promiſed to do his Endeavour, though he told me that would not be eaſy, for the Bulls were ſtrictly kept; and the next Day when I came hoping to ſee it, I could not be admitted; but he aſſured me, that, if that had not been the laſt Day of my Stay at *Rome*, he would have procured a Warrant for my ſeeing the Original: So this is all I can ſay as to the Authenticity of that Bull. But ſuppoſing it to be genuine, I could not agree with Mr. *Schelſtrat*, that the general Bull of Confirmation ought to be limited to the other that enumerates the particular Decrees: For ſince that particular Bull was never diſcovered till he found it out, it ſeems it was ſecretly made, and did not paſs according to the Forms of the Conſiſtory, and was a fraudulent Thing, of which no Noiſe was to be made in that Age; and therefore in all the Diſpute that followed in the Council of *Baſil*, between the Pope and the Council upon this Point, no Mention was ever made of it by either Side; and thus it can have no Force, unleſs it be to diſcover the Artifices and Fraud of that Court: That at the ſame Time in which the Neceſſity of their Affairs obliged the Pope to confirm the Decrees of the Council, he contrived a ſecret Bull, which in another Age might be made uſe of to weaken the Authority of the general Confirmation that he gave; and therefore a Bull that doth not paſs in due Form, and is not promulgated, is of no Authority, and ſo this pretended Bull cannot limit the other Bull. I will not give you here a large Account of the learned Men at *Rome*; *Bellori* is deſervedly famous for his Knowledge of the *Greek* and *Egyptian* Antiquities, and for all that belongs to the Mythologies and Superſtitions of the Heathens, and hath a Cloſet richly furniſhed with ſuch Things. *Fabretti* is juſtly celebrated for his underſtanding the old *Roman* Architecture and Fabricks. *Padre Fabri* is the chief Honour of the *Jeſuits College*, and is much above the common Rate both for Philoſophy, Mathematicks, and Church Hiſtory. And he to whom I was the moſt obliged, Abbot *Nazari*, hath ſo general a View of the ſeveral Parts of Learning, though he has chiefly applied himſelf to Philoſophy and Mathematicks, and is a Man of ſo engaging a Civility, and uſed me in ſo particular a Manner, that I owe him, as well as thoſe others, whom I have mentioned, and whom I had the Honour to ſee, all the Acknowledgments of Eſteem and Gratitude that I can poſſibly make them.

One ſees in Cardinal *Eſtrée* all the Advantages of a high Birth, great Parts, and a generous Civility, and a Meaſure of Knowledge far above what can be expected from a Perſon of his Rank: But as he gave a noble Protection to one of the moſt learned Men that this Age hath produced, Mr. *Launoy*, who lived many Years with him, ſo it is viſible, that he made a great Progreſs by the Converſation of ſo extraordinary a Perſon; and as for theological Learning, there is now none of the College equal to him. Cardinal *Howard* is too well known in *England* to need a Character from me: The Elevation of his Condition hath not in the leaſt changed him; he hath all the Sweetneſs of Temper that we ſaw in him in *England*, and he retains the unaffected Humility of a Frier, amidſt all the Dignity of the Purple. And as he ſhews all the generous Concern for his Countrymen that they can expect from him, I met with ſo much of it, in ſo many obliging Marks of his Goodneſs, that went far beyond a common Civility, that I cannot enough acknowledge it. I was told, the Pope's Confeſſor was a very extraordinary Man for oriental Learning, which is but little known in *Rome*. He is a Maſter of the *Arabick* Tongue, and hath writ, as Abbot *Nazari* told me, the moſt learned Book againſt the *Mahometan* Religion, that the World hath yet ſeen, but is not yet printed: His Learning is not in Vogue; and School Divinity, and caſuiſtical Learning, being that for which Divines are moſt eſteemed, he whoſe Studies lead him another Way is not ſo much valued as he ought: and perhaps the ſmall Account that the Pope makes of learned Men turns on him; for it is certain, that this is a Reign in which true Knowledge is very little encouraged. Upon the general Contempt that all the *Romans* have for the preſent Pontificate, one made a pleaſant Reflection to me. He ſaid, thoſe Popes that intended to raiſe their Families, as they ſaw the Cenſure this brought upon them, ſtudied to leſſen it by other Things that might ſoften the Spirits of the People. No Man did more for finiſhing St. *Peter's* and the Library, and for furniſhing *Rome* with Water, than Pope *Paul* V. though at the ſame time he did not forget his Family. And though other Popes, that have raiſed great Families, have not done this to ſo eminent a Degree, yet there are many Remains of their Magnificence; whereas thoſe Popes that have not raiſed Families, have thought that alone was enough to maintain their Reputation, and ſo have not done much either to recommend their Government to their Subjects,

jects, or their Reign to Poſterity: And it is plain, that the preſent Pope takes no great Care of this. His Life hath been certainly very innocent, and free from all publick Scandal; and there is at preſent; a Regularity in *Rome* that deſerves great Commendation; for publick Vices are not to be ſeen there. His perſonal Sobriety is alſo ſingular. One aſſured me, that the Expence of his Table did not amount to a Crown a Day; though this is ſhort of *Siſto* V. who gave Order to his Steward, never to exceed five and twenty Bajokes, that is, Eighteen pence a Day for his Diet. The Pope is very careful of his Health, and never expoſes it; for, upon the leaſt Diſorder, he ſhuts himſelf up in his Chamber, and often keeps his Bed, for the leaſt Indiſpoſition, many Days: But his Government is ſevere, and his Subjects are ruined.

And here one Thing comes into my Mind, which perhaps is not ill grounded, that the Poverty of a Nation not only diſpeoples it, by driving the People out of it, but by weakening the natural Fertility of the Subjects; for Men and Women well cloathed and well fed, that are not exhauſted with perpetual Labour, and with the Anxieties that Want brings with it, muſt be much more lively than thoſe that are diſtreſs'd; ſo it is very likely, that they muſt be much more diſpoſed to propagate than the other. And this appeared evident to me, when I compared the Fruitfulneſs of *Geneva* and *Switzerland*, with the Barrenneſs over all *Italy*. I ſaw two extraordinary Inſtances of the copious Productions of *Geneva*. Mr. *Tronchin*, Profeſſor of Divinity, and Father to the judicious and worthy Profeſſor of the ſame Name that is now there, died at the Age of ſeventy-ſix Years, and had an hundred and fifteen Perſons all alive, that either deſcended from him, or by Marriage with thoſe that deſcended from him, called him Father. And Mr. *Calendrin*, a pious and laborious Preacher of that Town, that is deſcended from the Family of the *Calendrini*, who, receiving the Reformation about an hundred and fifty Years ago, left *Lucca*, their native City, with the *Turretini*, the *Diodati*, and the *Bourtamachi*, and ſome others, came and ſettled at *Geneva*: He is now but ſeven and forty Years old, and yet he hath an hundred and five Perſons that are deſcended of his Brothers and Siſters, or married to them; ſo that if he liveth but to eighty, and the Family muliplieth as it hath done, he may ſee ſome hundreds that will be in the ſame Relation to him; but ſuch Things as theſe are not found in *Italy*.

There is nothing that delights a Stranger more in *Rome*, that to ſee the fine Fountains of Water, that are almoſt in all the Corners of it. That old Aqueduct, which *Paul* V. reſtored, comes from a Collection of Sources five and thirty Miles diſtant, that runs all the Way upon an Aqueduct in a Canal that is vaulted. It breaketh out in five ſeveral Fountains, of which ſome yield a Diſcharge of Water about a Foot ſquare. That of *Sixtus* V. the great Fountain of *Aqua Travi*, that hath yet no Decoration, but diſchargeth a prodigious Quantity of Water. The glorious Fountain in the *Piazza Navona*, that hath an Air of Greatneſs in it that ſurprizeth: The Fountain in the *Piazzo de Spagna*, thoſe before St. *Peter*'s, and the *Palazza Farneſe*, with many others, furniſh *Rome* ſo plentifully, that almoſt every private Houſe hath a Fountain. All theſe, I ſay, are noble Decorations, that carry Uſefulneſs with them that cannot be enough commended, and give a much greater Idea of thoſe who have taken ſuch Care to ſupply this City with one of the chief Pleaſures and Conveniencies of Life, than of others, who have laid out Millions merely to bring Quantities of Water to give the Eye a little Diverſion.

There is an univerſal Civility reigns among all Sorts of People at *Rome*, which, in a great Meaſure, flows from their Government; for every Man being capable of all the Advancements of that State, ſince a ſimple Eccleſiaſtick may become one of the *Monſignori*, may thence come to be a Cardinal, and ſo be choſen Pope; this makes every Man behave himſelf towards all other Perſons with Exactneſs of Reſpect; for no Man knows what any other may grow to. But this makes Profeſſions of Eſteem and Kindneſs go ſo promiſcuouſly to all Sorts of Perſons, that one ought not to build much on them. The Converſation of *Rome* is generally upon News; for though there is no News printed, yet in the ſeveral Anti-chambers of the Cardinals, one is ſure to hear all the News of *Europe*, together with many Speculations upon what paſſes. At the Queen of *Sweden*'s, all that relates to *Germany*, or the *North*, is ever to be found; and that Princeſs, that muſt ever reign among all that have a true Taſte either of Wit or Learning, hath in her Drawing-Rooms the beſt Court of the Strangers; and her Civility, together with the vaſt Variety with which ſhe furniſhed her Converſation, makes her the Chief of all the living Rarities that one ſees in *Rome*. I will not uſe her own Words to myſelf, which were, *That ſhe now grew to be one of the Antiquities of* Rome. The Ambaſſadors of Crowns, who live here in another Form than in any other Court, and the Cardinals and Prelates of the ſeveral Nations, that all meet and center here, make more News in *Rome* than any where; for Prieſts, and the Men of religious Orders, write larger and more particular Letters than any other Sort of Men. But ſuch as apply themſelves to make their Court here, are condemned to a Loſs of Time that had need be well recompenſed. As for one that ſtudies Antiquities, Pictures, Statues, or Muſick, there is more Entertainment for him at *Rome*, than in all the reſt of *Europe*; but if he hath not a Taſte of theſe Things, he will ſoon be weary of a Place where the Converſation is always general, and where there is little Openneſs practiſed; and, by Conſequence, where Friendſhip is little underſtood. The Women here begin to be more converſable, though a Nation naturally jealous will hardly allow a great Liberty in a great City that is compoſed of Eccleſiaſticks, who being denied the Priviledge of Wives of their own, are ſuſpected of being ſometimes too bold with the Wives of others. The Liberties that were taken in the Conſtable of *Naples*'s Palace, has diſguſted the *Romans* much at that Freedom, which had no Bounds. But the Dutcheſs of *Bracciano*, a *Frenchwoman*, hath, by the Exactneſs of her Deportment, amidſt all the innocent Freedoms of a noble Converſation, recovered, in a great Meaſure, the Credit of thoſe Liberties that Ladies beyond the Mountains practiſe with all the Strictneſs of Virtue; for ſhe receives Viſits at publick Hours, and in publick Rooms; and by the Livelineſs of her Converſation, makes her Court the pleaſanteſt Aſſembly of Strangers that is to be found in any of the Palaces of the *Italians*.

I will not engage in a Deſcription of *Rome*, either anceint or modern; this hath been done with ſuch Exactneſs, that nothing can be added to what has been already publiſhed. It is certain, that when one is in the Capitol, and ſees thoſe poor Remains of what once it was, he is ſurprized to ſee a Building of ſo great Fame ſunk ſo low, that one can ſcarce imagine that it was once a Caſtle upon a Hill, able to hold out againſt a Siege of the *Gauls*. The *Tarpeian* Rock is now ſo ſmall, that a Man would think it no great Matter, for his Diverſion, to leap over it; and the Shape of the Ground hath not been ſo much altered on one Side, as to make us think it very much changed on the other: For *Severus*'s Triumphial Arch, which is at the Foot of the Hill on the other Side, is not now buried above two Feet within the Ground, as the vaſt Amphitheatre of *Titus* is not above three Feet ſunk under the Level of the Ground. Within the Capitol one ſees many noble Remnants of Antiquity; but none is more glorious, as well as more uſeful, than the Tables of their Conſuls, which are upon the Walls; and the Inſcription on the *Columna Roſtrata*, in the Time of the firſt *Punick* War, is, without Doubt, the moſt valuable Antiquity in *Rome*.

From this all along the *Sacred Way*, one finds ſuch Remnants of old *Rome* in the Ruins of the Temples, in the Triumphal Arches, in Portico's and other Remains of that glorious Body; that as one cannot ſee theſe too often, ſo every Time one ſees them, they kindle in them vaſt Ideas of that Republick, and make him reflect on what he learn'd in his Youth with great Pleaſure. From the Height of the Convent of *Araceli*, a Man hath a full View of all the Extent of *Rome*, but literally it is now *Seges ubi Roma fuit*; for the Parts of the City that were moſt inhabited anciently are thoſe that are now laid out in great Gardens, or, as they call them, Vineyards, of which ſome are half a Mile in Compaſs. The Vaſtneſs of the *Roman* Magnificence and Luxury is that which paſſeth Imagination: The prodigious Amphitheatre of *Titus*, that could conveniently receive eighty-five thouſand Spectators: The great Extent of the *Circus Maximus*; the Vaults where the Waters were reſerved that furniſhed *Titus*'s Baths; and above all, *Diocleſian*'s Baths, though built when the Empire was in its Decay, are ſo far beyond all modern Buildings, that there is not ſo much as Room for a Compariſon. The Extent of thoſe Baths is above half a Mile in Compaſs; the Vaſtneſs of the Rooms in which the Bathers might ſwim, of which the *Carthuſians* Church, that yet remains entire, is one, and the many great Pillars, all of one Stone of Marble, beautifully ſpotted, are Things of which theſe latter Ages are not capable. The Beauty of their Temples, and of the Portico's before them, is amazing, chiefly that of the *Rotunda*, where the Fabrick without looks as mean, being only Brick, as the Architecture is bold; for it riſeth up in a Vault, and yet at the Top there is an Open left of thirty Feet in Diameter; which, as it is the only Window of the Church, ſo it fills it with Light, and is the hardieſt Piece of Architecture that ever was made. The Pillars of the Portico are alſo the nobleſt in *Rome*; they are the higheſt and biggeſt that one can ſee any where, all of one Stone: And the Numbers of thoſe ancient Pillars, with which not only many of the Churches are beautified, chiefly St. *Mary Maggoire*, and St. *John* in the *Lateran*, but with which even private Houſes are adorned, and of the Fragments of which there are ſuch Multitudes in all the Streets of *Rome*, gives a great Idea of the Profuſeneſs of the old *Romans* in their Buildings; for the hewing and fetching a few of thoſe Pillars muſt have coſt more than whole Palaces do now, ſince moſt of them were brought from *Greece*. Many of theſe Pillars are of Prophyry, others of Jaſper, others of granated Marble, but the greateſt Number are of white Marble.

The two Columns, *Trajan*'s and *Antonine*'s; the two Horſes that are in the Mount *Cavallo*, and the other two Horſes in the Capitol, which have not indeed the Poſtures and the Motion of the other; the Braſs Horſe that, as is believed, carrieth *Marcus Aurelius*; the Remains of *Nero*'s *Coloſſus*; the Temple of *Bacchus* near the Catacomb of St. *Agnes*, which is the moſt entire and the leaſt altered of all the ancient Temples. The great Temple of Peace, thoſe of the Sun and Moon, that of *Romulus* and *Rhemus* (which I conſidered as the ancienteſt Fabrick that is now left; for it is little and ſimple, and ſtandeth in ſuch a Place, that, when *Rome* grew ſo coſtly, it could not have been left alone unchanged, if it had not been that it was reverenced for its Antiquity) the many other Portico's, the Arches of *Severus*, of *Titus* and *Conſtantine*, in the laſt of which one ſees, that the Sculpture of his Age was much ſunk from what it had been, only in the Top there are ſome Baſs-relieves, that are clearly of much ancienter Time, and of a better Manner: And that which exceedeth all the reſt, the many great Aqueducts that come from all Hands and run over a vaſt Diſtance, are Things which a Man cannot ſee too often, if he would form in himſelf a juſt Idea of the Vaſtneſs of that Republick, or rather Empire.

There are many Statues and Pillars, and other Antiquities of great Value, dug up in all the Quarters of *Rome*, theſe laſt hundred and fourſcore Years, ſince Pope *Leo* X's Time; who, as he was the greateſt Patron of Learning and Arts, that perhaps ever was, ſo he was the moſt generous Prince that ever reign'd: And it was he that firſt ſet on Foot the enquiring into the Riches of old *Rome*, that lay, till his Time, for the moſt Part hid under Ground. And indeed, if he had been leſs ſcandalous in his Impiety and Atheiſm, of which neither he, nor his Court, were ſo much as aſhamed, he had been one of the moſt celebrated Perſons of any Age. Soon after him Pope *Paul* III. gave the Ground of the *Monte Palatino* to his Family: But I was told, that this large Piece of Ground, in which one ſhould look for the greateſt Collection of Antiquities of the higheſt Value, ſince this is the Ruin of the Palace of the *Roman* Emperors, hath never yet been ſearched into with any Exactneſs. So that when a curious Prince comes, that is willing to employ many Hands in digging up and down this Hill, we may expect new Scenes of *Roman* Antiquities. But all this Matter would require Volumes, and therefore I have only mentioned theſe Things, becauſe I can add nothing to thoſe copious Deſcriptions that have been ſo oft made of them. Nor will I ſay any Thing of modern Palaces, or the Ornaments of them, either in Pictures or Statues, which are Things that carry one ſo far, that it is not eaſy to ſet Bounds to the Deſcriptions into which one finds himſelf carried, when he once enters upon ſo fruitful a Subject. The Number of the Palaces is great, and every one of them hath enough to fix the Attention of a Traveller, till a new one drives the former out of his Thoughts. It is true, the *Paleſtrina*, the *Borgheſe*, and the *Farneſe*, have ſomewhat in them that leaves an Impreſſion, which no new Objects can wear out; and as the laſt hath a noble Square before it, with two great Fountains in it, ſo the Statue of *Hercules* and the *Bull*, that are below, and the Gallery above Stairs, are invaluable. The Roof of the Gallery is one of the beſt Pieces of Painting that is extant, being all of *Carracchio*'s Hand; and there are in that Gallery the greateſt Number of Heads of the *Greek* Philoſophers and Poets that I ever ſaw together. That of *Homer*, and that of *Socrates*, were two that ſtruck me moſt; chiefly the latter: Which, as it is, without Diſpute, a true Antique, ſo it carries in it all the Characters that *Plato* and *Xenophon* give us of *Socrates*: The flat Noſe, the broad Face, the Simplicity of Look, and the mean Appearance which that great Philoſoper made, ſo that I could not return oft enough to look upon it, and was delighted with this more than with all the Wonders of the Bull, which is indeed a Rock of Marble cut out into a whole Scene of Statues; but as the Hiſtory of it is not well known, ſo there are ſuch Faults in the Sculpture, that though it is all extream fine, yet one ſees it hath not the Exactneſs of the beſt Times.

As for the Churches and Convents of *Rome*, as the Number, the Vaſtneſs, the Riches of Fabrick, Furniture, Painting, and other Ornaments, amaze one; ſo here again a Stranger is loſt, and the Convent that is laſt ſeen is always the moſt admired. I confeſs the *Minerva*, which is the *Dominicans*, where the Inquiſition ſits, is that which makes the moſt ſenſible Impreſſion upon one that paſſeth at *Rome* for an Heretick; though except one commits great Follies, he is in no Danger there; and the Poverty that reigns in that City, makes them find their Intereſts ſo much in uſing Strangers well, whatever their Religion may be, that no Man needs be afraid there: And I have more than ordinary Reaſon to acknowledge this, who having ventured to go thither, after all the Liberty that I had taken in Writing my Thoughts freely of the Church and See of *Rome*, and was known by all with whom I converſed there; yet met with the higheſt Civilities poſſible among all Sorts of People, and in particular among the *Engliſh* and *Scottiſh* Jeſuits, though they knew well enough that I was no Friend to their Order.

In the Gallery of the *Engliſh* Jeſuits, among the Pictures of their Martyrs, I did not meet with *Garnet*; for perhaps that Name is ſo well known, that they would not expoſe a Picture with ſuch a Name to all Strangers; yet *Oldcorn*, being a Name leſs known, is hung there among their Martyrs, though he was as clearly convicted of the Gunpowder Treaſon as the other: And it ſeemed a little ſtrange to me, that a Time, in which, for other Reaſons, the Writers of that Communion have not thought fit to deny the Truth of that Conſpiracy, a Jeſuit, convicted of the blackeſt Crime that ever was projected, ſhould be reckoned among their Martyrs. I ſaw likewiſe there the Original of thoſe emblematical Prophecies relating to *England*, that the Jeſuits had at *Rome* near ſixty Years, and of which I had ſometime ago procured a Copy, which I found was true. I happened to be at *Rome* during St. *Gregory*'s Fair and Feaſt, which laſted ſeveral Days. In his Church the Hoſtie was expoſed; and from that, all that came thither, went to the Chapel, that was once his Houſe, in which his Statue, and the Table where he ſerved the Poor, are preſerved. I ſaw ſuch vaſt Numbers of People there, that one would have thought all *Rome* was got together: They kneeled down to his Statue, and, after a Prayer ſaid to it, they kiſſed his Foot, and every one touched the Table with his Beads, as hoping to draw ſome Virtue from it. I will add nothing of the ſeveral Obeliſks and Pillars that are in *Rome*, of the celebrated Chapels that are in ſome of the great Churches, in particular thoſe of *Sixtus* V. and *Paul* V. in *Santa Maria Maggiore*; of the Water-works in the *Quirinal*, the *Vatican*, and in many of the Vineyards: Nor will I go out of *Rome* to deſcribe *Freſcati* (for *Tivoli* I did not ſee.) The young Prince *Borgheſe*, who is indeed one of the Glories of *Rome*, as well for his Learning, as for his Virtue, did me the Honour to carry me thither, with thoſe two learned Abbots, *Fabretti* and *Nazari*, and entertained me with a Magnificence that became him better to give, than me to receive. The Water-works in the *Aldobrandin* Palace have a Magnificence in them beyond all that I ever ſaw in *France*; the Mixture of Wind with the Water, and the Thunder and Storms that this maketh is noble. The Water-works of the *Ludoviſio* and the *Monte Dragone*, have likewiſe a Grandeur in them that is natural. And indeed, the Riches that one meets with in all Places within-doors in *Italy*, and the Poverty that one ſees every where Abroad, are the moſt unſuitable Things imaginable: But it is very likely, that a great Part of their moveable Wealth will be ere long carried into *France*; for as ſoon as any Picture or Statue of great Value is offered to be ſold, thoſe that are employed by the King of *France* preſently buy it; ſo that as that King hath already the greateſt Collection of Pictures that is in *Europe*, he will very probably in a few Years more carry off the chief Treaſures of *Italy*.

I have now given an Account of all that appeared remarkable to me in *Rome*. I ſhall add a very extraordinary Piece of natural Hiſtory, that fell out two Years before, which I had firſt from two learned Abbots *Fabretti* and *Nazari*, and afterwards more authentically confirmed to me by Cardinal *Howard*, who was of the Congregation of Cardinals that examined the Matter. There were two Nuns, one in the City, and the other not far from it, who, after they had been for ſome Years in a Nunnery, perceived a ſtrange Change in Nature, and that their Sex was altered, which grew by Degrees to a total Alteration in one; and though the other was not ſo entire a Change, yet it was viſible ſhe was more Man than Woman: Upon this the Matter was looked into: That which naturally offereth itſelf here is, that theſe two had been always what they then appeared to be, but that they had gone into a Nunnery in a Diſguiſe, to gratify their Appetites. But to this, when I propoſed it, Anſwer was made, that as the Breaſts of a Woman, that remained ſtill, did in a great Meaſure take off that Objection, ſo the Proofs were given ſo fully of their having been real Females, that there was no Doubt left of that, nor had they given any Sort of Scandal on the Change of their Sex: And if there had been any Room left to ſuſpect a Cheat or Diſguiſe, the Proceedings would have been more ſevere and more ſecret; and theſe Perſons would have been burnt, or at leaſt put to Death in ſome terrible Manner. Some Phyſicians were appointed to examine the Matter, and at laſt, after an exact Enquiry, they were judged to be abſolved from their Vows, and were diſmiſſed from the Obligations of a religious Life, and directed to go in Men's Habits. One of them was a *Valet de Chambre* to a *Roman* Marquis when I was there. I heard of this Matter only two Days before I left *Rome*, ſo that I had not Time to enquire after it more particularly; but I judg'd it ſo extraordinary, that I thought it was worth communicating to ſo curious an Enquirer into Nature.

And ſince I am upon the Subject of the Changes that have been made in Nature, I ſhall add one of another Sort, that I examined while I was at *Geneva*. There is a Miniſter of St. *Gervais*, Mr. *Gody*, who hath a Daughter ſixteen Years old; her Nurſe had an extraordinary Thickneſs of hearing; at a Year old the Child ſpoke all thoſe little Words that Children begin uſually to learn at that Age, but ſhe made no Progreſs; yet this was not obſerved till too late; and as ſhe grew to be two Years old, they perceived that ſhe had loſt her Hearing, and was ſo deaf, that though ſhe hears great Noiſes, yet ſhe hears nothing that one can ſpeak to her. It ſeems, while the Milk of her Nurſe was more abundant, and the Child ſuck'd more moderately the firſt Year, thoſe Humours in the Blood and Milk had not that Effect on her that appeared after ſhe came to ſuck more violently; and that her Nurſe's Milk, being in leſs Quantity, was thicker, and more charged with that Vapour that occaſioned the Deafneſs: But theis Child hath, by obſerving the Motions of the Mouths and Lips of others, acquired ſo many Words, that out of theſe ſhe hath formed a Sort of Jargon, in which ſhe holds Converſation whole Days with thoſe that can ſpeak her own Language. I could underſtand ſome of her Words, but could not comprehend a Period, for it ſeemed to be a confuſed Noiſe. She knows nothing that is ſaid to her, unleſs ſhe ſees the Motion of their Mouths that ſpeak to her; ſo that in the Night, when it is neceſſary to ſpeak to her, they muſt light a Candle: Only one Thing appears the ſtrangeſt; ſhe has a Siſter, with whom ſhe has practiſed her Language more than any other; and in the Night, by laying her Hand on her Siſter's Mouth, ſhe can perceive what ſhe ſays, and can diſcourſe with her in the Night. It's true, her Mother told me that this did not go far, and that ſhe found out only ſhort Periods in this Manner. Thus this young Woman, without any Pains taken, has, merely by a natural Sagacity, found a Method of holding Diſcourſe, that doth in a great Meaſure leſſen the Miſery of her Deafneſs. I examined this Matter critically, only the Siſter was not preſent, ſo that I could not ſee how the Converſation paſs'd between them in the Dark.

23. From *Civita Vecchia* I came to *Marſeilles*, where if there were a Road as ſafe as the Harbour; and if the Harbour were as large as it is convenient, it were certainly one of the moſt important Places in the World. All is ſo well defended, that it is, with reſpect to Storms or Enemies, the ſecureſt Port that can be ſeen any where. The Freedoms of this Place, though now at the Mercy of the Citadel, are ſuch, and its Situation draws ſo much Trade to it, that there one ſees an Appearance of Wealth greater than I found in any Town of *France*; and there is a new Street lately built there, that for Beauty and Largeneſs, is the nobleſt I ever ſaw. There is in that Port a perpetual Heat, and the Sun was ſo ſtrong in the *Chriſtmas* Week, that I was often obliged to quit the Key. I made a Tour from thence through *Provence*, *Languedoc*, and *Dauphine*. I will offer you no Account of *Niſmes*, nor of the Amphitheatre in it, or the *Pont du Garde* near it; which as they are ſtupendous Things, ſo they are copiouſly deſcribed by many, and are generally known to the *Engliſh* Nation, that if you never went that Way yourſelf, yet you muſt needs have received ſo particular a Relation of them from thoſe that have ſeen them, that I judge it needleſs to enlarge upon them; nor will I ſay any Thing of the Soil, the Towns, or other remarkable Things that I found there.

I have a much ſtronger Inclination to ſay ſomewhat concerning the Perſecution, which I ſaw in its utmoſt Rage and Fury; and of which I could give Inſtances, that are ſo much beyond all the common Meaſures of Barbarity and Cruelty, that I confeſs they ought not to be believed, unleſs I could give more poſitive Proofs of them, than are now fitting; and the Particulars that I could tell you are ſuch, that if I ſhould relate them with the neceſſary Circumſtances of Time, Place, and Perſons, might be fatal to many that are yet in the Power of their Enemies, that reſtrains me. In ſhort, I do not think there ever was ſuch a Violation of all that is ſacred, with Relation to God or Man; and what I ſaw and knew there, from the firſt Hand, hath ſo confirmed all the Ideas that I had from Books, of the Cruelty of that Religion, that I hope the Impreſſion this hath made upon me, ſhall never end but with my Life. The Applauſes that the whole Clergy give this Way of Proceeding, the many Panegyricks that are already written upon it, and the flattering Sermons that are preached upon this Subject, are ſuch evident Demonſtrations of their Senſe of this Matter, that what is now on Foot may be well termed, the Act of the Clergy of *France*, which yet have been hitherto eſteemed the moſt moderate Part of the *Roman* Communion. If any are more moderate than others, and have not ſo far laid aſide human Nature, as to go entirely into thoſe bloody Practices, yet they dare not own it, but whiſper it in Secret, as if it were half Treaſon; but for the greater Part, they do not only magnify all that is done, but they animate the Dragoons to higher Degrees of Rage: And there was ſuch a Heat ſpread over the Country on this Occaſion, that one could not mix in any promiſcuous Converſation, without finding ſuch Effects of it, that it was not very ſafe for ſuch, as were touch'd with Compaſſion for the Miſeries that the poor Proteſtants ſuffered. Some perhaps imagine, that this hath not been approved in *Italy*; and it is true, there were not any Rejoicings upon it at *Rome*, no Indulgences, nor *Te Deum*'s were heard of: And the *Spaniſh* Faction being ſo prevalent, it is not ſtrange if a Courſe of Proceedings, without Example, was ſet forth by all that were of that Intereſt in its proper Colours; of which I met with ſome Inſtances myſelf, and could not but ſmile, to ſee the *Spaniſh* Faction ſo far forget their Courts of Inquiſition, as to argue againſt Converſions by Dragoons as a Reproach to the Catholick Religion: Yet the Pope was of another Mind; for the Duke *d'Eſtrée* gave him an Account of the King's Proceedings in this Matter very copiouſly, as he himſelf related it, upon which the Pope approved, and expreſſed a great Satisfaction in every Thing that the King had done in that Matter; and the Pope added, that he found ſome Cardinals (as I remember, the Duke *d'Eſtrée* ſaid two) were not pleaſed with it, and had taken the Liberty to cenſure it; but the Pope ſaid they were to blame: The Duke *d'Eſtrée* did not name them, though he ſaid, he believed he knew who they were, and it is very likely that Cardinal *Pio* was one; for I was told that he ſpoke freely of this Matter. I muſt add one Thing, that I do not ſee the *French* King is to be ſo much blamed in this Matter, as his Religion, which, without Queſtion, obliges him to extirpate Hereticks, and not keep Faith with them; ſo that, inſtead of cenſuring him, I only lament his being bred up in a Religion that obliges him to diveſt himſelf of Humanity, and to violate his Faith, whenever the Cauſe of his Church and Religion require it; or if there is any Thing in this Conduct, that cannot be entirely juſtified from Principles of Religion, it is this, that he doth not put the Hereticks to Death out of Hand, but forces them to ſign an Abjuration, that all the World muſt ſee is done againſt their Conſciences; and being the only End of their Miſeries, thoſe that would think any Sort of Death a happy Concluſion of their Sufferings, ſeeing no Proſpect of ſuch a glorious Iſſue out of their Trouble, are prevailed on by the many lingering Deaths, of which they ſee no End, to make Shipwreck of the Faith: This Appearance of Mercy, in not putting Men to Death, doth truly verify the Character that *Solomon* giveth of the tender Mercies of the Wicked, *that they are cruel*.

I paſs'd the Winter at *Geneva* with more Satisfaction than I thought poſſible any where out of *England*; tho' that received great Allays from the lamentable Stories every Day from *France*; but there is a Sorrow by which the Heart is made better. I ought to make the moſt publick Acknowledgments poſſible for the extraordinary Civilities that I met with in my own Particular; but that which pleaſed me moſt was of a publick Nature; before I left *Geneva*, the Number of the *Engliſh* there were ſuch, that I found we could make a ſmall Congregation, for we were twelve or fourteen; ſo I addreſſed myſelf to the Council of Twenty five, for Liberty to have our own Worſhip in our own Language, according to the *Engliſh* Liturgy. This was immediately granted in ſo obliging a Manner, that as there was not one Perſon that made Exception to it, ſo they ſent one of their Body to me, to let me know, that in caſe our Number ſhould grow to be ſo great that it were fit for us to aſſemble in a Church, they would grant us one which had been done in Queen *Mary*'s Reign; but till then, we might hold our Aſſemblies as we thought fit: So after that Time, during the reſt of my Stay we had every *Sunday* our Devotions according to the Common-prayer, Morning and Evening; and at the Evening-prayer I preach'd in a Room that was too large for our ſmall Company: But there being a conſiderable Number in *Geneva* that underſtand *Engliſh*, and in particular ſome of the Profeſſors and Miniſters, we had a great many Strangers; and the laſt *Sunday* I gave the Sacrament according to the Way of the Church of *England*; and upon this Occaſion I found a general Joy in the Town for this, that I had given them an Opportunity of expreſſing the reſpect they had for our Church: And as in their publick Prayers they always prayed for the Churches of *Great Britain*, as well as for the King, ſo in private Diſcourſe they ſhewed all poſſible Eſteem for our Conſtitution; and they ſpoke of the unhappy Diviſions among us, and of the Separation that was made from us upon the Account of our Government and Ceremonies, with great Regret and Diſlike. I ſhall name only two of their Profeſſors, that, as they are Men of great Diſtinction, ſo they were the Perſons with whom I converſed the moſt; one, Mr. *Turretin*, a Man of great Learning, that by his indefatigable Study and Labour has much worn out and waſted his Strength, amidſt all the Affluence of a great Fortune to which he was born: One diſcerns in him all the Modeſty of an humble and mortified Temper, and of an active and fervent Charity proportioned to his Abundance, or rather beyond it; and there is in him ſuch a Zeal for Religion, as the preſent Conjuncture calls for, with all the Seriouſneſs of Piety and Devotion, which ſhews itſelf in private Converſation, and in his moſt edifying Sermons, by which he enters deep into the Conſciences of his Hearers. The other is Mr. *Tronchin*, a Man of a ſtrong Head, and of a clear and correct Judgment, who has all his Thoughts well digeſted; his Converſation has a Charm in it, that cannot be reſiſted; he is a Man of extraordinary Virtue, and of a Readineſs to oblige and ſerve all Perſons, that has ſcarce any Meaſure: His Sermons have a Sublimity in them that ſtrike the Hearer, as well as edify him; his Thoughts are noble, and Eloquence maſculine and exact, and has all the Majeſty of the Chair in it, tempered with all the Softneſs of Perſuaſion; ſo that he not only convinces his Hearers, but ſubdues and triumphs over them. In ſuch Company it was no Wonder if Time ſeemed to go off too faſt, ſo that I left *Geneva* with a Concern that I could not have felt in leaving any Place out of *Britain*.

From *Geneva* I went a ſecond Time through *Switzerland* to *Baſil*. At *Avanche* I ſaw the noble Fragments of a great *Roman* Work, which ſeems to have been the Portico to a Temple. The Heads of the Pillars are about four Feet ſquare, of the *Ionick* Order: The Temple hath been dedicated to *Neptune*, or ſome Sea-God; for on the Fragments of the Architrave, which are very beautiful, there are *Dolphins* and *Sea-Horſes* in Baſs-Relieves; and the Neighbourhood of the Place to the Lakes of *Iverdun* and *Morat* make this more evident. There is alſo a Pillar ſtanding up in its full Height, or rather the Corner of a Building, in which one ſees the Remains of a regular Architecture in two Ranks of Pillars. If the Ground near this were carefully ſearch'd, no doubt it would diſcover Remains of that Fabrick. Not far from this is *Morat*; and a little on this Side of it is a Chapel full of the Bones of the *Burgundians*, that were killed by the *Switzers*, when this Place was beſieged by the famous *Charles* Duke of *Burgundy*, who loſt a great Army before it, entirely cut off by the Beſieged. The Inſcription is very extraordinary, eſpecially for that Age: For the Bones being ſo piled up, that the Chapel is quite filled with them, the Inſcription bears, that *Charles* Duke of *Burgundy*'s Army having beſieged *Morat*, *Hoc ſui Monumentum reliquit*, left that Monument behind it. It cannot but ſeem ſtrange to one that views *Morat*, to imagine how it was poſſible for a Town ſo ſituated, and ſo ſlightly fortified, to hold out againſt ſo powerful a Prince, and ſo great an Army, that brought Cannon before it. I met with nothing remarkable between this and *Baſil*, except that I ſtaid ſome Time at *Bern*, and knew it better; and at this ſecond Time it was, that my Lord Advoyer *D'Erlach* gave Order to ſhew me the original Records of the famous Proceſs of the four *Dominicans*: Upon which I have retouched the Letter I wrote to you laſt Year.

25. *Baſil* is the Town of the greateſt Extent of all *Switzerland*, but it is not inhabited in Proportion to its Extent. The *Rhine* maketh a Crook before it, and the Town is ſituated on a riſing Ground, which hath a noble Effect on the Eye, when one is on the Bridge, for it looks like a Theatre. *Little Baſil*, on the other Side of the *Rhine*, is almoſt a fourth Part of the whole. The Town is ſurrounded with a Wall and Ditch, but it is expoſed on many Sides, and hath now ſo dreadful a Neighbour within a Quarter of a League of it, the Fort of *Hunningen*, that it hath nothing to truſt to, humanly ſpeaking, but its Union with the other Cantons. The Maxims of this Canton have hindered its being better peopled than it is: The Advantages of the Burgherſhip are ſuch, that the Citizens will not ſhare them with Strangers, and by this Means they do not admit them. For I was told, that during the laſt War, that *Alſatia* was ſo often the Seat of both Armies, *Baſil* having then a Neutrality, it might have been very well filled, if it had not been for this Maxim. And it were a great Happineſs to all the Cantons, if they could have different Degrees of Burgherſhip, ſo that the lower Degrees might be given to Strangers for their Encouragement to come and live among them; and the higher Degrees, which qualify Men for the advantageous Employments of the State, might be reſerved for the ancient Families of the Natives. *Baſil* is divided into ſixteen Companies, and every one of theſe hath four Members in the Little Council, ſo that it conſiſteth of Sixty-four: But of thoſe four, two are choſen by the Company itſelf who are called the Maſters, and the other two are choſen by the Council out of the Company; and thus, as there are two Sorts of Counſellors choſen in thoſe different Manners, there are alſo two chief Magiſtrates.

There are two Burgo-maſtors, that reign by Turns, and two Zunft-maſters, that have alſo their Turns, and all is for Life; and the laſt are the Heads of the Companies, like the *Roman* Tribunes of the People. The Fabrick of the Stadt-houſe is ancient. There is a very good Painting in Freſco upon the Walls. One Piece hath given much Offence to the Papiſts, though they have no Reaſon to blame the Reformation for it, ſince it was done ſeveral Years before it, *viz.* in the Year 1510. It is a Repreſentation of the Day of Judgment, and after Sentence given, the Devil is repreſented driving many before him to Hell, and among theſe there is a Pope and ſeveral Eccleſiaſticks. But it is believed, that the Council, which ſat ſo long in this Place, acting ſo vigorouſly againſt the Pope, engaged the Town into ſuch a Hatred of the Papacy, that this might give the Riſe to this Repreſentation. The more learned in the Town aſcribe the Beginning of the Cuſtom in *Baſil*, of the Clocks anticipating the Time a full Hour, to the ſitting of the Council: And they ſay, that in order to the advancing of Buſineſs, and the ſhortening their Seſſions, they ordered their Clocks to be ſet forward an Hour, which continueth to this Day. The Cathedral is a great old *Gothick* Building; the Chamber, where the Council ſat, is of no great Reception, and is a very ordinary Room.

Eraſmus's Tomb is only a plain Inſcription upon a great Braſs Plate. There are a great many of *Holbein*'s Pictures here, who was a Native of *Baſil*, and was recommended by *Eraſmus* to King *Henry* VIII. The two beſt are a *Corpo*, or *Chriſt* dead, which is certainly one of the beſt Pictures in the World. There is another Piece of his in the Stadt-houſe (for this is in the publick Library) of about three or four Feet ſquare, in which, in ſix ſeveral Cantons, the ſeveral Parts of our Saviour's Paſſion are repreſented with a Life and Beauty that cannot be enough admired. It is valued at ten thouſand Crowns. It is on Wood, but hath that Freſhneſs of Colour ſtill on it, that ſeems peculiar to *Holbein*'s Pencil. There is alſo a Dance that he painted on the Walls of an Houſe where he uſed to drink, that is ſo worn out, that very little is now to be ſeen, except Shapes and Poſtures; but theſe ſhew the Exquiſiteneſs of the Hand. There is another longer Dance, that running all along the Side of the Convent of the *Auguſtinians*, which is now the *French* Church, and that is Death's-dance. There are above threeſcore Figures in it at full Length, of Perſons of all Ranks, from Popes, Emperors, and Kings, down to the meaneſt Sorts of People, and of all Ages and Profeſſions, to whom Death appeareth in an inſolent and ſurpriſing Poſture: And the ſeveral Paſſions that they expreſs are ſo well ſet out, that this was certainly a great Deſign. But the Freſco being expoſed to the Air, this was ſo worn out ſome Time ago, that they ordered the beſt Painter they had, to lay new Colours on it; but this is ſo ill done, that one had rather ſee the dead Shadows of *Holbein*'s Pencil, than this coarſe Work.

There is in *Baſil* a Gunſmith that makes Wind-guns, and he ſhewed me one, that as it received at once Air for ten Shot, ſo it had this peculiar to it, which he pretends is his own Invention, that he can diſcharge all the Air that can be parcelled out in ten Shot, at once, to give a home Blow. I confeſs thoſe are terrible Inſtruments, and it ſeems the Intereſt of Mankind to forbid them quite, ſince they can be employed to aſſaſſinate Perſons ſo dextrouſly, that neither Noiſe nor Fire will diſcover from what Hand the Shot cometh. The Library of *Baſil* is by much the beſt in all *Switzerland*. There is a fine Collection of Medals in it, and a very handſome Library of Manuſcripts. The Room is noble, and diſpoſed in a very good Method. Their Manuſcripts are chiefly the *Latin* Fathers, or *Latin* Tranſlations of the *Greek* Fathers; ſome good Bibles. They have the Goſpel in *Greek* Capitals, but they are viciouſly writ in many Places. There is an infinite Number of the Writers of the darker Ages, and there are Legends and Sermons without Number. All the Books that were in the ſeveral Monaſteries, at the Time of the Reformation, were carefully preſerved; and they believe, that the Biſhops, who ſat here in the Council, brought with them a great many Manuſcripts which they never carried away.

Among their Manuſcripts, I ſaw four of *Huſs*'s Letters, that he writ to the *Bohemians* the Day before his Death, which are very devout, but exceſſively ſimple. The Manuſcripts of this Library are far more numerous than thoſe of *Bern*, which are gathered by *Bongarſius*, and left by him to the publick Library there. They are indeed very little conſidered there, and are the worſt kept that I ever ſaw. But it is a noble Collection of all the ancient *Latin* Authors. They have ſome few of the beſt of the *Roman* Times, writ in great Characters, and there are many that are ſeven or eight hundred Years old. There is in *Baſil* one of the beſt Collections of Medals that ever I ſaw in private Hands, together with a noble Library, in which there are Manuſcripts of good Antiquity, that belong to the Family of *Feſch*, and that go from one learned Man of the Family to another: For this Inheritance can only paſs to a Man of Learning; and when the Family produceth none, then it is to go the Publick. In *Baſil*, as the ſeveral Companies have been more or leſs ſtrict, in admitting ſome to a Freedom in the Company, that have not been of the Trade, ſo they retain their Privileges to this Day. For, in ſuch Companies, that have once received ſuch a Number that have not been of the Trade, as grew to be the Majority, the Trade hath never been able to recover their Intereſt. But ſome Companies have been more cautious, and have never admitted any but thoſe that were of the Trade; ſo that they retain their Intereſt ſtill in the Government. Of theſe the Butchers were named for one; ſo that there are always four Butchers in the Council. The Great Council conſiſteth of two hundred and forty, but they have no Power left them, and they are only aſſembled upon ſome extraordinary Occaſions, when the Little Council thinks fit to communicate any important Matter to them. There are but ſix Bailiages that belong to *Baſil*, which are not Employments of great Advantage; for the beſt of them affords to the Bailiff only a thouſand Livres a Year. They reckon that there are in *Baſil* three thouſand Men that can bear Arms, and that they could raiſe four thouſand more out of the Canton; ſo that the Town is almoſt the half of this State, but the whole making thirty Pariſhes. There are eighteen Profeſſors in this Univerſity; and there is a Spirit of more free and generous Learning ſtirring there, than I ſaw in all thoſe Parts. There is a great Decency of Habit in *Baſil*; and the Garb of the Counſellors, Miniſters, and Profeſſors, their ſtiff Ruffs, and their long Beards, have an Air that is venerable and auguſt. The Appointments are but ſmall, for Counſellors, Miniſters, and Profeſſors, have but one hundred Crowns a-piece: It is true, many Miniſters are Profeſſors, ſo this mends the Matter a little; but perhaps it would go better with the State of Learning there, if they had but half the Number of Profeſſors, and if thoſe were a little better encouraged. No where is the Rule of St. *Paul* better obſerved than at *Baſil*; for all the married Women go to Church with a Coif on their Heads, that is ſo folded, that it comes down ſo far as to cover their Eyes, and another Folding covers alſo their Mouth and Chin, ſo that nothing but their Noſe appears; and then all turns backward in a Folding that hangs down to their Mid-leg: This is always white; ſo that there is ſuch a Sight of white Heads in their Churches, as cannot be found any where elſe. The unmarried Women wear Hats turned up in the Brims, before and behind; and the Brims of the Sides being about a Foot broad, ſtand out far on both Sides: This Faſhion is alſo at *Straſburg*, and is worn there alſo by the married Women.

26. I mentioned formerly the conſtant Danger to which this Place is expoſed, from the Neighbourhood of *Hunningen*: I was told, that at firſt it was pretended that the *French* King intended to build only a ſmall Fort there; and it was believed, that one of the Burgomaſters of *Baſil*, who was thought not only the wiſeſt Man of that Canton, but of all *Switzerland*, was gained to lay all Men aſleep, and to aſſure them, that the ſuffering this Fort to be built ſo near them, was of no Importance; but now they ſee too late their fatal Error; for the Place is great, and will hold a Garriſon of three or four thouſand Men. It is a Pentagon, only the Side towards the *Rhine* is ſo large, that if it went round on that Side, I believe it muſt have been an Hexagon. The Baſtions have all Orillons, and in the Middle of them there is a void Space not filled up with Earth, where there is a Magazine built ſo thick in the Vault, that it is Proof againſt Bombs. The Ramparts are ſtrongly faced; there is a large Ditch, and before the Curtain, in the Middle of the Ditch, there runs a Horn-work, which is but ten or twelve Feet high; and from the Bottom of the Rampart, there goes a Vault to this Horn-work, for conveying Men for its Defence. Before this Horn-work there is a Half-moon, with this that is peculiar to thoſe new Fortifications, that there is a Ditch that cuts the Half-moon in an Angle, and maketh one Half-moon within another: Beyond that there is a Counterſcarp about twelve Feet high above the Water, with a covered Way, and a Glacis deſigned, though not yet executed. There is alſo a great Horn-work beſides all this, which runs out a huge Way with its Outworks towards *Baſil*. There is likewiſe a Bridge laid over the *Rhine*, and there being an Iſland in the River where the Bridge is laid, there is a Horn-work that fills and ſtrengthens it. The Buildings in this Fort are beautiful, and the Square can hold above four thouſand Men: The Works are not yet quite finiſhed, but when all is complete, this will be one of the ſtrongeſt Places in *Europe*. There is a Cavalier on one or two of the Baſtions, and there are Half-moons before the Baſtions; ſo that the *Switzers* ſee their Danger now, when it is not eaſy to redreſs it. This Place is ſituated in a great Plain, ſo that it is commanded by no riſing Ground on any Side of it. I made a little Tour into *Alſace*, as far as *Mountbelliard*; the Soil is extreme rich, but it hath been ſo long a Frontier Country, and is by Conſequence ſo ill peopled, that it is in many Places overgrown with Woods. In one Reſpect it is fit to be the Seat of War, for it is full of Iron-works, which bring a great deal of Money into the Country. I ſaw nothing peculiar in the Iron-works there, except that the Sides of the great Bellows were not of Leather, but of Wood, which ſaves much Money; ſo I will not ſtand to deſcribe them.

The River *Rhine*, all from *Baſil* to *Spire*, is ſo low, and is on both Sides ſo covered with Woods, that one, that comes down in a Boat, hath no Sight of the Country. The River runs ſometimes with ſuch a Force, that nothing but ſuch Woods could preſerve its Banks, and even theſe are not able to ſave them quite; for the Trees are often waſhed away by the very Roots, ſo that in many Places thoſe Trees lie along the Channel of the River. It hath been alſo thought a Sort of a Fortification to both Sides of the River, to have it thus faced with Woods, which makes the paſſing of Men dangerous, when they muſt march for ſome Time after their Paſſage through a Defile. The firſt Night, from *Baſil*, we came to *Briſac*, which is a poor and miſerable Town; but it is a noble Fortification, and hath on the Weſt Side of the River, over which a Bridge is laid, a regular Fort of four or five Baſtions. The Town of *Briſac* riſeth on a Hill, which is a conſiderable Height. There were near it two Hills, the one is taken within the Fortification, and the other is ſo well levelled with the Ground, that one cannot ſo much as find out where it was. All the Ground about, for many Miles, is plain; ſo that from the Hill, as from a Cavalier, one can ſee exactly well, eſpecially with the Help of a Perſpective, all the Motions of an Enemy in Caſe of a Siege. The Fortification is of a huge Compaſs, above a *French* League, indeed almoſt a *German* League. The Baſtions are quite filled with Earth; they are faced with Brick, and a huge broad Ditch full of Water round them: The Counterſcarp, the covered Way, which hath a Palliſade within a Parapet, and the Glacis, are all well executed: There is a Half-moon before every Curtain; the Baſtions have no Orillons, except one or two, and the Curtains are ſo diſpoſed, that a good Part of them defend the Baſtion. The Garriſon of this Place, in Time of War, muſt needs be eight or ten thouſand Men. There hath not been much done of late to this Place, only the Ditch is ſo adjuſted, that it is all defended by the Flanks of the Baſtions.

But the nobleſt Place on the *Rhine* is *Straſburg*; it is a Town of a huge Extent, and hath a double Wall and Ditch all round it; the inner Wall is old, and of no Strength, nor is the outward Wall very good; it hath a *Fauſſebraye*, and is faced with Brick twelve or fifteen Feet above the Ditch: The Counterſcarp is in an ill Condition, ſo that the Town was not in Caſe to make any long Reſiſtance; but it is now ſtrongly fortified. There is a Citadel built on that Side that goeth towards the *Rhine*, and is much ſuch a Fort as that of *Hunningen*; and on the Side of the Citadel towards the Bridge, there is a great Horn-work that runs out a great Way with Out-works belonging to it. There are alſo ſmall Forts at the two chief Gates that lead to *Alſace*, by which the City is ſo bridled, that theſe can cut off all its Communication with the Country about, in caſe of a Revolt. The Bridge is well fortified; there are alſo Forts in ſome Iſlands in the *Rhine*, and ſome Redoubts; ſo that all round this Place there is one of the greateſt Fortifications in *Europe*.

Hitherto the Capitulation, with relation to Religion, hath been well kept; and there is ſo ſmall a Number of new Converts, and theſe are for the greateſt Part ſo inconſiderable, not being in all above two hundred, as I was told, that if they do not employ the new-faſhion'd Miſſionaries *à la Dragonne*, the old ones are not like to have ſo great a Harveſt there as they promiſed themſelves, though they are Jeſuits. The *Lutherans*, for the greateſt Part, retain their Animoſities almoſt to an equal Degree both againſt *Papiſts* and *Calviniſts*. I was in their Church, where, if the Muſick of their Pſalms pleaſed me much, the Irreverence in Singing (it being free to keep on or put off the Hat) did appear very ſtrange to me. The Churches are full of Pictures, in which the chief Paſſages of our Saviour's Life are repreſented, but there is no Sort of religious Reſpect paid them: They bow when they name the Holy Ghoſt, as well as at the Name of Jeſus; but they have not the Ceremonies that the *Lutherans* of *Saxony* uſe, which Mr. *Bebel*, their Profeſſor of Divinity, ſaid was a great Happineſs; for a Similitude in outward Rites might diſpoſe the ignorant People to change too eaſily. I found ſeveral good People, both of the *Lutheran* Miniſters, and others, acknowledge that there was was ſuch a Corruption of Morals ſpread over the whole City, that as they had juſtly drawn down on their Heads the Plague of the Loſs of their Liberty, ſo this having touch'd them ſo little, they had Reaſon to look for ſeverer Strokes.

One ſees, in the Ruin of this City, what a miſchievous Thing the popular Pride of a free City is: They fancied they were able to defend themſelves, and ſo they refuſed to let an Imperial Garriſon come within their Town; for if they had received only five hundred Men, as that ſmall Number would not have been able to have oppreſs'd their Liberties, ſo it would have ſo ſecured the Town, that the *French* could not have beſieg'd it without making War on the Empire: But the Town thought this was a Diminution of their Freedom, and ſo choſe rather to pay a Garriſon of three thouſand Soldiers, which as it exhauſted their Revenue, and brought them under great Taxes, ſo it proved too weak for their Defence when the *French* Army came before them. The Town begins to ſink in its Trade, notwithſtanding the great Circulation of Money that the Expence of the Forifications hath brought to it; but when that is at an End, it will ſink more ſenſibly; for it is impoſſible for a Place of Trade, that is to have always eight or ten thouſand Soldiers in it, to continue long in a flouriſhing State. There was a great Animoſity between two of the chief Families of the Town, *Dietrick* and *Obrecht*; the former was the Burgo-maſter, and was once almoſt run down by a Faction that the other had raiſed againſt him; but he turned the Tide, and got ſuch an Advantage againſt *Obrecht*, who had writ ſomewhat againſt the Conduct of their Affairs, that he was condemned and beheaded for writing Libels againſt the Government. His Son is a learned Man, and was Profeſſor of the Civil Law; and he, to have his Turn of Revenge againſt *Dietrick*, went to *Paris*, and that he might make his Court the better, changed his Religion. *Dietrick* had been always look'd on as one of the chief of the *French* Faction, though he had been at firſt an *Imperialiſt*, ſo it was thought that he ſhould have been well rewarded; yet it was expected, that to make himſelf capable of that, he ſhould have changed his Religion; but he was an ancient Man, and would not pay his Court at that Rate; ſo without any Reaſon given, and againſt the expreſs Words of the Capitulation, he was confined to one of the midland Provinces of *France* (as I remember, it was *Limoſin*:) And thus he that had been thought the chief Cauſe of this Town's falling under the Power of the *French*, is the firſt Man that hath felt the Effects of it.

The Library here is conſiderable, the Caſe is a great Room very well contrived; for it is divided into Cloſets all over the Body of the Room, which runs about theſe as a Gallery, and in theſe Cloſets all round, there are the Books of the ſeveral Profeſſions lodged apart: There is one for Manuſcripts, in which there are ſome of conſiderable Antiquity. I need ſay nothing to you of the vaſt Height and *Gothick* Architecture of the Steeple, and of the great Church, nor of the curious Clock, where there is ſo vaſt a Variety of Motions; for theſe are well known. The Baſs-relieves upon the Tops of the great Pillars of the Church are not ſo viſible, but they are ſurprizing; for this being a Fabrick of three or four hundred Years old, it is very ſtrange to ſee ſuch Repreſentations as are there. There is a Proceſſion repreſented, in which a Hog carrieth the Pot with the holy Water, and Aſſes and Hogs in prieſtly Veſtments follow to make up the Proceſſion: There is alſo an Aſs ſtanding before an Altar, as if he were going to conſecrate; and one carrieth a Caſe with Reliques, within which one ſeeth a Fox; and the Trains of all that go in this Proceſſion are ſupported by Monkies. This ſeems to have been made in Hatred of the Monks, whom the ſecular Clergy abhorred at that Time, becauſe they had drawn the Wealth and the following of the World after them; and they had expoſed the ſecular Clergy ſo much for their Ignorance, that it is probable, after ſome Ages the Monks falling under the ſame Contempt, the ſecular Clergy took their Turn in expoſing them in ſo laſting a Repreſentation to the Scorn of the World. There is alſo in the Pulpit a Nun cut in Wood lying along, and a Frier lying near her with his Breviary open before him, and his Hand under the Nun's Habit, and the Nun's Feet are ſhod with Iron Shoes. I confeſs I did not look for theſe Things, for I had not heard of them; but my noble Friend Mr. *Ablancourt* view'd them with great Exactneſs while he was the *French* King's Reſident at *Straſburg*, in the Company of one of the Magiſtrates that waited on him; and it is upon his Credit, to which all that know his eminent Sincerity, know how much is due, that I give you this Particular.

The Habits of the People here, but more eſpecially of the Women, are very ſingular, and ſurprize Strangers greatly; they are without Doubt very antique, and there is good Reaſon to believe that the Tyranny of Faſhion has never borne hard upon theſe honeſt People. They are ſtrongly of Opinion, that as Cloaths are intended to hide Nakedneſs, ſo the Manner of Cloathing ought to be ſuitable to the Condition; and upon this Principle it is, that you ſee every body regulate their Dreſs here; ſo that when you are once acquainted with their Cuſtom, you may diſtinguiſh by the Garb of every Woman you meet what Condition of Life ſhe is in. As for Inſtance, a Country Farmer's Wife wears ſhort Petticoats, a Kind of Boddice, and over theſe a Sort of long Jacket, which in the Winter Time is lined with Lambs-ſkin for Want of better Furs. Her Hair is curled with her beſt Skill, and upon her Head ſhe wears a Hat deck'd with Flowers. The lower Sort of Country People wear a Kind of Coif, under which their Hair is gathered up tight. A Tradeſman's Wife in Mourning makes a very ſolemn Figure; her Petticoats are long, ſhe has a ſtiff-bodied Gown, cloſe Sleeves, with Cuffs that turn up almoſt to the Elbows, and a Piece of fine Cloth turns up under the Chin over their Mouths, ſo that between that and a very cloſe round Cap, you ſee nothing but their Noſe and their Eyes. A Burgher's Wife is ſtill a more extraordinary Spectacle, for ſhe has a white Robe that covers all her Cloaths, a Hood and Fore-head Cloth upon her Head, the Corners of which are ſtiffned and ſtick out on both Sides, ſo that a ſtranger Figure can hardly be ſeen. Ordinary Women mourn in Black, but with a white Veil before them, which reaches to up their Mouths, and below their Knees. A Doctor's Wife has a Garb not eaſily expreſſed, her Petticoats are very long, her Sleeves flounc'd upon her Shoulders, cloſe on her Arms, and

Elbows, ſtraiter at the Wriſts with Cuffs of white Linnen, and Rings and Bracelets in Abundance. The Body of the Gown is very ſtiff with Wings that reſt upon their Shoulders, a round Ruff about their Necks, and a monſtrous large Head-dreſs, beyond the Size of a Turbant. Their young Women, however, have a more agreeable Habit, their Sleeves are open, they wear very fine Linnen, ſtiff-bodied Gowns, their Necks cloſe covered, Petticoats ſo long that nothing appears under them but the very Points of their Shoes, and on their Heads they wear very large Hats, like thoſe before deſcribed in ſpeaking of the Women of *Baſil*. Theſe Dreſſes will be better comprehended by ſeeing them in a Print, than by any Deſcription that can be given, and this is the more reaſonable, becauſe now there is nothing of this Kind to be ſeen, the *French* Cuſtoms generally prevail, and Strangers can diſcover no Difference between the Habits of the Women at *Straſburg*, and thoſe of other Frontier Towns in the *French* Dominions.

27. From *Straſburg* we went down the *Rhine* to *Philipſburg*, which lies at a quarter of a Mile's Diſtance from the River; it is but a ſmall Place, and the Baſtions are but little; there is a Ravelin before almoſt all the Curtains; and there lie ſuch Marſhes round it, that in theſe conſiſt the chief Strength of the Place. The *French* had begun a great Crown work on that Side that lies to the *Rhine*, and had caſt out a Horn work beyond that; but by all that appears, it ſeems they intended to continue their Works quite round the Town, and to make a ſecond Wall and Ditch all round it, which would have enlarged the Place vaſtly, and made a Compaſs capable to lodge ten thouſand Men; and this would have been ſo terrible a Neighbour to the *Palatinate*, and all *Franconia*, that it was a Maſter-piece in *Charles Lewis*, the late Elector *Palatine*, to engage the Empire in this Siege: He ſaw well, how much it concerned him to have it out of the Hands of the *French*; ſo that he took great Care to have the Duke of *Lorrain*'s Camp ſo well ſupplied with all Things neceſſary during the Siege, that the Army lay not under the leaſt Uneaſineſs. From thence, in three Hours, we came to *Spire*, which is ſo naked a Town, that if it were attacked, it could not make the leaſt Reſiſtance. The Town is neither great nor rich, and is ſubſiſted chiefly by the Imperial Chamber that ſitteth here, though there is a conſtant Diſpute between the Town and the Chamber concerning Privileges; for the Government of the Town pretends, that the Judges of the Chamber, as they are private Men, and out of the Court of Judicature, are ſubject to them; and ſo about a Year ago they put one of the Judges in Priſon: On the other Hand, the Judges pretend, that their Perſons are ſacred. It was the Conſideration of the Chamber, that procured to the Town the Neutrality that they enjoyed all the laſt War. I thought to have ſeen the Forms of this Court, and the Way of laying up and preſerving their Records, but it was not then ſitting. The Building, the Halls, and Chambers of this famous Court are mean beyond Imagination, and look more like the Halls of ſome ſmall Company, than of ſo great a Body; and I could not ſee the Places where they lay up their Archives. The Government of the City is *Lutheran*; but not only the Cathedral is in the Hands of the Biſhop and Chapter, but there are likewiſe ſeveral Convents of both Sexes, and the Jeſuits have a College there. There is little remarkable in the Cathedral, which is a huge Building in the *Gothick* Manner, of the worſt Sort. The Tombs of many Emperors that lie buried there are ſingular only for their Meanneſs, they being barely great Flag-ſtones laid on ſome ſmall Stone Balluſters of a Foot and an half high: There are alſo the Marks of a ridiculous Fable concerning St. *Bernard*, which is too fooliſh to be related; yet ſince they have taken ſuch Pains to preſerve the Remembrance of it, I ſhall venture to write it. There are from the Gate, all along the Nave of the Church up to the Steps that go up to the Choir, four round Plates of Braſs, above a Foot Diameter, and at the Diſtance of thirty Feet one from another, laid in the Pavement; on the firſt of theſe is engraven *O Clemens*, on the ſecond *O Pia*, on the third *O Felix*, and on the fourth *Maria!* The laſt is about thirty Feet diſtant from a Statue of the Virgin; ſo they ſay that St. *Bernard* came up the whole Length of the Church at four Steps, and that thoſe four Plates were laid where he ſtepp'd; and that at every Step he pronounced the Word that is engraven on the Plate; and when he came to the laſt, the Image of the Virgin anſwered him, *Salve Bernarde*; upon which he anſwered, let a Woman keep Silence in the Church; and that the Virgin's Statue has kept Silence ever ſince. This laſt Part of the Story is certainly very credible: He was a Man of Learning that ſhewed me this; and he repeated it ſo gravely to me, that I ſaw he either believed it, or at leaſt that he had a Mind to make me believe it; and I aſked him as gravely, if that was as firmly believed there? He told me, that one had lately writ a Book to prove the Truth of it, as I remember, it was a Jeſuit: He acknowledged it was not an Article of Faith, ſo I was ſatisfied.

28. There is in the Cloiſter an old *Gothick* Repreſentation of our *Saviour*'s Agony in Stone, with a great many Figures of his Apoſtles and the Company that came to ſeize him, that is not ill for the Time in which it was made, it being ſome Ages old. The *Calviniſts* have a Church in this Town, but their Numbers are not conſiderable. I was told there were ſome ancient Manuſcripts in the Library that belongeth to the Cathedral; but one of the Prebendaries, to whom I addreſſed myſelf, being, according to the *German* Cuſtom, a Man of greater Quality than Learning, told me, he heard they had ſome ancient Manuſcripts, but he knew nothing of them; and the Dean was abſent, ſo I could not ſee them, for he kept one of the Keys. The lower *Palatinate* is certainly one of the ſweeteſt Countries in all *Germany*; it is a great Plain till one comes to the Hills of *Heidelberg*; the Town is ill ſituated, juſt in a Bottom, between two Ranges of Hills, yet the Air is much commended. I need ſay nothing of the Caſtle, nor of the prodigious Wine-cellar, in which, though there is but one celebrated Tun, that is ſeventeen Feet high, and twenty-ſix Feet long, and is built with a Strength more like that of the Ribs of a Ship, than the Staves of a Tun; yet there are many other Tuns of ſuch a prodigious Bigneſs, that they would ſeem very extraordinary, if this vaſt one did not eclifpſe them. The late Prince *Charles Lewis* ſhewed his Capacity in the Peopling and Settling this State, that had been ſo entirely ruined, being for many Years the Seat of War; for in four Years time he brought it to a flouriſhing Condition: He raiſed the Taxes as high as was poſſible without diſpeopling his Country; all Men's Eſtates were valued, and they were taxed at five *per Cent.* of the Value of their Eſtates; but their Eſtates were not valued to the Rigour, but with ſuch Abatements as have been ordinary in *England* in the Times of Subſidies; ſo that when his Son offered to bring the Taxes down to two *per Cent.* of the real Value, the Subjects all deſired him rather to continue them as they were. There is no Prince in *Germany*, that is more abſolute than the Elector *Palatine*; for he layeth on his Subjects what Taxes he pleaſeth, without being limited to any Forms of Government. And here I ſaw that which I had always believed to be true, that the Subjects of *Germany* are only bound to their particular Prince; for they ſwear Allegiance ſingly to the Elector, without any Reſerve for the Emperor; and in their Prayers for him, they name him their Sovereign. It is true, the Prince is under ſome Ties to the Emperor, but the Subjects are under none. And by this *D. Fabritius*, a learned and judicious Profeſſor there, explained thoſe Words of *Pareus*'s Commentary on the *Romans*, which had reſpect only to the Princes of the Empire, and were quite miſunderſtood by thoſe who fancied that they favoured Rebellion; for there is no Place in *Europe* where all rebellious Doctrine is more borne down than here.

29. I found a great Spirit of Moderation, with Relation to thoſe warm Controverſies that have occaſioned ſuch Heat in the Proteſtant Churches reigning in the Univerſity there, which is in a great Meaſure owing to the Prudence, the Learning, and the happy

Temper of Mind of *D. Fabritius*, and *D. Miek*, who, as they were long in *England*, ſo they have that generous Largeneſs of Soul, which is the noble Ornament of many of the *Engliſh* Divines. Prince *Charles Lewis* ſaw that *Manheim* was marked out by Nature to be the moſt important Place of all his Territory, it being ſituated in the Point where the *Neckar* falls into the *Rhine*; ſo that thoſe two Rivers defending it on two Sides, it was capable of a good Fortification. It is true, the Air is not thought wholeſome, and the Water is not very good, yet he made a fine Town there, and a noble Citadel, with a regular Fortification about it; and he deſigned a great Palace there, but did not live to build it. He ſaw of what Advantage Liberty of Conſcience was to the peopling of his Country; ſo as he ſuffered the *Jews* to come and ſettle there, he reſolved alſo not only to ſuffer the three Religions tolerated by the Laws of the Empire to be profeſſed there, but he built a Church for them all three, which he called the *Church of the Concord*, in which the *Calviniſts*, *Lutherans*, and *Papiſts* had, in the Order of which I have ſet them down, the Exerciſe of their Religion; and he maintained the Peace of his Principality ſo entirely, that there was not the leaſt Diſorder occaſioned by this Toleration: This indeed made him to be looked on as a Prince that did not much conſider Religion himſelf. He had a wonderful Application to all Affairs, and was not only his own chief Miniſter, but he alone did the Work of many.

But I were unjuſt, if I ſhould not ſay ſomewhat to you of the princely Virtues, and the celebrated Probity of the preſent Prince Elector, upon whom that Dignity is devolved by the Extinction of ſo many Princes, that in this Age compoſed the moſt numerous Family of any of that Rank in *Europe*. This Prince, as he is in many Reſpects an Honour to the Religion that he profeſſes, ſo he is in nothing more to be commended by thoſe who differ from him, than for his exact adhering to the Promiſes he made his Subjects, with relation to their Religion; in which he has not (even in the ſmalleſt Matters) broke in upon their eſtabliſhed Laws; and though an Order of Men that have turned the World upſide down, have great Credit with him, yet it is hitherto viſible, that they cannot carry it ſo far, as to make him do any thing contrary to the eſtabliſhed Religion, and to thoſe ſacred Promiſes that he made his Subjects. For he makes it appear to all the World, that he does not conſider thoſe, as ſo many Words ſpoken at firſt to lay his People aſleep, which he may now explain and obſerve as he thinks fit, but as ſo many Ties upon his Conſcience and Honour, which he will religiouſly obſerve. And as in the other Parts of his Life he hath ſet a noble Pattern to all the Princes of *Europe*, ſo his Exactneſs to his Promiſes is that which cannot be too much commended; of which this extraordinary Inſtance has been communicated to me ſince I came into this Country. The Elector had a Proceſſion in his Court laſt *Corpus Chriſti* Day; upon which one of the Miniſters of *Heidelberg* preached a very ſevere Sermon againſt Popery, and in particular taxed that Proceſſion, perhaps with greater Plainneſs than Diſcretion. This being brought to the Elector's Ears, he ſent preſently an Order to the Eccleſiaſtical Synod to ſuſpend him: That Court is compoſed of ſome ſecular Men and ſome Churchmen; and as the Prince's Authority is delegated to them, ſo they have a Sort of an Epiſcopal Juriſdiction over all the Clergy. This Order was a Surprize to them, as being a direct Breach upon their Laws, and the Liberty of their Religion; ſo they ſent a Deputation to Court, to let the Elector know the Reaſons that hindered them from obeying his Orders; which were heard with ſo much Juſtice and Gentleneſs, that the Prince, inſtead of expreſſing any Diſpleaſure againſt them, recalled the Order that he had ſent them.

30. The Way from *Heidelberg* to *Francfort* is, for the firſt twelve or fifteen Miles, the beautifulleſt Piece of Ground that can be imagined; for we went under a Ridge of little Hills that are all covered with Vines; and from them, as far as the Eye can go, there is a beautiful Plain of Corn-fields and Meadows, all ſweetly divided and encloſed with Rows of Trees, ſo that I fancied I was in *Lombardy* again, but with this Advantage, that here all was not of a Piece, as it is in *Lombardy*; but the Hills, as they made a pleaſant Inequality in the Proſpect, ſo they made the Air purer, and produced a pleaſant Wine. The Way near *Darmſtadt*, and all forwards to *Francfort*, becometh more wild and more ſandy. There is a good Suburb on the South Side of the *Maine* over-againſt *Francfort*, which hath a very conſiderable Fortification. There is a double Wall and a double Ditch that goes round it; and the outward Wall, as it is regularly fortified, ſo it is faced with Brick to a conſiderable Height. The Town of *Francfort* is of a great Extent, and ſeemed to be but about a third Part leſs than *Straſburg*. The three Religions are alſo tolerated there, and though the Number of the Papiſts is very inconſiderable, yet they have the great Church, which is a huge rude Building; they have alſo ſeveral other Churches, and ſome Convents there. There are ſeveral open Squares for Market-places, and the Houſes about them look very well on the Outſide. Among their Archives they preſerve the Original of the *Bulla Aurea*, which is only a great Parchment writ in *High Dutch*, without any Beauty anſwering to its Title; and ſince I could not have underſtood it, I was not at the Pains of deſiring to ſee it; for that is not obtained without Difficulty. The *Lutherans* have here built a new Church, called St. *Katharine*'s, in which there is as much Painting as ever I ſaw in any Popiſh Church; and over the high Altar there is an huge carved Crucifix, as there are painted ones in other Places of the Church; the Pulpit is extreme fine, of Marble of different Colours, very well poliſhed and joined. I was here at Sermon, where I underſtood nothing; but I like one thing that I ſaw both at *Straſburg* and here, that at the End of Prayers there was a conſiderable Interval Silence left, before the Concluſion, for all People's private Devotions. In the Houſe of their publick Diſcipline they retain ſtill the old *Roman Piſtrina*, or Hand-mill, at which lewd Women are condemned to grind, that is, to drive about the Wheel that maketh the Mill-ſtones go. There is a great Number of *Jews* there, tho' their two Synagogues are very little, and by Conſequence, the Numbers being great, they are very naſty. I was told, they were in all above twelve hundred. The Women had the moſt tawdry Embroidery of Gold and Silver about them that ever I ſaw, for they had all Mantles of Crape, and both about the Top and the Bottom there was a Border above a Hand's Breadth of Embroidery. The Fortification of *Francfort* is conſiderable; their Ditch is very broad, and very full of Water; all the Baſtions have a Countermine that runneth along by the Brim of the Ditch, but the Counterſcarp is not faced with Brick as the Walls are, and ſo in many Places it is in an ill Condition: The Covered Way and Glacis are alſo in an ill Caſe. The Town is rich, and driveth a great Trade, and is very pleaſantly ſituated. Not far from thence is *Hockam*, that yieldeth the beſt Wine of thoſe Parts. Since I took *Francfort* in my Way from *Heidelberg* to *Mentz*, I could not paſs by *Worms*, for which I was ſorry.

I had a great Mind to ſee that Place where *Luther* made his firſt Appearance before the Emperor and the Diet; and in that ſolemn Audience expreſſed an undaunted Zeal for that glorious Cauſe, in which God made him ſuch a bleſſed Inſtrument. I had another Piece of Curioſity on me, which will perhaps appear to you ſomewhat ridiculous. I had a Mind to ſee a Picture, that, as I was told, is over one of the Popiſh Altars, which one would think was invented by the Enemies of Tranſubſtantiation, to make it appear ridiculous. There is a Windmill, and the Virgin throws Chriſt into the Hopper, and he comes out at the Eye of the Mill all in Wafers, which ſome Prieſts take up to give to the People. This is ſo coarſe an Emblem, that one would think it too groſs even for *Laplanders*; but a Man that can ſwallow Tranſubſtantiation itſelf, will digeſt this likewiſe.

31. *Mentz* is very nobly ſituated, on a riſing Ground, a little below the Conjunction of the two Rivers, the *Rhine* and the *Maine*; it is of too great Compaſs, and

too ill peopled, to be capable of a great Defence. There is a Citadel on the higheſt Part of the Hill that commands the Town; it is encompaſſed with a dry Ditch that is conſiderably deep. The Walls of the Town are faced with Brick, and regularly fortified; but the Counterſcarp is not faced, ſo all is in a ſad Condition, and the Fortification is the weakeſt on the Side of the Elector's Palace. There is one Side of a new Palace very nobly built in a regular Architecture, only the *Germans* ſtill retain ſomewhat of the *Gothick* Manner. It is of a great Length, and the Deſign is to build quite round the Court, and then it will be a very magnificent Palace, only the Stone is red; for all the Quarries that are upon the *Rhine*, from *Baſil* down to *Coblentz*, are of red Stone, which does not look beautiful. The Elector of *Mentz* is an abſolute Prince; his Subjects preſent Liſts of their Magiſtrates to him, but he is not tied to them, and may name whom he will. The ancient Demeſn of the Electorate is about forty thouſand Crowns, but the Taxes riſe to about three hundred thouſand Crowns; ſo that the Subjects here are as heavily taxed as in the *Palatinate*. There are twelve thouſand Crowns a Year given the Elector for his Privy-purſe, and the State bears the reſt of his Expence. He can arm ten thouſand Men, and there is a Garriſon of two thouſand in *Mentz*. This Elector has three Councils; one as he is Chancellor of the Empire, conſiſting of three; the other two are for the Government and Adminiſtration of Juſtice in his Principality: He and his Chapter have Months by Turns for the Nomination of the Prebends. In the Month of *January* he names, if any die; and they, ſuch as die in *February*, and ſo all the Year round. The Prebendaries, or *Dome-heers*, have about three thouſand Crowns a Year a piece. When the Elector dies, the Emperor ſends one to ſee the Election made, and he recommends one, but the Canons may chuſe whom they pleaſe; and the preſent Elector was not of the Emperor's Recommendation. Beſides the Palace at *Mentz*, the Elector hath another near *Francfort*, which is thought the beſt that is in thoſe Parts of *Germany*.

The Cathedral is a huge *Gothick* Building; there is a Cupola in the Weſt End, and there the Choir ſingeth Maſs. I could not learn whether this was done only becauſe the Place here was of greater Reception than at the Eaſt End, or if any Burying-place and Endowment obliged them to the Weſt End. Near the Cathedral there is a huge Chapel of great Antiquity, and on the North Door there are two great Braſs Gates with a long Inſcription, which I had not Time to write out, but I found it was in the Emperor *Lotharius*'s Time. There are a vaſt Number of Churches in this Town, but it is poor and thinly inhabited. The *Rhine* here is almoſt half an *Engliſh* Mile broad, and there is a Bridge of Boats laid over it. From *Mentz* all along to *Baccharach*, there are a great Number of very conſiderable Villages on both Sides of the River. Here the Rats-tower is ſhewed, and the People of the Country all firmly believe the Story of the Rats eating up an Elector; and that though he fled to this Iſland, where he built a ſmall high Tower, they purſued, ſwimming after him, and eat him up: And they told us, that there were ſome of his Bones to be ſeen ſtill in the Tower. This extraordinary Death makes me call to Mind a very particular and unlooked for ſort of Death, that carried a poor Labourer off the Ground a few Days before I let *Geneva*. The Foot of one of his Cattle, as he was Ploughing, ſtruck into a Neſt of Waſps, upon which the whole Swarm came out, and ſet upon him that held the Plough, and killed him in a very little Time; and his Body was prodigiouſly ſwelled with the Poiſon of ſo many Stings.

But to return to the *Rhine*: All the Way from *Baccharach* down to *Coblentz*, there is on both Sides of the River, hanging Grounds, or little Hills, ſo placed, as if many of them had been laid by Art, which produce the rich *Rheniſh* Wine. They are indeed as well expoſed to the Sun, and covered from Storms, as can be imagined; and the Ground in thoſe Hills, which are in ſome Places of a conſiderable Height, is ſo cultivated, that there is not an Inch loſt that is capable of Improvement; and this brings ſo much Wealth into the Country, that all along there is a great Number of conſiderable Villages. *Coblentz* is the ſtrongeſt Place that I ſaw of all that belong to the Empire; the Situation is noble, the *Rhine* running before it, and the *Moſelle* paſſing along the Side of the Town. It is well fortified, the Ditch is large, the Counterſcarp high, and the Covered Way is in a good Condition: Both Walls and Counterſcarp are faced with Brick, and there are Ravelins before the Curtains: But on the Side of the *Moſelle* it is very ſlightly fortified, and there is no Fort at the End of the Stone-bridge that is laid over the *Moſelle*, ſo that it lies quite open on that Side, which ſeems a ſtrange Defect in a Place of that Conſequence: But though the Fortifications of this Place are very conſiderable, yet its chief Defence lieth in the Fort of *Hermanſtan*, which is built on the Top of a very high Hill, that lieth on the other Side of the *Rhine*, and which commands this Place ſo abſolutely, that he who is Maſter of *Hermanſtan*, is always Maſter of *Coblentz*. This belongs to the Elector of *Triers*, whoſe Palace lies on the Eaſt Side of the *Rhine*, juſt at the Foot of the Hill of *Hermanſtan*, and over-againſt the Point where the *Moſelle* falls into the *Rhine*; ſo that nothing can be more pleaſantly ſituated; only the Ground begins to riſe juſt at the Back of the Houſe with ſo much Steepneſs, that there is not Room for Gardens or Walks. The Houſe makes a great Show upon the River, but we are told, that the Apartments within are not anſwerable to the Outſide. I ſay, we were told; for the *German* Princes keep ſuch Forms, that, without a great deal ado, one cannot come within their Courts, unleſs when they are abroad themſelves: So that we neither ſaw the Inſide of the Palace at *Mentz*, nor this of *Hermanſtan*.

32. It is but a few Hours from this to *Bonne*, where the Elector of *Cologne* keeps his Court. The Place hath a regular Fortification, the Walls are faced with Brick; but though the Ditch, which is dry, is pretty broad, the Counterſcarp is in ſo bad a Condition, that it is not able to make a great Defence. This Elector is the nobleſt born, and the beſt provided of all the *German* Clergy; for he is Brother to the great *Maximilian* Duke of *Bavaria*, and beſides *Cologne*, he hath *Liege*, *Munſter*, and *Hildeſheim*, which are all great Biſhopricks. He hath been alſo ſix and thirty Years in the Electorate. His Palace is mean, conſiſting but of one Court, the half of which is caſt into a little Garden, and the Wood-yard is in the very Court. The lower Part of the Court was a Stable; but he hath made an Apartment here, that is well furniſhed with Pictures; where, as there are ſome of the Hands of the greateſt Maſters, ſo there are a great many Foils to ſet theſe off, that are ſcarce good enough for Sign Poſts.

The Elector has a great many Gold Medals, which will give me Occaſion to tell you one of the moſt extravagant Pieces of Forgery that perhaps ever was, which happened to be found out at the laſt Siege of *Bonne*; for while they were clearing the Ground for a Battery, they diſcovered a Vault, in which there was an Iron Cheſt, that was full of Medals of Gold, to the Value of one hundred thouſand Crowns, and of which I was told, the Elector bought to the Value of thirty thouſand Crowns. They are monſtrouſly large, one weighed eight hundred Ducats, and the Gold was of the Fineneſs of Ducat Gold: But though they bore the Impreſſions of *Roman* Medals, or rather Medallions, they were all Counterfeit; and the Imitation was ſo coarſely done, that one muſt be extreme ignorant to be deceived by them. Some few that ſeem true, were of the late *Greek* Emperors. Now it is very unaccountable, what could induce a Man to make a Forgery upon ſuch Metal, and in ſo vaſt a Quantity, and then bury all this under Ground, eſpecially in an Age in which ſo much Gold was ten Times the Value of that it is at preſent; for it is judged to have been done about four or five hundred Years ago.

The Prince went out a Hunting while we were there, with a very handſome Guard of about fourſcore Horſe well mounted; ſo we ſaw the Palace, but were not ſuffered to ſee the Apartment where he lodged. There is a great Silver Caſſolette gilt, ſet with Emeralds and Rubies, that though they made a fine Appearance, yet were a Compoſition of the Prince's own making. His Officers alſo ſhewed us a Baſon and Ewer, which they ſaid were of Mercury, fixed by the Prince himſelf; but they added, that for many Years he has not wrought in his Elaboratory. I did not eaſily believe this; and as the Weight of the Plate did not approach to that of Quickſilver, ſo the medicinal Virtues of fixed Mercury (if there is any ſuch Thing) are held to be ſo extraordinary, that it ſeemed very ſtrange to ſee twenty or thirty Pound of it made up in two Pieces of Plate. A Quarter of a Mile without the Town, lies the beſt Garden of thoſe Parts of *Germany*, in which there is a great Variety of Water-works, and very many noble Alleys in the *French* Manner, and the whole is of a very conſiderable Extent. But as it hath no Statues of any Value to adorn it, ſo the Houſe about which it lies, is in Ruins: And it is ſtrange to ſee, ſo rich and ſo great a Prince, during ſo long a Regency, hath done ſo little to enlarge, or beautify his Buildings. *Bonne* and *Coblentz* are both poor and ſmall Towns. *Cologne* is three Hours diſtant from *Bonne*: It is of a prodigious Extent, but ill built, and worſe peopled in the Skirts of it; and as the Walls are all in an ill Caſe, ſo it is not poſſible to fortify ſo vaſt a Compaſs, as this Town makes, as it ought to be, without a Charge that would eat out the whole Wealth of this little State.

The *Jews* live in a little Suburb on the other Side of the River, and muſt not come over, without Leave obtained, for which they pay conſiderably. There is no Exerciſe of the Proteſtant Religion ſuffered within the Town, but thoſe of that Communion are ſuffered to live there, and they have a Church at two Miles Diſtance. The Arſenal here is ſuitable to the Fortifications, that is, very mean and ill furniſhed. The Choir of the great Church is as high in the Roof as any Church I ever ſaw; but it ſeems the Wealth of this Place could not finiſh the whole Fabrick, ſo as to anſwer the Height of the Choir, for the Body of the Church is very low. Thoſe that are diſpoſed to believe Legends, have enough here to overſet even a good Degree of Credulity, both in the Story of the three Kings, whoſe Chapel is viſited with great Devotion, and ſtands at the Eaſt End of the great Choir; and in that more copious Fable of the eleven thouſand *Urſulins*, whoſe Church is all over full of rough Tombs, and of a vaſt Number of Bones, that are piled up in Rows about the Walls of the Church. Theſe Fables are ſo firmly believed by the Papiſts there, that the leaſt Sign of Doubting of their Truth, paſſeth for an infallible Mark of an Heretick. The Jeſuits have a great and noble College and Church here. And for *Thauler*'s Sake, I went to the *Dominicians* Houſe and Church, which is alſo very great. One grows extreme weary of walking over this great Town, and doth not find enough of Entertainment in it. The preſent Subject of their Diſcourſe is alſo very melancholy. The late Rebellion that was there is ſo generally known, that I need not ſay much concerning it. A Report was ſet about the Town by ſome Incendiaries, that the Magiſtrates eat up the publick Revenue, and were like to ruin the City. I could not learn what Ground there was for theſe Reports; for it is not ordinary to ſee Reports of that Kind fly through a Body of Men, without ſome Foundation. It is certain, this came to be ſo generally believed, that there was a horrible Diſorder occaſioned by it. The Magiſtrates were glad to ſave themſelves from the Storm, and abandoned the Town to the popular Fury, ſome of them having been made Sacrifices to it; and this Rage held long. But within this laſt Year, after near two Years Diſorder, thoſe that were ſent by the Emperor and Diet to judge the Matter, having threatned to put the Town under the Imperial Bann, if it had ſtood longer out, were received, and have put the Magiſtrates again in the Poſſeſſion of their Authority, and all the chief Incendiaries were clapp'd in Priſon. Many have already ſuffered, and a great many more are in Priſon. They told us, that ſome Executions were to be made within a Week, when we were there.

Duſſeldorp is the firſt conſiderable Town below *Cologne*: It is the Seat of the Duke of *Juliers*, who is Duke of *Newburgh*, eldeſt Son to the preſent Elector *Palatine*. The Palace is old, and *Gothick* enough; but the Jeſuits have there a fine College, and a noble Chapel, though there are manifeſt Faults in the Architecture. The Proteſtant Religion is tolerated, and they have a Church built here within theſe few Years, that was procured by the Interceſſion of the Elector of *Brandenburg*, who obſerving exactly the Liberty of Religion that was agreed to in *Cleve*, had Reaſon to ſee the ſame as duly obſerved in his Neighbourhood, in Favour of his own Religion. The Fortifications here are very ordinary, the Ramparts being faced but a few Feet high with Brick. But *Keiſerſwart*, ſome Hours lower on the ſame Side, which belongs to the Elector of *Cologne*, though it is a much worſe Town than *Duſſeldorp*, yet is much better fortified. It hath a very broad Ditch, and a very regular Fortification: The Walls are conſiderably high, faced with Brick, and ſo is the Counterſcarp, which is alſo in a very good Condition. The Fortification of *Orſoy* is quite demoliſhed. *Rhineberg* continues as it was, but the Fortification is very mean, only of Earth, ſo that it is not capable of making a great Reſiſtance. And *Weſel*, though it is a very fine Town, yet it is a very poor Fortification; nor can it ever be made good, except at a vaſt Expence; for the Ground all about it being ſandy, nothing can be made there that will be durable, unleſs the Foundation go very deep, or that it be laid upon Pilotry. In all theſe Towns one ſees another Air of Wealth and Abundance, than in much richer Countries that are exhauſted with Taxes. *Rees* and *Emmerick* are good Towns, but the Fortifications are quite ruined, ſo that here is a rich and a populous Country, that hath at preſent very little Defence, except what it hath from its Situation. *Cleve* is a delicious Place, the Situation and Proſpect are charming, and the Air is very pure; and from thence we came to *Nimeguen* in three Hours.

I will not ſay one Word of the Country into which I am now come; for as I know that is needleſs to you on many Accounts, ſo a Picture that I ſee here in the Stadt-houſe puts me in Mind of the moſt perfect Book of its Kind that is perhaps in Being; for Sir *William Temple*, whoſe Picture hangs here at the upper End of the Plenipotentiaries that negotiated the famous Treaty of *Nimeguen*, hath indeed ſet a Pattern to the World, which is done with ſuch Life, that it may juſtly make others bluſh to copy after it; ſince it muſt be acknowledged, that if we had as perfect an Account of other Places, as he hath given us of one of the leaſt, but yet one of the nobleſt Parcels of the Univerſe, Travelling would become a needleſs Thing, unleſs it were for Diverſion; ſince one finds no farther Occaſion for his Curioſity in this Country, than what is fully ſatisfied by his rare Performance: Yet I cannot give over Writing without reflecting on the Reſiſtance that this Place made, when ſo many other Places were ſo baſely delivered up; though one does not ſee in the Ruins of the Fortification here, how it could make ſo long a Reſiſtance; yet it was this Town ſtemm'd the Tide of a Progreſs that made all the World ſtand amazed; and it gave a little Time to the *Dutch* to recover themſelves out of the Conſternation, into which ſo many Blows, that came ſo thick one after another, had ſtruck them.

But then the World ſaw a Change, that though it hath not had ſo much Incenſe given to it, as the happy Conjuncture of another Prince hath drawn after it with ſo much Exceſs, that all the Topicks of Flattery ſeem exhauſted by it, yet will appear to Poſterity one of the moſt ſurprizing Scenes in Hiſtory, and that which may be well matched with the Recovery of the

Roman State after the Battle of *Cannæ*. When a young Prince, that had never before borne Arms, or ſo much as ſeen a Campaign, who had little or no Counſel about him, but what was ſuggeſted from his own Thoughts, and that had no extraordinary Advantage by his Education, either for Literature or publick Affairs, was of a ſudden ſet at the Head of a State and Army, that was ſunk with ſo many Loſſes, and that ſaw the beſt half of its Soil torn from it, and the moſt powerful Enemy in the World, ſurrounded with a victorious Army that was commanded by the beſt Generals that the Age hath produced, come within Sight, and ſettle his Court in one of its beſt Towns, and had at the ſame Time the greateſt Force, both by Sea and Land, that hath been known, united together for its Deſtruction: When the Inhabitants were forced, that they might ſave themſelves from ſo formidable an Enemy, to let looſe that which on all other Occaſions is the moſt dreadful to them, and to drown ſo great a Part of their Soil for the Preſervation of the reſt; and to complicate together all the Miſeries that a Nation can dread; when to the general Conſternation with which ſo diſmal a Scene poſſeſſed them, a Diſtraction within Doors ſeemed to threaten them with the laſt Strokes; and while their Army was ſo ill diſciplined, that they durſt ſcarce promiſe themſelves any Thing from ſuch feeble Troops, after a Peace at Land of almoſt thirty Years Continuance; and while their chief Ally, that was the moſt concerned in their Preſervation, was, like a great Paralytick Body, more like to fall on thoſe that it pretended to ſupport, and to cruſh them, than to give them any conſiderable Aſſiſtance: When, I ſay, a young Prince came at the Head of all this, the very Proſpect of which would have quite damp'd an ordinary Courage, he very quickly changed the Scene; he animated the publick Councils with a generous Vigour; he found them ſinking into a Feebleneſs of hearkening to Propoſitions for a Peace that were as little ſafe as honourable; but he diſpoſed them to reſolve on hazarding all, rather than to ſubmit to ſuch infamous Terms.

His Credit alſo among the Populace ſeemed to inſpire them with a new Life: They eaſily perſuaded themſelves, that as one WILLIAM, Prince of ORANGE, had formed their State, ſo here another of the ſame Name ſeemed marked out to recover and preſerve it: It was this Spirit of Courage, which he derived from his own Breaſt, and infuſed into the whole People, as well as into the Magiſtracy, that preſerved this Country. Something there was in all this that was Divine. The publick Councils were again ſettled, and the People were at quiet, when they ſaw him veſted with a full Authority for that Time with relation to Peace and War, and concluded they were ſafe, becauſe they were in his Hands. It ſoon appeared how faithfully he purſued the Intereſt of his Country, and how little he regarded his own. He rejected all Propoſitions of Peace that were hurtful to his Country, without ſo much as conſidering the Advantages that were offered to himſelf (in which you know that I write upon ſure Grounds) he refuſed the Offer of the Sovereignty of its chief City, that was made to him by a ſolemn Deputation, being ſatisfied with that Authority which had been ſo long maintained by his Anceſtors, with ſo much Glory, and being juſtly ſenſible how much the breaking in upon eſtabliſhed Laws and Liberties is fatal even to thoſe that ſeem to get by it: He thus began his publick Appearance on the Stage with all the Diſadvantages that a Spirit aſpiring to true Glory could wiſh for; ſince it was viſible he had nothing to truſt to but a good Cauſe, a favourable Providence, and his own Intregity and Courage: Nor was Succeſs wanting to ſuch noble Beginnings; for he in a ſhort Time, with a Conduct and Spirit beyond any Thing that the World hath yet ſeen, recover'd this State out of ſo deſperate a Diſtemper, took ſome Places by main Force, and obliged the Enemy to abandon all that they had acquired in ſo feeble a Manner. And if a raw Army had not always Succeſs againſt more numerous and better-trained Troops; and if the Want of Magazines and Stores in their Allies Country, which was the chief Scene of the War, made that he could not poſt his Army and wait for favourable Circumſtances, ſo that he was ſometimes forced to run to Action with a Haſte that his Neceſſities impoſed upon him; yet the forcing of the Beginnings of a Victory out of the Hands of the greateſt General of the Age, the facing a great Monarch with an Army much inferior to his, when the other was too cautious to hazard an Engagement; and, in ſhort, the forming the *Dutch* Army to ſuch a Pitch that it became viſibly ſuperior to the *French*, that ſeemed to have been fed with Conqueſts; and the continuing the War till the Prince, that had ſacrificed the Quiet of *Europe* to his Glory, was glad to come and treat for a Peace in the Enemy's Country, and in this very Place, and to ſet all Engines on work to obtain that, by the Mediation of ſome, and the Jealouſies of other Princes: All theſe are ſuch Performances, that Poſterity will be diſpoſed to rank them rather among the Ideas of what an imaginary Hero could do, than with what could be really tranſacted in ſo ſhort a Time, and in ſuch a Manner. And in Concluſion, every Place that belonged to theſe States, and to their Neighbours along the *Rhine*, together with a great many in *Flanders*, being reſtored, theſe Provinces now ſee themſelves, under his happy Conduct, re-eſtabliſhed in their former Peace and Security. And though ſome Scars of ſuch deep Wounds may ſtill remain, yet they find themſelves conſidered on all Hands as the Bulwark of Chriſtendom againſt the Fears of a new Monarchy, and as the Preſervers of the Peace and Liberty of *Europe*.

Here is a Harveſt, not for forced Rhetorick or falſe Eloquence, but for a ſevere and ſincere Hiſtorian, capable of affording a Work that will far exceed all thoſe luſcious Panegyricks of mercenary Pens: But a ſmall or a counterfeit Jewel muſt be ſet with all poſſible Advantages, when a true one of a great Value needs only to be ſhewed, in order to have that Value known.

If one was to offer a proper Manner of writing Voyages to the Conſideration and Example of thoſe that travel, I do not conceive, that a better Model could well be found, than theſe Letters of Biſhop *Burnet*'s. The great End of Travelling is to form right Notions of the Countries one ſees, and of the People who inhabit them, and this End our Prelate plainly propoſed to himſelf, and to the honourable Perſon to whom he wrote, who was likewiſe a great Judge of the Truth and Fidelity with which he wrote, ſince he had himſelf travelled through theſe Countries, and reſided a conſiderable Time at *Geneva*. But at this Diſtance of Time we are better Judges of his Penetration and Sagacity; for as he repreſents the Conſtitution and political Affairs of the *Switzers* impartially, ſo he very truly foreſaw the Diſorders that have ſince happened in that Country as well as at *Geneva*. As thoſe Diſorders juſtify his Political Capacity, ſo they fully convince us of the Truth of the Maxim by him laid down, That Ambition will produce the ſame Effects, let the Object of it be great or ſmall; and the Deſire of Governing a Bailiage will have juſt the ſame miſchievous Conſequences in a ſmall Republick, that the Thirſt of preſiding over a great Province has in a larger State. So that in all Governments thus conſtituted, the very Principles of their Grandeur are alſo the Seeds of their Deſtruction, if theſe Governments are not yet diſſolved; this is owing to the Care of their Neighbours, and to ſome other Accidents; but that they ſhould be torn by Diviſions, and once in a Century brought to the Brink of Diſſolution, is very natural, and what has really happened within the Compaſs of our own Memory, when the State of *Geneva* was ſaved by the Interpoſition of *France* and the *Switzers*, the Government brought back to its firſt Principles; and the Government ſet right another Age at leaſt.

His Prediction with Reſpect to *Lombardy*, and the other *Spaniſh* Provinces in *Italy*, have been alſo fulfilled. The late King *Philip* V. entered into the quiet Poſſeſſion of them as Succeſſor in the *Spaniſh* Monarchy, and was ſupported in the Poſſeſſion of them, not only by the Forces of that Crown, but alſo by thoſe of *France*;

and yet in a very few Campaigns he was deprived of them by the *Germans*, under the Command of Prince *Eugene*, and himſelf and his Grandfather were glad to enter into a Treaty for the total Evacuation of *Italy*. It is indeed true, that this very Meaſure contributed not a little to the Preſervation of *Spain*, of which he had been likewiſe deprived, if, by ending the *Italian* War in this Manner, he had not ſecured a new Body of Auxiliaries for its Defence. The Entrance which the *Spaniards* ſince have gained into that Country, in Virtue of the Succeſſion of the Queen Dowager as Heireſs of the Houſe of *Parma*, afforded a new Proof of the Solidity of his Conjecture; for we have ſeen *Milan*, *Parma*, *Placentia*, and all the ſtrong Places in *Italy*, which made ſuch a Figure in former Ages, taken and retaken in ſucceſſive Campaigns; ſo that as he rightly judged, the modern Art of War has made a great Alteration in Things, and we have no Reaſon to expect that any Sieges for the future will reſemble thoſe of former Times, any more than that of *Troy*. A regular Method of attacking, and a large Train of Artillery, ſoon does the Buſineſs, in Spite of numerous Garriſons and the ſtrongeſt Fortifications.

His Obſervations in reſpect to the Territories of the *Venetians*, and other States of *Italy*, have been alſo verified. That they ſtill continue declining, all modern Travellers agree: That the great Cities which were rich and populous while free, are now falling to Decay, and in a Manner become Deſerts, as well as the Diſtricts about them, is not to be diſputed; and that it cannot be long before they are either ſwallowed up by powerful Neighbours, or change their Maſters by ſome ſudden Revolution, is a Thing morally certain; an Event which it is highly probable the preſent Generation will ſee. For though political Bodies reſemble natural ones in many Circumſtances, yet in ſome they differ; for the latter are often worn out and periſh by Conſumptions; yet this happens very rarely to the former, where the Diſſolution of one Government, generally ſpeaking, makes Way for another; ſo that it may be truly ſaid, a State has many Lives, or which is the ſame Thing, though it periſhes in one Form, it is again revived in another, becauſe the Country, and ſome Inhabitants at leaſt, remain in Spite of all Revolutions; and as in one Age we ſee ſmall States deſtroyed and conquered by great Monarchies; ſo in ſucceeding Ages alſo thoſe great Monarchies ſink under their own Weight, and their Dominions crumble again into ſeparate States. Thus the true Politician ſees through all theſe Changes, penetrates their Cauſes, ſees the greateſt Events at a conſiderable Diſtance, and is never ſubject to Admiration or Surprize, which are Weakneſſes incident only to limited Underſtandings and narrow Minds.

The Account he has given us of the deplorable State of the People who dwell at preſent in the fineſt Countries in *Europe*, ſerves to give Credit to the Accounts we daily received of their Poverty and Diſtreſs, which would otherwiſe ſurpaſs all Belief. It is however worthy of Notice, that within theſe few Years, the Popes themſelves, as well as other Princes of *Italy*, begin to be ſenſible of the Evils reſulting to their Subjects, from their Bigottry to their Religion, which they have endeavoured to remove, or at leaſt to ſoften in many Reſpects. The late King of *Sardinia*, one of the wiſeſt, and greateſt Princes of his Time, began this, and thereupon ſome Differences aroſe between his Majeſty and the Court of *Rome*. The Memorials he ſent thither on that Occaſion opened the Eyes of the late Pope, and ſome of the moſt intelligent Cardinals, who thenceforward became willing to make uſe of the ſame Methods that Monarch had practiſed for the Eaſe and Emolument of the Inhabitants of the Eccleſiaſtical State; but the natural Slowneſs of that Court in all its Motions, and the Fear of the Conſequences that might attend any Relaxation of religious Diſcipline among a People, naturally ſo corrupt as the *Italians* generally are, has hitherto retarded ſo good a Work, though the Thoughts of it are not quite given up, the Pope having lately attempted to ſuppreſs not only many but almoſt all the Holidays peculiar to his Church, which however has not been found eaſy to carry into Execution. The very Attempt however ſufficiently ſhews, that in the Opinion of the Papiſts themſelves, their Faith becomes a political Grievance, againſt which they are obliged to uſe ſuch Precautions as are ſuggeſted by Reaſon, which ſufficiently diſtinguiſhes between that Part of their Religion which is grounded on Revelation, and what is no better founded than on the Authority of the Church, or in plain *Engliſh*, the Invention of Prieſts. For evident it is, that God will command nothing that is not for the Good of his Creatures; and as Reaſon teaches, ſo Experience juſtifies this Truth; for the Chriſtian Religion, in its moſt eſſential Points, flouriſhes no where better than in thoſe rough and barren Countries, where our Prelate obſerves, that the People are both happy and rich in Spite, as it were, both of the Soil and Climate; but in the Countries where Popery is predominant, neither Soil nor Climate can contribute to render them populous, or the People that are left in them happy. The Inference I would draw from this is, that by Degrees it is more than probable, this great Evil will cure itſelf. For as the Papal Dominions feel it moſt, and as it is well known, that the beſt Politicians in *Europe* are generally found at *Rome*, for Reaſons which our Prelate has very judiciouſly aſſigned, it ſeems highly likely from thence, that the Reformation of theſe Abuſes, when they come to be intolerable, will be begun here; and when once this is brought about, there is no Room to queſtion, that Precautions of the like Nature will be freely taken by all the Princes of the ſame Communion, who as they have ſuffered themſelves to be led wrong, will be, no doubt, as ready to be ſet right by the Example of this Court. Thus the temporal Intereſt of the Pope may prove the Means of redreſſing the Diſorders occaſioned by his ſpiritual Authority.

There has been an Obſervation made by Travellers of all Nations, who have paſſed through all *Italy*, that the People grow worſe and worſe, as you advance, and better and better as you come back, which is another Proof of the Principles before advanced; ſince in thoſe diſtant Parts of the Country, but more eſpecially in *Naples* and *Sicily*, the People are univerſally under the Dominion of their Prieſts, and indeed the Clergy are the Proprietors of the greater Part of the Lands of thoſe Countries, which is the principal Reaſon that there is no Trade in Places that ſeem the fitteſt for it; and that thoſe Countries are left uncultivated, which are naturally the moſt rich, and the moſt fruitful. But whenever it ſhall happen, as happen it certainly will, that *Naples* and *Sicily* ſhall fall under the Dominion of an independent Prince, who will ſtudy only the Benefit of his Subjects, and the Advantage of his Family, theſe Grievances will be taken away, and the People put in Poſſeſſion of thoſe mighty Privileges, which ſeem to have been intended them by Nature. For it is impoſſible to conſider the convenient Situation, the rich Commodities, and the ſeveral Ports that are in theſe two Kingdoms, I mean of *Naples* and *Sicily*, without ſtanding amazed that they are no better peopled; that they have ſo few Ships belonging to them, and that all the valuable Commodities they produce, are carried away by Foreigners at an under Rate, and manufactured and exported afterwards to enrich the Inhabitants of other Countries.

The great Dutchy of *Tuſcany* is ſince fallen into a worſe Condition than when it was viſited by our Author. The Princes of the Houſe of *Medicis*, always retain ſomething of the Merchant; and though they wanted not Ambition, and were ſtudious enough for the Advancement of their own Intereſt, yet they kept always in View the Good of their Subjects, as being truly ſenſible, that a Prince could never be great or rich if his Dominions were thinly inhabited, or his People poor. It was with this View, that by the Aſſiſtance of Sir *Robert Dudley*, an *Engliſhmen*, Son to the great Earl of *Leiceſter*, that took ſo much Pains to build the Town, and open the Harbour of *Liverno*, which we taking our Pronunciation from our Sailors, call *Legborn*, and which they afterwards declared a free Port. In this, and in other Meaſures of the ſame Nature,

ture, they purſued the Maxims that had been laid down while *Florence* remained a free State; but there was this Miſchief attended the Change of the Government from a Republick, that its Fate depended no longer upon itſelf, but upon that of the reigning Family, which has brought it into the Circumſtances we ſee it at preſent, which are very extraordinary, ſince it no longer is the Inheritance of that Family, or of the Heirs of that Family, but by Way of Exchange has been given to the Duke of *Lorrain*, who is at preſent Emperor, and thus labours under two additional Miſfortunes; for as it had loſt its Liberty before, ſo now it has not only loſt its Native Princes, who were always the Parents of their People, and fallen under a foreign Yoke, but has actually no Prince at all, and is become a Province lying at a great Diſtance from the Reſidence of its Sovereign. Theſe are, without Doubt, very grievous Misfortunes, the Conſequences of which will be ſeen daily more and more.

The other States of *Italy* have alſo ſuffered much ſince they were viſited by our Author; the Duchies of *Milan*, *Mantua*, and *Guaſtalla*, are no more; and it is doubtful whether the ſame Thing may not be ſaid of *Modena* and *Mirandola*. The Republick of *Genoa* is certainly undone, if not ſubverted; and the two laſt general Wars have gone farther in depopulating, diſtreſſing, and impoveriſhing *Italy*, than all ſhe ſuffered in the two Centuries before, and yet in that Time her Sufferings were not ſmall. But notwithſtanding all this, and though it is ſcarce poſſible for a Country to be more wretched than this really is at the Time we are writing. there is no Doubt that a few Years of Peace, and the riſing up of good Princes, might ſtill recover it to as good a State as ever it was in for theſe five hundred Years. The Reader will from hence diſcern the true Reaſon, why the maintaining a Balance of Power in this Country is ſo much the Intereſt of all the Princes and States that are its preſent Poſſeſſors, and why the reſt of the Crowns of *Europe*, and the maritime Powers more eſpecially, have alſo an Intereſt in maintaining that Balance, which is of ſo great Conſequence to the Commerce of *Europe*, which can never be well regulated if that Balance ſhould be overturned, and, by Addition of Conqueſts, the greateſt Part of this Country fall under the Dominion of any Prince much more powerful than the reſt. We may alſo ſee how wiſe and how right an Expedient it would be, if all the *Italian* Powers would unite in a Confederacy for preſerving the Peace of that Country, by eſtabliſhing a perpetual Neutrality, which, as it would prejudice no one Power in *Europe*, ſo if thoſe concerned would go about it heartily, there could be no Doubt of their ſucceeding; and this might not only lay a Foundation for their particular Happineſs, but prove a very good Precedent for eſtabliſhing the univerſal Tranquillity of Chriſtendom; which if it be a Bleſſing that we have ſmall Hopes to ſee, we may however have Leave to wiſh, and pleaſe ourſelves with the Proſpect of what would certainly prove the greateſt and the moſt univerſal Good.

Thus we have taken Pains to accommodate the Accounts, Obſervations, and Remarks of Biſhop *Burnet*, made threeſcore Years ago, to the preſent Times, at leaſt with reſpect to *Italy*. It is very much to be regretted, that he did not give us a larger Account of his Journey through *France*, notwithſtanding the Reaſons aſſigned by him for omitting it. He ſhews himſelf very impartial in attributing the Perſecution of the Proteſtants to the Religion of the *French* King, rather than to the Haughtineſs and Cruelty of his Temper, and perhaps there was ſomething of Juſtice in this, becauſe it is certain, that in other Reſpects, this Prince was very far from ſhewing himſelf of a Blood-thirſty Temper, for there was but one Man of Quality put to Death, during his whole Reign, the Chevalier *de Rohan*; and the King baniſhed his Mother for not demanding his Pardon, which at the ſame Time he declared he would have granted. It is very remarkable that our Queen *Mary*, who was a moſt violent Perſecutrix, was alſo a Woman of a mild and gentle Temper; which ſhews, that the beſt Princes are capable of doing as bad Things as the worſt, when under the Influence of bad Counſels. But perhaps it may not be amiſs to inform the *Engliſh* Reader, that the *French* Memoirs of this Reign, ſuggeſt a very different Reaſon for this Perſecution, and though they do not lay it upon the King, they lay it as little upon the Prieſts; for the Account they give of it is this: *Lewis* XIV. was very deſirous to ſee the Proteſtants converted, as he called it, and for that Reaſon gave great Encouragement to ſuch of the Clergy as applied themſelves to this Work. This gave Oocaſion to the Archbiſhop of *Paris*, and the King's Confeſſor, Father *le Chaiſe*, to have frequent private Audiences of his Majeſty, which laſted an Hour or two at a Time. This gave ſuch Umbrage to one of his Miniſters, Mr. *Louvois*, that he determined to put an End to it at any Rate, which induced him to propoſe the new Method of converting by Dragoons, as the ſhorteſt and the moſt effectual. If there be any Truth in this, as indeed there is too great Reaſon to believe that this was the real Secret of that bloody Buſineſs, then it plainly ſhews, that both Princes and Prieſts are liable to be impoſed upon, and made the Tools of wicked and ambitious Stateſmen, who conſider nothing but their own Intereſt, and ſtick at nothing that may promote it. It was the ſame Perſon that filled the Head of that Prince with thoſe dangerous and deſtructive Views, that were ſo fatal to the Peace of *Europe*; the Pretence was his Maſter's Glory, and the Intereſt of the Crown of *France*, but the true Cauſe was the Senſe he had, that it was impoſſible for him to preſerve his Power, or make himſelf neceſſary to his Maſter, but in Times of War and Confuſion, which therefore he made it his conſtant Study to promote. The ſurprizing of *Straſburgh*, and the erecting of *Hunningen*, were both his Schemes, and in ſhort, ſo were all the bad Schemes in his Time. Beſides, he firſt taught the *French* Miniſters how to practiſe upon the *German* Princes, which they have continued to do ever ſince; and he made it his Boaſt, that in a Time of full Peace he had added more to the Dominions of *France*, than the greateſt of her Generals in Time of War by their Conqueſts: And indeed this was ſo true, that he brought four of the Electors to become in a Manner dependent upon that Crown, equally to the Diſgrace and to the Danger of the Empire. But Reflections of this Kind may lead us too far, and therefore we will put an End to them here, and with them to this Section, that in the next we may carry the Reader into *France*, and give him a ſhort View of a Country, which in Point of Situation, Climate, and Produce, ſcarce yields to any in *Europe*; the Monarchs of which are the leſs excuſable for aiming at univerſal Dominion, ſince the Poſſeſſion of it would hardly put more into their Power, than by quietly enjoying their own Territories, and attending only to the Welfare of their Subjects, they might, without Envy, Trouble, or Danger, find within their Reach. But Ambition is a Perſpective that diminiſhes Objects that are near, as much as it magnifies thoſe at a Diſtance, and conſequently ſhews both in falſe Lights.

SECTION V.

TRAVELS through the *Low-Countries*, and *Germany*, towards *Italy*, interſperſed with curious Obſervations, Natural, Topographical, Moral, Phyſilogical, Philological, *&c.*

By the late Reverend and Learned Mr. JOHN RAY, *F. R. S.*

1. *An Introductory Account of the Author and of his Performance, in order to ſhew the Difference between it and other Books of* Travels. 2. *A Deſcription of* Calais, Dunkirk, Gravelin, Newport, *and other Places in the* Spaniſh Flanders. 3. *An Account of* Bruges, Ghent, Bruſſels, Louvain, *and* Antwerp, *with occaſional Remarks on whatever is ſingular or worthy Notice in any of thoſe Cities.* 4. *The ſame Obſervations continued, with a copious Deſcription of the Nature of Foreign Univerſities.* 5. *A Deſcription of Fort* Lillo, *the City of* Middleburgh, Fluſhing, Ter-Veer, Bergen-op-Zoom, Breda, Dort *and* Rotterdam. 6. *The Deſcription of* Delft, *with the Monumental Eulogies of* William I. *Prince of* Orange, *and Admiral* Van Tromp. 7. *A Deſcription of* Leyden, *with an Account of the Univerſity, and of the Grove of* Sevenhuys, *and the Method of making Turfs.* 8. *The great City of* Amſterdam *deſcribed, with a very exact Account of its Government.* 9. *The Author's Journey from thence to* Utrecht, *with an Account of the remarkable Places in its Neighbourhood.* 10. Bois-le-Duc, Haumont, Maeſtricht, *and other Places, deſcribed.* 11. *The Manners, Cuſtoms, and peculiar Diſpoſition of the* Dutch *Nation, together with the curious Obſervations made upon that Subject by Mr.* Barnham, *Secretary to the Lord* Hollis. 12. *A large Deſcription of* Liege, *with the Monumental Inſcription of Sir* John Mandeville. 13. *An Account of* Spa, Limbourg, *and* Aix la Chapelle, *including the Antiquities and Form of Government of the laſt mentioned City.* 14. *An Extract from Dr.* Francis Blondel's *Obſervations upon thoſe Baths, eſteemed the beſt Account ever publiſhed of them.* 15. *A Deſcription of* Juliers, *and of the City of* Cologne, *and an Account of the Government of that Place.* 16. Andernach, Coblentz, *and many other Places deſcribed, with a particular Account of the Country.* 17. *A Deſcription of* Mentz, Francfort, Worms, *and* Frankendahl. 18. *An Account of* Spire, Manheim, *and* Heidelberg, *including the Deſcription of the* Palatinate. 19. Philipſbourg, Straſbourg, Briſac, *and the Country adjacent, deſcribed.* 20. *The City and Univerſity of* Bazil *deſcribed, with various Critical and Hiſtorical Obſervations thereon, and on the Places adjacent.* 21. Zurich, Schaffhauſſen, Conſtance, *and the Country about them, deſcribed very exactly.* 22. *An Account of* Lindaw, *and other Towns in* Bavaria. 23. *A Deſcription of* Munich, Augſbourg, *and* Donawert. 24. *The Country of* Anſpach, *and the City of* Nuremberg, *deſcribed.* 25. *A Deſcription of* Regenſberg, *or* Ratiſbon, Straubingen, *and* Paſſau. 26. *A large Account of the Country of* Auſtria, *with a particular Deſcription of the Capital City of* Vienna. 27. *An Account of the Author's Journey from thence to the Frontiers of* Italy.

1. IT is impoſſible to have a juſt Notion of the Nature and Value of the following Travels, without having ſome Account of the learned Perſon who wrote them, whoſe Name will always do Honour to this Nation. His Father was a *Blackſmith*, at *Black Notley* in *Eſſex*, where Mr. *Ray* was born and died. The firſt of theſe Events happened the 29th of *November*, 1628. He received his firſt Education at the Grammar-School at *Braintree*, and from thence was removed to *Cambridge*, where he diſtinguiſhed himſelf by his indefatigable Diligence in his Studies, and his particular Turn to *Botany*, which was the principal Cauſe of all his Travels. In 1658, he made the Tour of *Wales* and the Weſt of *England*; in 1661, he viſited the North, and examined the beſt Part of *Scotland*; in 1662, he made another Journey to *Cheſter*, and from thence through *Wales*, into *Cornwall*, *Devonſhire*, *Dorſetſhire*, *Hampſhire*, *Wiltſhire*, and returned to *London* through *Berkſhire*. In 1663, he travelled with Mr. *Willoughby*, Mr. *Skipton*, and Mr. *Bacon*, through the Countries which will be mentioned in the following Pages; and after his Return to *England*, he made many other Journies into different Parts for the Sake of Botanical Obſervations, of which he left behind him very large Accounts, that hitherto remain unpubliſhed. In 1677, he returned into his native Country, and built a Houſe in the Pariſh of *Black Notley*, where he paſſed the Remainder of his Days. He wrote and publiſhed a great Number of very learned and valuable Pieces, which are too well known for us to give any Account of them. He was juſtly eſteemed one of the honeſteſt and moſt conſcientious Men of the Age in which he lived; he ſuffered in his Youth for not taking the *Solemn League* and *Covenant*, and loſt his Living after the Reſtoration, becauſe he would not take the *Abjuration Oath* then impoſed in relation to that *Solemn League* and *Covenant*, which declared it not binding on thoſe who did take it; and thus he was generally eſteemed a *Nonconformiſt*, though always not only a Member, but a Deacon and Prieſt of the Church of *England*, in which Communion he died, *January* 17, 1705. His Travels are written in a very peculiar Style, and in a very ſingular Manner; he is generally copious, and always exact, but at the ſame Time there is hardly any Thing to be met with in his Accounts that hath been recorded by others; ſo that though he deſcribes the ſame Places with many other Writers, yet the Reader will meet with very few or no Repetitions, which was the principal Reaſon of our inſerting his Travels in this Collection, which have been always, and ſtill are very juſtly admired, and generally eſteemed. One Thing more it is neceſſary to obſerve, which is this, that we have omitted his Catalogues of Profeſſors, the Times and Subjects of their Lectures in the ſeveral Univerſities through which he paſſed, as being long ago out of Date, and ſo tending neither to the Entertainment, nor Inſtruction of the Reader; and we have likewiſe left out his Catalogues of Plants, becauſe foreign to our Purpoſe, though they will always add conſiderably to the Value of the larger Collection publiſhed under his Name, which being grown ſcarce, has been reprinted within theſe few Years.

2. We went in the Packet-Boat *April* 18th, 1663, from *Dover* to *Calais*, formerly belonging to the *Engliſh*, ſince to the *Spaniards*, and ſoon after ſurrendered to the *French*, in 1598. Its Situation is very advantageous, and the Fortifications of Earth, with a deep Ditch and Citadel to the Land ſide. It exceeds *Dover* in Bigneſs, and the Market-place is a very ſpacious Square; the Government of the Place being adminiſtred by a Mayor and four Aldermen.

April 21. We continued our Journey, by Way of *Gravelin* to *Dunkirk*; the firſt is a Place but indifferently built and peopled, ſeated in a watery Country, and encloſed with a good Number of Out-works and broad Ditches: The ſecond may be compared for Extent to *Cambridge*, being very populous and well fortified. It is one of the four Port-Towns of *Flanders*.

We travelled along the Sea-ſhore from thence to *Oſtend*, taking our Way by *Newport*: This laſt is another of the *Flemiſh* Ports, having a capacious and ſecure Harbour, but will admit of no Ships of any great Burthen; the Streets are broad and uniform, but the Houſes are low, and built of Timber. *Oſtend* is another of the Harbours of *Flanders*, conſiderable both for Strength and Conveniency; being capacious and ſecure againſt the Violence of the Winds, and capable of receiving Ships of conſiderable Burthen; the Buildings are likewiſe but low here, yet pretty uniform, and the Streets regular and ſtreight, being built all at once, after the famous Siege of three Years, before it could be taken by the *Spaniards*. *Sluys* is another Seaport Town of this Country, but under the Juriſdiction of the United Provinces; its Harbour exceeds all the before-mentioned for its Capacity, but is growing daily ſhallower, and will in Time be choaked up.

3. *April* 24. Having taken us Places in the Track-boat, bound for *Bruges*, and drawn by Horſes, we came about a League and an half from *Oſtend*, to one of thoſe Locks (called *Soſtegni* by the *Italians*) which are generally made at a great Declivity of a Fall of Water, to keep up the Water, and thereby render a River navigable, which either wants Water, or has too ſteep a Deſcent. Such there are in *Guildford* River in *Surry* in *England*. The City of *Bruges* is about four Leagues diſtant from *Oſtend*, well built, and of a great Circumference, having been formerly a very conſiderable City for Trade. Here, when we ſaw Pieces of Linnen faſtened to the Ring of the Doors, where Women were lying in, it put us in Mind of what *Eraſmus* had taken Notice of upon this Head in his *Colloquies*. But what delighted us much, was a certain Engine made uſe of here, for the drawing up of Water in great Quantities for the Uſe of the City. This is perform'd by Means of a Chain, unto which are faſtened Cylindrical Buckets of Iron; the Chain being round in Form of a Wheel-band, and put over a large *Axis*, deeply furrowed, from whence hanging down into the Well below it, and being turn'd about by the *Axis*, the deſcending Buckets have their Mouths downward, take up the Water as they paſs through the Well, which afterwards aſcending with their Mouths upwards (yet a little inclining from the Chain outward) they carry up to the *Axis*, to which as ſoon as they are come, they muſt, by Reaſon of their Poſition, turn it out into a Trough placed lower than the *Axis*, by which it is conveyed into a Ciſtern, and thence by Pipes through the City. The deep Furrows in the *Axis* are made to hold up the Buckets, without which, the Chain would be apt to ſlip back, by Reaſon of the Weight of the aſcending Buckets. I have ſeen many of this kind in *France*, *Spain* and *Italy*. This City has but Seven Pariſh Churches, but Convents in a great Number: In the Church dedicated to *Our Lady*, you ſee the Monument of *Charles*, ſirnamed the *Hardy*, Duke of *Burgundy*, who (as the *French* Inſcription tells you) was ſlain in the Battle of *Nancy*, 1476, and his Body tranſlated thence by the Emperor *Charles* V. We ſaw here a very tall Fellow, and well-ſhap'd; from his middle Finger to his Elbow 25 Inches, the Length of his Hand to the Wriſt 11 Inches, his middle Finger 7 Inches, and the reſt of his Limbs proportionable: He was afterwards ſhown in *England*.

According to *Boetius*, a Native of this Place, certain ſubterraneous Woods are digg'd up ten or twelve Ells deep in the Earth, with the Trunks, Boughs, and Leaves ſo apparent, that the ſeveral kinds of them may be eaſily diſtinguiſhed. The like I have been inform'd, are found in *Frieſland* and about *Groningen*, eſpecially in the fenny Ground, where they dig for Turfs. In *England* they are called *Moſs-wood*, and are likewiſe found in mooriſh and boggy Grounds: It is very probable, that in moſt ancient Times, before all Records, theſe Places were Woods on the Continent, and being overwhelm'd by the Sea, continued under Water, till the Rivers and Floods brought thither ſo much Earth and Mud, as by Degrees cover'd theſe Trees, and rejoined them to the Continent. As for the Seas often encroaching upon the Continent, it is manifeſt on our Coaſt of *Suffolk* about *Dunwich*, there being very ancient and authentick Records, which mention a certain Wood a Mile and a half to the Eaſt of *Dunwich*, which is now a great Way in the Sea. And, as to what concerns the filling up of ſuch Places, I have ſome Reaſons to believe, that if not all, at leaſt a great Part of the *Low Countries* have been thus gained from the Sea. I remember that *Varenius* mentions, that at the ſinking of a Well in *Amſterdam*, of 100 Feet deep, they met with a Floor of Sand and Cockle-ſhells, a convincing Argument that the Bottom of the Sea lay there in former Ages, and that in Proceſs of Time, theſe hundred Feet of Earth were accumulated and brought thither by ſome conſiderable Rivers which depoſited the Sands its Stream had waſhed from the high Grounds hereabouts. Of this we have divers other Inſtances in the Flats about *Venice*, and in the *Camarg*, or the Iſle of the River *Rhoſne*, near *Aix* in *Provence*, where (as we were credibly informed) the Watch-Tower had been three Times removed nearer to the Sea, within the Memory of ſome People, by Reaſon of the Acceſſion of Land on that Side. Some object concerning the Trees digg'd up in *England*, that, as they are generaly taken foe Firs (a Tree that never grows well in *England)* this Argument will not hold in reſpect of our Country; but till we are better convinced that the Trees they ſpeak of are really Fir-Trees, the Solution of this Objection meets with no great Difficulty.

We travelled *April* the 27th, by Water, from *Bruges* to *Ghent*, a City which ſtands on a great Track of Ground, but ſcarce half built. It has only Seven Pariſh Churches, but Fifty-five religious Houſes.

From hence we continued our Journey, *April* the 30th, to *Bruſſels*, by the Way of *Aloſt* (a fortified Town) the firſt being the Capital City of *Brabant*, and the Reſidence of the Governors of the *Spaniſh Netherlands*. The Inhabitants here, as well as in divers other Cities of the *Low Countries*, have Dogs to draw their little Wheel-barrows or Carts, in which they ſell Fruits and other ſmall Commodities.

May 2. We came to *Louvain*, a City which for its Circuit exceeds that of *Ghent* by three Rods, but contains, like that, abundance of void Ground, and is but indifferently built; the Town-houſe, which is very ſtately, being the only Structure worth mentioning. It has 43 Colleges, but does not now make the Figure it did.

The Students are diſtinguiſh'd by their Habits, according to their Profeſſions, the Divines wearing conſtantly Gowns and ſquare Caps, which the reſt are not obliged to, except at publick Exerciſes; yet none are allowed to wear Swords in the City. In the four *Pædagogies*, Philoſophy only is taught by two Profeſſors; the firſt is ſtiled *Primarius*, the other *Secundarius*. The *Primarius* reads in the Morning, from half an-Hour after ſix till half an Hour after ſeven, and from ten to eleven o'Clock. The other in the Afternoon, from half an Hour after one, till half an Hour after two; and from half an Hour after four, till half an Hour after five. They take the Profeſſors Lectures; (which are divided into *Dictata* or *Theſes*, and Propoſitions, and *Annotata*, or Objections and Solutions) in certain Note-Books. The Gentlemen Students are placed in a peculiar Form, called *Scamnum Nobilium.* As ſoon as the Students come to the Univerſity, they muſt enter their Names, with the Preſident of their College; every Time they are abſent from a Lecture, they pay a Penny, for each Time of Abſence from a publick Exerciſe, Three-pence, and if they miſs when they are to perform a publick Exerciſe themſelves, Twenty-pence. The Profeſſors of each *Pædagogy* chuſe every Year twelve of their beſt Scholars, and after they have been publickly examined, out of their Number twelve are ſelected to be *Burſers*, and to have their Lodgings, Diet, and a good Stipend in what College each of them pleaſes, and to chooſe what Profeſſion they like beſt, and it is out of theſe commonly the Profeſſors are choſen. Their Degrees here are *Batchelor*, *Licentiate*, and *Doctor*. After two Years ſtanding in Divinity, they may be created Batchelors, or *Baccalaurei currentes*, and at one more *Baccalaurei formati*, but can't be *Licentiates* till ſeven Years after; theſe immediately after their Creation, are reputed Gentlemen, and have Liberty to chooſe a Coat of Arms. Doctors are ſeldom created till they are 50 Years of Age, unleſs they have given more than ordinary Proof of their Abilities.

May 4. We took a Walk for half a Mile from *Louvain*, to take a View of the Duke of *Areſchot*'s Palace, and the Convent of the *Celeſtines* adjoining to it. At *Louvain*, we ſaw three Things we had not met with before, *viz.* Storks, Women Porters, and Troopers begging on Horſeback.

May 5. Leaving *Louvain*, we travell'd to *Mechlin (Malines)* a very neat Place, being the Seat of an Archbiſhop, and Capital of one of the Seventeen Provinces under the Name of the *Lordſhip of Mechlin*, tho' it has not above nine Villages under its Juriſdiction. The Inhabitants are very induſtrious in their Manufactories; and among the reſt, there are three whole Streets full of Tanners. We continued the ſame Day our Journey to *Antwerp*, by Boat, which ſome compare to *Florence*, but exceeds it in my Opinion for Beauty. It is encompaſs'd with Fortifications of Earth, faced with Free-Stone, of a conſiderable Thickneſs, and a broad and deep Ditch, which, together with its Situation in a level Ground, makes it very ſtrong. The Citadel, built by the Duke of *Alva*, is a Pentagon. The Houſes are generally lofty, and of Brick; the Chapel of the Jeſuits very rich and ſtately; and the Steeple of St *Mary*'s Church a curious Piece of Architecture, as is alſo the Town-houſe. Our *Royal Exchange* of *London*, was built after that of *Antwerp*, but the Copy much exceeds the Original; this City being much fallen from its Traffick, ſince the vaſt Increaſe of Wealth in the United Provinces. *Plantin*'s Printing-Houſe is the beſt of that Kind I ever met with.

4. *May* 15. We embark'd on board a ſmall Veſſel at *Lillo* Fort, upon the *Schelde*, three Leagues below *Antwerp*, belonging to the United Provinces: Having a favourable Wind and Tide, we made 54 *Engliſh* Miles, and arrived before Sun-ſet at *Middleburgh*, the Capital City of the Province of *Zealand:* In our Paſſage we ſaw ſeveral Sea Calves upon the Sands. This City is ſeated in the very Center of the Iſle of *Walcheren* (whence it derives its Name) being of a large Compaſs, well fortified, populous and wealthy. It has a Channel reaching from the Town through that Part of the Iſle which looks towards *Antwerp*, capable of receiving Ships of great Burthen, which are brought into the very Streets of the City. It has about 20 Churches, the *Lutherans*, *French*, *Proteſtants*, *Anabaptiſts*, and *Jews*, having alſo the publick Exerciſe of their religious Worſhip allowed them here. This is one principal Cauſe of their Wealth and Trade. We took a Walk thence to *Fluſhing*, about three *Engliſh* Miles: It is neither ſo large nor ſo handſomely built as *Middleburgh*, the Streets being much narrower; but the Convenience and Goodneſs of its Harbour, together with its Strength and Riches, make it very conſiderable.

May 19. We took a Walk to the *Ter-Veer*, about the ſame Diſtance from *Middleburgh*, to the North; it doth not come near to *Fluſhing* in Bigneſs, yet has two very good Harbours, and ſeveral Wharfs and Keys: As we paſs'd along, we found the Banks of the Sea-ſhore covered with a Kind of Matting of Ruſhes or Flags, ſtaked down as high as the Tide commonly riſes, to prevent their being waſhed away by the Strength of the Current.

May 20. We paſs'd in a Boat from *Middleburgh* to *Bergen-op Zoom*; and in our Way went by the ſtrong Fort call'd *Rammekens*, ſituate at the Entrance of the Channel leading to *Middleburgh*, a Place remarkable for its Fortifications, which are ſtrengthened by many Half-Moons, Horn works, &c. and is look'd on as one of the beſt Fortreſſes in this Country.

May 21. We travelled to *Breda*, eight Hours from *Bergen*, which makes about 24 *Engliſh* Miles; it being the Cuſtom of the *Dutch* to meaſure their Miles by Hours. This Place may ſtand in Competition with moſt in thoſe Parts for its Strength, Bigneſs, and Number of Inhabitants, being encloſed by very good Fortifications, and two broad Ditches, one of which is always fill'd with Water. It belongs to the Prince of *Orange*, whoſe Palace is ſeen here, and there is a good Garriſon in the Town.

May 22. We continued our Journey by the Way of *Gertrudenberg* (a ſmall but well fortified Place belonging to the *Dutch)* to *Dort* or *Dodrecht*, a City rich, populous, large, and for its Buildings, to be compared with *Antwerp* itſelf; the Streets being very neatly pav'd (as in all other Cities of *Holland*) with Stone in the Middle, and on each Side with a peculiar Kind of yellow Brick, ſet Edgeways. The *Engliſh* enjoy great Privileges here, and have two Churches, whereas the *French* have but one. We ſaw the Room in the *Gunners-Hall*, in which the Synod, held in this City 1611, was aſſembled, the Seats thereof being ſtill preſerved.

6. *May* 23. We paſs'd in one of their *Trackſchoots* or Boats drawn by Horſes, to *Rotterdam* in five Hours. This City is of a triangular Figure, and next to *Amſterdam*, vies with all the other Cities of the United Provinces, not excepting *Leyden* itſelf, having been conſiderably augmented of late, by the Addition of many new Streets. Not far from St. *Lawrence*'s Church, you ſee a ſmall Houſe, which having given Birth to the learned *Eraſmus*, his Picture is ſet over the Door, with this Diſtich on one Side of it; much inferior in Merit to its Subject.

Ædibus his ortus mundum decoravit Eraſmus
Artibus ingenuis, relligione, fide.

And another thus:

Fatalis ſeries nobis invidit Eraſmum,
At Deſiderium *tollere non potuit.*

His Statue in Braſs ſtands in the great Market-place, with a Book of the ſame Metal in his Hand. As the Inhabitants of *Rotterdam* enjoy the Conveniency of a very good Harbour, ſo Ships of great Burthen are carried into the very Streets, and they addict themſelves chiefly to Naval Commerce. Their Civil Government is adminiſtred by a Preſident, four Burgomaſters, and twenty-four *Aldermen* or *Senators*, which they call the *Vroteſchap:* Theſe continue in their Stations during Life, chooſe all the publick Officers out of their own Number, and if any one dies, have the Privilege of chooſing another in his Room; ſo that the Government here, as well as in other Cities of the United Provinces, is a Kind of *Ariſtocracy*, with this Difference only, that in ſome, the Number of thoſe who compoſe this *Vroteſchap* is more, in others leſs.

5. *May* 25. We went into one of their *Trackſchoots*, which go every Hour in the Day from hence to *Delft*, where we arrived in two Hours. This City is alſo very large, with fair Streets and Water-Channels in them

as in moſt other Places in *Holland.* The *Stadt houſe* is a ſtately Structure, and the old and new Churches are very large. In the Middle of the Choir of the laſt of theſe, you ſee the ſumptuous Tomb of *William* Earl of *Naſſau*, Prince of *Orange*, who was aſſaſſinated by the *Spaniards*, as this following Inſcription tells you:

D. O. M.
Et
Æternæ memoriæ
Gulielmi Naſſovii,
Supremi Arauſionenſium Principis,
Patr. Patr.
Qui Belgii fortunis ſuas poſthabuit,
Et ſuorum.
Validiſſimos exercitus ære plurimum privato
Bis conſcripſit, bis induxit;
Ordinum auſpiciis Hiſpaniæ tyrannidem propulit:
Veræ religionis cultum, avitas patriæ leges
Revocavit, reſtituit:
Ipſam deniq; libertatem tantùm non aſſertam
Mauritio Principi,
Paternæ virtutis hæredi filio,
Stabiliendam reliquit;
Herois vere filii, prudentis, invicti;
Quem Philip. II. Hiſp. R. ille Europæ timor, timuit,
Non domuit, non terruit;
Sed empto percuſſore fraude, neſanda
Suſtulit.
Fæderat. Belg. Provinc.
Perenne memor. monum.
Fec.

In the Quire of the old Church is the Tomb of the famous *Van Tromp* with this Inſcription:

Æternæ Memoriæ,
Qui Batavos, qui virtutem ac verum laborem amas, lege ac luge.
Batavæ gentis decus, virtutis bellicæ fulmen hic jacet, qui vivus nunquam jacuit, & imperatorem ſtantem debere mori ſuo exemplo docuit; Amor civium, hoſtium terror, Oceani ſtupor, Martinus Harperti Trompius: *Quo nomine plures continentur laudes, quam hic lapis capit ſanè anguſtior; Et cui Schola Oriens & Occidens, mare materia triumphorum, Univerſus Orbis theatrum gloriæ fuit: Prædonum certa pernicies, commercii fælix aſſertor, familiaritate utilis non vilis, poſtquam nautus ac milites, durum genus, paterno & cum efficacia benigno rexit imperio, poſt L. prælia, quorum Dux fuit aut pars magna, poſt inſignes, ſupra fidem, victorias, poſt ſummos, infra meritum, honores, tandem bello Anglico, tantum non victor, certe invictus,* X. Aug. *Anno* Æræ Chriſtianæ M.D.C.L III. Ætat. LVI. *vivere ac vincere deſiit. Fæderati Belgii Patres Heroi optime merito* M. P.

Over his Arms was written the following Diſtich.

Urbs * *Phœbi cineres jactat, ſed currus* || *honores*
Ingreditur quoties egrediturque mari.

* i. e. *Delphi.* || *Phœbi nimirum ſeu ſolis.*

One Mr. *Mere* an Apothecary of that City had a fine *Muſæum* of natural and artificial Rarities, and among the reſt, the *Dens Hippopotami* (though I queſtion whether there be ſuch an Animal) the Horns of the *Hircus Bezoardicus*, and the *Cornua & Pedes Alcis*, call'd the *Elk* in *Engliſh*; the ſame I ſuppoſe, which in *New England* and *Virginia*, is call'd *Mooſe*; a *Species* of Deer of a tall and large Size, the Horns being without Brow-Antlers, but only a broad Palm of ſeveral Shags upon it. I ſaw one of thoſe Horns at *Lewes*, at Mr. *Holney*'s an Apothecary, that weighed twenty-five Pounds, and the Skin of an *Elk* ſtuft, in the *Great Duke* of *Florence*'s Gallery. In the Anatomical Theatre we alſo ſaw many Rarities, too many to be inſerted here. *Delft* is famous for its Earthen Ware, which is made in great Plenty there, in Imitation of *China.* The Government is adminiſter'd by a *Prætor* or *Schout*, two *Burgomaſters*, ſeven *Eſchevins*, and forty *Senators*, which they alſo call the *Vroetſchap.*

May 28. We paſs'd by Water, in leſs than an Hour's Time, to the *Hague*, being rather a Village than a City, and not encloſed with Walls or any Thing elſe; but for the Fairneſs of its Streets and beautiful Houſes, and Number of People, may challenge the Preference before many Cities. The Grove which is near it, is exceeding pleaſant, and here I firſt ſaw the *Monophyllum* grow wild, as I found at *Scheveling*, a Village on the Sea ſide, near the *Hague*, a *Species* of *Spartum maritimum*, much larger than our *Engliſh* kind. Whilſt we were at the *Hague*, we took the Opportunity of viewing the Burial-place of a certain Lady of *Zealand*, in the Church of *Lauſdun*, a Village about five or ſix *Engliſh* Miles from the *Hague*, who, as the Inſcription tells you, was *Margaret* the Wife of *Herman*, Earl of *Hennenbergh*, and Daughter of *Florentius*, Earl of *Holland* and *Zealand*, and Siſter to *William* King of the *Romans*, &c. This Lady being about 40 Years of Age, and meeting with a poor Woman that had Twins in her Arms, told her that ſhe muſt have been diſhoneſt to her Huſband, as not believing that two Children could be begot at once; at which the poor Woman being highly concerned, wiſh'd that ſhe might bring forth as many Children at a Birth, as there were Days in the Year; which was fulfilled in 1276, when at one Birth ſhe was brought to Bed of 365 Children of both Sexes, who were baptiz'd by *Guido*, Suffragan of *Utrecht*, in two Braſs Baſons, the Sons having the Name of *John*, and the Daughters that of *Elizabeth* given them; and ſoon after died all in one Day, as did alſo the Mother, and were buried in this Church of the Village of *Lanſdun.* This Inſcription is to be ſeen in *Latin*, over the two Baſons, in which they ſay, theſe Children were baptiz'd, and beneath it this Diſtich:

En tibi monſtroſum nimis & memorabile factum,
Quale nec à mundi conditione datum.

7. *May* 31. We went in one of their Paſſage-boats in three Hours from hence to *Leyden*, being next to *Amſterdam*, the largeſt City in *Holland.* The great Church of St. *Peter* contains many Monuments of learned Men, and in the *French* Church is among others, that of *Joſeph Scaliger.* The Schools for publick Lectures is a Structure of three Stories high, of Brick, having two Rooms on a Floor; the two lower being aſſign'd for Divinity and Phyſic; middlemoſt for Law and Philoſophy; and the uppermoſt contains the Printing-Houſe, ſo well known by the Name of *Officina Elzeviriana.* Every Year a Catalogue is printed in *Latin*, and affixed to the School Gates, containing the Names of the Profeſſors, and what publick Lecture each of them is to keep the Year following. Behind the School-Yard is the Phyſick-Garden, which encloſes about an Acre of Ground in the Square, and has a conſiderable Number of exotick Plants; the Catalogues of which are alſo frequently publiſhed here. They have no more than two Colleges here, in the Nature of Hoſpitals, for the Suſtenance of poor Scholars, the reſt of the Students living upon their own Purſe, without any Gowns or Caps, but walk the Streets with their Swords, and appear in the Schools, and perform their Exerciſes in them, with their Heads uncover'd. Thoſe that have a Mind to be Members of the Univerſity, apply themſelves to the *Rector Magnificus* (reſembling the Vice-Chancellor of our Univerſity) who enters them into the Book, and gives them a Seal, by which they are freed from paying of Exciſe, yet under a certain Limitation. Beſides the publick Lectures, each of the Profeſſors allot certain Hours for reading in private (which they call *Collegia*) for which the Auditors pay a Gratuity. Degrees (of which they have only thoſe of *Maſter of Arts* and *Doctors*) are conferr'd here, without the leaſt reſpect to the ſtanding of the Candidates. He that is to commence in any Faculty, propoſes only certain Theſes upon a ſelected Subject in Print, which he is obliged to maintain againſt all Opponents, every one

having the Liberty (after Leave aſked from the Profeſſor that preſides) to oppoſe the Candidate. Each of theſe Profeſſors have a Salary of 200 and 300*l. per Annum* allowed them. Beſides the Univerſity, there is a great Manufacture of Woollen Cloth ſettled in this City. For the reſt, the Houſes are very well built, with very ſteep Roofs on Purpoſe to caſt the Rain Water into Ciſterns, wherein it is preſerved for Uſe. Its Streets are for the moſt Part very broad, large, and ſtreight, furniſhed with Water Channels. In the Night-time certain Watchmen go about the Streets, and making a Noiſe with a Rapper, tell every Hour what Time of Night it is. In the anatomical Theatre, we ſaw many Skeleton's of Men and Beaſts, and among other Rarities, a Box, containing the Skeleton of the Head of an *Indian* Creature, half a Stag's, half a Hog's Head; many Leaves of the *Bethle*, not unlike the great *Satyrion* Leaf; an *Ant-Bear*; and in the Library, the Manuſcripts of *Joſeph Scaliger*. *Leyden* is encloſed with a good Earth Wall, and a Ditch, which being ſurrounded by Rows of Lime-Trees, make very pleaſant Walks.

Before we parted from *Leyden*, we took a Turn to a Village called *Sevenbuys*, about four Leagues thence, to view a very pleaſant Grove near it, excellently well ſtored with wild Fowl, ſuch as *Scholſers*, called *Shags* in *England*, being not unlike *Cormorants*, but ſomewhat leſs; we were much ſurprized to ſee them build upon Trees. *Lepelaers*, called *Plateæ* and *Pellicani* by *Geſner*, ſome call them *Spoonbills* in *England*. *Quacks*, called *Night-Ravens* by the *Germans*, becauſe they always make a Noiſe in the Night-time, and *Reyers* or *Herons*. Beſides which this Wood affords vaſt Numbers of *Ravens*, *Wood-Pigeons*, and *Turtle Doves*. By the Way, we took Notice of *Lyſimachia lutea flore globoſo*, and the *Arum ſive Dracunculus* growing in the Ditches. All the Grounds between this Village and *Leyden* are low, fenny, and full of Pools. We ſaw the Country People hereabouts buſied in making of Turf: They rake with a Kind of Hoop-net, faſtened to a Pole, the Mud up from the Bottom of a ſtanding Pool, wherewith having laden a Boat, they throw this Mud with long Shovels on an even Piece of Ground, making of it a Bed of an equal Bigneſs as near as they can gueſs; this, after it has lain long enough to dry, they tread with Pieces of Boards faſtened to their Feet, to make it cloſe and ſmooth; then they cut the whole Bed with a Spade into Pieces of the Bigneſs of a Brick, and pile them up in Stacks or Ranks, ſo that one may ſee through them, to give a free Paſſage to the Air and Wind, to dry them further, and afterwards are laid up in Barns, the Sides of which are made up with wooden Bars at ſome Diſtance from one another, to make them fit for Firing.

June 6. We continued our Journey in one of the Boats that go from this Place to *Haerlem*, where we arrived in four Hours; being a populous, ſtrong, and pleaſant City; provided with very fair Channels in ſeveral of its Streets: It has moſt delightful natural Groves on that Side where it looks towards *Leyden*. In the Garden of the Prince's Houſe is a Summer-houſe, where you ſee the Picture of *Lawrence Coſter*, in a furr'd Gown, holding the Letter A in his Hand, with this Inſcription over it:

> M. S. *Viro Conſulari*, Laurentio Coſtero *Haerlemenſi alteri Cadmo*, & *Artis Typographicæ circa Annum Domini* MCCCCXXXX, *Inventori primo.*

The Statue and Inſcription which was on his Houſe in the Market-place, are no more to be ſeen, the Houſe being ſold. The chief Trade in this City is in weaving of Silks, Damaſks, Velvets, Sattins, Linen Cloths, &c. The Sea Coaſt near *Haerlem*, and all *North Holland*, are covered againſt the Sea with green Downs.

8. *June* 8. We went hence in two Hours by Boat to *Amſterdam*, where we met at the Gate no more than two Soldiers, one without, the other within: This City, as it is the biggeſt of all the Low Countries, ſo for Riches and Traffick may compare with any in *Europe*. At that Time I looked upon the Extent of it to be the ſame with *Venice*, and conſequently leſs by one half than *London*, but as they were then buſied in encloſing a very large Track of Ground with a ſtrong Wall and deep Ditch (which I hear is ſince filled up with ſtately Houſes) it will bid fair for being numbered among thoſe of the firſt Rank for Bigneſs. The chief publick Buildings here are, the *Stadthouſe*, a moſt magnificent ſquare Pile of Buildings, faced without with Free-ſtone; the Foundation of which, as they told us, coſt 100000*l.* Sterling, the Structure being built upon 13659 great Piles or Trees driven into the Ground. The Exchange, a large oblong Square, frequented by vaſt Numbers of all Nations. The *Admiralty Houſe*, a noble Structure, with fair Rooms. The *Magazine*, and various *Hoſpitals* and *Houſes of Correction*. In this City is alſo a publick School, in which are kept Lectures in ſeveral Faculties, by ſix Profeſſors, eſpecially in the Summer Time. The *Jews*, who are richer here than in any other Place, amount to twenty thouſand: In this City are alſo tolerated moſt other Religions (not excepting the *Roman Catholick*) but none, except thoſe of the eſtabliſh'd Religion, are permitted to erect any Steeples, or to make Uſe of Bells for the aſſembling of the Congregation. In that ſtately Structure, called the *New Church*, you ſee a very fair Monument, erected to the Memory of *John van Galen*, with this Inſcription:

Generoſiſſimo Heroi
Johanni à Galen
Eſſenſi
Qui ob res fortiter & *feliciter geſtas, ſexies uno anno Dunkirkanorum prædatorum navem captam,* & *à Barbaris opima ſpolia reportata, Ordinum Claſſi in Mari Mediterraneo Præfectus, memorabili prælio ad Livornam, Deo auxiliante, Anglorum navibus captis, fugatis, incendio* & *ſubmerſione deletis, commercium cum dicti maris accolis reſtituit, idibus Martii Anno* M.DC.LIII. *Et uno pede truncatus, nono poſt victoriam die, annos natus* XLVIII. *obiit, ut in ſecula per gloriam viveret.*
Illuſtriſſ. & *Præpotent. Fœderati Belgii*
Ordinum decreto,
Nob. & *Pot. Senatus Archithalaſſ.*
Qui eſt Amſtelodami
M. H. P.

The Pulpit of this Church is valued at ten thouſand Pounds Sterling, and there are twenty-four eſtabliſhed Miniſters belonging to this City.

The Government is adminiſtered here by the *Prætor* or *Schout*, four *Burgomaſters*, nine *Eſchevins*, and thirty-ſix Counſellors or Senators, which they call the *Vroetſchap*. The *Prætor* has the firſt Place upon the Bench of the *Eſchevins*: He is elected by the *Burgomaſters* (with the Approbation of the *Vroetſchap*) for three Years, but may be continued in his Office from Time to Time: He is not eligible to this Dignity unleſs he has been a Freeman ſeven Years. His Buſineſs is to make Laws in Conjunction with the *Burgomaſters* and *Eſchevins*, to apprehend and impriſon Criminals, and he preſides as Chief Juſtice in civil as well as criminal Cauſes; and with the Approbation of the *Burgomaſters* and *Eſchevins*, determines all Matters before them, and pronounces Sentence againſt Criminals, and ſees it put in Execution. In other Cities, the *Prætor*'s Concern reaches no farther than to apprehend and proſecute Malefactors. The whole Number of *Burgomaſters* conſiſts of twelve, but four only are regent at a Time, which is a Year: They muſt at the Time of their Election be forty Years of Age at leaſt. For every Year, the *Burgomaſters* that have been *Eſchevins*, chuſe by the Majority of Votes, three out of the twelve to be Regents, which three ſelect one out of the four that reigned the Year before, a fourth, who tenders them the Oath, and officiates as Preſident the firſt three Months. The remaining eight *Burgomaſters* are employed in other great Offices, ſuch as Treaſurers, Maſters of Hoſpitals, and one is ſent in Quality of Deputy to the Aſſembly of the

States at the *Hague*, one for a Member of the Council of the Admiralty of *Amſterdam*, &c. The Office of the *Burgomaſters Regent* is, to take Care of the Government and Peace of the whole City, to determine Differences between private Perſons, to be Surveyors of the Fortifications, Streets, and publick Buildings. If one of the twelve *Burgomaſters* happen to die, it belongs to the *Vroetſchap* to chuſe another. When the *Eſchevins* are to be elected, the *Vroetſchap* propoſes fourteen Perſons, out of which the *Burgomaſters* ſelect ſeven; but one Condition is, that they muſt not be near of Kin either to the *Schout*, or any of the *Burgomaſters Regent*. Unto thoſe ſeven the new and old *Burgomaſters*, together with the new elected *Eſchevins*, by the Majority of Voices, add two out of the Number of the *Eſchevins* choſen the laſt Year, which two for that Year have the firſt and ſecond Rank among the *Eſchevins*, who are Judges both in civil and criminal Cauſes. The Council of thirty-ſix, or *Vroetſchap*, continue in their Places for Life, and as often as one of that College dies, the reſt chuſe another in his Place' but no Body under twenty-five Years of Age is admitted. They not only have the Power of preſenting the fourteen Perſons out of whom the *Eſchevins* are choſen, but are alſo called together by the *Burgomaſters*, when any Thing of great Moment is to be debated or reſolved upon; ſo that the ſupreme Power ſeems to be lodged in them. Not many Years ago, according to the Conſtitution of this City, no Body could be *Burgomaſter*, unleſs his Father had been a Freeman a Year and ſix Weeks before he was born; but now any who will pay five hundred Gilders, may be made a Freeman, and after ſeven Years is qualified to be a *Burgomaſter*; but ſuch as do not aſpire to this Dignity, may be made Free for fifty Gilders. The City Trained Bands conſiſt of fifty-four Companies, divided into four Regiments, of eleven Companies each, one hundred and fifty Men in a Company, which amounted to 8250. Two Companies are drawn out every Night to guard the City, which makes them fit for Service.

9. *June* the 16th we proſecuted our Journey to *Utrecht* by the ordinary Paſſage-boat, where we arrived in ſix Hours. This is the capital City of the Province of the ſame Name; a large Place, ſurrounded with a good Earthen Wall and deep Ditch; but its Streets are not comparable for Neatneſs or Cleanneſs to thoſe of the Province of *Holland*, though the Water-channels are alſo conveyed through ſeveral Streets. The Univerſity here was eſtabliſhed by the States General in 1636; the Profeſſors of which, as well as thoſe of *Leyden*, publiſh a yearly printed Catalogue of their Names and intended Lectures. For the Adminiſtration of the Government, they have an Upper and Lower *Schout* and four *Burgomaſters*, two of whom are new choſen every Year.

Hence we paſſed by Boat to *Vianen*, reſembling the *Mint*, a Place for Refuge belonging to the Lord of *Brederode*. We ſaw here a certain Engine for the Weaving of Tape by the Motion of many Shuttles at a Time, at once curious, expeditious and profitable.
